But such background is not always enough. This is true not only of so-called problem passages but also of passages that we assume we interpret correctly. For instance, when we read that the good seed bears fruit a hundred times over (Mt 13:23), only if we know the average size of an ancient Palestinian harvest do we understand how abundant such a harvest would be. The charge against Jesus posted above the cross, "The King of the Jews," makes a lot more sense if we recognize that the Romans were very nervous about so-called prophets in Judea whom some people thought were messianic kings, because some of these "prophets" had already stirred up a great deal of trouble for Rome.

Further, culture affects even which books strike us as easier to understand; different parts of the Bible appeal to different cultures. Any reader of Leviticus and 1 Timothy could tell that the forms of writing used in these documents are quite different. Leviticus's hygiene codes have parallels in Hittite and other ancient Near Eastern texts; Leviticus was addressing issues of its day. But the subject matter of Leviticus would not have even interested most Greco-Roman readers by the time 1 Timothy was written, whereas all of 1 Timothy's themes and literary forms have parallels in Greco-Roman literature. To modern Western readers, most of the New Testament is much more inviting than Leviticus; but in many cultures, customs concerning what is clean and unclean appear important, and Christians in these cultures have taken more interest in some parts of the Bible that we tend to ignore. Of course, we have theological reasons for saying that we do not need to obey Leviticus literally today; but if all Scripture is inspired and profitable for teaching (2 Tim 3:16), it must have some purpose. The question is just, What is that purpose?

What point was God communicating to his people? Cultural background helps us figure out what the purpose was.

Objections to Using Cultural Background

Although everyone knows that the Bible was written in a different time and culture, and most people take that fact into account when they read particular passages, not everyone is consistent in using cultural background. Of course, not all passages in the Bible require much background; our culture still has some features in common with the culture of the Bible. But if we do not know anything about the original culture, we may sometimes assume that we do not need any background for a passage when in fact it would dramatically affect the way we read the text. Even though most people recognize the need to pay attention to cultural background, some people become nervous at the suggestion that they need it.

Some Christians occasionally object that using cultural and historical background is dangerous. "After all," they complain, "you can use culture to twist the Bible around to mean anything." People who raise this objection could cite the popular idea that the "eye of a needle" through which a camel must pass was a gate in ancient Jerusalem. Unfortunately, no gate with this title existed in first-century Jerusalem; convenient as it would be for us, this is a case of invented background. (Happily, some other background is relevant: the use of hyperbole, or rhetorical overstatement, was common among ancient Jewish teachers.) Although this example is a good argument against *making up* cultural background, it is no reason not to use genuine cultural background. A good bit of invented cultural background circulates on the market today, but that is all the more reason for readers to seek background based on genuine, solid research.

One might keep in mind that people have been twisting the Bible quite ably for a long time without using any cultural background; it is doubtful that a little historical study would make matters any *worse*. *Ignoring* the original culture and so reading it in light of our own is a far graver threat to most of us. (For example, the "Aryan Christians" under the Nazis "demythologized" biblical history to make it non-Jewish and hence more palatable to Nazi tastes. This is an extreme example of ignoring original historical context and reinterpreting the Bible to fit one's own culture. It differs from most reinterpretations today only in that the Nazis did it intentionally.)

A more common objection, which I raised myself as a young Christian, is that assuming the importance of cultural background might take the Bible out of the hands of nonscholars. At that time I rejected the use of cultural information so thoroughly that I insisted that women should wear head coverings in church, and I even tried to get up enough nerve to engage in some of Paul's "holy kissing." Reading the Bible forced me to come to grips with the way it is written, however,

and the more I have studied the world of the Bible, the more I have come to realize that God was being relevant in communicating his Word the way he did. He gave us concrete examples of how his ways address real human situations, not just abstract principles that we could memorize without pondering how to apply them to our lives. If we wish to follow God's example of being relevant, we need to understand what these teachings meant in their original culture before we try applying them to our own.

Cultural background does not take the Bible out of people's hands; it is when we *ignore* cultural context that we take the Bible out of people's hands. To hand people the symbols in Revelation with no explanation of how such symbols were commonly used in the ancient world is like handing the Gospel of Luke in Greek to somebody who cannot read Greek and saying, "Since this is the Word of God, you must understand and explain it." Only a trained scholar or a complete fool would have any idea what to do with it (and the fool's idea would be wrong).

Translating Both Language and Culture

Some scholars before the time of Luther decided that the church hierarchy of their day was wrong to keep the Bible in Latin. Most people could not understand the Bible unless scholars translated it for them into their own language. Some of these scholars were martyred for their conviction that the Bible must be available in common people's language; Luther, who translated the Bible into the German of his day, barely escaped this same fate. The best way scholars could help people was not by saying, "Translations are not available for the common people; therefore we take the Bible out of their hands if we say they actually needed such translations all along." The better approach was for such scholars to say, "Translations are not available for the people; therefore we will put the Bible into their hands by doing some hard work and making translations." Of course, as people in Luther's day realized, having a translation does not resolve all the problems of determining what the text *means;* that work is not completed simply by offering translations.

Translating can be difficult, as anybody who has studied a foreign language can testify. Some words do not translate directly in a single term; sometimes a word or phrase can have several different meanings, and the translator has to decide which meaning is best for a particular context. There is also more than one way to express an idea in English once one decides what it means. Those of us who have read the whole New Testament in Greek can testify that the same problems obtain there as in any other text we might try to translate. A random check of any passage in two or three Bible translations will verify the difficulty: no two translations will match exactly (otherwise, of course, they wouldn't be separate translations).

When Bible translators go into other cultures they face difficult questions regarding the meanings of words and phrases. For instance, some translators had to

explain "Behold, the Lamb of God!" (Jn 1:29) for a culture that had no sheep and thus no words for lambs. The culture did, however, have pigs, and used them for sacrifices. But if they translated it "Behold, the Pig of God!" (which does not ring nicely to many of our modern ears, and certainly would have offended ancient Jewish sensibilities even more), what would happen when they had to translate passages in the Old Testament where pigs were unclean but sheep were not? Perhaps they could best solve the issue by putting a footnote in the text and by translating with some combination of words that communicated the concept as best as possible in their language, like "hairy pig." Old Testament translators have had to resort to similar methods when rendering the Hebrew words for different kinds of locusts into English (Joel 1:4; 2:25). English does not have enough different words for locusts to match all the Hebrew terms, perhaps because the many varieties of locusts were more of an issue for the Israelites than they are for most of us.

But there is a bigger problem than just the words in the text in front of us. What happens when Paul makes an allusion to a whole concept that was important in his day (as he often does)? How do we translate that? Or do we just mention the issue in a footnote? The allusion that Paul makes is part of his meaning, yet sometimes even those who are otherwise competent to translate the text cannot catch the allusions Paul makes.

Some Christian readers during and before the Reformation period tried to figure out the situations that biblical texts were addressing. It was good that many scholars recognized the need to read the New Testament in the context of its own world, rather than viewing it as if it had been written in German or English directly to readers in the Renaissance or some other period. They were not, however, the majority. Most readers still read too much of their own culture into the text, just as we do when we fail to look at it in the light of the original culture. Most medieval and Renaissance intellectuals did the same thing; most of us have seen paintings of biblical scenes with Europeans in European dress filling all the roles of the biblical dramas. They were painted as if most of the biblical characters were Europeans, even though we know that few biblical characters were Europeans, and none was northern European.

Fortunately, some knowledge about the ancient world was still available in the Reformation period; unfortunately, it was not *always* the most *appropriate* background. Many scholars were so competent in the Greek classics that they could catch all sorts of allusions to Greek customs in the New Testament. The problem is that many Greek customs had changed from the time those early classics had been written to the time of the New Testament.

Another danger in assuming that all the background to the New Testament was classical Greek may be illustrated from the first few centuries that the New Testament was in circulation. The Gnostics often read the New Testament more in the

light of Plato than in the light of the Judaism from which it emerged, and this was the source of many of their doctrines which other Christians rejected as heretical. Plato did have some influence on the world of the New Testament, but he was hardly the most important influence.

Some writers, like John Lightfoot in the 1600s, challenged the predominant classical grid through which the New Testament was being read and offered Jewish texts as New Testament background. Lightfoot bent over backward to cover himself against the attacks of anti-Semites, explaining at some length that he indeed thought these Jewish texts were unspiritual, but that the work was necessary if one were to understand the New Testament.

Today, when anti-Semitism is less popular than in Lightfoot's day, it is more obvious to us that the Greek texts Lightfoot's contemporaries were using were much more pagan than the texts for which he found it necessary to apologize to his readers. Today it is generally recognized that ancient Judaism forms the *primary* context of the New Testament. Its basic, broad context is Greco-Roman society, but Jewish people had lived in and adapted to Greco-Roman culture, paving the way for the first Christians' witness in the context of pagan culture. Further, the first Christians were Jewish, and outsiders perceived Christianity as a form of Judaism. Moreover, the earliest Christians themselves saw their faith in Jesus as the true fulfillment of the Old Testament hope and hence saw themselves as faithful to Judaism. (Indeed, the New Testament writers affirm that only Christians were faithful to biblical Judaism; although some other Jewish groups also claimed to be the faithful remnant of Israel, these groups do not seem to have survived into subsequent centuries.) Both the specific Jewish and the broader Greco-Roman contexts of the New Testament are crucial for its interpretation, just as a good translation is.

The Work That Remains

Christians, especially those most committed to crosscultural missions, have always recognized the importance of reading the Bible in the light of its original cultural context. But while translations are available to most Christians, the cultural "footnotes" are not. (Hopefully this will change as study Bibles more frequently incorporate the most relevant features of background, so long as they depend on genuine research and not popular misconceptions.) Many helpful commentaries do exist (including some more recent ones focused on background), but no single commentary provides easy access to all the requisite background in one or two volumes. The more volumes in a work, the less accessible it becomes to most readers. Only a small percentage of people who read the Bible today have full sets of commentaries, fewer of them would have access to adequate cultural information in each of those commentaries, and fewer still can regularly take time to sort through them.

Many earlier biblical scholars gave their lives to translate the Bible and so to

begin to make it intelligible to whoever wanted to read it; but the work has never been completed. Many Bible readers still have very limited access to the background. Although many tasks demand the attention of Christian biblical scholars, this is surely one of the most important.

The need to understand the cultural context of the Bible should be as clear today as the need for translation was in the Reformation period. In our industrial, wired and often postmodern society, we have moved farther and farther from any vestige of biblical roots; our culture is becoming more and more alienated from the cultures in which the Bible was written and our young people are finding God's Book more and more foreign. It does no good to lament that most people will not visit our churches and learn our Christian language. God has called us to be missionaries to our world, so we must make the Word of God intelligible to our culture. We must not simply read it; we must understand it and explain it. We must explain what the writers meant when they wrote it to cultures long since changed or vanished, and how its message applies to us today. In fact, today's appreciation for diversity of cultures means that many people will be ready to hear the inspired biblical writers in those writers' own contexts.

Much of the church today seems asleep to our mission, largely because we have not allowed the Word of God to speak to us in all its radical power. We have allowed it to be a foreign book, and allowed the people it addresses to be a people far removed from our own lives. The tragedy is that the stakes have never been as high as they are in our generation: the world boasts a population seven times as high as it did two centuries ago, when the church was stirring to its mission in another great move of the Spirit.

God is making more than one important demand to his church, but one crucial demand is that we understand his Word. In a culture full of Bibles and teachings, those who value the Bible's authority still need to know, understand, obey and teach it more fully. Pastors, usually overworked, rarely have the time to investigate all the necessary resources to acquire background for each text on which they preach. Yet the need to understand God's message more fully and to awaken the whole church to his call so we can fulfill the commission our Lord has given us is urgent.

Among the resources God provides for that task are specialists gifted in the body of Christ as teachers who can provide various valid insights to help us understand and apply God's Word. Just as missionaries must learn a language and a culture to communicate God's message to another culture, we need servants of God on the other end, learning the language and culture in which God's Book was written. Such teachers labored in the past to provide translations and labor today to provide other tools to make the treasures of the Bible more widely accessible to all its readers.

While not all scholars devote their research to serving the church, many have done so throughout history, from Justin, Jerome, Augustine and Bede, to the monks

who led the medieval universities on which modern universities are based, and later Martin Luther, John Calvin, John Wesley, Jonathan Edwards and others. Likewise, many scholars today have pursued scholarship because this was God's call for them.

But the biggest task does not fall to scholars alone. All believers are called to hear God's voice in the Scriptures, to start with what is already clear and to learn more from there. One need not be a scholar to read passages of the Bible in context or to read the cultural footnotes to the Bible that a commentary like this one is meant to provide. May God give us all grace to do our part, to obey Christ our Lord and to reveal him to the needy people of our generation.

Gospels

Introduction

Note: asterisked (*) terms appear in the glossary.

Genre. *Genre* means the kind of writing a work is, whether poetry, *prophecy, bomb threat, letter, etc. Today it is easy to identify the genre of the Gospels, because four of them are grouped together at the beginning of the *New Testament. But when each Gospel was written, people would have read it as belonging to some genre or genres they already knew. Genre is important because our expectation of the kind of writing something is will influence how we read it (e.g., we take poetry less literally than prose).

The Genre of the Gospels. Some classifications of the Gospels have not stood the test of time. Some earlier scholars focused on elite classical Greek literature thought that the Gospels looked like common people's literature instead of "high" literature. But subsequent studies have shown that literature ranged widely between folk and high literature, and folk literature often imitated high literature. Even our Gospels range from Mark's rough style to Luke's sometimes fairly sophisticated style.

By contrast, more recent studies have compared the Gospels with the sources they would have most resembled for ancient readers. Thus the majority of recent scholars have come to classify the Gospels as ancient biography, which resembles the way that the church has historically treated them. Ancient biographies did not necessarily emphasize the same features that modern biographies do, but they were still a form of historical writing.

How historically reliable were ancient biographies? There was a range of reliability, but a major factor in this range was the chronological distance between the writer and the writer's subject. Some biographers, like *Plutarch and *Livy, certainly spiced up their *narratives, but especially when writing about characters who lived centuries earlier. Writers sometimes openly admitted the difficulty of distinguishing legend from fact when they wrote about reported events centuries earlier. Other authors, like *Tacitus (in the *Agricola*) and *Suetonius, writing about events of the past century and a half, kept very close to their sources.

When writing about subjects in the past generation, as (for example) the Gospel of Mark does, biographers were able to depend on large amounts of information. Thus, for example, Tacitus, Suetonius and Plutarch in the early second century write about the short-lived emperor Otho half a century earlier. When we compare them, we find that their material overlaps in very considerable detail. Because they follow their sources so closely where we can test them, we may assume that they generally follow them no less closely where other sources are no longer available to us. The Gospels supply much historical information about Jesus.

Biography was a largely Greek and Roman category, but it influenced other writers. Jewish writers could model their biographies after *Old Testament biographical narratives, which everyone in their day took to be reliable. Only Jewish writers composing in Greek created conventional biographies, however, and these often followed Greek forms. *Josephus spiced up his autobiography in good Greek rhetorical style but still expected his readers to take his account seriously, and the substance of his account is mostly reliable. But even works such as **Jubilees*, with its haggadic expansions (often to explain details), deletions (often to whitewash heroes) and so forth, follow the basic outline of their sources at most points; the early Jewish *Pseudo-Philo's *Biblical Antiquities* does so even more. Jewish novels about biblical characters also flourished, but not about characters of recent history and not with detailed dependence on sources. Luke wrote like a popular Greco-Roman historian, and none of the Gospels fits the haggadic *midrash pattern.

Ancient Historiography. Both Jewish and Gentile writers could take some liberties in how they recounted their narratives, but biographies about recent characters were supposed to be grounded in facts. Many scholars view ancient biography as a specialized form of ancient historiography. Whenever possible, historians consulted eyewitnesses or those who knew them. While historians and novelists both used some similar storytelling (or in elite circles, rhetorical) techniques, ancient writers (from *Aristotle to Pliny and *Lucian) insisted that history must deal in facts and distinguished it from novels.

Like many historians, journalists and others today, ancient historians had particular themes they wanted to emphasize. History was full of meaning and was to be written in a way that brought out its meaning. Far more often than novelists, historians (and still more clearly biographers) wrote with clear moral, political or theological agendas and expected readers to draw lessons from their works. Most historians and biographers also sought to recount their narratives in a lively and entertaining way. At the same time, however, historians by definition sought to follow the sense of their sources, to be as accurate as possible. Even those who took the most freedom followed the basic substance of history; and, where they had inadequate sources, they aimed for verisimilitude.

Are the Gospels Accurate? On the continuum between more and less careful

biographers, the writers of the Gospels are among the most careful. When we test how Matthew and Luke used Mark as a source, it is clear that they followed their sources carefully. Writing for ancient readers, they naturally followed the literary conventions of their day. But the first Gospels were written when eyewitnesses were still in positions of authority in the church and oral tradition could be checked, and this supports a higher degree of reliability than found in biographies of much earlier persons; biographies of roughly contemporary characters were normally far more accurate than those concerning heroes of the distant past. See further comment on Luke 1:1-4.

Sayings. Students carefully learned sayings of their teachers, often taking notes to help them memorize. Extraordinary feats of ancient memory indicate the extent to which memory could be accurate in ancient Mediterranean society, where memorization pervaded education from the elementary level. At a more advanced level, *disciples ordinarily learned their teachers' sayings well, often extensively. Sometimes they even collaborated with other former students to collect the teachings. Ancient schools often preserved the teachings of schools' founders, making them "canonical" for what the school would teach new adherents. (In one graphic but perhaps fictitious ancient example, *Pythagorean students had to repeat back their teacher's lectures from the previous day before getting out of bed in the morning. But disciples of other teachers were also rigorous in preserving their masters' teachings.)

We should expect no less for Jesus' disciples than for these other ancient students; to expect less of Jesus' disciples is simply to assume skepticism against our best evidence about how disciples learned. In their own instruction during years and decades that followed, the disciples would repeat the teachings of Jesus that they remembered, hence would know these selected teachings far better than disciples of other teachers who did not become teachers themselves.

None of this means that anyone expected the sayings to appear in sequence. The sayings were sometimes passed on with the stories in which they occurred, and at other times they were passed on as isolated proverbs (sayings of the wise); later students in rhetorical schools could also transplant sayings to other appropriate stories about the same teacher. Taking matters further, some critics warn that sayings of one teacher were also sometimes modified or transferred to another teacher after much time had elapsed. This observation is less relevant for the Gospels, however, since they focus on only a single founder and chief teacher for the movement. Moreover, they were written in the first two generations, when Jesus' teachings were still in the memories of the writers' sources, making radical changes unlikely.

Just as we do not expect the sayings to appear in sequence, we do not expect them to be verbatim (impossible for Jesus' *Aramaic sayings anyway, since the

Gospels are written in Greek). Jesus' words sometimes differ slightly from Gospel to Gospel. We expect such differences, because paraphrasing sayings in one's own words was a standard school exercise and a common writing technique in ancient times. (Those who conclude that different Gospel writers contradict each other because they quote Jesus differently are thus not paying attention to how works were written in antiquity.)

At the same time, a particular style and rhythm and sometimes Aramaic expressions (e.g., "*Son of Man") come through Jesus' sayings, indicating that the Gospel writers did not always paraphrase him, even in translation from Aramaic to Greek. (Jesus probably sometimes spoke Greek as well as Aramaic, but most scholars believe that he would have addressed Galilean crowds especially in Aramaic. Most Galileans would have been bilingual; some Jewish schools conducted advanced discussions even in Hebrew.)

Jesus used many of the Palestinian Jewish teaching techniques of his day, such as *parables and *hyperbole (rhetorical exaggeration), to make his points graphically. To grasp them the way his first hearers grasped them, his sayings must be read in this light and then understood in the context of the whole of his teachings. For example, readers must adequately recognize both loyalty to parents (Mk 7:9-13) and the greater demands of the *kingdom (Mk 10:29-30). Parables must also be read the way Jesus' Jewish hearers would have understood them. They were illustrations meant to convey truth, but some of the details of most parables are included simply to make the story work, so we should be careful not to read too much into such details.

Literary Techniques. Greek literary conventions permeated most Jewish literature written in the Greek language, and were applied both to historical books (such as biographies like the Gospels) and novels alike. Writers of topical biography had complete freedom to rearrange their sources, so it should not surprise us that Matthew and Mark often have events in Jesus' ministry in different order.

Although Jesus, like other Jewish teachers, surely repeated the same sayings on separate occasions, some of his sayings probably occur in different places in the Gospels simply because the writers were exercising the freedom ancient biographers had to rearrange their material. This freedom enabled the Gospel writers, like preachers today, to preach Jesus as well as report about him, while still recounting his words and deeds accurately. Ancient Christians already knew, of course, that the Gospels (like the majority of ancient biographies) were not in chronological order, as the early Christian teacher Papias plainly remarked about Mark.

Other Gospels? By the time that Luke wrote his Gospel, other works about Jesus were in circulation (Luke 1:1) this undoubtedly includes Mark. Luke, Matthew and possibly Mark also used material they shared in common, and the common sequence at points suggests at least one written source, which many scholars call "Q." Based on Papias, some scholars believe this source reflects early notes by Matthew

(to which Mark's narrative was added in forming our current Matthew's Gospel). These studies are valuable. The only first-century Gospels that survived, however, are the four that the church ultimately preserved as Scripture (and any material from other sources preserved in them). Later writers composed apocryphal Gospels, but instead of reflecting significant information about the Jesus who lived in first-century Galilee they fit the form of novels and derive from their heyday in the late second and third centuries. Later *Gnostics composed collections of sayings attributed to Jesus, but these are not really "Gospels" in the traditional sense of narratives about Jesus like the first-century Gospels. The earliest of these might date to 120 years after Jesus' public ministry; most belong to the late second century or later.

How to Read the Gospels. Ancient biographies were meant to be read the whole way through rather than jumping from a passage in one book to a passage in another. Each of the four Gospels was written separately to different readers and was meant to be read on its own terms before the reader moved to a different Gospel. We should therefore work through each Gospel, following the flow of that Gospel's thought.

Ancient biographies often had morals to their stories and set forth the characters as positive or negative examples. Old Testament stories about men and women of God taught morals about faith and how to serve God. The reader is therefore meant to ask at the end of each Gospel story, What is the moral of this story? How does this story help me relate to Jesus better? What does it teach me about the character of the Lord I serve?

Sayings were often passed down as proverbs, which are general principles or graphic ways of making a point; other times they appear in the context of stories where they are applied in a specific way.

Although we speak of "reading" the Gospels, most people in antiquity would have "heard" them. Many people could not read, and few people had economic resources to obtain their own copies of books. Instead, a person who could read would read the Gospels to gathered assemblies of believers, and most believers would "hear" the Gospels. In that sense we should speak of them as "audiences" rather than "readers." Each Gospel writer may have had a special target audience in mind, but probably most hoped for a wider audience as well. In antiquity, books that succeeded well in public readings came to circulate more widely as more people had copies made.

Applying the Gospels Today. When we read narratives, or stories, in the Bible, we should look for the moral or morals of the story that the author wished to emphasize for his audience. We should try to put ourselves in the place of ancient hearers and listen to the words of Jesus as if we were hearing them for the first time from his own mouth. We should allow Jesus' graphic language to strike us the way it would have struck the first hearers. The Gospels recorded Jesus' sayings to apply

them to other generations besides Jesus' own (the writers wrote them down for their own generation, after Jesus had ascended to heaven), expecting their hearers to apply them to their own situations. But before we can understand how Jesus' teachings apply to our situations today, we must understand what he actually said in first-century Palestine and what he meant.

The Gospels in This Commentary. Matthew, Mark and Luke overlap significantly (see "*Synoptic Gospels" in the glossary), and in order to avoid repetition I have sometimes included more background under one of the Gospels than another one. Because readers will learn the most by working their way through one Gospel at a time, however, I have provided sufficient background for interpretation for each of the three Gospels. Mark was meant to be read quickly, like a tract, whereas Matthew was meant to be studied more, perhaps as a training manual; my comments on Matthew are thus often more detailed, although Matthew and Luke receive less attention where they use Mark. When Matthew and Luke overlap, the commentary is generally more detailed on Matthew. I have treated John independently, because the Fourth Gospel overlaps with the others considerably less than they overlap with one another.

Bibliography. See especially David E. Aune, *The New Testament in Its Literary Environment,* LEC 8 (Philadelphia: Westminster, 1987); Richard A. Burridge, *What Are the Gospels? A Comparison with Graeco-Roman Biography,* SNTSMS 70 (Cambridge: Cambridge University Press, 1992; 2nd ed., Grand Rapids: Eerdmans, 2004); Joel B. Green, Jeannine K. Brown and Nicholas Perrin, eds., *Dictionary of Jesus and the Gospels*, 2nd ed. (Downers Grove, IL: InterVarsity Press, 2013); for a collection of background sources, see Darrell L. Bock and Gregory J. Herrick, eds., *Jesus in Context: Background Readings for Gospel Study* (Grand Rapids: Baker Academic, 2005).

Manson, *The Sayings of Jesus* (Grand Rapids: Eerdmans, 1979); Harvey K. McArthur and Robert M. Johnston, *They Also Taught in Parables* (Grand Rapids: Zondervan, 1990); Klyne R. Snodgrass, *Stories with Intent: A Comprehensive Guide to the Parables of Jesus* (Grand Rapids: Eerdmans, 2008); Robert H. Stein, *The Method and Message of Jesus' Teachings* (Philadelphia: Westminster, 1978). On Jesus's miracles in an ancient framework, one recent helpful work (focused especially on Mark) is Wendy J. Cotter, *The Christ of the Miracle Stories: Portrait Through Encounter* (Grand Rapids: Baker Academic, 2010); on the passion narratives, see Raymond E. Brown, *The Death of the Messiah—from Gethsemane to Grave: A Commentary on the Passion Narratives in the Four Gospels,* 2 vols. (New York: Doubleday, 1994); on the resurrection narratives, see Michael R. Licona, *The Resurrection of Jesus: A New Historiographical Approach* (Downers Grove, IL: InterVarsity Press, 2010); N. T. Wright, *The Resurrection of the Son of God* (Minneapolis: Fortress, 2003).

Matthew

Introduction

Authorship. In contrast to, say, Paul's letters, attributions of authorship in the Gospels are generally based on church tradition rather than evidence in the biblical text itself. Although these traditions surface in various parts of the second-century empire, there appears to be unanimity regarding the authorship of the four Gospels, suggesting the traditions are early. Rarely were works the size of the Gospels published anonymously, so the first generation would have probably remembered and transmitted accurately traditions about their authorship.

Some question the specific tradition about Matthew, in part because the earliest tradition also claims that the original Gospel of Matthew was written in Hebrew, which is not true of our First Gospel. Some suggest that Matthew authored an earlier Hebrew work, perhaps especially involving Jesus' sayings; translated into Greek, this material was used by other Gospel writers but especially developed in our Gospel of Matthew. Most scholars also believe that our current Gospel of Matthew uses Mark. Although this observation might count against direct authorship by Matthew, one could argue against it being decisive by itself. Xenophon, for example, depends on an earlier written source even while reporting events of which he was an eyewitness, presumably because that source had become standard. Whatever one's conclusions, it seems best to speak of "Matthew" for lack of any better designation. There was also likely a reason for the church's tradition. Some scholars note that tax collectors (Mt 9:9) would be among the Galileans most apt to be able to take notes.

Date. The date of Matthew is debated (from before 70 to around 90). Even fairly conservative scholars differ in their views of Matthew's date and authorship. Most scholars, however, do not date Mark before 64, and do believe that our current Gospel of Matthew depends on Mark at a time when the latter was circulating widely. Because Matthew shows more concern for the emerging power of the Pharisaic rabbinic movement than Mark, and these *rabbis began to achieve some political power in Syria-Palestine mainly after 70, some argue that Matthew wrote in the seventies. Scholars lack unanimity; suggestions range earlier and later.

Where Matthew Was Written. The most likely proposed locale is in the area of Syria-Palestine. Some do so because that is where the rabbis may have exercised their greatest influence in the seventies and eighties of the first century. Whether or not that is the case, much of Matthew's language fits that of Jewish sages from the eastern Mediterranean, suggesting such a milieu. But again certainty is not possible.

Setting, Purpose. Matthew addresses the needs of his Jewish-Christian hearers, whom many scholars believe were in conflict with a Pharisaic religious establishment (cf. Mt 3:7 with Lk 3:7; Mt 5:20; 23:2-39). Members of the early rabbinic movement, mainly successors of the earlier *Pharisees, never achieved the power that later rabbis claimed, but they began to consolidate as much juridical and theological influence as possible, especially in Syria-Palestine, in the years and decades following A.D. 70.

Matthew presents the traumatic destruction of the temple (on many views this event had occurred recently; see the previous discussion on date) as judgment on the earlier Judean establishment (though it was mainly Sadducean) in chapters 23–24. He wants to encourage his community to evangelize *Gentiles as well as their own people (cf. 1:5; 2:1-12; 3:9; 8:5-13; 15:21-28; 24:14; 28:19). Many scholars believe that Matthew's collection of Jesus' teachings (especially chaps. 5–7, 10, 13, 18, 23–25) is to be used to make other disciples for Jesus, just as other Jewish disciples passed on their rabbis' teachings to their own disciples (28:19).

Genre and Sources. Most scholars think that when Matthew wrote his Gospel, Mark was already in circulation. (Not all scholars accept this position, but it is widely viewed as the consensus.) In line with a common literary practice of the day, Matthew followed an important source—Mark—and then wove in material from other sources around it. Given the character of ancient biography (see introduction to the Gospels), Matthew would have used only sources that he believed to be reliable; given the range of dates proposed, most of Matthew's primary sources would have come from the generation immediately following Jesus' ministry. Due to space limitations in this commentary, much of the material found in both Matthew and Mark receives more detailed treatment only under Mark.

Matthew and Luke also follow other material they share in common. Given Luke's birth *narratives and other material, the majority of scholars think it unlikely that Luke was depending on our current Gospel of Matthew. Instead, both share a common source or sources, sometimes in the same sequence (as one might expect particularly for a written source). Like most sources from antiquity, this one has not survived, except insofar as we might infer it from Matthew and Luke.

Biographies were written differently in Matthew's day than they are today. Biographers could write either in chronological order (e.g., Luke usually follows the order of his sources as carefully as possible) or, more frequently, in topical order. Matthew arranges the sayings of Jesus according to topic, not chronology: the ethics

of the *kingdom in chapters 5–7, the mission of the kingdom in chapter 10, the presence of the kingdom in chapter 13, church discipline and forgiveness in chapter 18 and the future of the kingdom in chapters 23–25. Some commentators have argued that Matthew grouped Jesus' sayings into five sections to parallel the five books of Moses. (Other works were also divided into five to correspond with the books of Moses, e.g., Psalms, Proverbs, the rabbinic tractate *Pirke Avot,* 2 Maccabees and perhaps **1 Enoch*.) This could be the case, although one cannot parallel specific speeches with specific books of the Pentateuch.

Matthew's Message. Some scholars believe that this Gospel or one of its sources was used as a training manual for new Christians (Mt 28:19); rabbis taught oral traditions, but Jewish Christians needed a body of Jesus' teachings in writing for Gentile converts. Matthew repeatedly emphasizes that Jesus fulfills the Jewish Scriptures, and argues from those Scriptures the way a trained *scribe would. He portrays Jesus as the epitome of Israel's hopes for his Jewish audience, but also emphasizes missions to the Gentiles: outreach to the Gentiles is rooted both in the *Old Testament and in Jesus' teaching. Matthew is quick to counterattack the religious leaders of his day who have attacked the followers of Jesus, but he also warns of the growing dangers of unfaithful religious leadership within the Christian community.

Commentaries. For background material, very useful commentaries include Craig S. Keener, *The Gospel of Matthew: A Socio-Rhetorical Commentary* (Grand Rapids: Eerdmans, 2009); W. D. Davies and Dale Allison, *A Critical and Exegetical Commentary on the Gospel According to Saint Matthew,* ICC, 3 vols. (Edinburgh: T & T Clark, 1988–); and R. T. France, *The Gospel of Matthew,* NICNT (Grand Rapids: Eerdmans, 2007). On a more popular level, see, for example, R. T. France, *Matthew,* TNTC (Downers Grove, IL: IVP Academic, 2008); Joe Kapolyo, "Matthew," in *Africa Bible Commentary,* ed. Tokunboh Adeyemo (Grand Rapids: Zondervan, 2006), pp. 1105-70; Craig S. Keener, *Matthew,* IVPNTC (Downers Grove, IL: IVP Academic, 1997); and Charles H. Talbert, *Matthew,* Paideia (Grand Rapids: Baker Academic, 2010).

Those most familiar with Matthew's milieu, however, will recognize my debt to primary sources and to various scholars on Jesus and his Jewish setting, both earlier voices such as I. Abrahams, Joachim Jeremias, T. W. Manson and Gustaf Dalman; and more recent scholars such as E. P. Sanders, Geza Vermes and Martin Goodman. For examples of useful specialized studies, see, for example, Marshall D. Johnson, *The Purpose of the Biblical Genealogies,* SNTSMS 8, 2nd ed. (Cambridge: Cambridge University Press, 1988), whose treatment includes Matthew 1:2-16; and on John the Baptist, works such as Carl H. Kraeling, *John the Baptist* (New York: Charles Scribner's Sons, 1951); and Joan E. Taylor, *The Immerser: John the Baptist Within Second Temple Judaism* (Grand Rapids: Eerdmans, 1997).

1:1-17
The Background of Jesus

Ancient biographies typically began by rehearsing the noble lineage of their subject. Here Jesus is connected with the history of his people from the beginning.

1:1. Greek readers often called the book of Genesis "the book of generations," and the title is also used for genealogies and other accounts contained in it (Gen 2:4; 5:1 LXX). In Genesis genealogies are named for the first person cited, but Matthew's genealogy is named for the person in whom it climaxes, Jesus Christ. For Matthew, Jesus' ancestors depend on him for their historical significance no less than others expected descendants to depend on their ancestors.

The *Messiah was to be a "son [descendant] of David"; "son of Abraham" was applied to Jewish people in general, so Matthew begins by reminding us that Jesus is Jewish. Genealogies could provide unity to a survey of history between major figures (as with Adam, Noah and Abraham in Gen 5, 11).

1:2-16. As in *Old Testament genealogies, but in contrast to Luke and Greco-Roman genealogies, Matthew records the names beginning with the oldest and moving to the most recent.

Genealogies reminded Jewish people of God's sovereignty in arranging marriages and providing offspring. Sometimes they also used genealogies to explain why a person behaved a particular way (e.g., perhaps Moses' descent from lawbreakers like Reuben, Simeon and [directly] Levi in Ex 6:12-30); Greek biographers could use illustrious ancestry to honor a person about whom they wrote. Most important, Jewish genealogies were essential to document a person's proper lineage as a pure Israelite (i.e., not descended from converted *Gentiles), a member of the priesthood, or royalty. Genealogies could also be used as unifying links between major figures in history; Genesis links Adam, Noah and Abraham in this way (Gen 5, 11). Matthew connects Jesus with the Old Testament narratives about the patriarchs, the Davidic kingly line and the exile.

Tradition records that at least partial genealogical records of important (especially priestly) families were kept in the temple. Though the temple was destroyed in A.D. 70, the claim for Jesus' Davidic descent was made before 70, when it still could have been checked (Rom 1:3). Even after 70, tradition reports that the evidence for his Davidic descent was still sufficient to provoke trouble for some of Jesus' relatives with the Roman government.

Ancient genealogies usually omitted women, but Matthew includes four women (1:3, 5-6).Three of these women were Gentiles (Gen 38:6; Josh 2:1; Ruth 1:4) and the other was at least associated with a Gentile (2 Sam 11:3)—though Matthew omits the four matriarchs prominent in Jewish tradition, Sarah, Rebekah, Leah and (less relevantly here) Rachel. Thus he hints from the Old Testament that God has always planned a mission to all peoples (Mt 28:19). Yet Jews emphasized their pure ancestry!

Scholars have suggested that some ancient genealogies incorporated symbolic material based on the interpretation of biblical texts. Jewish interpreters of Scripture sometimes would modify a letter or sound in a biblical text to reapply it figuratively. Thus the Greek text of Matthew 1:10 reads "Amos" (the prophet) rather than "Amon" (the wicked king—2 Kings 21), and Matthew 1:8 reads "Asaph" (the psalmist) rather than "Asa" (a good king turned bad—2 Chron 16); most translations have obscured this point.

1:17. Matthew omits some names, as was customary in genealogies (in this case perhaps following the Greek translation of the Old Testament); creating patterns like three sets of (roughly) fourteen made lists easier to remember. Dividing history into eras was common; a later Jewish text, *2 *Baruch,* divided history into fourteen epochs. By surveying Israel's past, Matthew suggests that Israel was due (or overdue) for a new event in salvation history. Less certainly, some commentators have argued that Matthew uses fourteen generations because the numerical value of David's name in Hebrew letters is 14. (Unlike letters in the English alphabet, Greek and Hebrew letters were also used as numerals; the Jewish practice of counting the numerical values of words and deriving meaning from them came to be called *gematria.*)

1:18-25
The Birth of Jesus

Ancient biographers often included stories

about the virtue of their subjects' birth or upbringing. Sometimes they even praised miraculous features of the births of their subjects (especially prominent in the *Old Testament), but there are no close parallels to the virgin birth. Greeks told stories of gods impregnating women, but the text indicates that Mary's conception was not sexual; nor does the Old Testament (or Jewish tradition) ascribe sexual characteristics to God. Many miraculous birth stories in the ancient world (including Jewish accounts, e.g., **1 Enoch* 106) are heavily embroidered with mythical imagery (e.g., babies filling houses with light), in contrast with the straightforward *narrative style of this passage (cf. similarly Ex 2:1-10).

1:18. Betrothal (*erusin*) then was more binding than most engagements are in the Western world today. If Joseph followed earlier tradition, he would pay a bride price, at least part of it offered during the betrothal. Betrothal, which commonly lasted a year, meant that bride and groom were officially pledged to each other but had not yet consummated the marriage; advances toward anyone else were thus regarded as adulterous (Deut 22:23-27). Two witnesses, mutual consent (normally) and the groom's declaration were necessary to establish Jewish betrothals (in Roman betrothals, consent alone sufficed). Although Romans sometimes used engagement rings, Palestinian Jews probably did not use them in this early period.

Mary may have been between the ages of twelve and fourteen (or even as old as sixteen); if this was Joseph's first marriage, he may have been between the ages of eighteen and twenty (the age for men's marriage considered ideal by later *rabbis). Their parents likely arranged their marriage, with Mary and Joseph's consent. Later traditions suggests that premarital privacy between betrothed persons was permitted in Judea but frowned upon in Galilee, so Mary and Joseph may well not have had any time alone together at this point.

1:19. The penalty for adultery under Old Testament *law was death by stoning, and this penalty applied to infidelity during betrothal as well (Deut 22:23-24). In *New Testament times, Joseph would have merely been required to divorce Mary and expose her to shame; the death penalty was rarely if ever executed for this offense. (Betrothals were so binding that if a woman's fiancé died, she was considered a widow; betrothals could otherwise be terminated only by divorce.) But it could be difficult for a woman with a child, divorced for such infidelity, to find another husband, leaving her without means of support if her parents died. The unfaithfulness of a betrothed woman would also dishonor the man to whom she was pledged.

A husband could divorce his wife publicly before a judge if he were charging her with an offense; in this case he could dissociate himself from her publicly, get back any bride price he had paid, and acquire any dowry her father had given her for the marriage. Because divorces could be effected by a simple document with two witnesses, Joseph could divorce her without making her shame more widely known. Much later rabbinic tradition charges that Mary slept with another man, but Joseph's marrying her (v. 24) demonstrates that he did not believe this was the case.

1:20. In the Old Testament, angels often brought messages in dreams; in Greek literature, deceased people (as well as pagan deities) often brought messages, but this occurs nowhere in the Bible. The Old Testament does mention expert dream interpreters, like Daniel (Dan 1:17; 2:19-45) and Jacob's son Joseph (Gen 37:5-11; 40–41). Most stories from here in Matthew 1 to the end of Matthew 2 involve supernatural guidance (dreams or the star).

1:21. The name Jesus (*Aramaic *Yeshua*, Greek *Iesous*) means "God is salvation" in Hebrew. Parents often intended the names they gave children to have some meaning, but if God gave the name, it had special significance (cf. Gen 16:11; 17:19). The Old Testament taught that God's people would be saved in the time of the *Messiah (Jer 23:5-6), and Jewish readers in the first century would have understood this salvation to mean more than just personal forgiveness. They prayed for the day when God would deliver his people from the consequences of their sins—from subjugation beneath their enemies; many believed that this deliverance would occur when their people as a whole reformed and turned wholeheartedly to God. Jesus also came to deliver his people from personal sin and thus to deliver them from its judgment.

1:22-23. Matthew cites Isaiah 7:14 and indicates a broad familiarity with Isaiah's context. In that context, Assyria would lay waste Israel and Aram before the promised son was grown (Is 7:14-17); "a son" thus seems to refer to Isaiah's own son in Isaiah 8:3-4. But all the names of Isaiah's children were meant as signs pointing to significant events beyond themselves (8:18), and to whom would "Immanuel," or "God with us" (7:14), more aptly point than to the son of David rightly called "Mighty God" (9:6; cf. 10:21; 11:1)?

1:24-25. Joseph acts like Old Testament men and women of God who obeyed God's call even when it went against all human common sense. Marriage consisted of covenant (beginning at the betrothal; the marital contract also involved a monetary transaction between families), a celebration and a consummation, which ratified the marriage, normally on the first night of the seven-day wedding banquet. Joseph here officially marries Mary but abstains from consummating the marriage until after Jesus is born. They abstain even though she could have proved her virginity on the wedding night; in this way Jesus has not only a virgin conception but a virgin *birth* (1:23). Newly married couples sometimes lived in very small quarters. Jewish teachers thought that men had to marry young because they could not resist temptation (many even blamed a woman's uncovered hair for inducing lust). Joseph, who lives with Mary but exercises self-control, thus provides a strong role model for sexual purity.

2:1-12
The Pagan Seekers

Ancient writers and audiences often compared or contrasted characters in the *narratives. Here Israel's ruler acts like a pagan king, while *Gentiles come to honor Israel's true king; meanwhile, the religious teachers who knew the most (2:5) failed to act on the truth, even already at Jesus' birth.

2:1. Herod the Great died in 4 B.C.; Jesus was thus born before 4 B.C., rather than in A.D. 1; our calendars are off by several years. "Magi" (not "wise men"—KJV) were pagan astrologers whose divinatory skills were widely respected in the Greco-Roman world; astrology had become popular through the "science" of the East, and everyone agreed that the best astrologers lived in the East. The *Old Testament explicitly forbade such prognostication from signs (Deut 18:11; cf. Is 2:6; 47:11-15), prescribing true *prophecy instead (Deut 18:15).

2:2. Astronomers have offered various proposals for the appearance of this star in the first decade B.C. The ancients thought comets and falling stars predicted the fall of rulers; some emperors even banished from Rome astrologers who issued such predictions. Despite the biblical prohibition of divination, by this period many Jewish people accepted the idea that the stars could accurately predict the future (especially for Gentiles). Even though these Magi were pagans, God had chosen to reveal himself to them.

2:3. Many rulers feared astrological signs of their demise; the Emperor Nero later reportedly slaughtered many nobles in the hope that their deaths (rather than his own) would fulfill the prediction of a comet. Jerusalem was an important trade center; the Magi must have come with quite an entourage for the whole city to notice them. Then again, many people resented Herod's rule and rumors could have circulated quickly. King Herod, who was aware of broad currents of thought in the Roman Empire and sponsored pagan temples among Gentile cities in his realm, might have been especially apt to consider the Magi's mission significant.

2:4. The chief priests (*Josephus shows that in this period, the plural title applied to the aristocratic priests generally) belonged mainly to the wealthy aristocracy of *Sadducees; "*scribes" in the narrow sense in which the term is used here applies to experts in the Jewish *law, most of whom were also teachers of the law. That Herod exercised a great deal of influence over the prominent leaders of the people is not surprising; Josephus says that he executed the earlier Sanhedrin and after that assembled councils as he wished.

2:5-6. Micah 5:2 predicted Bethlehem as the *Messiah's birthplace, because the Messiah was to be a descendant of David, and Bethlehem had been David's hometown. It was a small town about six miles south of Herod's capital, Jerusalem. The Magi had come to Jerusalem because that was where they expected to

find any Judean king—but Herod had apparently not had any new sons lately. Remarkably, the scribes who knew where the Messiah would be born did not act on that knowledge; successors of these Jerusalem leaders later sought Jesus' execution (26:3-4, 57).

2:9-10. The text might imply only that the star *appeared* to move due to the Magi's own movement. Even had the object been close enough to earth to calculate its relation to Bethlehem, Bethlehem was so close to Jerusalem that any distance would have been negligible unless the object was only a mile high. But the description of God's leading of the Magi by a moving, supernatural sign may recall how God had led his own people by the fire and cloud in the wilderness (Ex 13:21-22).

2:11. Their posture of worship was appropriate toward gods or toward kings in the East. (Unlike most Mediterranean peoples, the Magi may not have been polytheists; they may have been Zoroastrian dualists. Scholars do, however, debate the exact nature of Zoroastrianism in this period.) Incense and myrrh were treasures characteristic of the East that the Mediterranean world typically imported from there (cf. 1 Kings 10:10; Ps 72:10-11, 15).

2:12. Most kings reacted with hostility to potential usurpers and to astrological predictions of their demise. That the Magi had to be warned by a dream not to return to Herod thus suggests their naiveté, an innocence Jews rarely expected of Gentiles. Most peoples in the ancient world paid attention to special dreams (1:20); some even had rules on how to interpret them; and the Greeks thought that Magi were specially adept at dream interpretation.

The main road they would need to take northward from Bethlehem went directly through Jerusalem, then eastward through Syria. Given the probably large size of their entourage, the Magi could not approach Jerusalem without being noticed, as Herod knew very well. Indeed, no major route could take them homeward without passing through Jerusalem. They may have ventured far south to Hebron; perhaps they then followed the rugged road to Gaza on the coast, where another road could lead them northward, then through Galilee and on to Damascus.

2:13-15
Egypt and a New Exodus

2:13-14. A very large Jewish community lived in Egypt in this period. Perhaps one-third of Alexandria, located in northern Egypt, was Jewish; with a population estimated at about one million, it was one of the empire's largest cities. Alexandria included a well-to-do Jewish element, schooled in Greek thought; most inhabitants of Egypt, however, were agrarian peasants, some of the poorest in the empire. Other Jewish communities had existed farther south, especially in Elephantine, for centuries. Literature from Palestinian Jews indicates that many of them questioned the devoutness of their Egyptian Jewish kinfolk, although Egyptian Jews considered themselves faithful to God.

The Nile made travel easy within Egypt, but the coastal road to Egypt from Palestine was not the finest. From Bethlehem one would take the poorer route southward to Hebron (see comment on 2:12). Egypt had served as a place of refuge in the past (1 Kings 11:40; Jer 26:21). In one Jewish tradition, God in a dream predicted to Moses' father that Moses would be a deliverer, before Moses was born. By leaving "at night," Joseph's family made their route of departure impossible to trace; the language might also evoke Jewish readers' memory of Exodus 12:31. Especially if they had an animal, they could have taken some of the gifts (2:11) for their life in Egypt.

2:15. Matthew builds almost every paragraph from the genealogy to the Sermon on the Mount around at least one text in the *Old Testament, explaining some event of Jesus' life from Scripture. In context Hosea 11:1 refers plainly to the Israelites leaving Egypt in the exodus; Matthew applies this text to Jesus because Jesus epitomizes and fulfills Israel's history (Mt 1:1). The broader context of Hosea 11 promises a new exodus and era of salvation (Hos 11:5, 11).

Matthew could have learned this Israel/Messiah interpretive analogy from his reading of Isaiah. Isaiah 42–53 narrows down the mission of Israel as a whole to the one who can ultimately fulfill that mission and suffer on behalf of the whole people—the one whom Christians would later understand to be Jesus (see Mt 12:17-21).

Herod died in 4 B.C.

2:16-18
Herod's Slaughter: A New Captivity

2:16. Because the most natural route by which the Magi could have returned was through Jerusalem (2:12), Herod knew that the Magi had purposely avoided returning to him. He was known for acts like the massacre described here. A young but popular competitor, a *high priest, had a "drowning accident" in a pool that was only a few feet deep. Enraged at his favorite wife, Herod had her strangled (discovering her innocence only afterward); he was deceived into having two innocent sons executed; and on his own deathbed Herod had another son executed (admittedly a guilty one). Although probably fictitious, a purported comment of the emperor is appropriate: Better to be one of Herod's pigs than his son. Josephus reports that Herod ordered nobles executed at his death to ensure mourning when he died; they were instead released at his death, producing celebration.

One of his fortresses, the Herodium, was within sight of Bethlehem, and he could have dispatched guards from there. Jewish people saw infanticide (killing babies) as a hideous, pagan act; sometimes applied by the Romans to deformed babies, it had also been used to control oppressed populations (Ex 1:8-22; 1 Maccabees 1:60-61; 2 Maccabees 8:4). Herod thus acts like a pagan tyrant, particularly Pharaoh in Exodus 1:22 (and secondarily Antiochus Epiphanes). Like Moses, Jesus escaped the fate of other male babies (Ex 1:22–2:10), and some Jews were expecting the coming of a prophet "like Moses" (Deut 18:15, 18).

2:17-18. Jeremiah 31:15 refers to the figurative weeping of Rachel, who was buried near Bethlehem (Gen 35:19). Jeremiah said she mourned for her descendants carried off into captivity during the Babylonian exile. Israel's corrupt ruler Herod is not only like Pharaoh; he is like Israel's subsequent oppressors. As Jesus' escape presaged a new exodus (Mt 2:15), so here his people's suffering echoes the captivity (cf. 1:11-12). The context of Jeremiah's *prophecy might remind Matthew of Hosea 11:1 (see Jer 31:20), but the suffering in the context becomes a prelude to the hope of the new covenant (31:31-34; cf. Mt 26:28).

2:19-23
The Nazarene

2:19. On dreams, see comment on 1:20.

2:20-21. Matthew's first readers would have undoubtedly caught the comparison Matthew implies between Jesus and Moses here (cf. Ex 4:19).

2:22. Archelaus, one of Herod's surviving sons, not only exhibited his father's worst flaws but also lacked his administrative skill. That his mother was a *Samaritan surely also failed to commend him to his Jewish subjects. His rule was unstable, and the Romans ultimately deposed him and banished him to Gaul (France); see Josephus, *Jewish Antiquities* 17.334; *Jewish War* 2.111.

2:23. Archaeological evidence in the region of Nazareth suggests that many people had moved there from Judea, including from the area near Bethlehem. Joseph may have had friends or relatives in Nazareth (cf. Lk 2:4). Nazareth was on a major road from the coast to Syria and only a few miles from the more cosmopolitan city of Sepphoris, which was being rebuilt during Jesus' childhood (cf. Mt 13:55). Some scholars believe that only a few hundred people lived in Nazareth proper. Though small, Nazareth would not have been isolated from broader cultural currents of antiquity. Nevertheless, it also appears to have been fairly conservative in its Jewish practice.

No single text provides Matthew's citation here. But ancient authors sometimes blended texts together, and both Jews and Greeks used plays on words to make points in argumentation, so this text could be a play on the Hebrew word *netser,* "branch," a title for the *Messiah (Jer 23:5; Zech 3:8; 6:12; cf. Is 11:1). (The only problem with this suggestion is that it assumes Matthew's original readers already knew Hebrew; but perhaps some of the more skilled among them did.) Or it could be a play on "Nazarene": by changing some letters slightly, it could refer to the Nazirites, a class of people dedicated to God (cf. Num 6:1-21).

3:1-12
Jesus' Forerunner

See Mark 1:2-8 for more detailed comments. Isaiah 40:3, cited in Matthew 3:3, refers to a

herald of the new exodus, when God would save his people again from the oppression they suffered.

3:1. "In those days" was a common *Old Testament expression, especially in (but not limited to) prophecies concerning the future. Many people in Jesus' day expected a great leader to bring deliverance to God's people from the wilderness, in a new exodus. In times of severe national apostasy in the Old Testament, some prophets (like Elijah) found it necessary to live outside society's boundaries.

3:2. The Jewish people recognized that God ruled the universe in one sense now, but prayed daily for the time when his *kingdom, or rule, would be established over all peoples of the earth. (See further comment on Mk 1:14-15.)

3:3. Isaiah 40:3 is in the context of Isaiah's *prophecy of a new exodus, when God would again deliver his people and lead them back to Jerusalem from all the nations among which they were scattered. Highways required adjustment of terrain to make them straight and level, and ancient kings, especially the kings of the East, expected the roads to be well prepared before they would travel on them. Perhaps in the interest of technical accuracy, Matthew deletes Mark's citation of Malachi here (used in Mt 11:10; Lk 7:27).

3:4. John's diet is that of the very poor; although domestic beekeepers were common, John eats only wild honey. (Honey was normally procured by smoking the bees out and then breaking open the honeycomb; honey was the only sweetener for food and was considered the sweetest of tastes.) But *Essenes and other pious Israelites (2 Maccabees 5:27) ate such diets to avoid unclean food.

John dressed like Elijah (2 Kings 1:8) and other people who lived outside society (some, like *Cynics and *Josephus's Essene tutor Bannus, were more *ascetic). Elijah was to prepare the way for God's coming, suggesting Jesus' identity (Mal 4:5-6; cf. 3:1).

3:5-6. Pagans wanting to convert to Judaism would repent and be baptized, but John here treats Jewish people on the same terms as pagans (see further comment on Mk 1:4-5.)

3:7. An ancient tradition suggested that some kinds of vipers ate their way out of their mothers (see, e.g., Herodotus, *Plutarch). It was bad enough to be called a viper, but to be called a viper's child was even worse—killing one's mother or father was the most hideous crime conceivable in antiquity.

3:8. *Repentance meant turning from sin. The *Pharisees themselves are known to have questioned professions of repentance if the supposedly repentant person continued sinning. The Old Testament prophets had sometimes described the obedience one owed God, or God's future blessing of his people, in terms of fruit (a natural image in an agricultural society; cf. Is 5:2; 27:6; Hos 10:1, 12-13; 14:7-8; Prov 11:30-31).

3:9. Jewish people commonly believed that they were saved as a people by virtue of their descent from Abraham. The idea of God raising up people from stones would have sounded to John the Baptist's Jewish hearers more like pagan mythology (the Greeks had such stories) than reality, but ancients often used the metaphor figuratively. Some scholars have also suggested a wordplay on "children" and "stones" in *Aramaic; biblical prophets sometimes used puns to hold attention. The God who could create from dust (Gen 2:7; cf. 1:24) or ribs (2:21) could create from stones; moreover, stones could be used to symbolize God's people (Ex 24:4; 28:9-12; Josh 4:20-21; 1 Kings 18:31). Other prophets had emphasized that God did not need Israel to fulfill his purpose (as in Amos 9:7).

3:10. Jewish literature sometimes used trees (like many other things) to symbolize Israel; at times the Old Testament used trees in *parables of judgment against the nations (Is 10:33-34; Ezek 31:2-18; Amos 2:9) or Israel (Is 10:18-19; Jer 11:16; Ezek 15:6). The wood of a thick tree (like a cedar from Lebanon) would have been used for building, but much of the wood from Palestine's many slender fruit trees (e.g., olive or fig trees) would be useful only for small items or, often as here, for fuel.

3:11. Slaves of high-status individuals often had higher status than free persons. A slave (unlike a *disciple, who also served a master) carried the master's sandals; John here claims that he is not worthy even to be Christ's slave—even though earlier prophets were often called "servants" of God (e.g., 2 Kings 9:7; Jer 7:25; Dan 9:6, 10).

The prophets had predicted the outpouring of God's *Spirit on the righteous at the time

when God established his kingdom for Israel (Is 44:3; Ezek 39:29; Joel 2:28). They also decreed fire upon the wicked (Is 26:11; 65:15; 66:24; Jer 4:4; 15:14; etc.). In Matthew 3:11, the wicked are baptized, or immersed, in fire (3:10, 12), the righteous in the *Holy Spirit.

3:12. Because the same Greek (and Hebrew) word can mean both "spirit" and "wind," the picture of wind and fire carries over from 3:11. Winnowing was familiar to all Palestinian Jews, especially to the farmers: they would throw harvested wheat into the air, and the wind would separate the heavier grain from the lighter chaff. The chaff was useless for consumption and was normally burned. Some other writers also described the day of judgment as a harvest (**4 Ezra* 4:30-32; cf. Jer 51:33; Joel 3:12-14) or the wicked as chaff (Is 17:13; Jer 13:24; 15:7; etc.). That the fire is "unquenchable" points beyond the momentary burning of chaff to something far more horrible (Is 66:24). Indeed, John presupposes the harshest view of hell available in his day, since Jewish tradition was far from unanimous concerning its duration (see "*Gehenna" in glossary).

3:13-17
Jesus' Accreditation by God

See Mark 1:9-11 for further details.

3:13-15. John anticipates Jesus' immediate *baptism in the Spirit (see comment on 3:11); Jesus identifies with Israel.

3:16. Many believed that the Spirit was no longer available in their time; others believed that the Spirit simply did not work as forcefully as in the days of the prophets, until the time of the end. That the Spirit comes on Jesus indicates the inauguration of the messianic era and marks Jesus out as the Spirit-bearer and hence *Messiah (3:11). The dove might evoke a new era (cf. Gen 8:11-12).

3:17. Many believed that voices from heaven were the closest anyone came to *prophecy in their time. Both kinds of witness support Jesus: the heavenly voice and John's prophecy. Matthew intends his more erudite readers to see allusions not only to a royal Messiah in Psalm 2:7, but also to the suffering servant of Isaiah 42:1-4 (see comment on Mt 12:18-21).

4:1-11
Jesus Overcomes Israel's Tests

The devil tried to shape Jesus' understanding of "sonship" (3:17) according to worldly models of power; Jesus allowed Scripture to define his mission. The three texts from Deuteronomy (6:13, 16; 8:3) he cites (Mt 4:4, 7, 10) were commands God gave to Israel when he tested Israel for forty years in the wilderness, the context of the first one addressing God's "son." Unlike Israel of old, Jesus as Israel's representative (1:1; 2:15) passes the tests. Some scholars have compared the battle of wits between Jesus and the devil to the way rabbinic debates were conducted. Jewish stories also praised those who endured and passed the severest moral tests.

4:1. One of the most common recitations of God's acts in the *Old Testament was that he "led" his people in the wilderness (see especially Is 63:14), where they were tested. Although the Old Testament only rarely mentions the devil, his activity as tempter (cf. Job 1-2) had come into focus much more by Jesus' day. A surprising feature here for most Jewish readers would not have been that the devil was providing temptation, but that he was doing it in person.

4:2. Moses also fasted forty day and nights; Jesus may appear here as a new Moses, the new lawgiver (see Mt 5:1-2). Israel also was in the wilderness forty years (see the introduction to this section).

4:3. The ancients attributed this sort of feat to magicians, who claimed to be able to transform themselves into animals and to transform other substances, like stones into bread. Many Jewish people were also hoping for a new exodus led by a new Moses—complete with new manna, or bread from heaven. The devil challenges or seeks to define Jesus' sonship against God's Word (3:17; cf. Gen 3:1); models of power in that culture included magicians and (as in 4:8) worldly rulers. The devil wants to conform the definition of Jesus' divine role to contemporary expectations.

4:4. The devil offers worldly models for what it means to be God's "son" (4:3); trusting the Father's voice (3:17), Jesus defines his mission instead from Scripture. Jesus would have known the context of Deuteronomy 8:3,

which he cites: he can depend on God's provision of manna in the wilderness because God is Jesus' Father as God was Israel's (Deut 8:5).

Other Jewish circles (as evident, e.g., in the *Dead Sea Scrolls and later rabbinic texts) also used the phrase "It has been written" to introduce Scripture.

4:5-6. "The holy city" was a standard title for Jerusalem. The devil takes Jesus to a part of the temple that overlooked a deep valley; a fall from there would have meant certain death. Later *rabbis acknowledged that the devil and *demons could handle Scripture expertly. Here the devil cites Psalm 91:11-12 out of context; 91:10 makes clear that God's angelic protection (cf. Mk 1:13) is for events that *befall* his servants, not an excuse to seek out such dangers. The devil phrases his temptation in language a popular Jewish work applied to the wicked mocking the righteous (Wisdom of Solomon 2:18).

4:7. Using the same general context as previously, Jesus cites Deuteronomy 6:16, which refers to how the Israelites had tested God at Massah by refusing to accept that God was among them until he wrought a sign for them (Ex 17:7).

4:8-9. This realm did not technically belong to the devil (see Dan 4:32), who owned human hearts only as a usurper. The best the devil could do would be to make Jesus the political, military sort of *Messiah most Jewish people who expected a Messiah were anticipating.

4:10. Deuteronomy 6:13, which Jesus cites from the same context as previously, prohibits idolatry (see Deut 6:14), a commandment anyone who worshiped the devil would obviously violate. Cf. Mt 16:22-23.

4:11. The promised angels of Ps 91:11 serve Jesus (cf. perhaps Ps 104:4), who refused to abuse the promise out of context in Mt 4:6-7.

4:12-17
Foreshadowing the Preaching to Gentiles

4:12-13. Nazareth was a small agricultural village and suburb of the old Galilean capital, Sepphoris; Capernaum was a larger fishing town (some estimate of one or two thousand) on the northwest edge of the Sea of Galilee. The trade routes brought *Gentiles through those parts. Capernaum lay in the borders of Naphtali but not Zebulon; Matthew mentions the latter because they occur together in Isaiah 9:1, which he cites in 4:15.

4:14-16. Citing here Isaiah 9:1-2, Matthew undoubtedly knows the context: the light to which it refers involves the promised Davidic king (Is 9:6-7). (Matthew again is anticipating the evangelization of non-Jews by foreshadowing it in his *narrative.) Many non-Jews in Galilee had been forcibly converted to Judaism in the second century B.C.; they had previously been aligned with Judea's Phoenician enemies (1 Maccabees 5:15). Subsequently, however, many Judeans settled in Galilee, and its inhabitants were primarily ethnically as well as religiously Jewish. More to the point, Galilee was surrounded on all sides (except its southern, *Samaritan border) by *Hellenistic city territories. Capernaum (like Sepphoris and Nazareth farther south) was situated along one of the major trade routes of Palestine, later called "the way of the sea." This was a caravan route from Damascus to Caesarea Maritima, which was on the Mediterranean coast.

4:17. Jesus' message is summarized as *repentance to be ready for the *kingdom; see comment on 3:2. First-century Jewish hearers would have heard in this proclamation a warning of the imminent day of judgment.

4:18-22
Examples of Repentance

Ancient writers often illustrated their teachings (here, 4:17) with narrative examples. See comment on Mark 1:14-20 for further details.

4:18. Most Galileans depended especially on salted fish, wheat and barley for sustenance; fish products like fish gravies were thus also common. The fish of the Sea of Galilee included large carp; the fish would be dried, salted or pickled to preserve them. Fishermen were central to the Galilean economy and could make a good living by the standards of their culture, far better than the large numbers of peasants who worked the land through much of the Roman Empire. It is thought that the casting net had a narrow end pulled by the boat and a wide end sunk by leads (contrast the larger dragnet of 13:47); nets were probably made of rope or cords woven from flax, papyrus or hemp. Archaeologists have recovered an ancient Galilean fishing boat.

4:19-20. *Disciples normally chose to become students of a particular rabbi. Only the most radical teachers called their own disciples.

4:21-22. Fishermen had more income than average people in Galilee, so James and John were not leaving their job just because it did not pay well. More than that, however, they suddenly left behind their father and the family business; such abandonment could easily bring them dishonor in the community. (Both Jews and Greeks, however, had similar accounts and would recognize this sudden departure as a sure sign of radical discipleship.)

4:23-25
Examples of Kingdom Authority

Ancient literature commonly includes not only longer *narrative segments but also summary statements like this passage (also 9:35; 19:1-2; etc.).

4:23. Visiting teachers, especially popular ones, were normally invited to speak in *synagogues, which in this period were led by priests or laymen who were prominent members of their communities.

4:24. Because many Jewish people lived in Syria, Matthew presumably intends Syrian Jews here (Matthew probably would have eagerly mentioned Gentiles had they come). The presence of multitudes seeking relief at hot springs (like Hammath-Tiberias) in Galilee testifies to the vast numbers who sought healing in the first century; the few figures reputed as wonder-workers (e.g., Jewish exorcists or Gentile magicians) could also draw great crowds.

Although some (not all) contemporary medical writers thought epilepsy was due to demonic activity, Matthew here distinguishes the two.

4:25. The Decapolis, the "Ten Cities," was a Gentile area that included a large Jewish population.

5:1-12
The Beatitudes, or Blessings

Matthew 5–7 is the first block of teaching material in Matthew, dealing with the ethics of the *kingdom. In 4:17 Jesus summarizes his message: "Repent, for the kingdom is at hand"; Matthew 5-7 shows in greater detail the repentant lifestyle that characterizes the people of the kingdom. This block is introduced by a common *Old Testament literary form called beatitudes: "Happy are those who . . . for they shall . . . " (e.g., Ps 1:1). (The form appears also in some Greek literature, but is more common in Jewish sources.) Here the blessings are the promises of the kingdom for those who live the repentant life. Jesus' hearers would have understood them especially as promises for the future time of God's reign; we must read them in the light of the present aspect of the kingdom as well (see "kingdom" in the glossary). The future kingdom was sometimes defined by images from the creation *narratives or from Israel's exodus from Egypt, which the Jewish people regarded as their original redemption.

5:1-2. Although one would stand to read Scripture publicly, the most respected Jewish teachers would usually sit to expound it, often with *disciples sitting at their feet. Some scholars have compared the "mountain" (cf. Lk 6:17) here to Mount Sinai, where God through Moses first taught his ethics by the *law (Ex 19-20; cf. Is 2:2-3).

5:3. Ancient writers and speakers would sometimes bracket a section of material by beginning and ending with the same phrase. These blessings involve the gift of the kingdom (5:3, 10).

Many Jewish people believed that the kingdom would be ushered in only by a great war and force of arms; Jesus promises it for the "poor in spirit," the "humble" or "meek" (5:5), the peacemakers (5:9). Poverty and piety were often associated in Judaism; the term *poor* could encompass either physical poverty (Lk 6:20), or the faithful dependence on God that it often produced ("in spirit," as here).

5:4. Mourning was usually associated with either *repentance or bereavement; the conjunction with "comfort" means that the second aspect is in view here. It could mean grief over Israel's sins, but in this context probably refers to the pain of the oppressed (it involves the broken, as perhaps in 5:3). "Comfort" was one of the blessings promised for the future time when God would restore his mourning people (Is 40:1; 49:13; 51:3, 12; 52:9; 54:11; 57:18; 61:2; 66:13).

5:5. Here Jesus cites Scripture (Ps 37:9, 11). Not those who try to bring in the kingdom politically or militarily but those who humbly wait on God will "inherit the earth." The

Hebrew of the psalm could mean "inherit the land" in a narrower sense (Ps 25:13), but in Jesus' day Jewish people expected God's people to reign over all the earth, as some other Old Testament passages suggest.

5:6. On the physically needy, see comment on Lk 6:20. Jewish people understood that God would also satisfy his people's needs in the future kingdom (Is 25:6; 41:17-18; 55:2), as he had supplied for them in the exodus when he first redeemed them (Deut 6:11; 8:7-10). But the greatest object of longing should be God (Ps 42:1; 63:1) and instruction in his righteousness (Ps 119:40, 47, 70, 92, 97, 103; Jer 15:16).

5:7. Some later *rabbis uttered similar statements (cf. also Prov 11:17). Like the peacemakers (v. 9), the merciful are not those who seek to bring in the kingdom by force. The mercy Jewish people generally hoped to receive was expected in the day of judgment (cf. Mic 7:18-19).

5:8. The "pure in heart" (Ps 73:1) were those in Israel whose hearts were "clean," or undefiled, those who recognized that God alone was their help and reward (Ps 73:2-28). The righteous would see God on the day of judgment (e.g., Is 30:20), as in the first exodus (Ex 24:10-11).

5:9. Both the Jewish people and the righteous were called "sons of God" in Jewish tradition; the ultimate declaration of that fact would be made in the sight of the nations on the day of judgment (cf. Hos 1:10). Those teachers who came to dominate Pharisaism after the war of A.D. 66–70 were the ones who emphasized the way of peace rather than the way of revolt espoused by others. But many other Jewish leaders had joined in the spirit of revolt and were killed or came to be viewed as illegitimate leaders after the revolt's failure.

5:10-12. Many of the Old Testament prophets suffered in bringing God's word to Israel (e.g., Jer 26:11); Jewish tradition amplified the number of prophetic martyrs further and made it a major emphasis. The burden of proof was always on the prophet who spoke what people wanted to hear (Jer 28:8-9; cf. 6:14; 8:10-11; 23:17).

Most Jewish people did not believe that prophets still existed in the Old Testament sense, so Jesus' comparing his followers to the prophets indicated that they would have an extraordinary mission. To suffer for God was meritorious (Ps 44:22; 69:7), and Judaism highly honored martyrs for God's law; yet no other rabbi called disciples to die for his own teachings or name.

5:13-16
Real Discipleship

A *disciple of the *kingdom who does not live like a disciple of the kingdom (5:3-12) is worth about as much as tasteless salt or invisible light.

5:13. Various scholars have emphasized different uses of salt in antiquity, such as a preservative or an agent regularly added to manure; but the use of salt here is as a flavoring agent: "if salt has become tasteless" (the Greek word can also mean "become foolish," so it may include a play on words).

Although the salt recovered from impure salt substances taken from the Dead Sea could dissolve, leaving only the impurities behind, the point here may be closer to that expressed by a rabbi at the end of the first century. When asked how one could make saltless salt salty again, he replied that one should salt it with the afterbirth of a mule. Being sterile, mules have no afterbirth, and the rabbi was saying that those who ask a stupid question receive a stupid answer. Real salt does not lose its saltiness; but if it did, what would you do to restore its salty flavor—salt it? Unsalty salt was worthless.

5:14. Jewish tradition considered Israel (Is 42:6; 49:6) and Jerusalem (as well as God and the *law) the light of the world. The "city" here could thus be Jerusalem; or it may be any elevated city at night, whose torch lights would make it visible to the surrounding countryside.

5:15-16. The small wicker oil lamps of this period gave little light in the average home, which had few windows; they would be most effective by being set on a lampstand. Something large placed over them would presumably extinguish the light altogether.

5:17-20
The Law Enforced

Jesus' ethical demands (5:3-16) are no weaker than those of the *law given by Moses; cf. 5:21-26.

5:17. Jewish teachers said that one "abolished" the law by disobeying it (cf. Deut 27:26),

because one thereby rejected its authority. Such highhanded rebellion against the law—as opposed to particular sins—warranted social and spiritual expulsion from the Jewish community. The charge of openly persuading others that the law was no longer in force would be even worse. Jesus opposed not the law but an illegitimate traditional interpretation of it that stressed regulations more than character.

5:18. Jesus refers here to the *yod,* the smallest letter in the Hebrew alphabet. Later rabbis told the story that when God changed Sarai's name to Sarah, the *yod* that was removed complained to God for generations till he reinserted it, this time in Joshua's name. In another later story, a *yod* protested that King Solomon was trying to uproot it from the Bible; God replied that a thousand Solomons would be uprooted, but not a single *yod* would pass from Scripture. Jewish teachers used illustrations like this to make the point that the law was sacred and one could not regard any part as too small to be worth keeping.

5:19. Later rabbis debated which commandments were the greatest. Some decided that the greatest commandment was honoring one's father and mother, and the least, respecting a mother bird; they reasoned that both merited the same reward, *eternal life (based on "life" in Ex 20:12; Deut 22:7). A modern reader might ask, What happens to the person who breaks one and keeps another? But such a question misses the point of this hyperbolic language which other Jewish teachers also typically used to say, "God will hold accountable anyone who disregards even the smallest commandment."

5:20. The *Pharisees were the most respected religious people in Judea, and the *scribes the supreme experts in the law (especially, no doubt, the Pharisaic scribes). Verses 21-48 show what Jesus' demand for a "higher" righteousness involves. The Pharisees also stressed the right intention of the heart (*kavanah*); Jesus' criticizes not their doctrine but their hearts as religious people. Religious communities led by Pharisaic teachers may have also been opponents of Jewish Christians in Syria-Palestine in Matthew's day, giving Matthew additional incentive to record these words.

5:21-26
Anger as Murder

Six times in verses 21-43 Jesus cites Scripture and then, like a good rabbi, explains it (5:21, 27, 31, 33, 38, 43). The sort of wording he uses (especially "You have heard") was used by other Jewish teachers to establish the fuller meaning of a text, although Jesus speaks with greater authority than Jewish teachers normally claimed.

5:21-22. "Raca" is *Aramaic for "empty-headed or worthless"; the insult is about the same as the one that follows it, "Fool!" The punishments are also roughly equal: the (day of God's) judgment, the heavenly Sanhedrin or supreme court, and hell. (Jewish literature described God's heavenly tribunal as a supreme court, or sanhedrin, parallel to the earthly one.) "The hell of fire" is literally "the *Gehenna of fire." Teachers envisioned Gehinnom as the opposite of paradise; in Gehinnom the wicked would be burned up (according to some Jewish teachers) or eternally tortured (according to other Jewish teachers). Here the addition of "fire" makes Gehinnom's fiery character all the more emphatic. Some other Jewish teachers would have agreed that not only the outward act of murder but also the inward choice of anger that generates such acts violates the spirit of God's *law against murder.

5:23-24. Judaism stressed reconciliation between individuals; God would not accept an outward offering if one had oppressed or mistreated one's neighbor and did not make it right. In the *Old Testament God accepted only sacrifices offered with a pure heart toward him and one's neighbor (Gen 4:4-7; Prov 15:8; Is 1:10-15; Jer 6:20; Amos 5:21-24).

5:25-26. Again Jesus returns to the image of the heavenly court (5:22). Here he may use the custom of debt imprisonment as another image in the *parable; this was a non-Jewish custom, but Jewish hearers would have known about it among the *Gentiles. No mercy would be shown: the amount of money to be repaid extended to the last (literally) *quadrans,* almost the least valuable Roman coin, the equivalent of only a few minutes' wages. (Details like the "officer" make the parable work as a story but do not symbolize anything in particular. Ancient storytellers did not invest

meaning in every detail of their parables; see "parable" in the glossary.)

5:27-30
Lust as Adultery

5:27-28. Many ancient Jewish sources warned against lust and emphasized women's seductiveness; Jesus here emphasizes only the responsibility of the one lusting. Other Jewish teachers also looked down on lust; some even went as far as Jesus in regarding it as adultery. The issue is thus not the doctrine of Jesus' hearers but their heart. The Greek word here is the same as in the opening line of the tenth commandment in the *Septuagint (the Greek version of the *Old Testament): "You shall not desire your neighbor's wife" (Ex 20:17). The tenth commandment, against coveting, forces Jesus' hearers to internalize Moses' other commandments.

5:29-30. Corporal punishment (cutting off appendages, e.g., Ex 21:24-25) is easier to bear than capital punishment, the decree of eternal death pronounced by the heavenly court. Some Jewish thinkers believed that one would be resurrected in exactly the form in which one had died (e.g., with limbs missing, as in the case of many martyrs) before being made whole, and Jesus employs this image. Many sources used physical "stumbling" (literally) as a metaphor for sin.

5:31-32
Remarriage as Adultery

Jewish *law about adultery technically addressed only intercourse with married women; the marital status of the man was not relevant. For this reason Matthew addresses here only the status of the divorced wife.

Some Pharisaic rabbis allowed divorce for almost anything (just as Roman law did); others allowed it only if the wife were unfaithful (see comment on 19:1-10; both Jewish and Roman law *required* divorce for adultery). Most recognized it as tragic. Yet the stricter rabbis did not view more lenient divorces as invalid. Jesus thus goes beyond the stricter position: not only does he allow divorce only if one's wife is unfaithful, but he regards divorce for any other reason as invalid, thus making remarriage in those cases adulterous. This seems, however, to be *hyperbole (as in 5:29-30), a graphic way of forbidding divorce except when the other partner has already irreparably broken the marriage covenant (see comment on Mk 10:11).

If Jesus' interpretation of the law was stricter than what the law said at face value, no one would have thought that he was therefore contradicting the law; "building a fence" around the law was a standard Jewish practice that involved making certain that the law's intent was not broken.

5:33-37
Integrity, Not Oaths

Oaths invoked the witness of a deity; people assumed that the deity would avenge any false appeals to his or her testimony. People swore by all sorts of things other than God to testify that their word was true. They reasoned that if they broke their oath based on any of these lesser things, at least they were not bringing God's name into disrepute. It eventually became necessary for rabbis to decide which oaths were completely binding. Like a small number of other thinkers, Jesus emphasizes having such integrity that oaths are unnecessary. He says that everything by which one could swear is ultimately God's, and demands that people simply be as good as their word. Jesus argues the point in part from Scripture; Isaiah 66:1 declared that heaven is God's throne and earth is his footstool.

Most people in Jewish Palestine had black or dark hair, unless they were older, in which case their hair was turning white; verse 36 would have been heard as referring to God's control over aging. Jesus' rule here is stricter than the letter of the *law but in accord with its spirit (Deut 23:21-23; Eccles 5:5). It is possible that the *Essenes also avoided oath-taking after their initial oath to join their sect.

5:38-42
Nonresistance

The language is partly *hyperbole—*disciples did not all engage in behavior that would immediately lead to homelessness (cf. 2 Cor 11:20). But hyperbole was meant to provoke hearers to consider the radical nature of what they were being told. To put the point more literally, Jesus is calling his followers to value relationships supremely and regard posses-

sions as nothing. (The point is absolute unselfishness, motivated by love; cf. 5:43-44.)

5:38. The "eye for an eye" and "tooth for a tooth" are part of the widespread ancient Near Eastern law of retaliation. In Israel and other cultures, this principle was enforced by a court and refers to legalized vengeance; personal vengeance was never accepted in the *law of Moses, except as a concession for a relative's murder (Num 35:18-21). The *Old Testament did not permit personal vengeance; David, a great warrior, recognized this principle (1 Sam 25:33; 26:10-11).

5:39. The blow on the right cheek (e.g., Job 16:10; Lam 3:30) was the most grievous insult in the ancient world (apart from inflicting serious physical harm), and in many cultures was listed alongside the "eye for an eye" laws; both Jewish and Roman law permitted prosecution for this offense. A prophet might endure such ill treatment (1 Kings 22:24; 2 Chron 18:23; Is 50:6).

5:40. The poorest people of the empire (e.g., most peasants in Egypt) had only an inner and outer garment, and the theft of a cloak would lead to legal recourse. Although conditions in first-century Palestine were not quite that bad, this verse could indicate divestiture of all one's possessions, even (hyperbolically) one's clothes, to avoid a legal dispute affecting only oneself. Jesus gives this advice in spite of the fact that, under Jewish law, a legal case to regain one's cloak would have been foolproof: a creditor could not take a poor person's outer cloak, which might serve as one's only blanket at night as well as a coat (Ex 22:26-27).

5:41. Roman soldiers had the legal right to impress the labor, work animal or substance of local residents (cf. Mk 15:21). Although impressment may not have happened often in Galilee, it happened elsewhere, and the fact that it could happen would be enough to raise the eyebrows of Jesus' hearers at this example of nonresistance and even loving service to the oppressor.

The Jewish hierarchy favored the status quo with Rome; some revolutionaries wanted to revolt. Most Palestinian Jews in this period wanted freedom but were not revolutionaries; at least some Galilean villagers, however, may have sympathized with bandits known for their hostility toward the existing powers. By A.D. 66 Jewish Palestine was caught up in a war, and by 70 the wisdom of Jesus' course was evident: Rome won the war, and the Jewish people, led to defeat by the revolutionaries, were crushed.

5:42. Beggars were widespread. The Bible stressed giving to those in need (Deut 15:11; Ps 112:5, 9; Prov 21:13). God would take care of the needs of those who helped the poor (Deut 15:10; Prov 19:17; 22:9; 28:8). Biblical laws against usury and especially about lending to the poor before the year of release (Deut 15:9; every seventh year debts were to be forgiven; cf. Lev 25) support Jesus' principle here, but Jesus goes even farther in emphasizing unselfish giving (especially Lk 6:35).

5:43-48
Beyond Nonresistance

5:43-44. The *Old Testament did not explicitly teach hatred for one's enemies (Ex 23:4-5; Prov 25:21-22), although hating God's enemies was a pious way to feel (Ps 139:19-22); some Jewish groups, like the *Essenes, emphasized hatred toward those outside the covenant. Greek ethics sometimes stressed learning from one's enemies' criticism but also could stress making sure to hurt one's enemies more than one was hurt by them (so Isocrates, a fourth-century B.C. Athenian orator and rhetorician).

Although vengeance belonged only to the Lord (Lev 19:18; Deut 32:35), prayer for one's persecutors (except that God would strike them dead!) had not generally characterized even the most pious in the Old Testament (cf. 2 Chron 24:22; Jer 11:20; 15:15; 17:18; 18:23; 20:12; often in Psalms, e.g., 137:7-9). Some philosophers valued nonresistance, but others answered their critics harshly and arrogantly.

5:45. Jewish teachers emphasized this universal aspect of God's mercy and that he alone was sovereign over rain. (Many also stressed that the prayers of the righteous could bring rain in times of drought, an issue not addressed here.) Some Jewish texts said that by being like God, one would be his child (i.e., imitator; e.g., Sirach 4:10).

5:46-47. Some Jewish teachers emphasized kindness to pagans (*Gentiles) to draw them to the truth, but most people greeted and (apart from charity) looked after only

those they knew. *Tax gatherers were considered among the most apostate Jews; Gentiles were considered (usually rightly) immoral, idolatrous, often anti-Jewish pagans. Jews agreed that one should not be like the pagans (so also the Old Testament: Lev 18:3; Deut 18:9; Jer 10:2).

5:48. Ancient rhetoric often included summary statements at the end of a speech or section. The *Aramaic word for "perfect" can mean "complete" or "whole," including the nuance of "merciful" (Lk 6:36). The Bible already commanded being holy as God is holy (Lev 11:44-45; 19:2; 20:26), and Judaism (as well as some Greek philosophers) sometimes argued ethics on the basis of imitating God's character.

6:1-4
Secret Charity

6:1. Where appropriate, ancient speakers liked to offer a starting summary, and sometimes to illustrate with three main points. This verse is the thesis statement that introduces the three examples of private piety in 6:2-16. Judaism stressed that one should not perform deeds for the sake of reward but nonetheless promised reward, as Jesus does here; this reward is rendered at the day of judgment, as in Judaism. Prayer, fasting and gifts to the poor were among the basic components of Jewish piety (Tobit 12:8), and many *rabbis listed qualities (e.g., virtues on which the world was founded) in sets of three.

6:2-4. In general, Greeks and Romans did not emphasize personal charity; wealthy contributions to public projects or to *clients of slightly lower status were meant to secure the giver's popularity. In contrast, charity was central to Jewish piety; some writers even said that it saved a person, although some later rabbis' restrictions technically did not permit one to give over twenty percent above his tithes.

Some commentators have taken the trumpet sounding literally, but it is hyperbolic (people did not blow trumpets when giving alms) and might reflect a play on words (charity boxes were often shaped like trumpets). Not letting one's left hand know about the right hand's gift is *hyperbole (cf. Jon 4:11), and some similar graphic pictures appear elsewhere. The language of "having" a reward "in full" is the language of repayment in ancient business receipts.

6:5-15
Secret Prayer

The parallel structure of the larger section (6:1-18) and of this passage on prayer is augmented by the presence of a sample prayer (6:9-13; thus how one should not pray, 6:5, 7-8; and how one should pray, 6:6, 9). Judaism was much more serious about regular prayer than were Greek and Roman religions.

6:5-6. The problem is not public prayer but motives directed toward other people rather than toward God. It was probably common for pious people to recite their prayers at least individually in the *synagogue; it is not clear that everyone prayed simultaneously in all synagogues as early as Jesus' time. Some suggest that the "chamber" was a storeroom; most people did not have private rooms in their houses, and only that room would have a door on it. Standing was a common posture for prayer.

6:7. Jewish scholars were debating the use of fixed prayers in this period; they generally held them to be acceptable if one's intent was genuine. Greek prayers sometimes piled up as many titles of the deity addressed as possible, hoping to secure his or her attention. Pagan prayers typically reminded the deity of favors done or sacrifices offered, attempting to get a response from the god on contractual grounds.

6:8. Judaism recognized that God knew everything; the issue here (and often with respect to Jesus' teaching) is thus not Jesus' hearers' doctrine but their hearts. Jewish people saw God differently than Greeks saw their gods (even though even monotheistic faith was not always what it should have been). In Judaism, God was a Father who delighted in meeting the needs of his people; Judaism also recognized that God knew all a person's thoughts. Jesus predicates effective prayer on a relationship of intimacy, not a business partnership model, which was closer to the one followed by ancient paganism.

6:9-10. Greek sources often called the supreme deity "father," including in prayers, but this practice is pervasive in Jewish sources as well, even as early as the *Old Testament (Deut 32:6; Ps 68:5; Is 63:16; 64:8; Jer 3:4, 19; 31:9; Mal

1:6; 2:10) and other very early Jewish works (e.g., Tobit 13:4; *3 Maccabees 5:7; 7:6). Jewish people commonly addressed God as "our heavenly Father" when they prayed, although such intimate titles as "Abba" (Papa) were rare (see comment on Mk 14:36). One standard Jewish prayer of the day (the Kaddish) proclaimed, "Exalted and hallowed be his . . . name . . . and may his kingdom come speedily and soon." Because God was Father, his children could depend on him (cf. 18:3).

Jewish prayers recognized that God's name would be "hallowed," or "sanctified," "shown holy," in the time of the end, when his *kingdom would come, as the Bible also said (Is 5:16; 29:23; Ezek 36:23; 38:23; 39:7, 27; cf. Zech 14:9). Jewish people would also recognize the importance of living consistently with what they valued in prayer. In the present God's people could hallow his name by living rightly; if they lived wrongly, they would "profane" his name, or bring it into disrepute among the nations (cf. also Ex 20:7; Jer 34:16; 44:25-26; Ezek 13:19; 20:14; Amos 2:7). Some regard the *kiddush hashem,* the hallowing of God's name, as the most fundamental principle of later rabbinic ethics; they counted profaning God's name as almost unforgiveable.

It was understood that after his kingdom came God's will would be done on earth as in heaven.

6:11. This verse alludes to God's provision of "daily bread" (manna) for his people in the wilderness after he first redeemed them. Some Jewish people looked for a renewal of manna in the end time, but prayers for God to supply one's basic needs—of which bread and water are the ultimate examples—were common in the ancient world (cf. Prov 30:8).

6:12. Prayer for forgiveness appears in standard ancient Jewish prayers (note the sixth of the Eighteen Benedictions). Jewish teaching regarded sins as "debts" before God; the same *Aramaic word could be used for both. Biblical *law required the periodic forgiveness of monetary debtors (in the seventh and fiftieth years), so the illustration of forgiving debts would have been a graphic one (especially since Jewish lawyers had found a way to circumvent the release of debts so that creditors would continue to lend).

6:13. Parallels with ancient Jewish prayers, and possibly the Aramaic wording behind this verse, suggest that the first line means: "Let us not sin when we are tested"—rather than "Let us not be tested" (cf. 4:1; 26:41 in context; cf. Ps 141:3-4). Some scholars have suggested an allusion to the final time of suffering here, which was expected to precede the coming kingdom, but while such testing could be included, most Jewish prayers about testing were for strength in the present era. Because Jewish prayers were commonly used in liturgical contexts that ended with a statement of praise, later texts' addition of the benediction ("Thine is the kingdom . . . ") to the original text of Matthew is not surprising.

6:14-15. Although others felt differently, some Jewish sages recognized that only those who forgave would be forgiven (Sirach 28:1-8). The principle of forgiveness that Jesus states here seems to be that only people of *grace know how to accept grace. See comment on 18:21-35.

6:16-18
Secret Fasting

Jewish people conjoined fasting with mourning, *repentance, or sometimes prayer; most fasts ran from sundown to sundown. During at least the dry seasons, many of the most pious people fasted (without water, though this was unhealthy) two particular days a week. This fasting was considered meritorious, although *ascetic fasting (e.g., fasting only to "beat down the flesh") was forbidden. Jewish fasting required abstinence not only from food but also from other pleasures, which would include the usual practice of anointing one's head with oil to prevent dry skin; avoiding all these practices made fasting obvious. (Greeks oiled their bodies before exercise and then used a metal utensil called a strigil to scrape off the sweaty dirt accumulated on the oil. But Jews did not practice this custom, and it is not in view here in Mt 6.) God had never settled for outward fasting only (Is 58:3-12; Jer 36:9).

6:19-24
Don't Seek Possessions

One should not value possessions enough to seek them (6:19-24)—or enough to worry about them—because God will provide one's

basic needs (6:25-34). Ancient views on possessions varied from denial of personal possessions (like the *Essenes) to viewing wealth as a blessing (more common); but most people then, like most people today, sought as much as possible.

6:19. Ancient teachers like *Hillel, a famous Jewish teacher, generally acknowledged the corruptibility of earthly treasure. Because thieves could dig through walls and steal a strongbox in one's home, well-to-do people usually tried one of several other methods to safeguard their wealth: investing money with moneychangers, depositing it in a temple for safekeeping (even most robbers balked at "robbing gods"), or burying it in the ground or in caves, where, however, moth (for expensive apparel) or rust (for coins, cf. Sirach 29:10-11; but the term here in Matthew may involve decay by creatures, e.g., worms) could destroy its value in time.

6:20-21. Jewish texts spoke of "laying up treasure" with God or in heaven (e.g., Tobit 4:7-10). Sometimes this meant that the generous person could trust that God would help him in time of need; sometimes it referred (as here) to treasure in the world to come.

6:22-23. Jesus speaks literally of a "single" eye versus a "bad" or "evil" one. This saying may involve several plays on words. A "single" eye normally meant a generous one but also sets the reader up for 6:24. A "bad" eye in that culture could mean either a diseased one or a stingy one. Many people believed that light was emitted from the eye, enabling one to see, rather than that light was admitted through the eye. Although here Jesus compares the eye to a lamp, he speaks of "diseased" eyes which fail to *admit* light. Such eyes become a symbol for the worthlessness of a stingy person.

6:24. Two masters rarely shared slaves, but when they did (sometimes through joint inheritance) it led to divided interests. "Mammon" is an *Aramaic word for possessions or money, and Jesus seems to be personifying it as an idol, using another ancient figure of speech (personification).

6:25-34
Don't Worry About Possessions

6:25. Most people in antiquity had little beyond basic necessities—food, clothing and shelter. Because their acquisition of these necessities often depended—especially in rural areas—on seasonal rains or (in Egypt) the flooding of the Nile, they had plenty of cause for stress even about food and clothing.

6:26-27. Some ancient philosophers taught about or drew morals from nature as well as from philosophy. Many Jewish teachers said that God's concern in the laws of the Bible was only for humans (although it was clear that God watched over all creation; cf. Ps 104:27). But Jesus' argument was a standard Jewish "how much more" (*qal vahomer*) argument: If God cares for the birds (and rabbis agreed that he sustained all creation), how much more does he care for humans?

6:28-30. Jesus' term could apply to any of the flowers in Galilee's fields, though some commentators have suggested anemones, which were purple, the color that many ancient readers would have envisioned for Solomon's royal robes (6:29). In any case, such flowers were fuel for women's bread-baking ovens. The perishing of grass and flowers as they dried up in each year's summer heat was a natural image for human mortality (cf. Ps 103:15-16; Is 40:6-8).

6:31-33. The pagan world did indeed seek after such necessities, but Jesus reminds his hearers that they could trust their Father (v. 32; see comment on 6:7-8) and should seek the kingdom (v. 33).

6:34. Other Jewish teachers after Jesus gave the same advice; whether Jesus used a common saying or his teaching in this case became a common saying is hard to determine.

7:1-5
Reciprocal Judgment

7:1-2. The idea of a measuring scale (the image is from the ancient marketplace) was used elsewhere for the day of judgment or divine retribution. "As one measures it will be measured back to one" occurs a number of times in later Jewish sources and may have been a maxim. For the principle, see 5:7, 6:14-15 and Proverbs 19:17. Compare also the *Old Testament principles that false witnesses were to receive the penalty they sought for the accused (Deut 19:18-21) and that God opposed unjust judges (Ex 23:6-8; Deut 16:18-20).

7:2-5. Although ancient eye surgery some-

times involved lancing the eye, here Jesus clearly uses *hyperbole. The imagery is vivid, shocking, ludicrous and probably humorous to Jesus' hearers, but it communicates the point. The prophets had appealed to graphic images, often employing plays on words to communicate their message (e.g., the Hebrew of Mic 1; Jer 1:11-12). The Old Testament (e.g., Prov 15:32) and subsequent Jewish tradition stressed that people should always be humble enough to accept correction.

7:6-12
Imitating God's Gifts

7:6. Pigs and dogs were considered unclean animals (Prov 26:11; 2 Pet 2:22), which had no appreciation for valuable things (Prov 11:22). Pigs typically ate the vilest foods, and dogs were scavengers, consuming even human blood. Stray dogs were known to growl at those who tossed them food as well as those who ignored them. The image would thus be forceful and beyond dispute for ancient hearers.

The more debated question is what the verse means in the context. Perhaps it means not correcting (cf. Mt 7:1-5) those who would not listen (cf. Prov 23:9).

7:7-8. Even as a general principle, the boldness with which this text promises answers to prayer is quite rare in ancient literature; only a few special men of God were thought to obtain most of what they requested.

7:9-11. Jesus adapts a standard Jewish argument here called *qal vahomer* arguing from the lesser to the greater (if the lesser is true, how much more the greater). Fish and bread were basic staples, integral to the diet of most of Jesus' hearers; they do not stand for the fineries of the wealthy.

7:12. That one should not do to others what one would not wish done to oneself was a common teaching; it occurred in the Jewish book of Tobit, reportedly in the teaching of the early Jewish teacher Hillel and in Greek sources as well (cf., e.g., the negative form in Tobit 4:15; Philo, *Hypothetica* 7.6; *Babylonian Shabbat* 31a; positively, *Letter of Aristeas* 207; cf. also Sirach 31:15; Greek sources and even Confucian teaching). The version attributed in a later source to *Hillel adds, "This is the whole law" (cf. Mt 22:40).

7:13-27
The Two Ways

7:13-14. Jesus' hearers would have been familiar with the image of "two ways"—one leading to life and the other to death; it was common in Judaism (see already Deut 30:15). Jesus' emphasis that few are on the right way occurs in **4 Ezra* but is not as common as the general image of the two ways. Apparently most Jewish people believed that Israel as a whole would be saved and that the few who were lost would be exceptions to the general rule.

7:15. Although many educated Jewish people did not believe that prophets had continued in the *Old Testament sense, they believed that false prophets (cf., e.g., Jer 2:8; 5:30) continued; *Josephus mentioned many of them in the first century. The contrast between vicious wolves and harmless lambs or sheep was proverbial. Stories existed of some using skins as disguises, but the image here is more graphic: wolves do not wear clothes.

7:16. Like wheat and barley, grapes and figs were among the most valuable and widely consumed fruits of the earth; thorns and thistles were worthless and troublesome to harvesters, as the Old Testament often mentions. For a figurative use of "fruits" in the Old Testament, see Isaiah 5:6 and comment on Matthew 3:8.

7:17-20. The repetition of "know them by their fruits" (7:17, 20) brackets this illustration; such bracketing was commonly used as a literary device (called *inclusio*) to mark off a paragraph. Prophets were known to be false if they led people away from the true God (Deut 13) or their words did not come to pass (Deut 18:21-22). The *rabbis allowed that prophets might temporarily suspend a teaching of the *law the way rabbis themselves would, but if they denied the law itself or advocated idolatry, they were false prophets. Jesus teaches that if they do not live right, they are false (Mt 7:21-23). Cf. Luke 6:43-45.

7:21-23. The miracles Jesus mentions are not necessarily false; it is possible to prophesy by the *Spirit's inspiration and yet be disobedient to God and unsaved (1 Sam 19:20-24). The admonition to depart is from a psalm about the vindication of the righteous (Ps 6:8; cf. 119:115; 139:19). Some tried to use Solomon's

name to cast out demons (Josephus, *Jewish Antiquities* 8.47), but many acted or prophesied in God's name (Deut 18:22; 1 Sam 17:45; 1 Esdras 6:1).

7:24-27. The rabbis debated whether hearing or doing the law was more important; most concluded that hearing it was more important, because one could not do it without hearing it. But they did insist that both were necessary.

Again the image is of the day of judgment. The idea of ultimately being judged for hearing but not obeying was familiar (Ezek 33:32-33). But no Jewish teacher apart from Jesus claimed so much authority for his own words; such authority was reserved for the law itself. Some of Jesus' more biblically literate hearers may have thought of Proverbs 24:3 ("by wisdom a house is built") and the contrast between wisdom (which builds a house in 9:1) and folly in Proverbs 9:1-18. Later rabbis told a *parable very similar to that of Jesus here, but whereas their foundation involved heeding the Torah (e.g., *Avot de Rabbi Natan* 24A), *here* it involves heeding Jesus' words.

7:28-29
Response of the Masses

The teachers of the *law never claimed as much authority as Jesus had (7:24-27); they derived their authority especially from building on previous tradition.

8:1-4
Touching the Unclean: Leprosy

Matthew groups together nine stories containing ten specific miracles (some commentators have suggested that Matthew wants his readers to remember Moses' ten miracles) in chapters 8–9: three miracles in 8:1-17, then teaching on true discipleship (8:18-22); three more miracles (8:23–9:8), then teaching on true discipleship (9:9-17); and finally three more miracle stories, one of which includes two miracles (9:18-33).

Ancient writers used examples to illustrate points: Jesus' authority over sickness, *demons and nature summons people to recognize his authority over their lives. In ancient thought, miracles could call attention to or attest teachers or their views (in contrast to modern rationalistic attempts to deny them).

8:1. People in power viewed mobile teachers with followings of large crowds as threats to social stability; the Romans were always concerned about uprisings in Jewish Palestine. Readers familiar with this situation in pre-70 Jewish Palestine might recognize here a hint of impending conflict.

8:2. Leprosy was an unattractive skin disease for which the Bible had prescribed quarantine from the rest of society (Lev 13:45-46). Lepers were thus largely outcasts from society (2 Kings 7:3). In personal address, "Lord" could also mean "Sir"; the degree of respect connoted depended on the person addressed. Prostrating oneself before another signified extreme respect for another's dignity or power to meet a difficult need.

8:3. Touching a leper was forbidden (cf. Lev 5:3), and most people would have been revolted by the thought of it. Indeed, the *law enjoined the leper's isolation from society (Lev 13:45-46). See further comment on Mark 1:40-45. The miracle itself would have been viewed as the work of a mighty prophet, however (cf. 2 Kings 5:14).

8:4. Jesus here follows the injunctions detailed in the *Old Testament law of leprosy (Lev 14:1-32). The instructions not to tell anyone else resemble the clandestine activity of some Old Testament prophets; they would also appear honorable in view of ancient Mediterranean disdain for boasting and perhaps because Jesus avoids competing with those in power here. Of course, preventing excessive crowds that could deter his mission could be another consideration, since reports about divine works drew crowds. On the messianic secret, see further the discussion of Mark's message in the introduction to Mark.

8:5-13
A Non-Jew's Faith

By including this story from his source, Matthew encourages his Jewish Christian readers in the *Gentile mission. Even a single exception should be enough to challenge racist stereotypes.

8:5. The nearest legion of Roman troops was stationed in Syria; in Judea, several cohorts were stationed at Caesarea on the Mediterranean coast with additional soldiers in the fortress Antonia in Jerusalem; Capernaum, as a customs post, might have warranted

some soldiers, or the centurion might come from elsewhere or be retired. Soldiers in Palestine were largely auxiliaries, many of them from the local region; while they would become Roman citizens when discharged (and would represent Rome for Matthew's audience), many were Syrian ethnically. Centurions commanded a "century," but in practice this consisted of roughly eighty troops, not one hundred. Unlike higher officers, most centurions worked their way up through the ranks. They were the backbone of the Roman army, in charge of discipline. In view of the Judean-Roman War (or even soldiers' abuses in the East; see comment on 5:41), most of Matthew's audience would probably not typically like centurions.

8:6. On "Lord," see comment on 8:2. During their minimum of twenty years of service in the Roman army, soldiers were not permitted to marry. Many had illegal local concubines, an arrangement that the army overlooked and the concubines found profitable; but centurions, who might be moved around more frequently, might be less likely to have such informal families than most soldiers. The centurion may or may not have had an unofficial wife and children. By ancient definitions, however, a household could include servants, and household servants and masters sometimes grew very close—especially if they made up the entire family unit. Centurions were paid much better than lower-ranking troops. At average prices, a slave would have cost about one-third of the annual wages of the best-paid legionary (and more for other soldiers), but centurions made between fifteen and sixty times the wages of typical soldiers.

8:7. Jesus' response may be read as a question, a challenge, rather than a statement: "Shall I come and heal him?" (cf. 15:26). If one reads it as a statement, it declares Jesus' willingness to cross an important cultural boundary. It seems that pious Jewish people did not normally enter Gentile homes; see comment on Acts 10:27-29.

8:8. The centurion, who knows that Jewish people rarely entered Gentile homes, concedes Jesus' special mission to Israel (cf. 15:27). At the same time he expresses great faith, for among all the stories (both true and spurious) of healing miracles in antiquity, long-distance healings were rare and considered especially extraordinary.

8:9. The centurion's response demonstrates that he (backed by Rome's authority) understands the principle of authority that Jesus exercises. Roman soldiers were very disciplined and (except in times of mutiny) followed orders carefully; they provided the ultimate model of discipline and obedience in the Roman Empire. "Go" and "come" appear elsewhere as summary examples of expressing authority.

8:10. Gentiles were generally pagans, with no faith in Israel's God.

8:11. This verse reflects the standard Jewish image of the future banquet in God's *kingdom. Although the Bible declared that it was for all peoples (Is 25:6; cf. 56:3-8), Jewish literature by this period emphasized that it was prepared for Israel, who would be exalted over its enemies. People were seated at banquets according to rank. They "sat" at regular meals but "reclined" (as here) at feasts; table fellowship signified intimacy, so fellowship with the great patriarchs, Abraham, Isaac and Jacob, was thought to represent a future hope for the Jewish people, not for Gentiles, with whom Jewish people did not eat.

8:12. The "rightful" heirs are cast out; other Jewish texts used outer darkness to describe hell, often where mighty evil spirits were imprisoned; the gnashing of teeth may allude to Psalm 112:10.

8:13. Some Jewish stories circulated about miracle workers, but reports of long-distance healings were rare and regarded as extraordinary. This healing would thus have been viewed as especially miraculous.

8:14-17
Messiah the Healer

8:14. Archaeologists have found what some think is this very home in a site close to the *synagogue. Adult children were expected to care for their aged parents. Newly married couples often lived with the groom's family. (For more details, see comment on Mk 1:29-34.)

8:15. Some religious men refrained from touching women in general to avoid any possibility of becoming unclean, unless they had means by which they could ascertain their status (based on Lev 15:19). That Peter's

mother-in-law was able to "serve" them at table, a common womanly role in antiquity (cf. Lk 10:40), indicates the extent to which she was genuinely healed.

8:16. Exorcists often used magical incantations and sought to manipulate higher spirits into helping them drive out lower ones; sometimes they also used smelly roots and similar techniques to expel *demons. In contrast, Jesus simply drives out spirits "with a word." Anthropologists have documented experiences indigenously interpreted as spirit possession in a majority of the world's cultures.

8:17. In context Isaiah 53:4 emphasizes particularly healing from the ravages of sin (53:5-6; cf. Hos 14:4, etc.), as some other Christian writers noted (1 Pet 2:24-25). But given Isaiah's emphasis on physical restoration in the messianic era (35:5-6) and the connection between physical and spiritual healing in Jewish tradition (cf. also Is 33:24), it makes good sense that Matthew also finds the nuance of physical healing here: Jesus inaugurates the messianic era, making some of its benefits available even in advance of the cross.

8:18-22
Jesus' Demands

8:18. *Disciples generally acted as servants to their *rabbis, following practical orders relevant to the work of the teacher and his school as well as learning his teachings.

8:19-20. Disciples usually sought out their own teachers. Some radical Greek philosophers who eschewed possessions sought to repulse prospective disciples with enormous demands, for the purpose of testing them and acquiring the most worthy. Those who joined radical Jewish sects such as the *Essenes had to relinquish their property. David warned a prospective follower about the suffering that would attend following him (2 Sam 15:19-20), but the proper response was to follow anyway (2 Sam 15:21-22). Like fishermen and *tax gatherers, carpenters had a much better income than agrarian peasants; Jesus' call, not involuntary poverty, summoned him and his followers to a sacrificial lifestyle.

Comparisons with animals constituted a fairly common teaching technique (e.g., the now famous animal fables attributed to Aesop). Jewish people could compare righteous sufferers with birds finding refuge for nesting only with difficulty (Ps 11:1; 84:3; 102:6-7; 124:7); foxes nested in desolate places (Lam 5:18; Ezek 13:4).

8:21-22. One of an eldest son's most basic responsibilities (in both Greek and Jewish cultures) was his father's burial; failure to meet this obligation could make one a social outcast in one's village. The initial burial took place shortly after a person's decease, however, and family members would not be outside talking with rabbis during the reclusive mourning period immediately following the death. Thus some argue that what is in view here instead is the secondary burial: a year after the first burial, after the flesh had rotted off the bones, the son would return to rebury the bones in a special box in a slot in the tomb's wall. The son in this *narrative could thus be asking for as much as a year's delay. Others note that in some Semitic languages, "wait until I bury my father" is a way of asking for delay until one may complete one's filial obligations, even if the father is not yet dead.

Even on these interpretations, however, Jesus' demand that the son place him above the greatest responsibility a son had toward his father would have horrified hearers: in Jewish tradition, honoring father and mother was one of the greatest commandments (see, e.g., Josephus, *Apion* 2.206), and to follow Jesus at the expense of not burying one's father would have been viewed as dishonoring one's father (on the need to bury parents, cf. Tobit 4:3-4; 6:15; *4* Maccabees 16:11). While some sages demanded greater honor than parents, only God could take precedence over them to this degree (cf. Deut 13:6).

8:23-27
Lord of Nature

Greek stories about those who could subdue nature were normally about gods or about demigods who had acted in the distant past. Jewish tradition reported some earlier teachers who could pray for rain or its cessation like Elijah. But absolute authority over waves and sea in Jewish tradition belonged to God alone. It is not difficult to understand why the *disciples did not know what to make of Jesus!

Only local people described the lake of Galilee as a "sea" of Galilee, as here (8:24). Phi-

losophers valued serenity during storms at sea as a sign of genuine belief in philosophy; similarly, ability to sleep in the face of danger could reveal faith in God (Ps 3:5; 4:8).

8:28-34
Lord over Evil Spirits

Proposals vary on why Matthew has two, and Mark but one, demoniac here (see comment on Mk 5:1-20); one suggestion is that Matthew knows of one that Mark omitted. Another is that he includes an extra one here because he left one out by omitting the story recorded in Mark 1:21-28; the doubling of characters here would not have violated standard Jewish writing conventions of that time.

8:28. Tombs were ceremonially unclean and were thought to be popular haunts for evil spirits (a belief the spirits were apparently happy to accommodate). Both Gadara (here) and Gerasa (Mk 5:1) were predominantly *Gentile cities in the region of the Decapolis, but Gadara was much closer to the Sea of Galilee (Gerasa, a prominent and magnificent city, was over thirty miles southeast). Roughly six miles to the southeast, Gadara probably controlled the land where this *narrative occurs. Violent behavior is still frequently associated with many cases of spirit possession in cultures that recognize the phenomenon.

8:29. "Before the time" means before the day of judgment. Apparently even the *demons did not expect the *Messiah to come in two stages, a first and second coming.

8:30. Jewish people lived in this region, but it was predominantly non-Jewish; hence the pigs. Herds could be huge; one ancient source speaks of a thousand pigs from a single sow.

8:31. Ancient stories about demons suggest that they liked to negotiate the least difficult terms if they were going to have to leave one whom they possessed. Hearing that demons would want to inhabit unclean pigs, Jewish listeners might have responded, "But of course!"

8:32. Though it was known that pigs could swim, they could not survive in this situation. In Jewish tradition, demons could die or be bound (sometimes beneath bodies of water); because Matthew says nothing to the contrary, his readers would probably assume that these demons have been imprisoned or otherwise deactivated.

8:33-34. Pigs required little oversight to graze, but some herdsmen, responsible to the owners, would nevertheless watch over them, and pigs might respond to their voices. The *Old Testament *narratives of Elijah and Elisha allowed Jewish people to place some miracle workers in the category of "prophet," but Greeks usually categorized miracle workers as magicians or sorcerers. Because magicians and sorcerers were usually malevolent and Jesus' coming had already cost these Gentiles from the Decapolis economically (a lot of pork), they were naturally terrified of him.

9:1-8
Authority to Forgive and to Heal

It was common to abridge accounts, as Matthew often does; reciting Mark's story about the paralytic (see comment on Mk 2:1-12), he omits even the dramatic letting down through the roof.

9:1-2. For many poor people, "beds" could be mats; thus the paralytics' friends may have carried him on the bed on which he lay all the time. "His own town" here is Capernaum (4:13).

9:3. Judaism believed that only God could forgive sins, but most Jews allowed that some of God's representatives could speak on God's behalf. The *Old Testament penalty for blaspheming God's name—reproaching rather than honoring it—was death (Lev 24:10-23). According to later rabbinic law, blasphemy technically involved pronouncing the divine name or perhaps inviting people to follow other gods. According to the more common, less technical usage, it applied to any grievous insult to God's honor (cf. Num 15:30). But these legal scholars were mistaken in interpreting Jesus' words as blasphemy, by any definition.

9:4. Judaism recognized that God sometimes revealed to prophets what others were thinking or planning.

9:5-7. Jewish teachers knew that only God could ultimately forgive (on the Day of Atonement in response to sacrifice); but they also recognized that healing ultimately came from God as well. *Josephus shows us that many false prophets in Jesus' day promised to work miracles but actually failed to work them; some of Jesus' critics may have placed him in this category, until they witnessed the miracles.

9:8. When ancient writers reported accounts of miracles, they generally concluded the account with the amazed response of the crowds who witnessed it.

9:9-13
A Physician for Sinners

9:9. Levi may have been a tax farmer working for Herod or the municipal government; situated at an office in Capernaum, many think that he was a customs agent, charging import duties on wares brought through this town on important nearby trade routes. Whether or not this is the case, his reputation seems to at least associate him with other kinds of tax collectors. Even more than the fishermen, he had a secure and prosperous job, which he surrendered to follow Jesus' call.

9:10. Most people regarded a man of wealth inviting a religious teacher over for dinner as honorable behavior. *Tax gatherers, however, were regarded as collaborators with the Romans or Herod's dynasty and were despised by religious people. Tax gatherers assessing property were free to search anything except the person of a Roman matron, seizing undeclared property; some were so brutal that they might beat an elderly woman to discover where her son had fled to evade payment. In poor areas in Egypt, we even hear of entire villages relocating to evade the tax gatherers. Presumably few agents in Galilee would have been so brutal, but tax gatherers were generally ill-liked. Even when tax gatherers did not extort additional money, taxes were high.

Some commentators have argued that "sinners" may refer to all who did not eat food in ritual purity, but the term probably refers to anyone who lived sinfully rather than religiously, as if they did not care what the religious community thought of them.

9:11. Table fellowship indicated intimate relations among those who shared it. Later *rabbis sometimes contrasted tax gatherers and *Pharisees as the epitomes of impiety and piety respectively. The Pharisees were particularly scrupulous about their special rules on eating and did not like to eat with less scrupulous people, especially people like tax gatherers and sinners. Here they assume that Jesus, being a wise teacher, ought to share their religious convictions, which they believed were scriptural (Ps 1:1; 119:63; Prov 13:20; 14:7; 28:7; the biblical principle, however, is to avoid being influenced by, not to avoid influencing, the ungodly). Judaism affirmed God's mercy (cf. Ps 25:8), but for Jesus as a teacher to pursue those known as sinners violated conventional expectations of holiness.

9:12. Jesus' reply plays on a common image of the day (comparing physicians and teachers) to make his point. Quick, witty repartee was characteristic of popular teachers in both Jewish and Greek traditions.

9:13. Other rabbis often said, "Go and learn" or "Come and see" to direct hearers to scriptural proofs for their position. Hosea 6:6 does not reject sacrifice or ritual, but elevates right relationship with God and right treatment of the poor, the oppressed and the outcasts above sacrifice and ritual (cf. similarly 1 Sam 15:22; Ps 40:6; 50:7-15; 51:16; 69:30-31; Prov 21:3).

9:14-17
Appropriate Fasting

9:14. People often held teachers responsible for the behavior of their *disciples. The *law required fasting only on the Day of Atonement, but many other fasts had been added by religious Jews, especially by groups like the Pharisees. Many of the Pharisees may have fasted two days a week without water, especially during the dry season (cf. Luke 18:12). Fasting was an important practice to join with prayer or penitence, so it would have been unusual for disciples (prospective rabbis) to have avoided it altogether. A teacher was regarded as responsible for the behavior of his disciples. If Jesus compares himself with the bridegroom (one should not press comparisons into every detail in *parables), it may be significant that God is the bridegroom in some OT images (e.g., Hos 2:14-20).

9:15. Wedding feasts could involve seven days of festivity; so crucial an obligation was joy that rabbis were said to pause their instruction to hail passing bridal processions. One was not permitted to fast or engage in other acts of mourning or difficult labor during a wedding feast. Jesus makes an analogy about the similar inappropriateness of fasting in his own time.

9:16. Again, the issue is the inappropri-

ateness of fasting in the present circumstance. Older clothes would have already shrunk somewhat from washing.

9:17. Wine could be kept in either jars or wineskins. The animal skins were often goatskins, often with two or three sewn together. Old wineskins had already been stretched to capacity by fermenting wine within them; if they were then filled with unfermented wine, it would likewise expand, and the old wineskins, already stretched to the limit, would burst.

9:18-26
Touching the Unclean: Blood and Death

Raising the dead was an extraordinary miracle, attributed to Elijah (1 Kings 17:21-22) and Elisha (2 Kings 4:33-35) in the Old Testament. Physical contact with either communicated ritual impurity (Lev 15:19-33; Num 19:11-12). See comment on Mark 5:21-43 for further details.

9:18-19. "Rulers of the *synagogue" were leaders in synagogues and were prominent members of their communities. (When honorary, the title may refer to benefactors only, but most Jewish people with this title were likely both significant donors and influential in the synagogue.) If the setting is still Capernaum (9:1), it is significant that Jesus' following could include both this man and more questionable elements of the community (9:9).

One would fall at the feet of someone of much greater status (like a king) or prostrate oneself before God; thus for this prominent man to humble himself in this way before Jesus was to recognize Jesus' power in a serious way.

9:20-21. This woman's sickness was reckoned as if she had a menstrual period all month long; it made her continually unclean under the *law (Lev 15:19-33)—a social and religious problem in addition to the physical one. If she touched anyone or anyone's clothes, she rendered that person ceremonially unclean for the rest of the day (cf. Lev 15:26-27). Because she rendered unclean anyone she touched, she should not have even been in this heavy crowd. Many teachers avoided touching women altogether, lest they become accidentally contaminated. Thus she could not touch or be touched, she had probably never married or was now divorced, and she was marginal to Jewish society. Leviticus forbade intercourse with a menstruating woman, and Jewish tradition mandated divorce when marriages did not yield children.

In an act of scandalous faith, she touches Jesus' garment's "fringe"—no doubt one of the tassels (*zizith*) worn by Jewish men, in obedience to Numbers 15:38-41 and Deuteronomy 22:12, on the four corners of their outer garment, and later on the prayer shawl (*tallith*). The tassels were made of blue and white cords woven together.

9:22. Many ancient people believed that only teachers closest to God had supernatural knowledge. Jesus uses his supernatural knowledge to identify with the woman who had touched him—even though in the eyes of the public this would mean that he had contracted ritual uncleanness.

9:23-24. Flute players were there to lead the crowd in mourning. Tradition preserved in the rabbis insisted on several professional women mourners for the funeral of even the poorest person; the funeral of a member of a prominent family like this one would have many mourners. The cathartic release of mourning included shrieking and beating of breasts. Because bodies decomposed rapidly in Palestine, mourners were to be assembled, if possible, immediately upon someone's death. Sleep was a common euphemism for death (though contrasted here).

9:25-26. The most defiling kind of ritual uncleanness one could contract in Jewish law came from touching a corpse, generating seven days' impurity (Num 19:11-22).

9:27-34
Healing Blind Eyes

9:27-31. "Son of David" was the title of the *Messiah, but in most expectations the Messiah was a political or military figure rather than a healer. But these blind men understand a connection between healing and Jesus' identity that went beyond Jewish tradition. God ruled over blindness and sight (Ex 4:11; Prov 20:12) and could answer prophets' prayers to remove and restore human sight (2 Kings 6:18-20). Matthew repeats or offers an analogous account at 20:29-34; Genesis and other earlier works likewise reported analogous incidents, inviting their audiences to read each incident

in light of the others (e.g., Gen 12:10-20; 20:1-18; 26:7-11).

9:32-34. Elijah and Elisha had done extraordinary healing miracles; David is the only recorded *Old Testament figure God used in exorcism (1 Sam 16:23). Matthew 9:33 thus indicates that the crowds were greatly impressed with his miracles.

9:35-38
More Laborers Needed

The works of Jesus in 8:1–9:35 must become those of his disciples in chapter 10. Disciples were typically expected to carry on their teachers' works.

9:35-36. Without Moses (Num 27:17) or a king (1 Kings 22:17; 2 Chron 18:16) Israel had been said to be "without a shepherd," or ruler. When Israel was without other faithful shepherds (religious leaders), God himself would become its shepherd (Ezek 34:11-16, esp. 34:5: scattered for lack of a shepherd); the shepherd's ministry included feeding (34:2-3), healing (34:4) and bringing back the lost sheep (34:4-6). Matthew 9:36 thus also implies that those charged with shepherding Israel, its leaders, were failing.

9:37-38. Harvest was urgent and had to be completed within a narrow window of time. "Harvest" could be used as an image for the end time (cf. comment on 3:12). A late first-century rabbi said something similar to 9:37; perhaps it was already a standard Jewish saying.

10:1-4
Sending the Twelve

Israel had twelve tribes, and groups that chose twelve leaders (as in the *Dead Sea Scrolls) did so because they believed that their own group was the true, obedient remnant of Israel.

Ancient sources often include lists of names, including of *disciples. Some of the names here are among the most common in ancient Judea and Galilee: Simon, James, Judas, and the like ("Mary" was most common among women). The lists in Luke and Acts replace Mark and Matthew's "Thaddeus" with "Judas son of James" (cf. also Jn 14:22). Ancient documents show that it was common for people to go by more than one name, so the different lists of apostles probably do refer to the same people. Nicknames were common, appearing even on tomb inscriptions. "Cananaean" is *Aramaic for "zealot" (Lk 6:15); thus some translations simply read "Simon the *Zealot" here. In Jesus' day, this word could just mean "zealous one," but it may mean that he had been involved in revolutionary activity before becoming Jesus' follower, as it would probably mean when the Gospels were written.

"Apostles" means "sent ones," or commissioned representatives. The analogous Hebrew term was used for business agents, although the general concept is broader than that; a "sent one" acted on the full authority of the sender to the extent that one accurately represented the sender's mission. Commissioning *narratives appear in the *Old Testament, as when Moses commissions Joshua to carry on Moses' work and take the Promised Land (Deut 31:23). Teachers often allowed their advanced students to practice teaching while they were still students, to prepare them for their own future work.

10:5-15
The Mission

10:5. "Way of the Gentiles" probably means a road leading only to one of the pagan, Greek cities in Palestine; many Jewish people avoided roads that led into such cities anyway. Galilee was surrounded by *Gentile regions except in the south, where it shared borders with Samaria. (On *Samaritans, see comment on Jn 4:1-4.)

10:6. A common Jewish belief was that ten tribes of Israel had been lost and would be found in the time of the end. Here, however, Jesus uses "lost sheep of Israel" in the more common Old Testament sense: they have gone astray from the Lord (Is 53:6; Jer 50:6; cf. Ezek 34:5). But cf. Matthew 10:18.

10:7-8. That the apostles' mission is the same as Jesus' is appropriate for "sent ones" (see comment on 10:1-4): they acted within the limits of their authorization. "As I [God] [gave the *law] for free, so you should" was a later Jewish saying applied to teachers of the law; whether it was a proverb Jesus was citing this early we cannot be sure.

10:9-10. They are to travel light, like some other groups: (1) peasants, who often had only one cloak (cf. 5:40); (2) some traveling philosophers, called *Cynics (not present in Jewish Galilee, though probably represented

as nearby as Tyre and the Decapolis, Gentile cities surrounding Galilee), who ideally had only a cloak, staff, cup, and, for begging, a bag; (3) some prophets, like Elijah and John the Baptist (see e.g., 1 Kings 18:13; 2 Kings 4:38; 5:15-19; 6:1; Mt 3:4). They are to be totally committed to their mission, not tied down with worldly concerns. A traveler could use a staff to fend off animals or robbers, or to keep one's balance when walking; though homeless, even Cynics used staffs. The prohibited "bag" could have been used for begging (so the Cynics used it), different from depending on hospitality in 10:11; on "money belts," see comment on Luke 6:38. It is said that *Essenes received such hospitality from fellow Essenes in various cities that they did not need to take provisions when they traveled.

10:11-13. Showing hospitality by taking in travelers was one of the most important virtues in Mediterranean antiquity, especially in Judaism; Jesus could have drawn on Old Testament precedent for traveling ministers depending on such hospitality (2 Kings 4:8-11); cf. comment on Matthew 10:41. (Indeed, Israelite tradition had required even most wicked kings to respect prophets and to spare them despite their criticisms, which other ancient kings would not have endured.) Though hospitality was a virtue highly valued in Mediterranean antiquity generally, hospitality might prove less dependable during later missions in the *Diaspora. In Galilee, however, probably only the inhospitable or those hostile to Jesus' message would refuse them altogether.

To whom and under what circumstances greetings should or should not be given were important issues of social protocol, especially because the common Jewish greeting, "Peace," was really a blessing (a prayer implicitly invoking God but addressed to the recipient) meant to communicate peace. Jesus cuts through such issues of protocol with new directives.

10:14-15. Pious Jewish people returning to holy ground would not want even the dust of pagan territory clinging to their sandals; Jesus' representatives here treat unresponsive regions as unholy or pagan. Sodom is set forth as the epitome of sinfulness both in the prophets and in subsequent Jewish tradition; the point here is probably that they rejected God's messengers, albeit lesser ones than Jesus (Gen 19). Earlier Scripture often used Sodom as the archetypical site of judgment (Is 13:19; Jer 50:40; Zeph 2:9) and applied the image to Israel (Deut 32:32; Is 1:10; 3:9; Jer 23:14; Lam 4:6; Ezek 16:46-49).

10:16-23
Promise of Persecution

10:16. The contrast between vicious wolves and harmless lambs or sheep was proverbial, and aggressors were often compared with wolves. Jewish people sometimes viewed themselves (Israel) as sheep among wolves (the Gentiles). Many also viewed doves as weak, timid or inconspicuous.

10:17. Before A.D. 70, local courts, or councils deciding cases, were run by local elders or priests, probably with an average of seven of them (in later rabbinic tradition, a minimum of three). Synagogues were the local places of public assembly, and thus provided the natural location for hearings and public discipline. Sometimes discipline was administered in the form of flogging; under second-century *rabbis' rules, Jewish flogging consisted of thirteen harsh strokes on the breast and twenty-six on the back with a strap of calf leather (forty is the maximum permissible, Deut 25:3). These words would have struck Jewish Christians as particularly painful, because they signified rejection of their preaching among their own people.

10:18. In Jewish thinking, a Jew betraying any Jew to Gentile persecutors was a horrendous act. "Governors" are Roman overseers in the provinces; the three levels were propraetors, proconsuls and procurators. "Kings" may refer only to Rome's vassal princes (e.g., Herod the Great earlier or Agrippa I later) but probably includes Parthian and other rulers from the East, indicating virtually universal persecution.

10:19-20. Jewish people thought of the *Holy Spirit especially as the Spirit of *prophecy who had anointed the prophets to speak God's message. Greek and Roman rhetoric emphasized careful preparation, yet people also respected those skilled enough to speak extemporaneously based on the knowledge they had already acquired.

10:21-22. See Micah 7:5-7 (more explicit in

Mt 10:35-36); this family divisiveness also became part of other Jewish images of the end time (e.g., *1 *Enoch* 100:2). In a culture where family loyalty was essential and honor of parents paramount, these words would have sounded particularly horrific.

10:23. A Jewish tradition that may have been in circulation in Jesus' day warns that in the time of final tribulation, Jewish people persecuted for their faith would have to flee from one city to another. The disciples may have understood Jesus' words in these terms. Jesus may emphasize that his followers' mission to Israel will continue until the end (cf. 23:39), and some will survive till then (cf. 24:22). Some people viewed fleeing as dishonorable, but (at least outside battles) most people preferred it to death (cf. 2:13).

10:24-33
Comfort in Persecution

Like most early Christians and zealous Christians in many parts of the world today, Matthew's readers faced persecution and often other dangers as part of their daily lives. Jesus' words would comfort them.

10:24-25. Disciples were to serve their teachers, in hopes of ultimately becoming master teachers themselves, yet always owing the teacher respect. A slave could attain status if owned by a prominent master, and under rare circumstances (e.g., if owned by a *freedperson), he could attain equal status after—but never before—becoming free and attaining wealth too. Verse 25 contains a play on words: by reading "Beelzebul" as if it meant "master" (*Aramaic *be'el*) of the house (Hebrew *zebul*), Jesus spoke of the "master of the house." "How much more" arguments were common (see e.g., 7:11; 10:29-31).

10:26-27. Secretive acts were often performed in darkness. Everything would come to light on the day of judgment, as was widely agreed; there was therefore no point in concealing anything now. The flat rooftops provided the best place for shouting messages out over the crowded streets.

10:28. Fearing (respecting, only in a much stronger way than we use the term *respect*) God was central to Jewish wisdom tradition and is repeatedly stressed in Jewish literature; some Jewish writers made affirmations about martyrdom similar to this passage (*4 Maccabees 13:14-15). Body and soul were instantly destroyed in some Jewish traditions about hell; in others, they were perpetually destroyed and tormented. Contrary to the assertions of many modern scholars, many Jewish people in this period agreed with most Greeks that soul and body were separated by death.

10:29-31. Sparrows were one of the cheapest items sold for poor people's food in the marketplace, the cheapest of all birds. Two were here purchased for an *assarion,* a small copper coin of little value (less than a sixteenth of a denarius, hence less than an hour's wages); Luke 12:6 seems to indicate that they were even cheaper if purchased in larger quantities. Some Jewish traditions preserved later recognize God's sovereignty even over birds, which they sometimes considered inconsequential. This is a standard Jewish "how much more" argument: If God cares for something as cheap as sparrows, how much more does he care for people! "Not a hair of (one's) head" falling was a familiar biblical promise of protection (1 Sam 14:45; 2 Sam 14:11; 1 Kings 1:52; Acts 27:34). While not itself a promise of universal protection, Matthew 10:30 thus invites trust in God's care and ability to protect.

10:32-33. Jewish teachers spoke of "confessing" God and warned against denying him; Jesus here speaks of himself in these terms. In some Jewish descriptions of the day of judgment, the testimony of righteous persons for or against others bore much weight with God. Rabbis spoke of God's angels or his attributes of mercy or judgment pleading a case before him. Here Jesus' advocacy before the Father weighs more heavily than anything else in this world.

10:34-39
The Cost of Discipleship

10:34. It was generally believed that there would be great sufferings before the end, and that the *Messiah would lead his people in a triumphant war, followed by a time of peace. Jesus assures his listeners that the promised era of peace is yet some time off and goes on to explain the nature of the current sufferings and conflict.

10:35-36. The context of Micah 7:6, cited here, describes the awful evils in the land and

the untrustworthiness of even the closest relatives and friends that would continue until the Lord would come to vindicate those who hoped in him. At least some Jewish people applied that text to the final tribulation. Given the belief held by many Jewish people that a time of sufferings would precede the end, the *disciples may have understood this saying as suggesting that they were already experiencing the sufferings of that time. A newly married couple often lived with the groom's parents (hence the daughter-in-law and mother-in-law here).

10:37. Jesus here expounds on the text just cited (Mic 7:6) to make a point virtually inconceivable to most of his hearers. Loving family members, especially parents, was one of the highest duties in Judaism; the only one who could rightfully demand greater love was God himself (Deut 6:4-5; cf. Exod 32:27; Deut 13:6-11; 2 Maccabees 7:22-23).

10:38. Crucifixion was a violent, painful and humiliating death by slow torture. A condemned criminal would carry on his back the horizontal beam of the cross out to the site of his execution, generally amid an antagonistic, jeering mob. This verse means a shameful, painful road to a dreadful execution.

10:39. Most Jewish people contrasted the life of this world with the life of the world to come.

10:40-42
Receiving Christ's Messengers

This passage returns to the theme of hospitality toward the messengers of the *gospel (10:11-14). The principle here is like that of the appointed messenger or agent in Judaism, who represented his sender to the full extent of his commission. God, his glory and *law, and Israel were also connected in this way in Jewish tradition. This principle had always been true of the prophets (e.g., Exod 16:8; 1 Sam 8:7; cf. Num 14:2, 11; 16:11): one who embraced them embraced their message and thus God's will. Those who provided for them were likewise rewarded (1 Kings 17:9-24; 2 Kings 4:8-37). A cup of water was the only gift of hospitality the poorest person might have available, but it would symbolize enough. Cold water was highly preferred for drinking (see comment on Rev 3:15-16).

11:1-19
More Than a Prophet: The Forerunner

Matthew 11:1 is an epilogue to 9:37–10:42; in 11:2-19, John, like Jesus and the Twelve, becomes a model for Christian discipleship.

11:1. Emissaries would often be sent to prepare people for the coming of a king or other important figure before his arrival. "Cities" is meant in a broad rather than a technical Greek sense: there is no indication that Jesus approached major cities like Sepphoris or Tiberias. Even most of the larger agricultural towns had fewer than three thousand inhabitants, and the Galilean countryside was full of villages.

11:2-3. John's attitude here contrasts strikingly with 3:14. Some commentators have suggested that John is concerned about reports that Jesus has been touching the unclean (8:3; 9:20, 25); to this report Jesus replies with the results of those touches (11:5). More likely, John, like most of his contemporaries, is tempted to think of a *kingdom bringer (3:11) or royal *Messiah rather than a "mere" miracle worker, so Jesus vindicates his healing mission with a text about the blessings of the messianic era (11:5). John's *disciples had probably traveled on the main road northward from Herod's Perean fortress Machaerus, where John was imprisoned, through Perea beside the Jordan, to cross west into Galilee, where Jesus was teaching.

11:4-6. Jesus cites signs from Isaiah 35:5-6 that refer to the arrival of the messianic era; cf. Isaiah 26:19; 61:1. (In a messianic context, a *Qumran text apparently attributes to God *eschatological healing and Isaiah 61's preaching to the poor, as here.)

11:7. Reeds were fragile (Is 42:3; *3 Maccabees 2:22), so a figurative "reed shaken by the wind" was notoriously weak (1 Kings 14:15) and undependable (2 Kings 18:21; Ezek 29:6). Tall reeds (as high as five meters) grew around the Jordan where John ministered. The image may also contrast with the pampered prince implied in 11:8: Antipas employed a reed as an emblem on his coins a few years earlier (up until A.D. 26).

11:8. Prophets were rarely well-to-do, and in times of national wickedness they were

forced to operate outside societal boundaries. (In David's time, Nathan and Gad could be court prophets; but by Ahab's time the court prophets were corrupt, and Elijah and others had to hide out in the wilderness or, in better days, at least remain outside the king's palace.) Even the plural "houses" could allude to Antipas's multiple palaces (or to multiple buildings comprising such palaces), although a broader application is also possible. Though Antipas was no king (see comment on 14:1), he was closer to royalty than anyone else in Galilee; his palaces included the fortress of Machaerus where John was executed.

11:9-10. Some Jews in the first century believed that full-fledged prophets had died out long ago, but they would have been open to the restoration of prophets in the end time. By fulfilling Malachi 3:1, John is more than just any herald of God; he is the direct announcer of the Lord, fulfilling the *prophecy of Elijah's return (Mal 4:5-6).

11:11. This statement elevates Jesus' disciples rather than demeans John (cf. 11:9-10). One may compare the early rabbinic saying that Johanan ben Zakkai, one of the most respected scholars of the first century, was the "least" of *Hillel's eighty disciples; this saying was not meant to diminish Johanan's status but to increase that of his contemporaries. Greek rhetoric often used comparison with an esteemed person to praise another all the more. Calling John the "greatest" was a typically Jewish form of praise, which could even be applied to more than one person at a time; *rabbis, for instance, could in the same breath speak of both Joseph and Moses as the greatest figures of Israel's history (in the *Old Testament cf., e.g., 2 Kings 18:5; 23:25). Those "born of women" was a familiar Old Testament and Jewish expression for humans (e.g., Job 14:1).

11:12. Revolutionaries, such as those later known as *Zealots, wanted to bring in the kingdom by military force. Jesus may use their zeal (cf. Prov 11:16) in a figurative way for the single-minded commitment necessary to enter the kingdom; he describes his followers as *spiritual* zealots (cf. Mt 10:34).

11:13. Jewish people sometimes summarized the Bible as "the Law and the Prophets"; many of them believed that after the biblical prophets the prophetic voice was muted until the messianic time. John thus introduces the messianic era.

11:14-15. Malachi 4:5 had promised the return of Elijah, who had reportedly never died (2 Kings 2:11); Elijah's return thus became part of Jewish expectation for the future.

11:16-17. "To what may we compare . . . ?" was a familiar idiom preceding a rabbinic *parable or argument from analogy. The marketplace was a town's open, most public place.

Although scholars debate the question, spoiled children who pretend to have weddings and funerals (one later game was called "bury the grasshopper") may stand for Jesus' and John's dissatisfied opponents; dissatisfied with other children who will not play either game, they are sad no matter what. The term for "mourn" here can mean "beat the breast," a conventional mourning custom in Jewish Palestine. Custom mandated that bystanders join in any bridal or funeral processions.

11:18-19. John the Baptist fit the role of an apparently *ascetic prophet, like Elijah; Jesus follows a godly model more like David, but both are proper in their place. The charge that John "has a *demon" suggests either that he is a false prophet possessed by an evil spirit, or that he is a sorcerer who manipulates a spirit guide; either charge would warrant the death penalty under earlier biblical *law (Deut 13:1-11; 18:9-20). "Glutton and drunkard" was also a capital charge (Deut 21:20). The charges against both prophets thus constitute serious accusations.

11:20-24
Judgment on Cities

Judgment oracles against nations were standard in the Old Testament prophets (Isaiah, Jeremiah, Ezekiel and Amos); they also appear in the Jewish **Sibylline Oracles* before, during and after the *New Testament period. The principle that those who had more light were judged more strictly appears in the Old Testament (cf. Amos 3:2; Jon 4:11).

11:20-21. Jewish people thought of Tyre and Sidon as purely pagan cities (cf. 1 Kings 16:31), though some of their inhabitants who were exposed to the truth had been known to repent (1 Kings 17:9-24). "Sackcloth and ashes" was dressing characteristic of mourning, including the mourning of *repentance (Job

42:6; Dan 9:3). Chorazin and Bethsaida were among the small villages on the lake of Galilee where Jesus ministered; Chorazin was a short walk, less than two miles, from Capernaum. It was unknown to people outside Palestine.

11:22. According to some Jewish stories about the time of the end ("the day of judgment," as it was often called), the righteous among the pagan nations would testify against the rest of their people, making clear that no one had any excuse for rejecting the truth about God.

11:23. Judgment was often described in the terms Jesus uses here (Is 5:14; **Jubilees* 24:31), especially against a ruler who exalted himself as a deity (Is 14:14-15, of the Babylonian king's death).

11:24. See comment on 11:22.

11:25-27
God's Revelation

In Jewish wisdom tradition, it was not those who were wise in their own eyes and leaned to their own understanding who were genuinely wise (Job 12:24-25; Prov 3:5-7; 12:15; 16:2; 21:2; 26:12), but the simple who began with the fear of God (Job 28:28; Ps 111:10; Prov 1:7; 9:10). God confounds the wisdom of the "wise" (Is 19:11-12; 29:14; 47:10; Jer 8:8-9; Ezek 28:3-12). Only God fully knew personified Wisdom (Baruch 3:31-32), so only he could reveal it (Wisdom of Solomon 9:16-17). As the revealer of God in 11:27, Jesus assumes a position often assumed by divine Wisdom in Jewish tradition. For the image of infants, cf. 10:42 and 18:1-10; God had always favored the lowly (e.g., 1 Sam 2:3-9).

11:28-30
The True Sabbath

11:28. God offered rest to the weary (Is 40:28-31; cf. the invitation of divine Wisdom in Sirach 24:19).

11:29-30. Animals often carried yokes; when a man carried a yoke he was normally very poor and would carry it on his shoulders (cf., e.g., Jer 27:2); Judaism applied this image to subjection or obedience. Jewish people spoke of carrying the yoke of God's *law and the yoke of his *kingdom, which one accepted by acknowledging that God was one and by keeping his commandments. Jesus speaks of his own yoke in similar terms. Matthew intends Jesus' words about rest as a contrast with Pharisaic sabbath rules in the following passage (12:1-14): the promise of "rest for your souls" comes from Jeremiah 6:16, where God promises to stay his wrath if the people turn to him instead of to the words of the false religious leaders (6:13-14, 20). The labor, rest and yoke together also echo Sirach 51:23-27; greater than the sage Ben Sira, Jesus presents himself as wisdom itself.

Using the term translated "gentle" or "meek" here, Greeks did praise rulers who showed kindness and mercy. Except for those of low status, Greeks did not normally welcome self-abasement, a value more prominent in Jewish piety.

12:1-8
Food on the Sabbath

Other details are noted in Mark 2:23-27, although details in Matthew, written mainly for Jewish Christians, would have sounded less like a sabbath violation to Jewish ears than Mark's wording would. Matthew's structure follows the standard form for many ancient reports of arguments: he summarizes the situation (12:1-2), presents arguments by example (12:3-4), analogy (12:5), comparison (12:6), citation (12:7) and ultimate basis (12:8).

12:1. Jewish *law based on Deuteronomy 23:25 (cf. Ruth 2:2-3) provided for the poor to eat food as they passed through a field. The issue here is thus not that the *disciples took someone's grain but that they picked it on the sabbath; later rabbinic interpretation specifically designated harvesting and grinding grain as forbidden on the sabbath.

12:2. The modern picture of *Pharisees as legalists unfairly trivializes the Pharisees' piety (sometimes intentionally, so modern legalists will not have to address Jesus' real bases for criticism). Not only the Pharisees but other Jewish people throughout the ancient world honored the sabbath and celebrated it with joy. The Bible itself had forbidden infractions of the sabbath under pain of death.

12:3-4. Although highhanded rejection of the sabbath was regarded as rebellion against God, different Jewish groups made arguments for differing interpretations of sabbath laws and were not in a position to legally enforce their views against others. Jesus' argu-

ments here would not have satisfied the Pharisees, but they might have satisfied elders or priests serving as judges on local courts. Outright rejection of the sabbath was viewed as rejecting the law, but Jesus rejects only its abuse.

12:5-6. As we know from later sources, most *rabbis would have questioned an argument based merely on an example such as the one in 12:3-4 and Mark 2:25-26; it is significant that Matthew, writing for Jewish readers, has an argument from the law itself. The stricter school of Pharisees, the *Shammaites, accused the more lenient *Hillelite school of Pharisees of breaking holy days; Hillelites, like Jesus in 12:5, offered analogies with the priests or could appeal to temple service overriding the sabbath.

The law of Moses commanded work for priests on the sabbath (Num 28:10). This is a Jewish "how much more" argument: if acceptable for the guardians of the temple, how much more for one greater than the temple? The temple had become the central symbol of the Jewish faith, and the suggestion that a human being could be greater than the temple would have struck most ancient Jewish ears as presumptuous and preposterous. Jewish teachers could, however, accept and argue from the principle that some things took precedence over sabbath observance (temple ritual, saving a life, defensive warfare, etc.).

12:7-8. Jesus goes on the offensive here with a still higher principle of the *Old Testament; cf. 9:13.

12:9-14
Healing on the Sabbath

Other details are noted in the comment on Mark 3:1-6. Whereas Mark's argument would not have been as persuasive to Pharisees, being an argument from analogy from greater to lesser (3:4), Matthew includes a more helpful argument from lesser to greater (12:12).

12:9-10. As one may gather here, informal dialogues could occur in smaller *synagogue gatherings in this period that are quite different from the stricter ritual observed in most *churches and synagogues today. The predominant school of Pharisees in this period, the *Shammaites, did not allow praying for the sick on the sabbath; the minority school, however, the *Hillelites (who later became predominant after 70), allowed it.

12:11. The *Essenes would have forbidden even rescuing an animal on the sabbath, but many Pharisees and most other Jewish interpreters would have agreed with Jesus. Pits were sometimes dug to capture predators such as wolves, but livestock could fall into them as well. Counterquestions (as here, answering 12:10) were common in the debates of Jewish teachers.

12:12. Jesus here uses a standard Jewish argument, "how much more" (*qal vahomer*): If one is concerned for a sheep, how much more for a person? This too was an argument his opponents had to understand, and by analogy it showed the inconsistency of their interpretation of biblical sabbath laws.

12:13. Pharisees debated whether medicine could be applied on the sabbath. By contrast, Jesus here not only applied no medicine; he did not even lay hands on the man.

12:14. Pharisees, who had little political power in this period, could do no better than plot. Jewish courts could not enforce the death penalty in this period, although the law of Moses allowed it for sabbath violation (Ex 31:14; 35:2). Indeed, these Pharisees violate standard Pharisaic ethics, which could tolerate opposing biblical arguments and which emphasized leniency, especially regarding death sentences. The issue is not their official ethics (which often resemble those of Jesus) but their hearts.

12:15-21
The Spirit-Anointed Servant

12:15-16. Withdrawing from this synagogue with new followers was not actually destroying the synagogue; first-century Palestinian Judaism was very diverse, and not everyone in a synagogue need hold the same views.

12:17-18. The servant passage in Isaiah 42:1-4 in context refers inescapably to Israel, not to the *Messiah, despite a later Jewish tradition applying it to the Messiah (see 44:1, 21; 49:3). But because God's servant Israel failed in its mission (42:18-19), God chose one within Israel to restore the rest of the people (49:5-7), who would take the remainder of the punishment due Israel (cf. 40:2) in its place (52:13–53:12). Thus Matthew declares that the Messiah

takes up the servant mission of Isaiah 42:1-4, and he is marked by the presence of the *Spirit. Matthew translates Isaiah to conform to the language of Matthew 3:17 ("my beloved . . . in whom I am well pleased"), which was otherwise closer to Genesis 22:2.

12:19-21. This passage stresses Jesus' meekness, in contrast to the warlike Messiah many people hoped for; this was a reason for the messianic secret (on which see the introduction to Mark in this commentary). It was customary to quote only part of a passage, because the more biblically informed hearers would know the context; Matthew wants all of his readers to catch the note on which he concludes: salvation for non-Jews (12:21; cf. 12:18).

12:22-37
Blaspheming the Spirit

See further comment on Mark 3:20-30.

12:22-23. The *Messiah of Jewish expectation, a descendant of David, was not a miracle worker, but since God was with Jesus in such extraordinary ways, it is not difficult to see how messianic hopes would be attached to him. David was also the closest example to an exorcist reported in the Old Testament (1 Sam 16:23); Jewish tradition associated exorcism especially with his son Solomon.

12:24. Pagan exorcists sought to remove *demons by magical incantations. In the second century rabbis still accused Jesus and Jewish Christians of using sorcery to achieve the miracles that everyone acknowledged they were performing. Sorcery merited the death penalty under Old Testament *law (Ex 22:18).

The title Beelzebul, "Lord of the House," probably alludes to "Beelzebub" ("lord of flies," a possible corruption of Baal-zebul), the local deity of Ekron (2 Kings 1:2-3). The title was appropriately applied in some later Jewish sources to *Satan (**Testament of Solomon* 3).

12:25-26. Jesus does not deny the existence of other exorcists here. But a demon's retreat that meanwhile drew attention to another of Satan's servants would only be a strategic retreat; such possible activity of magical exorcists contrasts with the wholesale exorcizing of the masses that Jesus undertakes, which clearly signifies a defeat of Satan (12:29). Quick, witty repartee was characteristic of popular teachers in both Jewish and Greek traditions.

12:27. Other Jewish circles also affirmed the need for exorcism (Josephus, *Jewish Antiquities* 8.47; 4Q242 fi 3.4; cf. Tob 8:3). "Your sons" probably means "members of your own group" or disciples (just as, e.g., "sons of the prophets" in the Old Testament meant "prophets"). Because some of the Pharisees' associates also cast out demons (by methods that would look more magical than Jesus'), they should consider their charge carefully. On being the judges of others in a group, see comment on 12:41-42.

12:28. It was generally believed that the *Spirit had been quenched or muted in some way after the Old Testament prophets had died, but that this withdrawal of the Spirit would be reversed in the time of the *kingdom, when the Messiah came. In the context of 12:18, Matthew wishes his readers to hear this text as Jesus' claim to be the Messiah (12:23).

12:29. Many early Jewish sources report that Satan or demons were "bound," or imprisoned, after God subdued them; magical texts often speak of "binding" demons by magical procedures. Here, however, the *parable about tying up a protective householder means that Jesus had defeated Satan and could therefore plunder his possessions—free the demon-possessed. Some plausibly find an allusion to God's activity in Isaiah 49:24-25.

12:30. Ancient Jewish teachers stated their points as starkly as possible; this statement and the one in Mark 9:40 both mean "A person is either on one side or the other." Other contrast sayings similar to this one circulated in antiquity.

12:31-32. Many Jewish teachers taught that one's sufferings in this life could make up for sins; but certain grave sins would be carried over into the world to come. (Some teachers declared similarly that King Manasseh's *repentance allowed him to be forgiven in this world but not in the world to come.) "High-handed" sins—deliberate rebellion against God—could not be *atoned for under Old Testament law. Blasphemy was punishable by death (Lev 24:10-23).

Jesus thus regards blasphemy against the Spirit—permanently rejecting his identity (Mt 12:18) even when attested by the Spirit's works (12:28)—as the worst of sins. (On the meaning of blasphemy in general, see comment on 9:3-8.)

12:33. For a figurative use of "fruits" in the Old Testament, see comment on 3:8; the fruits here are their words (12:34-37).

12:34-35. Their words (12:36-37) against him revealed their heart; on "offspring of vipers," see comment on 3:7 (cf. also Is 57:3-4; 59:5-8). Other Jewish teachers also often stressed the importance of a right heart (though believing something and being something are not always the same thing, as the lives of many who claim to be Christians today testify). People were characterized by their actions or speech as fools, wise, sinners, etc., in Jewish wisdom tradition.

12:36-37. Many proverbs emphasize the importance of sound speech and that silence is better than unhealthy speech (e.g., Prov 10:11; 15:4; 17:27-28). In context (Mt 12:32), Jesus' opponents reveal their hearts especially by rejecting testimony about Jesus' identity that was just as critical as the basic Jewish confession, the Shema' (Deut 6:4). Most Jewish people would have agreed that God will bring everything to light on the day of judgment.

12:38-45
A Demonized Generation

Here Jesus returns the charge: they, not he, are servants of Satan. Returning charges was standard practice in ancient courts and presumably other accusation settings.

12:38-41. Jewish discussions of the end times featured converts among the poor who would testify against those who said they were too poor to follow God, converts among the rich, converts among the Gentiles and so on. Here Jesus appeals to pagans who converted. Some Jewish teachers disliked Jonah for his initial disobedience to God "on behalf of Israel"—they said that he feared that Nineveh's repentance would leave unrepentant Israel condemned (Mekilta *Pisha* 1.80-82). In the Old Testament, Nineveh, responsible for permanently destroying the northern kingdom of Israel, epitomized wickedness (e.g., Nahum 2:8; 3:1, 7); but the repentance of Nineveh in Jonah 3:10 also taught that God could spare pagans who turned to him (Jon 1:15-16; 4:10-11) as well as judge his disobedient servants (1:14-15). (Some rabbis appreciated Jonah, suggesting that he resented Gentile repentance because it showed up Israel's lack of it.)

"Three days and nights" (Jon 2:1) need not imply complete days; parts of a twenty-four-hour day counted as representing the whole day. In early Jewish law, only after three days was the witness to a person's death accepted.

12:42. Some traditions identified the "Queen of the South," the queen of Sheba (1 Kings 10:1), with the queen of Ethiopia (cf. Acts 8:27).

12:43-45. Jesus' point: Although he is casting out *demons, this wicked generation is inviting all the more back in. The desert was a natural haunt of demons in much of Jewish tradition, and "sevenfold" was a traditional way to express severe punishment (Gen 4:15, 24; Lev 26:18), so the hearers would have readily caught Jesus' point. Jesus thus reverses his opponents' charges in 12:24; reversing charges was standard practice (including in ancient defense speeches in courts).

12:46-50
Jesus' Real Family

See comment on Mark 3:31-34. Fidelity to and respect for one's family were so heavily emphasized that such words must have struck their hearers quite forcefully. Many Jewish interpreters regarded the command to honor father and mother as the most important in the *law.

Family relationships in the ancient world were often defined by hierarchy even more than by kinship ties, so that wives and especially children (and, in wealthy homes, slaves) were expected to obey the father of the household. Jesus can thus define his "mother, brothers and sisters" as those who obey his Father. To disavow literal family members was so repulsive that even using the image would have been culturally offensive. Further, spiritual or figurative kinship language in Judaism (especially "brothers") was usually viewed ethnically (fellow Israelites).

13:1-9
The Sower, the Seed and the Soils

Jewish sages from before till long after Jesus' era commonly taught in *parables, sermon illustrations to communicate their main point or points. Parables illustrated their teaching and also could provoke new ways of considering it. In the *New Testament, though others use illustrations, only Jesus uses story

parables, a Palestinian Jewish teaching form; it cannot be attributed to composition by the later *church outside Jewish Palestine. The range of Jesus' parables (e.g., stories, similes, riddles) fit the *Old Testament range of the Hebrew term *mashal*.

Later *rabbis developed fuller story parables like those of Jesus, though theirs (reflecting their higher-scale audience) included more royal courts and conventional values and fewer purely agrarian images. Most of the Roman Empire's inhabitants were rural peasant farmers or herders. The literate elite often ignored this large population, but Jesus' illustrations show that he ministered frequently among this class.

13:1-2. Jesus gets in the boat for the purpose of relieving the overcrowding, but this would also make him easier to hear; a speaker to a crowd on shore would produce an ideal acoustic situation.

13:3-4. Jewish teachers often told illustrative stories like this one, although Jesus, addressing Galilean farmers, focuses more on agrarian images than later rabbis usually did. See "parable" in glossary. Most Galileans (like the majority of people in the empire generally) were agrarian peasants; Galilee had only two significant cities, in neither of which is Jesus recorded as ministering. Seed was sometimes (though not always) sown before the ground was plowed; it thus commonly befell any of the fates reported here. A farmer could either cast the seed by hand, as probably here, or let it trickle from holes in a sack carried by an animal. The "path" or "road" is one of the many footpaths through the field.

13:5-6. Much of the land in Palestine has only a thin layer of soil over rock; if the sower had not plowed first, he would not be aware that he wasted seed on this soil until after the fact.

13:7. These thistles were probably unseen too; instead of having been pulled out, they may have just been cut or burned, leaving roots from which thistles could grow with the seed to choke it out. In April, thistles could grow taller than a meter around roads.

13:8. Thirtyfold, sixtyfold and a hundredfold are tremendously good harvests from Galilean soil. The Jordan Valley normally yielded between ten- and a hundredfold, so a hundredfold need not be a miraculous harvest (Gen 26:12; cf. Amos 9:13). But for much of Palestine, the average yield was tenfold (meaning that ten seeds were harvested for every seed sown), and all the figures Jesus reports here are very good yields.

13:9. *Disciples learned especially by carefully listening to their teachers.

13:10-23
The Sower Explained: Understanding the Word

That some members of the community of disciples would not persevere fits Old Testament models; in the Old Testament, some persons, like Saul, turned away from obedience to God, whereas others, like David, persevered through many trials.

13:10. Disciples asked their teacher questions, normally away from crowds and interlocutors, till they understood what he meant. In the case of obscure or vague public teaching, they sometimes questioned their teacher privately as a group.

13:11-13. Parables were meant to explain a rabbi's point by illustrating it; the majority of ancient Jewish parables include an interpretation, sometimes with multiple points of correspondence to the story (in contrast to what some earlier modern scholars contended). If the point of the parable were not stated, however, the parable would amount to no more than a story—or a riddle. The *Qumran sectarians believed that God had given them special revelation of divine mysteries not available to outsiders. Rabbis (and some other ancient teachers) had some more secretive teachings that they thought only their closest disciples could handle, and they reserved these for private instruction. The meaning of Jesus' parables, then, would be understood only by those who chose to become insiders. They functioned like sages' riddles, inviting contemplation.

13:14-15. The people in Jesus' day were like the people in Isaiah's day who heard the word but could not really hear and repent (Is 6:9-10).

13:16-17. Some Jewish texts describe how the righteous in the Old Testament longed to see the era of messianic redemption and a fuller revelation of God. Making a statement about someone (here, Jesus) by blessing someone else (here, those who saw him in

contrast to the blind of 13:15) was an accepted rhetorical technique of the day.

13:18-19. Greek writers could use seed for word, and sometimes used "sowing seed" to symbolize education; Jewish writers applied God "sowing seed" in Israel to the *law (e.g., *4 Ezra* 9:31-37). Contrary to the assumptions of many scholars about Jesus' parables, ancient Jewish teachers often told parables with multiple points of comparison. Even more often, they offered interpretations immediately following their parables.

13:20-23. Outsiders chose what they would do with the word when it came to them. Rabbis sometimes said that one would be consumed with either the law or with the cares of this world (v. 22).

13:24-30
The Story of Wheat and Tares

Wealthy landowners controlled most of the rural land throughout the Roman Empire; their estates were worked either by free peasants or by slaves, whose options in life were roughly the same (except that slaves could also be beaten or sold). Many of Jesus' hearers (13:34) may have been rural farmers on larger estates, who would have readily identified with the difficulty of the situation he described.

13:24. "The kingdom is like someone who . . . " does not mean that the *kingdom is compared only to the person. Rabbinic *parables often began with, "To what may such and such be compared?" or, "Such and such is like . . . " In these parables the phrase meant that the subject was being explained by the whole analogy that followed, not just by the next word. Thus the kingdom here is compared not with the person alone, but with the entire situation Jesus goes on to describe. Parables sometimes compared God with a landowner.

13:25-27. People usually slept after lunch, but especially (and at greatest length) at night. Ancient farmers sometimes feuded, and Roman law even had to forbid the practice of sowing poisonous plants in a neighbor's field. The most basic staple of the Palestinian diet (and the ancient diet in general) was bread; thus wheat was critical. But a poisonous weed, a kind of ryegrass known as darnel (*lolium temulentum;* usually translated "tares") looked like wheat in the early stages and could only be distinguished from it when the ear appeared.

13:28-29. The fields were normally weeded in the spring, but if the weeds were discovered too late—as here—one would risk uprooting the wheat with them; the master does not want to risk his wheat. Once they were fully grown, however, harvesters could cut the wheat just below the head, leaving the shorter tares to be cut separately.

13:30. Although first-century Palestine was undoubtedly more forested than it became in subsequent times, much of the earlier forest had been cut down, and fuel could not be wasted; once dried, the darnel at least proved useful for something—fuel for burning.

13:31-33
The Stories of Mustard Seed and Leaven

The point of both *parables is that the mighty kingdom everyone expected could issue from apparently obscure beginnings—like Jesus and the *disciples.

13:31-32. Scholars still dispute what plant is meant by the "mustard seed." Nevertheless, by no conjecture is it the smallest of all seeds that Jesus' listeners could have known (the orchid seed is smaller); the point is that it was recognized as very small and yet yielded a large shrub. Around the Sea of Galilee, it can reach a height of ten feet and has sometimes reached fifteen feet. Its usual height, however, is about four feet; because it would grow anew each year, birds could not nest in it when they built nests in early spring. The *hyperbole Jesus applies to the best image of growth from tiny to large he had available does not change the point, however; the kingdom might begin in obscurity, but it would culminate in glory.

Even if birds could not nest in the mustard plant, they could perch in it (Matthew's term here was sometimes used that way); Matthew's language here alludes to Daniel 4:12, the splendor of another ruler's kingdom. Sources suggest that Palestinian custom relegated mustard seeds to fields rather than gardens; one may thus contrast Matthew 13:31 with Luke 13:19, each adjusting the image for their respective readerships.

13:33. Roman cities had bakeries, but the image here is that of a rural Galilean woman fixing her own bread. Leaven, or yeast, would

be mixed through the meal. Three pecks of flour, roughly a bushel, was all that a woman could knead, and the resulting bread would feed about a hundred people. This extraordinary quantity may prefigure the unexpected greatness of the kingdom.

13:34-35
Secret Teachings

See comment on 13:10-13. Matthew cites Psalm 78:2, where the psalmist describes his knowledge in traditional terms of Hebrew wisdom, then goes on to give its content in the rest of the psalm: the history of God's faithful, saving acts and of his people's rebellion.

13:36-43
The Final Separation of Wheat and Tares

Many *Essenes and a small number of other Jews withdrew from mainstream Jewish society to seek greater purity; *Pharisees limited certain kinds of contact with those they considered impure. But most expected the righteous and wicked in the world to be separated only on the day of judgment, recognizing that God alone knew the hearts of all people. Only at the end, at the day of judgment, would the righteous and the wicked be effectively separated. The harvest is used elsewhere (e.g., *4 *Ezra* 4:30-32; **2 *Baruch* 70:2; cf. Is 32:13-15; Jer 31:27-28; Hos 2:21-23; 6:11) as a symbol for the end, and Jewish texts sometimes compare hell with a furnace (**1 Enoch* 54:6; some manuscripts in 98:3; *4 Ezra* 7:36). The *Son of Man's authority might evoke Daniel 7:13-14. Other Jewish texts (perhaps following Dan 12:2-3) also spoke of the righteous shining with glory in the future kingdom.

13:44-46
The Kingdom's Value

13:44. Treasures were often buried for safekeeping. The most likely circumstance envisioned here is that of a peasant who, while working the field of a wealthy landowner, found the treasure but covered it again lest the landowner claim it for himself. The peasant then invested all his own resources into that field to procure the treasure. Rabbis told stories of abandoning much for the study of the *law. Stories of finding lost treasures naturally circulated among the poor; they usually emphasized the wealthy outcome, but Jesus uses the story line to stir his hearers to sacrifice whatever necessary for a treasure far greater than any on earth.

13:45-46. Divers sought pearls in the Red Sea, Persian Gulf and Indian Ocean, and some pearls, imported by the rich, could be worth the equivalent of millions of dollars. Jesus' hearers were probably familiar with the basic story line; there seems to have been a folktale that ran similarly, although it did not make the same point about the *kingdom.

13:47-50
The Final Separation of Good and Bad Fish

For further discussion see 4:19; on separation, 13:36-43; for the furnace, see comment on 13:40. Different kinds of nets were used for fishing; dragnets (the kind used here) were much larger than the fishing nets employed in 4:18. Dragnets had floats on top and sinkers on the bottom to keep one part of the wide end of the net at the surface while the other part dragged below, catching fish in the seine.

13:51-52
Scribes for the Kingdom

The *law and wisdom were often compared with treasure (and sometimes with a pearl); *scribes, who were specially conversant with the law, naturally had the "old" treasure, and the message of the *kingdom gave them something new. The image is that of a householder paying out old and new coins kept in a strongbox hidden in his home. Some scholars have suggested that Matthew's Gospel addresses especially Christian scribes whose vocation is to disciple the Gentiles to the greatest teacher, Jesus (28:19).

13:53-58
Dishonor at Home

See comment on Mark 6:1-6 for more details. The tradition of prophets being rejected by their own town was old (Jer 1:1; 11:21-23), but the theme of prophets being persecuted had developed even further in subsequent Jewish lore.

When Jesus was growing up in Nazareth, the demand for carpenters there was great (to rebuild nearby Sepphoris, which had been

burned and its surviving inhabitants enslaved); thus it is not surprising that this was Joseph's occupation. Carpenters engaged in woodwork, such as wooden plows, chairs and the woodwork on roofs. They could also engage in masonry where buildings were made of stone. Nazareth itself was a small village in this period, with perhaps sixteen hundred to two thousand inhabitants according to high, older estimates and perhaps five hundred by some more recent ones; Jesus would thus have been known to most of his townspeople. The size of Jesus' family here would not be unusual by the standards of his era. As in 13:57, biblical prophets were sometimes rejected in their home town (Jer 1:1; 11:21-23) and even more often by their own people; early Judaism developed this emphasis even further.

14:1-12
Herod Executes John

See Mark 6:14-29 for considerably more detail. This passage refers not to Herod the Great, who died within several years of Jesus' birth, but to Herod Antipas, Herod the Great's son by a *Samaritan mother, and full brother of Archelaus (2:22). He had ruled in Galilee and Perea (the latter was a narrow strip of land on the east of the Jordan) since about 4 B.C., and continued in power till A.D. 39. John's martyrdom foreshadows that of Jesus; ancient authors and audiences understood suspense and foreshadowing.

14:1. Matthew uses Herod Antipas's actual title, "tetrarch," rather than the sarcastic or loose one Mark gives him ("king"). "Tetrarch" originally meant ruler of one-quarter of some territory, but Romans applied it to rulers of any portion; Herod the Great's kingdom had been divided in 4 B.C. among Archelaus (later supplanted by Roman procurators), Antipas and Philip.

14:2. Probably Antipas envisions a temporary resuscitation like those performed on behalf of Elijah and Elisha (1 Kings 17:22; 2 Kings 4:34-35), rather than the permanent *eschatological *resurrection, which was a corporate resurrection reserved for the end of the age (Dan 12:2).

14:3-4. The first-century historian *Josephus also reports Herod Antipas's affair with his sister-in-law Herodias. The tetrarch and his paramour divorced their spouses to marry one another, and Herod thereby offended his former father-in-law, the Nabatean king, ultimately leading to a war in which Herod's honor suffered greatly. John thus surely expected that Herod would resent his preaching, but he preached anyway; Herod could well have taken John's moral preaching as a political criticism. Many of Antipas's own subjects, especially in the region where John was probably preaching and was finally imprisoned, were ethnic Nabateans with divided loyalties, and Antipas would want to stifle criticism.

14:5-6. Jewish people did not normally celebrate birthdays in this period (Josephus declares celebrating birthdays forbidden). But though most Jews considered birthday celebrations a *Gentile custom, culturally prestigious Greek customs influenced the aristocracy. Rejecting invitations to such parties without good excuse would risk enmity. Lewd dancing was common entertainment at drinking parties; normally a princess would never participate, but the Herodian family already had a reputation for its moral extravagances. At Herod's fortress Machaerus, men and women dined in separate halls (a custom known in the eastern Mediterranean), so Herodias would not have directly witnessed Herod's behavior toward her daughter Salome.

14:7. Herod's oath is a drunken one; as a vassal of Rome, he had no authority to compromise any of his territory. (Cf. comment on Mark 6:23.) Hearers could also recoil at Herod's lust (cf. Mt 5:28); to sleep with the daughter of one's wife was incest (Lev 18:17).

14:8-9. It was an affront to one's honor to break an oath in front of guests, even if (as in this case) Jewish teachers would have preferred to absolve the oath. Antipas would not wish to shame himself at a party designed for his honor.

14:10-11. Pious Jewish *law required a trial before execution; here Herod, given power by the Romans, ignores this tradition. Beheading was the fastest and least painful method of execution and was carried out with a sword. But it was a Greek and Roman custom, contrary to Jewish custom. In ancient literature, only the most brutal amused guests by executing

someone or presenting a head at a banquet.

14:12. One's son would normally be in charge of the burial; either John had no adult sons (which is probable) or his *disciples were the only ones ready to fulfill this role. Although the whole ancient world (except for some eccentric philosophers) considered lack of proper burial the worst possible fate, some tyrants forbade it or forbade public mourning. Even Jewish custom forbade public mourning for those executed according to Jewish law. Potentially Herod could have resented whoever showed up to claim the body.

14:13-21
Feeding the Five Thousand

See comment on Mark 6:32-44 for more details. The most significant ancient reports of feeding miracles are the reports of Israel's eating manna in the wilderness of Sinai and miracles performed at the hands of prophets (e.g., Elisha in 2 Kings 4:42-44).

14:13-15. Bread and fish were basic staples of the Palestinian diet; meat was more expensive and rarely eaten except at feasts. Teachers were not normally responsible for feeding their disciples from their own means.

14:16. Ancient students often paid their teachers (though other teachers were self-supporting); it was honorable to invite teachers to dinner and to show them the utmost hospitality. But here Jesus, the teacher, assumes the role of host or provider. The ancient emphasis on hospitality included providing food as well as shelter for guests. Teachers sometimes delegated to disciples duties like procuring provisions for their school.

14:17-18. Even in a more inhabited region (cf. 14:13), an abundance of countryside villages could not have provided for a crowd of perhaps ten thousand people (cf. 14:20); even the largest villages rarely held more than three thousand residents. Compare especially 2 Kings 4:42-43 for the incredulity of prophet-disciples when Elisha tells them to distribute the food to the people.

14:19. It was customary for the head of the household to "bless," or give thanks for, food before a meal.

14:20. It was expected that the most generous hosts who had means normally provided enough food that some was left over. Ancient moralists condemned wastefulness.

14:21. A crowd of five thousand men plus women and children was larger than most of the villages that covered the Galilean countryside.

14:22-33
Walking on the Water

See also Mark 6:45-52. Moses, Joshua, Elijah and Elisha had all done water miracles, parting the sea or the river Jordan; but the only one the *Old Testament said "trod" upon the waters was God himself.

14:22. Because a teacher controlled the duration of the learning situation, it would be understood that Jesus could send the crowds home.

14:23. The very pious could set aside two specific hours a day for prayer; Jesus here spends the whole remainder of the day in prayer (though how long this time was is uncertain, given Matthew's ambiguous use of "evening" here—vv. 15, 23). Mountains were places of prayer for Moses and Elijah; here, away from the crowdedness of Galilean town life, Jesus could find solitude.

14:24. Harsh storms often arise suddenly on the Sea of Galilee.

14:25. The fourth, or final, shift of the night watch was between 3 and 6 a.m.; the watches started at 6 p.m. Jewish people often divided the night into three watches, but the Romans had four.

14:26. Belief in ghosts or disembodied spirits was common on a popular level in antiquity, even though the idea of ghosts contradicted popular Jewish teachings about the *resurrection from the dead.

14:27. Jesus' answer is literally "I am"; although this can easily mean "It is I," it may also allude back to God's self-revelation in Exodus 3:14 and Isaiah 43:10, 13: "I am."

14:28-32. Despite Peter's failure to follow through, by beginning to walk on water he had done something that not even the greatest prophets of the Old Testament had done. Walking on water might remind readers of Israel passing through the Red Sea or the Jordan but was a greater miracle. (In one story told by the *rabbis—we cannot determine whether it is as early as Jesus' time—the first Israelite to cross the Red Sea began to sink in the waves but was rescued by Moses' rod,

which divided the sea.) Faith to step into water could evoke Joshua 3:13-17. For Jesus' rescue, cf. Psalm 18:16 and 144:7.

14:33. The term *worship* was applied to homage offered to pagan kings as well as that offered to deities. Although it could indicate prostration as a sign of respect (e.g., 1 Sam 24:8; 25:23), it is an unusual term to express Jewish disciples' amazement at a human teacher, even in miracle stories. Though the disciples would not yet have verbalized Jesus' deity, Matthew is ready to do so (cf. 28:17-19). Ancient miracle stories (including many in the Gospels) often concluded with the observers' awe and praise.

14:34-36
Healings at Gennesaret

The "fringe" of Jesus' garment no doubt refers to the tassels he wore as an observant Jew; see comment on 9:20; cf. 23:5. Ancient literature commonly includes not only longer *narrative segments but also summary statements like this passage (cf. 4:23-25). Gennesaret was a plain on the northwest shore of the Lake of Galilee.

15:1-20
Human Tradition Versus God's Word

See Mark 7:1-23 for more detail.

15:1-2. Contemporary Jewish sources always characterize the *Pharisees as observing the traditions of the elders; in this way they felt they could depend upon a repository of the wisdom of the pious who preceded them. Washing hands before meals was one of the most prominent of those traditions but had no direct basis in Scripture.

15:3. Jesus responds to the Pharisees' question with a counterquestion, as *rabbis often did.

15:4-6. Judaism universally demanded honor of father and mother and included financial support of aged parents as part of this honor. Some, like *Josephus and many rabbis, regarded this demand as the most important commandment in the *law. The Pharisees therefore could not have disagreed with Jesus' example; they did not recommend that people fail to support their parents, but their allowance of special vows dedicating things only to "sacred" use created this loophole for those who could have wished to exploit it (cf. Prov 28:24). Some legal loopholes (such as the *prozbul,* an early rule circumventing the law's cancellation of debts in the seventh year) were intended to uphold the spirit of the law; this one unwittingly undercut even that.

15:7-9. Jesus quotes Isaiah 29:13, which complained that Israel in Isaiah's day was outwardly religious but inwardly far from God (cf. Is 1:10-20). It goes on to criticize the folly of Israel's "wise" people.

15:10-11. In a later story Johanan ben Zakkai, a Jewish teacher from the generation after Jesus, admitted privately to his *disciples that outward impurity did not really defile; one should simply keep God's commandments about purity. But this sort of teaching, even if it had been widespread, was not emphasized publicly, lest people fail to keep the ceremonial laws (as happened among some well-to-do Jews in Egypt).

15:12. Although the Pharisees (from whose teachers most of the later rabbis seem to have come) had virtually no political power as a group in this period, they were respected and highly influential among the people. Offending them thus did not not appear to be prudent.

15:13-14. The images of uprooting (Jer 42:10; 45:4; cf. 1:10; 11:16-19; 12:2; 24:6; 31:28), blindness (15:14; cf., e.g., Deut 29:4; Is 6:10; 42:19) and leaders guiding others astray with falsehood (Is 3:12-15; 9:16) are standard *Old Testament judgment language; the *Dead Sea Scrolls similarly describe the *Qumran community as a shoot planted by God. The image here is that of a farmer preparing his field and ridding it of unwanted weeds (cf. 13:30). The point of Jesus' response to his disciples is: Do not worry about the Pharisees' power, because their day of judgment is coming (Mt 3:10).

15:15-20. Such views were rare, and even more rarely divulged publicly; see comment on 15:10-11. Liberal Alexandrian Jews who no longer believed in literal observance of the food laws (Lev 11; Deut 14) were particularly despised by their more conservative colleagues. But everyone would at least have had to agree with Jesus that the heart matters most (see Is 29:13, cited in Mt 15:8-9; cf. also Is 59:13).

15:21-28
Mercy on the Canaanites

15:21. Tyre and Sidon were traditionally pagan territory; Sidon had been the home of Jezebel (1 Kings 16:31). But in the same generation a woman from that region had miraculously received food and healing for her child from the prophet Elijah and so became a full believer in Israel's God (1 Kings 17:8-24). Some argue that in Jesus' period, their territory stretched inland, so that one had to pass through territory belonging to Syrophoenicia, as here, even to get from Galilee to Caesarea Philippi. Many Jewish people still lived here, however.

15:22. Canaanites, many of whose survivors had been driven northward into Phoenicia during the Israelite conquest, were the most morally despised of Israel's enemies in the Old Testament; Matthew's characterizing this woman with this term may have set Jewish hearers on edge. But by acknowledging Jesus as "Son of David"—*Messiah—she also acknowledges the right of the kingdom of David (who had also embraced many non-Jews as allies) over the land. How could a Jewish person remain prejudiced against a Canaanite woman such as this one? David had welcomed many *Gentiles.

15:23-24. Jesus' statement in verse 24 need not preclude a later mission to Gentiles. By way of comparison, the servant of Isaiah 53:6-8 suffers on behalf of the lost sheep of Israel (cf. 40:11; 56:11), but the servant's mission was ultimately to reconcile all nations to God (42:6; 49:6-7; cf. 56:3-8; perhaps 52:15).

15:25-28. Certain people in the Old Testament, such as the Sidonian woman to whom Elijah came (1 Kings 17:18-19) and the Shunammite woman with Elisha (2 Kings 4:28), laid their need before a prophet and would not take no for an answer; God answered their prayers with a yes. (Some Jewish teachers closer to Jesus' time were reported to exercise the same kind of holy chutzpah in praying for rain, etc.) Women, who often had little other access to justice and had less to lose than men by protesting, might also be specially insistent (see Mt 20:20-21; Luke 18:3). Even those who were most intimate with God approached him with only the greatest respect when praying an insistent prayer (Gen 18:22-32); but they also refused to be deterred. "Dog" was one of the harshest insults in antiquity. Even though here it is at most an implied analogy (playing more on the Gentile custom of using dogs as pets), it would take great humility for this woman to take up the analogy. People often respected witty retorts.

15:29-31
Lame, Crippled, Blind and Mute Healed

Here Jesus cures many traditional categories of serious ailments. Even in a culture where people did not deny the existence of miracles, these cures would be viewed as extraordinary. Matthew's summary of such miracles may recall prophecies of Isaiah (35:5-6; cf. 29:18-19, 23).

15:32-39
The Second Feeding

Jesus' first feeding miracle (see comment on Mt 14:13-21) was not an exception; he was able to repeat it at any time. Some have identified Magadan (v. 39), possibly Mary Magdalene's home town, with the Galilean village of Tarichea, associated with fishing; it apparently imbibed some Greek culture, but had strong Jewish patriotism.

16:1-4
No Sign but Jonah's

16:1. The *Pharisees and *Sadducees differed on most matters. The Pharisees had great popular support, whereas the Sadducees held most of the political power. Together they could make a dangerous team. Probably writing after 70, Matthew often links the various leaders together, though by this time the Sadducees and temple establishment had apparently lost power and Pharisees were gaining greater influence. On such testing, cf. 4:3. "From heaven" was sometimes a circumlocution for "from God," but the context may suggest they mean a heavenly sign (16:2-3).

16:2-3. They ask for a sign from heaven in verse 1 (cf. 2 Kings 20:8-9; Is 38:7; 2 Chron 32:24); astrologers used signs in the heavens to predict the fall of emperors, and *rabbis also tried to interpret such signs. Jewish writers like *Josephus believed there were portents in the heavens when disasters were about to

occur (cf. also Mt 24:29-30). Some prophets, like Elijah, actually had produced signs from heaven—he called down fire from heaven (1 Kings 18:38)—but most prophetic signs were not so spectacular (Judg 6:17; Is 7:11-14; 8:18; 19:20; 20:3; 37:30; 38:7; 66:19; Ezek 4:3; 12:11; 24:24, 27). But in ancient Jewish parlance, "from heaven" can mean "from God" (cf. Mt 21:25), so they could simply seek any sort of divine sign (but cf. 16:2-3). Perhaps Jesus' opponents desire a sign to validate that he is a prophet—some rabbis believed that prophets could temporarily even set aside some commandments of the *law, provided they were attested by signs—or perhaps they merely want him to make a prediction. Many rabbis, however, rejected the validity of signs favoring positions that contradicted their interpretation of Scripture. In Palestine, a red morning sky indicated Mediterranean winds bringing rain from the west.

16:4. Like their ancestors who did not heed God's acts already done among them, this generation is evil (Deut 32:5, 20 in context). Signs had already been given them (Mt 16:3), even clearer than God's usual signs from the heavens (16:2), but the final attestation would be the *resurrection (12:40). Many Jewish people expected a particularly evil generation directly before the end. Sages sometimes challenged hearers with riddles.

16:5-12
Evil Yeast

16:5-6. Jewish tradition sometimes used yeast to symbolize evil; most fundamentally, it was something that spreads. Some Jewish teachers made such comparisons (e.g., describing false teaching as poisoned water); the *disciples should thus have recognized that their rabbi could speak figuratively. On the Pharisees and *Sadducees, see comment on 16:1 and glossary.

16:7-11. Like Israel in the wilderness, Jesus' contemporaries quickly forgot God's past provision, and he often called them to remember (e.g., Deut 8).

16:12. Among other beliefs, Sadducees denied the resurrection (Mt 22:23) and Pharisees held to human traditions (15:2-3); throughout Matthew, both oppose Jesus.

16:13-20
The Christ and the Rock

16:13. Caesarea Philippi (a city distinct from the usual *New Testament Caesarea, which was on the coast) was pagan territory, near a grotto devoted to the worship of the Greek woodland deity Pan; Herod had also dedicated a temple for the worship of Caesar there. Few Jewish people would have expected it as a site for a divine revelation. The city was some twenty-five miles from the Lake of Galilee and about seventeen hundred feet higher, hence they would have needed to stop along the way (15:21, 39); it lay near the source of the Jordan, at the *Old Testament Dan, the northern boundary of ancient Israel.

16:14. All these answers about who Jesus is fall into the "prophets" category; though many members of the Jewish elite held that prophets had ceased, popular expectation of end-time prophets remained strong. Elijah was expected to return (Mal 4:5), and many of Jesus' miracles resembled Elijah's. His judgment oracles (Mt 11:20-24) or downplaying the temple (cf. 12:6; 24:1-2) may have evoked the comparison with Jeremiah.

16:15-16. Peter has the right title, though the wrong concept of what *Messiah means (16:22). David's royal line was adopted by God (2 Sam 7:14), so it was natural for the ultimate successor to his throne to be called God's Son (Ps 2:7; 89:27), as a few Jewish interpreters in this period noticed (e.g., in the *Florilegium* from *Qumran Cave 4, an *Essene commentary on 2 Sam 7).

16:17. "Blessed are you" is a standard form of blessing (cf. comment on Mt 5:1-12). "Barjonah" is *Aramaic for "son of Jonah." "Flesh and blood" was a typical Jewish phrase for "human being(s)." Although all Jews emphasized learning by studying the Scriptures, some also recognized divine illumination (e.g., in the *Dead Sea Scrolls) or revelation (*apocalyptic literature; some mysticism).

16:18. In Aramaic, "Peter" and "rock" are the same word; in Greek (here), they are cognate terms that were used interchangeably by this period. For the idea of a person as the foundation on which something is built, cf. Isaiah 51:1-2; Ephesians 2:20. (In context, the point appears to be that Peter is the rock in his

role as confessor—v. 16—and others build on the foundation by their proclamation of the same confession.)

The Old Testament often spoke of those who "built" God's people (e.g., Ruth 4:11; Jer 1:10) and prayed for God to build Israel up (Ps 51:18; 69:35; 147:2; Jer 24:6; 31:4, 28). The "gates of Hades" in the Old Testament (Job 38:17; Ps 9:13) and subsequent Jewish tradition referred to the realm and power of death; death itself (cf. Mt 16:24-26) would not silence the *church. Against those who presuppose that Jesus could not have planned the church, though he chose twelve disciples as the nucleus of a remnant for Israel (compare the symbolic use of twelve in the Dead Sea Scrolls), the language of a "church" was already being used for a remnant community among his contemporaries (Dead Sea Scrolls; see "church" in glossary for further information). Teachers who founded schools normally expected their disciples to carry on after them.

16:19. The keeper of the keys was one of the most important roles a household servant could hold (cf. Mk 13:32-34). Because keys were bulky and might be carried by only a single person, they also symbolized authority; a high official held the keys in a royal kingdom (Is 22:20-22) and in God's house, the temple. Keys here may signify the authority to admit into the *kingdom (Mt 23:13), based on the knowledge of the truth about Jesus (16:16). The Qumran community also had officials deciding whether to admit members; the decision was made based on the prospective member's acceptance of the community's rule of life.

Many Jewish people felt that the Jewish high court acted on the authority of God's tribunal in heaven, in a sense ratifying its decrees. "Binding" and "loosing" (also 18:18) could refer to detaining or releasing prisoners, hence could function figuratively in a judicial setting. Rabbis also used these terms regularly for legislative authority in interpreting Scripture ("prohibiting" and "permitting"). Because "binding" and "loosing" also were figurative images for punishing and releasing, they could likely be used judicially as well (cf. 18:18).

16:20. For comment on the messianic secret, see the introduction to Mark's Gospel.

16:21-28
Redefining Messiahship

Peter had divulged Jesus' secret identity (16:16) yet retained a faulty concept of what that identity entailed.

16:21. Even most of the *Old Testament prophets sought to avoid martyrdom insofar as possible and complained about their sufferings (1 Kings 19:3-4; Jer 20:7-18). Although martyrdom was associated with the prophets, it was not their *goal;* but it seems to be Jesus' goal here (cf. especially 20:28). Jesus could foreknow his death as a prophet, but he also orchestrated it in a sense: no one could stir a commotion in the temple and defy its officials as Jesus did, then remain in the city unarmed, without expecting martyrdom.

16:22. Jewish tradition in this period emphasized a triumphant *Messiah; apparently only a century after Jesus' teaching did Jewish teachers begin to accept the tradition of a suffering Messiah in addition to a triumphant one. One of the first rules of ancient discipleship (with noticeably rare exceptions) was: Never criticize the teacher, especially publicly. Here Peter breaks that rule, even on standard cultural grounds.

16:23. Disciples sometimes walked behind their teachers to signify submission. The term *stumbling block,* referring to something over which people tripped, had come to be used figuratively for things that led people to sin or stumble in their faith. Peter here offers the same temptation as *Satan: the *kingdom without the cross (4:9-10). Rabbis sometimes punned on the names of disciples; here the "rock" (16:18) becomes a "stumbling stone."

16:24. For 16:24-28, see comment on Mark 8:34–9:1. Carrying the horizontal crossbeam en route to crucifixion (where the upright stake sometimes already stood awaiting the condemned person) often meant enduring mockery and scorn on a path leading to death as a condemned criminal. Crucifixion was the worst form of criminal death, the supreme Roman penalty, normally inflicted only on lower class provincials and slaves; even talk of it could evoke horror. "Follow" can be the language of discipleship, since disciples followed their teachers; here disciples follow to the cross.

16:25-26. Although God had sometimes accepted a substitution (Ex 30:12), no treasure could really ransom one's life eternally (cf. Ps 49:7-8), and treasure was valueless without life. Various Jewish thinkers recognized that losing one's life in the present age was worthwhile if it would preserve one's life in the *age to come.

16:27-28. Jesus alludes to the *Son of Man in Daniel 7:13-14. He also applies Old Testament language for God as judge to himself (Ps 62:12; Prov 24:12; Jer 17:10; 32:19; Ezek 18:30). The reference to angels is probably from Zechariah 14:5, though it also fits the context of the image in Daniel 7:13-14. "Taste death" was idiomatic for "die." Verse 28 is a transition to the proleptic revelation of the kingdom to follow in 17:1-8 ("proleptic" means that this revelation anticipates the kingdom).

17:1-13
The Glory Shines Again

This passage includes so many allusions to God revealing his glory to Moses on Mount Sinai that most ancient Jewish readers would certainly have caught them. For more details on the passage, see comments on Mark 9:2-10.

17:1. The six days alludes to Exodus 24:16, when God began to speak to Moses from his cloud on the mountain.

17:2. Both Greek myth and Jewish *apocalypses told of transformations or transfigurations (in the latter describing glorious angels or the resurrected righteous, sometimes shining like the sun). The most obvious primary background for biblically literate hearers, however, would have been Moses' glorification on Mount Sinai (Ex 34:29, where Moses' face radiated glory because of God's revelation of himself to Moses).

17:3. Jewish people understood Scripture as denying that Elijah had ever died; God himself had buried Moses. Jewish people expected the return of both Elijah and Moses at the end of the age (Deut 18:15-18; Mal 4:5). Both of them (Ex 24:15-16; 1 Kings 19:8) heard from God at Mount Sinai (also called Horeb).

17:4. Israel had dwelt in tabernacles in the wilderness while the presence and glory of God was among them. Jews commemorated this annually by building shelters, so Peter would know how to build one.

17:5. The cloud of glory overshadowed the mountain in Exodus 24:15 and the tabernacle in 40:34 (the same Greek word is used in the *LXX of Ex 40:35 that Matthew uses here).

To the biblical allusions in Matthew 3:17, the voice in this passage apparently adds words from Deuteronomy 18:15: When the prophet like Moses comes, "give heed to him."

17:6-8. The *disciples' fear and falling on their faces were characteristic of people in the *Old Testament and later Jewish tradition when they experienced revelations of God (e.g., Ezek 1:28; Dan 8:17). The revealers also sometimes told people to arise and not be afraid (e.g., Ezek 2:1-2; Dan 8:18; 10:11-12)

17:9-13. Jewish people believed that Elijah would return before the time of the end to make matters right (Mal 4:5-6); the *resurrection of all the righteous dead was to follow his coming, at the end. Malachi 4:6 speaks of Elijah "restoring" families (not just their genealogies, as in later rabbinic tradition). Jesus interprets the promise of the end-time Elijah more figuratively than most of his contemporaries would have.

17:14-23
Inadequate Faith for Exorcism

17:14-18. See comments on Mark 9:14-29 for more detail. It might be relevant that, like Moses, Jesus must deal with the failure of those he left in charge once he comes down from the mountain (Ex 24:14; 32:1-8, 21-25, 35), though Jesus has not been absent as long. In some cases of spirit possession noted by anthropologists, persons become violently out of control and risk injury to themselves, as here. Although some compare symptoms here with epilepsy, Matthew does not always associate that affliction with *demons (Mt 4:24).

17:19-21. The disciples might inquire privately to avoid further increasing their public shame. "Removing mountains" was apparently a Jewish figure of speech (attested among later *rabbis for extraordinary mastery of the Torah) for that which was incomparably difficult. Mountains were thought to be the most stable of all things (cf. Ps 46:2; 125:1; Is 54:10); mustard seeds were used to define a proverbially small quantity. Jesus is thus telling the disciples that nothing God asks them to do will be impossible if they trust him; the issue is not how small their faith might be, but how large is the

God in whom their faith rests. Most relevant here may be Zechariah 4:6-9; before God's servant, God would bring down all obstacles against the tasks God designates.

17:22-23. Jesus predicts what would have been obvious to the disciples had they known that he planned to drive the moneychangers from the temple courts without either flight or resistance: he would die (cf. Mt 18:31; 19:22; 26:22). Because the disciples understand his resurrection to mean the general resurrection at the end of the age (17:9-10), they miss his point. In ancient parlance, "after the third day" could mean parts of three days.

17:24-27
The Children Are Exempt

17:24. Although Capernaum apparently had a customs post (see comment on Mt 8:5), the tax at issue here was paid by free adult Jewish males throughout the world. They showed their solidarity with the temple and the Holy Land by paying a half-shekel tax (Ex 30:13-16). Though the literal Greek double drachma seems no longer to have been in circulation, scholars argue that "two drachmas" was now an expression for the payment of the half-shekel tax (Ex 30:13-16). So much was gathered that the keepers of the temple eventually began using the excess to construct a massive, golden vine. After 70, in Matthew's time, the Romans confiscated this tax for the upkeep of a pagan temple, and some Jews may have refused to pay it on principle. In Jesus' day, most Jews loyal to Judaism would have paid it, but *Sadducees disapproved and *Essenes believed they need pay only once in a lifetime. The local collectors of the tax may have wondered about Jesus' position on the matter if he had already hinted God's judgment on the temple (as later in 21:12-14; 23:38–24:15); moreover, collectors did not force those living off charity (as they could assume Jesus to be—27:55; Lk 8:3) or beggars to pay. Or they may have simply been wondering if he would pay it in this locality or elsewhere, because the disciples were moving about. (At the least, they know that Jesus sometimes disagrees with mainstream views.)

17:25-26. Like a good prophet, Jesus responds to Peter before Peter even brings up the matter (1 Sam 9:20; 1 Kings 14:6; 2 Kings 5:26; 6:32).

In tax contexts, "free" normally means "free from obligation" concerning tax or tribute (e.g., 1 Esdras 4:49-50). Since a royal family did not tax itself, Jesus' point is that the *Son of God should not be taxed for the upkeep of his Father's house. (The principle of an exemption was known: Roman provincial taxes often exempted Romans or high-class Greeks from payment. The principle was also known in Judaism: the temple's attendants, the priests, applied it to themselves, to the chagrin of some of their Pharisaic contemporaries—Mishnah *Sheqalim* 1:3-4.) For Matthew's readers this saying might mean: It is not because Jesus is not in solidarity with Judaism (for he is), but rather because he is the *hope* of Judaism, that he is not obligated to pay.

17:27. On the basis of solidarity with the rest of the Jewish community, however, Jesus pays the tax. If some of Matthew's Jewish Christian readers were looking for an excuse to avoid paying the tax in their own day, this text would encourage them to pay it instead.

A stater was worth four drachmas (4 denarii); hence it covered the tax for both Jesus and Peter. Jewish teachers had several stories describing how God rewarded faithful Jews who bought fish and found gems in them; if these stories are as early as the first century (their date is not certain), Peter might be surprised that something similar had actually happened to him. Some fish in the Lake of Galilee had mouths large enough to hold staters; one such fish was what is now called the *Chromis simonis* (named after Simon Peter).

18:1-6
Offending the Children

See comment on Mark 9:33-37 for more information.

18:1. Some Jewish texts speak of different rewards and ranks in the *kingdom. Rank and status were issues that members of ancient society confronted daily. Jewish sources valued the virtue of humility, often extolling *rabbis who humbled themselves, for example, before other rabbis or before their parents. Yet such humility was rarely expressed toward children or by exalting children.

18:2-4. The most powerless members of ancient society were little children; in most of

ancient society, age increased one's social status and authority. In Jewish culture, children were loved, not despised; but the point is that they had no status apart from that love, and no power or privileges apart from what they received as total dependents on their parents. The posture of children as dependents may recall 6:9. "Converted" may allude to the Jewish idea of turning, returning or repenting, often found in the biblical prophets.

18:5. On receiving representatives, see 10:40-42 (on the name, cf. also comment on Jn 14:12-14).

18:6. Both Greeks and Jews used "stumble" figuratively; for Jews, it often meant "sin" or "fall away from the faith." Millstones were used to grind meal. They were extremely heavy, and the term here refers to the heavier kind of millstone turned by a donkey, rather than the lighter kind a woman would use. One of the most horrible punishments executed by Romans (abhorred by Jews) was to tie a person in a sack and throw them into a large body of water. Death at sea was considered terrible; some pagans believed that the ghost of the unburied would hover forever over the spot where the person had drowned. Others could apply this image to judgment (cf. **1 Enoch* 48:9). Jewish teachers sometimes warned of judgments with, "Better for a person who . . . than if . . . " (cf. also Mt 26:24).

18:7-14
Offenders of the Powerless

This passage extends the metaphor to all the weak in the *church, certainly including children. Church leaders and members must seek not only to avoid causing stumbling but also to bring back anyone who has stumbled.

18:7-9. Judaism also balanced God's sovereign plan with human choice and responsibility. To the extent that one's poor eyes could cause one to trip, they could be viewed as a sort of stumbling block; on stumbling blocks, see comment on 18:6. An apparently widespread Jewish belief was that God in the future would raise the dead initially in whatever form they had (e.g., with missing limbs) before restoring them to wholeness; on the removal of limbs, cf. comment on 5:29-30 or Mark 9:42-47.

18:10. Jewish readers would generally recognize here the concept of the guardian angel; it was typically believed that every Jewish person had one (cf. Tobit 5:22; Pseudo-Philo, *Liber Antiquitatum Biblicarum* 11:12; 59:4; Tosefta *Shabbat* 17:2-3; *Sifre Numbers* 40.1.5). Further, angels received their orders from God's throne; but unlike lower angels and mortals, the very highest angels (normally not thought to be guardian angels) regularly saw God's glory. Those who mistreated these "little ones" would hence be reported directly to God by the greatest angels, and the report would stand them in bad stead in the day of judgment.

18:12-14. One hundred was an average-sized flock in Palestine. Greek and Jewish literature affords other examples of pasturers who had to leave the flock or herd to look for a lost animal (cf. 1 Sam 9:3); a shepherd could leave his own flock with the other shepherds with whom he worked, who would be watching over their own flocks (cf. Lk 2:8). Shepherds did often graze flocks on mountains or in hill country, and sometimes became capable mountaineers. Religious leaders who failed to care for the broken and powerless are rejected by God (Ezek 34:2-10), and God himself would then seek after the sheep (34:11-16). God's people were commonly described as sheep in the *Old Testament (cf. comment on Jn 10:1-18).

18:15-20
Disciplining Offenders

We should keep in mind that the whole context of this passage on church discipline is mercy and forgiveness; forgiveness qualifies (but does not annul) the force of this passage on disciplining unrepentant offenders in the Christian community. The contextual emphasis is the hope of bringing back the erring, not confirming them irreparably in their guilt.

18:15. This procedure reflects standard Jewish custom; the *Dead Sea Scrolls, the rabbis and others demand that one begin with private reproof. Publicly shaming someone unnecessarily was considered sinful, and Jewish teachers stressed the importance of receiving reproof.

18:16. Deuteronomy 19:15 (cf. 17:6-7) was the standard text Jewish authorities cited for requiring two witnesses. (Later rabbis took this principle so far that one eyewitness was

not sufficient even if the eyewitness caught the murderer with the bloody knife in hand.) A final warning was merciful (e.g., Deut 25:8). Strict judicial procedures are being followed at this point because a judicial action is about to take place; Jesus here agrees with the Jewish practice of private rebuke, witnesses and finally, if *repentance is not forthcoming, the judicial assembly (18:17).

18:17. A church by definition would function as an ancient *synagogue would, and ancient synagogues were not only assembly halls for prayer and study but community centers where discipline would be inflicted on an erring member of the community. (Both "synagogue" and "church" ultimately render the same Hebrew expression for God's community.) This discipline could take a variety of forms, including public beating, but the most severe were several levels of dismissal from the community. After the most severe level of discipline the offending member would be treated as a pagan instead of as a Jew. Pagans and *tax gatherers alike—tax gatherers were seen as agents of a pagan government—were excluded from the religious life of the Jewish community. Giving a person a final warning before a court would take action (e.g., Deut 25:8) was an act of mercy.

18:18. Continuing the judicial thought of 18:15-17: many Jews felt that the Jewish high court acted on the authority of God's tribunal in heaven, in a sense ratifying its decrees (the verb tenses here probably indicate that the heavenly court has decided first). Those who judged cases on the basis of God's *law accurately represented his will.

"Binding" and "loosing," terms normally used for tying up or imprisoning versus freeing or releasing, provide a natural metaphor for condemning or acquitting in a court. As terms regularly used for rabbis' legislative authority in interpreting Scripture, they could naturally apply to judicial situations as well.

18:19-20. The "two or three" must refer to the "two or three witnesses" of 18:16. These verses may refer to the prayer of execration given at a Jewish excommunication; or they could represent prayers for the repentance and consequent forgiveness of the excommunicated person (see 1 Jn 5:16). In either case, it is of interest to note that the witnesses in the Old Testament were to be the first to execute the judgment of the court (Deut 17:7); here they are the first to pray.

Later sources report that ten Jewish males was the minimum quorum to constitute a synagogue assembly, but also (probably reflecting a more widespread tradition) that God's presence was with even two or three who met together to study his law (cf. Mishnah *ʾAvot* 3:2, 6; *Mekilta Bahodesh* 11). Jesus' presence is thus presented here as identical with God's (cf. also Mt 1:23; 28:20). (Indeed, one of the most common names for God among the later rabbis was "the Place," i.e., the Omnipresent One.)

18:21-35
Forgiving the Forgivers

18:21-22. Seventy times seven (some interpreters read seventy-seven; cf. Gen 4:24) does not really specify 490 (or 77) here with mathematical precision; it is a typically graphic, hyperbolic way of saying "Never hold grudges." Because true *repentance should involve turning from sin, some later rabbis limited opportunities for forgiveness for a given sin to three times; Peter might have thought his offer of seven times was generous, until hearing Jesus' further expansion.

18:23. On "the kingdom may be compared," see comment on 13:24. The story here is about a *Gentile king, such one of the Greek, Ptolemaic rulers of Egypt before the Romans conquered it. "Servants" here could mean his upper-level slaves—who were better off than nearly all the free people of Egypt, most of whom were peasants. In this case, however, "servants" might refer to free provincial satraps, who functioned as the ruler's tax farmers in various regions; they too were vassals of the king. The ruler would allow them to collect taxes for him at a profit, but he demanded efficiency. If they collected taxes after the harvests, the king might settle accounts with them afterward.

18:24. Many peasant agricultural workers struggled to pay taxes, especially after droughts, but this difficulty did not mitigate the tax collectors' responsibility to submit the requisite amount to the king. Some of the *disciples and perhaps Jesus himself could have smiled as the master storyteller told how far

the king had let one of his servants get in debt: ten thousand talents (cf. Esther 3:9) probably represented more than the entire annual income of the king, and perhaps more than all the actual coinage in circulation in most kingdoms (such as Egypt) at the time! In one period, the silver talent represented six thousand drachmas, or six thousand days' wages for an average Palestinian worker; ten thousand talents would thus be roughly sixty million days' wages (in another period, one hundred million). Although taxes were exorbitant in those days, especially for rural peasants, *Josephus reports the annual tribute from Galilee and Perea under wealthy Herod to be only two hundred talents, with perhaps six hundred more from Judean territories; it was thus inconceivable that one official could get so far in debt.

Ancient Judaism often viewed sins as debts before God (see comment on 6:12).

18:25. Enslaving family members for the man's debt was a Gentile practice that the Jewish people in this period found abhorrent. The math does not work here; the price of an average slave was between five hundred and two thousand days' wages, hence the king cannot recoup even one-thousandth of his losses on this sale. But the *parable is deliberately hyperbolic, to speak of guilt before God. A king with better math skills would not have let the man get so far in debt to begin with! The point here in any case is not economics but anger.

18:26. "I will repay" was a standard promise in ancient business documents. But given the debt of ten thousand talents, however (18:24), this promise is as absurd as the hope of recouping the loss by debt enslavement in 18:25.

18:27. Jesus' humorous *hyperbole continues. Given the ruthlessness of ancient Near Eastern kings and the greatness of the debt, that this ruler would forgive his servant is almost as impossible in the real world as the size of the debt. Sometimes rulers had to forgive Egyptian peasants' past tax debts when failed crops rendered them simply unable to pay, but the sums involved were comparatively small.

18:28. One hundred denarii represented one hundred days of a common worker's wages, which would be a small sum for his fellow tax farmer, after he had finished his accounting with the king (18:23). It was also a ridiculously minuscule sum compared to what the first servant had owed the king. But apparently the forgiven slave, instead of internalizing the principle of *grace, had decided to become ruthlessly efficient in his exacting of debts henceforth. Such extreme actions as choking are reported of angry creditors elsewhere in antiquity as well.

18:29-30. Someone in prison could not pay back what he owed (v. 34), unless friends came to his aid with the requisite funds. In pre-Roman Egypt, no one could charge a servant of the king, a policy the aggressor neglects.

18:31-33. The king is naturally angry; the forgiven servant has put another of his servants out of active commission, hence costing the king more lost revenues. The king had gained more advantage by convincing his people of his benevolence than he would have gained profit from the sale of the first servant; but once it was rumored that this first servant, his agent, was acting mercilessly, it reflected badly upon his own benevolence.

18:34. Jewish *law did not permit torture, but Jewish people knew that Gentile kings (as well as Herod) practiced it. Because this servant had fallen from political favor, he would have no allies who would dare come to his aid; and even if he had, given the sum he owed, his situation would have remained hopeless. He would never be released. (On liability for all sins if one did not stay righteous, cf. Ezek 18:24.)

18:35. The great contrasts of the parable are humorous and effective in relaxing the ancient listener's guard, but the horrifying details of debt slavery, torture and so forth bring home the point forcefully. This story would have communicated effectively for the ancient hearer. For a parable's sudden conclusion challenging the hearer, cf. 2 Sam 12:7.

19:1-12
Grounds for Divorce

This passage follows the sequence of a rabbinic debate.

19:1. *Pharisees (19:3) were more common in Judea than in Galilee. Sometimes Galilean pilgrims to Judea crossed the Jordan into Perea (to avoid Samaria), then crossed it again into Judea.

19:2-3. The Pharisees themselves debated the grounds for divorce implied in Deuteronomy 24:1-4: the school of *Shammai, predominant in Jesus' day, argued that the passage allowed divorce only if one's spouse was unfaithful; the school of *Hillel, which eventually won out, said that a man could divorce his wife if she burned the toast (a later *rabbi of this school added, "Or if you find someone more attractive"!); see Mishnah *Gittin* 9:10; *Sifre Deuteronomy* 269.1.1; more generally for the freedome to divorce, see, e.g., Sirach 25:26; Josephus, *Jewish Antiquities* 4.253; *Life* 415, 426; Philo, *Special Laws* 3.30 Although Shammai's school was generally dominant before A.D. 70, other sources indicate that the more liberal position of Hillel's school was closer to general practice on this issue (though Pharisees apparently widely regarded divorce as tragic). The success of a protagonist's wisdom under "testing" with difficult questions was an ancient theme (cf. 1 Kings 10:1); some questioners had hostile intentions.

19:4-6. It was standard interpretive practice to counter one proof text by appealing to another. Like the sectarians who wrote the *Dead Sea Scrolls (who used the text against royal polygamy, CD 4.20–5.2; 11QT 56.18-19), Jesus appeals to God's original purpose in creation in Genesis 1:27; 2:24.

19:7. They cite Deuteronomy 24:1, the basic text Jewish interpreters used to discuss grounds for divorce.

19:8. Jewish teachers of the *law recognized a legal category called "concession": something that was permitted only because it was better to regulate sin than to relinquish control over it altogether. Given God's purpose in creation (Gen 2:24), divorce naturally fell into such a category (cf. Mal 2:14-16). (Cf. similarly the law's regulation rather than abolition of polygyny and debt slavery.)

19:9. The exception stated here (the spouse's unfaithfulness) is one that counted as a charge in much ancient law. The school of Shammai (see comment on 19:1-3) did not permit divorce except for the wife's unfaithfulness (whether successful or attempted), but they did not consider remarriage afterward adulterous. Because all ancients recognized that one could not remarry unless one's divorce was valid, so Jesus presses the Shammaite position to its logical conclusion: if one divorces one's spouse without valid grounds (unfaithfulness or analogous sins; cf. 1 Cor 7:10-13), the marriage is not truly dissolved and subsequent marriage is adulterous. This statement (that all subsequent unions are invalid unless the first marriage was dissolved by infidelity) may be hyperbolic rather than literal, but *hyperbole is stated the way it is to make its point forcefully. Divorce must never be taken lightly.

Because men could divorce women unilaterally but women could demand a divorce only under certain very narrow conditions (and then needed the court's help), Jesus' opposition to this sort of divorce was also a defense of married women. Unmarried women had limited access to economic support.

19:10. Jewish men took the right to divorce for granted. Parents arranged marriages; marriages created kin ties and social pressure to stay married, but if the marriage failed, people counted on having a way out. Ancient marriage contracts often included advance arrangements in case a divorce occurred.

19:11-12. Later rabbis recognized different categories of eunuchs—those born without sexual organs (i.e., made eunuchs by God) and those made eunuchs by people, such as served in Eastern courts. But particularly offensive to Jewish sensitivities was making someone a eunuch, a practice that would exclude him from the people of God (Deut 23:1). Jesus uses this graphic language figuratively (cf. Mt 5:29-30) to describe a call to singleness for the *kingdom, although singleness too was generally outside the mainstream of Jewish social life (see comment on 1 Cor 7). Cf. Isaiah 56:4-5.

19:13-15
Blessing the Kingdom's Children

See comment on Mark 10:13-16 for more details; Matthew's form of the story is abbreviated, but abbreviating such accounts was a common practice in ancient writing.

Children were socially powerless and dependent. Some people in the *Old Testament would lay hands on others to bestow a blessing in prayer. Insensitive *disciples trying to keep from the master those seeking his help might remind Jewish hearers of Gehazi, a disciple of Elisha who eventually lost his position (2 Kings 4:27; cf. 5:27).

19:16-22
The Price Was Too High

See Mark 10:17-22.

19:16. Greek traditions also reported aristocratic young men who wanted to study under a famous teacher but were too spoiled to carry out what the teacher demanded.

19:17. Jewish tradition emphasized the goodness of God (e.g., *Philo: "God alone is good") and even used "the Good" as a title for him (as well as for the *law); by emphasizing God's unique goodness, Jesus hopes to confront the man with his own need. "Enter into life": "life" was sometimes used as an abbreviation for "*eternal life"—the life of the world to come.

19:18-19. These commandments include the humanward (vs. Godward) ones among the Ten Commandments (except the humanly untestable prohibition of coveting) and the summary of humanward commandments: Love your neighbor as yourself (Lev 19:18; cf. Mt 22:39).

19:20. With the possible exception of the less specific "Love your neighbor as yourself," most Jewish people could claim to have kept the specific commandments just mentioned. "Young man" probably places him between twenty-four and forty years of age.

19:21. Only a few radical Greek teachers demanded such things of would-be disciples. Jesus' demands are more radical than later Jewish charity laws permitted (lest the benefactor reduce himself to poverty); later regulations limited charity to twenty percent (which was nonetheless considerable on top of tithes and taxes). This was a severe test, not only of whether the disciple would value the teacher above earthly possessions, but even of his claim to love his neighbor as himself.

19:22. The young man responds as most aristocrats would have responded and did respond when confronted with such demands. The *kingdom is not meant to be an extra benefit tagged onto a comfortable life; it must be all-consuming, or it is no longer the kingdom.

19:23-29
A Cost-Benefit Analysis of the Kingdom

See Mark 10:23-31.

19:23-26. Here Jesus clearly uses *hyperbole. His words reflect an ancient Jewish figure of speech for the impossible: a very large animal passing through a needle's eye. On regular journeys at twenty-eight miles per day, a fully loaded camel could carry four hundred pounds in addition to its rider; such a camel would require a gate at least ten feet high and twelve feet wide. (A needle's eye in Jesus' day meant what it means today; the idea that it was simply a name for a small gate in Jerusalem is based on a gate from the medieval period and sheds no light on Jesus' teaching in the first century.)

Mainstream Judaism never denied the rich a place in the *kingdom of God; many of its benefactors and leaders were rich. Jesus allows that the rich may, by God's mercy, enter in, but only by giving their abundance to the destitute.

19:27-29. "Regeneration" was a term used for the future renewal of the world in Greek circles and naturally applied to Jewish expectations of a new world order (such expectations appear in Is 65:17; 66:22; and in the Dead Sea Scrolls). That the twelve tribes would be restored was one of the standard Jewish beliefs about the end times. Judges were those who ruled Israel in the *Old Testament before the institution of Israelite kingship.

19:30–20:16
The Last and the First

The agricultural setting of this *parable agrees with what is known from other ancient Palestinian Jewish sources. Other *rabbis also told parables like this one, although Jesus' point is different from the one preserved in similar rabbinic parables; both, however, typically portray God as a king or landowner.

19:30. Ancient literature often employed a framing device called *inclusio* to bracket off sections of material on a particular topic; 19:30 and 20:16 bracket off this parable, which follows naturally on the message of sacrificing in this age in 19:23-29. Most Jewish people believed that the day of judgment would set all things right. It would reverse the injustices of the present age; most notably, the *Gentiles would be cast down and Israel exalted.

20:1. The agricultural setting of 20:1-15 fits with what we know of much life in Galilee. Although Jesus told parables with

agrarian settings more often than did most other rabbis whose parables are preserved, both could portray God as king or landowner. On "the kingdom is like," see comment on 13:24. Wealthy landowners often had tenants to work their estates, but both they and less wealthy landowners hired extra workers temporarily to gather in the harvest. Work began around sunrise, about 6 a.m., before the day became hot. Some day laborers were also tenant farmers, with small plots of their own land; others were sons of those owning small pieces of land and had not inherited any of their fathers' land; still others had lost their land and traveled from place to place seeking employment.

20:2. A denarius was an average day's wage (though landowners often paid extra to get workers during the harvest). The daylong workers would probably develop a sense of camaraderie, often singing together during reaping.

20:3. Daylight during this season began a little before 6 a.m.; the "third hour" of daylight was complete a little before 9 a.m.. If it was harvest season and these men had any land of their own, they might have spent the morning gathering in their own ripe harvest. Idlers as well as people looking for work would gather in the marketplace.

20:4. These workers would expect less than a full day's wage.

20:5. The "sixth hour" is the period just before noon, and the "ninth hour" shortly before 3 p.m. About the sixth hour was the hottest time of the day, when workers would normally find a place in the shade to rest, eat or even nap for an hour or two; given the urgency of the harvest, they keep working (20:12). The laborers would finish by 6 p.m., so those newly hired would expect to receive considerably less than a full day's wages.

20:6-7. These laborers are hired for only a single hour of work; but the harvest must be gathered in quickly, before the day ends, and the work is not yet done. These verses express the typical urgency surrounding the harvest in ancient times.

20:8. Jewish *law mandated that laborers be paid the same day, because the wages were often little more than sufficient for a day's needs (Deut 24:14-15).

20:9-12. The wealthy throughout the Mediterranean world often bestowed significant gifts on society that were widely praised as beneficent, increasing the public status of the donors. Because status defined roles in ancient society, those who complained about receiving a day's wage for a day's work would be viewed as rude and ungrateful.

20:13-14. Orators could focus on a representative member of the crowd. Hired workers were not landowners' "friends," and certainly not in this case; the respectful title might shame the complainers for their own lack of respect (cf. Mt 22:12; 26:50).

20:15. An "evil eye" (literally; cf. KJV) meant a "stingy eye" in common idiom (cf. Prov 28:22). The landowner had been fair to those who worked all day and generous to those who had not; by charging the complainers with ingratitude (socially equivalent to hubris) he shamed them. Jewish people all affirmed that God, who alone rightfully owned all things, was beneficent whatever he gave; they acknowledged that only his attribute of mercy would enable even Israel to survive the day of judgment.

Jewish teachers employed a similar folk story about the day of judgment, but they used it to make the opposite point. Israel, who had worked hard, would receive high wages; the Gentiles, who had labored little, would receive little (*Sifra Behuqotai* pq. 2.262.1.9). In this context, however, Jesus' point challenges those who have wealth and status in this world, Jewish or Gentile, and promises that in the world to come God will redress those who have been oppressed in this world.

20:17-19
Jesus as the Last

In this context of those with low status being exalted, Jesus gives the extreme example: voluntarily submitting to ridicule and execution as a common criminal at the hands of the Romans, to be vindicated by God in the *resurrection. Jewish people generally expected a victorious leader—not a martyr. Against some who doubt that Jesus could have foreknown his death: even apart from Jesus' knowledge of the future, he provoked the hostility of the ruling authorities, publicly challenging their virtue and honor in 21:12-13.

20:20-28
The Greatest Is the Servant

See comments on Mark 10:35-45.

20:20-21. The indirect intercession of a motherly woman (cf. Mt 15:22) was often more effective than a man's direct petition for himself, in both Jewish and Roman circles (see also 2 Sam 14:2-20; 1 Kings 1:15-21; cf. 2 Sam 20:16-22). Women also could get away with making some requests that men could not. In this case, however, it does not work.

20:22-24. The "cup" represents Jesus' death (Mt 26:27-28, 39); Jesus may borrow the image from the "cup of wrath" in the *Old Testament prophets (see comment on Mk 10:38 for references).

20:25. Like many ancient teachers, Jesus offers both negative (20:25) and positive (20:28) examples. *Gentile ways are as negative an example as possible in Jesus' setting (5:47; 6:7; 18:17). Israelite kings had been bound by stricter moral conventions than neighboring pagan rulers (cf. Jezebel's more ready abuse of power than Ahab's). Jewish people recognized that most pagan rulers of postbiblical times were tyrants as well, including in their own time.

20:26-27. Inverting the role of master and slave was radical anywhere in antiquity; even the few masters who believed that slaves were theoretically equals did not go as far as Jesus goes here. (Even the temporary reversal during the Roman festival of Saturnalia served more to reinforce the traditional pattern than to overthrow it.) Jewish *disciples served their rabbis; in the *Qumran community, those of lesser rank obeyed those of greater rank.

20:28. Here Jesus probably alludes to the suffering servant of Isaiah 53, who offered his life on behalf of the many. It is also a standard Jewish "how much more" (*qal vahomer*) argument: if their master served, how much more ought they to do so.

20:29-34
Taking Time for the Blind

20:29-30. Although the road from Jericho to Jerusalem was notorious for robbers (Lk 10:30), it was widely used, and larger companies (such as Jesus') would face no threat. Jericho was one of the wealthiest cities of Judea, but beggars nevertheless remained at the bottom of the socioeconomic scale (if on the scale at all)—"nobodies" who were dependent on the pity of passersby. Judaism did value care for beggars, but had such a high work ethic that only the truly destitute, such as (in that society) the blind, would take this role. "Son of David" indicates that they acknowledge Jesus as *Messiah. "Have mercy on us" could be a common cry for alms, though here they seek more.

20:31. Those believing that their trek to Jerusalem was leading to the establishment of the *kingdom might well feel that Jesus had more important things to do than to be stopped by these beggars, whether they just want alms or are seeking something more.

20:32-34. The beggars want more than alms, and Jesus again demonstrates the difference between his kingdom and the militant kind most people were expecting.

21:1-11
The Meek King

See Mark 11:1-10 for some other details.

21:1. Bethphage was a suburb of Jerusalem at the Mount of Olives across the Kidron Valley from Jerusalem; it lay on the east side of Jerusalem, on the route from Jericho (cf. Mt 20:29).

21:2-3. This borrowing of a donkey may be seen in terms of royal emissaries temporarily impressing (demanding the service of) an animal; Jesus as Lord has the right to whatever his followers claim to own. On the historical level, the donkey's owner might have viewed it as helpful hospitality to visitors to the feast or as the honor of helping on his way a famous *rabbi. Some commentators have also suggested that the owner was away and those who kept the house, hearing that "the master" had need of the donkey, thought they were sending it to its real owner; but they surely would have recognized that the *disciples were not part of the household.

21:4-7. Colts that had not yet been ridden sometimes accompanied their mothers. Following a common Jewish practice of reading the Hebrew text for all one can get from it, Matthew reads Zechariah 9:9 as referring to two animals instead of referring to the same animal in two ways. The text is messianic, as

ancient interpreters generally acknowledged, but applying this part to himself redefines Jesus' messiahship: officials used donkeys for civil, not military, processions (e.g., 1 Kings 1:33). Thus this text is not a "triumphal entry" in the sense of Roman triumphal processions; it is Jerusalem's reception of a meek and peaceful king. With respect to leaders the term translated "meek" or "gentle" involved compassion and mercy as opposed to exploiting one's power.

21:8. Festal pilgrims were often welcomed in this way, though the acclamation of 21:9 suggests that in Jesus' case the welcome was on a larger and more significant scale. Cf. Psalm 118:27 (NIV).

21:9. Except for the acclamation "Son of David!" which indicates a recognition of Jesus' ancestry and a hope that he is the *Messiah, their cry is taken from Psalm 118:25-26 ("Hosanna!" means "O save!"). The Hallel, composed of Psalms 113–118, was sung regularly during Passover season and would be fresh on everyone's mind; later generations applied these psalms to the future redemption for which they hoped. Jesus cites Psalm 118 messianically in Matthew 21:42.

21:10-11. Jesus was better known in Galilee than in Judea; ancient sources often note regional divisions between the two.

21:12-17
Challenging the Temple Aristocracy

Like Jeremiah's smashing the pot in the temple centuries before (Jer 19), Jesus' demonstration there was a prophetic act inviting *repentance and warning of the temple's imminent destruction (see comment on Mt 24:1-2). Jesus' act may have been brief enough to prevent the temple's Levite police (or the Roman garrison, concerned about riot control) from intervening.

21:12. *Old Testament *law required visitors to the feast to purchase their sacrifices in Jerusalem, hence sellers of doves and other sacrificial animals were necessary. Because visitors would come with foreign currencies—even most Galilean towns had their own coinage—moneychangers had also become necessary. Although ancient moneychangers normally managed to turn an honest profit, those in the temple reportedly made very little. The issue appears to be not the commerce per se, and possibly not even whether it involves economic exploitation under the guise of religion, so much as *where* the commerce is occurring. Scholars have proposed several theories on the basis of later evidence, including that the sale of animals had been introduced into the Court of the *Gentiles very recently; but this theory is uncertain. Some other groups (like the *Essenes) believed that the corrupt priestly leadership had morally desecrated the temple.

21:13. The Old Testament temple did not officially restrict the access of women or non-Jews, but by extending Jewish purity laws the architects of Herod's temple had excluded Jewish women from the Court of Israel, placing them on a lower level, and non-Jews outside even the Court of Women. Non-Jews could enter the Jewish part of the temple (including the Court of Women) only on pain of death, yet the noisy crowds around the merchants' tables no doubt consumed a significant part of the large space in the Court of the Gentiles at the crowded festivals. Jesus here cites Isaiah 56:7, which goes on to speak of the temple being for the Gentiles as well, a subtlety some of Matthew's more skillful readers might have caught. Matthew might emphasize especially Jesus' second text, Jeremiah 7:11 ("den of robbers"), which addressed religious leaders of Jeremiah's day who thought their vested interests in the temple would protect them from God's wrath and the temple's destruction. It did not.

21:14. Even hereditary priests who were blind or lame were not permitted in the sanctuary (Lev 21:18); at least some extended this rule in time to exclude all the blind and lame (cf. the Greek version of 2 Sam 5:8; see also the *Dead Sea Scrolls). Second-century rabbis permitted but did not require blind and lame men to attend the feasts like other men. Although those who controlled the temple would not have opposed their presence in the outer court (see, e.g., Acts 3:2), Jesus' emphasis on ministry to them here makes a countercultural statement.

The powerful Sadducean priests who ran the temple were generally not looking for a *Messiah; but had they expected him, they would have expected him either to challenge their power militarily or to seek an alliance with them. From the aristocratic standpoint, seeking

followers among the weak was dishonorable and a foolish way to try to establish a kingdom.

21:15-17. Messianic claims threatened the stability of the temple hierarchy as much as overturning the tables would (cf. 27:11). Most of the Sadducean families were the elite priests who exercised most control over the city and temple; most were not looking for a "Messiah." This Galilean prophet had challenged their honor, and normally they would seek to avenge it by the challenger's public discipline—or at this level of public insult, his death. (A generation later another prophet merely announced judgment against the temple; the leading priests handed him over to the governor, who had him flogged until, *Josephus reports, his bones showed.)

Because the *high priests probably spoke Greek as their first language (as suggested by their tomb inscriptions), Jesus quotes to them from the Greek translation of Psalm 8:2, which reads "praise," rather than the Hebrew, which has "strength" (slightly less appropriate here). Jesus may argue *qal vahomer* ("how much more"): if God can bring strength or praise from the mouths of infants, how much more can he confound the powerful by the mouths of these children (cf. Mt 11:25; 18:3; 19:14)?

21:18-22
The Power of Faith

21:18. Jerusalem was full of visitors during Passover season—perhaps as many as five hundred thousand (Josephus even estimated more than five times that figure)—and many of the visitors consequently had to lodge in the countryside. "Morning" may mean as early as 6 a.m.

21:19-20. By this time of year fig trees near the Mount of Olives would have leaves, but only green fruit with an unpleasant taste appeared this early; edible figs appeared around early June. Often the green fruit would fall off, so that only leaves remained.

The sequence of events here differs from Mark (cf. Mk 11:12-14, 20-26); ancient biography was not required to be chronological, and Matthew's changes in Mark's sequence would have been considered negligible. For further details, compare comment on the Markan passage.

21:21-22. "Removing mountains" was a figure of speech for doing what was virtually impossible. From where Jesus and his disciples are standing, the Mount of Olives (cf. Zech 14:4, 10) and (from its slopes) perhaps the Dead Sea would be visible; thus Jesus' illustration would have been vivid to his disciples. The Gospels' own audiences might not know that, but Jesus, his disciples and the Gospel audiences all could have thought of Zechariah 4:6-9, where the *Spirit of God would remove all obstacles to God's purposes; the obstacles appear as a mountain.

21:23-32
The Right Authority

The conflicts with the authorities in the next several chapters reflect standard methods of debate in antiquity: questions and answers, witty responses, and attempts to trap opponents in their own words. The temple courts, the city's most public venue, were a popular place for teaching and discussion. See comment on Mark 11:27-33 for more details.

21:23. Teachers in Jerusalem often lectured in the temple courts. Those who were publicly dishonored would seek to recoup their honor by publicly challenging their opponent. The next few chapters include many examples of the format of ancient public debate: questions, witty retorts and attempts to use a speaker's words against him.

21:24. Jesus replies to the authorities' question with a counterquestion, which was common in Jewish debate.

21:25-27. Jesus argues that his authority and John's derive from the same source—"heaven" (one Jewish way of saying, "from God"). This response follows the Jewish legal principle that a commissioned messenger acts on the full authority of the one who sent him. The rest of the interaction follows the standard debate procedure of the period.

The chief priests, mostly *Sadducees, were elite politicians—less popular than the politically powerless *Pharisees—who had to balance the interests of both their people and the Roman authorities. They belonged to a hereditary elite whose power was backed by Rome; such groups usually despised popular teachers like Jesus as demagogues. At the same time, the aristocratic priests would also keep popular opinion in mind when making deci-

sions that might incur the displeasure of the people (21:26).

21:28-30. That a father should have asked his son to go work in the vineyard was natural. That the son should have refused to go would have offended Jewish moral sensibilities: this was an openly disobedient son, and disobedience was a punishable offense. But failing to go after promising to go was worse than not having promised; this son violated his word to his own father. The son who refused to go but repented acted preferably (cf. Ezek 18:21-24).

21:31-32. The pious regarded *tax gatherers and prostitutes as outside practicing Judaism. Jesus could not have chosen a much more offensive comparison. The rhetorical question or invitation to reconsider at the end of the *parable was a long-standing technique for challenging hearers (e.g., Is 5:4; cf. 2 Sam 12:1-7). On tax gatherers, see comment on 9:9; Jewish religion despised prostitution but it did exist in Judea. "Way of righteousness" means a righteous lifestyle (Prov 8:20; 12:28; 16:31), which was both John's practice and his message.

21:33-46
The Evil Tenants and the Benevolent Landowner

Much of the rural Roman Empire, including parts of rural Galilee, was controlled by wealthy landowners, whose income from the land allowed them lives of complete leisure. Their estates were generally worked by tenant farmers, who were usually free peasants (as in Egypt), but sometimes by slaves (as in much of Italy). Although landowners gained great honor among the poor if they were benevolent, such landowners normally had little incentive to do so. They generally lived far away, often in cities, and had little personal contact with their workers. But the landowner in this *parable is so benevolent that aristocrats would have considered him naive.

Jesus addresses those who fancy themselves rulers of Israel (21:23), reminding them that they are merely custodians appointed by God (like the shepherds of Jer 23 and Ezek 34) over his vineyard.

21:33. Jesus' description follows the normal way to prepare a vineyard, but he clearly alludes to Isaiah 5:1-2, where Israel is the vineyard.

21:34. Payments were rendered at harvest time, either by percentage (usually at least twenty-five percent) or a predetermined amount; this would have been specified in the initial contract. Ancient business documents often called profit "fruit," but here a proportion of the harvest seems likely to be meant. (Although probably not relevant to the point of the story, it might take a vineyard four years after planting to become profitable for the planter.)

21:35-37. Landowners in the ancient Mediterranean world always had power, socially and legally, to enforce their will on the tenants; a few reportedly even had squads of hired assassins to deal with troublesome tenants. Here the tenants act as if *they* are the ones with power, and they exploit it mercilessly (as opposed to the ideal of a *benevolent* landowner). Contrary to what some modern commentators have supposed, ancient sources show that their behavior would have horrified ancient hearers. This attitude fits the Jewish tradition that Israel martyred many of the prophets God sent. Peasants tended to praise benevolent landowners, but no ancient landowners would have patiently appealed to their sense of honor this long; people would have regarded such benevolence as folly.

21:38-39. The tenants presume too much about the inheritance. Although they could have seized it under certain legal conditions, the owner could also stipulate—and after their misdeeds certainly would—that someone else inherit the vineyard; or representatives of the emperor could have seized it. The story paints the tenants as incomparably wicked and stupid; yet the tenants are a transparent metaphor for the religious leaders who serve their own interests rather than yielding to God's appointed heir—as Jesus' hearers know (21:45).

21:40-41. Ancient hearers would wonder why the landowner had not intervened earlier to throw out the tenants. Landowners could replace tenants. Asking questions was a standard rabbinic way of involving hearers in the story or teaching; getting hearers of *parables to pronounce judgment on themselves was familiar from the biblical prophets (2 Sam 12:5-7; 14:8-17; 1 Kings 20:40-42).

21:42. Jewish parables often included a Scripture passage that the parable illustrated. This text is from Psalm 118:22-23, part of the

Hallel, like 118:25-26 cited in Matthew 21:9. The building referred to seems to be the temple (see Ps 118:18-21, 25-27); as the cornerstone of a new temple, Jesus poses a threat to the builders of the old one (Jerusalem's aristocracy). (Interpreters disagree as to whether the "cornerstone" refers to the stone located in the corner of the foundation or to the capstone of an arch, but this point is not crucial to the interpretation of the passage.)

21:43. Early Jewish parables especially often focused on the relationship between God and Israel. Israel was a "holy nation" (Ex 19:5-6), but the threat of transferring their status to others had been made before (Ex 32:10; Num 14:12). God rejected the builders' rejection (Mt 21:42), and he could replace them (cf. 3:10). "Producing" fruit (cf. 3:8) here means turning over the fruit to the landowner (God), in contrast to the tenants in the parable (21:33-42).

21:44. Assuming that this verse is original in Matthew (as in Lk 20:18), "falling on" the cornerstone reflects Isaiah 8:14-15 (probably interpreted in conjunction with Is 28:16, which also mentions a cornerstone); the stone falling on the offender alludes to Daniel 2:34, 44, where God's *kingdom, portrayed as a rock, crushes its earthly challengers. Jewish interpreters often explained texts by citing other texts employing the same term or idea (here, God's powerful stone); Jesus here expounds a text (Mt 21:42) by citing others sharing the same concept of the divine stone. A later rabbi warned, "If a pot falls on a rock, woe to the pot; if a rock falls on the pot, woe to the pot—either way, woe to the pot!"

21:45-46. The priestly leaders were shrewd politicians who would be careful not to act *publicly* against the people's wishes; the Pharisees were popular with the people but not popular enough to directly challenge Jesus' own popularity here. The priestly aristocracy and the Pharisees acted in concert only when necessary to preserve their people against dangerous revolutionary sentiments; challenging a common adversary like a messianic claimant would fit this category.

22:1-14
Honor the King's Son—or Die

22:1-2. On "the kingdom is like," see comment on 13:24. In *parables *rabbis often compared God to a king, whose son represented Israel (though not necessarily here); the setting was also sometimes a wedding feast for the son. Wedding feasts were frequently large gatherings; a very wealthy person could invite an entire city to one. Coming to a wedding feast required some commitment of valuable time on the part of guests (Jewish hearers could assume a feast lasting seven days, and a king might expect his guests, unlike those in lesser circumstances, to remain throughout the feast); this commitment would be difficult for peasants working the land. But the honor of being invited by a king—and the terror of displeasing him—would have motivated intelligent invitees to attend; refusal constituted an insult. The invited guests may have been aristocratic landowners anyway (22:5), who had the leisure for such activities. Many Jewish people expected a "messianic banquet" in the time of the *kingdom (cf. Is 25:6).

22:3. *Papyri attest the custom of a preliminary invitation and response. These guests had apparently already confirmed plans to attend (hence "those who had been invited") but now refused. To refuse the first invitation was rude and offensive; to refuse in concert after having agreed to come would be no accident, but a deliberately treasonous insult.

22:4. Astonishingly, the generous king responds with a further invitation rather than punishment. Because those preparing the food could not calculate the exact time it would be ready, guests had been told only when it was ready. But now it was ready, and if the meat were not consumed quickly, it would spoil.

22:5. See comment on 22:3.

22:6. This behavior would obviously have been illegal even had the servants not belonged to the king; but servants of a king had higher status than most free persons, and as a king's messengers they represented his person. Ancient peoples universally despised the mistreatment of heralds, or emissaries. In addition, the mistreatment of royal representatives was outright treason, constituting a declaration of revolt. Yet this was the treatment God's servant-messengers, the prophets, were known to have received.

22:7. Kings did not always live in the same place as most of their subjects (e.g., Rome's emperor vs. Jerusalem); the burning of the city

probably alludes specifically to the destruction of Jerusalem, which was burned in A.D. 70 (see 24:15). Burning a city was the final step in its complete destruction. That the king would delay the feast to accomplish this (despite the risk of the meat spoiling) bursts the bounds of realism to reinforce a point.

22:8-10. Preparations for the wedding of a king's son would be massive, and it would dishonor the son not to have guests present. Thus, as a last resort, the king redefines "worthy" guests and invites commoners. The lower a person's status, the more punctual they might be expected to be!

22:11. Even commoners knew better than to enter the king's presence without appropriate (at least clean) attire; this would be a sign of insolent disrespect to the host (who at this point in the story is in no mood for further disrespect!). Even peasants often had a set of good clothes for special occasions, besides their work clothes (the latter would be soiled and not easily cleaned in time). (Some scholars also suggest that special attire was provided at the door.) Thus even some of those who showed up for the feast (perhaps representing Jesus' purported followers, like Judas) dishonored him.

Scholars have suggested a parallel with a later Jewish story in which a king invited guests to a feast without advance notice of the date. In this story, only the diligent subjects were dressed and ready at the door when the date came; the others had to wait outside in shame.

22:12-13. Again Jesus bursts the bounds of realism to drive home his point. Porters would screen invitees at the door; on outer darkness and gnashing teeth, see comment on 8:12.

22:14. The last part of the story illustrates the point that many are invited ("called") to a feast (22:3, 8), but few are in the end among the chosen.

22:15-22
Caesar and God

Here Jesus' opponents seek to force him to choose between revolution—which would allow them to charge him before the Romans—and accommodation with the Romans—which they suppose he opposes (because he opposed their own leadership in the temple). The success of a protagonist's wisdom under "testing" with difficult questions was an ancient theme (cf. 1 Kings 10:1); Jesus' superior wisdom is demonstrated in Matthew 22:15-46.

22:15-16. *Pharisees tended to be nationalistic, whereas Herodians were clients of Herod, the Roman vassal; they worked together only in extraordinary situations. Pharisees would be concerned about Jewish legal requirements to have witnesses for a charge but would be ready to investigate charges concerning Jesus' disloyalty to the *law. The Herodians, who apparently wished for a restoration of Herodian rule in Judea (which *Pilate currently governed), were naturally disturbed by messianic figures who might cause Rome to tighten its direct control over the land.

22:17. The Pharisees pit the obligations of peace with Rome against the nationalistic, messianic fervor that they assume Jesus promotes; a disastrous tax revolt two decades earlier had shown where such fervor could lead. If he publicly takes the view characterized by those later called *Zealots (no king but God), the Herodians can have him arrested; if he rejects that view (which he does), he may compromise his following.

22:18-20. In contrast to King Agrippa later, at this time both Herod Antipas and Judea mostly circulated copper Roman coins without the deified emperor's image, which was offensive to Jewish sensitivity (though after A.D. 6 they were nonetheless *Roman* coins). The strictest Jews avoided images altogether. But foreign coins, which bore the emperor's image and mention of his divine status, were in common circulation in Palestine, where neither gold nor silver coins were permitted to be struck. The silver denarius, probably minted in Lyon, was required to pay taxes in Palestine as elsewhere in the empire, and Jewish people had to use it whether they liked it or not. In this period the side with the emperor's image read, "Tiberius Caesar, son of the divine Augustus."

Revolutionaries in A.D. 6 had violently protested the tax involving such coins and incurred terrible Roman retaliation that destroyed Galilee's largest city (walking distance from Nazareth). If Jesus' questioners here are concerned about paying Roman taxes, they obviously ought not to be carrying this coin.

22:21-22. Some scholars think that Jesus

alluded to people made in God's image (Gen 1:26-27), hence says to give Caesar the less important matter of money, but to give one's life to God. Repartee that put one's interrogators in a bad light was characteristic of popular teachers in both Jewish and Greek traditions, and Jesus proves himself among the most effective of ancient teachers. In a society that emphasized honor and shame, Jesus' witty responses put them to shame.

22:23-33
The God of the Living

22:23. In ancient Judaism the *Sadducees were especially notorious for not believing in *resurrection; later *rabbis who considered themselves successors of the Pharisees often classified Sadducees as heretics for this view (although the Sadducees, who vanished in the years after A.D. 70, were probably no longer around to respond).

22:24. The Sadducees' question concerns the law of levirate marriage, a custom practiced in many cultures both in antiquity and today (see Deut 25:5). It provides economic and social protection to widows in certain kinds of family-oriented societies where women cannot earn adequate wages. Students of Jewish *law were still expounding this *Old Testament principle in Jesus' day and afterward, though rabbinic rules differed from the Old Testament in some respects (e.g., the brother married the widow and the children she bore him were now his own).

22:25-27. The Sadducees borrow the story line from the Jewish book of Tobit, where righteous Sarah's first seven husbands died, slain by the jealous *demon Asmodeus. Some second-century rabbis proposed that a two- or three-time widow should not marry again, lest she bring harm on her next husband too (cf. Gen 38:11).

22:28. In defining Jewish law, teachers often debated hypothetical situations. But later *rabbinic literature is also full of examples of mocking questions posed by pagans, apostates or those they considered heretics, like the Sadducees.

22:29-30. Most Jewish people did not believe that angels needed to procreate (since they did not die, and some believed that God also regularly created new angels), or (normally) to eat or drink. Sadducees reportedly denied the developed angelology of some of their contemporaries.

"Marry" refers to the groom, whereas "be given in marriage" refers to the bride betrothed by her father.

22:31. Jewish teachers sometimes contested their opponents' points by appealing to Scripture with phrases like, "Go and read." The accusation implied in "Have you never read?" was even harsher (22:31; cf. 12:3; 19:4; 21:16, 42).

22:32-33. Arguing against their Sadducean opponents, the Pharisees commonly tried to prove the resurrection from the law of Moses (one rabbi even suggested that the resurrection was taught in every passage in the law; cf. also *4 Maccabees 7:18-19; 16:25; 18:19). Jesus here does the same. He argues that God would not claim to be the God of those who no longer exist; indeed, his faithfulness to his covenant demands that if he is their God after death, death is not the final word for them. Some other ancient Jewish writers used similar arguments to show that the patriarchs remain alive. One of the most common Jewish prayers of the period recites God's faithfulness to Abraham, Isaac and Jacob as a living reality for their own time.

22:34-40
The Greatest Commandments

Jewish teachers often debated which commandments were the greatest or could summarize much of the *law; among options were honoring parents or loving neighbors as oneself. Following Jewish interpretive technique, Jesus links the two commandments (Deut 6:5; Lev 19:18) by a shared key expression in Hebrew: "And you shall love" (*ve'ahavta*). Jewish ethics repeatedly stressed love of God and of others.

22:34-38. This commandment was so important to Judaism that it was regularly recited. Deuteronomy 6:5 demanded loving God with all one's "heart, soul and might"; "might" here becomes "mind" (which was implicit in the Hebrew understanding of "heart"), but the image is still "with one's whole person." (*New Testament writers apparently revocalized the Hebrew term for "might" as "mind," a Hebrew term that sounded similar; such revocalization was a common Jewish interpretive practice.)

22:38. Koine Greek sometimes used "great" (NASB) to mean (NRSV) "greatest."

22:39. Jewish tradition sometimes joined the second commandment with the first.

22:40. Some other teachers also used these commandments as summaries of the law, which is how they also appear in their contexts in the *Old Testament.

22:41-46
David's Lord

By definition, the Christ, or anointed one, was the royal descendant of David (Is 9:7; 11:1; Ps 2; 89; 132). Yet people typically thought of a son as a subordinate, a perspective inappropriate concerning Jesus. The one who would reign in God's *kingdom was David's "Lord," not merely his descendant; he would thus be greater than the resurrected David.

Jewish people agreed that the *Holy Spirit inspired the Scriptures (22:43). When Jewish teachers challenged their hearers to resolve apparent discrepancies in Scripture, they assumed that both texts were true (in this case, Jesus knows that he is both David's son and David's Lord; Mt 1:1) and were simply asking how to harmonize them. Jesus' opponents apparently have no answer to his question, perhaps because Jewish interpreters did not apply Psalm 110:1 to the *Messiah.

Those silenced by a speaker's wisdom had been publicly shamed and would be careful before engaging in such a public battle of wits with the speaker again. When contemporary literature reports hearers being overawed by a wise speaker's (usually the protagonist's) wisdom, the readers are meant to respect the speaker's wisdom too (e.g., 1 Esdras 4:41-42).

23:1-12
Serve More Humbly Than Pharisees

The other Gospels also record Jesus' disputes with *scribes and *Pharisees (Mk 12:38-40; Lk 11:39-52), but many scholars believe that Matthew focuses greater attention on these disputes than do Mark and Luke because scribes and Pharisees constituted the chief Jewish opposition his readers faced in Syria-Palestine (see the introduction to Matthew). That is, on this view, Matthew sometimes focuses on parts of Jesus' life and teachings most relevant to Matthew's audience, just as we sometimes do for our hearers today. Scribes and Pharisees were originally distinct though overlapping groups (Lk 11:39-52), but those who threatened Matthew's readers were the joint successors of both these groups. Matthew also intends this warning to apply against these opponents' counterparts in the *church (Mt 24:45-51).

23:1-2. Some scholars have pointed to a prominent seat in many *synagogues as a "seat of Moses" (cf. 23:6), but Jesus presumably means this expression figuratively. The Pharisaic scribes who articulated the *law believed their traditions were rooted in Moses' own teaching and fancied themselves Moses' successors for their own generation.

23:3. Pharisaic teachers normally taught that knowing Scripture took precedence over obeying it, because knowing it was the prerequisite for obeying it; but they themselves would have agreed that one must obey it and not just learn it.

23:4-5. "Phylacteries" are *tefillin,* small boxes affixed by a leather strap to one's head and left hand during morning and evening prayers; Scripture passages were inserted in these boxes (the practice is based on an overly literal reading of Deut 6:8). These passages were then recited as part of the prayers; rules concerning this later became stricter under the *rabbis. For the tassels, see comment on 9:20 and 14:36.

23:6. Everywhere in Mediterranean antiquity, seating was a matter of honor or dishonor; in Jewish circles, seating was according to rank in the *Qumran assemblies, traditions about the Sanhedrin and later rabbinic schools. This practice also obtained at banquets; those assigned seats in lower-status places frequently complained, as ancient literature amply attests. The most prominent seats in the synagogue perhaps varied in this period before synagogue architecture was standardized; one first-century synagogue seems to suggest a lack of seating rank. Probably in most synagogues the most honored seats were on the bema, the platform for the reading of the Law; elders and people of status may have often been seated in benches along the walls. At least some synagogues had other benches as well; in some

synagogues, however, many hearers may have remained on mats on the floor.

23:7. Greetings were an essential courtesy in Greek and Jewish cultures. Greetings ("Peace be with you") were so important socially that specific rules developed how to greet whom when; for example, the person of lower status coming upon a person of higher status should be first to offer a greeting. Not to hail a person superior in understanding the *law was a grievous insult. Marketplaces were the most crowded places in town.

23:8. "Rabbi" means "my master" and came to be commonly applied to teachers as a title of respect (something like "Reverend" or "Father" today); they were especially "masters" of their pupils. They were venerated in a variety of ways.

23:9-11. People in antiquity often addressed elders or community leaders as "fathers"; for this reason, some also called their teachers (cf. 23:8) "Abba," or "Papa," and teachers sometimes addressed their *disciples as their children. Society emphasized respect for honor and rank, often hereditary, and rabbis' authority and honor placed them on a higher level than the disciples. Jesus says that only God is to receive such superior respect; all other Christians are peers.

23:12. The principle stated here occurs in Proverbs 25:6-7 with reference to seating at banquets, and elsewhere the principle refers to the future time when God equalizes everyone (Is 2:11-12; 5:15; cf. Ezek 17:24; 21:26).

23:13-28
Woes to the Hypocrites

Like beatitudes (see Mt 5:3-12), woes were an *Old Testament form of prayer. The prophets commonly employed them to pronounce judgment, and they are akin to "alases" or, perhaps here, curses ("Cursed be . . . " in contrast to the blessing formula, "Blessed be . . . "; cf. Deut 27–28).

Pharisees were not all of one kind, and the later rabbis, who generally considered themselves spiritual heirs of the Pharisees, report criticisms of several sorts of Pharisees whose hearts were not right (e.g., "the bruised Pharisee," who kept bumping into things because his eyes were closed to avoid seeing a woman). These reports emphasize that motives are critical; the best motive is fear of the Lord, or (in the more refined version) love of God. *Rabbinic literature regularly condemns hypocrisy and demands proper motives. Jesus' opponents would have agreed with most of his ethics, and perhaps protested that they were not really violating them.

Hypocrites originally meant play-actors but by this time the term was also used pejoratively for two-faced people, whose behavior either differed from their belief or varied when they were with different people.

23:13. The image of power to shut someone out is the image of the doorkeeper with the keys to the house; see comment on 16:19.

23:14. This verse is not in all Greek manuscripts of Matthew; for background on its content, see comment on Mark 12:40.

23:15. Pharisees did not have missionaries as such, but Jewish people outside Palestine were always eager to make converts among the *Gentiles, and the wing of Pharisaism most influenced by *Hillel was said to be especially open to converting non-Jews to Judaism. Judaism continued to make many converts for centuries, until it was finally stifled by the legislation of Roman Christendom, with which it was in competition (although the Romans had always resented and tried to limit Jewish proselytism, including in pre-Christian times).

"Child of hell" means someone destined to go there. The problem here is not making converts (28:19) but teaching them wrongly.

23:16-22. Jews were no longer allowed to pronounce the sacred name of God in this period. By swearing lesser oaths, some people hoped to avoid the consequences of swearing by God's name if they could not keep their vow or if their oath turned out to be mistaken. As people swore or vowed by things related to God instead of by God himself, more and more things became substitutes for the divine name and thus became roundabout ways of seeming to swear by God while hoping to buffer the consequences. See comment on 5:33-37.

23:23. The principle that virtues like justice, mercy and faith are most important is familiar from Scripture (Deut 10:12-13; Mic 6:8), and the rabbis themselves sometimes summarized the law in terms of general principles like love. Most Pharisees and other Jewish interpreters

like Philo agreed that there were heavier and lighter parts of the law. They would have responded to Jesus that they attended to minutiae only because even the smallest detail of the law was important to the pious; they taught that one should devote as much attention to the little details as to the principles. But Jesus was not against the law (see Mt 5:19); his point is that they should have learned justice, mercy and covenant faithfulness first (9:13; 12:7).

Tithes were especially used to support the priests and Levites (and for a celebration shared by the entire community every third year). "Dill" and Luke's "rue" (Lk 11:42) are similar words in *Aramaic, possibly reflecting an original Aramaic source here. The law did not explicitly require tithing these dried green plants. Different groups of Pharisees debated among themselves whether to tithe cummin.

23:24. The *hyperbole here is humorous and would certainly catch ancient hearers' attention. Wanting to avoid the impurity caused by a dead insect in their drink, Pharisees would strain out any insect larger than a lentil before it could die in order to preserve the fluid (cf. Lev 11:32, 34). Pharisees considered gnats, which were smaller than lentils, exempt from this impurity, but the scrupulous Pharisee of Jesus' hyperbole would not have taken any chances. Yet Jesus charges hyperbolically that they would leave a camel (the largest animal in Palestine and also ritually unclean, Lev 11:4) in the cup and gulp it down. Their attention to the law's details was fine, but they had missed the main point (Mt 23:23). (The similarity between the Aramaic terms for camel [*gamla*] and gnat [*kamla*] may have also caught their attention.)

23:25-26. Ritual purity was important to the Pharisees, so they washed their vessels as well as themselves in ritual baths. The school of *Shammai—the Pharisaic majority in this period—said that the outside of a cup could be clean even if the inside were not; the minority view of Hillel's followers was that the inside of the cup must be cleansed first. Jesus sides with the school of Hillel on this point, but does this so that he can make a figurative statement about the inside of the heart.

23:27-28. Nothing spread ritual impurity as severely as a corpse (it made anyone who touched it unclean for a week—Num 19:11); Pharisees believed that one contracted impurity if even one's shadow touched a corpse or grave. Inconspicuous tombs (or limestone ossuaries) would be whitewashed each spring before Passover to warn passersby to avoid them and so avoid impurity; the Pharisees either lacked this telltale warning (Lk 11:44) or pretended that it was a mark of distinction rather than evidence of impurity. Matthew emphasizes instead whitewash's function as a beautifying agent employed to conceal corruption. "Whitewash" probably alludes to Ezekiel 13:10-12 and 22:28; it may have covered over a wall's weakness but would not stop its collapse.

23:29-39
Killing the Prophets

This is the final woe (23:29).

23:29-30. Ancient Judaism emphasized more often than the *Old Testament had that Israel had martyred its prophets (e.g., Jer 26:20-23; cf. 2 Chron 36:15-16). The Jewish community in this period built tombs as monuments for the prophets and righteous (including some who were not martyred, like David or Huldah).

23:31. Jesus' point here is, "Like father, like son"; corporate sin and guilt continued among the descendants of the wicked unless they repented (Ex 20:5; Deut 23:2-6; 1 Sam 15:2-3; Is 1:4; etc.).

23:32. This is an ironic challenge, typical of the prophets (Is 6:9; Jer 44:25; Amos 4:4-5): Go ahead and sin if you must, but God will judge you for it (Eccles 11:9)!

23:33. Being called vipers, or a kind of venomous snake, was bad enough (Ps 58:4; 140:3; cf. Gen 3). But the offspring of a viper was reputed to eat its way out of its pregnant mother's belly, so calling someone the offspring of vipers could imply that one was guilty of the universally horrifying crime of matricide. In other words, this was worse than just calling someone a viper!

23:34. Prophets were sent by God according to the Old Testament, or by Wisdom (cf. Lk 11:49) in some Jewish traditions; here they are sent by Jesus.

Some Jews allowed that *prophecy still happened, many doubted that prophets in the

Old Testament sense remained active (a notion apparently challenged here). Here Jesus mentions several clerical categories: prophets, wise men (wisdom teachers who circulated proverbs, etc.) and scribes to explain Scriptures (cf. 13:52). Crucifixion was the severest Roman punishment, reserved for the lowest classes of non-Romans; any Jew who delivered another Jew over to such a punishment was naturally despised by his people. Synagogue scourgings were a form of discipline inflicted on errant members of the Jewish community (see comment on 10:17); on "city to city," see comment on 10:23.

23:35. Bloodguilt was a serious matter, affecting the whole community and not just the individuals directly responsible (Deut 21:1-9). God himself would avenge it (Deut 32:43; Ps 79:10).

Insofar as one can speak of the sequence of the Hebrew Bible at all (it was then on separate scrolls), it was traditionally arranged in a different sequence than our modern English versions of the Old Testament. In it Zechariah is the last martyr (2 Chron 24:20-22), and Abel is the first, as in our Bibles (Gen 4:8). Jewish tradition expanded the accounts of both martyrdoms, declaring that after Zechariah's death a fountain of blood appeared in the temple that not even the slaughter of thousands of priests could appease. Abel's blood cried out for vengeance (Gen 4:10), and in this tradition Zechariah's did the same (biblically, he explicitly prayed for judgment; 2 Chron 24:22). From the first martyr to the last, Jesus says, their judgment is saved up for the particularly wicked generation.The Zechariah murdered in the temple was son of Jehoiada the priest (2 Chron 24:22), not Zechariah son of Berechiah (Zech 1:1), who lived much later in Israel's history. But Matthew apparently uses the Jewish interpretive technique of combining key words to coalesce two Zechariahs, referring to one and alluding to the other, as he did with Amon/Amos and Asa/Asaph in his genealogy in chapter 1. (The suggestion of some scholars that "Zechariah" also alludes to a prophet martyred in A.D. 67 is unlikely.)

23:36. "This generation" occurs also in Matthew 11:16; 13:39, 45; and 16:4; see comment on 24:34. This is the generation that would see the destruction of the temple. For the image of generations of guilt climaxing in the guiltiest generation on whom the whole judgment is poured out, see Jeremiah 16:10-13.

23:37. Jewish tradition claimed that Jewish people were under God's wings (cf. **1 Enoch* 39:7; **2 Baruch* 41:4; *Sifre Deuteronomy* 296.3.1; 306.4.1; 314.1.1-6), and when a Jewish person converted a *Gentile, he or she brought that Gentile "under the wings of God's presence" (*Sifre Numbers* 80.1.1). The Old Testament also portrays God as an eagle hovering over its offspring (Deut 32:11; cf. Ex 19:4), protecting Israel under his wings (Ps 17:8; 36:7; 57:1; 61:4; 63:7; 91:4) and terrifying Israel's foes in the same way (Jer 49:22). This is one Old Testament image of God's love for his people; here Jesus fills this divine role.

Prophets sometimes addressed Jerusalem directly (Jer 13:27), and repetition of a name in direct address is common in Jewish texts. On "killing the prophets," see comment on 23:29-30.

23:38. The "house" could mean Israel (Jer 12:7), but in this context almost certainly means the temple (e.g., Judith 9:13), which would also be left "desolate" (Mt 24:15) in A.D. 70. In the Old Testament, the temple was called God's house; perhaps it is called "*your* house" here to declare that God's presence has exited it, as in Ezekiel 10–11.

23:39. On the significance of this citation, see comment on 21:9. The Old Testament prophets and subsequent Jewish tradition suggested that the redemption would not come until after Israel's widespread *repentance (cf. Is 30:19; Jer 31:18-19; Hos 14:1-7).

24:1-3
Introduction to the Judgment Discourse

Chapter 23 began Jesus' warning of God's judgment against certain elements of the religious establishment; this chapter extends that judgment to the temple itself. After it was destroyed in A.D. 70, many of the Jewish people saw God's hand of judgment in the destruction.

24:1. Although Greeks counted Ephesus's Artemis temple as one of the seven wonders of the world, Jerusalem's temple was actually far larger and more magnificent. The Jerusalem temple was one of the most splendid structures of all antiquity and seemed strong and invincible (cf., e.g., **Letter of Aristeas* 100-101).

It was the central symbol of Judaism and was renowned for its beauty. See further comment on Mark 13:1.

24:2. Some Greek philosophers were unimpressed with magnificent structures, but Jesus' response goes far beyond this attitude—he speaks of judgment. Some other Jewish groups (including the *Qumran sect) also expected the temple to be judged; but most Jews, regardless of their other differences, found in the temple a symbol of their Jewish unity and would have been appalled to think that God would allow it to be destroyed (as in Jer 7:4-15). Some stones were left on others (e.g., part of one wall still stands), but this fact does not weaken the force of the *hyperbole: the temple was almost entirely demolished in A.D. 70.

24:3. *Old Testament prophets often grouped events together by their topic rather than their chronology, and in this discourse Jesus does the same. He addresses what in Matthew are grammatically two separate questions: the time of the temple's destruction and the time of the end. The *disciples may have viewed these questions as integrally related, but Jesus will distinguish them: when will the temple be destroyed (within a generation)? What will be the sign of his coming (at an hour known to no one)?

24:4-14
Coming Events

Preliminary signs indicating the nearness of the end appear in many Jewish *apocalyptic writings (e.g., **2 Baruch* 70:7), but much material characteristic of such texts (the final war, Rome's destruction, mutant babies, etc.) is missing here. Most of the preliminary signs that other apocalyptic thinkers expected for the end are explicitly *not* indicators of the end here (Mt 24:6-8).

24:4-5. Many false messianic figures arose in the first century (and subsequently); they often attracted large and devoted followings. Although *Josephus, writing for *Gentile readers, describes them as "false prophets" rather than as messiahs, their political aspirations are usually apparent in his descriptions.

24:6-8. These troubles were associated with the sufferings many Jews thought would immediately precede the end (e.g., **4 Ezra* 9:3; 13:31-32; *2 Baruch* 27:7; 70:3; **Sibylline Oracles* 2:22-24; 3:660-61). Some compared these troubles to "birth pangs," or the "birth pangs of the *Messiah" or of the messianic era (e.g., in the *Qumran *Hymns;* cf. Is 13:8; Hos 13:13). For Jesus, they are only the "*beginning* of birth pangs" and characterize life as normal in this age. He describes some of them in Old Testament language (2 Chron 15:6; Is 19:2; Jer 51:46).

24:9-14. Universal persecution, apostasy and worldwide missions revival mark the final era. These events began to characterize Jesus' movement in the first century, although not yet on a worldwide scale.

Under pressure, many converts to Judaism reverted to paganism, and Jewish texts warn of many Jewish people turning from God in the end time as they had just before the rise of the *Maccabees in the second century B.C. Apostasy and especially handing over friends to persecutors were considered horrible crimes.

Thus Jewish readers would have readily understood Jesus' warning about persecution and apostasy here; his teaching concerning the spread of the good news of the *kingdom among all nations, however, runs counter to prevailing Jewish teaching. Although apocalyptic writers expected persecution by the nations (cf. Dan 7:21, 25), they did not anticipate a widespread conversion of Gentiles before the end. (Some did envision the subjugation and/or conversion of nations during the end; others envisioned their destruction.)

24:15-22
The Events of 66–70

One prerequisite for Christ's return was the series of events fulfilled in A.D. 66–70, events accurately predicted by Jesus.

24:15. The "abomination that brings about desolation" in Daniel 9:27 occurs after the cutting off of the Messiah (a passage subject to various interpretations); Daniel 11:31 sounds as if it should have occurred in the second century B.C., and 12:11 at the time of the end, so some interpreters have felt that the *prophecy was accomplished in stages. Some interpreters believe that parts of Daniel's prophecy remain to be fulfilled; others believe that all of it was fulfilled in the first century.

The first-century Jewish historian Josephus felt that Daniel was fulfilled when revolution-

aries slaughtered the priests in the temple in A.D. 66, committing a sacrilege for which God brought about the desolation of the temple (human bloodshed in the temple desecrated it; cf. comment on 23:35). This sacrilege would have been the signal for Christians to flee Jerusalem (24:16); early Christian historians tell us that Christian prophets warned the Jewish Christians to flee Jerusalem at this time.

Three and a half years later, the temple was left "desolate" in 70, when the Romans destroyed it with fire and then erected their own standards on the site. As Jewish people knew (it is lamented in the *Dead Sea Scrolls), these standards bore the insignia of the Roman emperor, who was worshiped as divine in the Eastern Mediterranean; they would thus have sealed the site's desecration. Jerusalem's citizens had felt that even bringing these standards into Jerusalem temporarily (as *Pilate had done roughly three and one-half years before Jesus uttered this warning) defiled the holy city. On several occasions the Jerusalemites had shown that they preferred death to their temple's defilement.

24:16. The mountains were the easiest place in Judea to hide; armies had often used them for waging guerrilla warfare (cf., e.g., 1 Sam 23:26; 1 Maccabees 2:28). Early Christian tradition indicates that the Jerusalem Christians fled to Pella at the base of mountains to the north; although the Judean hill country lay all about Jerusalem, the route northward to Pella would be through the Jordan Valley. Both the mountains and the route to Pella could have provided places of refuge, but the flight to Pella shows that the mountain saying in 24:16 was not made up after the event.

24:17. The roof, which was flat, was used for prayer, drying vegetables and other functions. The staircase from this roof was on the outside of the house; one could thus descend without entering the house. Even if there is an element of *hyperbole, it graphically underlines the point of urgency.

24:18. Workers would wear an outer cloak to the fields when they began the day about 6 a.m.; as the day grew warmer, they left their cloaks on the edge of the field. Because people needed them as blankets to stay warm at night, creditors could not seize these outer cloaks overnight (Deut 24:13). Here haste (hence preserving life) takes priority over even the most crucial possesions.

24:19. Mothers may have nursed infants for their first two years before weaning them. Being pregnant or nursing a child made travel much more difficult. Famine would also make pregnancy and nursing much more problematic. Indeed, Josephus reports that the siege of Jerusalem became so difficult that some women ate their children (as in Lev 26:29; Deut 28:57; 2 Kings 6:29). Similar language elsewhere can refer to grief over the loss of young children, physically unprepared for the hardships.

24:20. Winter restricted conditions for travel, immobilizing even most armies. In the winter, the otherwise dry creek beds (wadis) were flooded with water and became difficult to cross; this was even more true of the Jordan River. In spring 68 some Jewish fugitives from another city did try to escape the Roman army during the war and, delayed by Jordan's flooded waters, were mostly slaughtered.

Jewish *law prohibited riding horses, mules and other means of transportation on the sabbath; even one's walking distance was regulated. Transportation and passage would thus be difficult to obtain on the sabbath, especially if residents of Jerusalem wished to flee secretly without being challenged by the patriotic *Zealots. The sabbath could be violated to save life, but those who did not recognize the situation's urgency would not cooperate.

24:21. Here Jesus borrows the language of Daniel 12:1, referring to the final era of tribulation necessary before the dead would be raised (12:11-13). "Never before or again" was sometimes hyperbolic (cf. Josh 10:14 with Ex 8:13; Num 14:20; 2 Kings 6:18), although Josephus concurs that the sufferings of 66–70 exceeded any before them in human history.

24:22. Jesus might mean the 1,290 days of Dan 12:11-12; the time would be shortened to ensure survivors.

24:23-28
Beware of False Messiahs

24:23-24. Some Jewish false prophets in first-century Judea drew large followings by claiming that they could perform miracles, such as parting the Jordan or making the walls of Jerusalem fall down; they failed to make

good on such promises. In addition, many magicians claimed to work miraculous cures, and some Jewish false prophets probably made similar claims. Some others reportedly prophesied that Jerusalem or the temple would not fall—some of them right up until their deaths in the burning temple.

24:25. Advance warning encouraged trust in God (Is 48:5).

24:26. Would-be messiahs most often came in the wilderness, trying to imitate Moses, who had long ago led his people through the wilderness. (Jewish people expected a deliverer like Moses, as in Deut 18:15.) After A.D. 70 and especially after the crushing defeat in A.D. 135, many Palestinian Jews grew more skeptical of messianic claimants (*Sadducees already had been).

24:27. False messiahs could not duplicate this sign. This is the coming of the Lord described by passages like Zechariah 14:3-8, with Jesus filling the role most Jewish readers expected God to fill.

24:28. Jesus' return will not be a secret event; it will be the place of the last battle, leaving his enemies as food for vultures (Ezek 32:4-6; 39:17-20). Being eaten instead of buried was considered a horrible fate (Deut 28:26; 1 Sam 17:44; Ps 79:2). Greeks sometimes believed that such lack of burial precluded entrance into the underworld.

24:29-31
Final Signs

24:29. This reference to astronomical events is *Old Testament language for the time of God's judgment at the final battle (e.g., Is 13:10; 24:23; 34:4; Ezek 32:7-8; Joel 3:14; Zech 14:6). Similar cosmic language was sometimes applied to judgments or other divine acts in history as well (e.g., Ps 18:6-19; Jer 4:20-28; **Sibylline Oracles*). Many in antiquity viewed darkness as a frightful judgment (cf. Ex 9:21-23); eclipses also usually generated fear. Both Jew and Gentile regarded signs in the heavens as portentous, and Josephus reports some signs in the heavens (on a much smaller scale) in connection with the fall of Jerusalem.

24:30. This heavenly appearance of the sign of the *Son of Man is the ultimate sign of Jesus' coming (24:3)—too late to prepare. The text combines Zechariah 12:10-12, where in the end God brings his people to repent of the pain they have caused him, and Daniel 7:13-14, where a representative of suffering Israel would receive the *kingdom from God and reign forever. (Cf. also Rev 1:7.) In the Dead Sea Scrolls, "clouds" refer to the hosts of angels at God's coming; in the Old Testament, this image could refer to the cloud of God's glory or to literal clouds.

24:31. Trumpets were used to announce the accession of kings and other great events. In the Old Testament they were especially used to gather God's people (most frequently for war); the prophets often used the trumpet as a symbol warning of impending battle and devastation (e.g., Jer 4:5, 19, 21; Zeph 1:16). The trumpet had already been used for the gathering of God's people in the end time (Is 27:13), a gathering associated with Israel's salvation (Is 11:12; 43:5; 49:5; 56:8; and commonly in Jewish tradition) and God's final war (Zech 9:14-16). A regularly recited Jewish prayer from this period mentions this future gathering of Israel at the sound of the trumpet; various other ancient Jewish texts agree. It was thus a natural image for the gathering of believers (cf. 1 Cor 15:52; 1 Thess 4:16).

"From one end of heaven to the other" may communicate in a popular image of the day: heaven was a dome over the earth, so this phrase is similar to our equally figurative "from one end of the earth to the other"—i.e., everywhere (cf. Mk 13:27).

24:32-35
Certainty of the Coming

24:32-33. This is the first of seven future-kingdom *parables, paralleling the seven parables on the presence of the *kingdom in chapter 13.

Unlike most Palestinian trees, fig trees lose their leaves in winter; they would have been in leaf by this time of year, however, predicting the fruit that should appear on them in the summer. Jesus had earlier used this tree as a parable for the temple's destruction (see Mk 11:12-25). But the meaning is ultimately decided by the context: when the signs he had listed (including the temple's destruction) were fulfilled, his coming would be imminent.

24:34. The temple was destroyed roughly forty years after Jesus spoke these words

(which refer to the temple's demise rather than to the Second Coming—see comment on 24:3). The Dead Sea Scrolls anticipated a final, forty-year generation of tribulation before the end; Jesus apparently leaves the period between the final earthly sign (the temple's demise) and his return indeterminate.

24:35. Even Jewish prophets would not speak thus of their own words (Zech 1:5-6); such a claim was made only for God's words, spoken through Moses and the prophets (cf. Jer 31:35-37). Those who claimed that their words were unchangeable believed that they spoke infallibly for God (cf. Zech 1:5-6; comment on Rev 22:18-19; *rabbis spoke thus concerning the authority of the Old Testament).

24:36-44
Uncertainty of the Time of His Coming

24:36. See perhaps Zechariah 14:7. Although God had made the crucial things known to his people, he always kept some mysteries secret (Deut 29:29; cf. **4 Ezra* 4:52).

Jewish teachers struggled with a tension between two positions: (1) one could predict when the *Messiah would come, in a time ordained only by God; and (2) one could not predict his coming, but he would come whenever Israel repented and wholly followed God.

24:37-39. Jewish tradition emphasized the evils of Noah's generation in much fuller detail than the Bible had, but the emphasis here is on their unpreparedness.

24:40-41. In the context of 24:37-39, "taken" may mean "taken to judgment" (cf. Jer 6:11 NASB, NRSV). Women worked together grinding at a shared handmill, perhaps in a courtyard shared with other houses, and often became as close as relatives. Wives of *Pharisees were allowed to work together with unreligious women (provided they did not involve themselves in any infringements of Pharisaic purity rules); thus the scenario of women of different convictions working together is not unusual.

24:42. "Watch" involves staying alert and ready the way a night watchman or guard would (cf. 24:43).

24:43-44. Thieves could "break in" by digging through the clay wall of the average Palestinian Jewish home, or by (more quickly but loudly) breaking in a door. (A more well-to-do householder with stronger walls would often have servants to watch the doors for him.) A thief who broke in at night, unlike one who broke in during the day, could be killed with impunity because he was regarded as potentially dangerous to life, expecting people to be home at night (Ex 22:2-3). God's judgment, of course, would be more dangerous than the average night thief (e.g., Jer 49:9; Obad 5).

24:45-51
Watchful Servants

Often a well-to-do householder had a slave who was a "manager," or "steward," managing his estate. Such a high-level slave could be in charge of giving rations to the other servants and could abuse his authority only if the master were not present. (Absentee landowners and householders were common, especially if they owned other estates at a great distance. In some stories of the period, absentee kings, landowners or husbands posed temptations to those remaining behind.)

Some laws viewed slaves as persons, while other laws viewed them as property (for economic matters). Although masters were allowed to beat slaves, it was in their economic interests not to do so often or severely. A slave who abused the other slaves was mistreating his master's "property"; often these other servants were also objects of the master's personal concern. Drunkenness was despised, especially if slaves drank wine and banqueted at the master's expense without his knowledge. Dismemberment (normally after death) was a punishment considered too cruel by Jews but nevertheless practiced by some Gentiles.

25:1-13
Watchful Bridesmaids

Being a bridesmaid was a great honor; to be insultingly unprepared and shut out of the feast was the stuff of which young women's nightmares were made. Professed believers must endure in faith to the end (24:13).

25:1. On "the kingdom is like," see comment on 13:24. Weddings were held toward evening and torches were used as part of the celebration, which focused on a procession leading the bride to the groom's house. It is unlikely that "lamps" refers to the small Herodian oil lamps, which could be carried in

the hand; all the evidence points instead here to real torches, which were also used in Greek and Roman wedding ceremonies. For many people, these torches may have been sticks wrapped with oil-soaked rags. In many traditional Palestinian villages in more recent times, the wedding feast occurs at night after a day of dancing; the bridesmaids leave the bride, with whom they have been staying, and go out to meet the bridegroom with torches. They then escort him back to his bride, whom they all in turn escort to the groom's home.

25:2-7. Torches like these could not burn indefinitely; some evidence suggests that they may have burned for only fifteen minutes before the burnt rags would have to be removed and new oil-soaked rags would need to be wrapped on the sticks of which they were made. Because not all the details of ancient Palestinian weddings are known, it is not clear whether the *parable envisions the lamps as burning while the bridesmaids slept (to avoid the delay of having to rekindle them) or as being lit only after the first announcement of the bridegroom's coming (as many scholars think). Either way, if the bridegroom delayed longer than they anticipated, their lamps would not last unless they had an extra reserve of oil. Bridegrooms were often late, and their comings were repeatedly announced until they arrived.

25:8. The bridesmaids needed sufficient oil to keep the torches lit during the procession to the groom's home and the dancing.

25:9. Trying to share the oil would have left too little for any of the torches and ruined the wedding ceremony. It would have been difficult to find dealers at this time of night, however (although some catering shops could have been open if they were near a large city); the foolish bridesmaids were definitely going to be late.

25:10. The young women were supposed to meet the bridegroom, who would then fetch his bride from her home and lead the whole procession back to his father's house for the feast. Some suggest that by portraying himself as the bridegroom, Jesus implies his deity (Is 54:5; Jer 2:2; Hos 2:14-20). Although people would often come and go during wedding feasts, the bolt used to shut doors was noisy and cumbersome; perhaps it represents an effort to be repeated only if necessary, making new visitors unwelcome (cf. Lk 11:7).

25:11-13. The foolish bridesmaids missed the entire procession back to the groom's house, their primary role, along with the festive singing and dancing. They also missed the critical element of the Jewish wedding, in which the bride was brought into the groom's home under the wedding canopy. "I do not know you" could be used in deliberate refusals to recognize someone indeed known. As they had (through lack of seriousness about their responsibility) insulted the wedding families, so now they receive a deliberate insult. Weddings typically lasted seven days, and much of a village would be welcome; these foolish girls, however, were unwelcome, and might carry this shame in village gossip for years. In one later rabbinic parable, a king invited guests to a banquet without specifying the date. Only the most conscientious invitees were dressed and waiting at the door when the banquet arrived, leaving the others outside in shame. Rabbinic parables also address readiness for death (though Jesus refers here to his return).

25:14-30
Making Use of the Interim Time

Wealthy landowners usually delegated the control and multiplication of their wealth to trained accountants, who could be free persons or, as here, servants. In view of the impending day of reckoning, believers must make the wisest use of all that the Lord has entrusted to them, to make it count for him; they must never take their stewardships for granted (24:45-51).

25:14. Well-to-do masters often went on long journeys, sometimes to oversee properties elsewhere or on government assignments. Given the uncertainties of transportation in those days, the time of return for even a well-planned trip would be uncertain. Wealthy persons usually depended on trained accountants to multiply their capital; such workers could be either free or (as here) slave. (Slaves could also be managers of estates.) In antiquity, slaves could often earn money and even buy property.

25:15. Although the exact value of a talent varied from period to period and place to place, we may estimate the values of these in-

vestments at roughly thirty to fifty thousand, twelve to twenty thousand and six to ten thousand denarii. Since one denarius was close to an average day's wage in this period, this would be a "small sum" (25:21, 23) only to a very rich master.

25:16-17. Those with sufficient capital could invest it at a profit; for instance, they could lend it to moneychangers who would use it to turn a profit and give them a substantial share. Lending money at interest directly was also profitable, given the exorbitant interest rates of the period. The normal Roman rate for private loans was twelve percent, though one *patron is reported to have lent to an entire city at roughly fifty percent interest! Because most people did not have capital available for investment, those who did could reap large profits.

25:18. One of the safest—and least profitable—ways of protecting one's money was to bury it in the ground; such buried reserves are still occasionally found where someone never returned to retrieve his or her deposits. (Lk 19:20 portrays a worse method.)

25:19-23. One could normally at least double one's investment; those with capital could often accomplish far more. The principle that integrity in smaller matters qualified one to prove one's integrity in larger matters was often invoked in antiquity. Some have suggested that Jesus used an *Aramaic term for "joy" that also means "festival" (cf. 25:10); the master threw a feast at his return and honored his helpful servants.

25:24-25. The smallest possible investment, providing some interest on a savings deposit, could not have endangered the deposit; it would have been as safe as burying the money. The third slave should have known better; he simply did not care what happened to his master's property (see comment on 25:15-17). The phrase "You have what is yours" was used in Jewish transactions to say, "I am not responsible for this any further."

25:26-27. Although usury, charging interest on a loan or a deposit, was technically against Jewish *law (Ex 22:25; Lev 25:36-37; Deut 23:19-20; Neh 5:7; Ps 15:5; Prov 28:8; Ezek 18:8, 13, 17; 22:12), *Gentiles were not bound to refrain from it; further, Jewish people could charge Gentiles, and many wealthy Jewish aristocrats followed Greek custom more than official Jewish teaching anyway. In any case, Jesus could expect his Jewish hearers to grasp the full imagery of this *parable, just as other *rabbis could tell parables about kings long after kings had ceased in Jewish Palestine.

25:28-30. Darkness is elsewhere used as an image for hell (8:12).

25:31-46
Judging Sheep and Goats

25:31. The *Son of Man was going to come to reign for God (Dan 7:13-14; cf. the **Similitudes of Enoch*, of uncertain date), and some Jewish *apocalypses (perhaps following Greek images of the realm of the dead) described human judges before the final day of judgment. But the description of absolute authority afforded Jesus here fits most precisely the standard Jewish picture of God judging the nations in the day of judgment. For the angels, see comment on 16:27.

25:32. God judging the nations (e.g., Is 2:4; Mic 4:3) was a standard part of Jewish expectation for the future. God would distinguish among the sheep (Ezek 34:17). Although sheep and goats grazed together, some scholars write that Palestinian shepherds normally separated sheep and goats at night because goats need to be warm at night while sheep prefer open air. Certainly sheep were considered more valuable than goats, so that owners usually had many more sheep than goats (though this is not part of Jesus' analogy here; cf. 7:13-14). The greater profitability of sheep may have influenced how these terms would be heard figuratively; for instance, in a pagan dream handbook sheep were associated with good while goats were associated with trouble. Most people in the eastern Mediterranean preferred goats' and sheep's cheese to that made from cows' milk. Sheep were shorn for wool twice a year; people used both sheepskins and goatskins for leather when the animals died, but preferred goatskins.

25:33. The right is the preferred side in ancient texts; in the few scenes of judgment where it occurs, the right side is for the righteous and the left for the wicked (e.g., the *Testament of Abraham* recension A).

25:34. "Inherit the kingdom" is a familiar phrase; in Jewish tradition, the *kingdom was

prepared for Israel, who had been predestined by God. The king in Jewish parables is virtually always God; here it refers to Jesus.

25:35-36. Except for visiting the imprisoned, the deeds Jesus lists are standard righteous deeds in Jewish ethics. Providing for the poor, giving hospitality to the stranger and visiting the sick were basic to Jewish piety.

25:37-39. An unclear statement followed by a counterquestion was a standard method of moving an argument forward (see, e.g., Mal 1:6-7).

25:40. In some Jewish apocalyptic texts, the nations would be judged for how they treated Israel. In the Bible, God also judged people for how they treated the poor (e.g., Prov 19:17). But given the use of "brothers" or "sisters" (12:50; 28:10; the Greek term can include both genders) and perhaps "least" (5:19; 11:11; cf. 18:4; 20:26; 23:11) elsewhere in Matthew, many argue that this passage refers to receiving messengers of Christ. Such missionaries needed shelter, food and help in imprisonment and other complications caused by persecution; see comment on 10:11-14. Receiving them was like receiving *Christ (on the Jewish principle of agency, see comment on 10:40-42). The judgment of all nations thus had to be preceded by the proclamation of the kingdom among them (24:14).

25:41-45. Some Jewish traditions (like the *Qumran War Scroll) report that Belial (*Satan) was created for the pit; destruction was not God's original purpose for people (**4 Ezra* 8:59-60). In many Jewish traditions, the *demons were fallen angels (cf. comment on 2 Pet 2:4). Jewish tradition was divided on the duration of hell; this passage's description of it as "eternal" was certainly not merely a concession to a universal image in Judaism.

25:46. *Eternal life was promised to the righteous after their *resurrection at the end of the age (Dan 12:2). Some Jewish teachers believed that hell was temporary and that at the end some people would be burned up and others released; other Jewish teachers spoke as if hell were eternal. Jesus here sides with the latter group.

26:1-16
How Much Is Jesus Worth?

See comments on Mark 14:1-11 for further details on this passage. Ancient writers and speakers often communicated points by contrasting characters. This *narrative provides three contrasting evaluations of Jesus' worth: lavish devotion (26:7); less devotion (26:8); and the biblical price of a slave (26:15). Regarding the passion narrative more generally, ancient biographers generally devoted greater attention to a person's death when it was particularly significant (e.g., martyrdom), as is certainly the case with Jesus.

26:1-2. Inhabitants of the Roman Empire, especially in places like Jewish Palestine, saw crucifixion as the cruelest, most painful and most degrading form of common criminal execution. Passover commemorated God redeeming Israel through the blood of lambs.

26:3-5. Rome ruled through local aristocracies; the leading priests and elders of Jerusalem largely belonged to the social elite there. Jerusalem's Sanhedrin, or municipal ruling council, drew from the local elite; despite their influence, their sentiments should not be confused with those of the rest of their people, and certainly not with Jesus' Jewish followers from Galilee. Most other Jewish groups, including *Pharisees and *Essenes, had conflicts with this group. A private meeting to plot the execution of a person not yet convicted violated conventional Jewish ethics (and Roman ethics as well). Their fear of a riot at the festival (v. 5), however, was entirely reasonable: under the crowded conditions of the festivals, riots were more likely than at any other time, and hundreds of people had been trampled in tumults at some previous festivals. The Roman governor came from Caesarea at the feasts to forestall any trouble, and Roman security was increased during this season. The priestly aristocracy were, above all, guardians of the status quo, and they would have to deal with messianic claimants in the most politically expedient way; they dare not arrest Jesus publicly (26:55). On Caiaphas, see comment on John 11:47-48.

26:6. Bethany was one of those villages near Jerusalem where Passover pilgrims could spend the night with hosts (though Jesus will eat the Passover within the city, 26:18). On Simon the "leper," see comment on Mark 14:3.

26:7. It was customary to anoint the heads of important guests, but this woman's

anointing of Jesus is extraordinary. This perfume (undoubtedly imported from the East) was expensive, worth a year of a common laborer's wages, and had probably been kept in her family as an heirloom. Its fragrance was preserved by its sealing in alabaster (the favored container for perfume). Once the flask was broken, the freshness could be lost, and the contents would have to be used quickly.

26:8-9. Although Judaism valued charity toward the needy at all times, some Jewish tradition suggests that people thought about this virtue even more during festival seasons (Tobit 2:2; Mishnah *Pesahim* 9:11; 10:1).

26:10-11. Jesus' reply probably contains an allusion to Deuteronomy 15:11, which urges generosity to the poor, who will always be in the land. Ancient comparisons did not always denigrate the lesser element in the comparison. He does not play down giving to the poor but plays up what follows: devotion to Jesus himself must precede and inform all other important and godly agendas.

26:12. In Jewish tradition, kings (including, by definition, the *Messiah, or "anointed one"), priests and others had to be anointed for service. But Jesus here stresses a different kind of anointing undoubtedly unintended by the woman: anointing a body for burial (see Mk 16:1); he will soon wear a different crown. Similar flasks found in tombs show that such ointments were often used for the dead.

26:13. Ancients applied such statements to those whose memory was preserved in epics or other famous works.

26:14-16. People in antiquity usually viewed betrayal (e.g., of one's people or friends) as a heinous crime. Chief priests would be easily located, but they would not have been accessible to Judas (especially during the festival) had his mission been less in line with their interests. The average price of slaves varied from place to place and period to period, but Matthew's biblically informed readers would probably recognize thirty pieces of silver as the average *Old Testament compensation for the death of a slave (Ex 21:32); Judas sells his master cheaply. Matthew also thinks of the rejected but faithful shepherd in Zechariah 11:12-13 (see the quotation in Mt 27:9-10). Ancient writers often made use of irony; Matthew's use of the term *paradidomi* ("betray," "hand over") ironically connects the guilt of Judas (26:15-16, 21, 23-25, 45-48), Jerusalem's elite (27:2, 18) and *Pilate (27:26).

26:17-30
Betrayal and Death in the Passover

See comments on Mark 14:12-26 for further details.

26:17. By this period "the Feast of Unleavened Bread," which immediately followed Passover in the Bible, had been extended in popular parlance to include the Passover itself. Representatives from each family would "prepare the Passover" (i.e., have the priests slaughter a lamb for them in the temple), then return with it for the later meal, eaten after sundown. Others would prepare the other dishes.

26:18-19. Because the Passover was supposed to be eaten within Jerusalem's walls (or its immediate environs), most homes included guests during the night of the feast. Bethany (21:17) lay outside the city's larger boundaries.

26:20. The Passover was to be eaten at night. In April, at the time of the Passover, sundown in Jerusalem came by 6 p.m., so their meal could have started then. Table fellowship was intimate at the feast; one or two families normally shared the meal (later sources, probably reflecting at least an average minimum, stipulated a minimum of ten persons); here Jesus and his closest *disciples make up the family unit. The usual posture at meals was sitting, but reclining on couches (if available), originally a Greek practice, was customary for feasts.

26:21-23. Bitter herbs were dipped into a mixture of nuts, fruit and vinegar to lessen their bitterness. That someone who was betraying a person would "dip in the bowl" with that person would have horrified ancient readers, who saw hospitality and the sharing of table fellowship as an intimate bond establishing a covenant of friendship. Based on the *Dead Sea Scrolls, some suggest that if "with me" refers to timing, Judas's dipping would have also been a deliberate mark of rebellion, since the group's leader should dip first.

26:24-25. Those lamenting in Greek tragedies and in the Bible often mourned the day of their birth (Job 3; Jer 20:14-18). Such laments were rhetorical expressions of deep grief, but Jesus here uses the same language as

a statement of fact. Other Jewish teachers also observed that it would have been better for a person never to have been born than to have denied the eternal God, been unfaithful to the *law, or the like; it seems to have been a common statement of Jewish wisdom (*rabbis; **4 Ezra* 7:69; **1 Enoch* 38:2; *2 Enoch* 41:2).

26:26. It was customary for the head of the household to give thanks for the bread and wine before any meal, but special blessings were said over bread and wine at the Passover meal. We should not understand "This is my body" literally, in a chemical sense, just as Jesus' contemporaries did not take literally the standard Jewish interpretation spoken over the Passover bread: "This is the bread of affliction our ancestors ate when they came from Egypt." (Taken literally, that bread would have been centuries old, and it had already been eaten anyway.) Rather, Jewish people were in a sense reenacting Passover so as to participate in the experience. The lifting up and explanation of the unleavened bread took place after the first cup.

26:27. Adapting some Greek banquet customs, four cups of red wine came to be used in the annual Passover celebrations, and if these were in use by the first century (as is likely), this cup may be the third or fourth. The leader of the group would take the goblet in both hands, then hold it in his right, a handbreadth above the table.

26:28. In the *Old Testament, covenants were ratified by the blood of sacrifice; God had also redeemed his people from Egypt by the blood of the Passover lamb. The language alludes especially to Exodus 24:8, when Moses sprinkled the people with sacrificial blood at Mount Sinai. "On behalf of the many" probably alludes to Isaiah 53 (see comment on Mt 20:28). Passover ritual interpreted the cup but did not interpret it as blood, because Jewish law and custom were revolted by the idea of drinking any creature's blood—especially human blood.

26:29. Jewish people often offered vows of abstinence: "I will not eat any such and such until this happens," or "I vow that I will not use this until that happens." Jesus vows not to drink wine again until the kingdom comes, and he apparently abstains from the fourth cup. Jewish tradition commonly portrayed the time of the kingdom as a banquet (based on texts like Is 25:6), when the Bible had promised an unending supply of wine (cf. Amos 9:13-14).

26:30. Jewish tradition suggests that after the meal, it was customary to sing psalms antiphonally from the Hallel, which consisted of Psalms 113–118. The walk to the Mount of Olives took at least fifteen minutes.

26:31-46
The Other Betrayers

See comment on Mark 14:27-42.

26:31-32. On "stumbling" ("fall away"—NASB), see comment on 18:6. Zechariah 13:7 (the shepherd quotation) is not clearly messianic (Zech 13:1-9 refers to striking false prophets in judgment, following Deut 13:1-11; cf. Zech 10:2; 11:3, 15-17), but the principle of sheep scattering from a smitten shepherd certainly applies equally well to the divine shepherd (Mt 25:32; cf. 18:12-14). Some other ancient Jewish readers understood Zechariah 13:7 positively (CD 19.5-9).

26:33-35. Ancient sources typically regarded the rooster as a reliable reporter of the advent of dawn, and night guards, shepherds and others who were awake at night were also familiar with other crowings, which, depending on the time of year, varied between 11:30 p.m. and 3:30 a.m. The point is that the denial was imminent.

26:36. They may have arrived at Gethsemane by 10 or 11 p.m. (which was well into the night in that culture). Gethsemane seems to have included an olive grove and probably an olive press (hence its name, which means "oil press"); it was on the western slope or base of the Mount of Olives, facing Jerusalem. Because Passover night had to be spent within the larger boundaries of Jerusalem, which did not include Bethany, they would not return to Bethany that night (21:17).

26:37-38. Jesus' description of his grief draws on *Old Testament language (Ps 42:5-6, 11; 43:5; Jon 4:9; cf. Ps 142:3-6; 143:3-4); compare Matthew 27:46. Greek philosophers emphasized facing death calmly, but Jesus, like the OT tradition (and most people), approached the experience of death with anguish.

26:39. The cup (20:22; cf. 26:27; 27:48) may allude to the Old Testament image of a cup of judgment given to the nations; see comment on Mark 10:39. Jewish readers would regard

applauding God's will even to one's own hurt as virtuous (e.g., 1 Maccabees 3:59-60; rabbis; Dead Sea Scrolls).

26:40. The disciples were to "stand watch" like the porters, slaves in charge of the door, in the *parable in Mark 13:34-36. It was customary to stay awake late on the Passover night and to speak of God's redemption. They should have been able to stay awake to keep watch; they had probably stayed up late on most other Passovers of their lives. According to one Jewish teaching, if anyone in the Passover group fell asleep (not merely dozed), the group was thereby dissolved; the teaching may, however, be too late for relevance to this period.

26:41. On watching and praying in the night, compare perhaps Ps 63:6; 77:6; 119:148. "Temptation" here is "testing"; given the common Jewish religious uses of the word, Jesus is saying: "lest you fall prey to the testing you are about to face." The contrast between "spirit" and "body" simply means that one may mean well on impulse (26:33; cf. the use of "spirit" in many cases in Proverbs), but the body is susceptible to exhaustion.

26:42-46. Romans appreciated loyalty to one's sense of duty; Judaism stressed faithfulness to God's law even to the point of dying for it. Thus all ancient readers would have recognized heroism in Jesus' intense faithfulness to his calling.

26:47-56
Completion of the Betrayal

See further comment on Mark 14:43-52.

26:47. Because they are sent by prominent men of Jerusalem, the band that comes to arrest Jesus is probably the temple guard. They come prepared for armed resistance from one they suppose is a messianic revolutionary.

26:48. Although there may have been a full moon, a sign would make it easier to find the right person, especially since they had to act quickly before confusion ensued. Arresting others might not be necessary (see comment on Jn 18:8). Judas' kiss might also delay the other disciples' suspicions of the large party approaching them.

26:49-50. A kiss (usually a light kiss on the lips in that culture) was a sign of special affection among family members and close friends, or of a disciple's honor and affection for his teacher. Judas's kiss is thus a special act of hypocrisy (cf. Prov 27:6). Given ancient values concerning hospitality, friendship and covenant loyalty, any of Matthew's readers encountering this story for the first time would have been horrified by the narration of the betrayal. Judas appears as the most contemptible of traitors; Jesus appears as one unjustly betrayed.

26:51. Although this servant is probably not a Levite and thus unable to minister in the temple anyway, some point out that those who were missing appendages such as ears were barred from serving in the sanctuary. (Jesus' disciple is probably *aiming* for the neck or something more substantial than an ear, however.)

26:52. These are not the words of a violent revolutionary (26:47). End-time schemes often included a great battle between the people of light and the people of darkness, and Jesus certainly expected violence (24:1-2); but his own followers were to stay clear of it. Matthew's readers might hear this possibly familiar saying (cf. the *Sentences* of the Syriac Menander 15-19) ironically: the temple authorities' behavior, perhaps partly motivated by the desire to keep peace for the Romans (Mt 26:1-5), invited the sword of judgment at the hands of the Romans in A.D. 66–70.

26:53-54. Legions normally had six thousand soldiers, so Jesus is saying that he could summon around seventy-two thousand angels (a legion per disciple). Even a human force of this size could have easily crushed the whole temple guard and the Roman garrison in the fortress Antonia, many times over; rarely did any nation field such vast armies in one place. The whole of Syria had only three legions (Josephus, *Jewish Antiquities* 17.286). Such an angelic force could have easily defeated any human army raised against them. God's heavenly armies occasionally appear in the *Old Testament, and they were invincible (e.g., 2 Kings 6:17; cf. 2 Sam 5:24; 2 Kings 19:35). *Qumran's War Scroll expected angelic help at the final battle.

26:55-56. Subversives (like the later assassins who slew Jewish aristocrats under cover of the crowds in the temple) did their acts secretly or in a way that would enable

them to avoid capture; the Romans and their local agents were always concerned about such groups. Far from being hidden, Jesus' teaching had been public and unconcealed—unlike his enemies' current action under the cloak of night.

26:57-68
Jesus' Trial

See comments on Mark 14:53-65. Brutal as the narrative appears, it depicts how justice was sometimes carried out in antiquity, including by the Sanhedrin. *Josephus recounts another prophetic figure, Joshua ben Hananiah, who predicted the temple's destruction a few years before it came about. The priestly leaders arrested him, handed him over to a Roman governor, and he was flogged, Josephus says, until his bones showed. Joshua was then released, because he had no following and was considered insane (Josephus, *Jewish War* 6.300-305). By contrast, Jesus had followers and could appear to the elite as a challenge to their political power; he could not be safely released.

26:57. Later tradition recounts that the full Sanhedrin normally met in their special meeting hall in the temple, the Chamber of Hewn Stone; writing in the first century, Josephus suggests that they met instead very close to the temple. In this case, many members of the Sanhedrin hold a secret night meeting without advance notice in the *high priest's home, though they are investigating what they will claim is a capital offense. At least according to later Pharisaic legal ideals, such a meeting was illegal on all these counts: capital trials had to meet during the day, and only after a day had intervened might the court render a verdict. Only the worst criminals could be executed at festivals. Pharisaic rules forbade executions at feasts except for the most heinous crimes. But the priestly aristocracy would pay little attention to Pharisaic scruples, and they had to hurry before Jesus' popularity with the crowds forced his release or made him more of a hero. Given the short notice, possibly many members of the Sanhedrin not inclined to consent were not invited. Most ancient ethics prohibited such a sudden, nocturnal trial, but political necessity often trumped legal ethics.

26:58. Trespassing on the high priest's private property required much courage from a Galilean fisherman. The guards are presumably members of the temple guard, probably waiting to see the results of the trial inside. Regardless of whether they had all been assigned guard duty that night, they may have stayed up later than usual because it was Passover.

26:59-60. The virtuous Jewish tradition of diligent cross-examination of witnesses brings the false testimony into question. But once these witnesses had contradicted one another, they should have been declared false and the case against Jesus regarded as fabricated; under Jewish (and Roman) law, in a capital case, false witnesses were supposed to be put to death (see Deut 19:16-21; also the Dead Sea Scrolls). Even though Rome had not given the Sanhedrin jurisdiction to execute false witnesses, the Sanhedrin should have at least disciplined them; that the case continues uninterrupted demonstrates severe bias among the council members gathered there.

26:61. Many Jewish people expected that God would establish a new, purified temple when he put down the Romans. Outsiders had naturally misinterpreted Jesus' teaching about a new temple and warning about the old temple's destruction as the threat of a mad, messianic revolutionary or end-time prophet, hence as a threat to public security. But they still fail the cross-examination.

26:62. In the *Old Testament, a judge would normally stand to render the verdict. At least according to later rabbinic law, the high priest could not legally force Jesus to convict himself out of his own mouth, but the priestly aristocracy would pay little attention to Pharisaic regulations even if this rule were already widely held. The official finally asks whether Jesus thinks of himself as a *messiah—hence, to a high priest's mind, as a revolutionary.

26:63. The high priest tries to compel Jesus to speak by appealing to the divine name; thus the phrase "adjure" (KJV, NASB, RSV), "charge under oath" (NIV; cf. NRSV; cf. also 1 Sam 14:24; 1 Kings 22:16). False oaths in God's name were forbidden in the Old Testament as "taking his name in vain." From the Jerusalem aristocrats' standpoint, a false messiah was a threat to peace with Rome, which allowed no kings except Caesar and his approved vassals.

26:64. "You say so" may indicate that this is their choice of wording and not his. Jesus' statement here is a claim to be not only a mortal messiah but the cosmic ruler of Daniel 7:13-14, the embodiment of Israel's call, the one who would come in glory and reign forever; the phrase "from now on" is especially offensive, because he thereby claims this role in the present, which would imply that he is their judge rather than they being his judges. "Power" was one Jewish title for God. (See "*Son of Man" in the glossary.)

26:65. One would tear one's clothes as a sign of mourning or *repentance, including when hearing the sacred name blasphemed. According to stricter Pharisaic standards, unless Jesus mentions the sacred Hebrew name of God, or summons them to idolatry (e.g., by calling himself God, which he does not do at this point) or in some other way insults God's dignity, he is not technically guilty of blasphemy (see comment on 9:3). Jesus' association of himself with God could be considered offensive, but the high priest had not proved it untrue. The priestly aristocracy had fewer restrictions against conviction than Pharisees did, however.

26:66. The high priest was not permitted to judge a case alone; he had to solicit the council's vote. (If later rabbinic sources give any indication concerning how the Sanhedrin may have functioned, the clerk may have called for each member's vote by name, but such technicalities may be out of place in this less formal hearing.) Judicial excuses aside here, Jesus clearly poses a threat to the temple establishment, and as a messianic claimant he threatens their power and the nation's stability (cf. Jer 26:9, 11).

26:67-68. Unlike public flogging, the behavior represented here—spitting on, striking and taunting a prisoner—was against Jewish law. Abuse of prisoners was common but violated ancient ethics. Ironically, while they mock Jesus as a false prophet, his *prophecy about Peter is being fulfilled (26:69-75).

26:69-75
Peter's Final Betrayal

See comment on Mark 14:66-72.

26:69-72. As a servant in an aristocratic household near the temple, this woman may have been near the temple and could have gotten a good look at Jesus' *disciples in the temple courts. Peter's evasive answer in verse 70 is not precisely betrayal—in contrast to verse 72. "I do not know what you say" is the standard form for denial in Jewish legal texts; calling a known person "the man" was sometimes used contemptuously. Taking God's name in vain (Ex 20:7) involved the swearing of false oaths (Mt 26:72), which essentially invited God's punishment if one were lying.

26:73. Galilean accents differed from Judean accents; Galileans were careless with their vowels and failed to clearly differentiate the various guttural consonants. The high priest's servants and temple guard would have lived in Jerusalem and viewed themselves as Judeans. Some scholars have suggested that Judeans associated Galileans with revolutionaries, but the evidence for this suggestion is at best ambiguous; given the ancient mistrust between urban and rural dwellers, however, it is not unlikely that many Jerusalemites looked down on Galileans. But the point here is simply that the hearer assumes—rightly—that disciples of a Galilean teacher were themselves Galileans.

26:74. The "curses" Peter utters are not vulgar words; rather, he swears by various things that he does not know Jesus (cf. 5:33-37), invoking curses on himself if he is lying.

26:75. For most people in the ancient Mediterranean, rooster's crowing marked daybreak. Those who were awake much earlier may have recognized an earlier Palestinian rooster crowing between 12:30 and 2:30 a.m. In any case, it was fulfilled speedily.

27:1-10
The Other Betrayer's Remorse

Ancient writers often laid contrasting pictures of characters side by side. Peter's remorse (26:75) contrasts here with that of Judas, who killed himself instead of repenting (27:5).

27:1-2. To provide legality, the leaders have a brief, early morning "official" hearing to ratify the night's decision; only daylight hearings were legal. Presumably this meeting was in the Sanhedrin's regular meeting place near the temple. Jerusalem's authorities have to bring Jesus to *Pilate, because they were not authorized by the Romans to execute the

death penalty themselves. Pilate would be available as early as sunrise; like other Roman officials, he would finish his regular public day before noon.

27:3-4. Some later Jewish teachers held that even the recantation of a false witness for the prosecution could not reverse the verdict; the officials here seem less concerned with legal theory than with political expediency, however.

On thirty pieces of silver, see comment on 26:15. Those who dealt in bribes were accursed under the *law (Deut 27:25), and a false witness was liable to the punishment appropriate for the alleged crime of the accused (Deut 19:18-19). Having innocent blood on one's hands meant that one was guilty of murder; in the *Old Testament, this guilt could be expiated only by the blood of the murderer or, if the murderer was unknown, through a sacrifice (Gen 4:10; 9:6; Num 35:33; Deut 21:1-9). God could, however, grant mercy to the repentant (Gen 4:15; 2 Sam 12:13-14).

27:5. Judas's suicide is an act of despair (cf. Saul—1 Sam 31:4; the traitor Ahithophel—2 Sam 17:23). Roman tradition considered suicide a nobler way to die than letting others kill one. To some Jewish people it was likewise noble if it was performed to avoid falling into the hands of torturers or to avoid being defiled (e.g., in *Josephus and in *4 Maccabees, possibly under Greek influence). But Judaism, especially strict Palestinian Judaism, normally regarded it as evil. (Ancient readers would thus view Judas's act in a more negative light than they would view that of the jailer in Acts 16:27.) Hanging was often viewed as a dishonorable form of suicide.

According to ancient thought, if Judas had hanged himself in the sanctuary he would have defiled it (though he may have just "gone away" to locate a more convenient place). Flinging the money in the temple alludes to Zechariah 11:13 (see comment on Mt 27:9).

27:6. Ancient writers often used irony, and Matthew is no exception: the chief priests are more concerned about the legal technicality of blood money for the treasury than that they issued the money for a judicial murder or that Judas is about to kill himself (cf. 23:23-24). Although the Old Testament did not explicitly prohibit the use of such money, they are careful to use it for something possibly doubly unclean (burying strangers). Some commentators have suggested that the mention of the treasury could reflect a Hebrew pun on the word translated "potter" (27:7; by a slight change of Hebrew spelling one could read "potter" as "treasury"), but this suggestion is not certain.

27:7-8. Burying people who had no one else to bury them was an act of piety (cf. the story of Tobit). Many Jews from around the world visited Jerusalem or moved there in their old age, and if they died without sufficient funds others would need to pay for their burial; the "strangers" might also include unclean *Gentiles. (There is also a Jewish tradition of burying condemned criminals in such a field.) Thus the *high priests no doubt saw their behavior as pious!

27:9-10. Jewish scholars could cite some texts while simultaneously alluding to others. Matthew here quotes Zechariah 11:12-13, but by attributing it to Jeremiah he also alludes to a similar text that he wishes his more skillful readers to catch (Jer 32:6-10; cf. 19:1-4, 10-11). (Because the composite quotation is nearly verbatim from these texts, and because large works like Matthew's Gospel normally went through multiple drafts tested before audiences, Matthew probably was well aware of what he was doing, rather than merely accidentally citing the wrong author, unless he is using a list of standard messianic proof texts instead of citing directly from Zechariah. He probably deliberately evokes both texts.) Zechariah 11:12-13 refers to the low valuation God's people had placed on him; they valued him at the price of a slave (Ex 21:32).

27:11-26
The Messiah or the Revolutionary

27:11. The governor had complete latitude in his decisions, though he would normally respect custom. This interrogation presumably occurs at Herod's old palace, where Roman governors resided when in Jerusalem. The charge presented to Pilate is clearly that Jesus claims to be a king, i.e., that he is a revolutionary acting for the overthrow of Rome. The charge "King of the Jews" interprets Jesus' messianic role for Pilate as treason against the emperor's majesty; calling oneself "king" was a

capital offense. Under Tiberius (the current emperor), even suspicion of minor forms of treason led to execution, and Tiberius' agents dare not fail to prosecute such offenses.

27:12. A defendant who offered no defense was normally convicted by default.

27:13-14. Jewish martyr stories also report rulers' amazement at martyrs' refusal to compromise. Although most of these stories are fictitious, they reflect not only the genuine astonishment of *Gentiles unfamiliar with Jewish commitment to the details of their law but also the ancient ideal of bravery in standing against tyrants.

27:15-18. Customs like this release of a prisoner varied locally. Roman law recognized two kinds of amnesty: acquittal before the trial and pardon of the condemned; this is the latter. Pilate was not required by law to cooperate, but governors often followed local traditions. Moreover, Pilate had severely irritated the priestly aristocracy and Jerusalemites at the beginning of his tenure and may have wished to avoid further problems; several years later, his further actions led to complaints and his recall from Judea. (If the trial is as late as October of A.D. 31, Pilate's main political supporter in Rome had just been executed, and he was on shaky ground politically; but the events of Mt 27 probably occurred before then.) Having heard of Jesus' popularity, he may miscalculate whom the crowds would choose.

27:19. The "judgment seat" seems to have been outside the palace. Although traditionally governors had to travel without their wives, by this period they were allowed to take their wives with them to the provinces. Further, although Roman matrons were ideally quiet, many stories praised aristocratic Roman women who privately influenced their husbands to some noble course of action. Dreams were respected in all Mediterranean cultures as sometimes being revelatory (see comment on 1:20; 2:12).

27:20-23. These events occur early in the morning (see 27:1-2), and much of the crowd may not be those whom Jesus had been teaching after arriving from Bethany each day. Jesus' primary supporters were probably especially fellow Galileans. But ancient literature also reports how quickly the masses often changed allegiances (e.g., in *Tacitus; 1 Sam 11:12). The chief priests were well respected and more visible than Jesus, especially to local Judeans and to foreign Jews visiting Jerusalem for the feast and unfamiliar with local politics. Barabbas would also appeal to those drawn to more militant responses to Roman oppression than Jesus provided. The leaders view Jesus, who has a significant following, as a greater political threat than Barabbas.

27:24. Washing hands was a typically Jewish (but also sometimes Gentile) way of declaring one's innocence (Deut 21:6; **Letter of Aristeas* 306), but Pilate's words and action absolve his guilt no more than the exactly parallel words of the chief priests in Matthew 27:4, or those of others who acceded to subordinates' unjust demands for the cause of political expediency (e.g., Jer 38:5). This was not the first time that the threat of riots had forced Pilate to relent; he had brought Roman standards (viewed by Jews as idols because they venerated the "divine" emperor) into Jerusalem, and withdrawn them only because mass protests forced him to either slaughter the populace or relent.

27:25. Once the responsibility for a murder or crime was attached to one person, another was considered free (cf. Gen 27:13; 2 Sam 3:28-29). Matthew probably relates this cry of the crowd to the judgment of A.D. 66–70 that crushed the next generation of Jerusalemites; he would not have approved of the anti-Semitic use to which this verse was subsequently put (cf., e.g., Mt 5:39, 43-44).

27:26. One would be stripped before a scourging or execution. Crucifixion was prefaced by scourging, either on the way to the cross or before the victim began the trip to the cross. Tied to a post, the condemned person would be beaten with the *flagellum:* a leather whip with metal knotted into its thongs. This whipping bloodied the victim's back, leaving strips of flesh hanging from the wounds. By weakening the victim's constitution, it would shorten the time it would take the condemned person to die on the cross.

27:27-44
Executing the King of the Jews

Crucifixion was the most shameful and painful form of execution known in antiquity. Stripped naked—especially shameful for Pal-

estinian Jews—the condemned would be hanged in the sight of the crowds, regarded as a criminal, unable to restrain the excretion of wastes in public and subjected to excruciating torture. Sometimes the victim would be tied to the cross with ropes; in other cases, as with Jesus, he would also be nailed to the cross. His hands would not be free to swat away insects attracted to his bloodied back or other wounds. The victim's own weight would pull his body into a position that eventually prevented breathing, if he did not die by dehydration or (if nailed to the cross) blood loss first. A footstand on the cross allowed him some support, but sooner or later his strength would give out, and (usually after several days) he would die from suffocation or (usually more quickly) dehydration.

27:27. The Praetorium in this period was Herod the Great's old palace, where the Roman prefect stayed when he visited Jerusalem. A cohort of six hundred men was normally stationed in Jerusalem (at the fortress Antonia on the Temple Mount), reinforced by additional troops who accompanied Pilate to the feast in case they were necessary for riot control.

27:28. Nakedness was especially embarrassing to a Jewish person in antiquity. Red robes would be those most readily available, because soldiers wore red capes; this garment could resemble the purple robe of the pre-Roman Greek rulers of the East. Roman soldiers often played games to pass time: they carved on the stone pavement of the fortress Antonia, where they were garrisoned on the Temple Mount, and knucklebones used as dice have also been recovered there.

27:29. The soldiers' kneeling before Jesus parodies royal homage in the Greek East. The reed is meant to parody a scepter; military floggings often used bamboo canes, so one may have been on hand among the soldiers. "King of the Jews" is an ironic taunt but may also reflect some typical Roman anti-Judaism; as auxiliaries in this region, the soldiers are probably ethnically Syrian. "Hail!" was the standard salute to the Roman emperor.

27:30. Spitting on a person was one of the most grievous insults short of violence; Jewish people considered the spittle of non-Jews particularly unclean. Some think that the soldiers' spitting on Jesus might parody the kiss of homage expected by rulers of the Greek East, but it could be simply pure contempt.

27:31. Those being crucified by the Romans were stripped naked; Jewish *law on stoning stripped a man of all but a loincloth. An actual execution squad on average consisted of four men, but is perhaps more here given the multiple victims.

27:32. Cyrene, a large city in what is now Libya in North Africa, was ethnically divided among Libyans, Greeks and Jews; the Jewish community probably included some local converts. "Simon" is a Greek name commonly used by Jewish people (because of its resemblance with the biblical "Simeon"). Like multitudes of foreign Jews, Simon had come to Jerusalem for the feast. Roman soldiers could impress any person into service to carry things for them. The condemned person himself normally had to carry the horizontal beam (Latin *patibulum*) of the cross out to the site where the upright stake (Latin *palus*) awaited; but Jesus' back had been too severely scourged for him to continue this (see comment on 27:26).

27:33. The likeliest site for Golgotha (near the Holy Sepulcher) used the remains of an ancient rock quarry.

27:34. The women of Jerusalem had prepared a painkilling potion of drugged wine for condemned men to drink; Jesus, committed to the full agony of the cross, refuses it (cf. 26:29). Psalm 69:21 speaks of both "gall" and "vinegar" (Mk 15:36 emphasizes the latter). The *Aramaic term for "myrrh" (Mk 15:23) resembles the Hebrew term for "gall."

27:35-36. Romans completely stripped the person being executed. Roman law permitted the execution squad any minor possessions the executed person carried (cf. also Ps 22:18). The custom of casting lots, common in both the *Old Testament and Greek culture, was a common ancient way to make decisions of this nature.

27:37. The condemned person sometimes carried the charge (Latin *titulus*) to the site of execution.

27:38. The word for "robbers" here is the standard term in Josephus for revolutionaries; presumably they had been colleagues of Barabbas. Executing criminals at festivals increased the publicity, hence the deterrent value, of their deaths.

27:39. The Gospel writers purposely describe the ridicule in the language of the righteous sufferer of Psalm 22:7.

27:40. Those who pass by repeat *Satan's taunt of Matthew 4:3, 7, still emphasizing their expectation of a political *messiah. Ironically, even those within the *narrative should have realized how closely the accusers' words echo the mocking words of the *wicked* in Wisdom of Solomon 2:18: "If the righteous person really is a son of God, God will help him and deliver him from those who resist him."

27:41-42. Compare 4:3, 6.

27:43-44. The language of the religious authorities exactly parallels Psalm 22:8; the righteous sufferer himself quotes this psalm in Matthew 27:46 (Ps 22:1).

27:45-56
The King's Death

27:45. The "sixth hour" begins by noon, the "ninth hour" by 3 p.m.; crucifixions rarely ended so quickly. The latter time, when Jesus dies, was close to the time of the evening offering in the temple. Darkness was one of the plagues in Egypt (the one preceding the sacrifice of the first paschal lamb) and occurs in the prophets as a judgment for the end time; both Jews and most pagans considered darkenings of the sky (especially eclipses) bad omens. Cf. Amos 8:9.

27:46. Here Jesus quotes Psalm 22:1, which may have been part of the Scripture recitation at this time of day. His opponents do not pause to consider that the psalm ends with the sufferer's vindication and triumph (Ps 22:25-31). Whereas Mark's quotation is in Aramaic, Matthew's is mainly in Hebrew.

27:47. Because Elijah was thought never to have died, some *rabbis felt that he was sent on errands like the angels, often to aid or deliver pious rabbis from trouble. Matthew's Hebrew version of the prayer (*Eli*, 27:46) sounds closer to "Elijah" (*Eliyahu*) than Mark's Aramaic version (*Eloi*).

27:48. This offer of a wine-soaked sponge may have been an act of mercy, because the wine could act as a painkiller. Perhaps the man thinks Jesus is delirious from pain. But sour wine was usually a remedy for thirst, and it may have been an attempt to revive him to perpetuate his suffering.

27:49. See comment on 27:47.

27:50. "Giving up one's spirit" is used elsewhere to refer to death.

27:51-53. Stories were told of catastrophes occurring at the deaths of pious rabbis, especially those whose intercession had been vital to the world; on rare occasions, Greek writers also applied such stories to the deaths of prominent philosophers. These events would have communicated Jesus' importance quite well to ancient observers and readers.

27:51. The veil (or curtain—NIV) is probably the one between the holy of holies—inhabited only by God—and the sanctuary where the priests ministered (Ex 26:33). Matthew might intend this tearing of the veil to recall the rending of clothes at the hearing of blasphemy (Mt 26:65). The point of the veil's rending may be that by the cross God provides access for all people into his presence, or it may indicate the departure of God from the temple (as in Ezek 10–11). *Apocalypses sometimes mentioned a major earthquake shortly before the coming of the *kingdom.

27:52-53. Although these raisings of the dead *saints, like those in the *Old Testament, do not mean that they will not die again, they prefigure Judaism's anticipated final *resurrection, when the dead will be raised never to die again. Archaeological evidence indicates that in popular (not official) Judaism, the tombs of saints were venerated. Gentiles sometimes understood appearances of the (not-raised) dead as omens of coming disaster (Ovid, *Metamorphoses* 15.797).

27:54. Here pagans—the executioners—are the first people after Jesus' death to recognize, to some extent, his identity, although they may mean "*Son of God" quite differently than Jewish people and Christians (including Matthew) would have (cf. Dan 3:25, 29): a semidivine hero, son of a deity, rather than *Messiah.

27:55-56. Although an execution squad might restrict close access (lest the crowd's view be obstructed), family and close friends might be present to lament at an execution; only the male *disciples would have been in danger as suspected allies of a revolutionary. Women often (though much less than men) performed the office of *patron, or benefactor, supporting religious or other groups;

it became problematic only for critics already opposed to a group. But in ancient Jewish Palestine, critics could have denounced as scandalous these women accompanying Jesus' disciples.

27:57-61
Jesus' Burial

27:57. Arimathea was only about twenty miles from Jerusalem; given the location of Joseph's tomb (27:60) and his historic membership in the Sanhedrin (Mk 15:43), Joseph's primary residence is apparently now Jerusalem. Even if the sabbath had begun (hence "evening"), the urgent washing and preliminary burial were permitted even on the sabbath (before decomposition would begin).

27:58. Joseph is said to have been wealthy; he must have been prominent to have secured an audience with Pilate after his official public hours (which ended at noon). When Romans crucified persons, they usually denied them burial (leaving them to be eaten by vultures or dogs); Jewish scruples in Palestine demanded burial (Deut 21:23), but for the first year this could be in a dishonorable grave site for criminals, not a family tomb. Exceptions were often made when relatives asked for the body, but in the case of treason (as claiming to be the Jewish king would be) an exception would not be made unless the deceased had a prominent advocate. Jesus had a posthumous ally in this man of influence, who was not ashamed to go on record as his follower. Because prominent people viewed as allies of a condemned revolutionary could risk their lives by speaking up for him, Joseph risks a great deal to come forward.

The term used for "evening" included late afternoon as well as just after sundown. In any case, in this hot climate under Jewish *law the preliminary disposal of the body (including its washing, also practiced by other peoples) took precedence over celebration of the sabbath, even if the rest of the treatment of the body had to wait. Burying the dead was an important duty of the pious in Judaism. Public mourning was important for all the dead but was illegal for anyone who had been executed.

27:59-60. Being wrapped in a fine linen shroud would mark an honorable burial. To bury someone in one's own family tomb was a special act of reverence and affection (cf. 1 Kings 13:30-31; cf. Is 53:12). (Cemeteries and burial plots in this period nearly always belonged to families.) In the first century, the body would normally be left to rot in the tomb's antechamber for the first year; at the end of the year, the bones would be gathered into a box, which would slide into a slot on the wall. This practice probably related to the standard Jewish hope in the resurrection of the body at the end of the age. The stone rolled in front of the tomb was a carved, disk-shaped stone probably about three feet in diameter, rolled into place in a groove and moved back from the entrance only with great effort.

27:61. Women generally took part in preparing bodies for burial in the ancient world. The oldest tradition for the site of Jesus' grave (the Roman Catholic location of the Holy Sepulcher) is a clearly first-century tomb located inside the walls of Jerusalem since the forties of the first century, even though the *New Testament and Jewish law required that the crucifixion happen outside the city walls. But King Agrippa I expanded the city walls during his reign (A.D. 41–44); at the time of Jesus' crucifixion, that area was still outside the walls. Thus the tradition of the approximate site of Jesus' burial and resurrection goes back to within roughly ten years of the event. (The traditional Protestant site contains tombs from a much later period and has no evidence to commend it.)

27:62-66
Making Sure He Stayed Buried

The priestly aristocracy, ever politically astute, takes no chances, and despite the sabbath and festival they obtain an audience with Pilate to secure the tomb. It is debated whether Pilate here provides them with Roman guards or tells them where the tomb is and permits them to post some of their temple guard; the guards' fear of Pilate's reprisals (28:14) could indicate that they are Roman guards, but they also answer to the *high priests (28:11) and it seems unlikely that Pilate would put his own soldiers at the chief priests' disposal. The seal on the stone would make any tampering obvious. That the Jerusalem authorities would have acted thus on the sabbath indicates their special interest in the case as well as suggests the selectiveness of their piety.

28:1-10
The First Witnesses of the Risen Jesus

That women are chosen as the first witnesses is highly significant; both Jewish and Roman law severely minimized the value of their witness. It fits Jesus' countercultural and counterstatus ministry and certainly runs counter to what outsiders would have valued or anything the later *church would have chosen to invent.

28:1. Sabbath ended at sundown on Saturday evening; the women are on their way to the tomb by 6 a.m., as soon as there is enough light for them to see. Jewish mourners as well as pagans were often known to visit tombs within the three days after the burial, to ensure that their relative was dead; given the nature of crucifixion, however, such a precaution would be unnecessary here, and their primary interest is undoubtedly mourning.

28:2-4. Angels, especially visibly fiery ones (many ancient Jewish people believed that angels consisted of fire), generally terrified people (e.g., Judg 6:22-23; 13:19-20; cf. **4 Ezra* 10:25-27; **3 Enoch* 22:4-9). Jewish *apocalyptic literature sometimes portrayed angels or other figures with superhuman radiance. Jewish people normally expected angels to be clothed in white (though this was also true of priests and of some others). Stones closing tombs were usually extremely heavy and disk-shaped, so rolling it back singlehandedly and sitting on it underlines the superhuman character of the angel.

28:5-8. Jerusalem was the religious center of Judaism; Judeans sometimes still looked on Galilee as a place of former non-Jews (4:15). Yet Galilee was where some of Jesus' revelations to his *disciples would take place; all four Gospels report that Jesus was better received there.

28:9-10. Whereas reports of ghosts were not very controversial in antiquity, bodily *resurrection differed and was, in the Roman empire, distinctively Jewish (see Dan 12:2). The witness of women was generally considered unreliable in that culture; *Josephus even claims that the Torah rejects women's testimony in view of the weakness of their gender. Jesus, however, goes against the culture by revealing himself to the women and telling them to bear his message to the other disciples. This detail is definitely not one that ancient Christians would have invented; it did not appeal to their culture.

28:11-15
The Final Subversion

Guards faced serious consequences for falling asleep on the job (indeed, Roman guards could be executed), including jobs guarding the corpses of crucifixion victims (see the first-century Roman writer *Petronius *Satyricon* 112). But the priestly aristocracy had enough influence to protect their own interests. Like Judas (26:15), the guards act partly on mercenary motives; the bribe and the potential penalty they face for allowing Jesus' body to disappear ensures their cooperation. (The officials' promise to protect the guards from *Pilate may involve more bribery; despite Roman policy, Pilate is known to have been susceptible to this form of persuasion.) Matthew would be unlikely to report a charge against the resurrection that had not actually been made (28:15), and his report indicates that the Jerusalem authorities had sought to explain the empty tomb—but had never tried to deny it.

28:16-20
Jesus' Final Orders

Ancient works sometimes contrasted characters: the true testimony of the women (28:1-10), in contrast to the false testimony of the guards (28:11-15), offers the proper model for the testimony of the church (28:16-20). Ancient works sometimes summarized major themes in their conclusions; Jesus' closing words in 28:18-20 connect many dominant themes in Matthew's Gospel, including Jesus' authority, his commandments, his identity and God's interest in even *Gentiles (cf. 1:3-5; 2:1-2; 3:9; 4:15; 8:5, 11, 28; 11:21-22; 12:41-42; 15:22; 24:14; 25:31-32; 27:54). Some have pointed out that Matthew 28:16-20 resembles some *Old Testament "commissioning narratives."

28:16. God had often revealed himself on mountains in biblical tradition, especially in the *narratives about Moses.

28:17. Some who see Jesus' appearance are doubtful, perhaps because it does not fit current expectations of the end time: all the dead were

to be raised together, not the *Messiah first.

28:18. Here Jesus alludes to Daniel 7:13-14 (going beyond Mt 9:6 and climaxing a *kingdom theme in Matthew's Gospel).

28:19-20. "Making *disciples" was the sort of thing *rabbis would do, but Jesus' followers are to make disciples for Jesus, not for themselves. Subordinate participles explain the command, "Make disciples," suggesting that making disciples involves three elements:

(1) Going, presumably to "the nations" who are being discipled. Many Jews outside Palestine sought converts among the "nations" (which can also be translated as "Gentiles" or "pagans"). But only a few converts ever studied under rabbis, so the idea of making Gentiles full disciples—followers of Jesus who would learn from and serve him—goes beyond this Jewish tradition. Isaiah predicted that Israel would be a witness to (or against) the nations in the end time (e.g., 42:6; 43:10; 44:8).

(2) Baptizing them. Because *baptism was an act of conversion (used for Gentiles converting to Judaism), it means initiating people to the faith. Jewish people recognized God as "Father" and his *Spirit as divine (sometimes as an aspect of God), but would find shocking "the Son" named between them.

(3) Teaching them Jesus' commandments recorded in Matthew. Rabbis made disciples by teaching them.

Jewish literature called only God omnipresent; Jesus' claim that he would always be with them (cf. also 1:23; 18:20), coupled with his being named alongside the Father in baptism (Jewish people did not baptize in the names of people), constitutes a proclamation of his deity.

Mark

Introduction

Authorship. Large *narrative works rarely circulated anonymously, especially in the first generation when the recipients generally knew the authors. The titles of the Gospels, which unanimously attribute them to particular authors, circulated in diverse parts of the Roman world from an early period; their wide circulation without contradiction indicates that the tradition is early. Although "Mark" was a common name, early *church tradition attributes this Gospel to John Mark (Acts 15:37; Col 4:10; 1 Pet 5:13), who was said to have derived his information from Peter. Because there is no evidence against this attribution, many scholars support Mark as the most likely candidate for the author. A relative of Barnabas (Col 4:10), John Mark may have had stronger ties with the *Diaspora than with Judea even when living in Jerusalem (cf. Acts 4:36). Similarly, some believe that this Gospel's writer was more familiar with Diaspora Judaism than with details of Galilean geography or Pharisaic customs.

Date, Setting and Purpose. The most common suggestions are that Mark wrote his Gospel to Roman Christians during the time of the great persecution in Rome, about A.D. 64 (for more discussion see 1 Peter), or that he wrote shortly before the conclusion of the Judean-Roman War (A.D. 66–70). The earlier of these dates helps explain the emphasis on suffering and may allow more easily for the most probable dating of Luke (who wrote after Mark), but certainty remains elusive.

Place of Writing. Various proposals for Mark's provenance have been offered: Galilee, Alexandria and, most often, Rome. Mark's audience probably lived outside Palestine and most of them were non-Jewish; Rome is the most likely of these proposals (favored by some early Christian traditions), though it is not certain. Internal evidence confirms that Mark himself comes from the eastern Mediterranean world.

Genre. See the introduction to the Gospels in this commentary.

Why Mark Wrote. Those who heard Mark read in the churches already knew many of the stories about Jesus, whom they worshiped as Lord. Mark connects these stories into a sort of biography of Jesus, perhaps following some of the plot movements familiar from Greek tragedy, except with a happy ending, like tradi-

tional Jewish stories that emphasized the faithfulness of God. Ancient biographies often made particular moral points through the example of their heroes, and Mark is no exception: he wants his fellow Christians to understand that Christ's call involves both power and suffering in their conflict with *Satan's forces.

Thus Mark wrote to a community that needed to be reminded that God heard prayers and would work through their witness and faith; they also needed to be reminded that this might cost them their lives in persecution. Finally, they could be reminded through the failure of the disciples in Mark that if they had not yet achieved the radical lifestyle their Lord's words demanded, he would still work with them patiently to help them get to that level of commitment. Along with external evidence for Rome as the place of writing, such factors may support viewing Mark as addressing the suffering of Roman Christians under Nero starting in A.D. 64. Again, however, this hypothesis, like many reconstructions of Gospels' "target audiences," remains simply a best guess.

Mark's Message. Mark is written in the most basic Koine Greek from the eastern Mediterranean world; I have tried to keep Mark's more basic approach in mind by making this part of the commentary simpler than, say, comments on Luke-Acts or Hebrews. Some themes are especially prominent in Mark. One such theme is the so-called messianic secret (noticed as early as the church fathers): Jesus conceals his messianic identity, insofar as possible, from the public. This secrecy may be due to several factors. First, the Christ, or *Messiah, was the Davidic king and officially took this title only at his enthronement. Thus in Mark Jesus is finally "coronated" on the cross. Ancients typically despised unjustified boasting. Second—and this is probably more important—Jesus' mission was completely different from any of the political views about messiahs circulating at the time; "messiahship" was thus an inadequate category for him until he could define it by the character of his mission. His mission could be understood only retrospectively, in the light of his death and *resurrection (9:9). One might further compare Jesus' attempts to secure privacy when possible with some prominent *Old Testament prophets. Such prophets often worked clandestinely, not seeking their own glory but only to accomplish their mission (e.g., 1 Kings 11:29; 13:8-9; 21:18; 2 Kings 9:1-10); more of their time may have been spent in the humble lifestyle circles of their own *disciples whom they were training (1 Sam 19:20; 2 Kings 4:38; 6:1-3). Perhaps most important was a logistical issue: the larger the crowds grew (e.g., Mk 1:45; 2:2; 3:9-10, 20), the greater the demands on Jesus' limited time, constrictions on his mobility and unwelcome attention of potentially hostile rulers.

A related theme in Mark is the failure of the disciples. In comic works, characters' failings could provide comic relief; in tragic works, characters' obtuseness could underline the tragedy of the outcome. Likely more relevant, ancient writings would sometimes play down the sensibility of secondary characters to make them foils for

the main hero. In Mark, the disciples are obtuse with regard to Jesus' and their own mission, both the charismatic part (miracle working—4:40; 9:18-19, 28-29) and, more significantly, the suffering part. This theme is so pervasive that the Gospel apparently ends on this note (16:7-8). The opening proclamation of the kingdom climaxes in Jesus' crucifixion as king of the Jews, Mark concisely teasing his audience with the resurrection that lay beyond it. This pattern fits the hiddenness of Jesus' Messiahship. Mark knows that the kingdom will come in its fullness but recognizes that in the present it is visible only to some (4:11-12, 30-32). Jesus focuses on the sick, the poor, the morally and socially marginalized, and others, rather than cultivating the favor of the powerful. Yet as Paul emphasizes, God's power is revealed in the epitome of human weakness, in the cross (1 Cor 1:18-25).

Commentaries. Useful commentaries for cultural information include William L. Lane, *The Gospel According to Mark,* NICNT (Grand Rapids: Eerdmans, 1974); Hugh Anderson, *The Gospel of Mark,* NCB (1976; repr., Grand Rapids: Eerdmans, 1981); Adela Yarbro Collins, *Mark: A Commentary,* Hermeneia (Minneapolis: Fortress, 2007); R. T. France, *The Gospel of Mark* (NIGTC; Grand Rapids: Eerdmans, 2002). Among special studies, see particularly Martin Hengel, *Studies in the Gospel of Mark,* trans. John Bowden (Philadelphia: Fortress, 1985); Wendy J. Cotter, *The Christ of the Miracle Stories: Portrait Through Encounter* (Grand Rapids: Baker Academic, 2010); for one literary treatment in historical context, see Rob Starner, *Kingdom of Power, Power of Kingdom: The Opposing World Views of Mark and Chariton* (Eugene, OR: Pickwick, 2011).

1:1-15
Introduction of the One Who Brings the Kingdom

Ancient writers often mentioned the main themes of their works in their introductions (in Mark, this runs from 1:1 to perhaps 1:15, give or take a few verses). The opening of the Gospel of Mark introduces Mark's presentation of Jesus as the proclaimer and bringer of God's *kingdom. In this passage Jesus, endowed with the *Spirit, enters into conflict with *Satan and defeats him; in the rest of the Gospel Jesus drives out *demons and heals the sick, is opposed by Satan's religious and political agents, and ultimately overcomes Satan's opposition by the *resurrection. This passage promises that Jesus endows his followers with this same Spirit for the same conflict they must face in proclaiming God's kingdom.

1:1. The Greek term translated "*gospel" refers to the good news a herald would bring, and the Greek translation of Isaiah used the related verb to refer to the good news that God was restoring his people and bringing the reign, or kingdom, of God (Is 52:7; cf. 40:9; 41:27; 61:1). (Because Jewish readers often named books for their first word or words, some scholars suggest that "the good news of Jesus Christ" is the title of Mark's Gospel; but these words are also simply a natural way to start off a book like this one.)

1:2-3. Jewish teachers often combined several texts or parts of texts, especially if they had a key word or words in common (here, "prepare the way"). Because they were so learned in the Scriptures, they did not have to say which texts they were quoting and often assumed the context without quoting it. Thus Mark cites both Isaiah (40:3) and Malachi (3:1) here, although he names only Isaiah. Isaiah refers to preparing the way for God, who is coming to restore his people; Malachi refers to God coming in judgment to set matters straight among his people. Mark applies these texts about God to Jesus (cf. also 1:7).

1:4-5. Like many other ancient peoples, Jewish people practiced ceremonial washings. Their only once-for-all ceremonial washing, however, was the immersion that non-Jews had to go through when they converted to Judaism. Non-Jews who were converting to Judaism would immerse themselves in water, probably under the supervision of a religious expert. John's baptizing activity fits this model.

Jewish people also practiced "*repentance" when they did something wrong, asking God's forgiveness and determining to change. (The *Old Testament prophets often used this Hebrew idea of "turning" from sin; it involves more than just a "change of mind," which is the literal sense of the Greek term used here.) But the ultimate example of repenting, or turning from a wrong way of living to a right way of living, was when a non-Jew decided to obey the teachings of Israel's God.

To tell Jewish people that they had to be baptized or repent the same way non-Jews did would have been offensive, because it challenged the prevalent Jewish belief about salvation. Most Jewish people thought that if they were born into a Jewish family and did not reject God's *law, they would be saved; John told them instead that they had to come to God the same way that non-Jews did. A key point of John's *baptism is that everyone has to come to God on the same terms.

The "wilderness" stretched about seventy-five miles north and south, but only about ten miles east and west, between the hill country of Judea and the Jordan Valley. Only one familiar with Palestine's topography would speak of people going into the "wilderness" to be baptized in the Jordan. The Jordan River was the most natural venue for John to have the people immerse themselves, but this location may have also evoked Israel's history of salvation (Josh 3–4). John's coming in the "wilderness" could evoke Israel's history too, especially because Isaiah 40:3 predicted the herald of a new exodus there, and many Jewish people expected the *Messiah to come as a new Moses there. Various Jewish groups withdrew into the wilderness to wait for a new exodus or to evade interference from authorities.

1:6. Some other poor people in John's day dressed the way he did and ate locusts and honey (the *Dead Sea Scrolls even give directions concerning the eating of locusts). But what is most important here is that the Old Testament emphasizes that Elijah dressed this way and, like John, did not depend on society for his sustenance (cf. 1 Kings 17:4, 9). Elijah

was expected to return before the end (Mal 3:1; 4:5-6; Sirach 48:10); cf. comment on Mark 1:2-3.

Many Jewish people believed that there had been no true prophets since Malachi and that prophets would not be restored till near the time of the end. But Mark wants us to understand that John is definitely a prophet, and indeed, the predictor forerunner for God (here, Jesus).

1:7. *Disciples often served their teachers in the same ways that slaves would serve their masters, except for the most menial chores like taking off their masters' sandals. Even though earlier prophets were called "servants" of the Lord John feels unworthy even to be the coming one's slave.

1:8. Some passages in the Old Testament speak of the Spirit being poured out like water; only God, however, could pour out God's Spirit. These passages refer especially to the time of God's kingdom, when he would cleanse his people and endow them with power to speak for him (Is 44:3; Ezek 36:25-27; 39:29; Joel 2:28-29; cf. Zech 12:10). Some Jewish traditions in Jesus' day still stressed that the Spirit would cleanse and provide prophetic anointing in the end time.

1:9-10. The tearing of the heavens may also indicate that the kingdom is near (Is 64:1; 65:17). Opened heavens could also accompany heavenly revelations (see Ezek 1:1). Although ancient writers used the dove symbolically in many diverse ways (most often for Israel; rarely, the Spirit), it might here allude back to God's promise of a new world (Gen 8:10-12).

1:11. Jewish teachers who believed that God no longer spoke through prophets believed that he now spoke to them by means of a voice from heaven (*bath qol*) although this was not considered as important as *prophecy. Here Mark shows that both a voice from heaven *and* John's prophecy testify to Jesus.

In Jewish stories the voice from heaven occasionally quoted Scripture, and most scholars think that the voice here refers to two or three Scriptures: Psalm 2:7, applied to the royal Messiah, the *Son of God; Isaiah 42:1, about the suffering servant; and Genesis 22:2, about Abraham sacrificing his beloved son. The wording of Mark's text is closest to Psalm 2:7 and Genesis 22:2.

1:12-13. Sources suggest that many believed that demons were especially attracted to places like pagan temples, bathhouses, graveyards and deserts. Readers would thus sense the suspense as Jesus battled with Satan on Satan's own turf. Safety among beasts showed God's protection (Ezek 34:25; Dan 6:22).

1:14-15. The summary of Jesus' message may also be the summary of Mark's Gospel, or good news (1:1): people should turn their lives over to God (on repentance, see comment on 1:4-5) if they believe the good news that God is getting ready to fulfill his promises to his people (see Is 52:6; comment on Mk 1:1).

The Jewish people recognized that God ruled the universe in one sense now, but they prayed daily for the day when his kingdom, or rule, would be established over all peoples of the earth. Because the Gospels affirm that Jesus must come twice, they recognize that the kingdom comes in two stages: God's future rule is already established when Jesus dies as king (15:26), but over all the world when Jesus returns. John, however, was not yet in a position to make this distinction.

1:16-20
Downward Mobility and Jesus' Call

Ancient writers often liked to illustrate their teachings with examples, and Mark is no exception. After telling how Jesus summoned people to turn their lives over to God, he reports a particular example illustrating how some followers of Jesus did so. The "Sea of Galilee" was a lake that only people from the region called a sea; Mark's language here reflects early memories about Jesus.

Only a few people in Jewish Palestine were rich; most were relatively poor. Scholars often estimate that seventy to ninety percent of the empire consisted of rural peasants. Some people, however, like many fishermen, tended to fall between the rich and the poor (distinctions were less clearly drawn in Galilee than in much of the empire); Galilean fishermen were not peasants. James and John were clearly not poor—they had "hired workers" (v. 20), as only somewhat well-off people did (although some translations could suggest that they were rented slaves, the term probably simply means free hired workers). Peter and Andrew were probably in business with James and John (Lk 5:7-10); we know of other fishing

partnerships at that time. This text suggests that none of these *disciples left their business behind because it was going badly; they left behind relatively well-paying jobs.

Even the departure of hired servants could be a hardship for a family business; departure of family members would be more difficult. Many Jewish teachers in Jesus' day felt that the greatest commandment was to honor one's parents. To abruptly leave behind one's family and the family business was a great sacrifice that went against most of the culture's values.

Disciples usually sought out their own teachers. Only the most radical teachers called their own disciples (e.g., 1 Kings 19:19). Because discipleship sometimes involved temporarily laying aside one's livelihood and being apart from one's wife and children for a time, the decision to choose a teacher would have normally been made only after much deliberation, especially when the teacher traveled from place to place instead of staying in one town to teach. Galilee was not so large as to require long journeys, however; they would be able to return to stay in their home towns periodically (see e.g., 2:1). Much instruction was also seasonal (especially for those needing to be home for planting and harvest), but it is not clear that this would have been the case with Jesus' disciples.

1:21-28
Authority over Demons

For Jewish hearers the following succession of miracle stories might evoke the *Old Testament narratives about Elijah and Elisha in 1 Kings 17–19 and 2 Kings 1–8. The account of the fishermen demonstrates the claims Jesus' authority makes on his followers' lives, but the verses that follow it demonstrate his authority over evil spirits (cf. 1:12-13). The only recorded possible exorcist in the Old Testament was David (1 Sam 16:23), but *Josephus and the *Dead Sea Scrolls suggest that some other Jewish people in this era practiced exorcism. Although wandering *demons appear frequently in Jewish literature, the only demons that appear in the Gospels (except Satan—Mk 1:13) are in people they possess (or, as a second choice, in pigs—5:12). The place that Jesus encounters his first demon may shock Mark's readers: it is in a religious setting.

1:21. Most *synagogues were community centers and places of prayer and study. When visiting teachers were present, local synagogue leaders (priests, *scribes, large donors, or other respected members of the community) would invite them to lecture, especially on the sabbath. Archaeologists have found the site of Capernaum's synagogue, which was built from basalt blocks. Although later synagogues were more ornate, most people in this first-century Galilean synagogue probably sat on mats on the floor.

1:22. Synagogue services were conducted by priests or by what we would call "lay leaders," but those most skilled in the Scriptures undoubtedly contributed their share when the Old Testament was to be expounded. Many local teachers were village scribes who also wrote down and interpreted legal documents for their village; some of them taught children the Bible. Most teachers would try to expound the *law (normally from their Scripture reading) by explaining the proper way to translate and apply it or by appealing to their traditions. More advanced teachers would also appeal to earlier traditions; this was especially true for those who belonged to the Pharisaic movement. Jesus' teaching went beyond this kind of exposition.

1:23-24. Demons (also occasionally called "unclean spirits," e.g., **Jubilees* 10:1) were often associated with *magic, and magicians tried to subdue other spiritual forces by invoking their names. If the demon here is trying to subdue Jesus in this way ("I know who you are" was used to subdue spiritual powers in magical texts), as some scholars have suggested, this ploy does not work. Ancients often recognized that demons had access to supernatural knowledge; it is not surprising that these demons perceive Jesus' true identity, which the people there still do not recognize. "Holy One" was normally a title of God, but "Holy One of God" here probably means something like "God's right-hand agent"; in Jewish literature, demons recognized their inability to harm those who walked close to God.

1:25-27. Jesus' action illustrates his authority (1:22, 27). Demons were apparently rebuked and subdued with orders like "Be

silent" (the later **Testament of Solomon*); rebukes in the *New Testament and other ancient literature never involved a *formal* statement like "I rebuke you." Exiting demons usually caused a commotion to make clear that they were leaving, regardless of the person who was casting them out.

Although exorcists—people who tried to chase demons out of other people—also occasionally used phrases like "Come out of so-and-so!" they used the phrases as parts of elaborate magical incantations. They had two main methods of expelling demons: (1) revolting or scaring the demon out (e.g., by putting a smelly root up the possessed person's nose in the hope that the demon would not be able to stand it); (2) using magical formulas or invoking the name of a higher spirit to get rid of the lower one. The people are thus amazed that Jesus can be effective by simply ordering the demons to leave. Jewish tradition praised teachers who could draw special insights from the law and sometimes attributed miracle-working powers to popular teachers; but Jesus seems to earn a category by himself ("new teaching").

1:28. Galilee's villages were close together, and close kin and trade connections among them would allow word to spread rapidly.

1:29-34
The Healer's Popularity

1:29-31. A newly married couple often lived with the husband's family (perhaps in a shack on the flat roof) until they made enough money to move out on their own. Many parents died while their children were young adults, so it is possible that Simon and Andrew took over their parents' home. In any case, Simon's father-in-law had probably passed away, and Simon and his wife had taken her widowed mother into their home. Caring for one's extended family was more common in Mediterranean antiquity then than it is in the West today.

1:32-34. The sabbath ended Saturday at sundown. Mark mentions that it was "after sunset" to let us know that the sabbath is over, because it would have violated the sabbath for anyone to have carried someone on the sabbath. The whole town gathers "at the door" because most homes around Capernaum had only one room, and even a larger home could not have accommodated many people. The doorway may have opened to a courtyard shared with other homes, as often in Galilean towns, but this door may be to an outside street. The few teachers reputed to work miracles rapidly drew large crowds.

1:35-39
Prayer Alone

1:35-37. This crowdedness also leads to another problem: it would be nearly impossible to find a place to be alone in such ancient towns, with their narrow streets and sometimes ten or twenty people living in the common one-room houses; most town blocks consisted of four homes all facing a common courtyard. Galilee was also heavily populated, and villages were commonly close together. But one could find a place alone in the hills outside one's village if one arose early enough. People got up for work as soon as the sun rose, so Jesus has to get up well before dawn to go out and find a solitary place for prayer.

1:38-39. The word used for the other "towns" suggests large agricultural towns still governed according to regular village structures; these were apparently places that had not yet heard of Jesus. He probably could have drawn the largest crowds in the synagogues on market days and sabbaths, and in late afternoons or early evenings when laborers had finished their day's work.

1:40-45
Cleansing a Leper

Leprosy was an unattractive skin disease (or diseases) for which the Bible had prescribed quarantine from the rest of society (Lev 13:45-46). Some later Jewish teachers blamed the disease on the leper's sin (often the sin of slander). Lepers were thus outcasts from the rest of society, the kind of people most healthy people preferred to ignore. People ordinarily avoided touching lepers, lest they contract impurity.

The leper approaches Jesus with humility, which was the proper *Old Testament way to approach God for prayer, although the fact that he even approaches Jesus also indicates a measure of holy boldness. Acknowledging that God had the right to refuse the prayer and that

one depended on his mercy was not in any way a lack of faith (Gen 18:27, 30-32; 2 Sam 10:12; Dan 3:18).

The *law had prescribed particular sacrifices if someone's leprosy were cured (Lev 14:1-32). By complying with these regulations, Jesus does nothing to violate the law or to offend the priests. (Later Jewish laws also insisted that the leper be checked by a local priest before going to the temple, but it is not clear whether these prescriptions were in effect in Jesus' day.)

Teachers thought to perform miracles would normally have large followings, because many people were sick; the number of people suffering from various afflictions is attested by how many people flocked to hot springs in Galilee that were thought to relieve ailments. Jesus, who performs miracles without the common pagan use of magical incantations, acquires such a large following that for a period of time he cannot accommodate them inside a town (v. 45).

2:1-12
Healed and Forgiven

Just as Jesus violates his culture's religious sensibilities by touching a leper (1:41) and claims more authority than a normal *rabbi would dare accept (cf. 1:17, 27), and just as Mark's *narrative challenges cultural religion by beginning with a demoniac in a house of study and prayer (1:21-28), Jesus' role in this passage challenges the theological categories of his culture's religious establishment.

2:1-2. The capacity of the average Capernaum home may have allowed only about fifty persons standing close together (the longest span in excavated homes is eighteen feet). We thus should not think of literally the whole town inside or just outside the door.

2:3-4. Poorer people often had only mats for "beds"; thus the paralytics' friends may have carried him on the bed on which he lay all the time. Some homes in Capernaum were private dwellings, but others were built around courtyards shared with neighbors. Houses often had an outside staircase, so they could reach the roof unimpeded. The roof of single-story homes was sturdy enough for walking on but was normally made of branches and rushes laid over the roof's beams and covered with dried mud; thus one could dig through it, though it would make a mess and presumably leave the diggers liable to cover subsequent repairs.

2:5-7. Undeterred determination to get to Jesus counts here as "faith," as similar determination counted in the *Old Testament (e.g., 2 Kings 4:27-28). In a positive way, teachers called *disciples, and older men could call younger men, "son" or "child." Sins were to be *atoned for by offerings in the temple. Judaism taught that only God could forgive sins, but most Jews allowed that some of God's representatives might speak on God's behalf. The passive form, "are forgiven," could be interpreted in this way (Jewish teachers often used the passive form to describe God's activity); but Jesus was not a priest, no one had offered sacrifice, and the *scribes had heard no basis for the pronouncement of forgiveness, not even clear indication of *repentance.

The Old Testament penalty for blaspheming God's name—reproaching rather than honoring it—was death (Lev 24:10-23). According to later rabbinic sources (known for restricting capital cases as much as possible), blasphemy involved pronouncing the divine name or inviting people to follow other gods. But the term was used much more broadly in popular parlance in this period, and these legal scholars may view Jesus as claiming a divine role and so dishonoring the divine name.

2:8. Because supernatural knowledge was especially attributed to prophets (e.g., 2 Kings 6:12), Jesus' hearers would probably view him here as a prophet; "speaking in one's heart" may be idiomatic (Deut 15:9; 18:21; 30:14). Most Jewish teachers believed that "prophets" in the Old Testament sense had ceased, but most of the people were happy to entertain new prophetic figures, many of whom they saw as harbingers of the end.

2:9-12. Some Jewish teachers accepted miracles as verification that a teacher was truly God's representative; others did not regard miracles as sufficient proof if they disagreed with the teacher's interpretation of Scripture.

Jewish teachers knew that only God could ultimately forgive (on the Day of Atonement in response to sacrifice); but they also recognized that healing ultimately came from God. Both were from God but could be announced

through God's agents acting according to his will. *Josephus shows us that some false prophets in Jesus' era promised to work miracles but actually failed to work them; some of Jesus' critics may have placed him in this category. His act in front of these witnesses, however, should have challenged them to rethink their case.

2:13-17
A Tax Gatherer Follows

As in 2:1-12, Jesus' behavior here runs counter to standards of piety among his Jewish contemporaries.

2:13. Most prominent local teachers taught regular groups of *disciples and also performed other local services in their town. Translocal teachers who had large followings, however, could threaten the establishment as potential revolutionaries.

2:14. Because Levi was situated at an office in Capernaum, many suspect that he was a customs agent, charging import duties on wares brought through this town on important nearby trade routes. This is possible, but others' disdain (2:16) might point toward him being a more general tax farmer working for Herod Antipas. In any case, even more than the fishermen, he has a secure and prosperous job, which he abandons to follow Jesus' call.

Some taxes went directly to the Roman government, but tolls and customs taxes (usually levied at two to three percent, but multiplied for traders who passed through many territories) supported the cities where they were taken. Even if Levi is a locally valuable customs agent, however, this *narrative shows that many still regarded his activity as unwholesome; the municipal aristocracy supported Roman interests against those of the Jewish poor.

2:15. Many religious people despised *tax gatherers as collaborators with the Romans or agents of oppressive aristocracies who collaborated with Rome. Some commentators have argued that "sinners" may refer specifically to those who did not eat food in ritual purity, but the term probably refers to anyone who lived sinfully rather than religiously, as if they did not care what the religious community thought of them.

2:16. Table fellowship normally established a bond of friendship. Upright people would not want to appear to approve of those who may not have tithed on the food, much less with outright and publicly known sinners. To eat with such would seem to overlook their actions and embrace shame in the eyes of one's peers. Teachers sometimes contrasted tax collectors with *Pharisees, models of piety. Here they presumably expect that Jesus, being a wise teacher, ought to share their religious convictions.

2:17. Jesus' reply plays on a common image of the day (comparing physicians and teachers) to make his point.

2:18-22
The Right Time to Fast

Again (see 2:13-17) Jesus does not appear religious enough for the traditionalists; but he has a new kind of religious lifestyle in mind.

2:18. The *law required fasting only on the Day of Atonement, but Jewish tradition had added many other fasts. Pharisees were said to often fast twice a week, without water (at least in the dry season). Fasting was an important practice to join with prayer or penitence, so it would have been unusual for *disciples (prospective rabbis) to have avoided it altogether. A teacher was usually regarded as responsible for the behavior of his disciples.

2:19-20. Wedding feasts ideally involved seven days of festivity; one was not permitted to fast or engage in other acts of mourning or difficult labor during a wedding feast. Here Jesus makes an analogy about the similar inappropriateness of fasting in his own time. If Jesus compares himself with the bridegroom (one should not press comparisons into every detail in *parables), it may be significant that God is the bridegroom in some *Old Testament images (e.g., Hos 2:14-20).

2:21-22. Again the issue is the inappropriateness of fasting in the present circumstance. Jesus uses two ordinary facts to make his point. Older clothes had already shrunk somewhat from washing. Wine could be kept in either jars or wineskins; the latter would stretch. Old wineskins had already been stretched to capacity by fermenting wine within them; if they were then filled with unfermented wine, it would also expand, and the old wineskins, already stretched to the limit, would break.

2:23-27
The Right Use of the Sabbath

Jesus' conflicts with the religious establishment in the preceding passages come to a head over details of sabbath observance (2:23-3:6). Their religious priorities differ; whereas the religious establishment may think that Jesus questions the Bible's authority, he demands instead a different way to understand it and so apply it.

2:23-24. Many argue that few *Pharisees lived in Galilee and question whether they would be in a grainfield on the sabbath; on this view, it is possible that Mark applies the more specific term *Pharisees* to local religious teachers responding to reports about what Jesus' *disciples had done. Others recognize that some Pharisees may have lived in Galilee, and suggest that some Pharisees had been investigating or traveling with Jesus, or that some had come even from Judea to investigate him. Others could also allow that this narrative occurred during one of the festival visits to Judea.

In any case, they would not be more than a "sabbath day's journey" from wherever they were staying—that is, two thousand cubits (about 960 yards or 1120 meters; i.e., over half a mile or over a kilometer). Thus the disciples, who encounter Pharisees, are surely within walking distance of food in a village, if it had been properly prepared the preceding day. Teachers were held responsible for the behavior of their disciples, and many rabbis considered it proper to defend the honor of their disciples.

2:25. Whether or not his opponents agree with Jesus' argument, he has cited biblical precedent for hunger overriding a standard biblical rule; therefore they could not have him disciplined by a local court for defying Torah. Because Jesus is defending his disciples, he mentions "those who were with" David. Even if David was actually alone (1 Sam 21:1), the point is that the priest accepted and acted on David's word that there were others (21:2). Hunger was allowed to take priority over ritual law.

2:26. Abiathar was not yet *high priest when David was given the bread, but Mark employs the term in the standard manner of his day: "high priest" was applied to any member of the high priestly family with administrative power, which would have included Abiathar when David came to Ahimelech, Abiathar's father.

2:27-28. Although Jesus claims the right to interpret sabbath rules as the authoritative *Son of Man (Dan 7:13-14), his opponents probably understand him to mean that because the sabbath was made for people (other Jewish teachers also mentioned this point), human beings had authority to do what they needed on the sabbath. ("Son of Man" was a standard *Aramaic term for "human being," and his hearers may have assumed he meant this, whereas his authority suggests that he claimed to be the Son of Man of Daniel 7:13-14.)

3:1-6
Healing or Killing on the Sabbath

3:1. The muscles and nerves of a "dried" or "withered" hand were inactive; thus the hand, smaller than usual, did not function (see 1 Kings 13:4; cf. *Testament of Simeon* 2:12). No cure was known for this paralysis.

3:2. Although some *Pharisees allowed for medical treatment, especially if the medicine was prepared before the sabbath, some others believed that cures were permitted on the sabbath only to save a life. (Even the strictest observers of the sabbath allowed compromising the sabbath to save life or to fight in a defensive war.) Their rule against cures applied to physicians, however, not to healings performed by God, and Pharisees disputed among themselves whether prayer for the sick was permitted on the sabbath. Fundamental human animosity more than technical Pharisaic principles are at work here.

3:3-5. Jesus might mean that "killing" is permitted on the sabbath, as it was during the Maccabean warfare (second century B.C.); more likely he draws a legal analogy from the principle that one could violate the sabbath to save life but not to kill except in self-defense; by extension, one could do good but not harm (cf. 2 Kings 5:7).

3:6. Unintentional violations of the sabbath or issues of disagreement about what constituted work (matters that were debatable in Jewish courts) were normally treated lightly; capital punishment (Ex 31:14; 35:2) was thought appropriate only for those who willfully rejected the sabbath. Punishments ac-

tually inflicted rarely exceeded fines or public beatings in the *synagogues. The majority school of Pharisees in this period, the *Shammaites, prohibited prayer for the sick on the sabbath, but did not seek to kill the minority school of Pharisees, *Hillelites, for allowing such prayer (though conflicts occasionally did escalate). Again, like many human beings, Jesus' opponents go far beyond their own traditions here. On the Herodians, see comment on 12:13.

3:7-12
Increasing Popularity

3:7-8. Idumea was south of Judea; east of the Jordan River was Perea, and Tyre and Sidon were to the northwest. Like Galilee, Idumea and Perea were religiously Jewish territories once dominated by *Gentiles; Tyre and Sidon were Gentile cities, although it seems most likely here that Jewish residents of those cities are intended (cf. 7:27).

3:9-12. Finally Jesus has to find another way to deal with the growing crowds (3:9). Any prophet supposed to perform signs drew large crowds in Jewish Palestine, and Jesus seems to have drawn larger crowds than most others. Other "signs prophets" sometimes tried miracles like making the walls of Jerusalem fall down or the Jordan part (they failed), but no prophets since Elijah and Elisha had been reported as doing as many miracles as Jesus.

3:13-19
Commissioning Twelve Representatives

3:13. Mountains were often considered places for communion with God (cf., e.g., the experiences of Moses and Elijah; Ex 3:1-2; 1 Kings 19:8, 11-18).

3:14-15. Israel consisted of twelve tribes, and if groups chose twelve leaders (as apparently those who wrote the *Dead Sea Scrolls did), they did so because they believed that their own group was the true, obedient remnant of Israel, perhaps a source of renewal for all Israel. "*Apostles" means commissioned representatives, the point here being that Jesus' authority to proclaim the *kingdom and expel *demons continues through his agents who act on his behalf.

3:16-19. Luke (and possibly "Q," a source he shares with Matthew) lists "Judas son of James" rather than Matthew's and Mark's "Thaddeus." Ancient business documents show that people were commonly known by more than one name. (The differences in the lists do show that the lists were not copied from one another or standardized, and thus that the tradition of Jesus choosing twelve is older than the particular lists themselves.) Nicknames were common, appearing even on tomb inscriptions.

As one of the most popular male names in this era, "Simon" needed a distinguishing epithet. (Although a Greek name, Simon was popular among Jews as a close equivalent to Simeon.) "Cananaean" is *Aramaic for "zealot" (Lk 6:15); thus some translations simply read "Simon the Zealot" here. In this period, this term could just mean "zealous one," but it might suggest that he had been involved in revolutionary activity (some revolutionaries soon after this time came to be known as "*Zealots"). "Boanerges" is apparently a Greek rendering of the Aramaic for "sons of thunder" (*rgs* for Aramaic *r'm*). "Iscariot" may mean "man from Kerioth," but this is unclear; yet most other proposals (e.g., a Greek transliteration of an Aramaic corruption of the Latin *sicarius,* "assassin," but the title arose later; see comment on Acts 21:38) appear even weaker.

3:20-30
Jesus Raids Satan's House

3:20-22. Exorcists often invoked a higher spirit to get rid of a lower one, so Jesus' opponents accuse him of gaining his power for exorcism from sorcery—relying on *Satan himself. Insanity (3:21) was sometimes associated with *demon possession (3:22), though his family itself need not have made this connection. Because false teachers were sometimes thought to be inspired by demons and the official penalty for misleading God's people this way was death (Deut 13:5; 18:20), Jesus' family (probably the meaning here; see 3:31) may have felt they had reason to want to reach him before the legal experts did. (The legal experts could not enforce the death penalty, because Palestine was under Roman domination; in some places, mental incompetence could even shield one from prosecution. But the public charge alone would humiliate the family.) Teachers offended

by reports of the events of 2:1–3:6 may now be taking the offensive.

3:23-27. Magical texts sometimes speak of "binding" demons by incantations (to manipulate them), but this is not the idea here (nor does Jesus ever say, "I bind you" to a demon). Rather, this is a *parable, and Jesus has conquered the strong man by resisting temptation (1:13) and/or expelling demons (1:25-26). (If Jesus alludes to Is 49:24-25, in that passage *God* freed his people from captivity to the strong man.)

3:28-30. "Blaspheming the Spirit" here means opposing Jesus' *messiahship so firmly that one resorts to accusations of sorcery to get around the *Spirit's signs confirming his identity. Different teachers debated whether some sins were eternally unforgivable; Jesus probably means that by rejecting even the Spirit's testimony to Jesus' identity and mission, expressed through exorcisms, Jesus' accusers show themselves dangerously close to being incapable of *repentance.

3:31-34
Jesus' Real Family

Thinking of one's coreligionists as brothers and sisters was common; respecting older persons as mothers or fathers was also widespread. Some even felt that teacher-*disciple relations took precedence over family ties, but never to the extent that appears here. (In later rabbinic teaching, when a pagan converted to Judaism, he or she valued Judaism above previous family obligations; but Jewish people were not supposed to neglect genetic kin. Still, Jesus was not the only Jewish teacher to employ *hyperbole, or rhetorical exaggeration. He is not rejecting his earthly family altogether but stating his priorities. This may be the case especially if, as some suggest, they want to declare him mentally incompetent to rescue him from the dangers he is sure to face from religious authorities if he continues on his present path; cf. 3:21.)

4:1-20
The Parable of the Sower and Four Soils

4:1-2. The acoustic setting from the boat would have been ideal for Jesus' voice to carry to the crowds. Some places in Palestine have natural acoustics. One cave near Capernaum allowed as many as seven thousand people to hear a person speaking in the center of the cove.

Rabbis commonly taught in *parables; although the subjects of many parables centered on royal courts, teachers explaining points to common folk probably often used more down-to-earth parables like the harvest stories Jesus uses here.

4:3-7. When seed was sown before the ground was plowed up (as it often was), it commonly befell one of the fates reported here. The "road" (NASB) is probably the footpath through the field (cf. NRSV: "path").

4:8. Thirtyfold, sixtyfold and a hundredfold are tremendously good harvests from Galilean soil. The fertile Jordan Valley normally yielded between ten- and (less often) a hundredfold, so a hundredfold need not be a miraculous harvest (though it is an astonishing one; Gen 26:12); but for more of Palestine, the average yield was seven and a half to tenfold (meaning that seven and a half to ten seeds were harvested for every seed sown), and all the figures Jesus reports here are very good yields. The yield is worth the sown seed that was wasted (cf. Eccles 11:1-6).

4:9. "Ears to hear" reflects the motif in the *Old Testament prophets that many had ears but were deaf to God's voice (e.g., Is 6:10; 43:8; 44:18; Ezek 12:2).

4:10-11. Jewish teachers typically used parables to illustrate and explain points, not to conceal them. But if one tells stories without stating the point they were meant to illustrate, as Jesus does here, only those who listen most astutely (4:9) and start with insiders' knowledge could possibly figure out one's point. They would function instead as sages' riddles. The members of the *Qumran community believed that God gave secrets to the prophets that they encoded in the Bible, and that God revealed the interpretation of those biblical texts to their own teacher, who shared it only with them. Greek teachers like *Plato and sometimes Jewish teachers would leave certain points obscure to keep them from outsiders; only those who were serious enough to persevere would understand. God revealed mysteries to Daniel (Dan 2:18-19, 27-30, 47), including about God's *kingdom (2:44).

4:12. The point in the context of Isaiah 6:9-10, which Jesus quotes here, may be that God's people had hardened their hearts so that they could not hear him; God thus chose to harden them further (what some have called "penal blindness") by sending them his message anyway. They thus held some moral responsibility for their inability to hear. For ears without truly hearing, see comment on 4:9.

4:13-14. This most basic message is the foundation for the rest: Jesus' message must be embraced with endurance and without distraction from the world to produce its intended effect. Others had also compared words to seeds. Agricultural images predominate in Jesus' parables more than in the later *rabbis, presumably because Jesus' largest audience probably consisted of Galilean farmers.

4:15. Judaism recognized *Satan's role as the ultimate accuser and tempter; Jesus thus shows his *disciples the seriousness of forgetting his word. Other rabbis also taught that forgetting a teaching of Scripture was a serious offense, but they would have resented a teacher who claimed unique authority for his own message.

4:16-17. Judaism valued its heroes of the past who had refused to compromise God's word, even in the face of death. Jesus' description of apostasy when persecuted for the message of the kingdom thus might evoke the disciples' discomfort and self-examination.

4:18-19. Jewish tradition valued seeking wisdom above earthly treasures (e.g., Prov 2:3-4; 3:13-14; 8:10, 19; 16:16; 20:15).

4:20. Well-trained disciples of rabbis were supposed to multiply disciples when they became teachers in their own right; part of the goal was to increase obedience to the *law. Concerning these yields, see comment on 4:8.

4:21-25
Accountability for the Word

Had another rabbi uttered the words of 4:21-25 in this context (contrast the setting in Mt 5:15), it would normally mean bringing forth treasures (special insights) concealed in Scripture. Thus Jesus claims to reveal God's message; he calls his disciples to understand and build on his teaching.

4:21-23. Jesus is a master of the graphic illustrations in which Jewish teachers sought to excel: invisible light is pointless (cf. Sirach 41:14: concealed wisdom is as useless as invisible treasure), and God wants the light of his word to be received. The lamps were small clay lamps that had to be set on a stand to shed much light in a room; an external wick led into the oil they contained. A bushel basket placed over the lamp would conceal and probably extinguish it.

4:24-25. Some later rabbis claimed that those who heeded some of the *law would learn more of it. The conventional wisdom was that each person is accountable for what he or she does with what he or she had originally been given; Jesus applies this principle to his own teaching. Thus if the crowds did not obey what light they had received, they would never receive more. The language of "measuring" is the language of weighing food and other commodities at the market; Jewish texts sometimes use it for God's measuring out just judgments in the final day.

4:26-32
A Microcosm of the Future Kingdom

It was commonly realized that God would someday establish his *kingdom, or rule, unchallenged over all the earth. Jesus and his small band of close followers may have seemed too obscure to contain the future glory of the kingdom, but the seed of the word would continue to spread from them until the final coming of the kingdom. Jesus' teaching challenges prevailing views of how the kingdom would come.

4:26-29. Every farmer would have agreed that God's providence, not the farmer's power, made the grain grow. (Thus pagan and Jewish farmers alike sought divine help for their crops; pagan farmers relied heavily on sacrifices. Some see an allusion to Joel 3:13, but emphasizing hope rather than Joel's final battle; more likely, harvesting with sickles was simply a familiar image.)

4:30-32. Scholars still dispute what plant is meant by the "mustard seed." Nevertheless, by no conjecture is it the smallest of all seeds that Jesus' listeners could have known (the orchid seed is smaller). The point is that it was proverbially small and yet yielded a large shrub. Around the Sea of Galilee, the plant that many

scholars currently think Jesus meant can reach a height of ten feet and has sometimes reached fifteen feet, although its usual height is about four feet. Because it would grow anew in spring each year, birds could not nest in it when they built nests in early spring; but small birds could light on it, all that is necessary to fulfill the language here (language borrowed as an allusion to a larger tree in Dan 4:12, which refers to a different kingdom destined to be replaced by God's). The *hyperbole Jesus applies to the best image of growth from tiny to large that he had available does not change the point, however; the kingdom might begin in obscurity, but it would culminate in glory.

4:33-34
Secret Teachings

Sometimes Jewish (and other ancient) teachers had some special esoteric teachings that they could confide only in their closest pupils, because they were not for public knowledge. People could not be ready to grasp the secret of the nature of Jesus' *kingdom until the secret about the nature of his *messiahship had been revealed (see the introduction to Mark in this commentary). Parables were normally sermon illustrations, but illustrations without the sermon would normally remain obscure.

4:35-41
Lord of Creation

Rousing a sleeping prophet to secure his prayers may have reminded the *disciples or first hearers of Jonah 1:5-6, but Jesus appears quite different from Jonah here. Some ancient pagan stories told of powerful individuals able to subdue even the forces of nature, but these were nearly always gods or, rarely, heroes of the quite distant and unverifiable past. Many Jewish people believed that angels controlled the forces of nature, such as winds and sea; yet such angels did have one to whom they must answer. In Jewish tradition, the one who ruled the winds and sea was God himself (Ps 107:29; cf. Jon 1:15). The disciples' surprise at Jesus' power is thus easy to understand.

Storms often rose suddenly on the lake called the Sea of Galilee; these fishermen had usually stayed closer to Capernaum and are unprepared for a squall this far from shore. Presumably the one place least inundated in a small fishing boat during a storm would be on the elevated stern. Commentators suggest that one could use the wooden or leather-covered helmsman's seat, or a pillow kept under that seat, as a cushion for one's head. Jesus' sleep during the storm may indicate the tranquillity of faith (Ps 4:8; cf. 2 Kings 6:16-17, 32; Prov 19:23); in some Greek stories, the genuineness of philosophers' faith in their own teachings on tranquility was tested in storms.

5:1-20
Overpowering a Legion of Demons

Jesus could bind the strong man no one else could bind (cf. 3:27; 5:3-4).

5:1. Matthew's "Gadara" (Mt 8:28), nearly eight miles from the lake, is more precise than Mark's "Gerasa," a prominent city over thirty miles southeast from the lake by a straight line and a longer journey by road. (Some, however, think that Mark intended Gergesa, modern El Koursi, adjoining the lake, as suggested even in some manuscripts and early Christian tradition.) But the mention of either Gadara or Gerasa would identify the general region for people who did not live there: that is, the area of the Decapolis, a predominantly non-Jewish area. Matthew apparently identifies the vicinity by reference to a nearer city, and Mark, writing for readers farther from this area, prefers a better known city as an identifier even though it is farther away.

5:2. Jewish people considered tombs unclean and a popular haunt for *demons. People in many ancient cultures brought offerings for the dead, which might also appeal to these spirits (demons were associated with pagan religion; see comment on 1 Cor 10:20). The time is night (4:35), when evil spirits were thought to exercise the greatest power. Mark thus sets the stage for ancient readers to feel the suspense of the ensuing conflict.

5:3-5. Some pagan worship had involved cutting oneself with stones (1 Kings 18:28), and anthropologists report both self-mortification and supernatural strength in conjunction with some cases indigenously defined as spirit possession in various cultures today.

5:6-8. In ancient *magic, practitioners often invoked higher spirits to drive out lower

spirits, and the demons here appeal to the only one higher than Jesus to keep Jesus from driving them out: "I adjure you by God" (not "Swear to God"—ESV). This language invokes a curse on Jesus if he does not comply. (Phrases like "I adjure you" and "I know you"—Mk 1:24—appear in ancient magical exorcism texts as self-protective invocations to bind the spiritual opponent.) The attempt at magical self-protection proves powerless against Jesus. Not only Jews but also *Gentiles sometimes called Israel's God "the Most High."

5:9. Identification of spirits' names or the names by which those spirits could be subdued was standard in ancient exorcism texts (see ancient magical texts and the **Testament of Solomon*); but this case, where many demons are present, is the only recorded example of Jesus seeking a name, and here he does not seem to use it in the exorcism.

A legion (perhaps meant here hyperbolically) included five thousand four hundred to six thousand troops. This man is therefore hosting a large number of demons; they probably outnumber the pigs (5:13).

5:10. Ancients were familiar with demons pleading for mercy or other concessions when they were about to be defeated (e.g., **1 Enoch* 12–14; *Testament of Solomon* 2:6). Perhaps they wish to stay in the area only because of the tombs, but in ancient lore spirits were often associated with particular local areas.

5:11-12. Although Jews lived in the Decapolis, most of its residents were Gentiles. Only Gentiles (or very nonobservant Jews) raised pigs, and Jewish readers would think of pigs as among the most unclean animals and perhaps thus as obvious hosts of unclean spirits. Ancient (and some modern) exorcists found that demons often asked for concessions if the pressure for them to evacuate their host was becoming too great for them to stay.

5:13. In some Jewish traditions demons could die, so some ancient readers may have assumed that the demons had been destroyed (or at least disabled) with their hosts. (Some traditions also portrayed at least some demons as fearing water—*Testament of Solomon* 5:11-12; but in other traditions, certain demons lived in water.) In other early traditions, demons were sometimes imprisoned in bodies of water. In any case, their activity here shows their continued destructiveness. Demons depend on their hosts in the Gospel accounts much more than in most other sources from the period.

5:14-17. The opposition to Jesus arises from both economic interests—the loss of a large herd of swine—and some Greek conceptions of dangerous wonderworking magicians, whom the people would fear.

5:18. In ancient stories, those recovering from madness might be unaware of their prior state (e.g., Leucippe in *Achilles Tatius, or Heracles in an ancient drama), but this was not always the case (Dan 4:34-37).

5:19-20. The Decapolis was a loose confederation of ten *Hellenistic cities (predominantly Gentile, though many Jews lived there), with ties also to the Nabatean Arabs. Perhaps because his *messiahship would be misunderstood, Jesus kept it a secret in predominantly Jewish areas. In the predominantly non-Jewish Decapolis, however, where people would perceive him as a magician, he urges his new *disciple to spread word about what *God* had done, thereby correcting the people's misunderstanding (cf. 2 Maccabees 3:36).

5:21-43
Healing a Girl and an Outcast Woman

This passage includes two cases of reversing uncleanness: a woman with a continual flow of blood and a corpse (see Lev 15:19-33; Num 19:11-22). Even after the flow stopped, the first woman would be counted unclean for seven days (Lev 15:28); the dead girl was even more unclean, so that one who touched her contracted impurity for a week (Num 19:11).

5:21-24. The precise duties of "rulers of the *synagogue" probably varied somewhat from one place in the empire to another; sometimes the title designates simply benefactors, perhaps to honor them, but elsewhere they were the chief officials in synagogues (perhaps not unrelated to their social influence); virtually always they were prominent members of their communities. Jairus's daughter had been a minor until that year and on account of both her age and her gender had little social status apart from her family. One would fall at the feet of someone of much greater status (like a king) or prostrate oneself before God; for this

prominent man to humble himself in this way before Jesus was thus to recognize Jesus' power in a serious way.

5:25. This woman's sickness was reckoned as if she had a menstrual period all month long; it made her continually unclean under the *law (Lev 15:25-28)—a social and religious problem on top of the physical one. Sometimes this condition starts after puberty; if that was true in her case, given a common ancient life expectancy of about forty years and the "twelve years" that she had been ill, she may have spent even half or all her adult life with this trouble. Since she could not bear children in this state, and Jewish men often divorced women who were incapable of bearing (cf., e.g., Pseudo-Philo, *Biblical Antiquities* 42:1), this woman probably had never married or (if the sickness began after marriage) had been divorced and remained single. In a society where single, celibate women could not easily earn much income, the illness affected virtually every area of her life.

5:26. Although some remedies were genuinely empirically based, many practices of both Jewish and Gentile physicians in biblical times were no more than superstitious remedies, which not surprisingly often proved ineffective (cf. 2 Chron 16:12; Tobit 2:10; *Qumran *Genesis Apocryphon* 20:19-20). Although many physicians in the Greek world were slaves, Palestinian Jewish sources suggest that physicians in Palestine had ample incomes. Some Palestinian Jews were skeptical of physicians' value.

5:27-29. If this woman touched anyone or anyone's clothes, she rendered that person ceremonially unclean for the rest of the day (cf. Lev 15:26-27). Some uncleanness was unavoidable, but it was inconvenient to fulfill the required bath, and men avoided uncleanness when they could. Because she rendered unclean anyone she touched, she should not have even been in this heavy crowd. Later Jewish tradition made this danger even more serious than Leviticus had (e.g., Mishnah *Toharot* 5:8), so many teachers avoided touching women (other than their wives) altogether, lest they become accidentally contaminated. Thus she could not touch or be touched, was probably now divorced or had never married, and was marginal to Jewish society.

5:30-34. Jewish people believed that only teachers closest to God had supernatural knowledge. Jesus uses his supernatural knowledge to identify with the woman who had touched him—even though in the eyes of the public this would mean that he had contracted ritual uncleanness. (By law, she was still counted as unclean for seven days after her flow of blood stopped; Lev 15:28.) Given the frequent failure of the male *disciples' faith (8:17-21; 9:19), Mark's record of this woman's faith (cf. 7:29; 12:44; 15:40-41) is all the more striking, especially for readers whose culture considered women less stable and emotionally weaker than men.

5:35-39. Childhood deaths were common (in Egypt, which was poorer, perhaps half the children born did not survive into adulthood). Tradition expected at least two or three professional mourners (two flutists and a mourning woman) to facilitate grief at the funeral of even the poorest person; more mourners would assemble at the death of a member of a prominent family like this one. Because bodies decomposed rapidly in Palestine, mourners had to be assembled immediately upon someone's death (presumably especially when it had been expected), and in this case they had gathered before word even reached Jairus that his daughter had died. Messengers were normally dispatched immediately to bring a parent or spouse the sad news.

5:40-43. In that culture, at the age of twelve the girl was a virgin probably soon to be married (with very rare exceptions, women were not able to continue in education as they do today). Young girls usually looked forward eagerly to their wedding day as the most joyous event in their life, and to die unmarried—especially just short of it—was lamented as a particularly great tragedy. Jewish interpreters sometimes linked texts by a common word; that this girl had lived the same number of years as the woman with the flow of blood had been ill (5:25) provides a useful literary connection. Whereas contact with the bleeding woman would render Jesus unclean for a day in the eyes of others (Lev 15:19-33), touching a corpse led to seven days of uncleanness (Num 19:11-22, esp. 19:11). Jesus spoke to her in *Aramaic, perhaps her first language, although Greek was widely

spoken in Palestine. (On the use of Aramaic in healings, see comment on 7:34-35.)

6:1-6
Jesus' Rejection in His Hometown

The *Old Testament often reiterates the principle of the prophet without honor: Jeremiah, Moses, Joseph and so forth; subsequent Jewish tradition emphasized this concept even more. That Jesus is "unable" to do works because of their unbelief (6:5) presumes a limitation not of his power but of his mission: to heal without morally directed faith would be to act like the pagan magicians of antiquity.

In 6:3, Jesus is called a "carpenter." In A.D. 6, early in Jesus' childhood, Sepphoris, then Galilee's capital and most prominent city, had been destroyed by the Romans, and rebuilding had begun immediately. Thus carpenters (mostly working in wood), like stone masons, were no doubt in demand in Nazareth, a village four miles from the ruins of Sepphoris. Joseph, Jesus' father, probably taught his son his own trade, as was common for fathers to do. After Sepphoris had been rebuilt, they probably did most carpentry work from their home, as most Galilean carpenters did. The observation that Jesus is a carpenter is meant to identify him, not to suggest the unlikelihood of a carpenter being a teacher, for we also have traditions about other carpenters who became famous teachers (e.g., *Shammai).

"Brothers" and "sisters" are the usual terms for siblings; a different term for more general "kinfolk" (e.g., Rom 16:11) is not used with regard to Jesus' siblings. The majority of scholars today, Catholic as well as Protestant, recognize that this text probably refers to children born to Mary after Jesus. Large families were common, with children often spread over a wide age range.

Jesus' "inability" to do miracles in Nazareth (6:5) indicates a limitation not of his power but of his mission. In Scripture, God can act sovereignly, but the goal is relationship, not merely impressing people.

6:7-13
Traveling Representatives of Jesus

6:7. On the "twelve," see comment on 3:14-15. It was customary to send heralds, or messengers, by twos, in both Greek and Jewish culture. In Judaism, such pairing also provided validation for their testimony (Deut 17:6; 19:15). Authority could be delegated.

6:8-9. They are to travel light, like some other groups: (1) some urban Greek philosophers, called *Cynics (although none were Jewish, and their presence is barely attested in Palestine); (2) perhaps more relevantly, peasants, who often had only one cloak (though they did not travel much); (3) most relevantly, some prophets, like Elijah and (probably Jesus' most immediate model) John the Baptist. They are to be totally committed to their mission, not tied down with worldly concerns. The "bag" may have been used for begging (like the Cynics' bags), or likelier just carrying supplies; Jesus forbids it here.

6:10. Antiquity in general and Judaism in particular highly valued hospitality. The mission here is apparently a short-term one; in normal circumstances, hospitality (which included taking a person in) usually lasted at most a few weeks. Like some of the early *synagogues, early *churches found it most practical to meet in homes (with no overhead cost) and to use them as a base of operation in reaching the rest of the community.

6:11. When entering the holy land or the temple, some scrupulous Jewish people would shake off the defiling dust of less clean soil; here the *disciples must treat apostate Jewish cities as if they are unclean *Gentile territory (cf. Mt 10:14-15).

6:12-13. Oil was sometimes used medicinally, and in the *Old Testament it was often associated with divine commissioning. Such associations could make it a useful symbol in prayer for healing (Jas 5:14).

6:14-29
The Politician Murders the Prophet

6:14-16. Herod Antipas, son of Herod the Great and Malthace, a *Samaritan (Josephus, *Jewish War* 1.562), was technically tetrarch (with Matthew and Luke), not "king"; Mark may use the latter term loosely or possibly even ironically: it was precisely Herod's appeal for the title "king" under Herodias's influence that ended his tetrarchy and led to his banishment in A.D. 39 (cf. Josephus, *Jewish Antiquities* 18.250-255).

Reincarnation is not in view in this passage.

Some Greeks (and Jews influenced by them) did believe in reincarnation; but John's return is said instead to be a "rising from the dead" (as a few persons had been raised through *Old Testament prophets); Elijah had never died, and many Jewish people anticipated his *eschatological return (Mal 4:5).

6:17-19. Herod's affair with his sister-in-law, whom he had by this time married, was widely known. Indeed, because Herodias insisted that Antipas divorce his first wife before marrying her, the first wife fled to her father, king of the Nabatean Arabs, who later went to war with Antipas and defeated him. John's denunciation of the affair as unlawful (besides being adultery, it violated biblical incest prohibitions; see Lev 18:16; 20:21) was an attack against Herod's adultery, but Herod could have perceived it as a political threat, given the political ramifications that later led to a major military defeat. (*Josephus claims that many viewed Herod's humiliation in the war as divine judgment for his executing John the Baptist; Josephus, *Jewish Antiquities* 18.116-119.)

Some scholars suggest that Herod's half-brother Herod Philip may be called by the secondary name Philip here to avoid confusing him with the main Herod in the story, Herod Antipas.

6:20. Despite Antipas's grounds for animosity toward John (6:17-19), it is not incredible that he would enjoy hearing him (cf. Ezek 33:31-33; Lk 23:8). Many well-to-do Greeks, fancying themselves *patrons of intellectual pursuits, supported philosophers more for respectable cultural and entertainment purposes than for ethical edification. Influenced by upper-class Greek ideals, Herod undoubtedly considered himself as open-minded culturally as he was brutal politically.

6:21. Celebrating birthdays was at this time a Greek and Roman but not a Jewish custom, although the Jewish aristocracy had imbibed plenty of Greek culture by this period. Herod held tight, centralized control over Galilee, and the officials he invites probably include local village and regional leaders loyal to his government; in all Galilee, only Tiberias and probably Sepphoris were cities organized after the Greek model.

6:22. Other ancient sources testify that the Herodian court was given to the sorts of astonishing excesses described here. Whereas Vashti refused to appear naked before Xerxes's guests, Herodias' daughter Salome offers Herod's guests a lewd dance. Some scholars suggest that Herodias's daughter Salome is at this point no longer a young girl and is already married to the tetrarch Philip. Other historical data about her, however, suggest that she may be no older than twelve or fourteen (which was a common age for virgins to marry in Jewish Palestine); it is possible that she is even slightly younger. On any reading, Herod's vulgarity is perverse; after taking his brother's wife (cf. Lev 20:21), he lusts after his wife's daughter (cf. Lev 20:14).

6:23. This is the sort of oath one might make while drunk, but it is especially reminiscent of the Persian king stirred by Queen Esther's beauty (Esther 5:3, 6; 7:2), though the depravity of this girl's request ironically contrasts with Esther's virtuous request. But Herod's oath is not backed up with genuine authority; as a Roman vassal he has no authority to give away any of his "kingdom." Salome will need to think of a more practical request.

6:24. The girl has to go "out" to ask her mother. Excavations at Herod's fortress Machaerus suggest two dining halls, one for women and one for men. Herodias has thus presumably not been present to watch Herod's reaction to the dance. Josephus characterizes Herodias the same way Mark does: a jealous, ambitious schemer (she and Antipas ultimately did themselves in; see comment on 6:14-16).

6:25. Beheading by the sword was the method of executing Roman citizens and other individuals of status; lower-class individuals were usually executed by crucifixion or other means, unless the matter were urgent. Salome's asking for John's head on a platter suggests that she wants it served up as part of the dinner menu—a ghastly touch of ridicule. It was the sort of grisly touch that ancient writers often associated with horrible abuses of power (e.g., of Nero).

6:26-28. Although an oath like Herod's was not legally binding, breaking an oath before dinner guests would have been embarrassing in a culture that highly valued honor; it is known that even the emperor would not lightly do it. Ancient sources report various

rulers or governors who had people visibly executed during dinner to please those to whom they were attracted; all those who report these actions view them as despicable. Unlike Judean Jewish leaders who needed *Pilate's approval to enact legal executions, Herod Antipas was acting ruler in his own domain.

6:29. If a man had sons, the eldest son was normally responsible for his father's burial; here John's *disciples must fulfill this role for him. Those who sought the body of a person who had been executed could risk being identified with the crime, especially if they were not family members; while Antipas had executed John only reluctantly, these courageous disciples may not know that. (Contrast the absence of Jesus' apparently less courageous male disciples in 15:42-47!)

6:30-44
A Shepherd Feeds His Sheep

The true ruler's gracious meal in this passage contrasts starkly with Herod's wicked banquet in the previous passage.

6:30-34. "*Apostles" were Jesus' commissioned agents, representatives authorized with his authority. Jesus' care for the sheep (6:34) is modeled on God's care for his people in Ezekiel 34:5, 15; this care is likewise expressed by providing sound teaching (cf. Ezek 34:4; Jer 23; Num 27:17). The traditional leaders were not giving them what they needed, including truth (cf. Ezek 34:1-10; Jer 23).

6:35-38. Fish (particularly around the lake) and especially bread were central components of the Palestinian diet; meat was probably rarely available for most people except at feasts, when large numbers of animals were sacrificed. Food was always sold in village markets, and the Galilean countryside was full of villages (6:36); but Jesus had withdrawn his followers some distance from the nearest villages (6:32). Even the largest villages would have under three thousand inhabitants; despite Galilee's agricultural self-sufficiency, feeding this crowd in the villages would thus have been difficult. But it would have taken more than two hundred days of an average person's wages (around seven months of hard labor) to feed the great multitude that had assembled. Compare the analogous instruction, astonished question from a *disciple, and following miracle in 2 Kings 4:42-44.

6:39. That the grass is green indicates that it is spring, around Passover (cf. Jn 6:4), and might explain the better conditions for sitting.

6:40. The purpose is to facilitate the distribution of food, but some scholars suggest that some people in the crowd may have thought that Jesus was organizing them as ranks for a messianic army (cf. Jn 6:15). (The *Old Testament and *Dead Sea Scrolls show such organization into ranks for armies. Mark records this organizing, however, simply to emphasize the great numbers fed.)

6:41. People sometimes looked up to heaven when they prayed. It was customary to begin a meal by giving thanks for the bread and then dividing it.

6:42-44. The multiplication of food is reminiscent of the miracle of God supplying manna for Israel in the wilderness (of hopes for a new Moses), and especially of Elisha multiplying food (2 Kings 4:42-44, where some was also left over). Ancient ethics frowned on wasting leftovers, although aristocrats often flaunted such waste. The term for "baskets" here was often used for wicker food baskets but could also mean the large baskets in which Roman soldiers carried their supplies.

6:45-52
Walking on Water

6:45-48. The language of "passing by" may refer to how God's glory "passed by" in the *Old Testament (Ex 33:19; Job 9:11), which also (in one of the same contexts) described God as "treading" upon the waves (Job 9:8); see also comment on 6:50-52. God parted waters for others, but in the Old Testament only God himself is said to walk on them (cf. Ps 77:19).

6:49. Although not all Jewish teachers sanctioned a belief in ghosts, it existed on the popular level and ultimately contradicted the more common Jewish (and *New Testament) teaching that the righteous and wicked dead are separated at death in view of the coming *resurrection. Some Hellenized Jews accepted a common Greek notion of souls persisting in the air; many people also thought that the souls of those who died at sea, hence were unburied, hovered around the site of their death.

6:50-52. "It is I" (NIV, NASB, KJV, etc.) is literally "I am." Although the former is the

primary meaning here, in this context it is possible that Jesus (or Mark) also intends to allude to a particular nuance of the latter meaning: "I am" may refer back to the God of the Old Testament (Ex 3:14; Is 41:4; 43:10; see comment on Mk 6:45-48).

6:53-56
Crowds Seek Healing

Carrying the sick on their mats or touching Jesus' cloak imitated earlier expressions of faith (see comment on 2:3-5; 5:27-29). Evidence from ancient pagan healing shrines suggests that once someone was healed in a particular way or at a particular place, others often tried to get healing by the same method. The marketplaces (6:56) constituted the largest open area of a town or village, where larger crowds could gather. In contrast to Greek cities, market areas in Galilean towns were not always located in the center of the town.

7:1-23
True and False Religion

Controversy over Jesus' treatment of uncleanness (1:40-45; 5:21-43) and other religious issues (e.g., 2:1–3:35) climaxes in a confrontation over the failure of Jesus' *disciples to wash their hands.

7:1. Most *Pharisees and the most elite *scribes were centered in Jerusalem. Some commentators have suggested that they came to evaluate Jesus' teaching, to see if he were a false teacher leading people astray (see Deut 13:13-14), or to evaluate the teaching more generally. Perhaps these represent a small number of Pharisees who did live in Galilee. Plenty of scribes already lived in Galilee.

7:2-3. The Pharisees were scrupulous about washing their hands as part of ritual purity, though this rule was not found in the *Old Testament and may have originally derived from Greek influence. Mark gives his *Gentile readers only a cursory summary of a much more complex custom (which some scholars think was limited to particular days), although his readers may have been familiar with related Jewish purity practices in their own parts of the world (*Diaspora Jews were known for washing their hands).

7:4. Washing the hands removed partial ceremonial impurity picked up in the marketplace; hands were apparently immersed up to the wrist or purified by having water poured over them from a pure vessel. The Pharisees also had rules about immersing vessels to remove impurity.

7:5. People held teachers responsible for the behavior of their disciples. The Pharisees were known for observing the traditions of their predecessors; unwilling to innovate more than necessary, they grounded everything they could in tradition. Thus they want to know where Jesus, as a popular teacher, stands on issues on which their tradition commented (such as washing hands), so they can evaluate his teaching accordingly.

7:6-8. Jesus quotes a *prophecy of Isaiah decreed against the Israel of Isaiah's day (Is 29:13), which had been religious in form but not close to God in heart (Is 1:10-20). The very thing the Pharisees prized as spiritual—traditions derived from many pious and wise teachers who had tried to interpret and apply God's *law—Jesus claims is undercutting the plain message of God.

7:9-13. Many Jewish teachers regarded the commandment to honor father and mother as the most important in the law. Jewish interpreters included in this commandment providing for one's parents when they were old. At the same time, tradition allowed that various items could be sacrificed or dedicated to the use of God's temple. ("Corban" appears on sacrificial vessels and means "consecrated to God"; in popular usage, it could also mean "forbidden to so-and-so.") One school of Jewish teachers in Jesus' day declared that a vow that something was consecrated and forbidden to others applied even to family members, even if those to whom it was forbidden included them only accidentally.

Some apparently religious people had been using this practice to withhold what should have otherwise gone to the support of their parents—against the otherwise firm Pharisaic belief that one should support one's parents. Jesus attacks here not the Pharisees' religious theory but these Pharisees' inconsistency with that theory in practice: their love for the law had led them (like some modern Christians) to such attention to its legal details that it created loopholes for them to violate the spirit of the law.

7:14-15. Other teachers are occasionally reported to have uttered sayings similar to Jesus' statement here, but only rarely and in private, perhaps to avoid anyone disobeying the literal rules of the law. If Jesus' words are taken literally, they declare the whole clean/unclean distinction emphasized in the law as of only symbolic value. Because this distinction constituted one of the main barriers between Jews and Gentiles (see Rom 14), Jesus' statement opens the way for cultural unity in table fellowship.

7:16-19. Jesus says that food does not affect what a person really is; writing in a day of conflict between the customs of Jewish and Gentile Christians, Mark applies this point to the kosher laws of Leviticus 11: pigs, dogs, bats, owls and so on are now "clean," or acceptable to eat. Mark's understanding of Jesus' teaching would not have been popular among most Jewish people. Liberal Alexandrian Jews who no longer believed in literal observance of the food laws (Lev 11; Deut 14) were particularly despised by their more conservative colleagues in Egypt and certainly found few allies in Palestine.

7:20-23. Other Jewish teachers would have agreed that the vices listed by Jesus were evil and that they came from the heart. (Vice lists were also a common teaching technique of ancient moralists.) But teachers would not have agreed with Jesus that most of themselves were more concerned about legal details than ethics, even though as experts in the law they necessarily had reason to spend more time focusing on legal issues than on God's work of transforming the heart.

7:24-30
A Gentile Woman's Faith

If "unclean" foods such as pigs and dogs were no longer unclean (7:16-19), neither were Gentiles. Although Jesus wins all his controversies with the religious authorities in Mark, he allows himself to be persuaded by a Gentile woman's desperate retort. This story would encourage Mark's Gentile readers, who were being persecuted for a faith that many others simply regarded as a Jewish heresy.

7:24-26. Jewish people did not expect much faith from pagans. Like Sidon, Tyre belonged to ancient Phoenicia, and the most prominent woman from Phoenicia in the *Old Testament was the wicked Jezebel. But another Phoenician woman who petitioned Elijah in the same generation received God's favor for her son (1 Kings 17:17-24). "Syrophoenicia" distinguishes this region from Libophoenicia, the region of north Africa settled by Phoenicians as Carthage. Greek culture had long influenced Syria, and after Alexander's conquests many Greeks had settled there; the citizen class of the Phoenician republics Tyre and Sidon considered itself Greek and was thoroughly Hellenized. Thus she is both Syrophoenician and Greek.

7:27-28. Members of the Greek ruling class of Syrophoenicia exploited the labors of Syrians and some Jewish settlers in the surrounding countryside; the woman belongs to a group that in a sense has been taking other children's bread. Jewish people did not regularly call non-Jews "dogs," as some commentators have argued. Rather, Jesus is making his point by way of illustration, as teachers in his day often did. Worthless food would be cast to the dogs (cf. Ex 22:31). Applied to either gender, "dog" was one of the gravest and most common insults in antiquity, although here it functions more as an analogy. In Jewish Palestine, dogs were regarded as scavengers, but in well-to-do households influenced by Greek custom (more familiar to the Syrophoenician woman), dogs were sometimes pets. Jesus is making an illustration: the children must be fed before the pets, and the Jewish people therefore had first claim (e.g., Ex 4:22). The statement would still sound offensive, but the woman surmounts the obstacle. Sometimes obstacles were provided to give opportunity for exercising faith.

He is saying that he will not heal like pagan magicians; he wants her to demonstrate faith, specifically faith in the supremacy of the true God. (Her reply takes up his illustration: she concedes the salvation-historical priority of the Jewish people, the children, but protests that even the dogs get to eat crumbs. In so arguing, she indicates her faith that only the smallest fraction of his power is necessary to heal her daughter.)

7:29-30. In the Old Testament, faith was often expressed in bold zeal, holy chutzpah, by women of faith (2 Kings 4:14-28), prophets (Ex 33:12–34:9; 1 Kings 18:36-37; 2 Kings 2:2, 4, 6, 9)

and other heroes (Gen 32:26-30). These examples all combine humble respect for God or his prophet with boldly urgent entreaty, and God answers these prayers. Because most of Jesus' ministry was to Israel and Mark's audience included Gentiles, this Gentile's deliverance by faith would encourage them that they were not excluded.

7:31-37
A Deaf-Mute Healed

7:31. The Decapolis, literally "ten cities" (see 5:1-20), was (like Tyre and Sidon) predominantly inhabited by non-Jews, though many Jews also lived there.

7:32-33. Deaf and mute persons were protected under Jewish *law but classed with other groups (women, slaves, imbeciles, minors) not educated enough to keep the law. Crowds gathered to see magicians do their tricks, and this crowd would have preferred to have seen Jesus heal a man in front of them, but he does not do so. On the spittle see 8:22-23. Magicians employed gestures, but Jesus, who does not regularly employ them, has a different reason here. Jewish people knew that deaf people could use signs to communicate, so here Jesus may be acting out "healing," "speech" and (7:34) "from God," to encourage the man's faith in what he is about to do. Mark's term for "mute" occurs in the *Septuagint only at Isaiah 35:6, referring to the blessings inaugurated in the messianic era.

7:34-37. Some scholars point out that magicians often spoke unintelligible phrases during healings. Here, however, Jesus speaks *Aramaic, which would have been known to most people, Jewish or *Gentile, from Syria-Palestine (cf. also Mk 14:36). It was probably particularly common in the villages and rural areas.

8:1-13
Feeding the Four Thousand

See 6:30-44 for more background on this passage. Jesus was not limited to doing a miracle only once; he could repeat them whenever necessary (8:19-21; cf. 2 Kings 2:19-22; 4:1-7, 38-41, 42-44; 7:16).

8:1-4. Galilee was full of towns and villages, so Jesus purposely withdraws his *disciples some distance away, presumably to secure privacy for instructing his disciples. Villages could not provide sufficient food for such a crowd (see comment on 6:36), but in view of Jesus' earlier miracle in 6:41-42 the disciples' question of 8:4 displays obtuseness.

8:5-7. Bread and fish were basic staples; it was customary to give thanks before a meal. The standard blessing later preserved is: "Blessed are You, O Lord our God, King of the Universe, who has brought forth bread from the earth."

8:8-10. The term for basket here (different from the one in chap. 6) refers to a reed basket often used for carrying fish, presumably available. This feeding miracle, like the earlier one, is reminiscent of Elisha (including leftover food; 2 Kings 4:42-44).

8:11-13. A sign "from heaven" could refer to any sign from God (cf. 8:12; Jewish people sometimes used "heaven" as a circumlocution for "God") or could request that Jesus perform a heavenly sign (e.g., fire falling). But it also might refer to predicting a sign in heaven (cf. 13:24-25). Most ancient peoples, including most Jewish people by this time, believed that signs in the heavens could portend events about to take place; unusual signs could portend the death of a ruler, the fall of a city and so forth. Deuteronomy 18:10 forbade divination, which would include astrological prognostication, but many Jewish people in this period accepted astrology.

In view of Mark 8:1-10, the reader recognizes how foolish Jesus' opponents are. Ancient *narratives sometimes cited the conspicuous denseness of opponents to highlight the protagonist's virtue.

8:14-21
Disciples Still Blind

Mark's Christian readers are confronted with a point less comfortable than the one in 8:11-13: not only Jesus' opponents but even his *disciples are dense.

8:14. One loaf would not feed all those in the boat. If they are headed for the less populated east side of the lake, it would be difficult to find bread; it would be simple, however, in Bethsaida (8:22). Their concern is heightened because bringing provisions had been their responsibility; teachers often delegated such matters to some of their disciples.

8:15. Yeast is used to represent various things in the Bible (unleavened bread in Ex 12:15-17 represents haste; in Mt 13:33, the *kingdom; in 1 Cor 5:6-7, someone's sin); the point here seems to be that it is something that spreads (as in Mt 13 and 1 Cor 5). Both Pharisaic piety and Herod as an agent of political power are corrupting influences.

8:16-18. The disciples are still spiritually half-blind, which is a moral fault in Mark 4:12 (and in the *Old Testament: e.g., Is 29:9-10; 42:19-20; 44:18; Ezek 12:2).

8:19-21. The disciples should have seen enough bread miracles not to worry about earthly bread and to catch Jesus' plain point. Instead, they are acting more like the Israelites in the wilderness, who never learned faith despite manna from heaven.

8:22-26
Blindness Half-Cured

In view of 8:17-21, scholars often view Jesus' use of two stages in healing as a sort of acted *parable, meant to illustrate a point while healing the man.

8:22-23. Some sources suggest that spittle was sometimes associated with healing; it was also often considered disgusting and may have tested the blind man's desire to be healed.

8:24-25. This is the only two-stage healing in the Gospels, and miracle stories in antiquity usually stress the suddenness of the miracle; emphasis on healing by degrees was quite rare. Many therefore believe that Jesus provided here an acted parable: unlike Jesus' opponents, the *disciples have begun to see but remain blind (8:16-18) until he touches them again at his *resurrection (9:9). The *Old Testament prophets sometimes acted out parables to get people's attention and communicate their point (e.g., Is 20:2-6; Jer 19:1-15; Ezek 4:1–5:17; 12:1-11).

8:26. Prophets usually presented healed persons to their families (1 Kings 17:23; 2 Kings 4:36), but Jesus' private action here emphasizes the messianic secret (see the introduction to Mark in this commentary). Had the man returned to the town, everyone would have known of the miracle.

8:27-30
The Disciples Half-See

This narrative may illustrate how the *disciples remain half-blind regarding the nature of Jesus' identity.

8:27. Caesarea Philippi was a pagan city known especially for its grotto dedicated to the worship of Pan, a Greek bucolic god. (Jesus thus chose to raise the question of his own identity in a largely *Gentile area.) "Villages of Caesarea Philippi" accurately depicts the area; throughout the *Hellenistic world, surrounding villages normally had a close relationship with the city in whose territory they were located.

8:28. Because some Palestinian Jews (particularly among the educated elite) believed that prophets in the *Old Testament sense had ceased, ranking Jesus among the prophets could have seemed radical—but it was not radical enough to grasp his true identity.

8:29-30. The "*Messiah," or "Christ," is literally the "anointed one"—not just any anointed one but the anointed king, descended from David, who would restore sovereignty to Israel (Is 9:6-7; 11:1-10; Ps 2). There were many different views of the Messiah (or messiahs) in Jesus' time, but they all revolved around an earthly deliverance and earthly *kingdom. Peter is right to call Jesus "Messiah," but what Peter means by the term and what Jesus means by it diverge widely at this point (see 8:31-32). Jesus may wish to avoid arousing the authorities' hostility prematurely; on the messianic secret (8:30) see the introduction to Mark.

8:31–9:1
Jesus Explains His Messianic Mission

8:31. People throughout Greco-Roman antiquity commonly believed that someone about to die could make predictions about the future, and many believed that holy men could forecast their own death. This background may be less relevant here, however. In addition to knowing *Old Testament examples of prophets' martyrdom (emphasized by his contemporaries) and texts such as Isaiah 52:13–53:12, Jesus knew the character of the temple authorities and what he planned to do in the temple (11:15-18). His actions virtually *provoked* his death.

8:32. Disciples were expected to respect their teachers and certainly never to reprove them. The *New Testament writers interpreted

some Old Testament texts as referring to the *Messiah's suffering, but most Jewish people in the first century did not recognize these texts as referring to the Messiah, who was to reign as king. Most Jewish people believed in the resurrection of all the righteous dead at the end of the age, and the inauguration of a *kingdom under God's appointed ruler afterward. Jesus' explanation of his mission in 8:31 thus seems to Peter to contradict his confession of Jesus' messiahship in 8:29.

8:33. "*Satan" originally meant "adversary" and in a few sources could even be used in the plural (though the plural is extremely rare); but in early Christian and most early Jewish writings it refers specifically to the devil. One could be said to act like someone else, however (e.g., John "in the spirit and power of Elijah"—Lk 1:17), and Jesus apparently uses *hyperbole to make the point: Peter is just like Satan in preferring the worldly to the divine (cf. Mt 4:8-10). Calling Peter by the name of the ultimate tempter and accuser underlines the seriousness of his failure as a disciple at this point.

The proper position of a disciple is "behind" his master, "following" him; "get behind me" may call Peter (who reproved Jesus; see comment on 8:32) back to his rightful position of subservience. In Greek circles as well a person could be reproached for thinking in human rather than divine terms.

8:34-37. To "come after" Jesus is to be his disciple (see comment on 8:33). Although some used "crucifixion" figuratively for great suffering, Jesus' means of death in this Gospel indicates a more demanding understanding. The cross was an instrument of violent and painful execution. To "take the cross" was to carry the horizontal beam of the cross out to the site of execution, generally past spectators, often a jeering mob. In rhetorically strong terms, Jesus describes what all true disciples must be ready for: if they follow him, they must be ready to face literal scorn and death, for they must follow to the cross. Because life is worth more than the world itself, giving one's life in this world to gain it in the world to come is a wise transaction (cf. **2 Baruch* 17:2-3; 51:15-16); there was nothing else one could give in exchange for it (Ps 49:7, 15). Ironically, Jesus' executioners later draft a bystander to fill the role of carrying the cross that none of his disciples are willing to undertake (Mk 15:21).

8:38. The coming "*Son of Man" here alludes to Daniel 7:13-14. Many others in Jesus' day believed that a period of great suffering and sin would precede the kingdom; but Peter and his colleagues prefer the easier view that it would not, or at least that their side would triumph supernaturally at no cost to themselves.

9:1. This verse points to the future glory mentioned in the preceding verses by way of an anticipatory revelation of that glory they are to experience in 9:2-13. Because the future *Messiah had already come, the glory of his future kingdom was also already present.

9:2-13
Glory on the Mountain

Ancient texts as diverse as Greek myth and Jewish *apocalypses speak of various radiant supernatural figures (deities, angels, etc.) and transformations, but by far the most obvious shared background for all those familiar with the *Old Testament (as Mark's hearers were) was Moses. God had revealed his glory to Moses on Mount Sinai, so that Moses had come down from the mountain reflecting God's glory (Ex 32–34). In Mark 9:2-13, the glory of Jesus, who is greater than Moses and Elijah, is revealed on the mountain; he is thus the ultimate spokesperson for God (Deut 18:18-19).

9:2. Mount Sinai was where God revealed his glory. Jesus waits "six days" to ascend a mountain to make the same point (Ex 24:16). That Jesus takes three companions may allude to Exodus 24:1, 9, although this possible allusion is less clear (seventy elders were also present in that account). (The *Qumran scrolls might speak of twelve leaders, with three being most prominent, though three is a small enough number to allow coincidence here.) Transformation or transfiguration appears in both Greek myth and Jewish apocalyptic literature, but the most obvious background of Jesus' transformation here must be Moses' glorification on Mount Sinai.

9:3. Jewish literature often described angels and other heavenly beings as being clothed in white. Cleaning clothes (cf. NIV "bleach") was normally a housewife's task, but this text refers to the widespread ancient profession of cloth refiners, who could be

men or women. They had facilities that homes lacked and prepared fabrics for cloth, by means that included combing, cleaning and thickening them before spinning. These refiners often treated the fabric with urine (a practice for which fullers were consequently notorious) and clay, brushing it with brushes or thistles. They bleached white fabrics with chemicals, and often brightened and softened them by stretching them on a frame over burning sulfur. They also cleaned existing clothing, and could often remove stains from white garments.

9:4. Jewish people understood Scripture as denying that Elijah had ever died; Moses was buried by God himself, and some (unbiblical) Jewish traditions even claimed that Moses was still alive (cf. comment on Rev 11:6). These two figures were both expected to return in some sense before the end (Deut 18; Mal 4).

9:5-6. Israelites annually built tabernacles, or booths, commemorating the time when God's presence was with them in the wilderness, so Peter would know how to build one.

9:7. The cloud probably recalls the cloud of God's presence, for example, on Mount Sinai (Ex 24:15-16). The heavenly voice repeats the basic message of Mark 1:11 but may add another biblical allusion. "Hear him" may refer to Deuteronomy 18:15, where the Israelites are warned to heed the "prophet like Moses," the new Moses who would come.

9:8. One may compare Elijah and Moses' vanishing with a Jewish belief assumed especially by the later *rabbis that Elijah could come and go at will, like an angel. In any case, angels were thought able to appear and disappear.

9:9-10. Given their cultural presuppositions, it was difficult for the *disciples to understand what had happened; they assumed that all the righteous dead would be resurrected simultaneously at the end of the age (cf. Dan 12:2).

9:11. The Jewish people expected Elijah to come at the time of the end (Mal 4:5), to prepare the Lord's way (Mal 3:1; Sirach 48:1-10), though they held different views on his exact function.

9:12. Elijah would come "to restore all things," that is, to reconcile families (Mal 4:6; although later rabbis interpreted this restoration as straightening out Israel's genealogies, people understood the text more broadly in this period; Sirach 48:10).

9:13. Most Jewish people were expecting the real Elijah (whom the disciples saw speaking with Jesus), but by applying the promise of Elijah to John, Jesus interprets it much more figuratively than most of his contemporaries would have.

9:14-32
Insufficient Faith for Exorcism

9:14-15. Like Moses, Jesus must deal with the failure of those he left in charge once he comes down from the mountain (Ex 24:14; 32:1-8, 21-25, 35). Most *scribes did not claim the power to work miracles, in contrast to Jesus' disciples (6:12-13). Teachers of the *law presumably knew the Hebrew Bible on a more sophisticated level than the disciples did, so if the disciples could not demonstrate God's power in other ways, they risked their credibility. Foaming at the mouth also appears in an analogous ancient example.

9:16-18. The possessed person's lack of control over his own motor responses is paralleled by examples of spirit possession in many cultures through history and is attested in anthropological studies of spirit possession today. Some writers have noted parallels between the form of demonized activity depicted here and epileptic behavior, but epilepsy has a neurological basis (epilepsy and demonic possession are distinguished in Mt 4:24). The parallels could indicate that the spirit interfered with the same centers in the brain where seizures could also be induced by other means. Brain research shows that neurological parallels to possession trances on some level occur even in REM sleep, sleepwalking, and a variety of other states; the brain is neurologically susceptible to altered states of consciousness, not all of which directly require the activity of alien spirits. Some of these states may, however, facilitate spiritual experiences (positive or negative); likewise, it would not be surprising that spirits invading some aspects of the personality could overload the human nervous system.

9:19. Mature disciples were supposed to be able to carry on in their teacher's absence;

sometimes a teacher would delegate lectures to his advanced pupils. The matter at hand requires a different sort of preparation than lectures did (9:29), but Jesus had already prepared them (6:7-13).

9:20-22. Demoniacs were often self-destructive (cf. 5:5), which again characterizes a number of cases of spirit possession attested in diverse cultures. See also comment on 9:16-18.

9:23-27. Exorcists usually tried to subdue *demons by incantations (often invoking higher spirits), by using smelly roots or the like. Jesus here uses only his command, showing his great authority.

9:28-30. Jewish teachers often explained more mature subjects (too risky for the public to hear) to their disciples in private. In a culture dominated by honor and shame, rebukes and admissions of failure were also better carried out in private. The few reports of miracle-working sages do not suggest that such sages usually expected their disciples to be able to emulate their power (though Elisha carried on Elijah's work), certainly not on the same level. Nevertheless, teachers often prepared their advanced students to become teachers themselves. Few rabbis were seen as miracle workers, and few who were expected their disciples to be able to emulate their power (though Elisha carried on Elijah's work), certainly not on the same level, and certainly not in the rabbi's name (v. 39). Exorcists' methods normally focused on their own power or, more precisely, their ability to manipulate other powers; Jesus here emphasizes prayer instead (9:29).

9:31. The context of Daniel 7:13-14, which speaks of God entrusting his *kingdom to one like a *Son of Man, declares that suffering at the hands of the evil world ruler precedes exaltation (7:18-27).

9:32. Suffering was not part of the contemporary expectation for the *Messiah; to understand Jesus' message, the people need a paradigm shift in their categories and values (cf. 8:29-33). Disciples always strove to be respectful toward their rabbis. They would regard their fellow disciples as their peer group and thus might not include the rabbi in a dispute among themselves; confronting him would also cost them honor (cf. 8:32-33).

9:33-37
The Greatest Is the Child

9:33-34. Competition for honor was important in many ancient societies. Those with capital could advance economically, but most people in ancient society lacked sufficient capital for advancement and were thus locked into roles determined by birth. Even those who improved economically could not break into the aristocracy. In other circles, rank was assigned by noble birth, by age, by being the academically most advanced pupils in a school, or by advancement in the law; thus, for example, the *Qumran sect annually reevaluated each member's rank, which determined their seating and speaking order. Most groups seated people according to social rank. By whatever means it was determined, rank was a critical issue in ancient life (cf. comment on 1 Cor 14:27). Many Jewish people hoped for a new status in the world to come, based not on noble birth but on faithfulness to God's covenant.

9:35. In antiquity, as today, heroes or benevolent people with power were preeminent. Rabbis stressed humility but expected their disciples to serve them.

9:36. Much more than today, in antiquity children were especially powerless in society and dependent on parents.

9:37. In Jewish custom, a person's agent, similar to a modern business representative, could act on behalf of the person who sent him. To the extent that he accurately represented the one who sent him, the agent was supported by the sender's full authority; the principle was applied in the *Old Testament to God's messengers, his prophets (1 Sam 8:7). How one treated the poor could also show one's treatment of the Lord (Prov 19:17).

9:38-41
Turning Away a True Believer

Here the *disciples, who shortly before could not cast out a *demon by using Jesus' name, criticize one of the "little ones" who did act in his name (cf. 9:37) by casting out demons (cf. Num 11:28). The format of this discussion resembles ancient *narratives in which a famous teacher refutes the contentions of the less informed.

9:38. Like individuals, different schools and sects often competed against each other. Sectarian attitudes were common in Judaism, as the *Dead Sea Scrolls testify. (Some Jewish groups would break away from others over such issues as the correct day for Passover.) Their zeal is misplaced (cf. Num 11:28; the reader may also recall other disciples' recent failure to expel a demon, 9:28).

9:39. Merely recognizing Jesus' name is one thing, but having the faith to do a miracle in that name indicates that this man was not just a typical exorcist trying to use a more powerful name to accomplish miracles, as exorcists often did (Acts 19:13-16; cf. Josephus, *Jewish Antiquities* 8.47). This exorcist probably seeks instead to act as Jesus' agent (cf. comment on Acts 3:6).

9:40. "He who is not against you is for you" may have been a proverb (cf. several sources, including *Cicero, a first-century B.C. Roman author); Jesus adapts it to make his point.

9:41. Jesus had spoken of welcoming his disciples (Mk 6:8-11); here Jesus refers to those who are so poor that they have only water to give when a disciple comes to them. Such people are very poor even by ancient standards (1 Kings 17:12). This action reflects faith and hospitality one would normally show to teachers one respects (1 Kings 17:12-16; cf. Lk 11:5-6) but not to those one thought to be false (2 Jn 10). Some ancients even told stories of people judged because they did not give even water or other available provisions to strangers, some of whom turned out to be divine or divine agents. Jewish teachers often spoke of receiving one's "reward" when God judged the world.

9:42-50
The Penalty for Turning a Believer Away

9:42. "Stumble" was often used metaphorically to refer to sinning or falling away from the true faith. Millstones were extremely heavy; one would certainly drown with a millstone tied around one's neck. Further, this term refers to the heavier kind of millstone turned by a donkey, rather than the lighter kind a woman would use. Jewish people regarded drowning as the awful sort that pagans might execute; thus the image is all the more dreadful. Death without burial (including death at sea) was regarded as the worst kind of death; pagans even believed that the spirit of the deceased hovered eternally over the waters where the person had died (see comment on Acts 27:20).

9:43-47. The imagery here may be corporal punishment (cutting off appendages, e.g., Ex 21:24-25) versus a form of divine capital punishment. Some Jewish thinkers believed that one would be resurrected in exactly the form in which one had died (e.g., with limbs missing, as in the case of many martyrs) before being made whole (cf. **2 Baruch* 50).

9:48. Here the imagery is from Isaiah 66:24. Although one could read Isaiah as applying only to the eternal destruction of corpses (cf. Sirach 10:11; 19:3), the imagery had nevertheless apparently already begun to be applied to eternal torment (Judith 16:17).

9:49. Salt was used on sacrifices (Lev 2:13; Ezek 43:24; cf. **Jubilees* 21:11), so the image might relate to the burning of 9:48 (though salt is positive in 9:50). Or cf. perhaps Deut 29:23.

9:50. Here Jesus apparently changes salt to a positive metaphor, perhaps meaning "peace." That real salt (as opposed to the impure salt mixtures from some inland sea deposits then known) by definition does not lose its saltiness only reinforces the strength of the image (see comment on Mt 5:13). Being "at peace with one another" contrasts with the divisiveness related in 9:33-38.

10:1-12
Divorce Forbidden

Because 10:1-12 addresses the treatment of spouses, 10:13-16 deals with the treatment of children, and 10:17-31 relates to one's true household in the *kingdom, some scholars have compared 10:1-31 to the ancient literary form "household code," except that this passage is in *narrative form. If this comparison is at all relevant, it is interesting that Mark's point runs counter to the values of those codes in his culture, which stressed the absolute submission of wives, children and slaves (see comment on Eph 5:21-33).

10:1. Most teachers who taught in public did so in specific localities. Only figures popular with the masses drew such crowds as

Jesus did wherever they went, and these popular teachers would naturally arouse the envy of many local professional scholars and the discomfort of the authorities.

10:2. Matthew's wording (Mt 19:3; see comment there) is closer to the exact wording *Pharisees would normally have used at that time; the issue was the *grounds* for divorce, not whether divorce was ever valid. Because Moses had assumed the practice of divorce (Deut 24:1), Jewish interpreters debated only the grounds for divorce; to ask whether Jesus thinks divorce is permissible at all is to ask whether he knows or agrees with Moses' *law.

10:3-5. Rabbis distinguished between what Scripture commanded and what it allowed as a concession; by asking what Moses "commanded" Jesus invites them to recognize that Moses explicitly only "permitted," not "commanded," divorce, on any grounds.

10:6-9. Taking for granted the unity of the law, Jewish interpreters commonly appealed to one clear text of Scripture to counter or explain another's use of a text that they felt unclear. Some interpreters, like the scribes who wrote the *Dead Sea Scrolls, appealed to the creation *narrative to show God's original plan for marriage. These interpreters used Genesis 1–2 to argue against polygamy; Jesus uses it to argue against divorce. (Reflecting Greek custom against polygamy, the *Septuagint had substituted "two" for the original Hebrew "they" in Gen 2:24.)

10:10. After a teacher offered an unsatisfying public response, *disciples could seek more detailed explanations from their teachers privately.

10:11. No one else in antiquity spoke of divorce in such strong terms. (Because most Jewish teachers allowed polygamy, they would not have seen marrying a second wife as adultery, even if they had agreed that the man was still married to the first wife. But Jesus eliminates the double standard; a man consorting with two women is as adulterous as a woman consorting with two men.)

Ancients allowed remarriage after valid divorces; this saying thus regards divorces as invalid in God's sight (hence subsequent unions as adulterous). That Matthew (Mt 5:32; 19:9) and Paul (1 Cor 7:15) state exceptions may suggest their recognition that the saying functions as *hyperbole, or as a general principle allowing exceptions (like many proverbs or other sayings of Jewish sages), reinforcing the literal point of 10:9. That he does not actually teach the ontological indissolubility of marriage—i.e., that a divorced person remains genuinely married even once divorced—is clear from the exhortation in 10:9 (cf. Jn 4:18). Hyperbole was a common teaching technique, but it was always meant to underline a point—here, that Jesus' followers must uphold their marriage covenants to the fullest extent in their power (as in 10:9). Jesus' point is to advocate fidelity to one's spouse, not to break up existing polygamous or remarried unions.

10:12. Unlike Roman law, Pharisaic interpretation of biblical law did not permit a woman to divorce her husband (although under extreme circumstances she could request that the court force him to divorce her). The only Jewish women known to have flouted this law were aristocrats like Herodias (6:17), who paid more attention to Greek custom than to Palestinian Jewish custom. Mark, who writes for readers living where wives could divorce their husbands, may be bringing out the implications of Jesus' teaching for them too. (Like modern preachers, ancient writers were expected to paraphrase sayings when needed to bring out their meanings.)

10:13-16
Images of the Kingdom

10:13. Children were loved but were socially powerless; the high childhood mortality rate meant that they were physically powerless as well, many dying before attaining maturity. (In the poorest places, like Egypt, perhaps as many as half of those born died by the age of twelve. Poorer *Gentile families often discarded babies if they thought they could not support them.) Eager to get on with the business of setting up the *kingdom, the disciples have little time for people who do not wield political power—compare the disciples' response, and Jesus' rebuke, with 2 Kings 4:27.

10:14-15. Some thought that the kingdom would be achieved by force of arms; others, by radical moral reform; and many, simply in God's time. But although Jewish people (unlike Greeks) respected humility, no one expected the kingdom to come by becoming

powerless like children. The totally powerless might learn to simply depend on a heavenly Father.

10:16. In Genesis some of the patriarchs conferred blessings by the laying on of hands (Gen 48:14), and their prayers were answered.

10:17-31
A Rich Man and the Kingdom

10:17. A pious man customarily sought out his own teacher; a man of wealth could normally find the best or most popular teacher for himself. For a man of wealth to bow before a teacher indicated tremendous respect. Ancient sources show that at least some disciples asked their teachers questions like the one this rich man asks Jesus. To "inherit *eternal life" meant to share in the life of the coming world, the life of the *kingdom of God.

10:18-19. Without denying that he himself is good, Jesus reminds the man of the standard Jewish conception of God's goodness (others could be good, but no one compared with God); he then lists select commandments from the *Old Testament (five from the Ten Commandments) dealing with human relations (rather than directly with God) that people could test (not, for instance, a prohibition against a sin of the heart, coveting).

10:20. If only God is good, the man will have to admit he has broken some commandment; but the commandments Jesus had listed were kept by most well-raised, educated Jewish people.

10:21-22. Judaism stressed charity heavily, but ordinary Jewish teachers did not require a prospective disciple to divest himself entirely of funds. Several teachers, especially some radical Greek teachers, made such demands on rich students to see if they would value true teaching above their wealth; a few rich persons would give up their goods, but most disappointed such teachers. Jewish *Essenes relinquished property when they joined their movement; some Old Testament prophets also made radical sacrifices to follow God's call (see, e.g., 1 Kings 19:19-21).

10:23-24. Jesus turns the social order upside down. The well-to-do were often hailed for their generosity (though they had more to give); being less educated in the *law, the poor were sometimes seen as less pious (although poverty itself was certainly not seen as a sign of impiety, especially by the poor themselves). Others saw the "poor" as more pious, the oppressed who depended on God.

10:25. This image reflects a Jewish figure of speech for doing something impossible (Babylonian Jews spoke of an elephant going through a needle's eye, but camels were the largest animal in Palestine). The saying, a *hyperbole, refers to a literal needle. (Those who think Jesus refers here merely to a gate in Jerusalem called the "eye of a needle" are mistaken; the alleged "needle's eye" gate was built in medieval times.) A wealthy person could relinquish wealth only by God's *grace (10:26-27).

10:26-30. Fishermen and *tax gatherers had some economic independence; these disciples had abandoned their economic position to follow him. Their reward would be found in believers sharing possessions as a family in this world (cf. 6:10; Mt 10:42; Acts 2:44-45) and receiving the life of the *kingdom in the world to come.

10:31. Most Jewish people understood that the day of judgment would turn things upside down (cf., e.g., Is 2:11-12, 17); those who appear great in this world will be nothing in the next, and those who were nothing in this world will be great in the next. Jewish people applied this principle especially to the exaltation of Israel over the other nations, the oppressed righteous over their wicked oppressors, but Jesus applies it also to individual rank and status.

10:32-34
Third Passion Prediction

10:32. Despite their expectation of the coming *kingdom, the *disciples recognize the danger of going to Jerusalem and confronting the *high priestly aristocracy there (perhaps based on experience with others, such as *Pharisees who debated with Jesus, or from earlier festivals). Perhaps they are aware of Jewish traditions about a terrible war preceding the final establishing of the *Messiah's kingdom—a war in which, according to some marginalized groups, the Jerusalem aristocracy would prove as evil as the Romans (cf. the Dead Sea Scrolls). Or perhaps they fear primarily the Roman garrison in Jerusalem.

10:33-34. Jesus warns against both the Jewish aristocracy and the Romans, who will

execute him in the manner customary for revolutionaries. On the suffering *Son of Man, see comment on 9:31. Many Jews condemned the corruption of the priestly aristocracy of this era.

10:35-45
The Greatest Is the Servant

10:35-37. James and John want the status of viceroys in an earthly *kingdom; this desire again reflects a popular conception of the *Messiah and God's kingdom that Jesus has repeatedly repudiated (see comment on 8:31-38).

10:38. Jesus elsewhere refers to the cross as his cup (14:23-24, 36), which may allude to the cup of judgment that appears often in the *Old Testament (Ps 60:3; 75:8; Is 51:17-23; Jer 25:15-29; 49:12; Lam 4:21; Zech 12:2). His *baptism in some way also prefigures his death (see comment on 1:11; cf. Lk 12:50; Ps 69:2, 14-15).

10:39-40. The positions on either side of a king's throne (especially the right side) were the most prestigious in a kingdom. (Jesus might, however, be alluding instead to those crucified on his right and his left; 15:27.) James was later the first of the twelve martyred (Acts 12:2), but according to *church tradition John lived into the nineties.

10:41-42. Competition for status was rife in Mediterranean antiquity. Jewish people knew well the *Gentile model of authority: many ancient near Eastern kings had long claimed to be gods and ruled tyrannically; Greek rulers had adopted the same posture through much of the eastern Mediterranean. The Roman emperor and his provincial agents (who often showed little concern for Jewish sensitivities) would have been viewed in much the same light: brutal and tyrannical. Jesus' reminding the disciples that seeking power was a Gentile (i.e., pagan) practice was tantamount to telling them they should not be doing it; Jewish teachers used Gentile practices as negative examples.

10:43-44. It was radical for Jesus to define greatness in terms of servanthood; despite Jewish rules requiring that slaves be well treated, Jewish free persons, like their Gentile counterparts, considered slaves socially inferior. Although both slaves and free persons varied in rank, slaveholders treated their slaves as inferior in rank to themselves.

10:45. By calling himself a "servant" and defining his mission as "giving his life a ransom for the many," Jesus probably identifies himself with the suffering servant of Isaiah 53:10-12 (despite contemporary debate surrounding this claim). Although the servant's mission had been given to Israel as a whole (Is 41:8; 43:10; 44:2, 21; 49:3), Israel through disobedience could not fulfill it (42:19), so that the one who would fulfill it had to restore Israel as well as bring light to the Gentiles (49:5-7; 52:13–53:12). Because hardly anyone else had yet applied this passage to the *Messiah, Jesus is trying to redefine their expectation about his messianic mission. On the "many," see comment on Romans 5:15. Some also compare traditional Jewish language for the deaths of martyrs assuaging God's wrath against Israel (see "*atonement" in glossary).

10:46-52
Stopping for a Blind Beggar

The *disciples want to get on with the business of setting up the *kingdom (10:37; 11:9-10), not understanding that stopping for a blind beggar is the sort of thing Jesus' kingdom is all about (cf. 10:13-14).

10:46. The blind, the severely disabled and others who could not engage in the traditional occupations of the day could support themselves only by begging, normally on a busy roadside. Judaism considered it righteous to help them. Jericho was a prosperous town with a good climate, and Timaeus's son no doubt received adequate support there. "Bartimaeus" means "son of Timaeus" (*bar* is *Aramaic for "son"); Mark clarifies that this was literally true in his case (not simply a name or title as in some *bar* names in 15:7; Acts 1:23; 4:36; 13:6; 15:22).

10:47-48. Except for what they had learned from listening to others recite, blind people in that time were largely illiterate in the *law (Braille had not been invented yet, so they could not read, although like vast numbers of other illiterate Jews they could hear the Torah read). Although they were protected under the law of Moses, they were largely socially and economically powerless, and Jesus' followers view this blind man's loud pleas as an intrusion, the way they had viewed the children (10:13). The disciples may have viewed Jesus' final journey to Jerusalem as a royal pro-

cession, and it was foolhardy and impudent to interrupt a royal procession.

10:49-52. Perhaps by "stopping" and standing still, Jesus allows the blind man to come to where Jesus' voice had last sounded. The "cloak" (10:50) is an outer garment, used as a coat in cold weather and as bedding at night, and possibly might have been spread before him for use in his daytime begging if he had no pouch. On the narrative level, the act of casting it aside may signify his forsaking dependence on anything else and trusting only in Jesus.

11:1-11
Jesus Enters Jerusalem

Although later Jewish teachers understood "the king coming on a donkey" (Zech 9:9) messianically, it is not clear that the whole crowd understands Jesus' claim to *messiahship here (he would not be the only person to ride a donkey). Had members of the Roman garrison been present outside the gates and recognized the implications of Jesus' claim, they would have arrested him.

11:1-2. Heralds or messengers were typically sent two by two (6:7; cf. 14:13). That Jesus chooses a colt over a grown donkey might reinforce Mark's portrayal of his humility (cf. also the final line of Zech 9:9). Also custom frequently preferred animals for divine use not yet used by people (Num 19:2; Deut 21:3; 1 Sam 6:7). In second-century Egypt, donkeys ranged in price from 50 to 350 drachmas—roughly between two and ten months' complete wages for a worker. Obviously borrowing an animal for the occasion was more economical than seeking to buy one!

11:3. Residents of the area around Jerusalem had to be particularly hospitable with their property around Passover season, when Jewish pilgrims from the whole ancient world came for the feast. The response to the potential question could have meant, "Lend these to Jesus, the teacher" (*Aramaic *rab* can be translated as "master" or "lord"), or "Lend these to the service of God." A king (or even Roman soldiers) could "impress" an animal for use (see comment on Mt 5:41).

11:4-6. In many cities, the doors of homes faced a courtyard shared by neighbors; in a small village, the doorway may have just faced a dirt road through the town. People would normally ride the adult, not the colt never before ridden, so the *disciples' purpose in untying the colt may not have been immediately obvious even had they owned it themselves.

11:7. A king "coming on a donkey" evokes Zech 9:9 (construed messianically by some later *rabbis), though it is not clear that the crowds recognize the allusion. The Romans would have arrested someone they suspected as a claiming to be a ruler, but no one would expect a genuine messianic claimant to enter Jerusalem peacefully and unarmed, since certain death would await such a person.

11:8. The spreading of garments represents what could be construed as royal homage (2 Kings 9:13). Branches were also waved in homage to rulers (cf. 1 Maccabees 13:51; 2 Maccabees 10:7). Jericho was 17 miles (about 27 km) uphill to Jerusalem, and possibly some larger branches were carried from there, though local ones (still smaller in the spring) might be easier for the colt to walk on. (Carrying branches was also part of the worship at the feast depicted in Ps 118:27.)

Pilgrims to the feast were typically welcomed by crowds already there, so it is unlikely that the whole crowd recognized the significance of Jesus' entry. Nevertheless, Jesus was well-known especially among the Galileans who had come to the festival. In view of the crowd's acclamation in 11:10, the image that may have come most readily to the minds of Mark's ancient hearers is probably that of a royal entrance procession.

11:9. "Hosanna" means "O save!" and both this and the next line of verse 9 come from Psalm 118:25-26. Psalms 113–118, called the Hallel, were regularly sung at Passover season, so these words were fresh in everyone's minds (cf. also comment on 12:10-11). Hopes for the restoration of the Davidic kingdom also ran high at this time of year; Rome thus had extra troops on hand at this season to control any unrest.

11:10. The coming of the *kingdom when David or his descendants would again reign (e.g., Is 9:7; 11:1; Jer 23:5-6) is here associated with the hope of one coming in the Lord's name. (David is their "father" in the sense of

"deliverer," not their ancestor: cf. Is 9:6; 2 Kings 13:14.) Passover commemorated God's deliverance of Israel from slavery in Egypt; consequently, Jewish hopes for a future deliverance from their current problems ran high during this season, and the Roman governor had some extra troops in Jerusalem ready in case riot control became necessary. By treating Jesus as the object of any of these hopes, the crowds are beginning to see in this teacher a possible messianic figure who could, on many views, lead them against the Romans.

11:11. The ancient workday began at sunrise; the "evening" offering in the temple was what we call afternoon (about 3 p.m.); people normally wanted to be near home by dark. "Late" may mean not "dark" but rather that the daily activity in the temple had begun to subside. Although eating the Passover in Jerusalem, as was expected, Jesus lodged in Bethany (11:11-12), about three kilometers east of Jerusalem on the southeastern slopes of the Mount of Olives.

11:12-25
The Temple and the Tree: Judgment Coming

Jesus' prophetic act against the temple is enclosed by the story of his cursing the fig tree, also an acted *parable of judgment. Fig trees were one of the most common kinds of trees in Palestine.

11:12-14. At this time of year, edible figs were still about six weeks away, but the bland fruit had recently appeared on the tree in late March; they would become ripe by late May. These were the early figs that preceded the main crop of late figs, which were ripe for harvest from mid-August into October. If only leaves appeared, without the early figs, that tree would bear no figs that year—whether early or late. Because everyone would know that it was "not yet the season for [real] figs," Jesus seems to be making a point about trees that only pretend to have good fruit (cf. Jer 24). In some Jewish stories, exceptionally holy men could curse others or objects and so destroy them; Jesus exerts genuine authority to curse only here, as an acted parable to his disciples.

11:15. Jewish people from other parts of the empire or even from different towns in Galilee would have local currencies that needed to be converted to some standard for use in the temple. Further, one was not to bring sacrifices from long distances but to convert their resources into money first (Deut 14:24-27) and buy the sacrifices in Jerusalem (cf. Ezra 7:17). The temple providing offerings (like pigeons here; Lev 1:14; 5:7; 12:8) locally was a service helpful for pilgrims. Moneychangers and sellers of doves were thus necessary and in some sense biblical. The issue is not whether there should have been moneychangers; it is whether it was valid to turn much of the outer court into a place emphasizing commerce to the detriment of worship. With hundreds of thousands of pilgrims at Passover, the merchants' strip in the temple must have been quite large, consuming much attention. The Sadducean priests who ran the temple establishment would see actions challenging the peace of the temple as also direct challenges to their own honor; such challenges were usually met with arrest and its consequences.

11:16. Later rabbinic teaching also complained against defiling the temple courts by carrying unnecessary items through them (although it is not clear that anyone would have enforced this principle in the first century). But no one protested as strongly as Jesus does, and no one seems to have questioned the necessity of commercial activity in the outer court at a feast.

11:17. Jesus cites two texts as the basis for his challenge. The first is Isaiah 56:7. In context, Is 56:7 shows that God-fearing *Gentiles will be welcome in the restored temple (always God's purpose for the temple; cf. 1 Kings 8:41-43), and in the *Old Testament the only separation in the temple was between priests and people. But in Jesus' day the temple was also segregated by ethnicity and gender for purity reasons, with Jewish women on a lower level outside the Court of Israel and non-Jews in the outermost court. Jesus shows his concern for the worship of the Gentiles and protests ethnic segregation in a divine institution.

The second text he cites is from Jeremiah 7:11, where Jeremiah condemns the idea that the temple is a safe haven for Judah in its sin; although those who have exploited the poor think that the temple will protect them, God will destroy his temple (Jer 7:3-15). Robbers' "dens" were the sort of places where robbers

kept their loot. Some also point out that in A.D. 66 rebel brigands or "robbers" (for whom *Josephus uses the same term as Mark) took possession of the temple and slaughtered the priests, further inviting God's impending wrath (see comment on 13:14).

11:18. The priestly aristocracy undoubtedly saw in Jesus' attack on the temple establishment a threat to their own economic and social interests (see comment on 11:15). The priestly aristocracy maintained their power and prestige by maintaining peace for the Romans, and the foundation of their priestly power was the temple. Most other Jewish groups (excluded from power), including Pharisees, Essenes and reports in Josephus, portrayed the priestly aristocracy as abusive and corrupt.

11:19. Many pilgrims lodged in the surrounding villages and countryside. Jerusalem was too crowded at Passover season to accommodate all the pilgrims during this period, though as many pilgrims as possible would seek to eat the Passover meal itself within or near the city's walls.

11:20-24. Some Jewish texts speak of "removing mountains" as an infinitely long or virtually impossible task, accomplished only by the most pious (later rabbis applied it to mastering studies that appeared humanly impossible to master). Thus Jesus is saying that nothing will be too hard for the person who trusts God (cf. Gen 18:14). The image of God's *Spirit bringing down a mountain before a faithful servant also appears in Zechariah 4:6-9; before God's servant, God would bring down all obstacles opposing the tasks God designates. The promise of one's commands coming to pass probably presupposes God's leading or authorization (cf., e.g., 2 Kings 2:21-22; 4:3-7, 41-44; Lam 3:37; Acts 3:6, 16).

11:25. Standing (often with uplifted hands) was the normal posture for prayer; though kneeling occurred, it was much rarer.

11:27-33
By Whose Authority?

11:27-28. As guardians of the temple and the status quo with the Romans, the chief priests would see Jesus' act as a direct challenge to their authority. Were Jesus not so popular, they might have already arrested him.

11:29. Counterquestions were common, and here one allows Jesus the opportunity to remain coy about the messianic secret (see introduction to Mark). An agent acted on the delegated authority of the sender.

11:30. Here Jesus argues that his authority and John's derive from the same source, from "heaven" (one familiar Jewish way of saying "God"). This argument follows the Jewish legal principle that a commissioned messenger acts on the full authority of the one who sent him. If John's authority were merely human (cf. Deut 18:20; Jer 23:16), they should have taken a firmer stand against him (Deut 13:1-11); if it was divine, God would hold them to account for not having listened (Deut 18:18-19; 2 Chron 20:20).

11:31-32. The chief priests were politicians—less popular than the politically powerless *Pharisees—who had to balance the interests of both their people and the Roman authorities. Holding most local political power, they had great incentive to prevent unrest. Thus they had to keep popular opinion in mind when making decisions that might incur the displeasure of the people (11:32).

11:33. Public admission of ignorance on an important matter would count against their honor, but offered less trouble than outrightly condemning John. Counterquestion (11:29) was a legitimate means of debate; their withdrawal from the rules of debate *rhetorically frees Jesus from the responsibility to continue in dialogue with them.

12:1-12
The Greedy Tenant Farmers

On "*parables," see the glossary. Jesus still addresses those who fancy themselves rulers of Israel, reminding them that they are merely custodians appointed by God (like the shepherds of Jer 23 and Ezek 34) over his vineyard.

Much of the rural Roman Empire, including parts of Galilee, was controlled by wealthy landowners, whose land was worked by tenant farmers. Landowners had great status in society, whereas tenant farmers had little except, perhaps, among their own peers.

12:1. Here Jesus describes a normal way to prepare a vineyard, but he clearly alludes to Isaiah 5:1-2, where Israel is the vineyard. Some Jewish interpreters by the time of Jesus saw Isaiah 5 as a prediction of the temple's de-

struction in 586 B.C.; if such an allusion was in the mind of any of Jesus' hearers, it would communicate his warning all the more forcefully.

Vineyards, unlike grain fields, often had walls to protect their fruits from animals and people. According to the most likely reconstructions, the "wall" was a rugged stone hedge, and the vat was a pit into which juice would run when workers trod down newly picked grapes. The top of the "watchtower" was a sentry post against intruders, but the building itself, sometimes a crude hut, may have also housed workers during harvest season.

12:2. Payments were normally rendered at harvest time, often one-quarter to as much as one-half the produce. (Landowners technically could be said to own all the produce until tenants paid their rent.)

12:3-5. Ancients appreciated the ideal of benevolent landowners, but also knew that landowners always had power, socially and legally, to enforce their will on the tenants; a few reportedly even had hired assassins to deal with troublesome tenants. They could displace the tenants if they chose. Here the tenants act as if they are the ones with power, and they exploit it mercilessly, without thought for consequences. Their behavior fits the Jewish tradition that Israel martyred many of the prophets God sent.

12:6. In the light of 1:11 and 9:7, the "beloved son" clearly represents Jesus and probably alludes to Genesis 22:2, where similar Hebrew words were used by Jewish readers to emphasize the pathos involved in Abraham's willingness to give up his precious son Isaac. No ancient landowner, no matter how benevolent, would have gone to such ends to satisfy tenants who had already killed messengers; ancient hearers would view him as naive, but recognizing in his behavior God's continued mercy to Israel would also lead to affirming that God would be right to judge his people.

12:7-8. "Come, let us kill him" probably echoes Joseph's brothers in Gen 37:20. The tenants presume too much about the inheritance; although they could have seized it under certain legal conditions, the owner could also stipulate—and after their misdeeds certainly would—that someone else inherit the vineyard; or representatives of the emperor could have seized it. The story paints the tenants as more wicked and stupid than one would expect any *real* tenants to be; but it is transparent that the tenants represent the religious leaders who serve themselves rather than God (Mk 12:12).

12:9. Ancient hearers would wonder why the landowner had not come and thrown out the tenants earlier, after 12:3-5.

12:10-12. This text is from Psalm 118:22-23, part of the Hallel, like 118:25-26 cited in 11:9-10. The Hallel was particularly fresh on people's minds for the Passover. If the larger context is in view, the building referred to is presumably the temple (Ps 118:18-21, 25-27); as the cornerstone of a new temple, Jesus is a threat to the builders of the old one.

12:13-17
Caesar and God

Rabbis dealt with questions concerning legal, moral and exegetical issues as well as mocking questions posed by opponents (e.g., *Sadducees, *Gentiles, apostates and schismatics). Parallels to these basic categories of questions appear in 12:13-37, where Jesus' answers prove him a proficient *rabbi.

12:13. *Pharisees tended to be nationalistic, whereas Herodians were clients of Herod, the Roman vassal; they worked together only in extraordinary situations. Pharisees would be concerned about Jewish legal requirements to have witnesses for a charge but would be ready to investigate charges concerning Jesus' disloyalty to the *law. That they would try to test his teaching here is not surprising. The Herodians, who hoped for a restoration of Herodian rule in Judea (which *Pilate currently governed), were naturally disturbed by messianic figures who challenged their idea of Herodian rule and might cause Rome to tighten its direct control over the land.

12:14-15. Knowing that much of the populace resents Roman taxation and that many may look to Jesus for deliverance, they know that Jesus cannot accept taxes without alienating his constituency. If Jesus denounces Roman taxes (as they probably hope), accepting no king but God, the view characterized by those later called *Zealots, he can be arrested as a threat to public order and handed over to Rome for execution on the charge of sedition and treason. A disastrous tax revolt

two decades earlier had shown where nationalistic fervor could lead.

12:16-17. Jewish Palestine circulated copper coins that omitted the image of the deified emperor, which was offensive to Jewish tastes. (Although King Agrippa later used both the image of the emperor and his own, Herod Antipas, current ruler in Galilee, avoided any images on his coins, and so did local Judean coinage.) But Jesus' opponents have a silver denarius—which bore the emperor's image—available when he requests one. They are therefore hardly in a position to challenge his lack of nationalistic zeal. As for rendering to God what is God's, some commentators believe that Jesus appeals to what is made in God's image: humans should give themselves to God (Gen 1:26-27).

12:18-27
Sadducees and the Resurrection

12:18. One of the basic points of contention between Pharisees and *Sadducees was that the latter did not accept the future *resurrection of the bodies of the dead.

12:19. The Sadducees' question to Jesus concerns the custom called levirate marriage (Deut 25:5-6), which was meant to protect widows economically. In various forms, both ancient Middle Eastern cultures and many traditional societies today employ levirate marriage. It helps widows in societies where women cannot earn adequate wages.

12:20-23. The Sadducees take this story line from the Jewish book of Tobit, where seven successive husbands of pious Sarah die (though they were not brothers).

12:24-27. Jesus' response resembles standard Pharisaic responses. When Pharisees debated this issue with Sadducees, they argued for the resurrection from the *law of Moses, and typically read a text for all they could get out of it. Standard Jewish interpretive technique would have read Exodus 3:6 as present tense, "I *am* the God of the patriarchs"—implying that the patriarchs still lived (cf. similarly 4 Maccabees 7:18-19; 16:25; Philo, *Abraham* 50–55). Phrases such as "in the passage about the bush" were standard, because the Bible had not yet been divided into chapters and verses.

12:28-34
The Love Commandments

12:28. A common issue of discussion among ancient rabbis was the question of which commandments were heavier (i.e., more important) and which were lighter (cf. comment on Mt 5:19).

12:29-34. Following Jewish interpretive technique, Jesus links the two commandments (Deut 6:5; Lev 19:18) by a common key expression, "You shall love." Some others also linked these passages (e.g., *Philo) and also summarized the *law in terms of devotion to God and to others. Some other teachers ranked these among the greatest commandments that summarized the law (e.g., Rabbi *Akiba in the early second century viewed Lev 19:18 as the greatest commandment; cf. *Sifra Qedoshim* pq. 4.200.3.7). This was especially true of "Love the Lord your God," which followed directly on and applied the basic confession of Judaism, "Hear, O Israel, the Lord . . . is one" (Deut 6:4). Many Jewish teachers affirmed that the best motive for serving God was love. That many of Jesus' hearers would recognize the plausibility of his reply makes it all the more difficult to dispute with him on the matter.

12:35-37
David's Lord

When Jewish teachers challenged their hearers to resolve apparent discrepancies in Scripture, they assumed that both texts were true (in this case, Jesus knows that he is both David's son, as in 10:47-48, and David's Lord) and were asking how to harmonize them.

12:35. By definition, the Christ, or anointed one, was the royal descendant of David (Is 9:7; 11:1; Ps 2; 89; 132). But this view of *messiahship could lend itself to a primarily revolutionary view of the *kingdom (see 11:10) and was thus inadequate by itself.

12:36-37. Jesus' opponents apparently have no answer, because extant sources do not suggest that Jewish interpreters applied Psalm 110:1 to the Messiah. Yet who else might the psalmist's second "lord" be, since Jewish tradition (reflected in the psalm's superscription) viewed David himself as the author? The one who would reign in God's kingdom was Da-

vid's "lord," not merely his descendant; he would thus be greater than the resurrected David. Writing in Greek, Mark might want his hearers to connect this verse (Ps 110:1) with a verse he has cited in the preceding section, because Jewish interpreters often linked verses with a key word—there was only one Lord: God (12:29). If so, Mark offers another claim for Jesus' deity here (cf. 1:3).

12:38-44
The Pious Poor and Their Religious Oppressors

12:38. Like their Greek counterparts, some Jewish teachers wore a special identifying garb; this seems to have been a long, white linen robe, similar to those of priests and temple officials. Teachers were normally greeted with titles of honor; marketplaces, which were full of people, would provide many opportunities for these teachers to receive such recognition. Custom demanded greeting social superiors before the superior could greet the required greeter.

12:39. Synagogues were not all of the same shape or size, but in many later *synagogues, teachers could take a seat in full view of most of the rest of the assembly (like ministers in most churches today). In some, many people probably sat on the floor, with persons of greater status on benches around the wall and sometimes other benches, and the best seats on the raised platform where this existed. What is significant is their status in a status-conscious society; synagogues were the most important assembly places for the community. At banquets, those seated nearest the host were in positions of honor; ancient literature is full of complaints from those snubbed by being given socially inferior seats.

12:40. Widows had little means of support, were socially powerless and honorless in a society emphasizing status and honor, and were to be protected under Jewish *law. In legal cases they normally needed advocates to speak on their behalf.

Jesus could mean that these teachers exploit widows' resources by abusing the letter of the law in legal decisions rather than showing special mercy to the poor, or by favoring more powerful relatives, or by seeking extensive contributions (or insisting on tithes, which Pharisees could set at twenty to thirty percent, on top of the heavy land taxes levied by the government). Whatever their specific crime, the charge of "devouring widows' houses" portrays them as no better than the *tax gatherers.

They may have lingered long in their individual or public prayers in the synagogues (apparently covering up the lack of private relationship with God); it is not the longevity of prayers but the motive of this longevity that Jesus criticizes here. Like the *Old Testament prophets, Jesus denounces both social injustice and religious hypocrisy (e.g., Amos 2:7; 8:5-6), and he stands on behalf of the economically powerless (Is 1:17).

12:41-44. Jerusalem's massive temple had a large treasury, reportedly adjacent to the Court of Women. A later tradition claims that thirteen receptacles for such gifts stood in the Court of Women, accessible to Israelite women as well as to men. Already probably the most massive temple in the Roman empire, supported by an annual temple tax on all adult male Jews (including in the *Diaspora), the temple sported ostentatious wealth (such as a massive golden vine). Its officials would probably waste this widow's money; but this powerless woman, ignorant of that likelihood, acts in good faith in her devotion to God and is the greatest giver in God's sight. Even if all else failed, the widow would not starve, given provisions for the poor in Jewish synagogues (cf. comment on Acts 6:1-4). The widow's "mite," or *lepton,* represented the lightest and least valuable coin of the period.

13:1-4
Setting of Jesus' End-Time Discourse

Mark may have risked serious trouble with the Roman authorities for writing this chapter, if he wrote publicly in his own name; Jewish underground tracts about the time of the end usually included Israel's exaltation, and Rome distrusted any threat to its power. Prophecies favoring Rome's greatness were welcome, but not those implying its demise. But this chapter before Jesus' arrest climaxes Jesus' warnings to his *disciples in Mark: true followers must be ready to follow to the cross and share his sufferings.

13:1. Greek texts sometimes portray Greek philosophical teachers conversing with their disciples while strolling about; this may have been a common teaching technique at least in particular schools (e.g., that of *Aristotle).

The temple complex consisted of many buildings and was perhaps the largest, most magnificent structure in the ancient world; it was twice the size of Solomon's temple. (Probably only anti-Jewish prejudice kept it from being ranked among the seven wonders of the ancient world, for it was larger than the Ephesian temple of Artemis, which was so ranked.) Construction had begun under Herod the Great before Jesus' birth and was still continuing at this time. Jewish people all over the world contributed to the temple, and so much was received that officials kept adding on to a golden vine that was part of its ostentatious glory. It was sacred to Herod's enemies as well as to his allies.

13:2. Many or most Jews considered the temple invincible, but forty years after Jesus spoke these words, in A.D. 70, the Romans destroyed the temple. The wording here is only slightly *hyperbolic: some stones in the retaining wall remained in place, but the temple proper was obliterated. As exemplified in the *Dead Sea Scrolls, some other groups also expected God to judge the temple authorities; but no one before A.D. 66 was as accurate concerning the timing as Jesus was (13:30).

13:3-4. Although Greek teachers often instructed their pupils while walking (13:1-2), they also often instructed them while sitting in front of a temple (a common form of public building in antiquity). The disciples' question to Jesus about the sign of the temple's destruction sets the scene for Jesus' answer in the rest of the chapter, in which he apparently describes both the imminent end of the Jerusalemites' world and the ultimate end of the age. In biblical prophets (e.g., Joel), nearer judgments sometimes prefigured more distant ones.

13:5-8
Not Yet the End

13:5-6. False messiahs often drew significant Jewish followings in Palestine, including known figures over the next few decades (see comments on Acts 5:36; 21:38) and as late as Bar Kochba, whom Rabbi *Akiba hailed as the *Messiah around A.D. 130. Within the decades immediately following Jesus some sought to emulate Moses or Joshua, perhaps viewing themselves as messianic.

13:7-8. Ancient Jewish *prophecy teachers usually listed events like these (often along with some that Jesus does not list, such as mutant infants) among the signs of the end; the end was often portrayed as preceded by great sufferings or a final war, and was sometimes compared with birth pangs. Jesus says that instead these sorts of events characterize all of life until the end; history until the final time is only the *beginning* of birth pangs.

13:9-13
Sufferings to Expect Before the End

13:9. Before A.D. 70, local courts, or councils deciding cases, were probably run by local elders or priests; in later times *rabbis would staff them. Synagogues were the local places of public assembly and thus provided the natural place for hearings and public discipline. Sometimes discipline was administered in the form of flogging, with thirty-nine lashes (cf. 2 Cor 11:24). Under rules dating back to at least the second century rules, this meant thirteen harsh strokes on the breast and twenty-six on the back; the smiter was to strike as hard as possible. These words would have particularly pained Jewish Christians, because they signified rejection among many of their own people.

13:10. In context, this preaching will be carried out before officials of all nations ("kings"—v. 9—could refer just to Rome's vassal princes, but "all nations" suggests that Parthian and other rulers from the East are also in view). Distant kingdoms already then known included Parthia, India and China to the east; Scythia, Germany and Britain to the north; and Subsahara Africa to the south. The context connects this universal proclamation with universal persecution.

13:11. Jewish people thought of the *Holy Spirit especially as the Spirit of *prophecy who had anointed the prophets to speak God's message, and biblical prophets suggest this Spirit's abundance in the end-time.

13:12. See Micah 7:5-7 (more explicit in Mt 10:35-36).

13:13. Enduring to the end might mean

survival (cf. *4 *Ezra* 6:25), but more likely means avoiding apostasy, which was often associated with end-time sufferings.

13:14-23
The Prerequisite for the End

About a decade after Jesus uttered these words, his *disciples had good reason to remember them. When the Roman emperor Caligula declared himself divine and tried to set up his image in the Jerusalem temple (A.D. 39), Jesus' sayings about the impending abomination that would cause desolation must have been circulated with renewed vigor. Paul evoked these sayings a decade later (2 Thess 2:1-12) and to Mark when he wrote his Gospel (perhaps A.D. 64). The abomination that would bring about desolation was finally fulfilled in A.D. 66–70 (cf. earlier cases in e.g., Ps 74:3-7).

13:14. *Josephus, who lived through the war of 66–70, thought the "abomination of desolation" (the reference is to Dan 9:27; cf. 11:31; 12:11) happened in A.D. 66, when *Zealots shed the blood of priests in the temple. Others date the abomination of desolation three and one-half years later, in 70. The Jerusalemites had considered it a sacrilege for the Roman standards, which bore the image of the worshiped emperor, to enter Jerusalem (Josephus, *Jewish Antiquities* 18.59; cf. 1QpHab 6.4). But in the year 70, when the temple was destroyed, the Romans erected these standards over the eastern gate of the temple and sacrificed to them, as they proclaimed Titus, their general, the supreme leader (Josephus, *Jewish War* 6.316). Both views may be true: if the phrase means "abomination that *causes* desolation," then the abomination of A.D. 66 may have led to the desolation of A.D. 70.

The mountains were full of caves and represented the safest place to flee. Earlier David eluded Saul there; the second-century B.C. Jewish revolutionaries, the *Maccabees, practiced guerrilla warfare from the mountains; later, Jewish refugees hid there in the war of A.D. 132–135. Later Christian sources report that the Jerusalem Christians, warned by prophecies before Jerusalem's fall, fled to a place called Pella in the Decapolis, far to the north.

13:15. Housetops were flat and could be used for prayer, drying vegetables, chatting with neighbors and so forth. Because one approached them by an outdoor staircase or ladder and not from indoors, one who fled in haste would descend without entering the house to retrieve any possessions. Even if there is an element of *hyperbole, it graphically underlines the point of urgency.

13:16. Workers would wear their outer coats in the cool of the early morning but leave them on the edge of the field as the day grew warmer. Because poor people depended on these cloaks for warmth at night, loss of the cloak represented a serious difficulty (Ex 22:26-27). This exhortation again indicates haste; preserving life takes priority over even the most crucial possesions.

13:17. The difficulties of bearing or nursing a child under these circumstances are obvious in any culture, especially to mothers. Mothers often nursed their babies for the first two years of life before weaning them (most Judeans would not have had wet nurses). The text could also indicate grief over the loss of the children (cf. *2 *Baruch* 10:13-15), physically unprepared for the hardships.

13:18. Winter brought colder nights, rains and (in the mountains) sometimes even snow; it also sometimes filled the dry Judean creek beds without warning with rainwater from the hills, making them difficult to cross. The melting of mountain snow in spring also could provide problematic flooding. Thus Josephus wrote of a group of Jewish fugitives (during the Judean War, but not from Jerusalem) who were delayed by the recently flooded Jordan in the spring of 68. As a consequence thousands were slaughtered by Roman soldiers (*Jewish War* 4.433-35).

13:19. Daniel 11 ends with Antiochus Epiphanes in the second century B.C., and the final distress to which no other tribulation could be compared (spoken of in Dan 12:1) seems to occur at that time, to be followed by the *resurrection of the dead (Dan 12:2). But sometimes events in Israel's history (like the full promise to Abraham or the conquest of Canaan) were deferred until conditions were right (often Israel's obedience); moreover, Daniel 9:24-27 sounds as if it better fits a date in the first century A.D. than in the time of Antiochus.

Jesus' addition of "never shall be" (Joel 2:2) to Daniel's "such as never occurred" suggests

that other tribulations could follow in history after the designated tribulation of A.D. 66–70.

13:20. "The days" refers presumably to Daniel's days of tribulation (Dan 12:11-12); given the severity of sufferings, the full period would have been too long to permit survivors.

13:21-22. False prophets and false messiahs had gained Jewish followings all through this period and usually challenged the authority of Rome, generally leading to the death of their followers. Josephus reports that some such prophets continued claiming that God would deliver Jerusalem up to their slaughter by the Romans at the fall of Jerusalem. After the temple's demise, hopes for the *Messiah's coming were presumably even more intense.

13:23. Knowing about events beforehand could give one the assurance that God did know and remain in control (e.g., Is 41:26; 48:5).

13:24-27
The End of This World

13:24-25. Here Jesus uses the language many of his contemporaries would have applied to the end or transformation of the present order that would lead to God's eternal *kingdom (Is 13:10; 34:4; cf. 24:23; Ezek 32:7-8). Sometimes this graphic, cataclysmic language was used for historical events (the **Sibylline Oracles* use it for an earthquake; cf. Ps 18:7-16; Jer 4:20-28), but usually ancient literature reserves it for the end or transformation of the present world order and the establishing of God's eternal kingdom.

On this reading, the end Jesus predicted could have been deferred, as perhaps in Daniel; the temple was destroyed just as Jesus predicted, but he did not then return. *Old Testament prophecies sometimes blended together events according to the kind of event rather than the time they would occur. Jesus' point need not be the immediacy of the end after that period, though it might perhaps indicate its imminence, that is, its potential nearness at all times thereafter (see comment on 13:19).

13:26. Jewish texts sometimes speak of God's *eschatological coming with angels (as in Zech 14:5). Jesus thus depicts the *Son of Man in terms that Jewish literature usually reserved for God. The text especially alludes, however, to Daniel 7:13-14, where "one like a son of man" (i.e., like a human being) receives the kingdom from God. This Son of Man functions as a representative on behalf of Israel, who in the same context suffers and also receives the right to rule the world (7:25-27).

13:27. One of the most prominent features of Jewish future expectation was the regathering of the dispersed tribes of Israel (as in the prophets, e.g., Is 11:12; 43:5; 49:5; 56:8). (Mark probably applies the image to the dispersion of believers in Jesus here; cf. 2 Thess 2:1).

13:28-31
The End Is Imminent

13:28-29. The signs Jesus lists show that the end is imminent, just as a fig tree's leaves show what season it is: because fig trees lack smaller branches they appear barren in winter, but they bloom in late March and are ideal for shade in the summer. Some apply this image to Jesus' acted-out *parable with a fig tree, implying the imminent destruction of the temple (see comment on 11:12-25).

13:30. The length of generations varied but was often represented in the *Old Testament by forty years (in the Dead Sea Scrolls, forty years represents the suffering of the final generation). Jesus speaks these words near A.D. 30; the temple would be destroyed in A.D. 70.

13:31. Others also noted that it was easier for heaven and earth to pass than for God to forget his covenant or his words (e.g., promises in Jer 31:35-37; warnings in Zech 1:5-6). Here Jesus speaks of his own words in the same manner.

13:32-37
The Time of the End Is Unknown

13:32. Jewish teachers were divided as to whether God had fixed the future time or whether Israel's *repentance could hasten it; most relevantly here, they were divided as to whether they could predict the time (offering a vast range of divergent predictions) or whether God alone knew it.

13:33-34. Other Jewish teachers also told parables of kings or householders going away and returning to find spouse or servants faithful or unfaithful. First-century readers heard enough stories about such events (including in the Bible—Prov 7:19-20) to relate to the image well. Slaves held many different roles, but in a household with enough slaves

for specialization the doorkeeper's role was a prominent one, because he held the master's keys, kept out unwanted visitors and checked other slaves leaving the premises. But with the relative prestige of the doorkeeper's position (some were even married to freedwomen) came great responsibility as well.

13:35. The times of night that Jesus mentions represent the Roman division of the night into four watches (when enough were available, guards might take shifts on these watches). Jesus' only guarantee is that he will come at night while the servant is posted on guard duty. In most of the ancient Mediterranean a rooster's final crowing could function like a modern alarm clock, signalling the advent of dawn; but in this context it might refer to the "watch" by that name, the quarter of the night after midnight (see comment on 14:30, 72).

Because the roads were infested with robbers, one would not expect the master to travel at night when it was unnecessary. Thus a slave could be caught off guard if the master returned at night.

13:36-37. Falling asleep at one's guard post would lead to punishment.

14:1-11
Anointed for Burial

14:1. In this period, the adjacent festivals of Passover and Unleavened Bread were often viewed together (Josephus, *Jewish Antiquities* 14.21; 17.213; 18.29; 20.106; *Jewish War* 2.10). Jewish literature (from *Essenes, *Josephus and later *rabbis) reports that many aristocratic priests bullied those who opposed them. Thus they would certainly not tolerate someone who challenged their temple cult (cf. 11:15-17) or who threatened impending judgment on its unwatchful servants.

14:2. Jerusalem was crowded during the feast, with perhaps five times its usual population. Riots were known to occur; Josephus (who often inflated figures) reported that at one Passover several decades after the events of this verse, thirty thousand persons were crushed or trampled during a stampede in the temple. For this reason, extra Roman troops were garrisoned in Jerusalem during the feast, and the Roman governor came from Caesarea to be on hand in case of trouble. The danger of arresting Jesus at the feast (i.e., during the festal time, in public) reflects an important concern for the temple leadership.

14:3. Bethany was one of those villages near Jerusalem where Passover pilgrims could spend the night with hosts. One "sat" at normal meals; one "reclined" on couches (if they could afford them) at special meals like feasts or banquets. If Simon had been a "leper" (nicknames usually had some basis but were not always meant literally; e.g., a tall family was nicknamed the "Goliaths"), he was certainly not one by this point, if present; no one would have joined him for dinner if he had been. Jesus may have healed him.

14:4-5. It was customary to provide olive oil to anoint the heads of important guests, but this woman's action is extreme. Whatever her economic status, this perfume (an oil from a root probably imported from India or South Arabia) was worth a year of a common laborer's wages; her family had probably kept it as a status symbol. ("Myrrh" was technically a resin from a shrub-like balsam in north Somaliland and south Arabia, but Mark uses the term more generically and specifies it as spikenard, a pleasant-smelling oil from the root of the nard plant native to mountains in north India.) Many people preferred semi-transparent alabaster bottles for expensive ointments; sealing it in such a container would preserve its fragrance, but once the bottle was broken, one would need to use up the perfume immediately. Her anointing of Jesus represents a major sacrifice and indicates the depth of her love, but given the great numbers of landless or tenant-farming peasants, some people present think the worth of the perfume could have been put to better use.

14:6-7. Jesus' reply probably contains an allusion to Deuteronomy 15:11, which in context urges generosity to the poor, who will always be in the land. He does not play down giving to the poor; rather he plays up what follows.

14:8. In Jewish tradition kings (including, by definition, the *Messiah, or "anointed one"), priests and others had to be anointed for service; one anointed even honored guests. But Jesus here stresses a different kind of anointing, which the woman undoubtedly had not intended: anointing a body for burial. Long-necked flasks appear in many first-

century tombs near Jerusalem, suggesting that others lavished such expensive ointments on their deceased loved ones. This woman's act of love was the only anointing Jesus would receive (16:1).

14:9. This commemoration does not mean that every individual would know about her; similar *hyperbole appears for writers or heroes whose memories would be preserved in epics by or about them.

14:10-11. Betrayal by a *disciple would shame the teacher, and would be seen as an especially heinous violation of trust. Judas could easily find contacts for the chief priests, although they would not have been accessible to him had his mission been less in line with their plans. His mercenary motives would have appeared as vile to ancient readers as they do to us, and they contrast with the behavior of the unnamed woman of 14:1-9.

14:12-26
The New Passover and the Betrayer

14:12. By this period the Feast of Unleavened Bread, which immediately followed Passover, had been extended in popular parlance to include the Passover itself. Representatives from each family would have the priests slaughter a lamb for them in the temple, then return with it to feed the whole family that night.

14:13. Many commentators point out that water jars (as opposed to wineskins) were nearly always carried by women (often the matron of the home); a man carrying one would therefore be noticeable. Well-to-do households (as probably here), which could afford servants, had them carry the water. Running water was a great luxury, and in many cities, servants were sent to the public fountains to bring rainwater.

14:14-16. Unless the house was unusually large (some were), the upper room would provide an intimate environment for just a few disciples (say, the Twelve; not many more). Nevertheless, anyone with a two-story house, the second story containing a "large" upper room, would be considered well-to-do. This family presumably resided in the area of Jerusalem known as the Upper City, near the temple, rather than the poorer Lower City, downwind of Jerusalem's sewage. Because the Passover had to be eaten within Jerusalem's walls, most homes would be crowded with guests; but the accommodations for Jesus' last meal with his disciples would be quite adequate.

14:17. The Passover was to be eaten at night. April's sundown in Jerusalem came by 6 p.m., so the meal could have started then. Table fellowship was intimate at the feast; one or two families normally shared the meal, but here Jesus and his closest disciples make up the family unit.

14:18-20. Dipping bowls were particularly used at Passover; the dish here is probably Passover's dish of bitter herbs. That someone "dipping in the bowl" with a person would betray that person would have horrified ancient readers, who saw hospitality and the sharing of table fellowship as an intimate, covenantal bond (cf. Ps 41:9, cited in Jn 13:18). (In one extreme example in a Greek epic, two warriors on opposing sides of a battle, learning that one's father had hosted the other's for dinner, decided to avoid fighting each other.) Some scholars have also suggested that someone dipping "with" Jesus could mean that the person was denying Jesus' superior rank, because some Jewish groups required the leader to act (hence to dip) first (see the *Dead Sea Scrolls; cf. Sirach 31:18), and many ancient banquets seated people by rank. This interpretation would be likeliest if Judas reclined near Jesus, on the same couch (cf. Jn 13:26).

14:21. Most of Judaism acknowledged both God's sovereignty and human responsibility. "Better that the person never have been born" was a frequent lament or pronouncement of judgment. Various biblical (Job 3:3-26; Jer 20:14-18), early Jewish and Greek lamentations spoke of never having been born alive being preferable to selected worse fates.

14:22. The head of the household customarily gave thanks for the bread and wine before any meal, but special blessings were said over bread and wine at the Passover meal (though probably not in quite the same form as became standard later). Jewish people broke rather than cut their bread. We should not understand "This is my body" literally (in *Aramaic the phrasing would be ambiguous: "is" or "represents" would not be distinguished), just as we do not take literally the standard Jewish interpretation spoken over the Passover bread: "This is the bread of affliction our ancestors ate

when they came from Egypt." No one assumed that the bread they were eating was 1300 years old, or had been digested by the ancestors; rather, they reenacted those events and felt that they participated in them.

14:23. Four cups of red wine came to be used in the Passover meal; if this custom was practiced as early as Jesus' day, this cup may be the fourth, which followed the blessing of the bread. (Other scholars have suggested that the third cup is in view. By the end of the first century the four cups seem to have been both Jewish and Greco-Roman practice at feasts.) Each person did not have an individual cup; they customarily passed around one cup.

14:24. Covenants were ratified by the blood of sacrifice, and Jesus' mention of the "blood of the covenant" evokes Exodus 24:8. God had redeemed his people from Egypt by the blood of the Passover lamb; "on behalf of the many" probably alludes to Isaiah 53 (see comment on 10:45). Passover ritual interpreted the cup but did not interpret it as blood, because Jewish *law and custom were revolted by the idea of drinking any creature's blood—especially human blood.

14:25. Vows of abstinence were common in Palestinian Judaism: "I will not eat any such and such until this happens," or "I vow that I will not use this until that happens." Jesus apparently vows not to drink wine again until the *kingdom comes, and he perhaps abstains from the fourth cup. Jewish tradition commonly portrayed the time of the kingdom as a banquet (developing the image from Is 25:6), when the Bible had promised an unending supply of wine (Amos 9:13). Jewish blessings over the wine called it "the fruit of the vine."

14:26. After the meal and lengthy discussion about the Passover, it was customary to sing psalms from the Hallel, which consisted of Psalms 113–118. (Music was common fare at many ancient banquets.) Walking from a home in the Upper City to the Mount of Olives presumably took fifteen minutes or longer.

14:27-31
Other Betrayers Predicted

14:27. Here Jesus cites Zechariah 13:7, which is not clearly messianic; Jesus may refer to the principle it reports: a flock is scattered without the shepherd to guide them. (The Dead Sea Scrolls do, however, apply this text to the future time.)

14:28. Jewish people in this period were not expecting a *resurrection of a given person distinct from the resurrection of the whole nation. Further, they certainly would not have expected a migration to Galilee to follow it: God's people would gather in Jerusalem in the time of the end (cf. Joel 2:32). These expectations may be why the *disciples appear to ignore this part of Jesus' statement.

14:29-31. Ancient sources typically regarded the rooster as a reliable reporter of the advent of dawn (e.g., the second-century A.D. Roman writer *Apuleius in *Metamorphoses* 2.26; *3 Maccabees 5:23; Babylonian Talmud *Berakot* 60b), but commentators report that in Palestine nocturnal crowings are familiar to the night watchmen beginning at 12:30 a.m.; the second was about 1:30 a.m. Roosters crow periodically through the night. People sound asleep at those times may have been more familiar with the crowing at dawn because they were readier to awaken then. In either case the point is that the denial is imminent.

14:32-42
Watchmen Asleep

14:32-34. Jesus and his *disciples may have arrived at Gethsemane by 10 or 11 p.m. (which was late in that culture). It was customary to stay awake late on Passover night and to speak of God's redemption. The disciples should have been able to stay awake to keep watch; they had probably stayed up late on nearly every other Passover of their lives.

14:35-36. "Abba" is the *Aramaic word for "Papa," a term of great intimacy and affectionate respect. It was typically the first word a child would utter, but adults could use it for their fathers as well, and students sometimes used it of their teachers. Perhaps because it implied such intimacy, Jewish people never used it of God (though they did call him a heavenly father) except in a very rare *parable by a charismatic teacher (as reported in later sources). On the cup of judgment, see comment on 10:38; for a prayer for God to protect one's life cf., e.g., Psalm 116:3-4, 13-15.

14:37. People often stayed awake late on Passover to discuss God's redemption, but on this particular Passover the disciples slept!

Teachers and leaders often reproved those who slept at inappropriate times; most dangerous, however, were sentries who failed to keep watch (cf. also servants in 13:34-36).

14:38. "Temptation" here is "testing"; given the common Jewish religious uses of the word (as in a common Jewish evening prayer), Jesus is probably saying: "lest you fall prey to the testing you are about to face." The contrast between "spirit" and "body" is not meant in the later *Gnostic or Neo-Platonic sense (in which the soul is good and the body is evil); rather that though one may mean well on impulse (14:31; cf. the use of "spirit" in many cases in Proverbs, e.g., 16:32; 25:28), the body is susceptible to exhaustion.

14:39-42. Jesus' use of "sinners" (v. 41) to refer to the men dispatched by representatives of the Sanhedrin is strong language, especially in view of the way most people would use the word (2:16).

14:43-52
The Betrayal

14:43. Because they had been sent by prominent men of Jerusalem, the band that comes to arrest Jesus probably belongs to the temple guard. This guard is known to have possessed the weapons mentioned here (swords and clubs); clubs were said to have characterized the corrupt priestly aristocracy in charge of the temple, as well as being useful in controlling rioters. Based on some second-century sources, some argue that clubs were not supposed to be carried on holy days, including the Passover festival.

These men come prepared for armed resistance from one they suppose is a messianic revolutionary—because they had interpreted Jesus' act in the temple in terms of the cultural categories of their day, rather than in terms of the rest of his teaching (14:48).

14:44-46. A light kiss on the lips was a sign of special affection among family members and close friends. Teachers could kiss disciples as a special sign of favor or approval, and disciples could kiss teachers to show honor and affection for them. Thus Judas's kiss is a special act of hypocrisy (cf. Prov 27:6).

Initially the band would not expect the disciples to know the specific object of their approach. Although there may have been light from a new moon, this band believed they needed Judas to lead them in person to the appropriate spot; had they searched for Jesus only on the basis of general directions, their search would have become evident and given Jesus time to escape. The kiss is necessary because darkness made it harder to recognize Jesus; under normal conditions the guards could have recognized him (he had been teaching in the temple).

14:47. Being well-to-do, *high priests had ample servants. Although the object of the expedition was only to arrest Jesus, had the sword struck again many of the disciples would likely have been killed in the ensuing conflict. In antiquity authorities sometimes settled for executing a movement's leader if they thought this action sufficient to destroy the movement, but any resistance would be met with force.

14:48-49. Subversives (e.g., the later assassins who slew Jewish aristocrats under cover of the crowds in the temple) did their acts secretly or so as to avoid capture; by contrast, Jesus' alleged subversion had been public and unconcealed. An arrest in the temple would have been politically disadvantageous and possibly aroused a riot (see comment on 14:1-2).

14:50. In antiquity, the loyalty of one's followers normally brought one honor; their abandonment brought one shame.

14:51-52. At night, one might have expected the disciple to have an outer garment as well as the linen cloth, and he is probably already chilly (cf. 14:54). (Although one could sleep naked inside one's home in Palestine in April, Jerusalem's higher elevation makes 14:54 a likely indication that it was a cool night; Passover pilgrims who camped outdoors had coverings.) Others in antiquity left behind cloaks when fleeing. Except for some Jews overwhelmed by Greek culture and considered apostates, Jewish people generally abhorred nakedness. The point is that the man is in a hurry to escape.

14:53-65
The Sanhedrin's Miscarriage of Justice

This trial breaks a number of Jewish legal principles, if later documents correctly indicate the

state of Jewish *law in this period. Mark probably knew most of these rules, and many of his hearers probably suspected them, since these principles of ethics were widely honored. Elites, however, did not always feel bound by such principles.

One might ask how Jesus' earliest followers knew what happened in a closed meeting of the *Sanhedrin. Even in the most private meetings of assemblies, however, leaks were common, especially when sympathizers had associates who were present (cf. 15:43); one may provide examples both from the Roman Senate and from Jerusalem's Sanhedrin. (Moreover, from a Christian perspective, the disciples later had access to the report of a major participant: Jesus.)

14:53. "Leading priests," "elders" and "*scribes" were all represented in Israel's chief Sanhedrin, the ruling religious court of Israel. A Sanhedrin was a senate, or municipal assembly; Judea's chief assembly was in Jerusalem. Later tradition claims that the full Sanhedrin, with seventy-one members, normally met in the assembly hall in the temple called the Chamber of Hewn Stone, where they sat in a semicircle with the *high priest in the center. The number may have been simply an average, and *Josephus suggests that they met quite close to the temple, but not in it. In this case, many members of the Sanhedrin (of whom perhaps half would have been necessary for a quorum) hold a secret night meeting without advance notice in the high priest's home (14:54), although they are investigating what they will claim is a capital offense.

By the more careful legal principles of later rabbis and most general legal principles of antiquity, the meeting that Mark describes would have been illegal on all these counts: a secret meeting, held at night, and in a private home. The leaders would have probably explained it as merely a preliminary inquiry before a real investigation (cf. Lk 22:66). The lack of advance notice could have been excused because it is during a feast and all necessary officials are present; but because Jewish law forbade trials on the sabbath, they were probably also forbidden on feast days (though executions were not). The officials who gather, probably predominantly *Sadducees (note the prominent role of the aristocratic priests in 14:55), seem more concerned with convicting Jesus quickly than with legal technicalities.

14:54. Peter's trespassing on private property—that of the high priest himself—required serious commitment from a Galilean fisherman. The guards could be the priest's night watchmen, but presumably they would immediately recognize that Peter does not belong there. They could also be members of the temple guard, waiting to see the results of the trial inside. They may have planned to stay up late for Passover anyway, though under better circumstances.

14:55-56. Despite the high priest's certainty of Jesus' subversiveness, at least some members of the council, perhaps scribes, follow the virtuous Jewish tradition of diligent cross-examination of witnesses. But once these witnesses had contradicted one another, all understandings of Jewish law unanimously demanded that they be declared false and the case be rejected as contrived; under Jewish law, in a capital case, false witnesses were to be put to death (see Deut 19:16-21 and the Dead Sea Scrolls). Even though Rome had not given the Sanhedrin jurisdiction to execute false witnesses, the Sanhedrin should have at least disciplined them. That the case continues simply underlines the corruption of those in control (other ancient Jewish sources, from the *rabbis to the *Dead Sea Scrolls, also complain of the corruption of the priestly aristocrats; *Josephus reports concrete examples of it).

14:57-59. Many Jewish people expected that God would establish a new, purified temple at the time he established the *kingdom. Outsiders had naturally misinterpreted Jesus' teaching about a new temple and warning about the old temple's destruction as the threat of a mad, messianic revolutionary. But the witnesses still fail the cross-examination.

14:60-61. Jesus' refusal to answer fits the ancient Jewish model of a martyr showing contempt to a corrupt judge. At least according to later rabbinic practice, the high priest could not legally force Jesus to convict himself out of his own mouth, but the testimony of other witnesses is so far not working; if the later rabbinic practice was valued by many teachers in Jesus' day, the priestly aristocracy might choose to simply not observe it. The high priest finally asks whether Jesus thinks of

himself as a *messiah—hence, to the high priest's mind, as a revolutionary.

"The Blessed One" was a common paraphrase for "God." "*Son of God" (see glossary) was an unusual phrase for a high priest to use, but not an impossible one (the Dead Sea Scrolls interpret 2 Sam 7:14 as messianic). Although Mark could have put the high priest's question in his own words (a common technique in writing at that time), the high priest had probably heard that Jesus had adopted the title for himself, possibly in a messianic sense (12:6).

14:62. Jesus' statement is a claim to be not only a mortal messiah but the cosmic ruler of Daniel 7:13-14, the embodiment of Israel's call, who would come in glory and reign forever. (The seating may allude to Ps 110:1.)

14:63. Tearing clothes was a sign of mourning or *repentance, and was required if one heard the sacred name blasphemed. Jesus would not be deemed guilty under later rabbinic procedure; unless Jesus mentions the sacred Hebrew name of God or summons them to what would be presumed to be idolatry (e.g., by calling himself God, which he does not at this point), he is not technically guilty of blasphemy (here not even by the broader popular sense; cf. 2:5-7). A Jewish court would have been more likely to have pronounced him insane; how could this arrested upstart teacher from Galilee think that he would come in the clouds of heaven? Again, elites (throughout the Roman empire) were not always interested in legal technicalities.

14:64. Under Jewish law, the high priest is not permitted to judge the case alone; he has to solicit the council's vote (if later recorded rules were already in effect, which might not be the case, this vote would begin with the youngest and conclude with the high priest, lest anyone feel intimidated by their elders). Although they cannot have genuinely believed that Jesus has committed blasphemy according to its technical Jewish definition, they have an important reason to deal with him quickly: he poses a clear threat to the temple establishment (11:15-18), and as a messianic claimant he threatens the whole Roman power structure that they, the Jewish aristocracy, represent.

14:65. Unlike public flogging, the behavior represented here—spitting on, blindfolding, striking and taunting a prisoner—was, of course, against Jewish law. While they ridicule Jesus as a false prophet, Peter fulfills Jesus' *prophecy concerning him (14:66-72); Jesus thus passes an important test for true prophets (Deut 18:22).

14:66-72
Peter's Denials

14:66-69. Leading slaves in the most powerful aristocratic households exercised more power and status than did the average free person. Female slaves did not normally wield such power, but her life might still well be more comfortable than that of average citizens. Although the high priest undoubtedly had many servants, similar cases from antiquity show that the slave girl would have recognized that Peter was not from the high priest's household. Peter would also be clothed differently from the guards. As a servant in an aristocratic household near the temple, this women had perhaps been at the temple and could have gotten a good look at Jesus' disciples in the temple courts. Peter's withdrawal from the court to the vestibule perhaps anticipates the need to escape.

14:70. Galilean accents differed from Judean accents, certainly in *Aramaic and presumably (as is probably the case here) in Greek. The high priest's servants and temple guard would have lived in Jerusalem and regarded themselves as Judeans. Regional accents were hard to conceal (cf. Judg 12:6).

14:71. The "curses" Peter utters are not vulgar words; rather, he vows that he does not know the man, invoking curses on himself if he is lying. The temple hierarchy is interested in eliminating the ringleader; followers would be viewed as a threat only if they continued to follow—as Peter had thus far.

14:72. For most people in the ancient Mediterranean world, a rooster's crowing marked daybreak. Some scholars have suggested that this refererence is to an earlier Palestinian rooster crowing between 12:30 and 2:30 a.m.

15:1-15
Pilate and the King

15:1. The night trial having been illegal, the officials reconvene somewhere around the first light (about 4:30 a.m.) or dawn (about 5:30 a.m.) to quickly make their conclusion official.

Local elites could try cases and accuse people before the Roman governor, but only the governor could order executions. (This was partly to guarantee that local elites did not remove Rome's supporters behind Rome's back.) Roman officials like *Pilate would meet with clients and members of the public from dawn till about noon, so they must have Jesus ready for Pilate very early; their office would give them priority over others wishing to see him. Pilate lived in Caesarea, on the Judean coast, but during the Passover stayed in Herod the Great's old palace in Jerusalem; the Roman governor needed to be in Jerusalem to forestall troubles at Passover.

15:2-4. Claiming to be the Jewish king, the *Messiah, would lead to a charge of sedition and treason against the emperor, especially under the paranoid emperor Tiberius. The only offense for which the Jewish leaders could automatically execute any transgressor was profanation of the temple; to them, Jesus' act in the temple might appear to have at least approached that, but the leaders know that his claim to messiahship would threaten Pilate more. Pilate had not been particularly cooperative with these leaders in the past, and they need to have a strong case for him now.

15:5. Jewish accounts of martyrs testify frequently concerning *Gentile judges' astonishment that the martyrs refuse to cooperate (e.g., 2 Maccabees, *4 Maccabees). Roman law did not interpret silence as an admission of guilt, but a defendant who persistently refused to answer could be convicted by default.

15:6-10. Roman governors might take into account precedent but were free to decide cases as they thought best. Releasing a prisoner at the feast is one local custom on which the surviving historical records are silent, but it fits the culture of the time (e.g., a governor in Egypt in A.D. 85 handed someone over to "the multitudes"). Unlike Jesus, Barabbas is a violent revolutionary; but so far as we know he did not claim to be a king or boast such a large following. Jesus' accusers painted him as a revolutionary, but Pilate apparently regards Jesus as both more popular and less harmful than the revolutionary Barabbas. If the people ask for Jesus, Pilate can release Jesus without offending the local political leaders (on his prior conflicts with them, see comment on 15:15).

15:11. Ancient writers often criticized the fickleness of crowds. Historically, most of the crowds gathered here are Judeans who do not know Jesus well, in contrast to the Galilean pilgrims who did (probably the bulk of his supporters in 11:9-10).

15:12-15. A severe flogging normally preceded crucifixion, but it was often administered along the way or even after the condemned was fastened to the cross. The condemned would be stripped and often tied to a post; soldiers would use "flagella," leather whips with iron or bone woven into their thongs, that left skin hanging from the back in bloody strips. Crucifixion was considered the most agonizing and degrading form of criminal execution known in antiquity. It was meant to be death by slow torture; although a victim could die faster from shock due to blood loss, they could spend a few days dying of dehydration or perhaps asphixiation. Hanging naked before crowds, unable to hold back one's bodily waste or swat flies from wounds, was also meant to humiliate the victim.

When Pilate became governor, he immediately enraged Jerusalem by bringing the imperial standards into the city; more recently, he had built an aqueduct with funds from the temple treasury. His insensitivity had only provoked Jewish hostility, and he had apparently become less eager to clash with the local officials. Local charges against a governor, if believed, could cause him to be recalled, and public order often trumped justice for individuals. Although Pilate remained politically secure until the demise of his possible *patron in Rome, Sejanus, in October of A.D. 31, he must have learned to cooperate with the local elite, for he survived in office for several more years, until A.D. 36. (At that time, according to *Josephus, local complaints did bring his recall.)

15:16-20
Hailing the King

15:16. The Praetorium was Herod the Great's enormous palace, which Roman governors used when they came to Jerusalem.

15:17. Purple was always expensive (see Acts 16:14), but more significantly here, purple robes and garlands of leaves marked the Greek vassal princes. The soldiers may have had to improvise from a scarlet Roman cloak.

Many scholars think that the crown of thorns, perhaps from the branches of the thorny acanthus shrub or from the date palm (which would look more like a crown), may have been meant to turn mainly outward rather than painfully inward; thus the crown would have mimicked the wreaths worn by *Hellenistic rulers. Because the wreath was twisted, however, some thorns or spikes must have scraped inward, drawing blood from Jesus' scalp. Only the highest king would wear an actual crown instead of a wreath, so they are portraying Jesus as a vassal prince.

15:18. The Roman emperor was greeted with "Hail . . . " Thus the Roman soldiers (probably Syrian auxiliaries) mock Jesus ("King of the Jews") here; they would have had little respect for a Jewish king even had they believed Jesus was one. On other reported occasions *Gentiles dressed people up to mock Jewish kings or abused prisoners physically and with mockery.

15:19-20. One paid homage to a king (including Caesar) by falling on one's knees. The reed might be on hand for military floggings.

15:21-32
The Crucified King

15:21. Cyrene was in what is now Libya in North Africa and included a large Jewish community. "Simon" was a common name among Jews (its resemblance to the patriarch Simeon made it popular). Devout Jewish pilgrims from throughout the Mediterranean world (and presumably a few God-fearers) came to Jerusalem during Passover. Roman soldiers could impress anyone into service to carry things for them. Because it is a feast and work is forbidden, Simon is not coming from "the field" (literally) as a worker; perhaps he is late for the festival, only now arriving from Cyrene or from where he is residing temporarily in the countryside.

15:22. The site of the crucifixion might have been named "Place of the Skull" because so many deaths occurred there, or from the shape of the hill left from surrounding quarried rock. (Nevertheless, the purported site of Calvary proposed by Charles Gordon around 1884, which then had the shape of a skull, acquired those contours long after Jesus' day. In contrast to the traditional site, "Gordon's Calvary" has no claim to reliability.)

15:23. It is said that pious women of Jerusalem normally prepared a solution like this one and offered it to those being executed to dull their pain (cf. Prov 31:6-7); Jesus chooses to endure the full force of the agony of crucifixion. Many scholars suggest that the myrrh had narcotic effects; others demur, but at the very least, the alcohol in the wine could help deaden sensitivity to pain.

15:24. A person being executed would be stripped naked; nakedness was particularly shameful in the East and for Jews. Roman soldiers could normally retain the executed criminal's final belongings. Casting lots was a frequent method of making decisions (see comment on Acts 1:26). Often a unit of four men would be dispatched to oversee a crucifixion (although more are possible in this case, since multiple prisoners are executed here).

15:25. The third hour began shortly after 8:30 a.m. and ran till shortly after 9:30 a.m. (The exact time of hours would vary according to the time of sunrise from which they were reckoned, hence according to the season of year.)

15:26. A soldier would sometimes carry in front of or alongside the prisoner a tablet announcing the charge (the *titulus*) for which one was being executed. Occasionally it could then be posted above the head of the person being crucified, if they were executed on the sort of cross whose vertical beam extended above the horizontal one. The claim to be a king would be sufficient to incur Roman wrath (see comment on 15:2); ironically, however, Jesus is called not a false royal claimant but "King of the Jews," perhaps reflecting an anti-Jewish sentiment of Pilate or his agents.

15:27. The term for "bandits" here (NIV; ESV; NRSV, cf. "robbers," NASB) is the same one Josephus used for revolutionaries. Thus these two men may be former colleagues of Barabbas, originally meant to be executed with him that day. Authorities often liked to conduct executions at busy festivals, to provide maximum warning value against potential transgressors.

15:29-32. Some people observing a crucifixion cursed those being crucified; for the temple charge (15:29), see comment on 14:57-59. Many ancient writers used irony, including narrative irony, and Mark is no ex-

ception, reporting unintended truth in the words of Jesus' enemies (v. 31).

15:33-41
The Death of the King

15:33. The "sixth hour" began before noon, the "ninth hour" before 3 p.m. Jesus dies around the time of the normal evening offering in the temple. Stories were told of catastrophes occurring at the deaths of pious *rabbis, especially those whose intercession had been vital to the world; but the biggest point of these signs is that judgment is imminent. Darkness had signified judgment in the past (Ex 10:21-23) and would in the future (Is 13:10; Ezek 32:7; Joel 2:2, 10, 31; 3:15; Amos 5:18; Zech 14:6). In Amos 8:9, darkness falls at noon; cf. Deut 28:29.

15:34. Jesus' cry is an *Aramaic quotation of Psalm 22:1, which was sometimes recited at this time of day in prayer but receives special significance when Jesus prays it. For biblically literate ancient hearers, the first line could evoke this entire psalm of the righteous sufferer—and its hope of divine vindication. (Jesus probably quoted the psalm in Hebrew, as in Matthew, though cf. Aramaic prayer in Mk 14:36; Mark uses the Aramaic form probably because the saying was transmitted in an Aramaic milieu. "Eli" could be mistaken for "Elijah" much more easily than "Eloi"; cf. 15:35-36.)

15:35-36. Not only was Elijah expected to come at the end (Mal 4:5), but some circles (attested in later rabbinic sources) believed that God sent Elijah like an angel to help or rescue famous teachers.

15:37. Scholars have often argued that crucifixion generally killed by asphyxiation: one became too weary to keep pulling one's frame up on the crossbeam, the diaphragm was increasingly strained, and eventually one became unable to breathe. But other scholars have recently argued that most victims would die of blood loss (if they were nailed to the cross) or dehydration first. In any case, death typically took a few days—much longer than the few hours Jesus suffered. Perhaps he died quickly due to the severity of the precrucifixion scourging.

15:38. Jewish people told stories of disasters occurring at the deaths of prominent rabbis. Scholars debate whether the temple's inner or outer veil is meant, but Mark would probably think of the inner veil. The holy of holies, which the priest could enter only once a year, was the ultimate symbol of God's dwelling place. God's rending the veil could symbolize the departure of God's presence from the temple (cf. Ezek 9:3; 10:4; 11:23) and/or broadened access to God apart from the temple. Thus he was now available apart from the temple system and the old temple order stood judged.

15:39. Roman officials or officers often delegated missions like this execution to centurions, who would take a small detachment of soldiers. Because Romans viewed the reigning emperor as a son of the deified Augustus, the centurion might be recognizing Jesus not only as "king of the Jews" (15:26) but also as a rival to even the emperor. But a non-Jew might use a phrase like "son of God" also with reference to a pious philosopher or, more commonly, a hero whose father was a deity. In Mark's Gospel, of course, "*Son of God" means much more than that (14:61). Whatever the specific nuance intended, however, Mark's irony (cf. 15:29-32) is plain enough: only a Gentile is explicitly impressed by Jesus' death.

15:40. The women followers were much less likely to be indicted than male followers, but they were still courageous to show up at the crucifixion. The epithet of James, "the Less" (NASB, KJV), is better translated "the younger" (NIV, GNT, NRSV), as the usage of the word in the ancient *papyri indicates. Mary is from Magdala; it has been identified with Tarichea, where many fishermen seem to have worked.

15:41. By the standards of the religiously strict, it could have been scandalous for women (especially married women) to travel with an entourage of male disciples (apparently usually without their wives; the case of families making pilgrimage to Jerusalem would be different); apart from members of the aristocracy, conservitive married Palestinian Jewish women were expected to limit their public activity, keep their heads covered and fulfill their domestic duties. A number of women in antiquity did function as benefactors and *patrons (sponsors), though less frequently than men. Adversaries often cited women supporters against one's movement; some had criticized *Pharisees for this practice; this case might

appear even more potentially scandalous, since these women traveled with Jesus. In this one verse Mark hints at an aspect of Jesus' ministry that challenges the conventional social order, especially if these women "followed" as disciples, which they presumably did (see comment on Lk 10:39; the common use of "follow" in the Gospels).

15:42-47
The Burial of the King

15:42. The sabbath would begin at sundown, within several hours of Jesus' death. It was not lawful to prepare the body for burial on the sabbath (see comment on Mt 27:57-58 for what was permitted). One could anoint, wash and wrap the bodies with shrouds even on the sabbath, but more thorough burial preparations would have to wait.

15:43. That the Sanhedrin included pious members like Joseph, and not just the sort who appeared in the trial *narrative (as pious as even they may have supposed themselves), fits the known diversity within even the Jewish aristocracy of the period. While a range of ancient Jewish sources complain about corrupt aristocratic priests, the reports of Josephus reveal that Jerusalem's aristocracy was divided on many points. Because he awaited the future *kingdom, Joseph was probably not a *Sadducee, unlike many of his colleagues in the Sanhedrin. He valued his people's hope more than Roman rule.

15:44. Crucifixion often took several days to kill a person unless hurried along (cf. Jn 19:31-32).

15:45. That excavated tombs include few crucifixion victims suggests that the bodies were not generally made available for burial—a horror to Jewish sensitivities (Deut 21:22-23). Presumably if Pilate were accommodating local interests in the execution, however, he would also accommodate them regarding burial. One exception found in a wealthy family tomb suggests that then, as now, those with wealth and social power had extra influence, which they could use for good or ill. Still, Joseph's request was courageous; identifying with one executed for treason could appear treasonous, and the wealthy were sometimes targeted with charges so leaders could execute them and seize their property.

15:46-47. If Jesus died by 3 p.m., Joseph must have bought the linen quickly, just before sundown (about 6 p.m.) when the sabbath began. Linen shrouds were customary for burial; tombs cut from virgin rock were the best. Large disk-shaped stones could be rolled in a groove over the mouth of a tomb, obstructing entry without the difficult removal of the stone. After a body had been prepared for burial it would be left to decompose for one year; then the eldest son or other closest family member would return, gather the bones for burial in a box and deposit them in a slot on the tomb wall.

16:1-8
The Women at the Tomb

Having predicted the *resurrection appearances (14:28), the Gospel of Mark would be complete with or without 16:9-20; Mark does not need to narrate them. Many ancient documents were content simply to predict and foreshadow events certain to come after the *narrative itself had closed (e.g., the *Iliad,* perhaps the most popular book in Greek antiquity, foreshadows Achilles' death and Troy's fall without narrating them). Such suspension was a literary and *rhetorical technique in this period. Some books (e.g., the Jewish historiographic work known as *Pseudo-Philo) and speeches and essays (such as some of *Plutarch's) also end abruptly. Scholars debate whether Mark ended here deliberately and, if so, why he did so. Mark may have wished to end just short of the resurrection appearances themselves because his persecuted readers were still sharing in Jesus' cross but needed to be reminded of the foolishness of their present doubts of their ultimate triumph.

16:1. Bodies were normally anointed with oil (then rinsed with water) before burial, but because Jesus had died on Friday just a few hours before the sabbath began (at sundown, around 6 p.m.), this anointing had been postponed (they could not buy spices then; 16:1). Men were allowed to dress only men for burial, but women could dress men or women. Spices may not have been used for everyone but were often used for the bodies of special persons (e.g., Herod). They reduced the immediate stench of rapid decomposition in the normally hot Mediterranean days. After one day and

two nights, the women could expect that the body would already stink. But Jerusalem is over two thousand feet above sea level and is cool enough in April that in a sealed tomb the body should have still been approachable.

16:2. The time is around 5:30 a.m.; it was customary to arise at dawn. They bought spices from merchants (16:1) before coming to the tomb, either in the morning or (perhaps more likely) on Saturday evening after sundown. Light was insufficient to reach the tomb before Sunday morning.

16:3-4. The disk-shaped stone rolled in a groove across the entrance to a tomb, and several strong men might be needed to roll it back (comparable to many other tombs here). After the conclusion of the initial mourning period, tombs were normally opened only for the secondary burial of bones a year later and for subsequently deceased family members to be buried there.

16:5. In Jewish literature, angels are normally garbed in white. These women need not have initially assumed that this figure is an angel; the priests in the temple and some others also wore white.

16:6-8. Ancient writers often valued irony. Throughout Mark, people spread news that they were supposed to keep quiet; here, when commanded finally to spread the word, people keep quiet. If the original Gospel of Mark ends here, as is likely, it ends as suddenly as it began, and its final note is one of irony. Many other ancient works (including many treatises and dramas) also had sudden endings.

16:9-20
The Commission (An Appendix)

The manuscript tradition and style suggest that these verses were probably an early addition (not original) to the Gospel of Mark, although a few scholars (such as William Farmer) have argued the case that they are Markan. In any case, most of the content of these verses is found elsewhere in the Gospels, and the traditions seem to be fairly early.

16:9-11. The witness of a woman was deemed much less reliable than that of men, as both *Josephus and the *rabbis attest (Roman law concurred). Given this view and the fact that Judaism was not expecting an individual resurrection of the *Messiah, it is not surprising that the *disciples do not believe Mary Magdalene.

16:12-14. According to Jewish tradition, supernatural beings like angels, *Satan and Elijah were capable of disguising themselves in different forms (a feature also applicable to some figures in Greek mythology). The resurrected Jesus apparently shares this trait.

16:15-18. Among the signs of the messianic era, Isaiah predicted that the sick would be healed and that mute tongues would speak (Is 35:5-6; the idea of tongues could refer to the sort in Acts 2:4 and 1 Cor 14, however), and that God's people would be witnesses for him (Is 43:10). The powers here attributed to believers are the sort that characterize many of the *Old Testament prophets (cf. this theme in Acts).

16:19-20. Both Jewish and Greek readers could relate to the idea of an ascension of a great hero to heaven (like Heracles or, in post-biblical Jewish tradition, Moses); the closest and best-known idea would likely be Elijah. For Jesus to sit at God's right hand, however, goes beyond this idea—it means that Jesus reigns as God's agent (Ps 110:1; cf. Mk 12:36).

Luke

Introduction

Authorship. Luke mentions "we" in a way peripheral to the action in passages in Acts 16 and 20–28; contrary to some scholarly constructs, "we" in historical literature almost always meant that the author was present on the occasions specified. Early tradition, attested by second-century witnesses and the early title of the book (see the discussion of authorship in the introduction to Mark), favors Luke, traveling companion of Paul, as the author of Luke-Acts. Although the case for Luke's use of medical language has been exaggerated, the presence of educated language is consistent with the tradition of Lukan authorship.

Date, Purpose. Many views exist. See the introduction to Acts; some of the specific emphases of Luke-Acts are clearer in Acts than in the Gospel. Luke and Acts together made up a single two-volume work. Details of apologetic in Acts also suggests for Luke's second volume a date within a decade or two of the events depicted (probably no later than the 70s).

Setting. Luke writes for hearers in the Greek-speaking northern Mediterranean, probably Aegean, world. At least some of his audience is well-to-do and literarily sophisticated, and possibly desires confirmation in their faith or arguments they can use to defend it. See comment on 1:3-4 and the discussion of purpose in the introduction to Acts.

Genre. See the introduction to the Gospels. Whereas the other Gospels are closer to the *genre of Greco-Roman biography, Luke's Gospel is the first volume of a two-volume work, Luke-Acts, which is in many ways closer to a Greco-Roman history than a biography. Multivolume histories sometimes included a volume about a particular individual, hence a biographic volume within a larger history. Luke-Acts thus combines biography and historical monograph. Because Mark is one of Luke's sources, I treat many of the passages where they overlap more thoroughly in Mark than in Luke.

Luke's Message. Various themes are especially prominent in Luke: Jesus' ministry to the outcasts, the religiously unfit, the poor and women; this emphasis paves the way for his treatment of the *Gentile mission in volume two, the book of Acts.

The plot movement is from Galilee to Jerusalem in Luke (though the book is framed by scenes in the temple), and from Jerusalem to the ends of the earth in Acts. Although those who wish to date Acts very late seek to separate it from Luke's Gospel, most scholars recognize that the two volumes have a strong narrative unity and were meant ideally to be read together (see Acts 1:1).

Commentaries. Useful commentaries include I. Howard Marshall, *The Gospel of Luke,* NIGTC (Grand Rapids: Eerdmans, 1979); François Bovon, *Luke*, 3 vols., Hermeneia (Minneapolis: Fortress, 2002–2013); John T. Carroll, *Luke: A Commentary* (Louisville: Westminster John Knox, 2012); F. W. Danker, *Jesus and the New Age: A Commentary on St. Luke's Gospel,* rev. ed. (Minneapolis: Augsburg/Fortress, 1988); Joseph A. Fitzmyer, *The Gospel According to Luke,* 2 vols. (Garden City, NY: Doubleday, 1981), and Craig A. Evans, *Luke,* NIBC (Peabody, MA: Hendrickson, 1990). Besides general works mentioned in the introduction to Matthew, Kenneth Bailey, *Poet and Peasant* (Grand Rapids: Eerdmans, 1976) is helpful on the background of much of Luke (especially Lk 15). Useful monographs include, among many others, Diane G. Chen, *God as Father in Luke-Acts* (New York: Peter Lang, 2006). Some chapters concerning introductory questions in my *Acts: An Exegetical Commentary,* 4 vols. (Grand Rapids: Baker Academic, 2012–) cite some other relevant sources.

1:1-4
The Literary Preface

In Luke's day the more sophisticated writers would often introduce their books with a piece of stylish prose written in more classical style. (Those with literary pretensions generally imitated the Greek of a much earlier period than was commonly spoken.) Luke's introduction here is excellent in this regard.

1:1. Luke's word here for "account" was used for a *narrative of many events, as distinct from a narrative of a single event, and was most characteristically (though certainly not only) applied to works of history. "Events fulfilled among us" was a natural topic for histories.

Writers compiling a work sometimes started with one main source and wove in secondary material from another source or sources. Most scholars agree that Luke begins with Mark as his main source and weaves in other material, including what most scholars call "Q" (any material that Matthew and Luke share in common that is not in Mark). Writers also normally explained why they were writing a work if other books on the same subject had appeared. Some writers invoked length (see 2 Maccabees) or stylistic considerations (see *Theon) to explain the need for a new work; other authors thought earlier writers had investigated matters inadequately (*Josephus, Artemidorus) or had embellished them *rhetorically (*Tacitus); still others simply wished to compile earlier works more thoroughly (*Quintilian).

1:2. "Handed down" was sometimes a technical term in the ancient world. *Disciples of *rabbis normally passed down first-generation traditions carefully. Elsewhere in antiquity, disciples of teachers viewed communicating accurately their teachers' sayings as a central part of their mission; the school would continue to propagate the ideas of the founder. Why should anyone suppose that Jesus' disciples would be less accurate than all other disciples? Historians normally consulted key eyewitnesses, many of whom remained alive and even in leadership during the period when the Gospel's sources were being written. Ancients often trained their memories in ways that could put modern intellectuals to shame. Orators could recite speeches hours in length; one exceptional orator even claimed to recall samples of scores of practice speeches offered by classmates decades before. Such memory was not the exclusive domain of the educated; uneducated oral storytellers could recite full works like Homer's *Iliad* and *Odyssey* from memory. To object to all such examples because this one is Greek, that one is late, and so forth, is to dismiss all extant evidence in favor of pure speculation. We should expect the material to have been preserved. Because Luke writes while eyewitnesses are still alive, and because they were accorded a place of prominence in the early *church, we may be confident that his traditions are reliable. (Eyewitness sources were accepted as the best.)

1:3-4. Literary introductions often specified the purpose of the work (e.g., in Josephus's *Against Apion:* "to teach all who wish to know the truth" about the Jewish people); here Luke wishes to provide "exact information" ("exact truth"—NASB; "certainty"—NIV). The subject matter specified here ("things fulfilled among us") is appropriate for a historical preface. Luke had opportunity to acquire "thorough knowledge" of the subject during his travels with Paul hinted at in Acts (in ancient historical sources, "we" nearly always meant that the author was present). These travels included up to two years in Judea (Acts 21:17-18; 27:1).

Appeals to common knowledge were frequent in ancient *rhetoric, and Luke here appeals to Theophilus's knowledge of the subject, which Luke merely confirms. That is, the bulk of Luke's story reflects what was already widely known in the early Christian movement. Books would often open with a dedication to the wealthy *patron who sponsored the writing project. (Luke-Acts is not just a private work; Luke's Gospel is within three percent of the length of Acts, both fitting a standard size of scroll for publication.) One could also dedicate a work to a person of status that one hoped would feel honored and therefore promote the work.

Theophilus, the name of the sponsor, was a common Jewish name. (Were it a symbolic name we could translate "lover of God," but we know of no symbolic names in ancient dedications.) "Most excellent" could literally mark him as a member of a high class in Roman society (the equestrian order), although Luke might use the title only as a courtesy. A desire

for verification was reasonable in view of the many competing claims to religious truth in the Roman Empire.

1:5-25
The Angel and the Priest

After the much more classical Greek prologue of 1:1-4, here Luke establishes himself as a master of various literary styles by adapting to *Septuagint style, reflecting its Hebraic rhythms, which dominate chapters 1–2.

1:5. Historians customarily introduced a narrative by listing the names of reigning kings or governors, which provided the approximate time of the narrative. Herod the Great was officially king of Judea from 37 to 4 B.C. Twenty-four "orders" (NRSV, GNT) or "divisions" (NIV, NASB) of priests (1 Chron 24:7-18, especially v. 10) took turns serving in the temple, two nonconsecutive weeks a year. Priests could marry any pure Israelite, but they often preferred daughters of priests ("daughters of Aaron").

1:6. The terms Luke uses to describe Zechariah and Elizabeth are the same that the *Old Testament used for some other righteous people, such as Noah (Gen 6:9), Abraham (Gen 17:1) and Job (Job 1:1). One who reads those narratives understands that although they may not have been morally perfect (Gen 9:21) or complete (Job 42:3-6), they did not violate any stated commandments in the *law. Thus Luke uses these terms to challenge the misconception that could arise from conventional wisdom concerning barrenness (Lk 1:7).

1:7. To be childless was economically and socially disastrous: economically, because parents had no one to support them in old age (see comment on 1 Tim 5:4, 8); socially, because in the law barrenness was sometimes a judgment for sin, and many people assumed the worst possible cause of a problem. Most people assumed that barrenness was a defect of the wife, and Jewish teachers generally insisted that a man divorce a childless wife so he could procreate. "Aged" may suggest that they were over sixty (Mishnah *Avot* 5:21); age itself conferred some social status and was sometimes listed among qualifications or virtues.

Contrary to conventional wisdom, however, Zechariah and Elizabeth are clearly righteous (1:6; cf. Wisdom of Solomon 4:1), and the Jewish hearer would immediately think of righteous Abraham and Sarah, who was also barren. The Lord also opened the wombs of other matriarchs, Rachel and Rebekah, and those of Hannah and Samson's mother; yet Elizabeth is especially like Sarah, who was not only infertile but also too old to bear.

1:8-9. There were many more priests and Levites than necessary (perhaps eighteen thousand) for any given function in the temple, so they were chosen for specific tasks by lot, during their appointed time of service (besides service on the three major festivals, they served about two weeks out of the year). Given the number of priests, a priest might get the opportunity in 1:9 only once in a lifetime; this would have been a special occasion for Zechariah.

Incense offerings (Ex 30:7-8) had been standard in ancient Near Eastern temples, perhaps to quench the stench of burning flesh from the sacrifices in the closed buildings. This offering in the temple preceded the morning sacrifice and followed the evening sacrifice. It is said that the officer who ministered regularly in the temple signaled the time to begin the offering and then withdrew; the priest cast incense on this altar, prostrated himself and then withdrew himself—normally immediately (cf. 1:21).

1:10. The hours of morning and evening sacrifices were also the major public hours of prayer in the temple (cf. Acts 3:1). Except during a feast, most of the people praying there would be Jerusalemites; unable to enter the priestly sanctuary, they were presumably men in the Court of Israel, and some women outside that in the Court of Women.

1:11. The altar of incense was in the center of the priestly sanctuary, outside the holy of holies. Zechariah 3:1 reports an Old Testament apparition in the temple. There *Satan appears to the *high priest, standing at his right to accuse him; but the high priest stands before the angel of the Lord, who defends him and brings him a message of peace for his people.

1:12. People usually reacted with fear to angelic revelations in the Old Testament as well.

1:13. Angelic annunciations, often complete with names, also preceded some major births in the Old Testament (e.g., Gen 16:11; 17:19; Is 7:14). Childless people throughout the

ancient world entreated deities for children.

1:14-15. The closest Old Testament parallel to Luke 1:15 is Judges 13:4-5, 7, where Samson, as a Nazirite from birth, is warned to abstain from strong drink (cf. Num 6:3-4). Cf. Luke 7:33. Ancient Judaism especially viewed the *Holy Spirit as the Spirit of *prophecy.

1:16-17. Elijah was to return before the day of the Lord, turning the father's hearts to the children (Mal 4:5-6; cf. Sirach 48:10). Although later rabbis interpreted this event as Elijah, master of intricate legal questions, straightening out Israelite genealogies, the point in Malachi is probably familial reconciliation (cf. Mic 7:5-6). On "prepared for the Lord" see Luke 3:4. On coming in Elijah's measure of the Spirit, cf. Elisha's request for a "double portion" (the inheritance right of a firstborn son, but narrated with double signs; Sirach 48:12) of this in 2 Kings 2:9; although John claimed no miracles, he was a great prophet—for he was Jesus' forerunner.

1:18. Like Zechariah here, Abraham (Gen 15:8; cf. 17:17), Gideon (Judg 6:17, 36-40; 7:10-11) and others in the Old Testament (2 Kings 20:8; cf. Is 7:10-14) asked for signs in the face of astounding promises, but they were not punished. That Zechariah's sign proves harsher to him (1:20) suggests only that this revelation is much greater than those which preceded it.

1:19. Although Judaism had developed quite a list of angelic names, the *New Testament names only the two who also appear in the Old Testament: Gabriel (Dan 8:16; 9:21) and Michael (Dan 10:13, 21; 12:1). These became the two most popular angels in contemporary Jewish lore, in which Gabriel was sent on many divine missions. Jewish literature typically portrayed the chief angels as before God's throne.

1:20-21. Casting incense on the heated altar of incense normally took little time, after which the priest emerged immediately. The delay here may have troubled the crowds; perhaps they thought Zechariah had been disrespectful and struck dead, or that something else had gone wrong. If Zechariah's offering had failed, their prayers were also in jeopardy.

1:22. The term here for "mute" can, but need not, include deafness. On such judgments for disobedience see, e.g., Genesis 19:11; on temporary speechlessness due to a shocking revelation, see Daniel 10:15; but see especially the silencing of a prophet until a sign was fulfilled in Ezekiel 24:27; 33:22.

1:23. Because his term of service was only two weeks a year, and he had no son to support him in his old age, Zechariah might have worked a small farm or done other work in the hill country of Judah. (Priests were supposed to be supported by others' tithes, not by working the land, but high taxes on the poor and unfair practices by the priestly aristocracy—especially in the decades just prior to A.D. 66—combined to make it harder on less wealthy priests.)

1:24-25. Praise such as Elizabeth utters here was common among the barren whom God visited (Gen 21:6-7; 1 Sam 2:1-11) but especially recalls Rachel's exultation, "God has removed my reproach!" (Gen 30:23).

1:26-38
The Angel and the Girl

Luke here contrasts the simple faith of a teenage girl, Mary, with the genuine but less profound faith of an aged priest, Zechariah (cf. the severer contrasts between Hannah and Eli in 1 Sam 1–2; though the story line is quite different, in both cases God uses a humble and obscure servant to bear an agent of revival to the coming generation). This section has parallels not only with *Old Testament birth annunciations but also with Old Testament call narratives: Mary was called to fill the office of Jesus' mother. Because it was common for writers to include implicit or explicit comparisons between major figures in their works, some charts may be helpful. More parallels among figures appear later in Luke-Acts, but I start in table 1 with some obvious ones at the beginning of Luke's work (borrowed from my Acts commentary).

1:26-27. Because Joseph was of David's line and Jesus would be his legal son, Jesus could qualify as belonging to David's royal house. In Judaism, "virgins" were young maidens, usually fourteen or younger. The term Luke uses here for "virgin" also indicates that she had not yet had sexual relations with a man (1:34-35). Nazareth in this period was an insignificant village; the early, highest estimates are sixteen hundred to two thousand inhabitants, with more recent, lower estimates of about five hundred. (One

question is naturally how far into the countryside would still count as Nazareth.) On Gabriel, see comment on 1:19.

1:28-29. God often encouraged his servants that he was "with" them (e.g., Jer 1:8). Greetings (like "hail") were normal, but rank and status within society determined whom one should greet and with what words. As both a woman and a young person (perhaps twelve or fourteen years old) not yet married, Mary had virtually no social status. Neither the title ("favored" or "graced one") nor the promise ("The Lord is with you") was traditional in greetings, even had she been a person of status.

1:30. "Do not fear" (cf. 1:13) was also common in Old Testament revelations (e.g., Josh 1:9; Judg 6:23; Jer 1:8; Dan 10:12; cf. Gen 15:1). Mary here joins the list of those in the Bible who found favor before God (Gen 6:8; 19:16, 19; Ex 33:13).

1:31. This verse follows the typical Old Testament structure for a divine birth announcement and especially resembles Isaiah 7:14, the Immanuel promise (on which see Mt 1:23).

1:32-33. This language ultimately derives from 2 Samuel 7:12-16 and also identifies Mary's future son with the "Mighty God" *Messiah of Isaiah 9:6-7 ("Mighty God" is clearly a divine title; cf. Is 10:21). On the eternal *kingdom, cf. also Daniel 2:44; 4:3; 6:26; 7:14.

1:34-35. Jewish tradition used the language of "overshadowing" for God's presence with his people (see comment on 13:34).

1:36-37. The point of 1:36-37 is that God, who acted for Elizabeth as he did for Sarah, could still do anything. On 1:37, cf. Genesis 18:14 (on Sarah having a child); Mary has more faith than her ancestor (Gen 18:12-15).

1:38. Mary expresses her submission to the Lord's will in regular Old Testament terms for submission or acquiescence (e.g., 1 Sam 1:18; 25:41; 2 Sam 9:6, 11; 2 Kings 4:2; cf. Bel and Dragon 9; see especially 2 Sam 7:25).

1:39-56
Miracle Mothers Meet

1:39-40. The journey from Nazareth to the hill country of Judea may have taken three to five days, depending on the precise location of Elizabeth's home. In view of bandits on the roads, young Mary's journey was courageous, although she probaby found others, perhaps a caravan, with which to travel; otherwise her family may not have allowed her to go. Greetings were normally blessings meant to bestow peace, hence the response of verse 41.

1:41. Like dancing, leaping was an expression of joy (e.g., Wisdom of Solomon 19:9). Jewish people recognized that the fetus was able to sense and respond to stimuli. (Indeed, while occasionally suggesting that the fetus's gender could be changed by prayer up until birth, some later rabbinic tradition also affirmed that infants could sin, sing and so forth

Table 1. Early Parallels in Luke

Zechariah in Luke 1:12-80	Mary in Luke 1:29–2:52
Luke 1:12: the vision's recipient is troubled	Luke 1:29: the vision's recipient is troubled
1:13: do not be afraid	1:30: do not be afraid
1:13: reason for miracle	1:30: reason for miracle
1:13: child's name (John)	1:31: child's name (Jesus)
1:15: child will be great	1:32: child will be great
1:15: filled with the Holy Spirit from the womb	1:35: conceived through the Holy Spirit
1:16-17: mission	1:32-33: mission
1:18: question	1:34: question
1:19-20: proof or explanation	1:35-37: proof or explanation
1:20: Zechariah muted for unbelief	1:38, 45: Mary praised for faith
1:80: child grows	2:40, 52: child grows

Table 1 is adapted from Craig S. Keener, *Acts: An Exegetical Commentary* (4 vols.; Grand Rapids: Baker Academic, 2012–2014), 1:557.

in the womb.) Some pagan stories also told of babies dancing in their mother's wombs or speaking in infancy, but pagans generally regarded these events as evil omens; here John's activity is instead a result of his prenatal sensitivity to the prophetic Spirit. On the *Holy Spirit, see 1:15.

1:42-44. For praising one (here Jesus) indirectly through directly blessing another, see comment on Matthew 13:16-17 (cf. also, e.g., the *pseudepigraphic **2 Baruch* 54:10-11).

1:45. Abraham also believed the promise of a son (Gen 15:6).

1:46-47. Verses 46-55 emphasize the exaltation of the poor and humble and the casting down of the proud and wealthy. This emphasis of Mary's song strongly resembles the praise song of Samuel's mother, Hannah, in 1 Samuel 2:1-10; Hannah celebrated when the Lord opened her barren womb. (Luke omits the imagery of military triumph that Hannah had applied to her rivalry with Peninnah.) The psalmist often speaks of "my soul"; to "glorify" the Lord is to praise him (Ps 34:2-3). Hebrew poetry commonly uses synonymous parallelism (in which a second line reiterates the statement of the first); thus "soul" and "spirit" are used interchangeably here, as often in Scripture; joy and praise are also linked (cf. Ps 33:1; 47:1; 95:2; 149:1-5).

Table 2 shows some possible echoes of Hannah's song (borrowed from the introduction to my Acts commentary).

1:48. Ancient Mediterranean culture emphasized honor and reputation, even after death. The *Old Testament spoke of those who obeyed God, especially the prophets, as God's servants. It also emphasized God's exalting the humble and reveals the importance ancient culture placed on one's honor and name enduring after one's death.

1:49-50. In verse 50 Mary alludes to Psalm 103:17, which in context emphasizes God's faithfulness, in spite of human frailty, to those who fear him.

1:51. This is the language of vindication through judgment; often in the Old Testament, God's "arm" would save his people and "scatter" their (his) enemies. Mary weaves together the language of various psalms.

1:52-53. The principle that God exalts the humble and casts down the proud was common in the Old Testament (e.g., Prov 3:34; Is 2:11-12, 17; cf. Sirach 10:14). "Filling the hungry" comes from Psalm 107:9, where God helps those in distress, because he is merciful.

1:54-55. God had promised to be faithful to his people Israel forever, because of the eternal covenant he had made by oath with their ancestor Abraham (e.g., Deut 7:7-8). Israel is God's "servant" in Isaiah 42–49 (cf. comment on Mt 12:15-18).

1:56. Although ancient texts sometimes speak of pregnancy as lasting ten months, it was known that it normally lasted nine; the three months mentioned here plus the six of verse 26 (and esp. v. 36) suggest that Mary was present long enough to see John's birth.

Table 2. Echoes of Hannah's Song

1 Samuel 2:1–10	Luke 1:46–55
God exalts lowly (2:1, 4-5, 8)	God exalts lowly (1:48, 52-53)
I rejoice in your salvation (2:1)	I have rejoiced in God my savior (1:47)
No one holy like the Lord (2:2)	Holy is his name (1:49)
Celebrating the humble exalted and the proud brought down (2:3-9)	Celebrating the humble exalted and the proud brought down (1:51-53)
Poor vs. rich (2:7-8)	Rich empty-handed (1:53)
Hungry vs. full (2:5)	Filled the hungry (1:53)
Poor displacing nobles (*dynaston*, 2:8)	Brought down rulers (*dynastas*, 1:52) [same term]
Shift from personal deliverance to God's anointed king (2:10)	Shift from personal deliverance to Israel's deliverance (1:50)

Table 2 is adapted from Craig S. Keener, *Acts: An Exegetical Commentary* (4 vols.; Grand Rapids: Baker Academic, 2012–2014), 1:557.

1:57-66
The Birth of John

This account lacks the *hagiographic details found in many Jewish birth stories of the period, especially those about Noah and Moses, where the baby illumined the room or (newborn Noah) spoke (or, in later *rabbis, babies were born circumcised).

1:57-58. Neighbors customarily joined in celebrations (cf. 15:6), and the birth—especially an unusual one like this one—and circumcision of a son in the family home (typically performed by the father in this period) were such occasions. Some later Jewish tradition even suggests that guests may have assembled every night from a boy's birth to his circumcision. On the special cause for the celebration here, see comment on 1:7. Jewish people viewed sons as essential because they carried on the family line, although in practice they seem to have loved daughters no less.

1:59. The *law required that circumcisions be performed on the eighth day; this was a special event, and Jewish custom included a charge to raise the child according to biblical law. Jewish children had customarily been named at birth; the evidence for naming a child at circumcision is late, apart from this text. But Romans named infants eight or nine days after birth (for girls and boys, respectively), so it is very possible that many Jewish people this early named boys at their circumcision, as this text and later sources suggest. Zechariah's muteness may have delayed the normal naming, but cf. 2:21.

1:60-62. Children were often named for grandfathers and sometimes for fathers. The father rather than the mother had ultimate say in the naming. Indeed, in Roman (but not Jewish) society, the father even had the legal right to decide whether the family would raise the child or throw the infant out on the trash heaps.

1:63. The writing tablet could be a wooden board coated with wax; one would inscribe the message on the wax surface. Priests could be educated.

1:64-66. Prophetic speechlessness and the restoration of speech once the *prophecy had been fulfilled are found also in Ezekiel 24:27; 29:21; 33:22.

1:67-80
Zechariah's Prophecy

In the *Old Testament only a fine line existed between inspired praise and prophecy (e.g., 1 Sam 10:5-6; 1 Chron 25:1-3), and often, as in Psalms, one could move from one to the other (46:1, 10; 91:1, 14).

1:67. The *Spirit of God was especially (though not exclusively) associated with prophecy in the Old Testament, and this perspective continued in various Jewish circles around the time of Jesus.

1:68. "Blessed be God" occurs in Old Testament praise (e.g., Ps 41:13; 72:18; 1 Chron 16:36; 2 Chron 6:4) and became a standard opening prayer for Jewish blessings. The prophets and later writers (cf. the *Dead Sea Scrolls) spoke of God visiting his people for redemption and judgment (see, e.g., the Greek translation of Ex 3:16; 13:19; Ezek 34:11). The use of "redeem" here compares this new event to when God saved his people from Egypt (cf. the cognate verb in Ex 6:6; 15:13; Deut 7:8); the prophets had promised future deliverance in a new exodus.

1:69. Because a horn could give an animal the victory in battle, it indicated strength. "Horn of salvation" parallels the meaning of "rock" and "strength" in Psalm 18:2 (also 2 Sam 22:3; cf. the linking of "horn" and "salvation" in Hannah's song in 1 Sam 2:1). Thus the Davidic *Messiah would be their deliverer (cf. Ps 132:17). David often was called God's servant (e.g., 2 Sam 3:18; 7:5, 8, 26).

1:70-75. God had promised salvation from their enemies in his covenant with Abraham and his descendants. The language here thoroughly reflects the Old Testament. Verse 71, for example, reflects Psalm 106:10 (God saving them from the hand of those who hated them), which in context applies to God redeeming his people from Egypt. "Holy covenant" (1:72) might evoke Daniel 11:28, 30 (though it is also a natural expression); God often would "remember" the covenant with the patriarchs (Ex 2:24; 6:5; Lev 26:42, 45; Ps 105:8-9), with Israel (Ps 106:45; 111:5; Ezek 16:60) or others (Gen 9:15-16). The "oath" God swore to Abraham evokes a range of texts (e.g., Gen 26:3; 50:24; Ex 6:8; 32:13; Deut 9:5; 29:13; 30:20; 1 Chron 16:16; Ps 105:9), especially

Genesis 22:16-18 (including triumph over enemies and blessing of nations).

1:76. "Prepare his way" alludes to Isaiah 40:3 (predicting the herald of a new exodus) and probably also Malachi 3:1 (probably connected with Elijah in 4:5); cf. Luke 3:4-6; 7:27.

1:77. Future "salvation" in Isaiah includes deliverance from political oppressors; but, as here, it is predicated upon Israel's restoration to divine favor through forgiveness.

1:78. "Sunrise" (NASB) or "rising sun" (NIV) could allude to God as the Sun of righteousness in Malachi 4:2 (cf. Ps 84:11), in the context of Elijah preparing the way (Mal 4:5-6). Some commentators have suggested a Greek play on words referring to the Messiah as both a "shoot" and a "star" in the Old Testament.

1:79. Although Luke weaves in various allusions here as elsewhere in the chapter, Isaiah 9:2 is especially in view; the context of this passage is explicitly messianic (Is 9:6-7), and that context probably informs the reading of the virgin birth in Luke and Matthew (cf. Is 7:14; comment in Mt 1:23).

1:80. The summary statement is especially reminiscent of 1 Samuel 2:26 and 3:19 for the maturation of the prophet Samuel. The desert was the expected place for a new exodus and thus for the Messiah; some groups, seeking greater purity, withdrew from common Judaism into the desert. Whether John may have studied among such groups for a time is debated, although it is plausible if his aged parents died before he reached maturity (the *Essenes reportedly adopted children and trained them from age ten on). John's later public ministry differed from their private withdrawal, however.

Ancient writers sometimes compared characters; Luke compares John here with Jesus in 2:40, 52. Such comparisons did not always denigrate the inferior person in the comparison; sometimes they chose a great person to illustrate that the one with whom he or she was compared was even greater. Luke repeatedly illustrates that Jesus is greater than John.

2:1-7
Journey to Bethlehem

Tax censuses became irregular during the late Republic, but Augustus revived them. Governors adminstered them in their provinces (at first every five years, and then every twelve). By A.D. 6 wide-scale censuses were taken every fourteen years. A tax census instigated by the revered emperor Augustus initiates the contrast between Caesar's earthly pomp and Christ's heavenly glory in 2:1-14.

2:1. Censuses were important for evaluating taxation; they were generally conducted by provincial governors, so local governments probably did not implement Caesar's decree in all regions simultaneously.

2:2. Scholars often dispute whether Quirinius was governor of Syria at this time. Quirinius was certainly governor of Syria during the much-remembered later census of A.D. 6, when Sepphoris and some Galilean patriots revolted against the tax census of that year. This passage seems to refer to an earlier census while Herod the Great was still king (before 4 B.C.); thus perhaps Luke's "*first* census under Quirinius."

Some commentators have suggested that Luke blended the two events (the well-known with the obscure) or that Quirinius was governor of Syria at the earlier time Luke describes as well as in A.D. 6, for which there is some (though currently incomplete) evidence. Historians dated events by naming current officials, so Quirinius may have been in office at the time without being associated with this census. The governor of Syria is mentioned because the Roman province of Syria included Palestine under its jurisdiction at this time.

2:3. Although Egyptian census records show that people had to return to their homes for a tax census, the home to which they returned was where they owned property, not simply where they were born (censuses registered persons according to property). Joseph thus must have still held property in Bethlehem; if the tax census of A.D. 6 is any indication, he might not have had to register for any property in Galilee.

2:4. Pottery samples suggest a recent migration of people from the Bethlehem area to Nazareth around this period, so Joseph and many other settlers in Galilee may have hailed from Judea. Joseph's legal residence is apparently still Bethlehem, where he had been raised. Bethlehem was just under six miles (nine kilometers) south of Jerusalem (perhaps one reason David chose Jerusalem to begin

with), hence easily reached after one traveled south to Jerusalem.

2:5. Betrothal provided most of the legal rights of marriage, but intercourse was forbidden; Joseph is courageous to take his pregnant betrothed with him, even if (as is possible) she is also a Bethlehemite who has to return to that town. Although tax laws in most of the empire required only the head of a household to appear, the province of Syria (then including Palestine) also taxed women; but this would apply only if she owned immoveable property. Joseph may simply wish to avoid leaving her alone this late in her pregnancy, especially if the circumstances of her pregnancy may have deprived her of other friends.

2:6-7. The "swaddling clothes" were long cloth strips used to keep babies' limbs straight so they could grow properly (cf. Wisdom of Solomon 7:4). Some advised using them for forty or (more often) sixty days; others advised removing them as soon as the baby's limbs were firm. Midwives normally assisted at birth; especially because this was Mary's first child, it is likely (though not explicit in the text) that a midwife would assist her. Jewish *law permitted midwives to travel a long distance even on the Sabbath to assist in delivery.

By the early second century A.D. even pagans in the area were reportedly widely aware of the tradition that Jesus was born in a cave used as a livestock shelter behind someone's home, and they reported the site of this cave to the emperor Hadrian. (The story could have been adapted to fit a few *Gentile stories about deities born in caves, but its earliness lends some weight to its reliability.) The manger was a feeding trough for animals; sometimes these may have been built into the floor. The word traditionally translated "inn" probably means something more like "home" or "guest room"; whether because other relatives may have also been returning home for the census or for other reasons, it is easier for Mary to bear (or care for the child after birth) in the vacant cave outside.

2:8-20
The Real King's Birth

2:8. Due to the proximity to Jerusalem, some scholars have suggested that the flocks here are the temple flocks raised for sacrifice. In any case, this *narrative would have challenged the values of many religious people, who despised shepherds (the earlier examples of Moses and David notwithstanding); shepherds' work kept them from participation in the religious activities of their communities. More clearly, elites throughout the empire usually viewed contemporary shepherds negatively. Pasturing of flocks at night indicates that this was a warmer season, not winter (when they would graze more in the day); Christians may have later adopted December 25 as a time to celebrate Christmas in part to coopt a pagan Roman festival scheduled shortly before that time.

2:9. Angelic appearances, the revelation of God's glory and consequent fear among the humans present were common in the *Old Testament when God was acting in history in special ways.

2:10-12. For "Do not be afraid," see comment on 1:13, 30. "Good news" could refer to the proclamation of God's salvation (Is 52:7), but pagans applied it also to celebrations of the cult of the emperor among all people in the supposedly worldwide empire. They celebrated his birthday (pagans publicly celebrated deities' birthdays) and hailed him "*Savior" and "Lord." But Jesus' birth in a lowly manger distinguishes the true king from the Roman emperor. For the "Lord Christ," see *_Psalms of Solomon_ 17:32 (a pre-Christian Jewish work). "Signs" are common in prophetic literature (e.g., Is 7:14; Ezek 12:11) and function as much to provoke and explain truth as to prove it. Jesus' birth "to you" may evoke Isaiah 9:6.

2:13-14. This choir contrasts with the earthly choirs used in the worship of the emperor. The current emperor, Augustus, was praised for having inaugurated a worldwide peace. The inverted parallelism (God vs. people, and "in the highest" vs. "on earth") suggests that "in the highest" means "among heaven's angelic hosts."

2:15-18. The shepherds probably checked the animal stables till they found the one with the baby; Bethlehem was not a large town by modern standards (although it was much larger than Nazareth).

2:19-20. Mary kept these matters in her mind as Jacob had his son Joseph's revelations in Genesis 37:11 (for the idiom, cf., e.g., Ps 119:11; Prov 6:21; Wisdom of Solomon 8:17).

2:21-40
The Infant and His Witnesses

2:21. See comment on 1:57-59.

2:22-24. These verses refer to Exodus 13:2, 12 and Leviticus 12:8. Jesus' parents fulfill the *law of Moses properly and piously. The particular sacrifice they offer indicates that they are poor (Lev 12:8). Following the custom, Mary would lay hands on the pigeons, then a priest would take them to the southwest corner of the altar, wringing one bird's neck as a sin offering and burning the other as a whole burnt offering.

2:25-26. This encounter with Simeon no doubt cannot occur deeper in the temple than the Court of Women, since Mary is present. God's future intervention for Israel was described as "consolation" or "comfort" (cf., e.g., Is 49:13; 51:3; 52:9; 66:13). Early Judaism often associated the "*Holy Spirit" with *prophecy.

2:27-32. Simeon's praise reflects Old Testament piety such as Genesis 46:30, and (in Lk 2:32) prophecies like Isaiah 42:6 and 49:6. For being willing to die once one has seen good, see Genesis 46:30; Tobit 11:9; for living to see God's salvation, see Psalm 91:16. For seeing God's salvation more generally, see Exodus 14:13; 2 Chronicles 20:17; Isaiah 52:10; cf. Luke 3:6.

2:33-35. Prophecies in Jewish and Greco-Roman tradition were often obscure, easier understood in hindsight than at the moment they were given. Simeon's words may allude to the stumbling stone of Isaiah 8:14-15 and the anticipated *resurrection. The "sword" reflects either Mary suffering over Jesus' pain or (as in the later part of the verse) her heart being bared, probably the former (a mother's grief can symbolize a son's suffering, e.g., Judg 5:28).

2:36. Although the Old Testament did include prophetesses, they were much less prominent than male prophets in the Jewish tradition of this period. The name "Anna" (Tobit 1:9) is the Hebrew name "Hannah" (1 Sam 1:2).

2:37-38. Jewish and Greco-Roman culture often viewed widows who never remarried as pious and faithful. One famous widow in Jewish tradition, Judith, was said to have lived as a widow till her death at 105. If one adds the two numbers given in the text here, seven and eighty-four (taking eighty-four as the length of Anna's widowhood rather than her age), and she was married at the common age of fourteen, one could see her as about 105 also. But the number may refer to her age; or Luke might mean her age but retain ambiguity to allow an allusion to Judith. Scripture promised the redemption of God's people (Is 52:3; Jer 31:11).

2:39-40. See comment on 1:80 and the allusion to Samuel.

2:41-52
The Boy in the Temple

Where such information was available, ancient biographers would tell significant anecdotes about their subjects' youth, sometimes about spectacular child prodigies (e.g., Cyrus, *Josephus). In 2:21-40, Jesus intrigued prophets; in 2:41-52, he intrigues teachers of the *law.

2:41. The law required an annual pilgrimage to Jerusalem at Passover (Deut 16:16), although most Jewish people living far away could not come annually. Although Jewish teachers did not always require women's attendance at the festivals, many women attended. This verse may be another allusion to Hannah in 1 Samuel 1:7 and 2:19.

2:42. "Twelve years old" would have been about one year before Jesus officially became an adult Israelite and accepted responsibility for fulfilling the law. (Although the official Jewish *bar mitzvah* ceremony may not have existed as early as Jesus' day, its analogy to Roman coming-of-age rituals supports other evidence for an official entrance to adulthood around this age.)

2:43-45. Caravans, which afforded protection from robbers, were common on pilgrimages for the feasts in Jerusalem. (Indeed, Josephus even speaks of entire towns traveling for the feasts.) Traveling with a caravan, in which neighbors from their town would watch the community children together, Mary and Joseph might assume that the near-adult Jesus was with companions, especially if by now they had younger children to attend to. If we assume a pace of twenty miles per day (though perhaps slower, depending on transportation and the children), Nazareth would be a little over three days' journey along the shortest route, so the other villagers were probably home by the time the parents found Jesus (2:46). Estimates of Jerusalem's population

vary widely; it may have been in the range of seventy to eighty thousand, making Jesus difficult to find without help.

2:46-47. Some Jewish teachers in this period reportedly conducted their classes in the temple courts; the famous *Hillel and *Shammai may have been two such teachers. Asking questions was used both in teaching and in learning, but it was important for learners to ask intelligent questions, as Jesus does. Teachers could answer questions with questions, and Jesus' answers are also intelligent. Students might begin advanced training in their mid-teens; the teachers recognize Jesus as a prodigy.

2:48-51. Mothers were responsible for children at an earlier age, but the father would be responsible for the child's education, certainly by this age. Early Judaism regarded the commandment to honor one's father and mother as one of the most important in the law, and children not yet considered adults were to express this honoring in part by obedience. On Mary's heart, see comment on 2:19.

2:52. See comment on 1:80; cf. Judith 16:23; for the wording, cf. also Proverbs 3:4, but especially 1 Sam 2:26.

3:1-6
Introduction of John

3:1-2. It was customary to begin historical *narratives by dating them according to the years of rulers and officials, when possible, both in Greco-Roman and *Old Testament historiography, and often in introducing prophetic oracles or books (e.g., Is 1:1; 6:1). Luke thus shows that John began preaching somewhere between September of A.D. 27 and October of A.D. 28 (or, less likely, the following year). Tiberius reigned as sole emperor from A.D. 14 to 37 but shared some power with Augustus from A.D. 13; Herod Antipas, son of Herod the Great (see comment on 1:5), was tetrarch (governor) of Galilee from 4 B.C. to A.D. 39; Pontius *Pilate was in office from A.D. 26 to 36. Presumably Pilate was installed with the approval of Sejanus, the praetorian prefect who influenced most of Tiberius's decisions at that point; although attested in an inscription and featuring prominently in Josephus and Philo, Pilate proved of little interest to Rome's own historians except once—for his execution of Jesus. Philip of Trachonitis was son of Herod the Great and was married to Herodias's daughter Salome (Josephus, *Jewish Antiquities* 17.189; 18.137); he died in Tiberius's twentieth year (*Jewish Antiquities* 18.106). Itureans were a pastoral tribe known for raiding others and initially difficult to control. Lysanias ruled Abilene (named for its leading town, Abila) but his territory, along with that of Philip, was later transferred to Agrippa (*Jewish Antiquities* 19.275; 20.138). On "Annas and Caiaphas," see comment on John 18:13, 19.

3:3. Non-Jews who wished to convert to Judaism were required to immerse themselves in water to remove their impurity as *Gentiles; John requires this act of conversion even of Jews. See comment on Mark 1:5.

3:4-6. On the quotation, see Mark 1:3; Isaiah promised a new exodus in which God would again save his people Israel. Luke extends the quote to highlight more of Isaiah 40, possibly to conclude with seeing God's salvation (cf. Lk 2:30) and probably also to include "all flesh/humanity" (cf. Acts 2:17, where Luke may look ahead to the welcoming of Gentiles).

3:7-20
John's Preaching

See comment on Matthew 3:7-12 for more details.

3:7. Vipers (e.g., the Nicander's viper) were commonly believed to eat their way out of their mother's womb; thus John's calling the crowd "viper's offspring" was even nastier than calling them "vipers." (In a context where people valued their ancestry, as in 3:8, the image of parent-murder would be all the more relevant.) Serpents would flee a burning field.

3:8-9. Jewish people often believed that they were saved by virtue of their descent from Abraham, which constituted them the chosen people. The idea of raising people from stones appears in Greek mythology, but the metaphor of people like stones appears in a range of sources. John could be making a wordplay between the *Aramaic words for "children" and "stones."

3:10-11. The poorest people (such as most people in Egypt, who were peasants) had only one outer tunic (though some had a nicer garment for special occasions). Peasants in Palestine may have been somewhat better off,

but in any case, anyone with two tunics had more than necessary for life. "What shall we do?" occurs throughout Luke-Acts as a question about how to be saved.

3:12-13. *Tax gatherers sometimes collected extra money and kept the profit; although this practice was not legal, it was difficult to prevent. In rural Egypt, where we have the fullest evidence, they were known to even beat old ladies to discover where tax fugitives were; on occasion, an entire village would even relocate to escape tax collectors.

3:14. Some commentators think these "soldiers" are Jewish police, who accompanied tax gatherers, or Herodian mercenaries, but more likely these are the light auxiliary non-Jewish troops that Rome recruited from Syria. Although the large legions were stationed in Syria, not Palestine, some soldiers were stationed in the cohorts in Caesarea and the one in Jerusalem. Some may have traveled to hear (or investigate) John's preaching. (The frequency of Roman soldiers' illegal concubinage with native women indicates that soldiers did not all remain in their garrison at all times.) Jews were exempt from required military service due especially to their dietary laws.

Soldiers occasionally protested their wages, creating trouble with the government (e.g., the frontier mutiny of A.D. 14); they were known for extorting money from local people they intimidated or for falsely accusing them (see, e.g., the *papyri, *Apuleius).

3:15-17. On John's messianic preaching, see comment on Matthew 3:11-12. The *Old Testament prophets had declared that in the end time the righteous would be endowed with the *Holy Spirit and that the wicked would be burned with fire. The Jewish people generally viewed the Holy Spirit as the Spirit of *prophecy, and some circles viewed the Spirit as a force that purified God's people from unholiness. Winnowing was familiar to all Palestinian Jews, especially to the farmers: they would throw harvested wheat into the air, and the wind would separate the heavier grain from the lighter chaff. The chaff was useless for consumption and was normally burned. Some other writers also described the day of judgment as a harvest or the wicked as chaff (Is 17:13; Jer 13:24; 15:7; etc.). Because the same Greek (and Hebrew) word can mean both "spirit" and "wind," the picture of wind and fire carries over from 3:16. That the fire is "unquenchable" points beyond the momentary burning of chaff to something far more horrible (Is 66:24).

3:18. On his "many other words," see comment on Acts 2:40.

3:19-20. John's preaching to Herod Antipas fits prophetic morality, but Herod and his advisers may view it as political meddling, especially given the political cost of Herod's illicit liaison with Herodias (see comment on Mk 6:17-20). Herod's nemesis, a Nabatean king (Aretas IV), was particularly angry about the affair, and also found ethnic allies in Herod's subject territory of Perea. Herod may thus have viewed John's preaching in that region (Jn 3:23) as especially damaging.

In ancient Israel prophets normally enjoyed an immunity from persecution that was virtually unparalleled elsewhere in the ancient Near East (prophets of other nations rarely denounced living kings; at most they suggested more funds for their temples). The ancient world did treat the abuse of heralds as treachery worthy of death, and God's prophets were his messengers (usually using the messenger formula "Thus says"). But some Israelite rulers did imprison (1 Kings 22:26-27; Jer 37–38) and seek to kill or silence them (1 Kings 13:4; 18:13; 19:2; 2 Kings 1:9; 6:31; 2 Chron 24:21; Jer 18:18, 23; 26:11, 20-23). John's costly stand prefigures Jesus' death at the hands of the authorities.

3:21-22
Jesus' Sonship Declared

Some Jewish tradition stressed that God communicated in this era by voices from heaven; many people believed that he no longer spoke by prophets, at least not as he once had. The prophetic ministry of John and the voice from heaven thus provide a dual witness to Jesus' identity. Opened heavens could accompany heavenly revelations (see Ezek 1:1). See further comment on Mark 1:9-11.

3:23-38
Jesus' Ancestry

Greco-Roman biographers often included lists of ancestors, especially illustrious ancestors, when this was possible. Like Greco-Roman

genealogies, but unlike Matthew and *Old Testament genealogies, Luke starts with the most recent names and works backward. This procedure enables him to end with "*Son of God" (cf. 1:35; 3:22; 4:3).

For more details on genealogies, see comment on Matthew 1:2-16. Scholars have proposed various explanations for the differences between the genealogies of Matthew and Luke, of which the following are most prominent: (1) one (probably Matthew) records the genealogy of Joseph, the other of Mary (given the preference for clan endogamy, both could derive from the house of David; both genealogies, however, attribute the line to "Joseph"); (2) one (probably Matthew, or his source) spiritualizes the genealogy rather than following it literally; (3) the lines of descent cross but are different because one list includes several adoptive lines through levirate marriages (Deut 25:5-10).

In Greek society, men often entered public service at the age of thirty; Levites' service in the temple also began at thirty (cf. Num 4:3-47 et passim). Like a good Greek historian, Luke says "about thirty" (3:23) rather than stating an estimate as a definite number, as was more common in traditional Jewish historiography.

4:1-13
Tested in the Wilderness

See comment on Matthew 4:1-11 for more details. Jesus here settles issues as good *rabbis did, by appeal to Scripture. But this text also shows that Jesus does not just use Scripture to accommodate contemporary views of its authority; he uses it as his authority and the final word on ethics even when dealing with a supracultural adversary. (It should go without saying that the original writer and hearers viewed the devil as a literal, personal being.)

The devil here appeals to contemporary models of power (such as magician or earthly *messiah) to define Jesus' sonship; Jesus appeals to Scripture. The three texts from Deuteronomy (6:13, 16; 8:3) cited here (4:4, 8, 12) were commands given to Israel when Israel was tested in the wilderness; the starting context in Deuteronomy addressed God's people led by him and tested in the wilderness for forty periods of time (Deut 8:2). Unlike Adam, another "son" of God, who sinned (3:38), Jesus overcomes the tests (cf. Gen 3).

4:1-2. Moses also fasted forty days and nights; Israel also was in the wilderness forty years. On fasting, see further comment on Acts 13:2-3.

4:3. The devil's first test of Jesus is the sort of feat ancient thought attributed to magicians, who claimed to be able to transform themselves into animals and to transform other substances, like stones into bread.

4:4. Other Jewish circles (evident, e.g., in the *Dead Sea Scrolls and later rabbinic texts) also used the phrase "It has been written" to introduce Scripture. The context of Deuteronomy 8:3 involves God's "son" Israel depending on God for provision (Deut 8:3-5).

4:5-7. Most of early Judaism understood that the devil ruled the present age of human rebellion, but that ultimately God remained sovereign. The world did not technically belong to the devil (Dan 4:32), who owned human hearts and societies only as a usurper (acting through powers subordinate to God, e.g., Dan 10:13). The most he could do would be to make Jesus the political, military sort of Messiah most Jewish people who expected a Messiah were anticipating.

4:8. Deuteronomy 6:13, which Jesus cites, prohibits idolatry (Deut 6:14), a commandment anyone who worshiped the devil would obviously violate. It belongs to the broader context of Jesus' earlier quotation (Deut 8:3).

4:9-11. The devil takes Jesus to a part of the temple overlooking a deep valley; a fall from there would have meant certain death. Later rabbis acknowledged that the devil and demons could handle Scripture expertly; here the devil cites Psalm 91:11-12 out of context, because 91:10 makes clear that God's protection is for events that *befall* his servants, not an excuse to seek out such dangers to make God prove himself.

4:12. In contrast to the devil, Jesus approaches biblical texts with a greater sensitivity to their context. Continuing his citations from Deuteronomy, Jesus cites Deuteronomy 6:16, which refers to how the Israelites had tested God at Massah by refusing to accept that God was among them until he wrought a sign for them (Ex 17:7).

4:13. To most ancient readers, the devil's

departure would have implied at least his temporary defeat (cf. the **Testament of Job* 27:6; *Life of Adam and Eve* 17:2-3, though of uncertain date).

4:14-30 Preaching in His Hometown Synagogue

Luke, who follows the order of his sources quite meticulously (perhaps according to the pattern of biography he is using), departs from that order here (cf. Mk 6:1-6), because this section becomes programmatic for his *gospel. (Cf. Peter's sermon in Acts 2, which analogously functions as programmatic for Acts.)

That Jesus would quote Scripture against the devil (4:1-13) would hardly have disturbed his contemporaries; that he would use it to challenge traditions that his contemporaries believe are scriptural, however, enrages them. Insofar as first-century Jewish teachers may have been like second- and third-century rabbis, they officially welcomed debate, examining all views from the Scriptures. Nevertheless, most people also generally interpreted Scripture in such a way as to support views sanctioned by tradition (a frequent practice in many churches today).

4:14-15. Visiting rabbis were often given opportunities to teach; but Nazareth, a village of as few as five hundred inhabitants, already knew Jesus and would be less open to thinking about him in new ways.

4:16. Literacy varied from one place to another in antiquity, but many estimate that on average only ten percent of the population could read and write on any significant level. The percentage was higher in some urban areas, but reading knowledge of the Torah may have also been more available in Jewish Palestine. Many *Gentiles remarked how diligently the Jewish people taught their traditions in the *synagogues and to their children; they called them a "nation of philosophers." (In contrast to most cultures today, a minimum of other material competed with it, making knowledge of Torah the primary area of expertise, and a briefer cultural "canon" than the Greeks enjoyed.) More would be able to recite lines of Torah from memory than to read and understand it, but Jesus here is able to read and expound. The people would have known that Jesus was devout and skilled in Hebrew from his previous readings in his hometown synagogue. In Jewish Palestine, respected teachers usually sat while expounding Scripture (Mt 5:1) but stood while reading it (although some reversed this custom).

4:17. Scholars debate when regular lectionary readings for the Law began in synagogues, but in this period readers were probably free to make their own selection from the prophets; still later, readers in the Prophets were even allowed to "skip" passages. The synagogue attendant (*chazan*—v. 20) may have chosen which book to read (different books of the *Old Testament were on different scrolls; Isaiah was so large that it required one large scroll by itself). "Opening" the book meant unrolling the Hebrew scroll from right to left to the desired place.

4:18-19. Isaiah in this passage (61:1-2; cf. 58:6) seems to describe Israel's future in terms of the year of Jubilee, or year of release, from Leviticus 25 (cf. esp. Lev 25:10); the *Dead Sea Scrolls read Isaiah 61 in this way. Some scholars have suggested that a recent Jubilee year may have made this text fresh in the minds of Jesus' hearers; some other scholars dispute whether this even remained a current practice in mainstream Judaism. That Luke ends the quote on a note of salvation is probably intentional, but his readers who know Scripture well would know how the passage continues (speaking of judgment).

4:20. According to the most common Palestinian Jewish custom, respected teachers normally sat to expound Scripture. The synagogue attendant was presumably the *chazan,* the official responsible for the upkeep of the building, the scrolls and so forth; this position was eventually a paid one (but lower in authority than "rulers" of a synagogue); we need not assume something so formal in small Nazareth. Synagogues were probably less formal then than *churches or synagogues generally are today, so the attentiveness of those present is significant.

4:21-22. Immediacy ("today"; cf. 2:11; 19:5, 9; 23:43) will surprise Jesus' hearers; the text Jesus reads is supposed to be fulfilled in the messianic era, and the inhabitants of Nazareth recognized neither a *Messiah nor a messianic era before them. Because they lived only four

miles from Sepphoris, they were well aware of how the Romans had destroyed that Galilean capital after a messianic-style revolt in A.D. 6; that this region was thereafter cautious about messianic announcements is suggested by the fact that the rebuilt Sepphoris did not join in the later revolt of A.D. 66.

Writers of the Dead Sea Scrolls, who believed that they lived on the verge of the end time, often stressed the immediacy of biblical prophecies, applying descriptions of Nahum, Habakkuk and others to their own day. Interpreting the Bible this way was thus not in itself offensive to first-century Palestinian Jews; the offense was implying that God's end-time activity had arrived in Jesus' own ministry.

4:23-24. The tradition that Israel rejected its own prophets was strong in Judaism, which amplified the fewer reports of martyrdoms already in Scripture (e.g., Jer 26:23). Jeremiah was persecuted even by his own priestly town, Anathoth (Jer 1:1; 11:18-23). The proverb in 4:23 is attested in some form in Greek classical and medical literature, and some rabbis cited a similar *Aramaic proverb.

4:25-27. Jesus mentions the socially weak (widows) and marginalized (lepers) here, but the main point (a helpful foretaste for Luke's second volume, Acts) is that non-Jews were the ones to accept two of the major signs prophets of the Old Testament (implicitly illustrating the principle in Luke 4:24). Sidon and Syria were among the particularly despised areas. The context of Naaman's cure (2 Kings 5) also indicates that many lepers in Israel were not cured (2 Kings 7:3; these lepers were in Israelite Samaria; cf. Luke 17:16). Jesus' point: Nazareth will not receive him, but non-Jews will. Elijah and Elisha are apt analogies for Jesus' ministry, which included raising the dead and multiplying food (similar to what Elijah did for the widow of Zarephath) and healing lepers.

4:28-29. Under Roman rule, a mob could not legally execute capital punishment in Jewish Palestine; Jewish law, moreover, required trial and conviction before execution. The crowd is thus unusually angry—especially to attempt this execution on the sabbath (v. 16). Nazareth is situated on top a hill and, like many ancient cities it was set in the hill country, with plenty of jagged rocks and cliffs nearby. Somewhat later sources suggest that stoning ideally should begin with throwing the criminal over a cliff, then hurling rocks nearly the size of one's head on top of the victim. One aimed for the chest first, but at such a distance one's aim would not be particularly accurate.

4:30. Whether the Lord hides him (cf. Jer 36:26), his attitude silences them, or his townspeople suddenly realize what they are doing to one of their own, Jesus walks through the crowd unharmed—his hour had not yet come.

4:31-37
Preaching in Capernaum's Synagogue

A pericope about Jesus' inhospitable reception in a house of prayer and study (4:14-30) is followed by his confrontation with a demoniac in one. Yet the people's response in Capernaum, which by the second century A.D. had become a center for early Jewish Christianity, contrasts with that of Nazareth in 4:14-30. See comment on Mark 1:21-28.

4:31. Archaeologists have found the site of Capernaum's synagogue.

4:32. Most teachers would try to expound the *law by explaining the proper way to translate it or by appealing to their legal or *narrative traditions; Jesus goes beyond such practices.

4:33-34. *Demons were often associated with *magic, and magicians tried to subdue other spiritual forces by invoking their names; some think that the demon tries to ward off Jesus' power in this way. (Magic also depended on its secrets not being divulged.) If the demon is trying to intimidate Jesus by threatening to subdue him in this way ("I know who you are" was used to subdue spiritual powers in some magical texts), as some scholars have suggested—his ploy does not work.

4:35-37. Among prominent methods ancient exorcists used to expel demons were the following: (1) scaring the demon out or making it too sick to stay—for example, by putting a smelly root up the possessed person's nose in the hope that the demon would not be able to stand it—or (2) invoking the name of a higher spirit to get rid of the lower one. The people are amazed that Jesus can be effective by simply ordering the demons to leave.

4:38-44
Popularity Increases

See comment on Mark 1:29-39 for more details.

4:38. Simon's father-in-law had probably passed away, and Simon and his wife had taken her widowed mother into their home. Caring for one's extended family—especially aged parents—was common.

4:39. Waiting on guests was an important element of hospitality normally assigned to the adult women of the household (most free families could not afford slaves).

4:40-41. The sabbath (4:31) ended Saturday at sundown. "As the sun was setting" indicates that the sabbath is ending; thus people could carry the sick to Jesus for healing (carrying was considered work, thus forbidden on the sabbath). Laying on hands had a rich symbolism in Jewish tradition (e.g., Gen 48:13-14; Num 27:23; Deut 34:9; see comment on Acts 6:6). Jesus could also heal without it if the people could believe (see Lk 7:6-9).

4:42-44. It was nearly impossible to find a place to be alone in ancient towns, with their narrow streets and sometimes (often in poorer places like Egypt) twenty people living in the common one-room houses. Many blocks in Capernaum consisted of four homes facing a common courtyard. Villages were also often close together, though one could find a place alone if one arose early enough (most people arose at dawn).

5:1-11
Fishers of People

Like Moses' experience as a shepherd, David's as a commander and Joseph's as an administrator, the background of these *disciples as fishermen can provide them a perspective that will help them for their new task.

5:1-2. The lake of Gennesaret is the lake of Galilee (locally called the "Sea" of Galilee). Non-Galileans (like Luke or Pliny) call it a "lake"; it was most often people of this region who called it Gennesaret (Josephus, *Jewish War* 3.463). Nets would collect things other than edible fish, thus requiring cleaning. Edible fish in the inland "Sea" of Galilee today include varieties of carp; *Josephus says that the lake of Galilee held several kinds of fish.

5:3. The shore of the lake would function acoustically like an amphitheater; withdrawing a little from the crowd and addressing them from the boat thus would have made Jesus much easier to hear.

5:4-5. Peter's obedience is exemplary; a fisherman might trust a *rabbi's teaching on religious matters but need not do so in his own field of expertise, fishing. The fishermen had labored with a casting net (see comment on Mt 4:18) or possibly a dragnet (see comment on Mt 13:47-50, where a precise term for a dragnet is used) at night, which should have caught them many more fish than Jesus' instructions here. Some said that fish were most easily caught before sunrise (Pliny, *Natural History* 9.23.56, 58). Sources suggest that fish would stay deep during the day to avoid the sun, hence were more easily caught at night in the lake of Galilee; they would be sold in the morning (ahead of competitors).

5:6. Ancient fishermen sometimes told stories of marvelous catches of fish; more importantly, Jesus' multiplication of food and of creatures has *Old Testament precedent (e.g., food—Ex 16:13; 2 Kings 4:1-7, 42-44; creatures—Ex 8:6, 17, 24; 10:13; both—Num 11:31-32). The circular cast net, for use in shallow water, was about fifteen feet wide, tightly meshed, and had lead sinkers. The dragnet (Mt 13:47-48) was dragged between two boats that moved further apart, sweeping up fish in their path. Broken nets could ruin fishermen, unless they secured (often borrowed) money to repair them.

5:7. Because the overhead cost of equipment was high, fishermen often worked together in cooperatives; families would sometimes work together to increase their profits. Other fishing cooperatives are known from ancient Palestine, so it is not unusual for Simon and Andrew to be in business with the family of Zebedee (5:10). Men working from more than one boat could let down larger nets than those working from only one; fish could then be emptied onto the boat or the nets hauled ashore.

5:8-9. Moses, Gideon and Jeremiah were all overwhelmed by their initial calls; but Peter's excuse is especially like Isaiah's (Is 6:5) and fits Luke's emphasis (Lk 5:20, 30-32; Acts 9:4).

5:10. "Fishers of people" could allude to two Old Testament texts (Jer 16:16; Hab 1:15),

transforming an image of impending judgment into one of rescue from that judgment; but Jesus might simply transform their vocation as fishermen, as God made Moses and David "shepherds" of his people.

5:11. Even if they had a bad night (5:5), fishermen made a better income than most Galileans (most of whom were peasants), so leaving their job is an act of radical commitment that they would expect to adversely affect them economically. Commercial fishermen tended to be better off than rural peasants, and were considered strong and inured to the sun.

5:12-16
Cleansing a Leper

See comment on Mark 1:40-45 for more details. Lepers were outcasts from society, and most nonlepers would not have wanted to touch them, even had Jewish *law permitted it. The Bible had prescribed particular sacrifices if someone's leprosy were cured (Lev 14:1-32). By complying with these regulations, Jesus does nothing to violate the law or to offend the priests.

Teachers thought to perform miracles usually drew large followings, because many people were sick; the number of people who flocked to hot springs in Galilee that were thought to relieve ailments attests to the large numbers of people who suffered from various afflictions.

5:17-26
Healing a Paralytic

For more details, see comment on Mark 2:1-12.

5:17. *Pharisees were apparently much more common in Jerusalem and Judea; thus probably more of the Galileans belonged to the other group Luke mentions, the teachers of the *law (cf. Mk 2:6). Larger Galilean villages would have had *scribes schooled in Jewish law, who could execute legal documents and train children in the law of Moses.

5:18-19. The average Capernaum home may have allowed only about fifty persons standing (the span of the largest excavated homes there is eighteen feet). One gained access to the roof by an outside staircase, so these men could reach it unimpeded. The roof of a single-story Palestinian home was sturdy enough to walk on but was normally made of branches and rushes laid over the roof's beams and covered with dried mud; thus one could dig through it.

Luke changes this Palestinian roof structure to the flat roof of interlocking tiles more familiar to his own readers, as preachers today change details when retelling biblical stories to make them relevant to their hearers. For the same reason, Luke does not mention their digging through the roof (indeed, in one play by Aristophanes such an action might have caved in a Greek roof). (The Roman atrium in fact had an opening in the ceiling, though Luke, who mentions tiles, probably does not envision that.) The paralytic's "bed" or "stretcher" would have been the mat on which he always lay.

5:20-21. Most Jews allowed that some of God's representatives could speak on God's behalf, but they recognized that only God could forgive sins. Technically and by the narrowest definition preserved in later rabbinic sources, "blasphemy" involved pronouncing the divine name or perhaps inviting people to follow other gods; less technically, it had to involve at least dishonoring God. Strictly speaking, therefore, these legal scholars would be mistaken in interpreting Jesus' words as blasphemy, even by their own rules. They presumably employ the term more loosely, believing that Jesus dishonored God by usurping a divine role.

5:22-26. Some Jewish teachers accepted miracles as verification that a teacher was truly God's representative; others did not regard miracles as sufficient proof if they disagreed with that teacher's interpretation of Scripture.

5:27-32
Partying with Sinners

See comment on Mark 2:13-17 for more details. In the *Old Testament, God instructed "sinners" in his way, i.e., the humble who knew their need (Ps 25:8-9).

5:27-28. Given the location of Capernaum, some think that Levi is a customs official for Herod Antipas. Whatever kind of tax collector he was, he probably had a good income and was not likely to get his job back once he left it, especially on such short notice.

5:29. Jesus' invitation for Levi to follow

him constituted a great honor, especially for one who would have normally been excluded from religious circles. That Levi should respond by throwing a party for him is not surprising; repaying honor was an important part of social life in antiquity, and Levi probably would feel honored to have a prominent rabbi in his house. Table fellowship indicated intimate relations among those who shared it, and given the nature of ancient banquets, it was natural for a well-to-do person to invite his (former) colleagues and also subordinates to a feast. The colleagues would be offended if not invited.

5:30. The *Pharisees (and the teachers belonging to their movement) were scrupulous about their special rules on eating and did not like to eat with less scrupulous people, especially people like *tax gatherers and sinners. Most people regarded tax gatherers as collaborators with the Romans, and nationalistic religious people despised them. Religious people also expected edifying conversation. Because the Pharisees here attack only Jesus' table fellowship, we may infer that Jesus and his own *disciples conduct themselves properly otherwise (e.g., they would not get drunk), whether or not all of Levi's other guests are doing the same.

5:31-39
Partying or Fasting?

See comment on Mark 2:18-22. The *Old Testament also recognized that some practices or objects once appropriate in worship or commemoration could become no longer appropriate (2 Kings 18:4; Jer 3:16).

5:31-33. Although the Old Testament commanded many more feasts than fasts, fasting had become a widespread Jewish practice; Pharisees often fasted twice a week, at least during the dry season. Although *ascetic fasting was forbidden, many people probably did fast for ascetic reasons. Fasting was an important practice to join with prayer or penitence, so it would have been unusual for disciples (prospective rabbis) to have avoided it altogether. A teacher was regarded as responsible for the behavior of his disciples.

5:34-35. Wedding feasts involved seven days of festivity; one was not permitted to fast or engage in other acts of mourning or difficult labor during a wedding feast. Jesus makes an analogy about the similar inappropriateness of fasting in his own time.

5:36-38. Jesus uses two familiar facts to make his point. Older clothes had already shrunk from washing. Wine could be kept in either jars or wineskins; wineskins, unlike jars, would stretch. Old wineskins had already been stretched to capacity by wine fermenting within them; if they were then filled with unfermented wine, it would likewise expand, and the old wineskins, already stretched to the limit, would break. Watered-down wine was drunk with meals.

5:39. Although distillation had not yet been developed and wine could achieve only a certain level of alcoholic content, aged wine was generally preferred over fresh wine that had not yet begun to ferment (a proverb, e.g., Sirach 9:10; rabbinic sources). Jesus is probably indicating why the religious people are objecting to the joy of Jesus' disciples: it is something new.

6:1-5
Lord of the Sabbath

See Mark 2:23-28 for more details. Some scholars have suggested that "rubbing with their hands" (v. 1) by extension constituted threshing, a forbidden category of work on the sabbath. Although the *law of Moses was especially authoritative for Jewish legal experts, the *narratives of other parts of the *Old Testament sometimes illustrate principles of the law's spirit taking precedence over its normal practice (e.g., 2 Chron 30:2-3).

If Jesus could demonstrate his case from Scripture, his opponents technically could not prosecute him successfully, due to the variety of Palestinian Jewish views on how the sabbath was to be observed.

6:6-11
Lawful to Do Good

See further comment on Mark 3:1-6.

6:6. The muscles and nerves of a "dried" or "withered" hand were inactive; thus the hand, smaller than usual, was incurably nonfunctional.

6:7-10. Again, Jesus does nothing to violate the *law; although some religious teachers opposed minor cures on the sabbath, "stretching

out one's hand" was not considered work, and no one could complain if God answered prayer on the sabbath. *Pharisees differed among themselves as to the propriety of "minor cures" on the sabbath.

6:11. Unintentional violations of the sabbath, or issues of disagreement about what constituted the sabbath (matters that were debated) were normally treated lightly (at most, with corporal punishment in a *synagogue). Capital punishment (Ex 31:14; 35:2) was thought appropriate only for those who willfully rejected the sabbath. Jesus' opponents go far beyond conventional Pharisaic teachings here.

6:12-16
Choosing the Twelve

See comment on Mark 3:13-19.

6:12. Jesus may here follow a pattern in Moses' ministry. Moses prayed on a mountainside, receiving instructions about helpers (Ex 19:24; 24:1-2; cf. 31:1-2) and successors (Num 27:15-23; cf. 20:23-29).

6:13-16. People often had a secondary name, sometimes a nickname, which may account for the slight differences among the Gospels' lists of the Twelve, as well as for the distinguishing of two Simons, two Judases and the second James in the list (these names were common in the holy and in this period).

6:17-26
Blessings and Woes

See comment on Matthew 5:3-12. Blessings and woes were a common literary form, especially in the *Old Testament and Judaism; here they may parallel the blessings and curses of the covenant given from the mountains in Deuteronomy 27–28. For the particular blessings and curses listed here, cf. perhaps Isaiah 65:13-16.

6:17-19. On this introduction to Luke's Sermon on the Plain (or "level place"), see comment on Matthew 4:23-25.

6:20. God was near the lowly and broken but far from the proud (Ps 138:6), and showed special mercy to the poor (Ps 113:7-8; 140:12; Prov 14:31; 21:13; Is 1:17; 58:6-7; Zech 7:10). Some of Jesus' *disciples who had not been economically poor became poor to follow him (see 18:28). Behind Luke's "poor" and Matthew's "poor in spirit" probably lies a particular *Aramaic term that means both. "The poor" had become a designation for the pious in some Jewish circles, because they were the oppressed who trusted solely in God. The piety of the poor was emphasized especially after the Roman general Pompey redistributed Jewish lands about a century before Jesus; like most other people in the ancient Mediterranean world, most Jewish people were poor. The Jewish people longed for the *kingdom.

6:21. Being "filled" (sustained) was a hoped-for blessing of the messianic era. Hunger struck poor families in times of famine (the situation in rural Palestine was better than that of rural Egypt but worse than that of Corinth or Italy). Weeping was a sign of mourning or *repentance.

6:22-23. The Old Testament tradition that most true prophets suffered rejection was amplified further in Judaism, so Jesus' hearers would have caught his point. The separation or ostracism here might allude to being officially put out of the *synagogue (cf. comment on Jn 9:22) but is probably meant more generally.

6:24-25. "Comfort" was a blessing of the messianic era (e.g., Is 40:1; cf. Lk 16:25). Most of Jesus' hearers were poor, but Luke's urban, Greco-Roman readership was probably better off (1:3-4); Luke pulls no punches for his own audience (cf. **1 Enoch* 96:4-5). Laughter was often associated with scorn.

6:26. Greek philosophers, who often scoffed at the opinions of the masses, sometimes complained if the multitudes spoke well of them. But Jesus' comparison with the prophets is even more appropriate; the burden of proof was always on prophets who told people what they wanted to hear (Jer 6:14; 28:8-9). Although the hearers often suspected some truth in the genuine prophets' claims (Jer 21:1-2; 37:3; 42:2; cf. 1 Kings 22:27), false prophets were usually more popular (1 Kings 22:12-13; Jer 5:31; 23:13-14).

6:27-38
Treat Others Mercifully

6:27. The *Old Testament specifically commanded love of neighbor (Lev 19:18), but neither it nor Jewish sages commanded love of enemies (although many taught nonretaliation and insisted on leaving vengeance to God).

6:28. Although Jesus (23:34) and his followers (Acts 7:60) practiced this rule of blessing and praying for enemies, prayers for vindication by vengeance were common in the Old Testament (2 Chron 24:22; Ps 137:7-9; Jer 15:15; cf. Rev 6:10) and in ancient execration (magical curse) texts.

6:29. The backhanded blow on the right cheek was the most grievous insult in the ancient Near East, punishable under law. Its purpose was not to shatter teeth but to insult, to challenge honor; a *disciple is not to jealously guard one's honor (or perhaps to care what the insulter thinks). The clothing in the verse refers to the outer and inner cloak, respectively; the poorest of people (like the average peasant in Egypt) might have only one of each. Deprivation of both could leave one naked, a shameful state; thus here Jesus refers, probably in hyperbolic images, to absolute nonresistance on one's own behalf.

6:30. Here Jesus may allude to beggars, quite common in the ancient East, and poorer people seeking loans. In Jewish Palestine, with its high work ethic, beggars were usually only those in genuine need, and most were unable to work; farmers generally sought loans to plant crops. Jewish society emphasized both charity and responsibility.

6:31. In its positive and especially its negative form ("Do not do to others what you do not want them to do to you"; cf. Tobit 4:15; *Philo; **Letter of Aristeas* 207), this was a common ethical saying in the ancient world.

6:32-33. Ideas like loving enemies and lending without hoping to receive again were unheard of, although many *Pharisees advocated peace with the Roman state (at least, tolerating enemies in some sense).

6:34-35. In the Roman world, interest rates ran high (in an extreme case, as high as forty-eight percent), but the Old Testament forbade usury, or charging interest. Because many Jewish creditors feared that they would lose their investment if they lent too near the seventh year (when the *law required cancellation of all debts), they stopped lending then, hurting the small farmers who needed to borrow for planting. Jewish teachers thus found a way to circumvent this law so the poor could borrow so long as they repaid. Jesus argues that this practice should not be necessary; those with resources should help those without, whether or not they would lose money by doing so.

Biblical laws about lending to the poor before the year of release (Deut 15:9; every seventh year debts were forgiven; cf. Lev 25) support Jesus' principle here, but Jesus goes even farther in emphasizing unselfish giving. Although the law limited selfishness, Jesus looks to the heart of the law and advocates sacrifice for one's neighbor. A good man's "sons" were expected to exemplify their father's character; thus God's children should act like him.

6:36. That human mercy should reflect God's mercy became a common Jewish saying (e.g., the *Letter of Aristeas* 208; *rabbis). "Merciful" may reflect the same *Aramaic word translated "perfect" in Matthew 5:48.

6:37. "Judge," "condemn" and "pardon" are all the language of the day of judgment, prefigured in God's current reckonings with his people (e.g., on the Day of Atonement).

6:38. The image here is of a measuring container into which as much grain as possible is packed; it is then shaken to allow the grain to settle, and more is poured in till the container overflows. Pouring it "into the lap" refers to the fold in the garment used as a pocket or pouch. Because Jewish people sometimes used "they" as a way of avoiding God's name, some suggest that "they will pour" (NASB) may mean that God will do it; or the idea may be that God will repay a person through others. The Old Testament often speaks of God judging people according to their ways (e.g., Is 65:7). Proverbs and other texts speak of God's blessings toward the generous (e.g., Deut 15:10; Prov 19:17; 22:9; 28:8, 27).

6:39-45
True and False Teachers

6:39. Others also used this image of leading the blind. The point here is that one must learn the right way (6:40) and receive correction before seeking to teach others (6:41).

6:40. In ancient Judaism, the purpose of a *disciple's training was to make him a competent teacher, or rabbi, in his own right. By definition, a disciple did not have more knowledge about the *law than his teacher.

6:41-42. Here Jesus uses *hyperbole, and the

exaggeration would probably draw laughter—and thus attention—from Jesus' hearers.

6:43-45. See 3:9. The principle was well known (e.g., Seneca, *Epistles to Lucilius* 87.25). Figs and grapes were often cultivated together and were two of the most common agricultural products in Palestine, often linked in *Old Testament texts. Thorns and thistles were always troublesome to farmers (cf., e.g., Gen 3:18; also Is 5:2, 4 LXX).

6:46-49
Right and Wrong Foundations

Jesus again uses the image of the day of judgment. The idea of ultimately being judged for hearing but not obeying was familiar (Ezek 33:32-33). But no Jewish teacher apart from Jesus claimed so much authority for his own words; such authority was reserved for the *law itself. Later rabbis told a very similar *parable, but whereas there the foundation was the Torah, here it is Jesus' words.

Some commentators have suggested that "digging deep" (v. 48) implies that he built a cellar; although cellars were not uncommon in Palestinian houses, they were used more often in Greek architecture; cf. comment on 5:19. The passage may simply involve a deep foundation on the bedrock, however.

7:1-10
A Pagan's Amazing Faith

7:1-2. The nearest Roman legion was stationed in Syria, but many auxiliaries, mostly recruited from Syria, were also stationed at Caesarea on the Mediterranean coast, with some in the Fortress Antonia in Jerusalem. They were not bound to their camps at all times, however, and after retirement some probably settled at various places in Palestine. Centurions commanded a "century" (i.e., 100), which *in practice* consisted of sixty to eighty troops. Centurions were the backbone of the Roman army, in charge of discipline. An inexpensive slave might cost a third of a soldier's pay for a year, but centurions were paid far more.

7:3-5. Non-Jews who feared God and donated substantial sums to the Jewish community were well respected. Those requesting help often sought someone respected by the benefactor to intercede on the requester's behalf. (This centurion may have also been able to intercede for their town with higher Roman officials if necessary.) Ancient Mediterranean culture stressed reciprocity; the elders now intercede on his behalf. Centurions' salaries were roughly sixteen to seventeen times those of their troops (perhaps thirty to sixty times for the highest ranking centurions), but for this centurion to have built the local *synagogue might nevertheless represent years of savings. The main point lies in the contrasting views of worthiness (7:4, 6).

7:6. The centurion was not a full convert to Judaism and thus retained some of his uncleanness as a *Gentile, especially in regard to the food in his home. To invite a Jewish teacher into such a home would have been offensive under normal circumstances, but in this case the community's elders want to make an exception (7:3), presumably because this Gentile home is not defiled by idolatry.

7:7. During their twenty or so years of service in the Roman army, soldiers were not permitted to marry. Many or most had "unofficial" local concubines; these unofficial marriages were often ratified after a soldier completed his term of service. But centurions, who could be moved around more frequently, could be less likely than ordinary soldiers to have such relationships; they sometimes married only after retirement. By ancient definitions, however, a household could include servants, and household servants and masters sometimes grew very close—especially if they made up the entire family unit.

7:8. The centurion demonstrates that he understands the principle of authority that Jesus exercises. Roman soldiers were very disciplined and except in rare times of mutiny followed orders carefully.

7:9. "Gentiles" were generally synonymous with pagans, with no faith in Israel's God.

7:10. Some Jewish stories circulated about miracle workers, but reports of long-distance healings were rare and were viewed as more extraordinary than other miracles. Thus people would view this healing as especially miraculous.

7:11-17
Interrupting a Funeral

Interrupting a funeral was a blatant breach of Jewish *law and custom; touching the bier ex-

posed Jesus to a day's uncleanness (Num 19:21-22); touching the corpse exposed him to a week's uncleanness (cf. Num 5:2-3; 19:11-20). But in Jesus' case, the influence goes in the other direction.

7:11-12. People customarily dropped whatever they were doing and joined in the back of a funeral procession when it passed by. For a widow's only son to die before she did was considered extremely tragic; it also left her dependent on public charity for support unless she had other means or relatives of means.

7:13. According to custom the bereaved mother would walk in front of the bier; Jesus, approaching from the front rather than behind, meets her first. Cf. 1 Kings 17:17-24.

7:14. By touching even the bier, a stretcher on which the body was borne (Jewish custom did not use a closed coffin), Jesus would be viewed as contracting corpse-uncleanness, the severest form of ritual impurity in Judaism (Num 19:11-20). Only those closest to the deceased were expected to expose themselves to this impurity. The young man had not been dead long, because it was necessary to wash, anoint, wrap, mourn over and then bury the body as quickly as possible to avoid the stench of decomposition.

7:15-17. God had used several earlier prophets (Elijah and Elisha) to resuscitate the dead (1 Kings 17:23; 2 Kings 4:36), but it was a rare miracle. The few pagan stories of resuscitations, especially from the third century A.D. (from Philostratus and *Apuleius), are later and not validated by eyewitnesses as the Gospel accounts are; they also often exhibit features missing here, such as reports from the underworld. The language of a prophet "among" his people (Lk 7:16) is an OT idiom (Num 12:6; Deut 13:1; 18:15, 18; Ezek 2:5).

7:18-23
Encouraging John

7:18-20. Ancient writers sometimes repeated a message twice (when the messengers heard it and when they delivered it). Some plausibly suggest that John is troubled that Jesus exposes himself to potential ritual uncleanness (e.g., with *Gentiles and corpses) for the sake of healings. More likely, Jesus' words simply do not fit John's picture of the coming one he had proclaimed in 3:15-17, although John has no doubt that Jesus is at least a prophet who will tell him the truth.

7:21-23. Jesus' answer makes use of language from Isaiah 35:5; these healings are signs of the messianic era. Some teachers compared the blind, lame and lepers to the dead because they had no hope of recovery.

7:24-35
Vindicating John

John's and Jesus' styles of ministry differ; but both are valid, and the religious community rejects both equally.

7:24. Reeds were fragile (Is 42:3), so a "reed shaken by the wind" would be notoriously weak (1 Kings 14:15) and undependable (2 Kings 18:21; Ezek 29:6).

7:25-26. Prophets were rarely well-to-do, and in times of national wickedness they were forced to operate outside societal boundaries, including royal courts. Now imprisoned by Herod Antipas, John is no court prophet who simply tells powerful people what they want to hear. Antipas employed a reed (7:24) as an emblem on his coins a few years earlier (up until A.D. 26).

7:27. By fulfilling Mal 3:1, John is more than just any herald of God; he is the direct announcer of the Lord, who will act in a decisively new way by leading his people in a new exodus. (The new exodus, a return from captivity, is a theme in Isaiah.)

7:28. In *rhetoric and elsewhere, comparisons could demean the lesser figure, but often did not do so; sometimes speakers chose the lesser figure for comparison precisely because it was great, thereby amplifying all the more the greater figure. This comparison elevates Jesus' *disciples rather than demeans John. One may compare the early rabbinic saying that Johanan ben Zakkai, one of the most respected scholars of the first century, was the "least" of *Hillel's eighty disciples; this saying was not meant to diminish Johanan's status but to increase that of his contemporaries and thus that of his teacher.

7:29-30. Because the once-for-all kind of *baptism was essentially reserved for pagans converting to Judaism, the religious people are unwilling to accept it for themselves. They questioned the religious commitment of less observant Jews, especially the *tax gatherers.

7:31-32. The marketplace was the most public part of town. Spoiled children having make-believe weddings and funerals (one later game was called "bury the grasshopper") represent Jesus' and John's dissatisfied opponents; unhappy with other children who would not play either game, they are upset no matter what.

7:33-34. John the Baptist fits the role of a more *ascetic prophet, like Elijah (cf. 1:14-15 for John's abstention from wine); Jesus follows a model more like David, but both are proper in their place. *Demon possession (v. 33) was associated with madness (and sometimes with sorcery, hence a capital charge). "Glutton and drunkard" (v. 34) was a capital charge (Deut 21:20), hence a serious accusation.

7:35. Jewish tradition often personified Wisdom, usually as a holy woman exhorting the righteous to follow her; here she is the mother of the righteous.

7:36-50
The Pharisee and the Sinful Woman

Jesus violated social taboos to reach out to those marginalized not only culturally (7:1-10), economically (7:11-17) and religiously (7:24-35) but also morally (7:36-50). Since the classical Greek period, banquets had become an occasional setting for moral instruction.

7:36. It was considered virtuous to invite a teacher over for dinner, especially if the teacher were from out of town or had just taught at the synagogue. That they are "reclining" rather than sitting indicates that they are using couches rather than chairs and that this is a banquet, perhaps in honor of the famous guest teacher.

7:37. Because this woman is a known "sinner" some think that she is a prostitute (surely a Jewish one—cf. **Psalms of Solomon* 2:11—though many prostitutes in Palestine were non-Jews); given ancient stereotypes of women's sins (she is presumably not a tax collector), at least she might be a woman with a reputation for being morally loose. Whatever the case, given associations of these ideas, when assigned to women, with particular behaviors, the Pharisee might suppose her to be seeking something disreputable. If the *Pharisee is well-to-do, he might have a servant as a porter to check visitors at the door; but the pious also sometimes opened their homes for the poor. In any case, the woman manages to get in. In banquets where uninvited people could enter, they were to remain quiet and away from the couches, observing the discussions of host and guests. Alabaster was considered the most appropriate container for perfume.

7:38. Jewish people did not consider perfume sinful, but because this woman is a "sinner" (7:37), they might assign special connotations to it, rendering Jesus' acceptance of the gift offensive. That she stands "behind him" and anoints his feet instead of his head has to do with the posture of guests reclining on the couches; he would have reclined on his left arm, facing the host. His feet would have pointed away from the table toward the wall.

7:39. Adult women who were religious were expected to be married and thus would have their heads covered; a woman with her hair exposed to public view often would be considered promiscuous, at least by those with more conservative cultural values. That this woman wipes Jesus' feet with her hair would thus indicate not only her humility but also her marginal religious and social status, even had Jesus not been a prophet and had she not been known in the community's gossip. That the host allowed that Jesus might be a prophet at all suggests great respect, because many Jewish teachers believed that prophets ceased after the *Old Testament period.

7:40. "I have something to say" sometimes introduces blunt or harsh words in Middle Eastern idiom.

7:41-42. Gratitude was an emphatic obligation in Mediterranean antiquity. Some scholars have argued that *Aramaic lacks a term for gratitude, hence "Which will love him more?" rather than, as we might expect, "Which will be more grateful?" Although debts were to be forgiven in the seventh year, experts in the *law had found a way to get around that requirement. Those who could not pay could be imprisoned, temporarily enslaved or have certain goods confiscated; but this creditor goes beyond the letter of the law and extends mercy.

7:43-46. Common hospitality included providing water for the feet (though well-to-

do householders left the washing to servants); the oft-invoked example of Abraham's hospitality (Gen 18:4) would render the host without excuse. Oil for the dry skin on one's head would also be a thoughtful act. A kiss was an affectionate or respectful form of greeting, commonly shown to respected teachers and others. Jesus faces the woman finally in verse 44; cf. comment on 7:38. Failing to provide such basic courtesies could appear to other guests as an affront, but guests rarely publicly confronted hosts no matter how inadequate the hospitality, for such public humiliation could invite enmity. Yet Jesus humiliates his host who had privately despised the grateful woman.

7:47-50. Although the priests could pronounce God's forgiveness after a sin offering, Jesus pronounces forgiveness without the clear restitution of a sacrifice to God in the temple. This pronouncement contradicted Pharisaic ethics, and most of early Judaism would have seen it at best as marginal behavior. (One story in the *Dead Sea Scrolls is a rare exception to pronouncing forgiveness and accompanies an exorcism, but it does not seem to reflect general Jewish practice.)

8:1-3
The Women Disciples

For the form of support mentioned here, cf. 2 Kings 4:42. Women sometimes served as *patrons, or supporters, of religious teachers or associations in the ancient Mediterranean. (Some estimate that men outnumbered them more than ten to one, because men had more of the economic resources; yet a tenth remained a large number.) But for these women to travel with the group would have been viewed as scandalous, at least by Jesus' detractors. Apart from some small Greek philosophic schools, adult coeducation was unheard of, and that these women are learning Jesus' teaching as closely as his male *disciples would surely bother some outsiders as well. Upper-class families had more mobility, but commoners might still talk. While a small number of philosophers had women disciples, many criticized this practice; we know of no other women disciples among Jewish teachers in this period. "Herod" here (8:3) is Herod Antipas.

8:4-15
The Sower, the Seed and the Soils

See comment on Mark 4:3-20 for more details.

8:5-7. Seed was often sown before the ground was plowed; it thus commonly befell any of the fates reported here. The "road" (NASB) is probably a "path" (NRSV), i.e., a foot path through the field.

8:8. Thirtyfold, sixtyfold and a hundredfold are tremendously good harvests from Galilean soil.

8:9. Jewish teachers normally used *parables to illustrate and explain points, not to conceal them. But if one told stories without stating the point they were meant to illustrate, as Jesus does here, only those who listen most astutely and start with insiders' knowledge could figure out one's point.

8:10. Greek teachers like *Plato would leave some points obscure to keep them from outsiders; Jewish teachers would sometimes do the same (such as later *rabbis' mystical teachings about creation or God's throne). Thus only those who were serious enough to persevere would understand.

8:11-15. Many of Jesus' hearers would be farmers who could relate well to these agricultural images; although Galilee (which was full of towns) was more urban than much of the empire, the majority of people worked the land. The tenant farmers who made up a large portion of the Roman Empire were also common in rural Galilee. Both Jewish and Greek sources, familiar with agrarian society, often use seeds in illustrations; Jewish sources could apply it to God's word.

8:16-18
Accountability for the Word

8:16. Jesus is a master of the graphic illustrations in which Jewish teachers sought to excel: invisible light is pointless, and God wants people to receive the light of his Word. The lamps Jesus mentions were small clay lamps that had to be set on a stand to shed much light in a room; anything placed over the lamp would have extinguished it.

8:17-18. If the crowds do not obey what light they receive, they will never receive more. Others also observed that those who had something would obtain more.

8:19-21
Jesus' True Family

Thinking of one's coreligionists as brothers and sisters was common; respecting older persons as mothers or fathers was also widespread. But allowing ties with nonkin to take precedence even over family ties could prove offensive culturally (except for *Gentile converts). (One could treat a teacher as a father, and some even allowed according him greater respect, but not in the sort of radical ways taught by Jesus, as in 9:59-60.)

8:22-25
Master of Winds and Sea

Some ancient stories told of powerful individuals able to subdue even the forces of nature, but these were nearly always gods or, less commonly, heroes of the distant past. In Jewish tradition, the one who ruled the winds and sea was God himself (Ps 107:29), though a few pious men were reputed to be able to persuade him to send rain. The surprise of the *disciples at Jesus' power is thus easy to understand.

Storms often rose suddenly on the lake called the Sea of Galilee; these fishermen had usually stayed closer to Capernaum and are unprepared for a squall this far from shore. The only place one could sleep in a small fishing boat with water pouring in from a storm would be on the elevated stern, where one could use the wooden or leather-covered helmsman's seat, or a pillow sometimes kept under that seat, as a cushion to rest one's head.

8:26-39
Subduing the Demonic Legion

See further comment on Mark 5:1-20.

8:26. Matthew's "Gadara" (Mt 8:28), eight miles from the lake, and Gerasa, about thirty miles from the lake, were in the same general region, the area of the Decapolis, a predominantly non-Jewish area. Luke's audience would recognize the area more easily by the better-known Gerasa.

8:27. Jewish people considered tombs unclean and a popular haunt for unclean spirits. Many ancient cultures brought offerings for the dead, which might also be thought to appeal to these *demons.

8:28. In ancient *magic, one could try to gain control over a spirit by naming it. Any such attempt at magical self-protection is powerless against Jesus.

8:29. The strength that this demoniac displays is reported in some cases of spirit possession in various cultures today as well.

8:30-31. A legion had a nominal six thousand (in practice, often five thousand) troops. Although the number might be hyperbolic, this man is clearly hosting a large number of demons. According to Jewish traditions, many demons were imprisoned in the atmosphere, but they could also be imprisoned, as here, under the earth (in the "abyss"). Some sources from this period treat the abyss as a genuine geographic location (**1 Enoch* 18:11-12; 83:4); the *Septuagint applies it to the "depths," perhaps of the waters (Prov 3:20; 8:24).

8:32. Only *Gentiles or nonobservant Jews considered "apostates" raised pigs, which Jewish readers would consider among the most unclean animals and thus better hosts for evil spirits. Ancient exorcists found that demons sometimes asked for concessions if the pressure for them to evacuate their host became too great.

8:33. Some Jewish traditions taught that demons could die, so some ancient hearers might assume that the demons had been destroyed with their hosts. Perhaps more relevantly, in other Jewish traditions demons could be imprisoned in bodies of water; many hearers would thus have thought of them as at least disabled.

8:34-37. The opposition to Jesus arises from both economic causes—the loss of a large herd of swine—and certain Greek conceptions of dangerous wonderworking magicians, whom most people feared.

8:38-39. Perhaps because his *messiahship would be misunderstood, Jesus kept it a secret in predominantly Jewish areas (see the introduction to Mark). In the predominantly non-Jewish Decapolis, however, where people would wrongly perceive him as a magician, Jesus urges his new *disciple to spread the word about what *God* had done, thereby correcting the people's misunderstanding.

8:40-56
Death and the Flow of Blood

See further comment on Mark 5:21-43.

8:40-41. "Rulers of the *synagogue" were usually the chief officials in synagogues (though especially in the *Diaspora this was also often an honorary title for large donors) and were prominent members of their communities.

8:42. The official's daughter had been a minor until that year and on account of both her age and her gender had far less status than her prominent father (vv. 40-41).

8:43. This woman's sickness was reckoned as if she had a menstrual period all month long; it made her continually unclean under the *law (Lev 15:19-33)—a social problem on top of the physical one. In a culture in which adult women who were not wealthy virtually needed to marry, she was almost certainly unmarried at this point (if she had ever been married), since it violated the law for a man to sleep with her in this condition. Just as Jewish interpreters linked texts by a common phrase, Luke's source may use "twelve years" to emphasize the relatedness of these stories (vv. 42-43).

8:44-45. If she touched anyone or anyone's clothes, she rendered that person ceremonially unclean for the rest of the day (cf. Lev 15:26-27). She therefore should not have even been in this heavy crowd. Conservative teachers avoided touching women altogether (other than their wives), lest they become accidentally contaminated. Thus this woman could not touch or be touched, was probably now divorced or had never married, and was marginal to the rest of Jewish society.

8:46-48. Jewish people generally believed that only the sages closest to God had supernatural knowledge. Jesus uses his supernatural knowledge to identify with the woman who had touched him—even though in the eyes of the public this would mean that he had contracted ritual uncleanness. Lest anyone be permitted to think that the healing had been accomplished by typical pagan *magic, operating without Jesus' knowledge, he declares that it happened in response to "faith" (v. 48).

8:49. Many Jewish teachers held that once an event had occurred, it was too late to pray for its reversal. For example, later rabbis claimed that it was too late for one hearing a funeral procession to pray that it was not for a relative.

8:50-56. At least two or three professional mourners (two flute-players and a mourning woman) were required at the funeral of even the poorest person; the funeral for a member of a prominent family like this one would have many mourners. Because bodies decomposed rapidly in Palestine, mourners had to be assembled as quickly as possible, and they had gathered before word even reached Jairus that his daughter had died.

9:1-6
Authorizing the Twelve

9:1-2. Delegating authority was intelligible in antiquity. According to Jewish custom, for example, a sender could authorize messengers to act with his full legal authority to the extent of the commission given them.

9:3. Jesus instructs the *disciples to travel light, like some other groups: (1) peasants, who often had only one cloak (but did not often travel); (2) homeless urban Greek philosophers called *Cynics; (3) most relevantly, some prophets, like Elijah and John the Baptist. They are to be totally committed to their mission, not tied down with worldly concerns. Cynics used the "bag" for begging, presumably here prohibited.

9:4. Jewish travelers depended on hospitality, which fellow Jews customarily extended to them.

9:5-6. "Shaking the dust off" may mean treating these Jewish cities as if they are unclean, pagan cities, no defiling dust of which a particularly pious Jew would want to bring into the Holy Land. A place like the temple was so holy that those entering would (at least in pious theory) not want the dust of the rest of Israel on their feet.

9:7-9
John Returned?

Although a few Jews influenced by *Plato and other sources accepted reincarnation, most Palestinian Jews believed in bodily *resurrection. The idea here, however, is probably like the temporary resuscitations Elijah and Elisha performed in the *Old Testament (1 Kings 17:22; 2 Kings 4:34-35) rather than the permanent resurrection anticipated at the end of the age (Dan 12:2). Herod the tetrarch was a son of Herod the Great; the latter had been king when Jesus was born.

9:10-17
Mass Feeding

9:10-12. Bethsaida was probably associated with fishing, and was located on the northern shore of the Lake of Galilee; some scholars suggest two sites with this name, but the matter is disputed. In any case, the *narrative seems to suggest that Jesus took the crowds beyond Bethsaida itself. The Galilean countryside was full of villages, but Jesus had withdrawn his followers some distance from the nearest villages. Even most larger towns would have under three thousand inhabitants; feeding the crowd in the villages would have been difficult (9:12). The known Bethsaida was ethnically mixed and not far from the region of the Decapolis. If they were further in largely *Gentile territory, hospitality would be even harder to find.

9:13. It would normally have taken far more than two hundred days of an average person's wages (around seven months of hard labor) to feed the great multitude that had assembled, even if we assumed that only five thousand persons were present.

9:14. The people are organized in ranks like armies. The purpose is to facilitate the distribution of food, but some people in the crowd may have thought that Jesus was organizing them as ranks for a messianic army (cf. Jn 6:15).

9:15. People generally reclined at banquets and sat for regular meals.

9:16. It was customary to begin a meal by giving thanks for the bread and then dividing it. A prayer like the common one attested by the second century, "Blessed are you, O Lord our God, who have brought bread from the earth" may have already been common. (Later sources indicate that people also gave thanks less formally after a meal, but it is not clear whether this practice was this early.) People often prayed "looking toward heaven" (1 Kings 8:22, 54; Jn 17:1).

9:17. The multiplication of food is reminiscent of the miracle of God supplying manna for Israel in the wilderness, and especially of Elisha multiplying food (2 Kings 4:42-44, where some was also left over).

9:18-27
The Cost of Following the Real Messiah

9:18-19. Because many Palestinian Jews believed that prophets in the *Old Testament sense had ceased, ranking Jesus among the prophets would have been radical—but it was not radical enough to grasp his true identity.

9:20-21. There were many different views of the *Messiah (or messiahs) in Jesus' time, but they all revolved around a deliverance on earth and an earthly kingdom.

9:22. The *New Testament writers took some Old Testament texts as referring to the Messiah's suffering, but most Jewish people in the first century did not recognize these texts as referring to the Messiah, who was to reign as king. Most Jewish people believed in the *resurrection of all the righteous dead at the end of the age and the inauguration of a *kingdom under God's appointed ruler afterward.

9:23-25. The cross was an instrument of violent and painful execution. To "take the cross" was to carry the horizontal beam (the *patibulum*) of the cross out to the site of execution, usually past a jeering mob. In *rhetorically strong terms, Jesus describes what all true *disciples must be ready for: if they follow him, they must be ready to face literal scorn on the road to eventual martyrdom, for they must follow to the cross. "Come after" was often the language of discipleship, since disciples followed their teachers; here disciples follow to the cross, reminding themselves each day that their lives are forfeit.

9:26. "*Son of Man" here may refer to Daniel 7:13-14. The kingdom for which the disciples are hoping will ultimately come; but it will be preceded by a period of great suffering and wickedness. Many others in Jesus' day taught that great suffering and sin would precede the kingdom; but Peter and his colleagues expected the kingdom to come without suffering (perhaps, as some believed, by a supernatural, costless triumph)—at least for Messiah's followers.

9:27. Most Jewish people prayed daily for the establishment of God's kingdom. The future glory of the preceding verses is anticipated by way of a revelation of the glory they would experience in 9:32-35.

9:28-36
A Taste of Future Glory

God had revealed his glory to Moses on Mount Sinai, and Moses had come down

from the mountain reflecting God's glory (Ex 32–34).

9:28. God revealed his glory to Moses on a mountain (see comment above).

9:29. Jewish literature often described angels and other heavenly beings as being clothed in white. Some suggest that Luke omits Mark's "transfigured" because of the pagan connotations this term could have for his audience (Greek gods and magicians transformed themselves into other forms, though Mark, like Luke, was alluding to Moses, not to magicians).

9:30. Elijah apparently never died (2 Kings 2:11; Mal 4:5; Jewish tradition); Moses was buried by God himself (Deut 34:6), and some (unbiblical) Jewish traditions even claimed that Moses was still alive (cf. comment on Rev 11:6). Both these figures were expected to return in some sense before the time of the end.

9:31. Jesus' departure here is literally his "exodus." Although this term was a natural way to describe death (Wisdom of Solomon 7:6), some suggest that it might also represent a wordplay allusion here to Israel's future salvation, which the prophets and later Jews often viewed as a new exodus.

9:32-33. Peter's suggestion of erecting shelters on the mountain may allude to Israel's tabernacles in the wilderness, by which the Israelites recognized God's presence among them in Moses' day. Israelites annually built tabernacles, or booths, so Peter knew how to build one.

9:34-36. Cf. the cloud of God's presence, especially on Mount Sinai (Ex 24:15-16). In this context, "hear him" might refer to Deuteronomy 18:15, where the Israelites were warned to heed the "prophet like Moses," the new Moses who would come.

9:37-43a
Delivering a Demoniac

9:37-38. An only son was extremely important to a father in this culture, for social, economic (support in old age) and hereditary reasons (including the passing on of one's ancestral line).

9:39. The possessed person's lack of control over his own motor responses parallels examples of spirit possession in many cultures through history and is attested in anthropological studies of spirit possession today. Greek medical texts mention "foam" in connection with epileptic seizures, the symptoms of which are in this case (but not always—Mt 4:24) caused by demonic possession.

9:40-41. *Disciples were expected to learn from their teacher's example. Jesus' response presupposes that he expected his disciples to have enough faith to work miracles as he did. Some ancient Jewish teachers were seen as miracle workers, but not often did they expect their disciples to be able to do miracles also.

9:42-43a. Exorcists normally tried to subdue *demons by incantations, often invoking higher spirits, or by using smelly roots. Jesus here uses only his command, thereby showing his great authority.

9:43b-50
Qualifying Misconceptions of Glory

9:43b-45. The glory on the mountain and Jesus' power over *demons would confirm the disciples' messianic suspicions (9:20), so Jesus needs to reemphasize his definition of the messianic mission in contrast to theirs (see 9:22). Most Jews did not expect the *Messiah's death.

9:46-48. Status was a preeminent concern in ancient society; children had none. But in Jewish custom messengers bore the full authorization of the one they represented (see comment on 9:1-2), so Jesus' agents did not need worldly status. Representatives of someone who had great authority exercised more authority than others who acted on their own.

9:49-50. Ancient exorcists often invoked more powerful spirits to drive out lesser ones. If this exorcist is genuinely effective (contrast Acts 19:15-16), he is probably on their side.

9:51-56
Jerusalem via Samaria

9:51. This is a turning point in the plot movement, as in Acts 19:21. Like modern writers, skilled ancient writers often gave signals of plot movement. "Setting one's face" normally implied resolute determination, such as a prophet would display (cf. Ezek 21:2; in Ezekiel the language normally implies a hostile position, but the idiom need not always imply that).

9:52. Galilean pilgrims to the Passover

feast in Jerusalem often took the short route through Samaria, although some took a longer route around it. But this verse suggests that Jesus sought accommodations there, which would have offended many pious *Pharisees and most Jewish nationalists.

9:53. Even before John Hyrcanus, a Jewish king, had destroyed the *Samaritan temple in the second century B.C., Samaritans and Jews had detested one another's holy sites. The extant version of the Samaritan Pentateuch specifies the proper site of worship as Mount Gerizim. Samaritans later tried to defile the Jerusalem temple (avenging a Jewish king having destroyed the Samaritan temple on Mount Gerizim in the second century B.C.). They were also known to heckle pilgrims to Jerusalem, a practice that occasionally led to violence.

9:54. James and John want to call down fire from heaven as Elijah had done on the altar on Mount Carmel and when two companies of troops came against him (1 Kings 18:38; 2 Kings 1:10, 12). Elijah did this under much severer circumstances than Jesus faces here; all three cases were life-threatening, and his opponents at Carmel had been responsible for the martyrdom of most of his disciples. Jesus uses the model of Elijah elsewhere even in this context (e.g., Lk 9:61-62), but not in this respect.

9:55-56. Ancient audiences (even those that hated Samaritans) did appreciate those who exercised their power with mercy. Ancient Jewish hearers could view Jesus' merciful restraint as pious (1 Sam 11:13; 2 Sam 19:22), even if they hated the Samaritans.

9:57-62
True Discipleship

9:57-58. *Disciples usually sought out their own teachers. Some radical philosophers who eschewed possessions sought to repulse prospective disciples with enormous demands, for the purpose of testing them and acquiring the most worthy. Many Palestinian Jews were poor, but few were homeless; Jesus had mostly given up even home to travel and is completely dependent on the hospitality and support of others.

9:59-60. Family members would not be outside talking with *rabbis during the mourning period, the week immediately following the death. The initial burial took place shortly after a person's decease, and would have already occurred by the time this man would be speaking with Jesus. But a year after the first burial, after the flesh had rotted off the bones, the son would return to rebury the bones in a special box in a slot in the tomb wall. Thus the son here could be asking for as much as a year's delay. Others note that in some Semitic languages, "wait until I bury my father" is a way of asking for delay until one may complete one's filial obligations, even if the father is not yet dead.

Even on these interpretations, however, Jesus' demand is significant; while not highlighting urgency the way that 9:61-62 would, it would still underline the *priority* of following Jesus. One of an eldest son's most important responsibilities was his father's burial. Jesus' demand that the son place Jesus above this responsibility could thus sound subversive: in Jewish tradition, honoring father and mother was one of the greatest commandments, and to follow Jesus in such a radical way would seem to break this commandment. Some sages might demand greater honor than parents in principle, but neglecting a father's burial in practice would make this son a reproach in his village, perhaps for the rest of his life.

9:61-62. One needed to keep one's eyes on the path of the plow to keep its furrow from becoming crooked. The hand-held plow was light and wooden and often had an iron point.

When Elijah found Elisha plowing, he called him to follow but allowed him first to bid farewell to his family (1 Kings 19:19-21). Jesus' call here is more radical than that of a radical prophet.

10:1-16
Authorizing the Seventy(-two)

10:1. If Jesus chose twelve *disciples to represent the twelve tribes of Israel, he may have chosen the number of this larger group to represent the seventy (sometimes seventy-two) nations of Jewish tradition, prefiguring the mission to the *Gentiles. (Some Greek manuscripts here read seventy, others read seventy-two.) Cf. also the seventy prophetically endowed elders of Numbers 11:24-25, plus Eldad and Medad (Num 11:26).

Heralds were generally sent "two by two." The term for "send" might suggest that Luke views them as *apostles similar to the Twelve (see comment on 9:1-2; cf. 1 Cor 15:5-7), though even in Acts Luke usually restricts the noun to the Twelve.

10:2. A *rabbi of the late first to early second century made a statement similar to Jesus' here, referring to training people in the *law; the urgency of harvesting while the fields are ripe was a natural image to first-century farmers.

10:3. Jewish people sometimes viewed themselves (Israel) as sheep among wolves (the Gentiles). The image of a lamb among wolves was proverbial for defenselessness.

10:4. These apostles are to travel light, like some other groups; cf. comment on 9:3. *Essenes reportedly received such hospitality from fellow Essenes in various cities that they did not need to take provisions when they traveled. Greeting no one on the way indicates the urgency of their prophetic mission representing God and not themselves (cf. 1 Kings 13:9-10; 2 Kings 4:29; 9:3); it was offensive to withhold greetings, and pious people tried to be the first to greet an approaching person of higher rank. (Jewish teachers agreed, however, that one should not interrupt religious duties like prayer in order to greet someone.)

10:5-9. Hospitality to travelers was a crucial virtue of Mediterranean antiquity, especially in Judaism. To whom and under what circumstances greetings should be given were important issues of social protocol, because the greeting, "Peace," was a blessing (an implicit prayer to God on the addressee's behalf) meant to communicate peace and well-being, though it was here conditional (cf. Prov 26:2). Jesus cuts through such protocol with new directives.

10:10-11. Pious Jewish people returning to holy ground would not want so much as the dust of pagan territory clinging to their sandals (cf. 10:12).

10:12. Both the biblical prophets and subsequent Jewish tradition set forth Sodom as the epitome of sinfulness (e.g., Is 13:19; Jer 50:40; Zeph 2:9), sometimes applying the image to Israel (e.g., Deut 32:32; Is 1:9; 3:9; Jer 23:14; Lam 4:6; Ezek 16:46; Amos 4:11). The particular sin that Jesus mentions here is probably rejection of God's messengers, albeit lesser ones than Jesus (cf. Gen 19).

10:13. Jewish people thought of Tyre and Sidon as purely pagan cities (cf. 1 Kings 16:31), but those who were exposed to the truth had been known to repent (1 Kings 17:9-24). "Sackcloth and ashes" were characteristic of mourning, which sometimes expressed *repentance.

10:14. According to some Jewish stories about the time of the end ("the day of judgment," as it was often called), the righteous among the nations would testify against the rest of their people, making it clear that no one had any excuse to reject the truth about God.

10:15. Jewish literature often described judgment in terms similar to those Jesus uses here (Is 5:14; **Jubilees* 24:31), especially against a ruler who exalted himself as a deity (e.g., the reference to the Babylonian king's death in Is 14:14-15).

10:16. See comment on 9:48.

10:17-24
The Real Cause for Joy

10:17. Exorcists usually had to employ various incantations to persuade *demons to leave; thus the *disciples are amazed at the immediate efficacy of Jesus' name.

10:18. Although the texts often cited today as describing *Satan's fall (Is 14; Ezek 28) refer contextually only to kings who thought they were gods, much of Jewish tradition believed that angels had fallen (based especially on Gen 6:1-3).

But the context and the imperfect tense of the Greek verb ("I was watching") might suggest that something different is in view here (although it could draw on the same image): the self-proclaimed ruler of this age (Lk 4:6) retreating from his position before Jesus' representatives. (One might compare, e.g., the Jewish tradition that the guardian angel of Egypt fell into the sea when God smote the Egyptians for Israel; the image of falling from heaven is usually not literal, e.g., Lam 2:1; in this context, cf. Lk 10:15.)

10:19. The protection Jesus promises is similar to that which God had sometimes promised in the *Old Testament (cf. Deut 8:15; Ps 91:13; for scorpions as a metaphor for human obstacles to one's call, see Ezek 2:6). Occasionally some associated serpents with Satan, demons or *magic; they provide a

natural metaphor for danger (cf. a real snake in Acts 28:3-4).

10:20. The book containing the name of the righteous in heaven was a common image in Jewish literature (e.g., *Jubilees*; **1 Enoch*), with ample Old Testament precedent (Ex 32:32; Is 4:3; Dan 12:1; Mal 3:16; perhaps Ps 56:8; 139:16; Jer 17:3).

10:21. Jesus' words here could have sounded offensive to people like the *scribes, who had worked hard to study the *law. The theme of God exalting the lowly is, however, common in the Old Testament prophets.

10:22. Jewish texts did speak of unique mediators of revelation (e.g., Moses), but in this period the role here ascribed to the Son as the sole revealer of the Father and as the content of the Father's revelation is held in Jewish texts only by Wisdom, personified as a divine power second only to God.

10:23-24. Some Jewish texts describe how the righteous in the Old Testament longed to see the era of messianic redemption and a fuller revelation of God. Making a statement about someone (here, Jesus) by blessing someone else (here, those who saw him) was an accepted *rhetorical technique of the day.

10:25-37
Loving One's Neighbor

10:25. As this *law-expert would know, students normally sat to listen to teachers, but might stand to ask a question or (normally only for non-students) to issue a challenge. The lawyer's question about inheriting *eternal life was a common Jewish theological question, and legal and other challenges to *rabbis were common in ancient rabbinic debate.

10:26. Teachers often responded to questions with counterquestions. "How do you read?" was a fairly standard rabbinic question.

10:27. The legal expert offers the sort of answers sometimes given by Jewish teachers (and by Jesus; see Mk 12:29-31). Rabbis often linked texts using a common word (here "you shall love" in Deut 6:5 and Lev 19:18).

10:28. Some texts in the law promised life for those who kept the law. This "life" meant long life on the land the Lord had given them (Lev 18:5; Deut 4:1, 40; 8:1; 16:20; 30:6, 16-20), but many later Jewish interpreters read it as a promise of eternal life. Jesus applies the principle to eternal life as well (cf. v. 25). "You have answered rightly" serves aptly to drive home a *parable's application in the respondent's own case (**4 Ezra* 4:20; cf. 2 Sam 12:7; 1 Kings 20:40-42).

10:29. Jewish teachers usually used "neighbor" to mean "fellow Israelite." Leviticus 19:18 clearly means "fellow Israelite" in the immediate context, but the less immediate context applies the principle also to any non-Israelite in the land (19:34).

10:30. Jesus' story forces his hearers to identify with a solitary merchant or a *Samaritan, though some might want to side with the priest or Levite. Like most parables, this story has one main point that answers the interlocutor's question; the details are part of the story and are not meant to be allegorized. Jericho was lower in elevation than Jerusalem; hence one would "go down" there. Robbers were common along the steep, seventeen-mile road and would especially attack a person traveling alone. Many people did not have extra clothes, which were thus a valuable item to steal. But though clothes were a valuable commodity, completely stripping him treated him like a corpse on a battlefield. Ancient sources commonly use the expression "half-dead"; one in this condition could appear to be dead (e.g., Callimachus, *Hymn* 6.59; *Livy, *Books from the Foundation of the City* 23.15.8; 40.4.15; *Suetonius, *Divus Augustus* 6; Quintus Curtius Rufus, *History of Alexander* 4.8.8).

10:31. Many wealthy priestly families lived in Jericho. Priests were supposed to avoid especially impurity from a corpse; *Pharisees thought one would contract it if even one's shadow touched the corpse. Like the man who had been robbed, the priest was "going down" (v. 31), hence he was heading from Jerusalem and did not have to worry about being unable to perform duties in the temple. But although the rule of mercy would take precedence if the man were clearly alive, the man looked as if he might be dead (v. 30), and the priest did not wish to take the chance on contracting impurity. The task might be better left to a Levite or ordinary Israelite. Jesus' criticism of the priesthood here is milder than that of the *Essenes and often that of the prophets (e.g., Hos 6:9).

10:32. Rules for Levites were not as strict as

for priests, but the Levite also wished to avoid defilement.

10:33. In some later rabbinic parables, an Israelite might perform a pious duty that a priest and Levite had failed to perform, but the third character here would instead shock Jesus' hearers. Jews and Samaritans traditionally had no love for each other; although violence was the exception rather than the rule, the literature of each betrays an attitude of hostility toward the other. Jesus' illustration would strike at the heart of Jewish patriotism, which his contemporaries justified religiously.

10:34. Oil was used medicinally and for washing wounds; wine was also apparently used to disinfect wounds. Jewish people commonly avoided Gentile, and probably Samaritan, oil. A donkey might have seated both men, unless (as is very possible for a donkey-owner) the Samaritan was a merchant with many wares. The Samaritan instead leads the donkey, taking the inferior (even servile) position to help the Israelite. The possible allusion to 2 Chron 28:15 and its context would remind Jesus' most biblically literate hearers of a common bond uniting two different kingdoms in the land.

10:35. "I will repay" was a standard formula guaranteeing a debt. Because inns were known for immorality and innkeepers often mistrusted, his promise to pay more offered the innkeeper further incentive to tend to the wounded man.

10:36-37. Although the legal expert is reluctant to simply confess, "the Samaritan," Jesus has forced him to answer his own question offered in 10:29.

10:38-42
The Woman Disciple

This passage challenges the role designations for women in the first century; the role of *disciple and future agent of Jesus' message is more critical than that of homemaker and hostess, valuable as the latter may remain.

10:38. Being one of Jesus' hostesses would be a lot of work for Martha; he had brought many disciples to feed. Martha's act may fall short of Mary's in this *narrative, but her labor represents the best display of devotion she knows how to offer. Homemaking and hosting skills assigned to women in her culture gave her a way to serve Jesus.

10:39. People normally sat on chairs or, at banquets, reclined on couches; but disciples sat at the feet of their teachers (see Luke's other use of the expression in Acts 22:3). Women could listen to Torah teaching in *synagogues and occasionally one might listen to a rabbi's lectures, but they were not disciples sitting in the dust at sages' feet. Mary's posture and eagerness to absorb Jesus' teaching at the expense of a more traditional womanly role (10:40) would have shocked most Jewish men. The most advanced level of disciples included training to become rabbis; we know of no women who filled this role in antiquity. (The case closest to a known exception was a learned rabbi's daughter who had married another learned rabbi in the second century; but most rabbis rejected her opinions outside of domestic law.)

10:40-42. Despite the cultural importance of hospitality (the food preparation for guests was normally incumbent on the matron of the house), Mary's role as a disciple of Jesus is more important than anything else she could do.

11:1-13
Jesus on Prayer

11:1. *Disciples commonly asked their teachers for instruction, and in later times, when prayers became more standardized, some were known to have asked the proper blessings or prayers for different occasions. Yet it was considered rude and impious to interrupt someone's praying (one dare not even interrupt one's own; cf., e.g., Mishnah *Avot* 3:7; Tosefta *Berakhot* 3:20); thus here the disciples wait till Jesus finishes his own prayers before they ask. Different teachers might teach special forms of prayers to their own groups of disciples, although most of Palestinian Jews had some prayers in common, except for radical sectarians like the *Essenes.

11:2. Jewish people commonly addressed God as "Our heavenly Father" when they prayed, although such intimate titles as "Abba" (Papa) were rare (see comment on Mk 14:36). One standard Jewish prayer of the day proclaimed, "Exalted and hallowed be your . . . name . . . and may your kingdom come speedily and soon."

God's name would be "hallowed," or "sanctified," "shown holy," in the time of the end,

when his *kingdom would come. This idea was biblical (Is 5:16; 29:23; Ezek 36:23; 38:23; 39:7, 27; cf. Zech 14:9). In the present God's people could hallow his name by living rightly; if they lived wrongly, Jewish teachers observed, they would "profane" his name, or bring it into disrepute among the nations (cf. Jer 34:16; Ezek 13:19; 20:14; Amos 2:7).

11:3. This petition alludes to God's provision of "daily bread" (manna) for his people after he first redeemed them (Ex 16:4). Prayers for God to supply basic needs—of which bread and water were seen as the ultimate examples—were common (cf. Prov 30:8).

11:4. Jewish people regarded sins as "debts" before God; the same *Aramaic word could be used for both. Jewish *law at least in theory required the periodic forgiveness of monetary debtors (in the seventh and fiftieth years), so the illustration of forgiving debts makes good sense. Parallels with ancient Jewish prayers suggest that "Lead us not into testing" means "Let us not sin when we are tested"—rather than "Let us not be tested" (cf. 22:46 in context).

11:5-6. Hospitality was a crucial obligation; the host must feed the traveler who has graced his or her home by coming to spend the night. Although many homes would have used up their day's bread by nightfall, in a small village people would know who still had bread left over. In modern villages of that region, bread might last for several days, but one must serve a guest a fresh, unbroken loaf as an act of hospitality.

11:7. The children would often sleep on mats on the floor of the usual one-room dwelling. People who could afford them had beds (one of the most basic pieces of furniture), and those with more resources might even have canopies to protect from insects such as mosquitoes; but even most of those who had beds may have filled them with multiple persons. The door being closed might allude to it being bolted; unbolting the heavy bar that was often laid through rings attached to the door was a bother and would make noise that would awaken them. In real life, however, it should have been unthinkable for the man inside to refuse the request that affected the village's reputation.

11:8. The continual pounding would awaken the children anyway; unbolting the door would thus no longer pose much problem. The word translated "importunity" (KJV) or "persistence" (NASB, NRSV) means "shamelessness" (sometimes like the insistence of some "holy men" in prayer in Jewish tradition;). This term refers either to the boldness of the knocker, lest he be shamed by having nothing to give his guest, or perhaps the shame of the father inside, because the whole village would be humiliated by a bad report about their hospitality.

11:9-10. In the context of the *parable, these verses mean that the knocker receives either (see 11:8) because of boldness or because the honor of God is inseparably connected with the honor of his servant, the knocker.

11:11-12. Fish was a basic staple around the Lake of Galilee.

11:13. This is a standard Jewish "how much more" (*qal vahomer*) argument. Most people believed that the *Holy Spirit (1) had departed, (2) was available only to several of the holiest people, or (3) belonged to a special end-time community (*Dead Sea Scrolls). Thus the promise of verse 13 would have surprised the hearers; given common beliefs about the Spirit in ancient Judaism (based on the *Old Testament) often emphasized in Luke-Acts, this was essentially a promise that God would make them like prophets, anointed spokespersons for God.

11:14-26
Who Is Satan's Real Vassal?

11:14-16. Ancient exorcists typically sought to remove *demons by fumigation or magical incantations. Rabbis in the second century still accused Jesus and Jewish Christians of using sorcery to achieve the miracles they were performing. "Beelzebul" is related to the name of the pagan god called "Baal-zebub" in 2 Kings 1:2; used as an equivalent to "Belial" (2 Cor 6:15), it was a common Jewish name for the devil in the **Testament of Solomon*. (The pre-Christian work **Jubilees* called him Beliar or Mastema; the *Dead Sea Scrolls, Belial; later *rabbis often called him Sammael; by whatever name, ancient Jews understood who the prince of demons was.)

11:17-18. Jesus does not deny the existence of other exorcists here, but he need not be validating most of them either: a demon's retreat to draw attention to another of *Satan's

servants would be only a strategic retreat. Their exorcisms contrast with the wholesale exorcising of the masses that Jesus undertakes, which clearly signifies a defeat of Satan (11:20).

11:19. "Your sons" means "members of your own group" (just as, e.g., "sons of the prophets" meant "prophets"); because some of their associates also cast out demons (by methods that would look more magical than Jesus'), they should consider their charge carefully. They achieved limited success for a few individuals, not the massive results Jesus was achieving.

11:20. God's "finger" represented his power. Although the phrase occurs elsewhere, Jesus alludes especially to Exodus 8:19, where Pharaoh's magicians, attempting to imitate Moses' miracles, are forced to admit that the true God is working through Moses but not through them.

11:21-23. Many early Jewish sources report that Satan or demons were "bound," or imprisoned, somewhere after God subdued them. Less relevant to this context, ancient magical texts also speak of "binding" demons by magical procedures. The parable here about tying up a protective and armed householder means that Jesus had defeated Satan and could therefore plunder his possessions—free the demon-possessed.

11:24-26. Here Jesus returns the charge: they, not he, are servants of Satan; he casts demons out, but they invite them back in even greater numbers. Skillful lawyers and *rhetoricians delighted in subverting an opponent's charge by showing that the opponent himself was guilty and thus unqualified to bring the accusation.

11:27-36
The Genuinely Blessed

11:27-28. It was customary to praise the child by blessing the mother; this figure of speech occurs in Greco-Roman literature (e.g., the first-century Roman satirist *Petronius), rabbinic texts (e.g., sayings attributed to Johanan ben Zakkai) and elsewhere (e.g., *2 *Baruch* 54:10).

11:29-30. Jonah's preaching was a simple message of judgment, but that was all that Nineveh required in his generation.

11:31-32. Jewish discussions of the end times included converts from among the poor who would testify against those who said they were too poor to follow God; and similarly converts among the rich, converts among the *Gentiles and so on. Thus no one could say, "My group had no opportunity to repent." Here Jesus appeals to pagans who converted. Ancient Sheba was probably in south Arabia and/or the horn of Africa. Jewish people in this period probably thought of the "Queen of the South," the queen of Sheba, as the queen of "Ethiopia" (the Greek title for Africa south of Egypt), which was considered the southernmost part of the world (cf. Acts 8:27). *Josephus thought that she ruled Egypt and Ethiopia (*Jewish Antiquities* 8.159, 165, 175).

11:33. Most Palestinian homes did not have "cellars," but Luke is relating the image to his audience; many Greek homes did have them (cf. 6:48). Sizeable Greek houses often placed the lamp in the vestibule, and many Palestinian homes had only one room; whichever architectural style is in view, "those who enter in" would immediately see the lamp.

11:34-36. Jesus speaks literally of a "single" eye versus a "bad" or "evil" one. A "single" eye normally meant a generous one. A "bad" eye in that culture could mean either a diseased one or a stingy one. Many people believed that light was emitted from the eye, enabling one to see, rather than that light was admitted through the eye; here it seems to be admitted through the eye.

11:37-54
Denouncing Religious Colleagues

As in 7:36-50, a dinner becomes the occasion for moral instruction (this practice was so common in antiquity that it became a frequent setting in a type of philosophical literature called a *symposium*). Even more than in 7:36-50, it also becomes the occasion for confrontation.

11:37. The *Pharisee's behavior would have appeared honorable; see comment on 7:36. Prominent teachers would be invited to lecture at such meals, discoursing on wise topics with others who also liked to show off their education.

11:38. Pharisees were particularly scrupulous about washing their hands, a tradition common in the *Diaspora but not practiced in the *Old Testament.

11:39-40. Ritual purity was important to the Pharisees, so they washed their vessels as well as themselves in ritual baths. The school of *Shammai—the Pharisaic majority in this period—said that the outside of a cup could be clean even if the inside were not; the minority view, held by *Hillel's followers, was that the inside of the cup must be cleansed first. Jesus sides with the school of Hillel on this point, but does so to make a figurative statement about the inside of the person, the heart.

11:41. The *Aramaic word for "cleanse" (Mt 23:26) is similar to that for "give in charity"; it is possible that Luke adopts one nuance of an Aramaic wordplay by Jesus, while Matthew adopts another.

11:42. Tithes were used especially to support the priests and Levites. "Rue" and Matthew's "dill" (23:23) are similar words in Aramaic, possibly reflecting an original Aramaic source here. The written *law did not explicitly require tithing these dry, green, garden herbs; the question among the Pharisees was whether they counted as foodstuffs and hence were subject to tithing. Jesus may thus address a hyperbolic, superscrupulous Pharisee.

11:43. Pharisees were considered quite meticulous in their observance of the law, people were seated by social rank in public places, including *synagogues, and those regarded as superior in their knowledge of the law were hailed especially respectfully in the marketplaces. Custom dictated the character of greetings, so that people of higher status were greeted first.

11:44. Nothing spread ritual impurity as severely as a corpse; Pharisees believed that one contracted impurity if even one's shadow touched a corpse or grave. Inconspicuous tombs (or limestone ossuaries) would be whitewashed each spring to warn passersby to avoid them and so to avoid impurity, but the Pharisees lack this telltale warning sign. They look religious on the outside but spread impurity.

11:45. Luke is more concerned to distinguish Pharisees from professional legal experts than Matthew is (cf. Mt 23:13-29). Although some Pharisees worked as legal experts and some legal experts were Pharisees, these groups were not identical.

11:46-47. Ancient Judaism emphasized more often than the Old Testament had that Israel had martyred its prophets; the Jewish community in this period built tombs as monuments for the prophets and the righteous (including some Old Testament servants of God who were not martyred, like David or Huldah).

11:48. The point of Jesus' saying here is "like father, like son"; speakers sometimes linked those they accused with the misdeeds of their ancestors, pointing out that this was what one expected. Corporate sin and guilt continued among the descendants of the wicked unless they repented (Ex 20:5; Deut 23:2-6; 1 Sam 15:2-3; 2 Sam 21:1; Is 1:4; etc.).

11:49-51. Jewish sources often personify God's wisdom. Many Jewish people believed that fully anointed prophets had ceased at the end of the Old Testament period and would be restored only in the end time. Bloodguilt was a serious matter, affecting the whole community and not just the individuals directly responsible (Deut 21:1-9). God would avenge it (Deut 32:43; Ps 79:10). The *rabbis considered the place between the porch and altar the holiest place on earth after the holy of holies and the priestly sanctuary.

The Hebrew Bible filled multiple scrolls, but ancients generally thought of their arrangement differently than in our English Bibles today. Thus Zechariah could be the last martyr (2 Chron 24:20-22), while (as in our Bibles) Abel was the first (Gen 4:8). Jewish tradition expanded the accounts of both martyrdoms, declaring that after Zechariah's death a fountain of blood appeared in the temple that even the slaughter of thousands of priests could not appease. Zechariah prayed for vengeance (2 Chron 24:22), and Abel's blood cried out from the ground (Gen 4:10); to say that their vengeance would be requited on Jesus' generation was thus to promise unimaginable horrors. This judgment is because his generation would climax the terrible sins of their spiritual ancestors.

11:52-54. Experts in the law supposedly increased knowledge of the law; for Jesus to charge that their detailed expositions of it instead rendered its plain meaning inaccessible was a serious accusation.

12:1-12
Sound Speech and the Day of Judgment

Some Jewish sages focused on the end time. Jesus warns his hearers to evaluate all their values and priorities in view of the day of judgment: their words, their lives and (in 12:13-34) their possessions. Although the world's hostility appears somewhat less pronounced in Luke (who, like the Jewish authors *Philo and *Josephus, wants his faith to make sense to the broader culture) than in Mark (who, like many *apocalyptic writers, experienced only opposition from the world), Luke reports Jesus' warnings no less plainly than other writers: following Jesus is costly. The costs of not following, however, are eternal.

12:1. From natural acoustic settings (e.g., coves or hills) a powerful speaker could address a vast crowd. A crowd of "many thousands" was rare; had the Romans known of such large crowds in the wilderness, they might have detained Jesus. They did not trust large gatherings of people who met without their sanction and whose potentially revolutionary *rhetoric they could not monitor. (The theater in the Galilean city Sepphoris seated four to five thousand people, but because it was not in the countryside, any anti-Roman rhetoric would have been more quickly an issue.) The odds of Roman interference at this point are small, however; they did not patrol the Galilean countryside, and their highest officers are as yet unaware of Jesus (23:2).

12:2-3. The flat housetops would have provided the most conspicuous forum for shouting news to neighbors; they were in the open, as opposed to the inner rooms. The darkness of night was considered the easiest time to pass along secrets (or do antisocial activities that would not be known). In this context, 12:2-3 may either warn that one's confession or denial of *Christ will be reported by deceptive betrayers (12:1, 4-5) or that it will be reported at the judgment (12:4-10). The day of judgment would bring all deeds to light (cf., e.g., Is 29:15); the wicked would be ashamed and the righteous vindicated (e.g., Is 45:16-17).

12:4-5. All Jewish hearers would understand "the one who has authority to cast into hell" as God, the judge, whose power the wise are respectfully to "fear" (e.g., Prov 1:7).

12:6-7. Sparrows were one of the cheapest items sold for poor people's food in the marketplace and were the cheapest of all birds. According to Matthew 10:29, one could purchase two sparrows for an *assarion,* a small copper coin of little value; here it appears that they are even cheaper if purchased in larger quantities. This is a standard Jewish "how much more" argument: If God cares for something as cheap as sparrows, how much more does he care for humans? The hairs of one's head being numbered was an *Old Testament way of saying that nothing could happen to a person without God allowing it (cf. 1 Sam 14:45; 2 Sam 14:11; 1 Kings 1:52).

12:8-9. Jesus is presented as both intercessor (defense attorney) and prosecutor before the heavenly court, a familiar Jewish image. In many Jewish accounts, the heavenly court consisted of angels; the angels would certainly be gathered for the day of judgment. God would pass final judgment, but the text implies that Jesus never loses a case before him.

12:10. When Jesus says people "will be forgiven," he means that God will forgive them (Jewish people sometimes used passive constructions to avoid use of God's name). See comment on Mark 3:23-30. In this context, blasphemy against the Spirit might apply to a denial of Jesus (in the face of danger) of which the denier (unlike Peter) never repents.

12:11. Synagogues functioned as meeting places for Jewish local courts; transgressors were sometimes beaten there. Punishments meted out by Roman authorities were normally even harsher than Jewish punishments.

12:12. The Jewish people viewed the *Holy Spirit especially as the Spirit of prophetic inspiration and empowerment; thus when brought before the authorities (12:11) believers would be empowered to speak God's message as plainly as did the Old Testament prophets. (Inspiration does not, of course, imply lack of general preparation or discipline in the subject about which one speaks; *disciples memorized the sayings of their teachers in both Jewish and Greek culture, and Jesus' disciples would know his teaching as well as being inspired by the Spirit.)

12:13-21
Materialism and Hell

12:13. People often called upon *rabbis to settle legal disputes. Inheritance disputes were extremely prominent in *Gentile courts, where wills would determine inheritance. Jewish *law should have been less complicated: the eldest son was supposed to receive double what any of the other sons would receive (Deut 21:17). The proportion of inheritance in a Jewish setting was thus fixed (though particular items may be in dispute), and the plaintiff in this case has every legal right to receive his share of the inheritance.

12:14-15. Jesus' answer would strike first-century hearers forcefully: the issue is not whether the plaintiff is legally in the right (probably clear; cf. 12:13); the issue is that life, not possessions, is what matters. Even most peasants owned some property (a dwelling), so Jesus' words strike at the very heart of human desire. Only a few Greek philosophers (e.g., *Epictetus) uttered words about possessions that sounded as countercultural as Jesus' here.

12:16-18. Archaeologists have found large grain silos on farms owned by wealthy absentee landowners, such as at Sepphoris, one of the largest and most *Hellenized Jewish cities in Galilee. The image in the *parable here is that of a wealthy landowner, part of the extremely small leisured class (generally estimated at less than one percent), who need not labor in his own fields. Although many peasants may have taken pride in their labor and few could ever change their social status, the lifestyles of the rich and famous provided natural models for popular envy.

12:19. The *Epicurean-like complacency of the man who would "eat, drink and be merry" probably refers to the analogous folly of well-to-do Jews in Isaiah 22:13-14. It was the best that mortal life itself could offer a person (Eccles 2:24; 3:12; 5:18-19), but one needed also to consider God's demands (11:7-12:14). Many other Jewish texts also criticize the self-sufficient person who thinks that he or she has it all and does not reckon with death (e.g., Sirach 11:18-19; Syriac Menander's *Sentences* 368-76; *Pseudo-Phocylides 109-10; **1 Enoch* 97:8-10).

12:20. The idea of leaving the fruit of one's labors to others more worthy appears in the *Old Testament wisdom tradition (e.g., Prov 13:22; Eccles 2:18); the fear of leaving it to someone who would squander it is also common in ancient literature; the image of life being loaned to a person and required back at death would have likewise been familiar (Wisdom of Solomon 15:8).

12:21. Jesus does not state that the sin is how the man gained his income but simply that he hoarded it rather than giving generously; the same emphasis appears in Proverbs.

12:22-34
The Unimportance of Possessions

12:22-23. Jesus reasons back to basics: one's basic needs relate to survival. Some philosophers taught that people should seek only these basic needs, although most philosophers felt that people could acquire possessions as long as they did not go out of their way to seek them. The *Cynics, however, owned nothing; and among Palestinian Jews, the *Essenes shared all their possessions communally. Jesus nowhere prohibits possessions, but he teaches priorities that challenge his followers' lifestyles; whereas people and their needs matter, possessions beyond one's needs are worthless.

12:24-28. Jewish (and Greek) wisdom teachers often illustrated their points from nature. Solomon's splendor, during what was undoubtedly the wealthiest period materially in Israel's history, was impressive by all human standards (1 Kings 10:5). A cubit is a measure of length; if Jesus applies it to longevity, as some think, such clever wording was sometimes used to hold people's attention.

12:29-30. A Jewish hearer would not wish to be worse than the "nations," the godless *Gentiles. The Jewish people believed that God was their (not the Gentiles') father.

12:31-32. Here Jesus may use a Jewish "how much more" argument (if God gives you the *kingdom, how much more will he also supply all other needs).

12:33-34. One should invest in *eternal life rather than in possessions; see comment on Matthew 6:19-21.

12:35-40
Ready for His Coming

In context (12:22-34), this passage suggests that only those who travel lightly will be prepared.

Although most of Jesus' Jewish contemporaries longed and prayed for the time of future redemption, on average they also seem to have been more preoccupied with daily needs than with extraordinary preparation for the future judgment (exceptions were the *Essenes, *apocalyptic visionaries and followers of messianic figures and revolutionaries).

12:35. Like military watchmen or others who stay prepared when others sleep, Jesus' followers must be dressed and ready for action (Ex 12:11). Keeping lamps lit would literally mean having a ready supply of oil and staying awake so they could draw on this supply; this is a figure for preparedness (cf. Mt 25:3-10). Keeping loins girded (so the Greek here) means keeping ready for action (cf. Ex 12:11; 2 Kings 4:29; 9:1), since one could not easily run with the folds of one's long robe impeding.

12:36. Well-to-do householders often had a special slave or slaves in charge of keeping the door; these slave-porters would keep unwanted persons out but admit members of the household. If Jewish banquets resembled Greek and Roman banquets, the feasting itself could last well into the night. Although he might not remain for the full seven days of the feast, it would be unusual for a well-to-do householder to return from a distant banquet (as opposed to one in the same city) in the night. Robbers made night travel more dangerous, though the danger was reduced by a large entourage. (In large urban areas, travel alone at night was dangerous even within one's city, although that might not be relevant to Jesus' primary audience here.)

12:37. Although a few philosophers argued that slaves were the moral equals of their masters, and one well-to-do Roman is known to have eaten on the same level as his freed slaves, masters' serving slaves was unheard of. (The exception among Romans for the festival of Saturnalia was a deliberate inversion of normal reality.) Such an image would offend the well-to-do but would be a powerful symbol of how Jesus would treat those who remained faithful to the end.

12:38. Here the passage follows a Jewish division of night into three watches; contrast the division for Roman guard duty in Mark 13:35.

12:39. The term translated "broken into" can mean literally "dug through"; walls were often built of dried mud and thus one could dig through them, although it would be quicker to simply break in the door. More well-to-do homes could use stone instead. Israelite *law considered thieves breaking in at night the most dangerous.

12:40. Many Jewish thinkers viewed the time of the *Messiah's coming as in God's hands alone (though some believed that Israel's *repentance could hasten it).

12:41-48
For Ministers Too

Leaders in the *church must recognize that they are appointed only to serve their fellow servants, the rest of the church.

12:41. *Disciples often sought clarification from their teachers by asking questions.

12:42. Many well-to-do householders had a hired person or slave called a "steward," a sort of business manager who managed the estate. Such a high-level slave (as is in view here; 12:43) could be in charge of rations to the other servants.

12:43-44. Upward mobility existed among household servants; indeed, many such servants outranked free peasants in terms of real power or status, and even earned more money (which they could later use to buy their freedom). (In the most powerful households in the empire, the highest-level slaves and *freedpersons sometimes wielded more power than most aristocrats, though such power is not in direct view here.)

12:45. High-status slaves often wielded more power than did most free persons; nevertheless, slaveholders would be enraged by abuses. Absentee landowners and householders were not infrequent, especially if they owned other estates at a great distance. In other stories of the period, absentee kings, landowners or husbands posed temptations to those remaining behind. Drunkenness was despised, even more when slaves became drunk at the master's expense. A slave who abused the other slaves was viewed as mistreating his master's property (see comment on 12:47-48); in some cases, slaves were also objects of a master's personal concern.

12:46. The *Gentile punishment of "cutting in pieces" is attested elsewhere, especially in an earlier period; Luke's hearers, who would view

themselves as more civilized, would no doubt find this detail horrifying. Taken literally, the subsequent banishment with unbelievers could mean that he was deprived of decent burial (reserved for the worst crimes; see comment on Rev 11:8; sometimes the pieces of dismembered corpses were also scattered for further punishment). In the *parable, however, it especially points to the Jewish doctrine of hell (Gehinnom; see "*Gehenna" in the glossary) for idolaters and other transgressors.

12:47-48. Some ancient laws treated slaves as persons; other laws treated them as property. Although masters were allowed to beat slaves (as they also generally beat their children), it was in their economic interests not to do so often or severely. A major flogging (12:47), execution and disfigurement of the corpse (12:46) reflect the severity of the crime; a master legally had the power of life and death over his slaves. Floggings often preceded executions in general. The parable indicates that greater knowledge brings greater responsibility (see Lev 26:18; Amos 3:1-2).

12:49-53
Bringer of Division

Jesus' ethics and mission differ so radically from those of the world that division is inevitable.

12:49. The fire probably refers to the impending end-time judgment. Fire in the Old Testament could symbolize the end-time judgment and purging; cf. comment on 3:16.

12:50. Jesus' impending "*baptism" may refer to undergoing the baptism of fire (12:49; judgment—3:16; cf. also comment on Mk 10:38).

12:51-53. Given the great emphasis on family harmony in Judaism, Jesus' words here would strike the hearers strongly (cf. Mic 7:6). Extended family lived in the same household more frequently than today, although not everyone would have had in-laws present.

12:54-59
Signs of the Times

12:54. In Palestine, a cloud from the west would be coming from the Mediterranean Sea and thus would be full of rain.

12:55. In much of the Mediterranean world, a wind from the south would bring hot air from the Sahara Desert. In Palestine, it came especially from the Arabian desert to the southeast, but the immediate south of Judea was also hot desert.

12:56-57. Such weather predictors (12:54-55) were obvious; Jesus says that the truth of his message is equally obvious. Speakers sometimes *rhetorically challenged their hearers to decide the matter (12:57).

12:58-59. Here Jesus refers to the ancient practice of debt imprisonment (cf. debt slavery in the *Old Testament, e.g., Lev 25:39-41; Amos 2:6). In debt imprisonment, one without access to means would have to depend on friends to come up with the needed funds; one would not be released unless they did so. The term for "officer" here can apply to a constable overseeing a debtors' prison. (This may be a contextualization for Greek readers of a more general term as in Mt 5:25.)

13:1-9
Repent or Perish

13:1-5. As in many cultures today, so in much ancient Jewish thought, when something bad happened to someone, people wondered what the person had done wrong. Stories of atrocities traveled quickly, and often grew as they spread. *Pilate's cruelty here fits the sort of conflicts he had with the Jewish community; his known brutality (Josephus, *Jewish Antiquities* 18.60-62); the presence of Galilean pilgrims at the holy days celebrated in Jerusalem; and the governor's practice of coming to feasts to maintain order. The "tower in Siloam" may have been on Jerusalem's city wall above the pool of Siloam; some suggest that it may have been associated with Pilate's construction of an improved water-supply system for the city. The feast may have been Passover, when nonpriests offered their animals.

13:6. *Parables often includes stories about plants and animals (though only relatively rarely in Jewish parables did they speak, as in many Greek fables). Palestinian vineyards often contained fruit trees in addition to vines.

13:7. That some fig trees did not bear fruit in a given year did not mean that they would never do so (cf. comment on Mk 11:12-14), and fig trees do not always bear fruit even within their first four or five years. In this parable the vineyard worker asks the master to wait till the fourth year to make sure it was a worthless tree

(cf. Is 65:8). According to rabbinic interpretation of Leviticus 19:23, fruit from newly planted trees was forbidden for three years (though the Jewish tradition may have applied more strictly to olives than to figs). In later Jewish teaching, God examined Israel's sins once a year to decide their future for the coming year; but it is not clear if Jesus alludes to such an idea here. The space it takes up could be used for vines.

13:8. The vineyard worker answers to the owner, perhaps as his servant, yet intercedes on behalf of the fig tree. Digging around a tree and putting manure around it to fertilize it were common procedures, but fig trees usually did not need manure; the worker does all he can to try to save the tree. Jewish teachers debated whether Israel's *repentance could change the set time of the end, but they agreed that God could suspend his judgment if he saw repentance.

13:10-17
Healing on the Sabbath

13:10. Visiting teachers were commonly asked to speak in *synagogues on the sabbath.

13:11-12. Ancient medical writers used words like "loose" to describe the removal of curvature of the spine and related ailments. The term was also used of freeing people from a *demon's grip.

13:13-14. The synagogue leader's argument sounds logical: work is forbidden on the sabbath, but that still leaves six days a week for healings. The problem with the argument is that biblical sabbath *laws did not restrict *God's* activity, and the only physical work Jesus performs on this sick woman is to lay his hands on her (though some *Pharisees considered this work). Even Pharisaic rules officially forbade only healing by a physician; they debated the propriety of prayer for the sick on the sabbath. But we do not know if Pharisees were present on this occasion anyway; most of the estimated six thousand seem to have lived in Judea.

13:15-16. Here again Jesus uses the common Jewish "how much more" (*qal vahomer*) argument: if one could release an animal from a bond for its own good on the sabbath (one of the few kinds of tying and loosing permitted then), how much more could one release a "daughter of Abraham" (i.e., an Israelite) from her satanic bonds?

13:17. Arguments by analogy were accepted in Jewish legal debate; Jesus has skillfully outmaneuvered his opponents. Both Greek and later rabbinic controversy *narratives typically culminated in the wise protagonist's response that silenced his opponents, so Jesus' triumph would be obvious to Luke's readers.

13:18-30
The Nature of the Kingdom

13:18. "To what shall we compare?" was a common rabbinic way to introduce a *parable to illustrate a point.

13:19. Everyone regarded the mustard seed as very small; indeed, something smaller would be hard to see easily. It nevertheless yielded a shrub the size of a small tree (around the Sea of Galilee, it can reach a height of eight to ten feet, though rarely more than five, if interpreters have the correct plant in view), with room for small birds to perch in it (borrowing the language of Daniel 4:12, the splendor of a mortal ruler's kingdom). According to second-century Palestinian teachers the mustard seed was not sown in gardens (cf. Mt 13:31); but outside Palestine (where Luke's hearers lived) it could be.

13:20-21. Leaven, or yeast, would be mixed with flour throughout the dough. The point of both parables (13:18-21) is that the mighty *kingdom everyone expects could issue from apparently obscure beginnings—like Jesus and the *disciples.

13:22-24. The image of "the two ways" was common in Jewish (and other ancient) literature; some texts also stressed that the majority of people would follow the way to destruction (see, from the late first or early second century, **4 Ezra* 7:3-16, 60-61; 8:1-3). Other Jewish groups besides Christians, like the *Essenes, also believed that they were the only saved group. But many mainstream Jews apparently believed that nearly all Israel would be saved in the time to come (cf. Mishnah *Sanhedrin* 10:1).

13:25. It was an essential social rule to greet by name or title those persons one knew. To deny knowledge of where they were from would be to deny knowing them and was a form of repudiation.

13:26-27. Table fellowship created a social bond; hospitality bound its recipient to friendship (cf. comment on 14:1). In this parable the fugitives from destruction try to remind the owner of the house who they are, but he reiterates that he does not know them, and therefore they will not enter his house. The final line is Psalm 6:8 (cf. 119:115; 139:19), where the workers of iniquity are the psalmist's own persecutors, against whom the Lord takes vengeance to vindicate the psalmist.

13:28. Most Jewish people assumed that God had prepared the kingdom for Israel; they expected to participate in it with the patriarchs (Abraham, Isaac and Jacob) and the prophets (see on 13:22-24).

13:29-30. Here Jesus could refer to the gathering of the Jews dispersed outside Palestine, but in the context of Luke-Acts (and the parallel in Mt 8:11-12) the point is much more shocking: *Gentiles will participate in the kingdom, reclining (the posture used for feasts) at the messianic banquet, from which many of the people who expected to be there would be excluded. The four directions were used together to mean "everywhere."

13:31-35
Lament of the Rejected Lover

13:31. Herod Antipas had considerably more authority in Galilee than the priestly aristocracy did in Jerusalem; he had executed John and could do the same with Jesus. If, however, Jesus leaves Antipas's jurisdiction (as the well-meaning *Pharisees here warn him to do), he will be safe.

13:32. Calling someone a "fox" in antiquity would not necessarily imply that the person is sly (although that was one possibility); instead, it could portray the person as worthless, slanderous, treacherous or (quite often) cunning, but often in an unprincipled manner. Thus Jesus here does not offer Herod a backhanded compliment (cf. Ezek 13:4). Moreover, foxes were predators and scavengers (Neh 4:3; Song 2:15; Lam 5:18), hence could prey on hens (Lk 13:34) when they had the opportunity. Ancient stories feature their cunning and their activity as predators more than any strength; though ancient stories regularly portray them as predators, they sometimes emphasize that they (and even wolves) are inferior in power to lions, the most powerful predators.

13:33. In the *Old Testament some prophets were martyred, and Jewish tradition applied this fate to many other prophets as well. Jesus plays on this tradition; in several days he will enter the city that had murdered the most prophets (i.e., he is leaving Antipas's jurisdiction but will die soon, with or without Herod's help). That Jerusalem was prophets' only place of martyrdom was hyperbolic, but it was naturally the center of persecution in ancient Judah. Putting it so starkly, however, would shock many Jewish listeners, because most Jews except the Essenes considered Jerusalem the center of Jewish piety.

13:34. Jewish tradition claimed that Jewish people were under God's wings, and when a Jewish person converted a Gentile, he or she "brought the Gentile under the wings of God's presence." The Old Testament also portrays God as an eagle hovering over its offspring (Deut 32:11; cf. Ex 19:4) and protecting Israel under his wings (Ps 17:8; 36:7; 57:1; 61:4; 63:7; 91:4), and similarly terrifying Israel's foes (Jer 49:22). This is but one image of God's love for his people. Jesus here applies this divine role and image to himself.

13:35. The desolation of the "house" probably refers to the destruction of the temple in A.D. 70 (cf. Lk 21). The quotation is from Psalm 118:26, which was sung during this season at the Passover and which the crowds will sing to Jesus at his entry into Jerusalem (19:38).

14:1-6
Healing on the Sabbath

14:1. Eating bread together was supposed to be an occasion for intimate fellowship; treachery or less than friendly motives among those sharing a meal would repulse ancient readers. This feeling would be magnified at a sabbath meal, to which many Jewish people considered it particularly virtuous to invite a prominent teacher.

14:2. Dropsy (edema) causes the body to swell from excess fluids, as ancient medical texts commonly mention. Because the man with dropsy here is in front of Jesus and not on the room's periphery, he might be an invited guest.

14:3-6. Jewish legal experts debated proper sabbath *laws among themselves; if one side

was silenced and unable to reply, they would be presumed wrong or at best too ignorant of the law to defend their position. *Essenes did not permit rescuing an animal on the sabbath, but *Pharisees did. Jesus argues by analogy with a principle on which his opponents agreed, and extrapolates by a "how much more" argument; cf. 13:15-16.

14:7-14
Instructions to Guests and Hosts

14:7. Well-known teachers customarily lectured or participated in dialogues at banquets. Ancient writers sometimes arranged literary discussions as monologues or dialogues in the setting of such banquets; these writings were called *symposia*.

Social status was important in antiquity and was made obvious by the seating of dinner guests at banquets. This status was especially a problem in well-to-do Greco-Roman circles (see comment on 1 Cor 11:21), but seating by rank is well attested in Palestinian Jewish society, including in the *Dead Sea Scrolls.

14:8-10. Jesus states a principle directly from Proverbs 25:6-7—to which the guests were not paying much attention—that is repeated in other ancient Jewish texts. Yet as in Roman circles, no one of socially inferior status would be arbitrarily invited forward; one would be advanced only if one had sat in too low a position.

14:11. Here Jesus repeats a standard *Old Testament promise, applied especially to the day of judgment (cf. Is 2:12; Ezek 17:24; 21:26; cf. also comment on Lk 1:52-53).

14:12. Not to invite people of one's own social status would offend them; but Jesus says that the other's need, not one's own social standing, must determine the giving of gifts. The Old Testament forbade charging interest on a loan and so profiting by one's neighbor; but Jesus' principle here excludes looking for any repayment at all; cf. 6:34-35.

14:13. Well-to-do persons in the Greco-Roman world usually invited people of somewhat lower social status in return for receiving honor, but these invitees would still be relatively respectable, not absolute dependents or beggars, as those who were unable to walk or were blind would be in that society, or peasants (although many Jewish teachers might regard inviting beggars and peasants as an act of piety). Those unable to walk or who were blind were not permitted on the premises of the probably *Essene community at *Qumran, but this was for ritual reasons.

14:14. Judaism taught that the righteous would ultimately be rewarded at the *resurrection of the dead; here Jesus applies this truth to distribution of resources. That God repaid those who helped the poor was already taught in the Old Testament (Prov 19:17).

14:15-24
The Ultimate Banquet

Those one would have expected to attend God's banquet had turned him down; thus he has every right to invite the outcasts of society whose presence would offend the powerful.

14:15. Texts reflecting Jewish expectation (as early as Is 25:6-9) often portrayed the *kingdom of God as a banquet.

14:16. The man in the *parable would have invited well-to-do persons; though not of higher status and wealth than himself, he would invite peers and those less well-to-do but still respectable.

14:17. Invitations were often R.S.V.P.; thus these invited guests had already confirmed that they were coming.

14:18. One would think that this man would have examined the land beforehand, even if he had bought it through an agent. (Indeed, legal contracts often specified that the buyer had examined the property and found it satisfactory; e.g., P.Oxy. 1707.13-15.) The buyer may have been legally obligated to go to complete the purchase; deals were also sometimes made contingent on a later inspection. But like the excuses that follow, this late notice would be heard as a weak excuse that would serve as a grievous insult to the dignity of the host, who had prepared the feast at much expense.

14:19. A buyer could test oxen before buying them. Indeed, only a fool would buy an animal without examining it (cf. *Seneca, *Epistle to Lucilius* 47.16). Having even a total of five yoke of oxen would mean that this man had much land to plow; he must be a wealthy landowner in his own right. It would therefore be inconceivable that he had no one working for him.

14:20. The rudeness escalates: the first man

objected, "I need to go," but asked to be excused; the second, "I go," but also asked to be excused; this man does not even ask to be excused! This man's excuse is a valid one for not going to war during the first year of marriage (Deut 20:7; 24:5; cf. 1 Maccabees 3:56), but it is not valid for skipping a feast one had promised to attend, even though women (including his new wife) were sometimes not invited to such dinners (and would have often been in a separate banquet hall if they were). Banquets generally lasted into the night. Wedding feasts (which this feast probably is; cf. Mt 22:2) were planned far in advance, and the man should have known not to schedule two events at the same time.

14:21-22. Banquets were meant to bring the host honor, but the corporate insult of 14:18-20 instead dishonored him. He can recoup at least some honor (and keep the meat from spoiling) only by getting at least some guests. Poor people rarely entered the walled, well-to-do part of a city; bringing in beggars from off the street was unheard of (see comment on 14:13). (The Dead Sea Scrolls exclude the maimed and blind from the future messianic banquet.) The host's behavior will not be socially respectable to his own class, but it will give him honor at least with someone. "Lanes" here may represent the narrow walkways between the residences of the poor.

14:23-24. Because the poor would feel unworthy to come, the slave must compel them. A higher-ranking slave in a wealthy household might be of higher status than poor free persons.

14:25-35
The Cost of Following Jesus

The demand that all Jesus' *disciples value the needy above respectability (14:7-24) deprives them of the right to remain socially respectable; to count the cost of following Jesus, one dare not value family approval (14:26) or any possessions (14:33) above God's call heard through the world's need.

14:25-26. "Hate" could function as a hyperbolic, Semitic way of saying "love less" (Mt 10:37), but this point hardly diminishes the offensiveness of this saying in a society where honor of parents was considered virtually the highest obligation and one's family was usually one's greatest joy. Teachers regularly demanded great respect and affection, but in Jewish tradition only God openly demanded such wholesale devotion as Jesus claims here (Deut 6:4-5).

14:27. A condemned criminal would "carry the cross" (i.e., the horizontal beam of the cross) out to the site of the upright stake where he would be crucified, usually amid a jeering mob. No one would choose this fate for oneself, but Jesus calls true disciples to choose it and thus to hate their own lives by comparison with their devotion to him (14:26).

14:28-30. Wealthy people displayed their power by magnificent private buildings or by supporting public buildings. Failing to finish, however, would convince others that the donors' supposed wealth was merely pretense. Several years earlier (A.D. 27) a poorly built amphitheater had collapsed, with an estimated fifty thousand casualties. The failings of inadequate or half-finished structures were well known. The crucial point here, however, is the builder's shame in a society obsessed with honor.

14:31-32. Occasionally those with smaller forces defeated those with larger ones, but it was normally wiser to sue for peace (cf. Prov 20:18; 24:6). Galilee's tetrarch Herod Antipas had recently (A.D. 29) lost a war with a neighboring Roman vassal, so the image of foolhardy war should be meaningful to Jesus' hearers. Jesus' point (as in 14:28-30) is that one must recognize the cost when one enlists as a disciple of Jesus (cf. Prov 20:18; 24:6).

14:33. The *Essenes devoted all their property to the community; some radical Greek philosophers espoused the same kind of teaching. But the rest of early Judaism and, even more, Greco-Roman society in general rejected such fanaticism; Judaism stressed giving to charity but not divestiture of possessions. Jesus' disciples did not become propertyless but shared all that they had (Acts 2:44-45; cf. comment on 12:12). Nevertheless, Jesus would sound like one of the radical teachers, because he claims that anyone who values possessions more than people—and so holds onto them rather than meeting known needs—is not being his disciple.

14:34-35. Salt was particularly used as a seasoning agent for taste. Some suggest that it was sometimes (probably not in Palestine) mixed in with manure to keep it fresh for use

as fertilizer (slowing fermentation, although the salt itself would be counterproductive in fertilizing soil, unless one's purpose was to make ruined land incapable of producing; it might also be used for killing weeds). The point is that disciples who do not live like disciples are worth as much as unsalty salt: nothing. (Such graphic demands *rhetorically commanded attention, but Jesus' desire for all to be transformed is clear in the context; see 15:1.)

15:1-2
Sinful Friends

15:1. *Tax gatherers and sinners were excluded from the religious community; cf. comment on 5:29-32. Proverbs (1:15; 13:20; 14:7) warns of the danger of spending time with sinners (cf. also Ps 1:1). But it is clear in this text that the moral influence is from Jesus to the sinners, not the reverse. Many religious Jews emphasized talking about the *law whenever possible; no one could legitimately complain about Jesus, who here communicates God's message to his listeners during table fellowship (on lectures at meals, cf. comment on 14:7).

15:2. *Pharisees and legal teachers did not consider it proper to eat with those excluded from the religious community; besides such dangers as eating untithed food, intimate table fellowship connoted acceptance. "Grumbling" could remind biblically knowledgeable ancient readers of Israel's unbelief and murmuring in the wilderness.

15:3-7
The Lost Sheep

Jesus addresses three *parables to his religious accusers (15:1-2), in effect turning the tables on them and demonstrating that they were not truly God's friends. Pharisees considered shepherds members of an unclean profession and thus would not readily identify with the protagonist of the story (but cf. 2:8-20).

15:3-4. One hundred was not an unusual size for a flock. Because shepherds often worked together (cf. e.g., 2:8) or with cowherds in the same area, this shepherd could probably leave his flock with his companions without endangering the flock. That they remain in the open pasture at night makes it likely that this is the warm season, not winter. Other Jewish teachers stressed God's forgiveness for the repentant, but did not stress God's seeking sinners out.

15:5. The easiest way to carry a lamb may have been across one's shoulders, with the legs crossed over one's chest (cf. God carrying his sheep in Ps 28:9; Is 40:11, but in the latter text God carries lambs at his breast).

15:6-7. "Heaven" was sometimes a surrogate title for God (15:18), but might allude more broadly to heaven's watching inhabitants (cf. 15:10). The moral of the story is: As the shepherd's friends rejoice when he finds that which was lost, so do God's friends rejoice when he recovers what was lost to him. Thus Jesus' accusers, who resent his fellowship with sinners he seeks to restore, may not really be God's friends (15:1-2).

15:8-10
The Lost Coin

The relative value of the lost item increases in each parable: one out of one hundred, one out of ten and finally (15:11) one out of two. Pharisees were generally unimpressed with the moral character of women and, though valuing care for the poor, mostly came from an educated class different from people with just ten coins. They would not readily identify with the protagonist of this story (contrast Luke's approach in 24:1-11).

15:8. The ten silver coins are most likely the woman's dowry—the only money she brings into the marriage that is technically hers even if the marriage is dissolved. That she has only ten coins (worth about ten days of a worker's wages) suggests that her father's family is not well-to-do; she would presumably have married into a household roughly equally poor (marriage within one's economic bracket was preferred). Given Luke's emphasis on widows elsewhere and his lack of specification here, she is probably not envisioned specifically as a widow, but a widow with only ten coins would be in an even more desperate condition.

The lamp here is a small, handheld oil lamp, which emits little light but is more helpful than the small (if any) window that may be in her wall. The rough stone floors of poor homes had many crevices between the stones, into which coins and fragments of pottery fell so often that archaeologists can now use coins in those

crevices to date when people lived in these homes. By sweeping with a broom she might hope to hear the coin rattle against the floor.

15:9-10. See comment on 15:6-7 for the moral. In Jewish tradition the angels in heaven generally took great interest in God's workings on earth; seven chief angels surrounded the throne, and among other angels each person was specifically assigned at least one guardian angel.

15:11-32
The Lost Son

15:11-12. To ask one's father for one's share of the inheritance early was unheard of in antiquity; in effect, one would thereby say, "Father, I wish you were already dead." Such a statement would not go over well even in the West today, and in a society stressing obedience to one's father it would be a serious act of rebellion for which the father could have beaten him or worse (cf. Ex 21:17; Deut 21:18-21). A not unusual response would have been for the father to disinherit the son! That the father grants the request means that most of the hearers will not identify with the father in this parable; from the start, they would think of him as stupidly lax to pamper such an immoral son. Presumably most hearers do not realize at the beginning that Jesus is depicting God's mercy toward them!

The Roman custom was to divide an estate equally unless a will gave more specific instructions. In the traditional Jewish practice, apart from gifts designated before the father's death, the eldest son was to receive a double portion (Deut 21:17); in this case, he would have received two-thirds of the inheritance (15:31) and the younger brother one-third.

15:13. Jewish *law did permit a father to determine which assets (especially land) would go to which sons before he died, but they could take possession only on the father's death: the father remained the manager and received the land's profits until then (cf. 15:22-23, 29). Thus this son could know what would be his but could not ethically (and perhaps legally) sell his assets; he does it anyway.

Many Palestinian Jews migrated, seeking fortune in less economically pressed areas. The younger son is presumably little older than eighteen (he was unmarried) and had an older brother. Moralists, both Jewish and *Gentile, considered squandering a father's hard-earned assets a terrible crime.

15:14. Famine was a common devastating feature of the ancient economy. (People often viewed famines as divine judgments, but because Jesus' story does not address the famine area as a whole, it does not apply this perspective to the story line.)

15:15. At this point, many of Jesus' hearers may be ready for the story to end (like a similar second-century Jewish story and a kind of moral lesson they might tell their children): the son gets what he deserves—he is reduced to the horrendous level of feeding the most unclean of animals. The son might well thus be cut off at this point from any nearby Jewish community and any financial charity it would otherwise offer him.

15:16. The "pods" here are the kind of carob pods fed raw to animals; people roasted and ate them, but subsisted on them only in time of famine. (Thus some Jewish teachers said Israel repented whenever they were driven to eating carob pods.) Given pigs' proverbially unclean eating habits, the thought of eating pigs' food would disgust Jesus' hearers. That the young man is jealous of pigs' fare also suggests that he is not receiving fair wages (cf. 15:17).

15:17. "Hired men" could be slaves rented for hire but are likelier free servants working for pay; either option suggests that his father is well-to-do.

15:18-19. Jewish people often used "heaven" as a respectful way of saying "God." The son here returns simply out of hunger and the belief that his father may feed him as a servant, not because he is genuinely sorry that he disgraced his father. Given the magnitude of his sin and the squandering of one-third of his father's life's earnings, stricter hearers might regard his return as an act of incredible presumption rather than humility.

15:20. It was a breach of an elderly Jewish man's dignity to run, though familial love could take priority over dignity after a long absence (cf. Tobit 11:9—mother and son). Given the normal garb, the father would have to pull up his skirt to run. Kissing was a conventional greeting for family members or intimate friends; normally it consisted of a light

kiss on the lips (easily distinguishable from lovers' passionate kisses).

15:21-22. The best robe in the house would belong to the father himself. The ring would probably be a family signet ring—hence would symbolize reinstatement to sonship in a well-to-do house. Slaves or impoverished workers often did not wear sandals, though (as here) they carried and tied a master's sandals. The father is saying, "No, I won't receive you back as a servant. I'll receive you only as a son."

15:23. The calf would be enough to feed the whole village; this would be a big party! Aristocratic families often invited the whole town to a banquet when a son attained adulthood (about thirteen years old) or a child married. If Jesus' audience envisioned any particular occasion here for which the calf had been fattened, it might be the elder son's impending wedding, or perhaps even the father's expectation of the younger son's return (though the text does not specify the particular occasion for which it was fattened).

15:24. Ancient writers sometimes bracketed off a section of their work by repeating a particular line; this bracketing off is called an *inclusio*. So far this parable has followed the course of the two that preceded it (15:3-10), but 15:24-32 are bracketed off to address the climactic issue: the elder brother represents Jesus' religious accusers (15:2).

15:25-28. Dancing was used in both religious and nonreligious celebrations. That the elder brother is apparently the only person in the village (cf. 15:23) uninformed about the party bursts the bounds of plausibility in the real world (where the elder brother should himself have taken the lead at reconciling father and younger son). This touch of unrealism is necessary to graphically underline the older brother's isolation from the community (cf. 15:1-2). Publicly refusing to enter in the midst of a party makes an intrafamily dispute public news, dampening the celebration and, worse yet, shaming his father just as the younger brother had, in a culture where honor and shame were essential values. This is also a grievous insult to the father's dignity and could have warranted discipline or being disinherited (cf. 15:12). Instead of punishing him, however, the father comes out and humbles himself, giving up his honor to seek reconciliation with his son (cf. 15:20).

15:29. Failing to greet one's father with a title (e.g., "Father", "Sir"; contrast even 15:12) was a grievous insult to the father's dignity. This son emphasizes his "service"—even though the father wanted a son rather than a servant (15:19-22). In this context (15:1-2), the elder brother is a transparent analogy for the Pharisees, and the younger brother for the sinners with whom Jesus was eating. A kid (baby goat) offered much less meat than a fattened calf (15:30).

15:30-32. Religious Judaism in this period considered prostitution sinful; both Jewish and non-Jewish sources considered squandering property, especially someone else's (16:1), sinful.

Although hearers might not consider all the details of the *narrative's logic, within the narrative logic the elder brother's response is even worse than modern readers might assume. Because the inheritance had been divided, the elder brother was already assured of his share, effective on the father's death (15:12); he had nothing to lose economically by his brother's return, at least not in terms of obligation. The final response of the elder brother is never stated, providing the Pharisees with the opportunity to repent if they are willing.

16:1-13
The Unfaithful Steward

16:1. Many well-to-do landowners had managers to oversee their estates; these managers, or stewards, could be slaves or, as here (16:3-4), free persons. Squandering another's possessions was considered a particularly despicable crime (cf. 15:13).

16:2-4. Although the master has dismissed this manager, the master gives him some time to get the accounts together before he leaves. The manager uses this time to procure favor for himself with others to whose houses he may join himself afterward. Ancients were very conscious of favors they owed; reciprocity was a matter of obligation. The manager uses the master's authority even though he can no longer legally exercise it.

Both digging and begging were considered undignified professions. Digging was usually performed by captive slaves or those who

knew no other skills, and was viewed as the most difficult form of labor.

16:5. These tenants may owe the landowner fixed amounts of their crops. They were not required to pay the sum until harvest. Each of these debtors is wealthier than average in his own right, hence could use a manager in the future.

16:6-7. The measure of olive oil (100 baths, about 850 gallons) represented the yield of nearly 150 olive trees and was worth about 1,000 denarii, no small sum. The measure of wheat (100 cors, about 1,000 bushels) represented the yield of about 100 acres and was worth about 2,500 denarii. The percentages of debt forgiven differ, but roughly the same amount of money is forgiven in each of the sample transactions (about 500 denarii). These renters are all relatively well-to-do in their own right, and thus might make use of a manager themselves in the future.

In hard times, masters would sometimes forgive part of the debt, writing it off as a loss, in return for being considered benevolent.

16:8. All these changes of notes required only small marks on the papers, made by the clients themselves (not incriminating the manager's own, no longer authorized, hand); and if the projected income thereby appears less, it will be harder to recognize that the master's profits affected by the manager's embezzlements are really diminished.

More important, the manager has gained public favor for himself and for the master as a generous benefactor; if the master punishes the manager now, it would appear to the public that he were doing so because of the manager's benevolent act. The criminal manager could be jailed, but he wisely stakes everything on his master's honor as a generous man. Ancient stories often portray powerful persons as appreciating and rewarding cunning, even if it had been used against them ("wisely"—KJV—can mean "shrewdly"—NIV, NASB, etc.; cf. Ex 1:10). Some stories (undoubtedly popular among slaves) portray slaves outwitting their masters; although this steward appears to be free (thus "begging" in 16:3), the story line may resemble one with which Jesus' hearers would be familiar. "Children of light" appears in the *Dead Sea Scrolls for God's special remnant, as opposed to the rest of the wicked world; here the "children of this age" echoes Jewish language for those who live for this age and lack hope for the world to come. There appears to be an implied "how much more" argument (a common ancient Jewish argument): if worldly people can think ahead regarding money, how much more should God's people do so?

16:9-13. The moral of the story appears to be: Use possessions to serve people, rather than accommodating it for yourself, because you are only God's managers of anything you have. "Mammon" (KJV) is an *Aramaic word for possessions or money.

16:14-18
The Radical Demands of the Law

16:14. Many *Pharisees may have belonged to the leisured class, but that description applied far more to the *Sadducees. Most Pharisees worked and praised the piety of giving. In this context, however, "lovers of money" refers to all who value money too much to give whatever of it they must to satisfy the human needs around them.

16:15. Jesus here cites a standard *Old Testament principle (1 Sam 16:7; Job 10:4), applicable especially to the practice of religion (Is 1:10-17; 58:1-14; Jer 6:13-14, 20; Hos 4:4-9, 19; 6:6; Amos 5:21-27).

16:16. Jewish people sometimes summarized the Bible as "the Law and the Prophets"; many of them believed that after the era of the prophets the prophetic voice had been muted until the messianic time. Thus John introduces the messianic era.

16:17. Later *rabbis told the story that when God changed Sarai's name to Sarah, the *yod* (the smallest letter of the Hebrew alphabet) that was removed complained to God for generations till he reinserted it in Joshua's name. Jewish teachers used such illustrations to make the point that the *law was sacred and one could not regard any part as too small to be worth keeping.

16:18. Jewish law permitted men the right of divorce for almost any reason, although many rabbis disapproved of divorcing on slight grounds. Jesus' statement, however, declares that divorce is invalid in God's sight, so that a subsequent marriage is adulterous. Here Jesus articulates a stronger view of the mar-

riage bond than anyone else we know of in antiquity, and his statement thus intensifies the law of Moses. Like most other statements of general principle in the ancient world (e.g., Prov 18:22 with Prov 11:22; 12:4; 21:9; or Prov 10:15; 13:8; 14:20 with 10:2, 11:4; or 14:24; 16:6 with 15:16; 16:8; 30:7-9; or 11:8; 12:13, 21 with principles such as 2 Tim 3:12), this one does not exclude exceptions (for the innocent party who had no say in the matter, cf. Mt 5:32; 19:9; 1 Cor 7:15). Jesus' language is probably *hyperbole (see comment on Mt 5:32; 19:9; Mk 10:9); Jesus' purpose is to protect an innocent party from being divorced, not to punish the party who has been so betrayed. His statement addresses especially the wife because in the traditional custom in Jewish Palestine (in contrast to Roman custom) only the husband had full rights to divorce.

16:19-31
The Rich Man and the Poor Man

This story resembles a rabbinic story of uncertain date, except that there the rich man did a good deed and made it into the world to come; here he allows starvation while he lives in luxury, and thus inherits hell. Some details about the afterlife here are standard features of Jewish tradition; a few are simply necessary to make the story line work (acceptable practice in the telling of *parables).

16:19. Purple was an especially expensive form of apparel (cf. comment on Acts 16:14); the lifestyle Jesus describes here is one of ostentatious luxury. Although this man may have become rich by immoral means such as oppressing the poor (as people often did), one cannot simply assume this; the only crime Jesus attributes to him is that he let Lazarus starve to death when he could have prevented it.

16:20. On occasion, Jewish parables (including the rabbinic one mentioned at the beginning of this section) named a character or two. In normal stories, one would expect the rich man rather than the poor man to be named. "Lazarus" is a variant form of Eleazar.

16:21. Some wealthy people displayed extravagant consumption, careless about what was spilled from their tables. The crumbs here may be regular crumbs or pieces of bread used to sop up the table. Had Lazarus gotten to eat them, these leftovers would still have been insufficient to sustain him. The dogs here appear to be the usual kind Palestinian Jews knew: scavengers, viewed as if they were rats or other unhealthy creatures (also in the *Old Testament, e.g., 1 Kings 14:11; 16:4; 21:24; 22:38). They were considered unclean, and their tongues would have stung his sores.

16:22-23. Jewish lore often speaks of the righteous being carried away by angels; Jesus spares his hearers the traditional corresponding image of the wicked being carried away by *demons. Every person, no matter how poor, was to receive a burial, and not to be buried was seen as terrible (e.g., 1 Kings 14:13). But Lazarus, having neither relatives nor charitable *patron, may not have received one (if we might infer from the contrasting statement about the rich man), whereas the rich man would have received great eulogies. True Israelites and especially martyrs were expected to share with Abraham in the world to come. The most honored seat in a banquet would be nearest the host, reclining in such a way that one's head was near his bosom.

The term "Hades" simply specifies the realm of the dead (like the Hebrew *sheol*), but the description of torment makes clear that the rich man is in hell. Greeks envisioned a neutral place of shadowy existence inhabited by most deceased people; a few particularly righteous went to a more blessed place, and a few particularly wicked were tormented in Tartarus. Jewish views were more likely to have a clearer divide, as here. Their views of the place of the wicked, *Gehenna, varied; the image of continuing torment here is among the harshest of views.

16:24-26. Jewish literature often portrayed hell as involving burning. The formerly rich man hopes for mercy because he is a descendant of Abraham (see comment on 3:8), but the judgment here is based on a future inversion of status. Jewish people expected an inversion of status, where the oppressed righteous (especially Israel) would be exalted above the oppressing wicked (especially the *Gentiles), and also believed that charitable persons would be greatly rewarded in the world to come. But this parable specifies only economic inversion, and its starkness would have been as offensive to most first-century hearers of means as it could be to many

middle-class Western Christians today if they heard it in its original force.

16:27-31. If those who claimed to believe the Bible failed to live accordingly, even a *resurrection (Jesus points ahead to his own) would not persuade them. Jewish literature also emphasized the moral responsibility of all people to obey whatever measure of light they already had. Ancient writers sometimes included foreshadowing, prefiguring later events; in verse 31 Jesus foreshadows future hostility despite his own resurrection.

17:1-4
Proper Relationships

17:1-2. Those who caused others to stumble ("to sin"—ESV, NLT) are as doomed as the rich man of the preceding parable; in contrast, *disciples should look out for one another's good. "Stumble" was often used metaphorically to refer to sinning or falling away from the true faith. Millstones, used to grind wheat and olives, were extremely heavy, and the term here refers to the heavier kind of millstone turned by a donkey for the community mill, rather than the lighter kind a woman would use for household grinding. Jewish people considered barbaric the Roman punishment of drowning someone in a bag or with a heavy weight; the image is thus all the more dreadful.

17:3-4. Private reproof, *repentance with restitution, and forgiveness were standard doctrines of Jewish piety. Jewish teachers did question the genuineness of repentance if one planned to sin again, but like Jewish legal experts exploring legal principles, Jesus offers here a theoretical case: if a person does genuinely repent repeatedly, you must forgive that person.

17:5-10
The Faith of Servants

17:5-6. Ancient Jewish writers sometimes observed that the roots of the black mulberry (this tree's usual identification) are spread out, which makes it a difficult tree to uproot. It is a strong tree that grows slowly but lives a long time. Mustard seeds were proverbially small.

17:7-10. Except during harvest, field work might end, and the afternoon meal begin, some time after 3 p.m. Most slaveholders had few slaves; thus the slaves did both fieldwork and food preparation. Masters regarded this work as their slaves' duty, not an option. Nor was it considered honorable for masters to eat with their slaves, and it was virtually never done; even a master eating at the same table with his *freedpersons (former slaves) was rare and noteworthy. The point of the illustration seems to be: Faith grows as one uses it as a servant; its end is service, and it is never an end in itself.

17:11-19
A Samaritan's Gratitude

17:11-12. Leprosy was an unattractive skin disease (not limited to what is called leprosy today) for which the Bible had prescribed quarantine from the rest of society (Lev 13:45-46), although the Bible did not go so far as many Jewish teachers in blaming the disease on the leper's sin. Lepers were thus outcasts from the rest of society.

17:13. The lepers approach Jesus with humility, which was the proper *Old Testament way to approach God or one of his representatives for prayer.

17:14. The Bible had prescribed particular sacrifices if someone's leprosy were cured (Lev 14:1-32). By complying with these regulations, Jesus does nothing to violate the *law or to offend the priests.

17:15-19. On their own terms *Samaritans were quite pious, but Jewish people considered them irreligious, and religious Jews avoided intimate dealings with them (lepers, alienated from both societies, might ignore this barrier). This tension supplies most of the punch of the story. That a Samaritan would travel with Jewish lepers in the area between Samaria and Galilee (v. 11) also illustrates the extremity of lepers' outcast status: it erases other social distinctions. Ironically, Elisha had healed an outsider leper (Naaman the Aramean, 2 Kings 5) but not the lepers of the city of Samaria (2 Kings 7:3; Lk 4:27).

17:20-37
The Nature of the Impending Kingdom

17:20-21. Jewish teachers debated whether the *kingdom would come at a predetermined time known only to God, or when Israel repented. Although Jewish people acknowledged that

God ruled in the present, most also longed for God's unchallenged rule, or kingdom, in the future. Jewish teachers disputed when the kingdom would come: either at a set time unknown to mortals, or whenever all Israel repented. By teaching that the kingdom as God's reign is somehow present, Jesus implies that something of the kingdom—such as the messianic king—is already among them.

17:22. Second-century *rabbis, probably using a wider idiom, sometimes spoke of a future messianic era called "the days of the Messiah." Some texts spoke of a period (sometimes forty years) when the *Messiah would lead Israel in war against its enemies before the final end; others (more often), that the Messiah would come to reign for a period after those enemies were subdued.

17:23-24. The ultimate coming of the kingdom would not be ushered in by just an earthly war (as some thought) or by earthly messianic figures claiming followings (as many expected), but by a cosmic revelation to all the earth. (Various Jewish texts adopted either scenario.) "In his [Jesus'] day," if original, may allude to the *Old Testament "day of the Lord," the final time when God would judge the earth and bring about eternal justice (cf., e.g., Is 13:6, 9; Ezek 30:3; Joel 1:15; 2:1, 11, 31).

17:25. Cf. the context of Daniel 7:13-14 (the future *Son of Man) for suffering preceding glory (in Dan 7:21-22, referring to the *saints).

17:26-27. Jewish literature often used Noah's generation as a typical image of evil. None of the activities Jesus mentions here is evil (though Jewish teachers regarded some as necessary responses to the evil impulse); but those otherwise preoccupied are taken by surprise, living life oblivious to impending judgment.

17:28-30. Many Jewish texts used Sodom (Gen 19) as a typical image of evil (cf. comment on Lk 10:12) and often linked it with Noah's generation (cf. comment on 17:26-27).

17:31. The flat rooftop was used for a variety of purposes. Because the stairs from the rooftop led down the outside wall of the house, not inside, one need not go inside when descending. This is an image of haste: of forgetting possessions, property and worldly concerns to get to the street and greet the returning king, or to flee impending doom.

17:32-33. When Lot's wife looked back to her destroyed home in Sodom, it cost her her life, which she should have valued more than her possessions (Gen 19:15-16, 26).

17:34. The Greek language used masculine pronouns if any members of the group were male; thus the "two" likely refers to husband and wife (NIV, against NASB "two men"). Here Jesus undoubtedly refers to one being taken to judgment (as in an analogous second-century story about Israelites and Egyptians in bed during the last plague).

17:35. Part of the Palestinian Jewish woman's work was grinding at a mill; she would often do this with another woman. These women could normally work together regardless of religious convictions. Provided that the unreligious woman was not violating Pharisaic rules, even the wife of a *Pharisee and the wife of a nontither (whom Pharisees despised) could grind together.

17:37. The *Son of Man's coming would bring judgment as on Noah's and Lot's generations (17:26-30), leaving his enemies as food for vultures (Ezek 32:4-6; 39:17-20), which Jewish people considered a horrible fate (Deut 28:26; 1 Sam 17:44; Ps 79:2). Some commentators have suggested (though the reference seems less likely here) that the "eagles" here refer instead to the Roman standards, which could be represented thus. In A.D. 70 the Romans offered sacrifice to these standards on the site of the temple after they had destroyed it. The image of devouring vultures was, however, widespread.

18:1-8
God the Faithful Judge

18:1-5. Under *Old Testament *law, judges were to fear God (i.e., consider that he will judge those who break his law and mistreat others) and therefore defend the oppressed. Many ancient societies had severe legal penalties for unjust judges, though the judges often got away with their corruption (taking bribes and the like).

In the law, the widow was the ultimate example of the oppressed person, because she had no means of support (e.g., Ex 22:22-24; Ps 146:9; Is 1:17, 23; Jer 7:6-7). She certainly could not afford a bribe; in Jesus' *parable here the widow's opponent may threaten something like taking her land in payment for a debt (cf.,

e.g., 2 Kings 4:1). Although normally only men spoke in lawcourts and women needed advocates to plead cases for them, when women were so audacious as to speak there they generally commanded attention and sympathy.

18:6-7. This parable is a standard Jewish "how much more" (*qal vahomer*) argument: if an unjust judge who cared not for widows can dispense justice, how much more will the righteous judge of all the earth, who was known as the defender of widows and orphans, do so? In the context, God would administer his justice especially when Jesus came to judge the earth (17:22-37). The principle is familiar from the Old Testament: God is faithful to act on behalf of and to vindicate his people, by his acts in the present and especially his final day of judgment.

18:8. Many Jewish writers predicted great sufferings in the end time, on account of which many people would fall away from the truth; Jesus warns his own to persevere (17:22-37; 21:8-19, 34-36; 22:31-32, 40, 46).

18:9-14
The Pharisee and the Tax Gatherer

18:9-10. *Pharisees were considered the most pious people in regular Palestinian Jewish society (*Essenes were less involved in society; many lived in the wilderness); *tax gatherers were considered the most despicable, often regarded as traitors to their people. Pharisees did not want tax gatherers admitted as witnesses or given honorary offices. To catch the impact of this *parable today a traditional Christian might think of these characters as the most active deacon or Sunday-school teacher versus a drug dealer, gay activist or crooked politician.

18:11. Jewish people considered it pious to thank God for one's righteousness, rather than taking credit for it oneself. The first hearers of this parable would not think of the Pharisee as boastful, but rather as grateful to God for his piety.

18:12. Many of the most pious fasted—without water, despite the health hazard—two full days a week (Mondays and Thursdays); some believe this was only during the dry season. (Considering this pattern of fasting hypocritical, some early Christians insisted on fasting on Wednesday and Friday instead!—*Didache* 8.1). Pharisees were meticulous about tithing to the full extent one could infer from the *law (several different tithes, together constituting more than twenty percent of one's income). When they were not certain that the food they purchased had been tithed on, they would tithe it just in case. (Tithes involved a portion of agrarian produce.)

18:13. Standing with eyes and hands lifted to heaven was a common posture of prayer in antiquity (as well as in some other cultures). Beating one's breast was a sign of great mourning or grief, in this case in *repentance for sin (which in Jewish custom was expressed by mourning). The tax gatherer's prayer for mercy involves no deliberate act of restitution, and hence many of Jesus' contemporaries would judge it invalid.

18:14. Jesus' conclusion to the parable would shock the original hearers (cf. comment on 18:11); it fails to shock many Christians today only because they are so accustomed to the parable. On the future inversion of present roles, cf. 14:11 and 16:25.

18:15-17
The Kingdom Is for Children

Children were people of no social status, and the *disciples would not want the important time of their rabbi taken up with blessing them. But Jesus says that the *kingdom belongs to those considered insignificant, those who do not approach it on the merits of their own status.

18:18-30
Sacrificing Wealth for the Kingdom

18:18. Some disciples asked their teachers questions like the one this ruler asks Jesus about *eternal life. To "inherit eternal life" meant to share in the life of the coming world, the life of the *kingdom of God.

18:19-20. Without denying that he himself is good, Jesus reminds the man of the standard Jewish conception of God's goodness (others could be good, but no one compared with God); he then lists select commandments from the *Old Testament.

18:21. If only God is good, the man will have to admit he has broken some commandment; but the commandments Jesus lists were kept by most well-raised Jewish people.

18:22-23. Judaism stressed charity heavily, but other Jewish teachers did not normally require a prospective disciple to divest himself entirely of funds. A few teachers, especially some radical Greek teachers (Antisthenes, Zeno and Diogenes), made such demands on rich students to see if they would value true teaching above their wealth. A rich person would occasionally give up his goods, but rich prospective disciples usually disappointed such radical teachers, failing the test of discipleship and returning to their wealth.

18:24. Jesus turns the social order upside down. Often the well-to-do were hailed for their generosity (they had more to give), and the poor, being less educated in the *law, were thought less pious (although poverty itself was not necessarily seen as a sign of impiety, especially by the poor themselves). Many also believed the poor and oppressed to be pious, but many further believed that the rich were wealthy by virtue of God's blessing.

18:25-27. Jesus' saying here reflects a Jewish figure of speech for doing something impossible (a large animal going through a needle's eye). The saying, a *hyperbole, uses the image of a literal needle (not a gate, as some have incorrectly thought).

18:28-30. Though not elite, most of Jesus' disciples whose professions we know (such as fishermen and, especially, tax gatherers) had not been poor (though the Gospels may be more interested in narrating the exceptional ones) but had abandoned their economic security to follow him. Their reward would be found in believers' sharing of possessions in this world (cf. Acts 2:44-45) and the life of the kingdom in the world to come.

18:31-34
Jesus' Impending Suffering

Standard Jewish messianic concepts did not accommodate a suffering *Messiah (most Jewish references to that idea are from the second century or later). Although Jesus saw this idea in the Scriptures (24:44-46), Jewish tradition's different way of reading the Bible (normally passages about suffering were not applied to the expected triumphant Messiah) makes it difficult for the disciples to fit their belief in Jesus as the Messiah with the plain words he speaks.

18:35-43
Healing a Blind Suppliant

18:35. Most blind and other disabled persons who could not engage in the traditional occupations of the day could secure their living only by begging, normally on a busy roadside. Jewish people considered helping them a righteous deed. Jericho was a prosperous town with a good climate and many wealthy priests living there. This blind man no doubt received ample support there, especially when pilgrims were passing by en route to the festival in Jerusalem.

18:36-38. That the blind man shouts "Son of David" means that he recognizes Jesus as the *Messiah. Jesus characterizes his insistent, obstinate (v. 39) plea for mercy as "faith" (v. 42).

18:39-42. Blind people were socially powerless, and Jesus' followers see his loud pleas as an intrusion, the way they had seen the children (18:15).

18:43. Other miracle stories in this period frequently ended with the response of the crowds, a response generally characterized—as one would expect after a miracle—by awe.

19:1-10
A Tax Gatherer's Repentance

19:1-2. Being a border city, Jericho had a customs station. Because it was also one of the wealthiest cities of Palestine, in the most fertile part of Judea and boasting a Herodian palace, the residence of many wealthy priestly families, other tax income would also be extensive. The "chief" *tax gatherer would be the one who contracted for sales and customs taxes and hired collectors under him. Given this role, Zacchaeus could have become rich without cheating; but it seems that he had cheated anyway (19:8).

19:3-4. For Zacchaeus to be "short" by ancient Mediterranean standards could mean that he was shorter than five feet tall. People often paid more attention to tall people (though Zaccheus by virtue of his office commanded attention). With its pleasant climate year-round, Jericho was especially noted for its palm trees but supported many other trees as well, including the well-known sycamore tree. The kind of "sycamore" tree described here is related to the fig tree and was easy to climb, with large limbs spreading from fairly low on

the tree; it is not the North American sycamore or European-Asian sycamore maple. *Old Testament Jericho had many tightly packed houses, but the prosperous city of the *New Testament period had spacious villas and parks, where one could more easily climb a tree than get on a rooftop.

19:5. No matter how high their status, people did not normally invite themselves to someone else's home. Pious Jews would also be loath to enter the home of a tax gatherer or to eat of his food (which Jesus' language also implies); because someone unreligious enough to collect taxes would not be careful about tithing his foodstuffs, *Pharisees would not trust what he offered. Jewish people normally considered the ability to call the name of someone one had never met—as Jesus does here with Zacchaeus—to be the sort of thing that only a prophet could do. Because the journey to Jerusalem from Jericho was about seventeen miles uphill (nearly a day's journey), Jesus may have preferred to let his *disciples rest in a place with sufficient accommodations before continuing their journey.

19:6-8. Zaccheus could not imprison someone on his own authority, but he could make false reports to produce that outcome; his office would thus have given him power to intimidate and secure his demands, if he wished to do so. Zacchaeus's promise to make restitution recognizes that his white-collar crime is just as serious as other kinds of theft (Ex 22:1-4). His restitution goes beyond the lenient Pharisaic interpretation of the *law, which required fourfold or fivefold restitution only for stolen oxen and sheep, only if he slaughtered or sold it, and only if a sufficient number of people witnessed the act. Moreover, Judaism traditionally thought of restitution to receive forgiveness, but here it responds to *grace instead of invites it. In ancient accounts of discipleship, a radical response with possessions was a certain sign of newly acquired devotion to the teacher.

19:9-10. Many Jewish people believed that salvation belonged to almost all Israelites by virtue of their descent from Abraham, except for those who excluded themselves by heinous crimes. In Ezekiel 34:6 and 11, God took over the mission of seeking out the lost sheep because the leaders of his people had failed (less directly relevant, cf. also Wisdom of Solomon 6:16).

19:11-27
Making Use of the Delay

19:11. New Testament Jericho is about seventeen miles from Jerusalem and about a mile south of the site of Old Testament Jericho.

If Jesus was the *Messiah, proclaiming the *kingdom and saying things like salvation was "today" (19:9), Jewish hearers would naturally expect the kingdom right away (17:20; Acts 1:6). The most common expectation of the kingdom would include the subjugation of Rome and other *Gentiles.

19:12. The image Jesus uses here would be familiar: both Herod the Great (40 B.C.) and his son Archelaus (4 B.C.) had to go to Rome to receive their "kingdom," i.e., the right to rule Judea.

19:13. Each of the slaves was given a mina, the equivalent of about one hundred days' wages, which they would probably entrust to the moneychangers. Because of exorbitant interest rates in the Greco-Roman world (on one unusual occasion a lender charged a desperate city roughly fifty percent interest) and because only a few people had significant capital, those doing business could quickly multiply their investments.

19:14. What this verse describes happened to Herod's son Archelaus, who was not at all popular with the people. An embassy of fifty representatives of the people went to Rome to oppose him. Similarly, his father Herod the Great had to fight till 37 B.C. before his kingdom (already officially granted him by the Romans) was securely under his control. Even under more direct Roman rule, complaints to Rome about actions of Roman officials could still cause them trouble, but only if Rome was persuaded.

19:15-19. It was not unusual for investors to make returns such as those these servants report; nor was it unusual for rulers to reward profitable servants who proved their administrative skills. Rome allowed its client kings to appoint their own local officials.

19:20. Not only was this servant's failure to invest the money contrary to the king's orders and common sense (19:13); he even failed to protect the money, as giving it to money-

changers, storing it in a temple treasury or even keeping it in a strongbox might have done. Wrapping money in a perishable handkerchief was considered one of the most irresponsible ways to take care of money and suggests that the servant was stupid or treasonous (cf. v. 14), or (most likely) both.

19:21. Objecting that the master "takes out what he does not supply" means that he took money that he had not deposited, perhaps misappropriating funds.

19:22-26. Knowing that the master liked to make money that he had not deposited, the slave should have understood that the master would certainly want good interest from a deposit. Judging one by one's own words (19:22) was considered appropriate (e.g., 1 Kings 20:40).

19:27. Eastern kings coming to power often disposed of enemies in this manner; Herod the Great had taken some ruthless measures to quell opposition and bring peace, and his son Archelaus likewise brutally retaliated against those who had opposed him.

19:28-40
The Royal Entrance

19:28-29. Messengers were normally sent two by two. When Jesus' group reaches the Mount of Olives, they are just outside Jerusalem.

19:30-34. Readers might interpret Jesus' (as king) borrowing the animal in terms of Romans or royal emissaries temporarily impressing (demanding the service of) an animal. The donkey's owners probably see it as part of the hospitality to visitors to the feast, or perhaps as the honor of helping a famous *rabbi on his way.

In antiquity the vast majority of people, including Christians, were poor; knowing that their Lord Jesus had to borrow his royal mount probably would have encouraged them.

19:35. Officials used donkeys for civil, not military, processions (1 Kings 1:38). Thus this text is not a triumphal entry in the sense of Roman triumphal processions; it is Jerusalem's reception of a meek and peaceful king. Jesus chooses to define his kingship in terms of Zechariah 9:9, not the commonly expected role of warrior *Messiah.

19:36-37. Festal pilgrims were often welcomed with shouts of joy, but 19:37-40 suggests that a greater recognition was taking place here.

19:38. With the addition of "the king," the first part of the people's cry is taken from Psalm 118:26. The Hallel, composed of Psalms 113–118, was sung regularly during Passover season and would be fresh on everyone's mind; later generations applied these psalms to the future redemption for which they hoped. Jesus will cite the psalm messianically in Luke 20:17.

19:39-40. "Stones" could mean any stones (3:8), but they may refer to the stones of the temple (see 19:44; 20:17).

19:41-44
Jerusalem's Doom

19:41-42. Like Jeremiah or another prophet weeping for his people (e.g., Jer 6:26; 8:18–9:3; Lam 1:1-4), Jesus cries out a lament over his people.

19:43. "The days will come" was a common phrase used by *Old Testament prophets (e.g., 1 Sam 2:31; 2 Kings 20:17; Jer 31:31). The Romans besieged and destroyed Jerusalem in the war of A.D. 66–70, roughly forty years after Jesus spoke these words.

19:44. Here Jesus uses standard prophetic *hyperbole; the city was destroyed in A.D. 70 but not completely leveled. Further leveling (including the filling of an entire valley) took place after the Bar Kochba revolt, which was finally suppressed in A.D. 135. The Old Testament spoke of God "visiting" (KJV, NASB, NRSV; cf. "coming to"—NIV) his people in acts of deliverance or judgment (e.g., Is 23:17); here the term refers to Jesus' mission.

19:45-48
Transforming the Temple

See the more extensive comment on Mark 11:15-19.

19:45. Sellers were needed in the temple so foreign Jews could buy sacrifices to offer there. Psalms, prophets and Jewish teachers in Jesus' day agreed that prayer and a pure heart counted for more than sacrifices but did not oppose sacrifices per se. Jesus presumably would oppose not sacrifices (cf. Acts 21:26) but an emphasis on ritual without the true relationship with God that he had demanded in his own teaching (cf. Lk 19:47). Even if he clears out the whole temple, however, the sellers will not stay out.

19:46. One text Jesus cites in part, Isaiah 56:7,

refers to the future restored temple when even pious *Gentiles would come to worship in the temple; but instead the temple has become like the "robbers' den" of Jeremiah 7:11. Jeremiah called it that because Israel thought the temple was a refuge from divine judgment despite the people's sins; injustice was taking place in the land, but the people did not expect judgment because of their ritual piety (Jer 7:1-15).

19:47. Other teachers also taught in the temple courts. The Jewish aristocracy who controlled the temple had vested interests in keeping down would-be *Messiahs (usually revolutionaries) and anyone who challenged the temple. Defiling the sacred inner courts of the temple was the one offense for which the Romans permitted the Jewish authorities to execute an automatic death penalty. Although Jesus' action in the outer court would not actually qualify as defiling the sacred precincts, it must have enraged the authorities and served as a direct challenge to their power there.

19:48. These leaders had official authority, but they lacked the measure of popularity with the common people in Jewish Palestine that the Pharisees and Jesus possessed.

20:1-8
On Whose Authority?

20:1-2. People lectured in temples, which were public places. Verbal challenges in public staked the honor of both challenger and challenged on the outcome. The powerful priestly aristocracy who ran the temple exercised their own authority over it; they would know that Jesus has not received the authority from themselves or from the Romans. They would not accept any other human authorization as legitimate, nor regard other humans as divinely authorized; they presumably believed that God had authorized them rather than someone else to be in charge of the religious aspects of the temple. They would regard Jesus as a serious troublemaker from Galilee, dangerous (yet to be handled gently) because he was a populist demagogue. Elites in antiquity complained about demagogues who swayed the masses instead of appealing to aristocratic sentiments like "honorable" people should.

20:3-4. Jesus' question about John the Baptist concerns the principle of agency: in Jewish *law, an authorized agent acted on behalf of the sender, backed by the sender's full authority. "Heaven" was a Jewish circumlocution for God.

20:5-8. The temple authorities, who had to please the Romans on the one hand and the populace on the other, were already accustomed to considering the political consequences of their statements.

20:9-18
Judgment on Evil Leaders

Jesus still addresses those who fancy themselves rulers of Israel, reminding them that they are merely custodians appointed by God over his vineyard (like the shepherds over God's flock of Jer 23 and Ezek 34).

Wealthy landowners controlled much of the rural Roman Empire, including many rural parts of Galilee; tenant farmers worked their land. Landowners had great status, whereas tenant farmers had little; tenants were therefore normally quite respectful to the owners.

20:9. Absentee landlords were common.

20:10. Payments were rendered at harvest time. Some contracts specified that the tenants would pay the landowner a percentage of the harvest; other contracts called for a fixed amount.

20:11-12. Landowners always had power, socially and legally, to enforce their will on the tenants; a few even reportedly had hit squads to deal with troublesome tenants. Here the tenants act as if they are the ones with power, and they exploit it mercilessly (as opposed to the ancient ideal of a *benevolent* *patron or landowner). This description fits the Jewish tradition that Israel martyred many of the prophets God sent to it.

20:13. The expression "beloved son" emphasizes the father's great affection for the son, increasing pathos if he were lost (cf. Gen 22:2). In the light of 3:22, the "beloved son" clearly represents Jesus. Ancient hearers of the *parable would regard the landowner as abnormal; naively benevolent, he counted on a kindness in his tenants that their behavior had already disproved. Rich or poor, all hearers at this point would agree that the landowner was in the right, and that he was benevolent—indeed, strikingly, foolishly benevolent.

20:14-15. The tenants presume too much about the inheritance; although they could have seized it under certain legal conditions, the owner could also stipulate—and after their misdeeds certainly would—that someone else inherit the vineyard; or representatives of the emperor could have seized it. If a dead body were left in a vineyard, it would render the harvested food impure if the food got wet (traditional Jewish interpretation of Lev 11:38).

20:16. Ancient hearers would wonder why the landowner had not come earlier and killed the tenants. The people's negative response is only because they know how Jesus is applying it—against their own leaders (v. 19).

20:17. Here Jesus cites Psalm 118:22-23, another text from the Hallel (the crowd referred to 118:25-26 in Lk 19:38). The building here is the temple (Ps 118:18-21, 25-27); as the cornerstone of a new temple, Jesus is a threat to the builders of the old one. (Herod used priests to construct the temple, but we need not press the analogy of "builders" so far.)

20:18. "Falling on" the cornerstone reflects Isaiah 8:14-15 (cf. 28:16); the stone falling on the offender reflects Daniel 2:34, 44, where God's *kingdom, portrayed as a rock, crushes its earthly challengers. Jesus here uses a standard Jewish practice of expounding one text (cf. Lk 20:17) by citing others sharing the same key word or concept, in this case, the divine stone.

20:19-26
Both Sides of the Coin

20:19-21. Here Jesus' opponents seek to force him to choose between revolution—which would get him in trouble with Rome—and accommodation to the Romans—which they suppose he opposes (because he opposed their leadership in the temple).

20:22. They pit the obligations of peace with Rome against the nationalistic, messianic fervor that they assume Jesus has generated; a disastrous tax revolt two decades earlier had shown where such fervor could lead. If he publicly takes the view characterized by those later called *Zealots (no king but God), he can be arrested; if he rejects that view (which he does), he may compromise his following (cf. 23:18-19).

20:23-26. Jewish Palestine circulated its own copper coins, which bore the name but not the image of the deified emperor. Nonetheless, foreign coins, which bore the emperor's image and mention of his divine status, were in common circulation in Palestine, where neither gold nor silver coins were permitted to be struck. Revolutionaries in A.D. 6 had violently protested the use of such coins and incurred terrible Roman retaliation.

20:27-40
God of the Living

20:27. In ancient Palestinian Judaism the *Sadducees were especially notorious for not believing in *resurrection, and *rabbis who considered themselves successors of the *Pharisees classified Sadducees as heretics for this view.

20:28. The Sadducees' question to Jesus concerns the law of levirate marriage, practiced in many cultures both in antiquity and today. It provides economic and social protection to widows in societies where women cannot earn wages. Students of Jewish *law were still expounding this *Old Testament principle (Deut 25:5) in Jesus' day and afterward.

20:29-32. The Sadducees borrow the story line from the Jewish book of Tobit, where the jealous *demon Asmodeus killed righteous Sarah's first seven husbands (though they were not brothers).

20:33. Later *rabbinic literature is full of examples of the "mocking question" posed by pagans, apostates or heretics like the Sadducees.

20:34-36. Jewish people widely agreed that angels did not procreate (they did not need to replenish their numbers, because they did not die, and also because, in some other traditions, God regularly created new angels), nor did they normally eat or drink.

20:37-38. Against their Sadducean opponents the Pharisees commonly tried to prove the resurrection from the law of Moses; Jesus here does the same. He argues (using Ex 3:6; cf. 3:15-16; 4:5) that God would not claim to be the God of those who no longer exist; indeed, his faithfulness to his covenant demands that if he is their God after death, death is not the final word for them. One of the most common Jewish prayers of the period recites God's faithfulness to Abraham, Isaac and Jacob as

a living reality for their own time (cf. also *4 Maccabees 7:19; 16:25).

20:39-40. Contemporary literature commonly reports hearers being overawed by a wise speaker's (usually the protagonist's) wisdom.

20:41-44
David's Lord

By definition, the Christ, or anointed one, was the royal descendant of David (Is 9:7; 11:1; Ps 2; 89; 132). But this view of *messiahship often lent itself to a revolutionary view of the *kingdom (see comment on 17:20-24) and was inadequate. The one who would reign in God's kingdom was David's "Lord" (Ps 110:1) not merely his descendant (cf. Ezek 34:24; 37:24); he would thus be greater than the resurrected David (cf. Is 9:6-7).

When Jewish teachers challenged their hearers to resolve apparent discrepancies in Scripture, they assumed that both texts were true (in this case, Jesus knows that he is both David's son and David's Lord) and were asking how to harmonize them. Jesus' opponents apparently have no answer, because other Jewish interpreters did not apply Psalm 110:1 to the Messiah (reacting against the Christian interpretation, some later Jewish interpreters even applied this text to Abraham).

20:45–21:4
The Powerful and the Weak

Some Jewish teachers were so concerned to prevent the exploitation of the poor that they criticized collectors of charity who asked for contributions from the poor. But then, as now, some individuals used their religion to exploit others.

20:45-46. Like their Greek counterparts, some Jewish teachers wore a special identifying garb, in this case a long, white linen robe, similar to those of priests and temple officials. People normally greeted teachers with titles of honor; marketplaces, which were full of people, would provide many opportunities for teachers to receive such recognition. Seating at banquets marked one's rank in society.

20:47. Widows had little means of support, were socially powerless and were to be protected under Jewish *law (see comment on 18:1-5). Jesus could mean that these teachers exploit widows' resources by seeking extensive tithes (which they could set at twenty to thirty percent, on top of the heavy land taxes levied by the government); or he could mean that they follow the letter of the law toward creditors in legal decisions, rather than showing mercy to the poor as the law also required.

These teachers may have lingered long in their individual prayers in the *synagogues; here Jesus criticizes not the length of prayers but the motive for this length. Like the *Old Testament prophets (e.g., Is 1:11-17; Amos 5:21-24), Jesus sees social injustice and religious hypocrisy as inextricably linked. Both examples here reveal selfish hearts.

21:1-4. A later tradition claims that thirteen receptacles for gifts to the temple treasury were in the Court of Women, accessible to Israelite women as well as to men. Because of the annual temple tax on all Jewish adult males, the temple now sported ostentatious wealth (such as a golden vine; *Josephus, *Jewish Antiquities* 15.394-95), and its officials would probably waste this widow's money; but this powerless woman, presumably ignorant of that likelihood, acts in good faith and is the greatest giver in God's sight.

21:5-7
Introduction to the Discourse on the Future

Jesus draws much of the language of this discourse from the *Old Testament.

21:5. The Jerusalem temple was one of the most splendid structures of all antiquity and seemed strong and invincible (cf., e.g., **Letter of Aristeas* 100-101); cf. comment on Mark 13:1.

21:6. Other groups also expected the temple to be judged, but most Jews, regardless of their other differences, found in the temple a symbol of their Jewish unity and would have been appalled to think that God would allow it to be destroyed (as in Jer 7:4-15). Some stones in the retaining structure were left on others (e.g., one wall still stands; not in the temple proper), but this fact does not weaken the force of the prophetic *hyperbole: the temple was almost entirely demolished in A.D. 70—roughly forty years after Jesus predicted it (Lk 21:32).

21:7. Old Testament prophets often grouped events together by their topic rather

than their chronological proximity, and Jesus in this discourse does the same. He addresses two separate questions: the time of the temple's destruction and the time of the end.

21:8-19
Imminent Sufferings

21:8. Various false messiahs and messianic-type leaders modeling themselves after Moses or Joshua arose in the first century; such figures drew significant Jewish followings in Palestine as late as Bar Kochba, whom Rabbi *Akiba hailed as the *Messiah after A.D. 130.

21:9-11. Ancient *prophecy teachers usually listed these sorts of events among the signs of the end; the end was often portrayed as preceded by great sufferings or a final war. (Jesus' list omits some other omens cited by his contemporaries, such as babies born with animal heads.) Jesus says that instead these events characterize normal life until the end.

21:12-15. Synagogues were the local places of public assembly and thus provided the natural place for hearings and public discipline. Sometimes discipline was administered in the form of flogging; under second-century rules, this meant thirteen harsh strokes on the breast and twenty-six on the back. Prisons were usually holding places until a trial rather than places of punishment; punishments included execution, enslavement, banishment, confiscation of property and so forth. "Kings" could refer just to Rome's vassal princes, but could also suggest that Parthian and other rulers from the East are also in view. People in the Roman Empire knew of other parts of the world as far apart as Iceland (probably), Tanzania, India and China; in the second century, some merchants from the Roman Empire traveled to what is now Vietnam. The proclamation and consequent persecution therefore may be widespread.

21:16. See Micah 7:5-7. In a culture with a heavy emphasis on family fidelity, betrayal by a family member would sound especially harsh (though such problems as court disputes over inheritances show that the ideal was not always achieved).

21:17-19. Here Jesus offers a promise of protection (cf. 1 Sam 14:45; 2 Sam 14:11). Because hundreds, probably thousands, of Christians had been publicly murdered under Nero in Rome in A.D. 64, probably less than two decades before Luke wrote, it is clear that this is hyperbolic, not an unqualified promise (9:23-24; 21:16). (With the majority of scholars I assume that Luke did not write before A.D. 64, although the case for this date is not conclusive.) This promise suggests either spiritual survival (12:4-5) or that God will often deliver physically, as in many cases in the *Old Testament (e.g., Dan 3:27).

21:20-24
The Fall of Jerusalem

21:20. Luke's language is less ambiguous than Mark's "abomination of desolation": the war with Rome began in A.D. 66, and soon Roman armies had marched through the rest of Palestine and surrounded Jerusalem, then laid siege to it until it fell in A.D. 70. Those who tried to flee shortly after Jerusalem was surrounded found that it was too late; some who escaped the Jewish revolutionaries inside Jerusalem were cut open by Syrian recruits outside, who were looking for jewels they might have swallowed.

21:21. The mountains of Judea were the safest place to evade invading armies, as the people in Judea had often learned (e.g., David and the second-century B.C. Maccabean guerrillas). When people in the countryside saw approaching armies, they often fled to the safety of city walls; but Rome would not break its siege, and those trapped within Jerusalem's walls would be doomed (v. 24).

21:22. The prophets often spoke of judgment against Jerusalem. God would come in a day of vengeance (e.g., Is 34:8; 61:2; 63:4; Jer 46:10; 51:6) or days of vengeance (Hos 9:7), and in some cases the prophets spoke of God's vengeance against his own unfaithful people (e.g., Jer 5:9, 29; 9:9). Although the prophets usually pointed especially to the Babylonian captivity (about six centuries before Jesus), their principle of judgment and their demand for *repentance before ultimate restoration was still applicable.

21:23. The difficulties of bearing or nursing a child under these circumstances are obvious in any culture. The text may also indicate grief over the loss of the children (cf. **2 Baruch* 10:13-15). The language of "great distress" echoes prophecies about tribulation that

would precede Israel's final repentance (Dan 12:1). The *Old Testament repeatedly describes God's judgments in history as "wrath" (e.g., on Jerusalem—Lam 1:12), as well as his future wrath in the day of the Lord (e.g., Zeph 1:14-15).

21:24. All the inhabitants of Jerusalem died in the war (by famine, disease, burning, Jewish factional fighting or fighting with the Romans) or were enslaved in the year 70. Jerusalem was left in ruins; after the second destruction in A.D. 135, Jerusalem was rebuilt as a pagan city, with a pagan temple on the site where God's temple had been. "Times of the *Gentiles" presumably refers to the period of Jerusalem's or the Jewish people's subjugation under other nations; many Jewish people envisioned a succession of four evil empires (cf. Daniel 7), Rome being the final one, before the *kingdom of God would come and deliver them from evil.

21:25-38
Be Prepared

The destruction of Jerusalem constitutes the final, universally visible earthly sign before Jesus' return; after this sign, Christ's followers should be ready for his imminent return.

21:25-26. *Josephus and writers dependent on him spoke of portents in the heavens preceding the fall of Jerusalem. These portents were meant to give the wicked cause to fear (Is 19:16; Jer 4:9). This is the language of the end (how most Jewish people in this period understood Is 13:10; 34:4; cf. 24:23; Ezek 32:7-8). Some ancient Jewish literature used this cataclysmic language for historical events (the **Sibylline Oracles* use it for an earthquake; cf. Ps 18:6-19; Jer 4:20-28), but most reserved it for the end or transformation of the present world order and the establishing of God's eternal *kingdom.

21:27. Jesus sometimes describes the *Son of Man's coming in terms Jewish literature usually reserved for God (cf. Is 19:1). Here Jesus clearly alludes to Daniel 7:13-14, where "one like a son of man" (i.e., like a human being) receives the kingdom from God.

21:28. Unlike others, believers need not fear these heavenly signs (Jer 10:2); they merely signal that "redemption" is near. Jewish teachers sometimes debated whether the Jewish people could hasten the kingdom or whether it would come only in a time dictated by God. During the revolts against Rome, Jewish patriots declared the arrival of their "redemption," or liberation from Rome; but Jesus teaches that this redemption will come solely from heaven's intervention.

21:29-31. The signs Jesus lists show that the end is imminent, just as a fig tree's leaves show what season it is. (In winter the fig tree appeared more bare than other trees.)

21:32. The length of a generation varied but was often represented in the *Old Testament by forty years (in the *Dead Sea Scrolls, forty years represents the suffering of the final generation). Jesus speaks these words near A.D. 30; the temple was destroyed in A.D. 70.

21:33. Sometimes God made promises that he noted would endure even if heaven and earth passed away (Jer 31:35-37); God's words would not pass away (*Pseudo-Philo's *Biblical Antiquities* 11:5). Jesus thus speaks as God here.

21:34-36. "Strength to escape" (v. 36) could refer back to the escape of verse 21 or to enduring the persecutions of verses 12-19; "standing before the Son of Man" may mean persevering or being presented triumphant before him. For this use of "snare" or "trap" as judgment imagery, cf. perhaps Is 8:14; 24:17-18; Jer 48:43-44; 50:24; Ezek 12:13; 17:20.

21:37. As sundown approached, about 6 p.m. in April, fewer and fewer people would be in the temple courts. Because thousands of pilgrims came to the Passover feast, many had to stay in surrounding villages at night. Although eating the Passover in Jerusalem, as was expected, Jesus lodged in Bethany (Mk 11:11-12), about three kilometers east of Jerusalem on the southeastern slopes of the Mount of Olives.

21:38. "Early in the morning" could mean as early as sunrise, which would be by 6 a.m. in Jerusalem in April.

22:1-13
Preparing the Passover

22:1. The Jewish Feast of Passover was technically followed immediately by the Feast of Unleavened Bread; but because pilgrims made one trip to Jerusalem to celebrate both of them, in popular parlance they had come to be described as a single entity (e.g., in *Josephus).

22:2-6. Jewish literature reports that the *high priests bullied those who opposed them;

against some popular misconceptions, the Gospels are no more anti-Jewish for their reports of high-level corruption and abuses than are the ancient *rabbis, *Dead Sea Scrolls and Josephus who report the same sort of behavior by the priestly aristocracy. (Indeed, many scholars today believe that Josephus even mentions the Jewish aristocrats alongside the Romans as involved in Jesus' execution; despite later Christian editing, much of *Jewish Antiquities* 18.63-64 is original.) The aristocratic priests who dominated Jerusalem's municipal elite would certainly not tolerate someone who claims that God has directed him to attack their temple cult. But they have to be cautious due to Jesus' popularity (22:2; cf. comment on 20:5-7).

22:7. See comment on 22:1.

22:8-9. Representatives from each family would have the priests slaughter a lamb for them in the temple, then return with it to feed the whole family that night after sundown.

22:10. Commentators note that water jars (as opposed to leather wineskins) were almost always carried by women; thus a man carrying one could be a noticeable sign. In well-to-do households (as apparently here), however, slaves would carry the water. Running water was a great luxury, and in many cities people would collect water at public fountains.

22:11-13. Anyone with a two-story home, the second of which contained a "large" upper room (not merely a small dwelling), would be considered well-to-do. This family presumably resided in the Upper City of Jerusalem, near the temple, rather than the poorer Lower City, downwind of Jerusalem's sewage. Because the Passover had to be eaten within Jerusalem's walls, most homes would be crowded with guests; but the accommodations for Jesus' last meal with his *disciples would be quite adequate.

22:14-23
Eating the Passover

Both the preparation for Passover and its eating are mixed with promises and foreshadowings of the betrayal, because the Passover here itself prefigures Jesus' death. Following the *Old Testament prophets, Judaism looked for a new exodus when God would again deliver his people from bondage, although contemporary Judaism was looking for a new Moses—not a new lamb.

22:14. The Passover was to be eaten at night. April's sundown in Jerusalem came by 6 p.m., so the meal should have started then. Table fellowship was intimate at the feast; one or two families normally shared the meal, but here Jesus and his closest disciples make up the family unit. Palestinian Jews in this period "sat" for most meals but "reclined" for feasts, like Passover.

22:15-16. Vows of abstinence (also 22:18) were common in Palestinian Judaism: "I will not eat any such and such until this happens," or "I vow that I will not use this until that happens." Jewish tradition often portrayed the time of the *kingdom as a banquet. It was customary to give thanks over the cup of wine at regular meals and also at Passover.

22:17-19. The head of the household customarily gave thanks for the bread and wine before any meal but said special blessings over bread and wine in the Passover meal. We should not understand "This is my body" literally, just as we do not take literally the standard Jewish interpretation spoken over the Passover bread: "This is the bread of affliction our ancestors ate when they came from Egypt." The thought instead is of a sort of memorial (as in Ex 12:14), but, as with the Passover, one in which one symbolically reenacted, hence participated in, the past act of redemption. Those who did not understand it in these terms would have imagined it as cannibalism, a custom that horrified most people in the Mediterranean world (cf. Jn 6:52); that misinterpretation later became a pagan accusation against Christians.

22:20. Covenants were ratified by the blood of sacrifice; "covenant in . . . blood" probably evokes Exodus 24:8, "the blood of the covenant." Here, however, a "new covenant" is in view (see also 1 Cor 11:25), echoing Jeremiah 31:31. God had also redeemed his people from Egypt by the blood of the Passover lamb. Passover ritual interpreted most elements of the meal and included blessings over the cup. But the ritual certainly did not interpret the cup as blood, because Jewish *law and custom were revolted by the idea of drinking any creature's blood, especially human blood.

22:21. Ancient Jewish readers would view

betrayal by one sharing a meal as particularly scandalous, because they saw hospitality and the sharing of table fellowship as an intimate bond, initiating a covenant of friendship, often lifelong.

22:22-23. Most people in ancient Judaism stressed both God's sovereignty and human free will, which they saw as complementary. (Modern views that see them as contradictory are based more on Greek logic than on Jewish thought or the Bible.)

22:24-30
Exaltation of the Servants

22:24-25. Jewish people were well familiar with the *Gentile model of authority: ancient Near Eastern kings had long claimed to be gods and had ruled tyrannically; Greek rulers had adopted the same posture through much of the eastern Mediterranean. Jewish people would view the Roman emperor and his provincial agents (who often showed little concern for Jewish sensitivities) in much the same light. Rulers and others who doled out favors from the vantage point of power were called "benefactors"; the practice of benefaction was widely praised in Greek circles, appearing pervasively in public inscriptions. Jesus' reminding the disciples that seeking power is a Gentile (i.e., pagan) practice is tantamount to telling them they should not be doing it.

22:26. In antiquity age often determined rank; the youngest had the least respect. Even a socially powerful slave remained subordinate to the master (applicable even to slaves who wielded more power than peasants and others who were socially inferior to their masters).

22:27. Slaves waited on masters at table. (Although servants are probably in view here, in households without servants the female members of the family prepared and served the food.) "Reclining" was the standard Greek posture for eating, which Palestinian Jews adopted at feasts.

22:28-30. Jewish literature often portrayed the *kingdom as a future time when Israel would partake of a banquet prepared for them (cf. already Is 25:6, for all peoples); a standard Jewish expectation for that time was that the lost tribes of Israel would be restored. Those who "judged" Israel in the *Old Testament ruled it.

22:31-38
Preparing for the Betrayal

22:31-32. Wheat would be sifted to separate the genuine wheat from other items that had gotten mixed in with it; for the image, see Amos 9:9. For winnowing away the chaff, see comment on Matthew 3:12. The background for *Satan's demand is presumably Job 1:6-12 and 2:1-6, where Satan tries to prosecute Job before the heavenly court (the Hebrew text has "the satan," literally "the adversary," i.e., the accuser).

22:33-34. Ancient sources typically regarded the rooster as a reliable reporter of the advent of dawn (attested by *Apuleius, *Metamorphoses* 2.26; *3 Maccabees 5:23; Babylonian Talmud *Berakhot* 60b). But commentators report that in Palestine nocturnal crowings are familiar to night watchmen beginning at 12:30 a.m.; the second was about 1:30 a.m.; roosters often crow during the night. In either case the point is that the denial is imminent.

22:35. See comment on 9:3.

22:36-38. By mentioning the "sword" here Jesus is not inviting revolution like the *Zealots and other revolutionaries did (cf. *Pseudo-Phocylides 32-34). Instead, Jesus calls for a temporary and symbolic act—two are sufficient (v. 38)—so he may be charged as a revolutionary and hence "reckoned among transgressors" in accordance with Isaiah 53:12. (On the messianic import of Is 53, see comment on Mt 12:15-18.) To be without one's outer cloak at night would leave one cold; yet Jesus suggests that it is better than being unprepared for the conflict these disciples are about to face.

22:39-46
The Prepared and the Unprepared

22:39. The walk from the upper room to the Mount of Olives took at least fifteen minutes.

22:40. They may have arrived at Gethsemane by 10 or 11 p.m. (which was normally considered late in the evening, because agriculture and business operated by daylight). Jewish people customarily stayed awake late on Passover night to speak of God's redemption. The *disciples should have been able to stay awake to keep watch; they had probably stayed up late on nearly every other Passover of their lives.

"Temptation" here means "testing"; given the common Jewish religious uses of the word, Jesus is saying: "lest you fall prey to the testing you are about to face."

22:41-42. On the "cup of judgment," see comment on Mark 10:39.

22:43-46. The disciples are to "stand watch" like porters (slaves in charge of the door) or sentries. Some ancient texts report the rare phenomenon of sweating blood; Luke's variant may intend this phenomenon (sometimes mentioned today in connection with extreme stress) or simply that Jesus' sweat is profuse and dripping the way blood would.

22:47-53
The Betrayal

22:47. Because they had been sent by prominent men of Jerusalem, the band that comes to arrest Jesus is probably the temple guard. This guard is known to have possessed the weapons mentioned here (swords and clubs); clubs were said (by later rabbis) to have characterized the corrupt priestly aristocracy, as well as being useful in controlling rioters.

22:48. A kiss was a sign of special affection among family members and close friends, or of a disciple's honor and affection for his teacher. Thus Judas's betrayal kiss is a special act of hypocrisy (cf. Prov 27:6).

22:49-50. Being well-to-do, *high priests had many servants. Although the servant mentioned here is probably not a Levite and is thus unable to minister in the temple anyway, some note that those who were missing appendages such as ears were barred from serving in the sanctuary. This attack on this servant would confirm the armed (22:47) expedition's suspicions that Jesus' followers are violent revolutionaries (22:36-38).

22:51. Many people associated leaders who were thought to be messiahs with popular revolt and the overthrow of the Gentile kingdoms that oppressed Israel; a *Messiah who would heal his attackers was not part of anyone's messianic picture at the time.

22:52-53. Subversives (e.g., the later assassins who slew Jewish aristocrats under cover of the crowds in the temple) did their acts secretly or in a way that would avoid capture; Jesus' alleged subversion was public and unconcealed. Here it is Jesus' enemies, not Jesus, who acts under the cloak of darkness. Night was commonly associated with evil and crime; in popular superstition (later found in rabbinic teaching as well), night was the time when the *demons ruled and witchcraft operated.

22:54-62
Peter's Denials

22:54. This trial breaks a number of Jewish legal rules, if later documents correctly indicate the state of Jewish *law in this period. Taking Jesus to the *high priest's home at night breached ancient legal protocol (Jewish and Roman).

22:55. Peter's trespassing on the high priest's property (even an outer court) required serious commitment from a Galilean fisherman. Household watchman and temple guards wait to learn the results of the trial inside. They may have planned to stay up late for Passover anyway, as was the custom.

22:56-58. Slaves in aristocratic households exercised more power and status than the average free person. Although the high priest had many servants, the slave girl would recognize that Peter and the guards are not from the household; further, Peter was not dressed like one of the guards. As a servant in an aristocratic priestly household near the temple, she may have been at the temple, where she could have gotten a good look at Jesus' disciples in the temple courts.

22:59. Galilean accents differed from Judean accents, certainly in *Aramaic and presumably (as undoubtedly here) in Greek; Galileans were especially noted for mispronouncing guttural sounds. The high priest's servants and temple guard lived in Jerusalem and would see themselves as Judeans. Regional accents were difficult to hide (cf. Judg 12:6).

22:60-62. For most people in the ancient Mediterranean, a rooster's crowing marked daybreak. Some scholars have suggested that this crowing refers to an earlier Palestinian rooster crowing between 12:30 and 2:30 a.m.

22:63-71
The Decree of the Sanhedrin

22:63-65. Jewish *law (as preserved in the more Pharisaic tradition of the later rabbis) permitted public flogging of a condemned person; it did not permit the treatment de-

scribed here—mocking and beating—certainly not before a person had been proved guilty in a trial. Jewish law meticulously guarded the rights of the accused and erred on the side of mercy in official decisions; thus the behavior described here would have revolted the *Pharisees and other pietists. Jesus' words could not even be construed as blasphemy by the strict definitions of later rabbis (possibly held by Pharisees in this period). Like most ancient elites, however, the priestly aristocracy would not feel bound to such rules.

22:66. By at least waiting till morning for an official hearing (as opposed to any informal interrogations that may have taken place earlier), those representatives of the Sanhedrin present maintained some semblance of legality in the proceedings; night trials were illegal and would not be respected even by honorable Roman governors.

"Leading priests," "elders" and "*scribes" were three groups represented on the Sanhedrin, the ruling religious court of Israel. In later tradition the full Sanhedrin had seventy-one members, normally assembled in a meeting hall in the temple called the Chamber of Hewn Stone, where they sat in a semicircle with the high priest in the center. The number may have been simply an average, and Josephus, writing in the first century, suggests that they met quite close to the temple, but not in it. In any case, although the body acted as a whole, not all its members concurred (23:51); writers would often make a general statement about a group without listing explicit exceptions (cf. Jer 26:16, 24).

22:67-68. If extant reports of ancient Jewish law are accurate, the high priest could not legally force Jesus to convict himself out of his own mouth. Nevertheless, he asks whether Jesus thinks of himself as a *messiah—hence, to the high priest's mind, as a revolutionary. A prophet could speak the truth while doubting that his hearers would accept it (Jer 38:15).

22:69. Jesus' response is a claim to be not a merely mortal messiah but the cosmic ruler of Daniel 7:13-14. "Power" was sometimes used as a Jewish title for God; Luke simplifies the phrase for his Greek readers as "power of God."

22:70-71. The religious authorities serve as their own witnesses that Jesus claims to be a subversive, a revolutionary (23:2). Although codified only later, the spirit of Jewish law resisted condemning a prisoner by his own admission, but Jesus' critics here treat Jesus' words not as admission of an offense, but as an offense itself. Although they might construe Jesus' words as "blasphemy" for purposes of the court, they also seemed to confirm suspicions about Jesus politically—the issue in which Pilate would be interested (23:2).

23:1-12
Accusations Before Pilate and Herod

23:1. The visit to *Pilate would be early in the morning, because Roman officials met the public only from sunrise to before noon.

23:2. "King Messiah" became a standard title of the *Messiah in later *rabbis; "Messiah" meant simply "anointed one," but in popular parlance it was most often used for the king from David's line who would be associated with the restoration of the *kingdom to Israel.

Despite 20:22-25, the leaders interpret Jesus' messianic claim the only way they know how: according to the category of prophetic revolutionaries. Such revolutionaries had become common in their day; some leaders among them appeared to be potential messianic figures, a pattern that would climax in Bar Kochba, the purported messianic warrior who would lead his people to a bloody defeat in A.D. 132–135. Such political messiahs threatened the religious authorities' power and security and were especially troublesome to Rome. In addition to genuine revolutionaries, a number of prophets gathered followings, expecting God to intervene for Israel; but Rome regarded even predictions of an emperor's demise as treason. All such popular movements threatened the aristocratic priests' base of power and the nation's stability.

23:3-4. Pilate apparently understands Jesus' claim in a religious or philosophic rather than a political sense and therefore does not feel that it comes under Roman civil jurisdiction. Further, Pilate's relationship with the priestly aristocracy is known to have been strained. On Luke's theme of Roman authorities exonerating Christians, see the discussion of Luke's legal purpose in the introduction to Acts.

23:5. A Galilean had led the tax revolt of A.D. 6; Judeans also tended to view Galileans

as inferior to themselves, although some of Galilee was urban and much of it was in touch with the larger Mediterranean culture, as Jerusalem was.

23:6-7. Herod Antipas would be in Jerusalem for the feast and was probably staying at the old Hasmonean (Maccabean) palace. Pilate had the authority to try Jesus if he had committed a crime in Pilate's area of jurisdiction; but sometimes the right of extradition was allowed, and Antipas might thus be free to try Jesus for a crime committed in Galilee. By refusing jurisdiction, Pilate could take the matter off his own hands.

23:8-10. This Herod was the one who had murdered John; cf. comment on Mark 6:14-29. Many people wanted to see signs; in some popular stories (notably a later one in *Apuleius), their curiosity got them in trouble with sorcerers. Of the four Gospels, only Luke reports two hearings before the governor separated by one before a Herod; Acts reports two trials of Paul before procurators with a trial before another Herod, Agrippa II. Ancient Greco-Roman historians liked to point out parallels between related figures in history.

23:11. The "bright" or "elegant" (NIV, NRSV) robe may be a white one, characteristic of Jewish kings. This apparel would be an appropriate mockery from Antipas's bodyguard.

23:12. Herod and Pilate had had plenty of opportunities to become alienated; for instance, Antipas had intervened in a matter concerning votive shields (reported in *Philo, *Embassy to Gaius* 299-300); on another occasion Pilate had pilfered the temple treasury for funds for an aqueduct; even the event of Luke 13:1 could have been the provocation. Giving the ambitious Herod Antipas a sign of influence in Jerusalem would certainly create a "friendship," which in upper classes often meant a political alliance.

23:13-25
Pilate and the Crowds

23:13-17. On the Lukan motif of Roman authorities exonerating Christians, see the introduction to Acts.

23:18-25. As a clearly violent revolutionary, Barabbas appeared to Pilate to be a greater danger than Jesus. Romans were known for their emphasis on justice, but Romans were also politicians concerned with crowd control: the emperor himself pacified the masses with shows in the arena and free grain, and public outcry had previously forced Pilate to withdraw the Roman standards from Jerusalem. For many Roman governors, efficiency in ruling provinces and keeping peace took precedence over individual justice; for instance, a Roman soldier who had burned a *law scroll was executed to pacify Jewish antagonism, not because the Romans cared about burning their religious book.

23:26-32
Road to the Cross

23:26. Condemned criminals normally bore their own crosses (i.e., the horizontal beam of the cross), but in this case someone else is drafted, perhaps due to the severe precrucifixion beating often administered, which the other Gospels report Jesus had received (cf. also Lk 18:33).

Cyrene was in what is now Libya in North Africa and included a large Jewish community; "Simon" is a Greek name often used by Jewish people (because it sounded like the patriarch Simeon). Devout Jewish pilgrims from throughout the Mediterranean world came to Jerusalem during Passover. Roman soldiers could impress anyone into service to carry things for them. Because it is a feast and work is forbidden, Simon is not coming from "the field" (literally) as a worker; perhaps he is late for the festival, only now arriving from Cyrene, or perhaps he has rejoined the day's festivities from where he is residing temporarily in the countryside.

23:27. Authorities used executions as public warnings, and crowds generally went to view an execution. Later rabbinic tradition claims that the pious women of Jerusalem often went to mourn the executed, providing a narcotic drink to dull the victim's pain. (Rulers sometimes forbade funerals and public mourning for condemned persons; but nationalistic Jews would sympathize with fellow Jews executed by the Romans for being revolutionaries.) In antiquity women usually expressed mourning more dramatically than men.

23:28. "Daughters of Jerusalem" designates Jerusalemite women (e.g., Song 1:5; 2:7; 3:5) but could also recall some judgment or-

acles (Is 3:16-17; 4:4). The admonition to "mourn for yourselves" was also a prophetic cry of judgment (Is 32:9-14; Joel 1:5).

23:29. Jesus' statement is the sort of lament mothers would offer when their children died (*2 *Baruch* 10:13-15). *Josephus reports that some mothers were reduced to eating their children during the famine in Rome's siege against Jerusalem, A.D. 66–70 (cf. Lev 26:29; Deut 28:53; 2 Kings 6:29).

23:30. The prophets had used the same image Jesus uses here as an image of awful judgment (cf. Hos 10:8; Is 2:10, 19-21). Jesus especially uses Hos 10:8, changing the wording only slightly.

23:31. Unlike a green one, a dry tree would easily catch fire. The point may be that Jesus is "green" wood, not really a revolutionary; how much greater would be the Roman judgment against the dry wood, the real revolutionaries? Or that if they murdered the innocent, how much more would they destroy themselves (Jewish leaders fought one another as well as the Romans in 66–70)? Or the saying may simply mean that Jerusalem is becoming more ripe for judgment. Jesus may also allude back to the trees and Jerusalem's fall in 21:24, 29-30, though this option seems less likely.

23:32. Authorities preferred to execute people on festivals, when the executions would warn the greatest number of people against rebellion. It was also less work for the soldiers if they could execute several convicts at once.

23:33-43
On the Cross

23:33. The site of the crucifixion might have been named "Place of the Skull" because so many deaths occurred there. The traditional "Calvary" (KJV) is from Latin *calvarius*, "skull."

23:34. Despite the precedent of *Old Testament prayers for vengeance (e.g., 2 Chron 24:22; Ps 137:7-9; Jer 15:15; 17:18; 18:23; 20:12), Jesus prays that God will forgive his persecutors. Those who were executed were supposed to say, "May my death *atone for all my sins"; but Jesus confesses instead the sin of those who falsely convicted him, who under Old Testament *law were liable for his penalty before God. Ancient biographers often paralleled different figures, and Luke parallels with Jesus the first martyr of his second volume, Stephen (Acts 7:60). Roman custom awarded the soldiers the victim's clothes. People in antiquity made many decisions by means of casting lots (see comment on Acts 1:26).

23:35. Ridicule was one of the sufferings inflicted on the naked man hanging on a cross. Ancient writers often liked irony; the double irony here is that Jesus does save others, and that the leaders utter lines like *Satan's (4:3, 6-7, 9).

23:36. One might view the soldiers' offer of "sour wine" or "wine vinegar" (NIV) as an act of mercy, because sour wine could act as a painkiller and was also often used as a remedy for thirst; but Luke declares that it is done only as part of their ridicule. That some is on hand is not surprising; soldiers and others used it because it quenched thirst better than water and was cheaper than normal wine.

23:37. The soldiers' taunt may include a touch of *Gentile cynicism toward Judaism, which was widespread despite (or partly because of) Roman conversions to Judaism.

23:38. The condemned person or a member of the execution squad sometimes carried the charge (Latin *titulus*) to the site of execution.

23:39-41. Jesus' interaction with his fellow victim is Luke's ultimate example of Jesus receiving sinners and outcasts, although Luke (unlike Mark) has called them "evildoers" or "criminals" (NIV) without specifying that they were revolutionaries.

23:42. A request to "remember" the supplicant could mean to look out for them once one was able (cf. Gen 40:14). To "enter his kingdom" was to begin to reign; at the cross, only clear-sighted faith could recognize that this dying rabbi Jesus would genuinely reign as *Messiah, true king of the Jews.

23:43. Jewish literature typically contrasted "paradise" (the "garden of Eden") with "*Gehenna," or hell. Although Jewish texts disputed the location of paradise (e.g., in the third heaven; or on the perimeters of the circle of the earth—like a Greek view of the Elysian Fields), they often mentioned it as the abode of the righteous after death or after the *resurrection. Thus both Jesus and this condemned man would proceed directly to the abode of the righteous after death.

23:44-49
Jesus' Death

23:44. "All the earth" (KJV) means simply "the whole land" (NIV, NRSV; "the whole country" GNT cf. Mt 9:26). The "sixth hour" would come shortly before noon, the "ninth hour" shortly before 3 p.m.; crucifixions rarely ended so quickly. The latter time, when Jesus dies, is close to the time of the evening offering in the temple. Darkness was one of the plagues in Egypt (Ex 10:22) and occurs in the prophets as a judgment for the end time (often due to clouds of rain, locusts, smoke, etc.; Is 13:10; Ezek 30:3, 18; 32:7-8; Joel 2:2, 10, 31; 3:15; Amos 5:18; Zech 14:6). An eclipse (cf. 23:45) was considered particularly ominous, especially when it occurred at length and in the middle of the day (the sun was said to be at its peak at midday); cf. Amos 8:9.

23:45. The "veil" (KJV, NASB) or "curtain" (NIV, GNT, NRSV) is probably the one between the holy of holies—inhabited only by God, and where no mortal could enter except the *high priest once each year—and the sanctuary where the priests ministered (Ex 26:33). Some believe that the point of the veil's rending is that God provides access for all people into his presence; others argue that it is more likely that it indicates instead the departure of God from the temple, as in Ezekiel 10–11.

23:46. This line from Psalm 31:5 is said to have often been recited at the period of the evening offering—about the time of Jesus' death.

23:47. Whereas Mark has "*Son of God," Luke emphasizes an implication of that claim: "innocent." Roman pronouncements of innocence were important to Luke's audience; see the introduction to Acts. Soldiers of the Roman army stationed in Palestine were auxiliaries mostly recruited from the eastern Mediterranean, especially from Syria. Although the centurion may be ethnically Syrian, however, for Luke's hearers he would represent Rome.

23:48. Beating breasts was a characteristic sign of mourning (cf. 18:13; Jer 31:19; Nah 2:7), like other mourning activities such as tearing one's hair and throwing dust on one's head). Jewish women bystanders would offer this as the only public mourning these criminals could get, because none was normally permitted after the disposal of their bodies.

23:49. Family and friends would usually be present at an execution; probably only the male *disciples would be in danger as potential revolutionaries. No one stood too close to the cross, because that could obstruct the view; most crosses were lower to the ground than many modern pictures depict. To Palestinian Jews, the fact that these women accompanied Jesus' group of disciples could have been scandalous.

23:50-56
Jesus' Burial

23:50-51. Luke, whose readers are not clashing with Palestinian Jewish leaders (as are Matthew's), is more apt to distinguish different elements within that leadership than is Matthew. In Jesus' day, Judaism was quite diverse, because no one group could lay claim to all the power; but after A.D. 70, when much of the competition had been eliminated by the destruction of the temple (the *Sadducees' power base) and the scattering of other groups, some other members of the Palestinian Jewish elite sought to consolidate their religious power.

23:52-53. Condemned criminals did not normally receive such honorable burials; but exceptions seem to have been made on the intercession of well-to-do family or friends, as the skeleton of a crucified man buried in another aristocratic Jewish tomb of this period testifies.

23:54-56. Because bodies decomposed rapidly, mourners were allowed to anoint, wash and wrap the body in its shrouds even on the sabbath. More elaborate arrangements that these loyal women *disciples wish to bestow on Jesus, however, might wait until the sabbath (sundown Friday evening to sundown Saturday evening) has passed.

24:1-12
The First Announcement

24:1. The sabbath ended at sundown Saturday evening; as soon as daylight breaks (by 6 a.m. at this time of year) these women head for the tomb. (In popular superstition, night was dangerous due to the predominance of *demons at that time, but the women probably do not travel at night because it would be too hard to find the tomb, which was outside the city walls on unfamiliar terrain.) Spices may not have

been used for everyone but were often used for the bodies of special persons (e.g., Herod). They reduced the immediate stench of rapid decomposition in the normally hot Mediterranean days. After one day and two nights, the women could expect that the body would already stink. But Jerusalem is over two thousand feet above sea level and is cool enough in April that in a sealed tomb the body would have still been approachable.

24:2-3. The stone was probably a large, disk-shaped stone rolled along a groove in front of the tomb. That it had been rolled back could have suggested tampering or a tomb robbery, although nothing valuable had been buried with the body. More likely, just outside Jerusalem, it could suggest seizure by the authorities.

24:4-5. Angels often appeared as human beings in the *Old Testament (Josh 5:13) and also often appeared in radiant garments or bodies (cf. 2 Kings 6:17; Dan 10:5-6). The latter was especially the case in contemporary Jewish texts (i.e., in the expectations of the people to whom this revelation is being given).

24:6-12. Part of the reason for the *apostles' unbelief is that a *resurrection of this nature contradicted their messianic expectations; another reason may have been that many men considered the witness of women nearly worthless, because they regarded women as unstable and undependable. (These opinions appear, e.g, in *Josephus, *Jewish Antiquities* 4.219 and Justinian, *Institutes* 2.10.6, as well as Mishnah *Yevamot* 15:1, 8-10; 16:7; *Ketubbot* 1:6-9; Tosefta *Yevamot* 14:10; *Sifra Vayyiqura Dibura Dehobah* pq. 7.45.1.1.)

24:13-35
The Emmaus Appearance

24:13. Sixty stadia was about seven miles. Apparently more than one place in Palestine was called Emmaus (1 Maccabees 3:57; 4:3; Josephus reports a different one). The exact site of Luke's Emmaus is no longer known.

24:14-17. Jewish travelers would not consider it unusual for a stranger, who is also a fellow Jew, to join their small company walking for some distance, especially if they assume him to be a Passover pilgrim on his way home. People normally conversed as they walked; later *rabbis favored discussion about the Torah. Jesus' feigning ignorance to ask a question does not mean that he does not know the answer (cf. Gen 3:9, 11; 4:9-10). On their lack of recognition, see comment on 24:31-35.

24:18. News spread quickly by word of mouth, and public executions at a feast would be widely discussed. No matter where a Greek-speaking pilgrim visiting Jerusalem for the feast was from, he or she would probably have heard something about these matters. (The description of Cleopas's surprise resembles, for example, astonished characters in ancient stories confronting people awakening from many years of sleep and unaware of recent events.) Unless he speaks with emotional *hyperbole, however (which is possible), Cleopas appears to suppose too much to presume that everyone would regard these events as the most obvious of the past several days.

24:19-21. Cleopas's words reflect the confusion all Jesus' followers must have felt: Jesus was a prophet, as in the *Old Testament, or maybe the *Messiah; but the religious leaders of the nation, who of all people should have embraced and followed him, had rejected him (like some prophets of old). In Galilee and outside Palestine, where the priestly aristocracy was not as directly known as in Judea, respect for the temple leadership no doubt ran higher.

24:22-24. See comment on 24:6-12.

24:25-27. If we may infer his subjects from the texts used elsewhere in Luke-Acts and in early Christianity, plus obviously messianic texts, Jesus surely includes references to Deuteronomy 18:15-18, Isaiah 9, 11 and 53; for suffering preceding exaltation, Isaiah 53:12 might be key. The implication, however, is that Jesus adduced principles applying to his messiahship from throughout the Old Testament. (Luke may supply samples of the intended references in some speeches in Acts; these could also include analogies with Old Testament savior figures, as in Acts 7, where some suffered before being exalted.) Later *rabbinic literature regularly praised interpreters with deep insight into Scripture, such as that Jesus demonstrates here.

24:28. It is polite for Jesus to make as if he would go on, unless they invite him to stay with them; such behavior could also test a person's hospitality (Gen 19:2).

24:29. Hospitality demanded no less than the lodging these *disciples offer Jesus, espe-

cially because it is approaching sundown; night travel, particularly as one got farther from Jerusalem, would be dangerous due to robbers, and it would be difficult to see. Jewish people throughout the ancient world welcomed fellow Jews who were traveling to spend the night, and insistence was part of hospitality (e.g., Judg 19:5-9; 1 Sam 28:23).

24:30. It was also part of hospitality to offer bread to a guest, no matter how late in the evening (see comment on 11:5-6). After the long walk, these disciples would be hungry anyway, and all three are travelers. But by breaking and giving bread to them, Jesus takes the role usually held by the head of the household, which he had exercised among his disciples.

24:31-35. Greeks told stories of supernatural beings who could change shape or disguise themselves or others. More relevantly, in Jewish sources angels were sometimes said to come in disguises and reveal themselves only at the end of their mission (e.g., Raphael to Tobit and Tobias in the book of Tobit). But this was not the case with humans, including dead persons restored to earthly life in the Old Testament. Although one reason these disciples do not recognize Jesus may be that their eyes have been blinded (24:31; cf. 2 Kings 6:17), Jesus' subsequent disappearance also seems to indicate that he has a new kind of body, the sort of body promised the righteous in the future resurrection.

24:36-43
The Nature of Jesus' Resurrection

24:36-38. Because the *resurrection of all the dead had not yet occurred, the disciples think Jesus might be a "ghost" or some other spirit. On the popular level, some people held a belief in ghosts (cf. Mk 6:49) without considering that it contradicted the idea of afterlife in paradise or hell (*Gehenna) and the doctrine of the bodily resurrection. But Jesus assures them that he is not an example of a ghost but of the bodily resurrection.

24:39-40. Some victims were tied onto crosses; others were nailed on. The nails would have been driven through the wrists (which could be called part of the hand). A nail through the ankles may not have been common (there does appear to be evidence from an excavated example), but there was nothing to have kept soldiers from doing it. Roman execution squads were left to their own ingenuity to devise various creative ways to torture their dying victims.

24:41-43. In most Jewish traditions, angels did not eat earthly food. Spirits had no need for food.

24:44-53
The Final Commission

24:44-46. See comment on 24:25-27. Although Scripture could be summarized by other divisions (e.g., the Law and the Prophets; 16:16), other Jewish writings mention the threefold division of the *Old Testament, as here. Jewish interpreters sometimes spoke of God "opening their eyes" to his truths, language with Old Testament precedent (Ps 119:18). Although the Gospels report Jesus' disagreement with his contemporaries on many issues, every stratum of Gospel tradition reports his appeal to the Old Testament to define his mission. Although he may have disagreed with many of his contemporaries on Old Testament interpretation, he agrees with them concerning its authority. Luke does not elaborate Jesus' teaching here, but probably alludes to what he believes was its content in some speeches in Acts (e.g., Acts 7:2-53; 13:16-47).

24:47-48. Isaiah spoke of Israel being witnesses to (or against) all the nations in the end time (43:10; 44:8), by means of the endowment of the *Spirit (42:1; 44:3). The Spirit (mentioned in the parallel passage in Acts 1:8) was especially associated with the ability to prophesy, to speak as God inspired a person to speak.

24:49. Jewish people sometimes spoke of being "clothed" with spiritual qualities (e.g., 1 Chron 12:18 [literally; Heb. and Gk. 12:19]; Sirach 17:3). Given the parallel with these verses in Acts 1:4-8, "power from on high" may echo Isaiah 32:15, where the Spirit is poured out "from on high."

24:50. Priests lifted their hands to give the priestly benediction over the people ("May the Lord bless you, and keep you . . ."—Num 6:24-27).

24:51. See comment on the ascension in Acts 1:9-11.

24:52-53. Many of the temple courts were used for prayer. Ancient writers often framed literary units by starting and ending on the same point; Luke frames his whole Gospel by starting and ending it in the temple.

John

Introduction

Authorship. For the purposes of interpretation, the specific author's name is less important than that the Gospel appeals to eyewitness testimony; there is wider agreement on the latter point than on the former. Early tradition is almost unanimous that "John" wrote the Fourth Gospel, although scholars debate which John. The Gospel itself claims to come from an eyewitness (19:35), whom the internal evidence suggests is the "beloved disciple," whose role most closely fits that of John, son of Zebedee, in the other Gospels. This perspective fits the respect that classicists often accord to external attestation, although it is a minority view among *New Testament scholars today. (One mediating solution has been the proposal that a Johannine "school" composed the Gospel using traditions that the beloved disciple had passed on to them; most famous teachers had *disciples to pass on their teachings in such settings.)

The two strongest objections to Johannine authorship of this Gospel today are its date and its differences from the other extant Gospels. The argument based on date objects that an original disciple of Jesus would have been in his eighties or nineties when the Gospel was written. This challenge is of limited weight, however; although most people did not live that long, mortality was highest in early childhood; typical disciples were in their teens; and we know of other ancient thinkers in their eighties with sharp memories and wit. That one of the Twelve (or another close disciple) should have survived into his nineties and would then be pressed to record his experience of Jesus is not implausible. The other objection, based on differences from Matthew, Mark and Luke, is more persuasive but would lose most of its force if John represents an independent tradition or witness to Jesus, writing in his own style and with his own interests (see the discussion of *genre). Flexibility in the ways ancient biographies were written allow John to pursue a distinctly different approach from Mark and those that followed him.

Although pseudonymous works existed in antiquity, they stated their purported author rather than implied him; unless we want to argue for the author's *implicit* pseudonymity (implying that he was one of Jesus' disciples), the internal evidence

supporting an eyewitness author should be allowed to stand. For this reason, the Fourth Gospel's claim to authorship by an eyewitness is significant. We would accept this claim in most other ancient biographies or histories.

Date. Tradition holds that the Gospel was written in the 90s of the first century; that it could not have been written much later than this date (against some nineteenth-century scholars' views) has been confirmed by a manuscript fragment of the Gospel dating to the early second century. A date in the 60s has also been proposed, but most scholars hold to the mid-90s, which best fits the setting described below and the probable setting of the book of Revelation, which stems from the same Christian circles as the Fourth Gospel.

Where John Was Written. Because John focuses (even more than Matthew) on the *Pharisees as opponents, it is plausible that his Gospel is written in Galilee or Syria, where conflicts with the Judean Pharisees would be most easily felt in the 90s of the first century.

Tradition strongly holds, however, that John lived in Ephesus in Asia Minor, although he had originally come from Palestine and probably maintained awareness of issues in Palestine through contacts there. In this case the material may have taken shape in retellings in Palestine before massive numbers of Palestinian Jews settled elsewhere (including Asia Minor) in the wake of the war of 66–73. Two of the seven *churches in the book of Revelation grapple with precisely the issues that his Gospel addresses: Smyrna (Rev 2:9-10) and Philadelphia (3:7-9). Smyrna became a center of Johannine tradition in the next generation and faced the sort of situation most scholars find in this Gospel.

Setting. Archaeological discoveries have demonstrated the appropriateness of the Fourth Gospel's traditions to a Palestinian Jewish milieu—that is, the place where both Jesus and the beloved disciple had lived. The Gospel applies these traditions to a new situation. The temple's destruction in A.D. 70 and the scattering of many Judeans afterward fit the emphasis on the new temple in John.

John also expresses concern for conflict with *synagogues (16:2; cf. 9:22; 12:42). After A.D. 70, the strength of many Jewish religious groups in Palestine was broken; the Pharisees began to take more leadership in religious matters. Jewish Christians may have provided their main competition, and many scholars argue that Judean leaders even added a line to a standard prayer that cursed sectarians, among whom they included the Jewish Christians. (Scholars are not, however, unanimous regarding the precise date and object of the curse.) John's specialized concern with the Pharisees in his Gospel (other groups are mostly limited to his passion narrative) may suggest that their opposition is somehow related to the opponents his readers face in their own communities.

After the war of A.D. 70, many Jews in the Roman Empire wanted to distance themselves from sects emphasizing messiahs, the *kingdom and *prophecy. Some

believers were made unwelcome by local synagogue authorities, treated as if their very Jewishness was held in question because they believed in Jesus as *Messiah and kingdom-bringer (cf. perhaps another response in Rev 2:9; 3:9, also addressing western Asia Minor). The Roman authorities were also suspicious of people who did not worship the emperor but were not Jewish (see the discussion of setting in the introduction to Revelation). John writes his Gospel to encourage these Jewish Christians that their faith in Jesus is genuinely Jewish and that it is their opponents who have misrepresented biblical Judaism.

Genre. For the *genre of Gospels in general, see the introduction to the Gospels. Although all four Gospels fall into the general ancient category of biography, that genre was broad enough to allow considerable differences of style. For instance, Luke writes like an ancient Greek historian; Matthew's heavy use of the *Old Testament shows his interest in interpreting such history. But John seems to be the most interpretive of all, as has been recognized since the early church fathers.

Jesus' discourses in this Gospel also require special comment. The style of Jesus' speaking in John differs from his words in the first three Gospels; it may be helpful to observe that ancient writers were trained to practice paraphrasing speeches in their own words. Some scholars have also argued that John applies Jesus' words to his readers' situation under the *Spirit's guidance; Jewish teachers and (more thoroughly) storytellers often developed different kinds of Old Testament *narratives by describing them in terms most relevant to their audience. Most of Jesus' discourses in John 3–12 are conflicts with the Jewish authorities and could bear some resemblances to the briefer rabbinic accounts of arguments with opponents. Others compare John's lengthy speeches to the interpretive speeches often found in ancient historiography. In any case, John remains a Gospel—an ancient biography of Jesus.

Message. One emphasis in the Fourth Gospel concerns God's *law and word. The Pharisees claimed that God's law supported their positions; but John emphasizes that Jesus himself is the Word (1:1-18) and the appointed messenger of the Father, and that to reject him is thus to reject the Father.

Another area of emphasis is the Spirit. The Pharisees did not believe that the Spirit, which they associated especially with the ability to prophesy, was active in biblical ways in their own day; thus they did not claim to have the Spirit. In contrast, John encourages the believers to argue not only from the law but also from their possession of the Spirit. The Pharisees claimed to know the law through their interpretations and traditions; the Christians claimed to know God personally and therefore claimed to understand the law's point better than their opponents did.

One recurrent set of characters in the Gospel, identified with these opponents of Jesus, is "the Jews." Although Jesus and the disciples are clearly Jewish, John usually uses the term "Jews" in a negative sense for the Judean authorities in Jerusalem, whom he sometimes identifies (perhaps to update for the language of his

own day) with "the Pharisees." Anti-Semites have sometimes abused the Gospel of John to deny Jesus' Jewishness, ignoring the situation in which John writes. But John often uses irony (a common ancient literary technique), and by calling the Judean authorities "Jews" he may ironically answer these authorities who say that the Jewish Christians were no longer faithful to Israel. He concedes the title to them, but everything else in his Gospel is meant to argue just the opposite: that the genuine heirs of Israel's ancestral faith are the Jewish Christians, even though they have been expelled from their Jewish communities.

John uses many images common in his culture, especially contrasts between light and darkness (common in the *Dead Sea Scrolls), above and below (common in Jewish *apocalyptic literature), and so on.

Commentaries. For background, some of the most useful commentaries are the multivolume commentaries by Raymond Brown, *The Gospel According to John,* 2 vols., AB 29 and 29A (Garden City, NY: Doubleday, 1966–1970); Craig S. Keener, *The Gospel of John: A Commentary*, 2 vols. (Grand Rapids: Baker Academic, 2003); and Rudolf Schnackenburg, *The Gospel According to St. John,* 3 vols. (New York: Herder & Herder/Seabury/Crossroad, 1968–1982); and the single-volume commentary on the Greek text by C. K. Barrett, *The Gospel According to St. John,* 2nd ed. (Philadelphia: Westminster, 1978). On a less technical level, useful works for background include, among others, Charles H. Talbert, *Reading John: A Literary and Theological Commentary on the Fourth Gospel and the Johannine Epistles* (New York: Crossroad, 1992); Jo-Ann A. Brant, *John*, Paideia (Grand Rapids: Baker Academic, 2011); Jey J. Kanagaraj, *John,* NCC (Eugene, OR: Cascade, 2013); on a mediating but still one-volume level, see George R. Beasley-Murray, *John,* 2nd ed., WBC (Nashville: Nelson, 1999); Andreas J. Köstenberger, *John,* BECNT (Grand Rapids: Baker, 2004). Helpful specialized studies abound, e.g., Paul N. Anderson, *The Fourth Gospel and the Quest for Jesus: Modern Foundations Reconsidered,* LNTS 321 (New York: T & T Clark, 2006); Craig R. Koester, *Symbolism in the Fourth Gospel: Meaning, Mystery, Community* (Minneapolis: Fortress, 1995); John Christopher Thomas, *Footwashing in John 13 and the Johannine Community,* JSNTSup 61 (Sheffield: JSOT Press, Sheffield Academic Press, 1991).

1:1-18
The Word Becomes Flesh

The Greek term translated "word" was also used by many philosophers to mean "reason," the force that structured the universe; *Philo combined this image with Jewish conceptions of the "word." Although Greek conceptions undoubtedly did have some influence on how John's hearers understood his phrase, they were not philosophically trained. (Statistically it is likely that most could not even read.) The most relevant background is background that all of them shared, at the very least from what they heard read in *synagogues or *churches each week: God's "Word" was Scripture. The personification of this "Word" makes sense. The *Old Testament had personified Wisdom (Prov 8), and ancient Judaism eventually identified personified Wisdom, the Word and the Law (the Torah), sometimes identifying them with each other (e.g., Sirach 24:1, 23; Baruch 3:28–4:1).

By calling Jesus "the Word," John calls him the embodiment of all God's revelation in the Scriptures and thus encourages his Jewish Christian hearers, marginalized from some of their synagogues, that only those who accept Jesus truly honor the law fully (1:17). Jewish people considered Wisdom/Word divine yet distinct from God the Father, so it was the closest available term John had to describe Jesus; to communicate, we normally take the best available language and then adjust it as needed (e.g., the Greek and English words for "God" were applied to other deities before being applied to the true God).

1:1-2. Beginning like Genesis 1:1, John alludes to the Old Testament and Jewish picture of God creating through his preexistent wisdom or word. According to standard Jewish doctrine in his day, this wisdom existed before the rest of creation but was itself created. By declaring that the Word "was" in the beginning and especially by calling the Word "God" (v. 1; also the most likely reading of 1:18), John goes beyond the common Jewish conception to imply that Jesus is not created (cf. Is 43:10-11).

1:3. Developing Old Testament ideas (e.g., Ps 33:6; Prov 8:30), Jewish teachers emphasized that God had created all things through his Wisdom/Word/Law and sustained them because the righteous practiced the law. (Some even pointed out that Gen 1 declared "And God said" ten times when he was creating, and this meant that God created all things with his Ten Commandments.) Ancient Jewish teachers would have agreed with verse 3. Influenced by Platonic thought, *Philo also believed that God created the world through his *logos* ("word"), which he viewed as a sort of pattern in God's mind; but the background for creation through God's word is already present in the Old Testament.

1:4. Developing Old Testament promises of long life in the land if Israel obeyed God (e.g., Ex 20:12; Deut 5:16; 8:1; 11:9), Jewish teachers emphasized that the reward for obeying God's word was *eternal life. John declares that this life had always been available through God's word, which is the same word that he identifies (in 1:14) with Jesus. Jewish teachers called many things "light" (e.g., the righteous, the patriarchs, Israel, God), but this title was most commonly applied to God's law (a figure also in the Old Testament, e.g., Ps 119:105).

1:5. That darkness did not "apprehend" the light may be a play on words (it could mean "understand" or "overcome" [NRSV]). Similarly, in the *Dead Sea Scrolls, the forces of light and darkness were engaged in mortal combat, but light was predestined to triumph.

1:6-8. "Witness" was traditionally a legal concept in the Greco-Roman world and in Jewish circles. Isaiah used it in relation to the end time, when the people God delivered would testify to the nations about him before his tribunal (43:10; 44:8). This image recurs throughout this Gospel; although people in this period used the term widely enough that it did not always retain legal connotations, many scholars envision a legal metaphor in this Gospel (in view of expulsions from the synagogue in 9:22; 12:42; 16:2; cf. comment on 14:16; 16:8). On John the Baptist himself, see 1:15.

1:9-10. Jewish people expected that the *Gentiles were unenlightened. A later Jewish tradition even declared that God had offered the law to all seventy nations at Mount Sinai but lamented that they had all chosen to reject his word; only Israel had accepted it. In the same way, the world of John's day has failed to recognize God's Word among them.

1:11. Here John breaks with the image in Jewish tradition, according to which Israel alone of all nations had received the law. Jewish people expected that the faithful of Israel would likewise accept the revelation when God gave forth the law again in the end time (Is 2:3; Jer 31:31-34). (In most Jewish tradition, the law would, if changed at all, be more stringent in the world to come.) They realized, of course, that in many generations even Israel disobeyed God.

1:12-13. The emphasis is thus not on ethnic descent (v. 11) but on spiritual rebirth; see comment on 3:3, 5 for details on how ancient Judaism might hear the language of rebirth. Jewish tradition applied the title "children of God" to Israel (cf. Ex 4:22; Deut 32:19-20).

1:14. Neither Greek philosophers nor Jewish teachers could conceive of the Word becoming flesh. Since the time of *Plato, Greek philosophers had emphasized that the ideal was what was invisible and eternal; most Jews so heavily emphasized that a human being could not become a god that they never considered that God might become human.

That John had in mind one particular passage, which addresses God giving the law to Israel, is confirmed by the accumulation of multiple allusions. When God revealed his glory to Moses in Exodus 33–34, he revealed not just dramatic splendor but his *character* (Ex 33:19). Particularly relevant here, his glory was "abounding in covenant love and covenant faithfulness" (Ex 34:6), which could also be translated "full of *grace and truth." Like Moses of old (see 2 Cor 3:6-18), the *disciples saw God's glory, now revealed in Jesus. As the Gospel unfolds, Jesus' glory is revealed in his signs (e.g., Jn 2:11) but especially in the cross, his ultimate act of love and the ultimate expression of God's heart for people (12:23-33). The Jewish people were expecting God to reveal his glory in something like a cosmic spectacle of fireworks; but for the first coming, Jesus reveals the same side of God's character that was emphasized to Moses: his covenant love.

"Dwelt" (KJV, NASB) here is literally "tabernacled," which means that as God tabernacled with his people in the wilderness, so had the Word tabernacled among his people in Jesus. In Jewish literature Wisdom also appeared on earth and "lived among" people (Baruch 3:37-38), although there was no thought of Wisdom becoming human.

1:15. Scholars have suggested that some people may have thought too highly of John the Baptist, a mere prophet, at the expense of Jesus the *Messiah (cf. Acts 19:3-5); such a situation would invite the writer to put John in his place. Others see John as merely the prototypical witness here, modeling the Gospel's larger theme. In any case, in the Fourth Gospel, John always defers to Jesus, as a proper prophet should.

1:16-17. Grace and truth were clearly present in the law (Ex 34:6), but Moses could not witness their fulness because he could see only part of God's glory (Ex 33:20-23). Their ultimate expression would come in the Word/law enfleshed.

1:18. Even Moses could see only part of God's glory (Ex 33:20), but in the person of

Table 3. Parallels Between Exodus 33–34 and John 1:14-18

Exodus 33–34	John 1:14-18
The revelation of God's word, the Torah	The revelation of God's Word, Jesus
God dwelt among his people in the tabernacle (33:10); Moses pleaded that God would continue to dwell with them (33:14-16)	The Word "tabernacled" (literally, in 1:14) among people
Moses beheld God's glory	The disciples beheld Jesus' glory (1:14)
The glory was full of grace and truth (34:6)	The glory was full of grace and truth (1:14)
The law was given through Moses	The law was given through Moses (1:17)
No one could see all of God's glory (33:20)	No one could see all of God's glory (1:18a), but it is fully revealed in Jesus (1:18b)

Jesus God's whole heart is fleshed out for the world to see. "In the Father's bosom" (KJV, NASB; cf. "side"—ESV) means that Jesus was in the position of greatest possible intimacy (cf. Jn 13:23; cf. "in closest relationship with the Father," NIV; "near to the Father's heart," NLT). Jewish people often viewed personified Wisdom as the image of God (Wisdom of Solomon 7:26), so that seeing Wisdom was seeing God (see Jn 14:9). Ancient writers often framed a *narrative by beginning and ending it with the same phrase or statement; this framing device is called *inclusio*. In John 1:1 and (according to the most likely reading of the text) 1:18, John calls Jesus "God."

1:19-28
John's Witness to the Jewish Leaders

1:19. Although a few priests were *Pharisees in Jesus' day, there was generally little cooperation between them, and the Pharisees (1:24) certainly had never had power to send priests on missions from Jerusalem. A minority belonged to the ruling aristocracy, but a larger number of the members of the ruling elite were *Sadducees. By the time John writes, however, the Pharisees probably represent Palestinian Christians' main opposition. It was within the tradition of Jewish writing John follows to update the language, the way preachers often do today to bring home the point of the text. John thus focuses on the Pharisaic element of Jesus' opposition.

1:20-21. Elijah had been caught up to heaven alive, and Jewish people anticipated his return, which was predicted in Malachi 4:5. (The later *rabbis thought of him as a master of Jewish *law who would sometimes show up to settle rabbinic disputes or be sent on angelic errands to deliver rabbis in trouble. They expected him to settle legal issues when he returned; others expected him to perform great miracles or to introduce the Messiah.) "The Prophet" undoubtedly means the promised prophet like Moses (Deut 18:15-18).

1:22-23. Applying Isaiah 40:3 to himself means that he is the herald of a new exodus, announcing that God is about to redeem his people from captivity, as he had in the days of Moses. This theme appears in many of the *Old Testament prophets and was part of Jewish expectation in Jesus' day. Indeed, would-be prophetic leaders usually gained followings in the "wilderness." *Qumran sectarians, who (according to the most common view) lived in the wilderness, applied the verse to their own mission.

1:24-25. Of the many kinds of ceremonial washings in Jesus' day, the most significant once-for-all kind of washing was *proselyte *baptism. *Gentiles were usually baptized when they converted to Judaism; this was widely known and is even mentioned by the Greek philosopher *Epictetus. By reporting that John asks Jews to be baptized in an act of conversion, the Gospel writers suggest that John treats Jews as if they are pagans, which was unheard-of (see comment on 3:3-5). The Fourth Gospel often contrasts water rituals and the *Spirit (3:5; see comment on 4:7-26).

1:26. John probably employs the common ancient technique of irony: that they do not "know" the coming one speaks ill of them spiritually (1:10, 33-34).

1:27. Slaves carried their master's sandals (the one servile activity that was too demeaning for rabbis' *disciples to duplicate); John claims that he is not worthy to be even Christ's slave. Prophets were often called God's servants in the Old Testament (e.g., 2 Kings 18:12; 19:34; 20:6; 24:2; Jer 35:15; 44:4).

1:28. "Beyond the Jordan" means Perea, one of the territories controlled by Herod Antipas. Because *Josephus tells us that John was later imprisoned in the fortress Machaerus in the same region (Josephus, *Jewish Antiquities* 18.116-119), it makes sense that this is where he ministers and is later arrested.

1:29-34
John's Witness to His Disciples

1:29. John's saying probably alludes to the Passover lamb (19:36), likely with the *Old Testament image of sacrificial lambs blended in. (By this period, Passover lambs seem to be viewed as sacrificial; cf. Josephus, *Jewish Antiquities* 3.248, 294; 11.110; *Jewish War* 6.423.) John may also allude to Isaiah 53:7, 11. "Taking up" sin might allude to the scapegoat (Lev 16:21-22), but it also suits a sacrificial lamb.

1:30-31. The whole purpose of John's *baptism is to "prepare the way" (cf. v. 23). To "come after" a person sometimes meant to be

his *disciple, so some scholars propose that Jesus actually followed John for a time, as well as being baptized by him; others interpret "come after" in this passage only chronologically.

1:32. The dove might evoke, if anything in particular, God's promise of a new era (Gen 8:10-12).

1:33-34. In Old Testament *prophecy, God pours out his own *Spirit (Is 32:15; 44:3; Ezek 39:29; Joel 2:28-29), a role here assumed by Jesus. Most Jewish groups believed that the Spirit was not as active in prophetic inspiration as in the Old Testament period. The emerging rabbinic movement and many of their allies, who linked the Spirit almost exclusively with prophecy, emphasized that the direct prophetic endowments of the Spirit had ceased when the last Old Testament prophets (Haggai, Zechariah and Malachi) died. Many others believed that prophecy continued, yet without major prophets; some, like the Qumran sectarians, believed that the Spirit worked among them as the end-time remnant of Israel. For many of John's hearers, a claim that the Spirit is being restored would be a claim that the messianic era is at hand. In the Old Testament, the Spirit often was said to come "on" people temporarily rather than explicitly remaining (e.g., Judg 11:29; 2 Chron 20:14).

1:35-39
John's Disciples Follow Jesus

1:35-37. See comment on 1:29. Teachers normally trained *disciples, who then went out to teach others. To recommend disciples to a greater teacher was rare, required great humility and denoted confidence in the other teacher's superiority. Conflict sometimes arose between disciples of rival teachers, though we do have reports of exceptional cases where a teacher, very impressed with another sage, referred his students to him.

1:38-39. Asking such indirect questions (they want to come home with him) was characteristic of ancient politeness and hospitality. The "tenth hour" by usual reckonings would be about 4 p.m., possibly too late in the afternoon to walk a long way home before dark and thus implying that a hospitable person would invite them to spend the night. (By another system of time reckoning, unlikely here, the "tenth hour" could mean 10 a.m.; this system fits 19:14 better but not 4:6.) Rabbis also could lecture disciples while traveling.

1:40-51
The Disciples Witness Too

Like John the Baptist, the disciples learn that the best witness is simply to introduce people to Jesus and let him do the rest.

1:40-41. Given close kinship ties, the testimony of a brother would count significantly. Of the four Gospels, only John uses the Hebrew or *Aramaic title, *Messiah, although he also translates it into Greek because that is the language of his Jewish readers. (Outside Palestine, most Jews in the Roman Empire spoke Greek.)

1:42. "Cephas" is Aramaic and "Peter" Greek for "rock." Nicknames were common, and *rabbis sometimes gave characterizing nicknames to their disciples. In the *Old Testament, God often changed names to describe some new characteristic of a person (Abraham, Sarah, Jacob, Joshua; as a negative declaration, see Jer 20:3).

Greeks and Romans would attribute supernatural knowledge (like knowing the name of a person one had never met, as Jesus does here) to miracle workers (usually magicians); Jewish people would attribute it to prophets or prophetically endowed teachers; but see especially comment on 2:24-25 for John's emphasis.

1:43. Some radical Greek teachers were said to have called disciples to follow them (e.g., Socrates reportedly called Xenophon), but normally ancient students or their parents chose their own teachers. As often in Matthew and John, "following" could mean "becoming a disciple," because disciples could show respect to masters of Torah (*law) by walking behind them. In the Fourth Gospel, however, this term also has greater significance (see 10:4).

1:44. Bethsaida's name suggests its association with the fishing industry; the town was not well known outside Galilee. Its name was apparently changed to Julia in A.D. 30 (Josephus, *Jewish Antiquities* 18.28), but the Gospels retain its name from the time of Jesus' ministry. Mark says that Simon and Andrew were from Capernaum (1:21, 29; 2:1), and excavations confirm that many early Christians thought that Peter's home was there. It is not unlikely that as fishermen in a fishing cooperative with

James and John (Mk 1:19) they took their boats back and forth between Capernaum and Bethsaida; perhaps the latter had a regional market or the family had moved from the latter to the former.

1:45. By the one predicted in "the Law and the Prophets" (a common Jewish designation for the Old Testament), Philip no doubt means the Messiah (e.g., Deut 18:15-18; Is 9; 11; 53).

1:46. Some suggest local village rivalry as a factor in Nathanael's question. Nazareth seems to have been a very traditional, orthodox town; priests later considered it ritually clean enough to move there. But Nazareth was relatively small and obscure; some early estimates of the population are about sixteen hundred to two thousand inhabitants, with some more recent estimates even below five hundred within the village itself. (Then again, many Galilean villages probably had fewer than three hundred residents.) Yet people often expected important figures to hail from important places, and Nazareth was no Jerusalem (or Bethlehem). It lay about four miles from the large city of Sepphoris, which rivaled Tiberias (6:23) for its urban Greek character in Jewish Galilee.

1:47. Jesus here makes a wordplay on the Old Testament Jacob, or "Israel," who *was* a man of guile (Gen 27:35; 31:26); see Jn 1:51.

1:48-49. Teachers often taught disciples under trees, which were popular for this and a wide variety of other purposes because of their shade (too many purposes for us to be certain what Nathanael was doing under the tree). But Jesus' knowing *which* tree Nathanael had sat under is a demonstration of genuine supernatural knowledge (cf. Susanna 54, 58). On this knowledge, see comments on 1:42 and 2:24-25.

1:50-51. The opening of the heavens indicated a major revelation (e.g., Ezek 1:1). Jesus' words allude to Genesis 28:12: Jesus is the new way between heaven and earth (Jacob's ladder) on whom angels ascend and descend; like Jacob of old, this "genuine Israelite" Nathanael (Jn 1:47) would receive this new revelation.

2:1-11
Jesus' First Sign

Jesus values the groom's honor above the demands of ritual purity.

2:1. "Third day" here does not refer to the third day of the week, because virgins were married on the fourth day (Wednesday) and widows on the fifth; nor does it seem to fit the count of days in 1:29, 35, 43. Presumably it simply means (as it normally did) "the third day after the event just narrated" (counting the days inclusively, so that it was the day after the next day). But ancient writers often bracketed off segments of their work by starting and ending on the same note (a practice called *inclusio*); thus John may use this designation to point toward 2:19 and link this story (2:1-11) with the prediction of Jesus' death and *resurrection (see on 2:4).

"Cana" may be Kefar Kanna (over three miles from Nazareth), but most scholars prefer Khirbet Kana (over eight miles from Nazareth). Either site would be a long walk, close enough to Nazareth to explain how the host knows Jesus' family.

2:2. Weddings ideally lasted seven days, and hosts invited as many people as possible, especially distinguished guests like prominent teachers. Many guests would come for only part of the time, however, making the requisite resources harder to predict.

2:3. To run out of wine at a wedding was a social faux pas that could become the subject of this village's jests for years; the host was responsible to provide his guests with adequate wine even if the feast lasted seven days.

Women were often closer to where the wine and food were prepared; thus Mary learns of the shortage of wine before word reaches Jesus and the other men. Her words may be a polite Middle Eastern way of implying that he should do something; guests were to help defray the expense of the wedding with their gifts, and it seems that their friend needs some extra gifts now.

2:4. "Woman" was a respectful address (like "Ma'am") but hardly a customary address for one's mother. Jesus' statement here establishes further polite distance (though "What have I to do with you" is usually a harsh, not a polite, expression in biblical language). One's "hour" could refer to the time of one's death. Because Jesus' "hour" in John refers especially to the cross, here Jesus is saying, "Once I begin doing miracles, I begin the road to the cross."

2:5. Like many *Old Testament seekers of

God who would not take no for an answer (Gen 32:26-30; Ex 33:12–34:9; 1 Kings 18:36-37; 2 Kings 2:2, 4, 6, 9; 4:14-28), Mary acts in confidence that Jesus will hear her entreaty. Ancient Jewish readers, who told stories of miracle workers who insisted that God would send rain, would read Mary's action as demonstrating strong faith. Her words may evoke Pharaoh's similar words concerning Joseph, a God-empowered provider (Gen 41:55).

2:6. The description of the stone jars indicates that they contained enough water to fill a Jewish immersion pool used for ceremonial purification. Although *Pharisees forbade storing such water in jars (and *Essenes and *Sadducees also avoided this), some Jews were probably less strict. Jewish people also poured water over their hands to purify them, but such large jars would not have been suitable for direct pouring, though water could be drawn from them. In any case, these large jars were being reserved for ritual purposes. To employ waterpots set aside for purification for non-ritual purposes violated custom; Jesus here values the host's honor above ritual purity customs. Stone jars were common because they were less likely to contract ritual uncleanness than those made of other substances.

2:7. The jars were consecrated for sacred use; Jesus shows more concern for his friend's wedding than for contemporary ritual.

2:8. "Master of the banquet" was a position of honor (Sirach 32:1-2); one of his primary duties was to regulate the distribution of wine to prevent excess that would (especially in a Jewish context) ruin the party. At least in Greek banquets, guests sometimes elected this person; at other times the host would select him or he would be chosen by lot. His role included presiding over the entertainment and controlling the level of dilution for the wine; thus some observers might have held him partly responsible for the host's running out of wine prematurely.

2:9-10. Soon after the grape vintage, all wine would contain some alcohol (neither refrigeration nor hermetic sealing existed). But the alcohol level of the wine was not increased artificially (distillation was not in use); rather, the wine was watered down, with (on average) two to three parts water to one part wine. Sometimes at Greek parties drunkenness was induced through less dilution or the addition of herbal toxins, but Jewish teachers disapproved of such practices; that drunkenness is part of the celebration at Cana is unlikely. Yet it normally made sense to serve the better wine first because, drunk or not, guests' senses would become more dulled as the seven days of banqueting proceeded.

2:11. God had often manifested his glory by doing signs (Ex 16:7; Num 14:22; for glory, cf. comment on Jn 1:14). Moses' first public sign was turning water into blood (Ex 7:20; cf. Rev 8:8); Jesus' first sign is turning water into wine.

2:12-25
The Raising of a New Temple

Especially in the devastating wake of the temple's recent destruction (A.D. 70), Jesus' earlier warnings about the old temple and announcement of a new one would prove very relevant for John's hearers.

2:12-13. Pious Jews who could attend the Passover in Jerusalem customarily did so; unlike Jewish people in distant lands, Galileans could make the pilgrimage regularly. Galileans went "up" to Jerusalem (because of Jerusalem's higher elevation).

2:14. The sheep and doves (and, to a lesser extent, the cattle; cf. Lev 1:3-9; 4:2-21; 8:2; 22:21) were necessary for the people's sacrifices; moneychangers were needed to standardize foreign and Galilean currencies into coinage useful to the sellers of the sacrificial animals.

2:15-16. Jesus insists on a different priority for activity in the temple; cf. perhaps Malachi 3:1-6.

2:17. The *disciples recall Psalm 69:9, a psalm of a righteous sufferer. Psalm 69:21 speaks of vinegar being given him to drink (cf. Jn 19:29). In the context of John, Jesus' zeal "consumes" him by bringing about his death for the world (cf. 6:51).

2:18. Some Jews expected prophetic leaders to validate their authority with signs. (Some for example claimed to be able to part the Jordan or make the walls of Jerusalem collapse, like a new Moses or Joshua.)

2:19-20. Many groups in Judaism expected a new or transformed temple. But the old temple was one of the most magnificent buildings in antiquity, the symbol to which the rest of Judaism looked. To most Jews, and es-

pecially to the aristocracy who controlled Jerusalem's temple, speaking of the temple's demise sounded like opposing God. Herod the Great began work on the temple in 20–19 B.C., and work continued until A.D. 64; its forty-sixth year mentioned here places Jesus' words in A.D. 27.

2:21-22. A prophetic word was often understood only in retrospect (e.g., 2 Kings 9:36-37; the Delphic oracle's words to Croesus). Many Jewish interpreters (attested especially in the *Dead Sea Scrolls) interpreted Scripture in this way.

2:23-25. Miracle workers were often thought to know some hearts, but only God, who was called "searcher of hearts," was thought to know the hearts of all people.

3:1-8
Conversion as Birth from Above

Jesus explains to Nicodemus that religious knowledge and ethnicity are not a sufficient basis for a relationship with God; one must be born into his family by the *Spirit. John often contrasts water rituals and the Spirit (3:5; see comment on 4:7-26).

3:1. A wealthy and prominent Nicodemus (Nakdimon ben Gorion) is known in Jerusalem in this period, though we do not know whether John means the same one. As a highly educated "ruler" or leader in the Jewish community, John's Nicodemus was surely well-to-do.

3:2. One might come by night to avoid being seen, or because Jewish teachers who worked during the day could study only at night (cf. Ps 119:148; the latter was undoubtedly not the case with Nicodemus, who would not need to work—v. 1). But John includes the detail because it serves the theme of light and darkness (1:4-5; 11:10; 13:30) that brackets this *narrative (3:19-21).

3:3-4. Jesus speaks literally of being born "from above," which means "from God" ("above," like "heaven," was a Jewish circumlocution, or roundabout expression, for God). One could also construe the phrase as meaning "reborn," which Nicodemus takes literally. (Ancient writers, including those of the *Old Testament—as in the Hebrew text of Jer 1:11-12; Mic 1:10-15—often used plays on words, and John includes quite a few other puns; they also sometimes used other characters as less intelligent foils for a narrative's main spokesperson.) Most evidence for Greek traditions about individual rebirth come from a later period, possibly formulated in light of Christianity, but some Jewish analogies probably lack direct Christian influence. Because Jewish teachers spoke of *Gentile converts to Judaism as starting life anew like "newborn children" (just as adopted sons under Roman law relinquished all legal status in their former family when they became part of a new one), Nicodemus should have understood that Jesus meant conversion; but it never occurs to him that someone Jewish would need to convert to the true faith of Israel. The idea of a transforming conversion reflects texts such as Ezekiel 36:26 (evoked in this passage of John), although such ideas may appear elsewhere (e.g., 1 Sam 10:6; Wisdom of Solomon 7:27; 8:17).

3:5. Converts to Judaism were said to become "as newborn children"; their conversion included immersion in water to remove Gentile impurity. "Born of water" thus could clarify for Nicodemus that "born from above" means conversion, not a second physical birth.

The Greek wording of 3:5 can mean either "water and the Spirit" or "water, that is, the Spirit." Ezekiel 36:24-27 used water symbolically for the cleansing of the Spirit (cf. especially the *Dead Sea Scrolls), so here Jesus could mean "converted by the Spirit" (cf. 7:37-39)—a *spiritual* *proselyte *baptism. Whereas Jewish teachers generally spoke of converts to Judaism as "newborn" only in the sense that they were legally severed from old relationships, an actual rebirth by the Spirit would produce a new heart (Ezek 36:26).

3:6-7. The "spirit" that is born from God's Spirit may reflect the "new spirit" of Ezekiel 36:26. Everyone understood that like begets like.

3:8. The term for "Spirit" also meant "wind" in both Greek and Hebrew. (Although Jesus probably spoke especially *Aramaic in Galilee, a high-status teacher in Jerusalem might be equally comfortable with Greek.) One could translate "sound of the wind" as "voice of the Spirit" (for plays on words, see comment on 3:3-4). The wind is unpredictable and uncontrollable (see Eccles 8:8; cf. Eccles 1:6, 8, 14, 17; 2:11, 17, 26; 4:4, 6, 16; 6:9). The Spirit, associated with water in Ezekiel 36, was sym-

bolized as wind in the next chapter, Ezekiel 37; some Jewish interpreters linked this image with Genesis 2:7 (cf. Jn 20:22).

3:9-21
The Revealer from Above

Jesus as incarnate Wisdom (see comment on 1:1-18) is the only one fully qualified to reveal God and reconcile the world to him.

3:9-10. Nicodemus's denseness makes him a foil for Jesus the revealer. For this theme in some ancient literature, see the discussion of Mark's message in the introduction to Mark.

3:11-12. "Earthly things" might be the analogies of water and wind used earlier in the passage. Only an eyewitness of heaven, such as the Father and the Son, could fully testify about heaven. Wisdom of Solomon 9:16 notes that people can scarcely guess about earthly matters, and thus asks how people could guess about heavenly ones.

3:13. In the context of John's allusion to Wisdom of Solomon 9:16 (in Jn 3:11-12), the next verse may be relevant: no one could learn God's ways without wisdom and the *Spirit sent from above (Wisdom of Solomon 9:17). Jewish literature provides other parallels to John 3:11-13, but the closest are Jewish texts that speak of divine Wisdom coming down from God, seeking to reveal the ways of heaven (God) to people (cf., e.g., Baruch 3:29; Wisdom of Solomon 9:10; God's powerful "word" descending to slay Egypt's firstborn in Wisdom of Solomon 18:15). Jesus might also imply a contrast with Jewish mystics who sought to ascend to heaven, and with the Jewish tradition that Moses ascended not only Mount Sinai but up into heaven to receive God's *law. Now Wisdom/Word/Law itself—one greater than Moses—has come down from heaven in the flesh (see comment on 1:14-18).

3:14-15. "Lifting up" is another play on words (3:3-4): Jesus returns to heaven by way of the cross, "lifted up" like the serpent Moses lifted up to bring healing (Num 21:4-9; for "lifting up," see comment on Jn 12:32-33). "Lifting up" had long been a play on both exaltation and execution (Gen 40:20-22); here the language evokes Isaiah 52:13, where God's servant would be lifted up (and the *Septuagint adds, "glorified"), a passage immediately preceding Isaiah 53. The serpent passage in Numbers (Num 21:8-9) directly precedes a passage about God's gift of a well in the wilderness (Num 21:16-18), relevant for John's following chapter (Jn 4:6, 14). Ancient Egyptians used images of snakes as magical protection against snakebites; this cursed the snakes. In Wisdom of Solomon 16:6, this bronze serpent symbolized salvation. Moses set the serpent on a standard, which the Septuagint renders with the same word that translates "sign" (*semeion*), making Jesus' death a sign (cf. Jn 2:18-19). *Midrashically, some Jewish interpreters could have linked this bronze serpent with Moses' rod that became a serpent (Ex 4:3; 7:9-10, 15), hence a "sign" (Ex 7:9). Those who saw the serpent in Numbers 21 would "live" (21:8-9); later Jewish interpreters sometimes applied biblical promises of life to *eternal life, and in John, those who see Jesus live forever (cf. Jn 6:40; 14:19).

3:16-18. God "gave" his Son by him being lifted up like the serpent (see comment on 3:14-15). The term often translated "so" means not "how much" but "in this way"; the tenses of the Greek verbs reinforce the sense: "This is how God loved the world: he gave his son." Some translations' "only begotten" is literally "special, beloved"; Jewish literature sometimes applied it to Isaac, to emphasize the greatness of Abraham's sacrifice in offering him up. Eternal life is literally the "life of the world to come" (from Dan 12:2); John's present tense ("have") indicates that those who trust Jesus begin to experience that life already in the present time.

Despite ancient Jewish literature's mention of God's love for humanity and its emphasis on God's special love for Israel, nothing compares with this sacrifice, especially not for "the world," which in John normally means those not yet following God's will. The *Old Testament also emphasizes God's immeasurable love (e.g., Ex 34:6-7; Deut 7:7-8; Judg 10:16; Is 63:9; Hos 11:1-4, 8-11; cf. Is 16:11; Jer 48:36). Jewish people expected full salvation and judgment in the day of judgment; like eternal life, however (just noted), John recognizes these events taking place also in the present (3:17-18), because the promised *Messiah has already come.

3:19-21. Ancient texts (especially the *Dead Sea Scrolls) often contrast light and darkness

as good and evil in the same way John does here. Everyone would have understood John's point. Bracketing off a narrative by starting and ending on the same point (3:2) was an ancient literary device.

3:22-36
The Witness and the Son

3:22-23. On John's *baptism, see comment on Mark 1:4-5. Jews who practiced initiatory baptisms of other Jews could be viewed as sectarian. Away from the Jordan River, water was not plentiful, so in their itinerant ministry Jesus' *disciples (4:2) probably do not baptize everywhere, although ceremonial immersion pools were widespread in Palestine. Many scholars think that Aenon was near modern Ainun; although it lacks water today, many springs remain in the area. Although this reconstruction is not certain, if it is correct it is interesting that Aenon lay near Shechem, the center of *Samaritan habitation in Jesus' day, so that John the Baptist is already ministering in an area near where Jesus will be ministering in chapter 4.

3:24. There is a possible echo of Jer 37:4. John was imprisoned and executed in Herod Antipas's strong and well-known fortress Machaerus. This was located in Perea, across the Jordan (i.e., not in Judea or Galilee proper), where much of John's ministry occurred (1:28; 3:26; 10:40).

3:25-26. On Jewish ceremonial purification, cf. 2:6 and 11:55. This theme runs through the Gospel: ceremonial washing (2:6), *proselyte baptism (3:5), perhaps Jacob's well (chap. 4) and the healing waters of Bethesda (chap. 5), Siloam's water for the Feast of Tabernacles (7:37-38; 9:7) and perhaps 13:5-11 and 19:34. Disciples of rival teachers often competed, but John is not competing with Jesus.

3:27-28. "Heaven" was a fairly common Jewish circumlocution for God. In Jewish custom, one person who represents another acts on his sender's authority but must adhere to the constraints of his mission; the real authority always stems from the sender; for being sent ahead, cf. perhaps Malachi 3:1. Such customs might help make the point more intelligible for John's hearers.

3:29-30. Weddings epitomized joy (e.g., *3 Maccabees 4:6). The "friend of the bridegroom" refers to the Jewish custom of the *shoshbin*, who was much like the best man in weddings today. Like other friends, this leading friend of the bridegroom might offer speeches of encouragement at the wedding; he might also be a witness for the wedding, contribute to it financially, possess the evidence of the bride's virginity, and so forth. (To illustrate the way that Jewish traditions valued both this role and weddings in general: later *rabbis claimed that God was the *shoshbin* for Adam's wedding.) The most significant emphasis of Jewish weddings was joy.

3:31. One who originates from heaven, as opposed to others who were from earth, most naturally applies in Jewish texts to divine Wisdom (see comment on 1:1-18).

3:32-33. Prominent individuals had distinctive marks on their signet rings, which they would press into hot wax seals on the outside of documents to attest that they were witnesses to the execution of the document. Merchants could use seals to attest a container's contents. Rulers could also share their seals with the highest officials who would act in their name (cf. Gen 41:42).

3:34. Because many thought that the *Spirit had been quenched in Israel till the future restoration of Israel, and many thought that only a few had merited the Spirit, to say that someone had unlimited access to the Spirit (whether Jesus has unlimited access as giver or receiver here is debated) indicates that he is greater than any person who had ever lived.

3:35-36. Again, the language of the Father authorizing the Son and judging the world by their response to him portrays the Son more highly than any mere human was viewed in Jewish literature; cf. 3:31. Again, language that John's Jewish contemporaries often applied to the future judgment is applied also to the present here (see comment on 3:16-18).

4:1-6
Jesus Travels Through Samaria

Jesus' positive reception by *Samaritans contrasts with his reception in Jerusalem (2:13–3:9). In John 4:1-42, Jesus crosses strict cultural boundaries separating culturally distinct peoples, genders and moral status, pointing to the new and ultimate unity in the *Spirit. Some features of Jesus' encounter with the Sa-

maritan woman evoke earlier well scenes (Gen 24; 29; Ex 2), but to a different effect.

Samaritans worshiped Israel's God devoutly, practicing circumcision and the Sabbath. Nevertheless, insofar as our later sources can indicate, they accepted only the Pentateuch, regarding Israel's subsequent history as apostate. They claimed that the true site for worship was Mount Gerizim (edited even into their version of the Ten Commandments), rejecting the Jerusalem temple. Like Jews, they looked for an end-time restorer; thus one prophetic figure promised to restore sacred vessels left by Moses at Mount Gerizim (before *Pilate butchered them). Greek culture and language heavily affected Samaria, although Greek need not have been the first language of Samaritan villagers. (The *Gentile Greek city Sebaste, in the midst of Samaria, probably exerted an influence; cf. Acts 8:5.)

4:1-2. On Jesus' *baptism, see comment on 3:22-23. Although ceremonial washings were common in Judaism, those who practiced initiatory baptisms (those that initiated people into a particular Jewish group) were viewed by other Jews as sectarian.

4:3-4. The "necessity" of the Samaritan route may have been spiritual rather than geographic. One could travel around Samaria (east through Perea), but many pilgrims to and from the feasts in Jerusalem took the shorter route straight through Samaria (Josephus, *Jewish Antiquities* 20.118; *Jewish War* 2.232); the quickest route, it yielded a three-day journey (*Josephus, *Life* 269). But if Jesus was near John (3:22-23) and the latter was in the Jordan valley (3:23), Samaria might even be a geographic detour, since Jesus could have traveled north near Bethshan. Since Jesus ends up staying awhile (Jn 4:40), the Father's plan rather than haste probably motivates his need to pass through Samaria. Samaritans and Jews worshiped the same God and both used the *law of Moses (although the Samaritans made a few changes in it). But they despised one another's places of worship and had remained hostile toward one another for centuries.

4:5. Some identify "Sychar" here with Shechem (closest to Jacob's well), or perhaps more often with modern 'Askar (about 1.5 km northeast of the well).

4:6. The site of Jacob's well is still known; it is within view of Mount Gerizim, which was holy to the Samaritans (based on Deut 11:29; 27:12). This site begins a *narrative that emphasizes holy geography (especially 4:20). Although this concept is foreign to most modern Western readers, ancient people were widely attracted to special "holy sites"—which Jesus here supersedes.

The "sixth hour" normally means noon; thus Jesus and the *disciples had been journeying for perhaps six hours. (According to a much less likely system of time reckoning here, "sixth hour" would mean 6 p.m.—cf. 19:14—in which case Jesus and his disciples would be ready to settle down for the night and lodge there—4:40.) Weary travelers sometimes would sit, including at wells; most relevant here is Ex 2:15 (which in Jewish tradition Josephus claims occurred at noon). Because noon was particularly hot, most people sought shade and often rested during that time. The local women, who often would come in groups to draw water, would not come in the midday heat of this hour; people throughout the ancient Mediterranean world avoided being out in the midday heat except when no alternative was available. This woman, however, had to do so, because she had to come alone (for her reasons, see comment on 4:7).

4:7-26
A Gift for a Samaritan Sinner

In the Fourth Gospel, Jesus' gift of the *Spirit supersedes the ritual waters of John the Baptist (1:26, 33), ceremonial purification (2:6), *proselyte *baptism (3:5) and the Feast of Tabernacles (7:37-39; 9:7); note discussion of background on each of these passages. It also apparently supersedes water having other religious symbolism associated with holy sites, such as healing sanctuaries (5:2-8) and Jacob's well (4:7-26). For John's readers, who have the Spirit but lack many of the rituals of their opponents, these contrasts would constitute an encouragement.

4:7. That this *Samaritan woman comes to the well alone rather than in the company of other women (and at the hottest hour of the day, when she would not run into them) probably indicates that the rest of the women of Sychar did not like her, in this case because of her marital history (cf. comment on 4:18). Although many Jewish teachers warned

against talking much with women in general, they would have especially avoided Samaritan women, who, they declared, were unclean from birth. Other ancient accounts show that sometimes even asking water of a woman could be interpreted as flirting with her; this might be especially the case if she had come alone at an unusual time. Jesus breaks various conventions of his culture here. In addition, Isaac (through his agent, Gen 24:17), Jacob (Gen 29:10) and Moses (Ex 2:16-21) met their wives at wells; such precedent created the sort of potential ambiguity at this well that religious people wished to avoid.

4:8. Rabbis sometimes sent *disciples to procure supplies. Many *Pharisees considered many of the foods of the Samaritans unclean.

4:9. John provides cultural background in this verse. Although his summary statement might contain an element of *hyperbole, the animosity between Jews and Samaritans was well known; on rare occasions it even led to bloodshed requiring Roman intervention. Judeans usually regarded Samaritans more favorably than Gentiles, but views varied and tended to be negative. The woman first confronts this encounter in ethnic/cultural terms: under Jewish *law, even her water vessel (the same term as in 2:6) was considered unclean for Jewish drinking. Ironically, in John's Gospel only non-Jews recognize Jesus' Jewishness (here and 18:33-35).

4:10. "Living water" simply meant "fresh" or "flowing" as opposed to stagnant or well water (cf. the *Septuagint and Hebrew text of Lev 14:6, 51; Num 19:17; Zech 14:8), but given John's propensity for double meanings (see 3:5), here the term may also mean "water of life." Cf. Jer 17:13.

Some scholars have pointed out that the *rabbis spoke of Torah, the law, as God's gift and as living water. But John uses the symbolism differently to refer to the Spirit (7:37-39). The background here is God as provider of the source of genuine life (Is 12:3; Jer 2:13).

4:11. Jesus has no jar to lower into the well; moreover, even with a jar he could not get "living" (i.e., fresh or flowing) water from a well (see comment on 4:10). Although we cannot know the well's depth in the first century, in modern times it is about a hundred feet (around thirty meters) deep.

4:12. Her saying "our father Jacob" is an affront to the Jewish teaching that the Jewish people were children of Jacob, whereas the Samaritans had much Gentile blood. The one who is greater than Jacob (for this theme cf. also 8:53) does not argue the point with her; it is peripheral to the issue he wishes to drive home.

4:13-14. Cf. Sirach 24:21 (where Wisdom promises that whoever drinks from her will thirst for more of her). If Jesus alludes at all to Moses' well in Numbers 21:16-18, it may or may not be coincidental that that passage immediately follows the account of the serpent (Num 21:4-9) mentioned in John 3:14.

4:15. The images of water and wells were often used symbolically in antiquity; like many other characters in John, however, she takes Jesus literally when he is speaking figuratively. Nonwealthy rural women usually went to nearby water sources to draw water; they could let down their pitcher or other vessel into a spring, and sometimes would carry it back on their head.

4:16-17. In view of the ambiguity of the situation (see comment on 4:7), her statement, "I have no husband," could mean "I am available." While wells were common places of conversation, they also could serve as places for finding spouses, most notably in some well-known biblical accounts (Gen 24; 29; Ex 2). Although she obviously came to the well alone, this Jewish man converses with her (against custom; Jn 4:27) and might be thought to ask a leading question. Jesus removes the ambiguity, which stems from his refusal to observe customs that reflected ethnic and gender prejudice, not from flirtation.

4:18. Jesus clarifies her ambiguous statement: she had been married five times and is not married to the man with whom she now lives. If she were repeatedly widowed, people might well think something was wrong with her (cf. Gen 38:11; Tobit 6:14-15). A more common situation would be that she had been divorced most or all of these times; in this case, most ancient readers would (rightly or wrongly) believe there was something wrong with her. (Carrying a vessel, she was not wealthy enough to have initiated the divorces.) Samaritans were no less pious and strict than Jews, and she was apparently ostracized from the Samaritan religious community—which

would have been nearly coextensive with the whole Samaritan community (see comment on 4:6-7).

4:19. That she came to the well alone might lead a visitor to suspect that she had a negative reputation; only a prophet, however, could supply details. Prophets were considered capable of sometimes knowing others' thoughts (see comment on 1:42). Although this frequent designation for Jesus is inadequate (4:44; 6:14; 7:40; 9:17), it at least moves the conversation beyond 4:17. Yet Samaritans apparently rejected the biblical prophets between Moses and the end-time restorer. The Samaritans awaited not just any prophet, but the greatest prophet, one like Moses (Deut 18:15-18); see John 4:25. If Jesus is a prophet, then Jews are right and Samaritans are wrong, leading to the question of 4:20.

4:20. Mount Gerizim, the Samaritans' holy site equivalent to Judaism's Jerusalem, was in full view of Jacob's well. For Jews, the Jerusalem temple was the holiest site on earth. The Samaritan Pentateuch, by contrast, specified Gerizim as the proper site for worship. The woman undoubtedly uses the past tense for "worship" because of her continuing consciousness of Jews' and Samaritans' ethnic separation: roughly two centuries earlier, in 128 B.C., a Jewish king had obliterated the Samaritan temple on that mountain, and it had remained in ruins ever since. Samaritans mocked the Jewish holy site and once, under cover of night, even sought to defile the Jerusalem temple. Jews similarly ridiculed Mount Gerizim and even built many of their *synagogues so worshipers could face Jerusalem. Samaritans were unwelcome in Jerusalem's temple, so if the Jews are right (4:19), there is no hope for her.

4:21. "A time is coming" was common prophetic language (1 Sam 2:31; 2 Kings 20:17; Jer 31:31). Ancient peoples valued "holy sites."

4:22. Jesus is not neutral; he accepts the correctness of the Jewish position, although he does not allow that to remain as an ultimate barrier to ethnic reconciliation (4:23). In a Gospel probably at least partly addressing Jewish Christians rejected by their synagogues (see the introduction), this point is significant.

4:23-24. When he speaks of "worship in Spirit and truth," Jesus may have in view the common identification of the *Spirit with prophetic inspiration and empowerment in ancient Judaism, as well as *Old Testament passages about charismatic, prophetic worship (especially 1 Sam 10:5; 1 Chron 25:1-6). Given the common belief that the prophetic Spirit was no longer fully active, Jesus' words would strike ancient ears forcefully. The future hour (4:21) is present as well as future; Jesus makes the character of the future world available to his *disciples in their present lives (see comment on 3:16). For oppressed Jews and Samaritans longing for the future promise, this was also a striking statement.

4:25-26. Later Samaritan documents explain the Samaritan concept of a *messiah: the *Taheb,* or restorer, was a prophet like Moses (Deut 18:15-18). Some evidence suggests that the Taheb's role included teaching.

4:27-42
Reaping Among the Samaritans

4:27. Traditional Jewish piety warned men not to talk much with women (some later *rabbis added, even with one's own wife!), both because of temptation and (especially in later sources) even because uninformed observers might suspect misconduct. Traditional Greek and Roman culture also considered it inappropriate for a wife to talk with men in unguarded settings; although Roman culture had been shifting, much of the rural Mediterranean world (probably including most of Galilee and Samaria) maintained more conservative traditions. That the disciples are amazed yet trust their teacher enough not to ask about this situation is a sign of their respect for him, an attitude considered appropriate for faithful disciples. (A few later Jewish traditions report rabbis who disintegrated disrespectful disciples into heaps of ashes with their eyes, but such stories are meant only to illustrate the general principle that one ought not to challenge one's teacher!)

4:28-30. Like other ancient cultures (e.g., Roman law), most Jewish people did not have much regard for the witness of a woman (see later rabbis but especially Josephus, *Jewish Antiquities* 4.219). The witness of a sinner, meanwhile, would be worthless; the situation was probably the same among the Samaritans. Nevertheless, she witnesses the way Philip had

(1:46). That she is distracted from her original purpose for coming to the well (4:28) likely suggests that Jesus' water has replaced the water of Jacob's well for her. Someone who knew Rebekah came to meet the man who met her at the well and to invite him to stay (Gen 24:28-32; cf. 29:13; Ex 2:20).

4:31-33. Ancient teachers sometimes used food as a metaphor for spiritual food (see comment on 6:32). In the *Old Testament, this metaphor sometimes related to one's calling (Jer 15:16; cf. Ezek 3:1-3).

4:34. The figurative use of food imagery was intelligible in Jesus' milieu (e.g., Sirach 24:19-21), including for one's calling (cf. Jer 15:16; Ezek 3:1-3). Jewish teachers regarded God's work in one sense as finished (his creative work—Gen 2:2) but in another sense continuing (his work of sustaining his creation; see comment on 5:17). Jesus refers here to a work that climaxes all God's work: Jesus completes the Father's work on the cross (19:30; cf. 17:4).

4:35. "Lifting up one's eyes" (KJV, NASB) was a common Old Testament expression for "looking" (e.g., Gen 13:10; 18:2; 24:63-64), although it became rarer in later Hebrew. The main wheat harvest ran from mid-April through the end of May; the barley harvest, which made fields "white" (literally, as in KJV, NASB; cf. "ripe"—NIV, NRSV) was in March. In Palestine, the gap between sowing and reaping was normally four to five months. Some scholars think that Jesus here cites a Jewish proverb that refers to four months between planting and harvesting.

4:36-38. In this context, Jesus and the Samaritan woman sow, and the *disciples see the harvest (v. 39). Verse 37 seems to adapt a popular proverb based on ideas such as Ecclesiastes 2:18—changing an image of sorrow to one of joy.

4:39-42. The effectiveness of her testimony in this culture is surprising; see comment on 4:28-30. The Samaritans now believe because they meet Jesus (as in 1:46-49), but the woman's relationship to her community also changes through her having become his first witness there.

Mediterranean culture, especially in largely rural areas like Palestine, emphasized the virtue of hospitality. Nevertheless, Jews and Samaritans did not typically extend this act to each other. For Jesus to lodge there, eating Samaritan food and teaching Samaritans (v. 40) would disturb traditional Jewish sensitivities, perhaps like defying segregation in the United States during the 1950s, apartheid in South Africa in the 1980s, or ethnic or cultural segregation found in many other societies. The Jesus of the Gospels is more concerned with people than with custom (cf. 2:6-9).

4:43-54
Faith and Healing in Galilee

4:43-45. See comment on Mark 6:4; but here the "home country" is apparently Judea (cf. Jn 1:11).

4:46. For Cana see 2:1. Capernaum was close to a full day's walk from there. "Royal official" (NASB, NIV) probably means that this man is one of Herod Antipas's court officials, although Herod's official title was tetrarch rather than king; some of the Herodian rulers' officers were even *Gentiles (though John would probably mention it if that were the case here). Many of these lived in Tiberias, some ten miles (about fifteen kilometers) from Capernaum (see comment on 6:23), but this one may reside in Capernaum. Jesus, who is never mentioned as entering Tiberias (or Sephoris, the other major city in Galilee), was extremely unfavorable toward Antipas (Lk 13:32; 23:9; for reasons, cf. Mk 6:17-29); this man who comes to Jesus may have been a wealthy aristocrat, probably much influenced by Greco-Roman culture and probably not respected by stricter Jewish standards.

4:47-49. "Come down" (v. 49 NRSV) is relevant because Capernaum, on the Sea of Galilee, was lower in elevation than Cana. The *Old Testament condemned unbelief in the face of signs (Ex 4:9; Num 14:11); John's Gospel articulates an even higher ideal. On Jesus' rebuff and a suppliant's insistence, see comment on 2:4-5.

4:50-54. The journey from Capernaum to the likeliest site of Cana is less than twenty miles, an average day's walk in antiquity, but if evening intervened the official would have stopped en route to spend the night before proceeding. Long-distance miracles were rare by Old Testament, other Jewish and Greco-Roman standards; people generally

believed prophets and Greek magicians more easily if they were present in person. The rare stories of long-distance miracles suggested to ancient readers that these miracle workers had extraordinary power. For Jesus, the only prerequisite for such miracles is seekers' faith in his power.

5:1-9a
Healing at Bethesda

Healing shrines were common throughout the ancient world, especially for the worship of Asclepius and other popular deities renowned for healing powers. Most of these shrines required the supplicants to purify themselves at the adjoining fountain or other source of water. This passage portrays Jesus as greater than such healing sanctuaries of his day. More critically, this chapter reveals Jesus as the Father's agent (see "*apostle" in the glossary), hence able to perform divine acts even on the Sabbath. Contrasting characters was a common *rhetorical and literary device in antiquity, probably applied by John here.

site under St. Anne's Monastery in Jerusalem, just north-northeast of the temple. The pools were quite large (like a football field) and roughly twenty feet deep. This site had two twin pools, surrounded by four porches, or porticoes, and one porch (a fifth one) down the middle separating the pools (perhaps separating genders). Although John writes after Jerusalem was destroyed in 70, his recollection of the site is accurate.

5:3. This site was later used as a pagan healing shrine; given the ancient tendency to reuse older shrines, the Jewish community in Jesus' day may well have viewed this pool as a place of healing. The temple authorities undoubtedly did not approve—after all, sacred pools at healing shrines characterized Greek cults like that of Asclepius—but popular religion often ignores religious contradictions that seem clearer to official religious leaders.

5:4. This verse may not be original (see notes in most translations) but was probably added early by a *scribe familiar with the tradition of healing at Bethesda; it explains the otherwise enigmatic verse 7.

Table 4. Parallels Between John 5:1-17 and 9:1-34

John 5:1-17	John 9:1-34
Unable to walk for 38 years (5:5)	Blind from birth (9:1)
Jesus, rather than a Jerusalem pool, brings healing (5:3-4, 7)	Jesus uses a Jerusalem pool to bring healing (9:7)
Do not keep sinning, lest you face something worse (5:14)	Neither this man nor his parents sinned to cause his condition (9:2)
The man reports Jesus to the authorities (5:15)	The man refuses to deny Jesus to the authorities (9:24-34)
Jesus does the Father's works (5:17)	Jesus came to fulfill the Father's works (9:3-4)

5:1. John does not specify which Jewish feast is the occasion for Jesus' trip to Jerusalem, although some manuscripts have "the feast," which would probably imply the Feast of Tabernacles, as normally in Jewish tradition (not Passover). But the real issue for this narrative is that the day on which Jesus heals is a sabbath (5:9b).

5:2. Public baths were standard in Greco-Roman cities, and people congregated there. A *Qumran scroll attests the name of this pool, and archaeologists have discovered a pool in this location fitting precisely this description. Although scholars do not agree on the site of Bethesda (or its exact spelling), many favor a

5:5. The man had been sick there longer than many people in antiquity lived—for about as many years as Israel had wandered in the wilderness. Ancient reports of healings often specified how long the person had been sick to emphasize the greatness of the healer's cure. Obviously nothing else, including this pool, had succeeded in restoring him.

5:6-9a. In 2:6 and 3:5, Jesus replaces the water of ceremonial purification; in 4:13-14, he replaces the "holy water" of a *Samaritan holy site. Here he, not the supposedly healing waters, restores the man.

5:9b-18
Betrayal on the Sabbath

Narratives often made points by contrasting characters; John contrasts the man healed in 5:1-9 with the man healed in 9:1-7. Local authorities may have been pressuring some of John's hearers to follow the example of the former; John urges them to emulate the latter instead (a few decades later, a Roman governor was pressuring Christians to renounce their exclusive devotion to Christ, sparing their lives only if they revered the statue of the emperor and other deities).

5:9b-10. Biblical rules forbade work on the sabbath, even so much as gathering wood for a fire (Num 15:32-36). By Jesus' day, Jewish *law explicitly forbade carrying things on the sabbath, viewing this as a form of work.

5:11-13. Many teachers also forbade minor cures—physicians' cures not necessary to save a life—on the sabbath. That Jesus acts in God's name with a miracle rather than a physician's cure should make that discussion irrelevant; but law is often argued by analogy, and the particular authorities in this passage apparently reason that Jesus' cure is just like a physician's cure.

5:14. The man may have been in the temple for worship, possibly to give thanks for his healing (cf. Lev 14:10; Ps 56:12); but the temple dominated public space in Jerusalem. In the Bible sufferings were sometimes (not always—cf. 9:2-3; e.g., 2 Sam 4:4; 1 Kings 14:4; 2 Kings 13:14) judgment for sin (e.g., 1 Kings 13:4; 2 Kings 1:4; 2 Chron 16:12). Jesus warns of greater judgment here—probably the *resurrection for judgment (cf. 5:29).

5:15-16. This man apparently does just the opposite of the faithful healed man in 9:30-34, with whom John contrasts him. His behavior may resemble those who left the *churches of John's readers and sided with their opponents, betraying them to persecution (see introduction to 1 John in this commentary).

5:17. Everyone recognized that God had continued to work since creation, sustaining the world even on the sabbath. Jesus reasons by analogy that what is right for God in sustaining his creation is also right for himself.

5:18. Jewish prayers often called God "Father," as the Father of Israel; the issue here is that Jesus seems to treat his relationship to the Father in a special way (see e.g., Ex 4:22-23; Is 63:16; 64:8; Jer 3:19). Because Jesus appears to usurp prerogatives solely attributed to God (5:17—the right to work on the sabbath), his hearers think that he thereby claims a position equal to that of God, a claim that naturally sounds blasphemous to them (cf. Is 14:14; Ezek 28:2). Second-century *rabbis accused many Jewish Christians of believing in two gods; some later rabbis even spoke of those who sought to make themselves independent of God as acting as if they were "equal" to God. Even Greeks, for whom the line between divine and mortal was often rather thin, regarded attempts to make oneself a deity as presumptuous. One could "annul" a biblical law by disregarding it, so they feel that Jesus is (literally) "destroying" the sabbath.

5:19-29
Jesus' Relation to the Father

Jesus seeks to qualify their understanding of his relationship to the Father; far from usurping God's honor (5:18), Jesus acts only on the Father's authority and in conjunction with his will.

5:19. Jesus qualifies their understanding by applying another analogy: it was common wisdom that sons imitated their fathers. Far from claiming that his rank rivals the Father's (as they have charged), Jesus here highlights his obedience to the Father (filial obedience was an important virtue in antiquity). But the offense remains in that Jesus claims to be God's Son (and to watch the Father continually) in a unique way that does not include them.

Wordplays were common. God continued his creative work on the sabbath (see comment on 5:17); what Jesus "does" or "makes" (*poieo*) here is that he "makes a person" well on the sabbath (7:23), a possible allusion to the *Septuagint of Genesis 1:26-27, where God first "made a person." In that passage, God made humanity "in *our* image"; Jesus might imply the joint work of the Father and the Son.

5:20. Some Jewish mystics claimed visions of God, but Jesus' language goes beyond this, implying continual experience of God. Fathers typically loved sons; God was said to love Israel (in context, of course, Jesus' claim is more special).

5:21-22. If Jesus shares the Father's initial and continuing work of creation (see comment on 1:3; 7:23), he could also share his future prerogative of raising the dead. Although some *Old Testament texts spoke of a king who would reign under God's authority (Dan 7:13-14; cf. Jn 5:27), raising and judging the dead was a divine prerogative reserved for God alone, as rehearsed daily in Jewish prayers ("God who raises the dead"). Some Jewish texts, perhaps following Greek models, delegate some judgment in the afterlife to an individual like Enoch or Abel or perhaps even the *Son of Man, but absolute judgment is a divine prerogative.

To his opponents, this would sound like ditheism (an offense with which some later rabbis charged early Christians). By claiming that the Father "gave" him this authority, Jesus claims to exercise delegated authority as the Father's agent (Judaism accepted the legal principle of agency; cf. "*apostle" in the glossary). The idea of the Son as the Father's agent runs throughout this section and disarms their objection in verse 18. (In trinitarian terms, Jesus is equally deity with the Father but distinct in person and submits to the Father.)

5:23. In the kin-centered ancient Mediterranean world, how one treated one member of a family reflected one's attitude toward the family as a whole. God sometimes gave others honor as his representatives (Ps 2:11-12; Is 60:1-2), but no one was ever to be honored to the same degree as God (Is 42:8; 48:11; cf. Ex 20:5). Jesus' hearers could easily construe Jesus' statement here as a claim to deity.

5:24-25. *Eternal life, the life of the world to come, was supposed to be available only when the dead would be raised; but Jesus provides new life already for those who trust in him.

5:26. Non-Palestinian Jewish texts held God to be the only one with life "of himself" ("uncreated," "self-begotten," etc.); as in some Greek writings, they described the supreme God as existing without any source outside himself. Although John can also use the phrase more generally in other contexts (6:53), this passage compares Jesus' prerogatives with those of the Father, suggesting that, as in *Diaspora Jewish sources, the term here refers to Jesus' uncreated eternality.

5:27. The Son of Man in Daniel 7:13-14 was to rule for God in the future *kingdom; ruling included executing judgment.

5:28-29. The Old Testament (Dan 12:2) and much of ancient Judaism taught a *resurrection of both the righteous and the unrighteous, which would take place at the last day. (Some circles in ancient Judaism taught only a resurrection of the righteous; others taught that the wicked would be resurrected only temporarily for judgment and then destroyed; still others held that the wicked would be resurrected to eternal judgment. Others, such as *Sadducees and probably many Hellenized Diaspora Jews, denied a future resurrection.) The Old Testament and Judaism spoke of God judging people by their deeds. "Tombs" may evoke Is 26:19 in the Septuagint.

5:30-47
Jesus' Witnesses

5:30. Jesus is thus a faithful *shaliakh,* or agent; Jewish *law taught that the man's agent was as a man himself (backed by his full authority), to the extent that the agent faithfully represented him. Moses and the *Old Testament prophets were sometimes viewed as God's agents.

5:31. Here Jesus cites the Old Testament principle, central to later Jewish law (both that of the rabbis and that of the *Dead Sea Scrolls), that two witnesses are necessary to prove a (capital) case (Deut 17:6; 19:15). Testimony was essential in ancient Jewish court cases.

5:32. Jewish teachers sometimes spoke of God in roundabout terms (here, "another").

5:33-34. On John the Baptist as a witness, see comment on 1:6-8. Speakers in courts sometimes supplied evidence even while denying that it should be strictly necessary.

5:35. The hand-held oil lamps of the Herodian period were too small to give forth much light (they normally produced as much as a candle), and thus one would symbolize only a small reflection of "the light." Some Jewish teachers referred to a great person, such as a patriarch or a great rabbi, as a "lamp" or light in the world.

5:36-37. The witness of the Father should be all that is necessary. Israel at Sinai supposedly saw his form and heard his voice (cf. Ex 19:9, 11; 24:10-11; Sirach 17:13; but cf. the qualification in Deut 4:12), and accepted his

word through his agent Moses; Jesus says that his own generation rejects the fuller revelation of God sent to them (cf. Jn 1:11, 14-18). Greek-speaking Jews thought of Wisdom as God's image (Wisdom of Solomon 7:26; so also *Philo of Alexandria regarding the *logos*); see comment on John 1:1-18.

5:38. They claimed to have God's word in the law given at Sinai (cf. 5:37, 39), but missed the point.

5:39-40. Even *Gentiles recognized the Jewish people's zeal for their Scriptures, and various groups (including the people reflected in the *Dead Sea Scrolls) emphasized diligent searching of the Scriptures. Scripture said, "Do this and you will live," which Jewish teachers read as: "Do this and you will have life in the world to come." Thus they believed that one had eternal life through the Scriptures; but Jesus says that the Scriptures witness to him, hence to reject him is to disobey the Scriptures.

5:41-44. The Father's agent comes in the Father's name, not in his own; to reject a person's agent was to reject the authority of that person himself.

5:45-47. Moses witnesses to Jesus in his writings (the first five books of the Old Testament were attributed to him). Ancient Judaism viewed Moses as an intercessor for Israel (a view found in, e.g., *Josephus, rabbis, the **Testament of Moses*); but Jesus says that Moses will instead be their prosecutor. Jewish teachers regarded Moses as the central prophetic figure of their history, and even many pagans knew of Moses as Israel's lawgiver. Moses wrote of a prophet like himself (Deut 18:18), but in the larger context of John's Gospel, Jesus could refer here to Moses' experience of divine glory (see comment on 1:14-18).

6:1-15
A New Passover Meal

After speaking of Moses (5:45-47), Jesus goes on to perform a sign that might be expected of a new prophet like Moses (Deut 18:15): providing manna.

6:1. Although outsiders rightly called it a "lake," Galileans called it the "Sea" of Galilee.

6:2. Any means of possible healing in antiquity (such as hot springs and healing shrines) drew large followings. Wonder-workers seem to have been rarer in this period, but even fraudulent ones (such as the Alexander mentioned by *Lucian) or those who promised but later failed to deliver prophetic signs (such as some failed prophets mentioned in *Josephus) often drew large crowds.

6:3-4. If the events of chapter 5 took place at the Feast of Tabernacles (see comment on 5:1) and those of this text occur at Passover, and if this section of John is in chronological order, half a year has elapsed between these chapters. The chronological recollection fits the depiction of grass in 6:10.

6:5-6. People (e.g., generals) sometimes tested others' understanding or resolve; some teachers also asked questions of their *disciples solely to test them.

6:7. The bread needed to feed the crowd would cost two hundred days' wages for a peasant or unskilled laborer; during food shortages (which such a multitude might create for surrounding villages) a day's wages might feed just one family. Although fishermen may have earned the same amount faster, it still represents a substantial sacrifice to the disciples' communal treasury (12:6; 13:29).

6:8-9. The "barley" loaves are reminiscent of 2 Kings 4:42-44, where Elisha multiplies such loaves. Philip's and Andrew's skepticism also mirrors that of one of Elisha's prophet disciples (2 Kings 4:43; cf. Num 11:21-22). (Some scholars also point to the presence of Elisha's assistant in 2 Kings 4:38, 41; the *LXX there uses the same word for "lad" as Andrew does here.) There too bread was left over, though Elisha fed just two hundred with twenty loaves. Bread was the most fundamental staple of the ancient Mediterranean diet; barley was cheaper than wheat, allowing for more loaves at the same price. Fish was a staple in Galilee, and sometimes was dried; most people could not regularly afford meat.

6:10. People often sat on chairs but "reclined" (so the Greek here) at banquets (like Passover). Grass would flourish especially in the spring, around Passover season (cf. 6:4); it would also make the ground more comfortable for sitting (the wilderness often lacked it). John numbers five thousand "men" (the Greek term here is gender-specific, and only men were usually numbered in antiquity); the whole crowd, including women and children, may have been as many as four times that

number. In this case Jesus could be addressing a crowd nearly as large as the seating capacity of the theater for the citizen assembly of a major city like Ephesus, and at least four times the seating capacity of the theater in Sepphoris, a major Galilean city; to address such a crowd was no small feat.

6:11. The head of the Jewish household customarily gave thanks before (and, at least according to later attested custom, after) the meal. A later standard blessing is, "Blessed are You, Lord our God, who brings forth bread from the earth." Miracles of multiplying food appear in the *Old Testament (cf., e.g., 1 Kings 17:16; 19:8) and occasionally in extrabiblical Jewish tradition (cf. the oil in late traditions about the *Maccabees) and Greco-Roman texts; the primary background here is 2 Kings 4:42-44 (see comment on 6:8-9) and especially the manna of Exodus 16 (see comment on 6:31-33).

6:12. Possibly relevant is an ancient Roman custom that required hosts to provide sufficient food for some to be left over at the end of the meal; Jesus is the ultimate host. Certainly relevant is the analogous miracle in 2 Kings 4:44. Greco-Roman moralists and Jewish teachers abhorred waste; although the extra bread has been provided miraculously, its provision is not to be taken for granted and squandered.

6:13. The leftovers are considerably more than they started with; that they filled the maximum number of baskets they could carry underlines the enormity of the miracle.

6:14. "The Prophet" implies the prophet like Moses of Deuteronomy 18:15-18. In Moses' day, God had miraculously provided bread from heaven, manna. At Passover season (Jn 6:4) hopes for deliverance ran even higher than usual, because the Jewish people rehearsed how God had delivered them from their oppressors by the hand of Moses.

6:15. Some other first-century leaders gathered large followings in the wilderness who believed that they could perform signs like Moses or Joshua and overthrow the Romans; see comment on 6:14. The crowds wanted a worker of earthly miracles and an earthly leader like Moses (some Jewish traditions—*Philo, the *rabbis, etc.—viewed Moses as a king; cf. Deut 33:4-5); but this was not Jesus' mission (6:63). Perhaps threatened by the earthly emperor's claims to authority (see the introduction to Revelation), John's hearers may have taken warning from this passage. Privacy was difficult to find within Galilean villages, but would be easier on the mountain (6:3).

6:16-21
Lord of the Sea

In the context of John's discussion of Jesus as the New Passover, new manna and one greater than Moses, Jesus' miracle on the sea may have reminded his first hearers of Israel's crossing the sea in the days of Moses.

6:16-19. Squalls were frequent on the lake and can keep even modern boats on shore. Given where they are traveling (from the northeast to northwest shores), they were probably most of the way across the lake; turning back is no longer an option. That they had not arrived yet indicates the difficulty of the wind (6:18). Fishing boats were equipped with oars; the sail would be counterproductive in this storm. In the *Old Testament, only God is said to walk on the waves (see comment on 6:20).

6:20. "It is I" (v. 20) is literally "I am." "It is I" is a legitimate way to translate the phrase, and no doubt how Jesus intends the disciples to understand it; but given the context of Jesus walking on water, the nuance of deity in "I am" (Ex 3:14; Is 41:4; 43:10, 13) is probably present. *Gentiles had some stories of miracleworkers walking on water, but these were not known to Palestinian Jewish tradition, echoed here. In the Old Testament, Moses, Joshua, Elijah and Elisha all parted bodies of water, but only God trod upon the water (Job 9:8; cf. Ps 77:19, shortly before Ps 78:24, possibly used in Jn 6:31).

6:21. The boat being instantly at its destination has no exact Old Testament parallels, but the *Spirit had sometimes carried prophets from one place to another almost instantly (e.g., Ezek 8:3; 11:24—probably in a vision; cf. 1 Kings 18:12; 2 Kings 2:16).

6:22-29
Proper Motives

6:22-23. A large, culturally Greek-oriented city on the lake of Galilee, Tiberias was named for the emperor Tiberius and built by Herod Antipas on the site of a graveyard. This site ef-

fectively kept the most religious Jews out of the city and allowed Herod to dole out favors to allies without interference from other powerful Jews. It does not appear in the *New Testament record apart from this mention and, like Sepphoris, the other large city of Galilee (also very Hellenized), does not seem to have been frequented by Jesus. People often had to cross the lake in small boats.

6:24. People could lease boats, and perhaps paid a fare for conveyance (though this is not clear). Capernaum was a shorter distance across the sea from their location than Tiberias was, and less than ten miles from Tiberias (relevant if the boat-owners of 6:23 wished to return there).

6:25-26. The appeal of free food is not hard to understand; thus, for example, emperors and others used it to pacify Rome or gain political support. The crowd wants to follow a prophet who will provide free food and political deliverance—another Moses. But they miss the central thrust of Jesus' mission (cf. 6:15).

6:27-29. The dialogue between Jesus and the crowd plays on the term *work;* Judaism stressed righteous works, but Jesus singles out a particular work: faith in him (Jewish teachers praised Abraham's "work" of faith in God, but Jesus' demand is more specific). They then demand from Jesus a "work," which now means a sign (v. 30), as it sometimes does in Jewish literature. The "seal" (v. 27) means that God has attested Jesus; cf. comment on 3:33.

6:30-59
Jesus as the New Manna

This passage fits ancient Jewish expectations for a *midrash or homily on Exodus 16:15 and Psalm 78:24, which Jesus quotes in John 6:31. Jesus paraphrases, explains and expounds in a manner characteristic of ancient Jewish teachers, yet his hearers fail to understand him. Ancient teachers sometimes made their lectures hard to understand to sort out genuine followers from the masses.

6:30-31. The crowd still wants him to act as the new Moses they expect—on an earthly, political level. Many Jewish people expected manna to be restored in the world to come. Moreover, God provided Israel bread in the wilderness not just once but daily; the crowd might reason that if Jesus is a prophet like Moses (6:14-15), he should provide bread more than once. Like other ancient writers, John was free to paraphrase his material in his own words; here the crowd cites Scripture as if they are rabbis in a debate, using Exodus 16:4, 15 and/or Psalm 78:24. John seems to know and use both Hebrew and Greek versions of these texts. The following discourse repeatedly paraphrases the text (as was common in ancient Jewish Scripture exposition).

6:32-33. Both Exodus 16:4, 15 and Psalm 78:24 attribute the bread to God (also Ps 78:19-20; Neh 9:15); correcting a misapplication was common in Jewish Scripture interpretation (e.g., "Do not understand the text as meaning X; instead it means Y"). (Some later rabbis attributed the manna to Moses' merit, but they would have agreed that God gave it.) Jesus says, "Not Moses, but God really gave this bread." His hearers would have to agree; that was technically how Moses had put it (Ex 16:4, 15; cf. Deut 8:3). Like many other interpreters of his day (see, e.g., the *Dead Sea Scrolls), Jesus is concerned to apply the biblical text to their present situation.

6:34. They hear him on a different level from the meaning he intends (cf. 3:4; 4:15), so he explains further. The ignorance of opponents or minor characters was often used as a foil to further a main argument throughout ancient literature (*Plato, rabbis, novels, etc.).

6:35-38. Jewish expositors had already often used manna as a symbol for spiritual food, God's *law, or Torah/Wisdom/Word. Ancient writers also often used water or drinking figuratively (including Jewish teachers using it for Torah or Wisdom). Sirach 24:19 portrays Wisdom as saying, "Come to me . . . and eat from my fruits"; in 24:21, Wisdom cries, "Those who eat me will hunger for more, and those who drink me will thirst for more." Jesus here compares himself with divine Wisdom, but (in contrast to Sirach) emphasizes the satisfaction of those who eat and drink from him.

6:39-40. The dead would be raised to *eternal life "on the last day," the day of the Lord, when God would transform the world and inaugurate his eternal *kingdom. In ancient *rhetoric, the repetition of a point would make it sound more emphatic; repeating both the beginning and ending of a claim would underline

it all the more. For divine vision (6:40) and transformation, see comment on 1 Jn 3:2.

6:41-43. In Exodus 16:2, Israelites grumbled before receiving manna, but here Jesus' hearers complain even after having eaten bread. The crowd continues to hear Jesus on the wrong level, even though he clearly refers to eternal life and not literal bread. For background on Jesus coming down from heaven in addition to manna, see comment on 3:13 (especially on Wisdom's descent; e.g., Wisdom of Solomon 9:10).

6:44. Most Jewish people believed in both human choice and God's sovereignty. For example, the fifth benediction of the Amida, a regularly prayed Jewish prayer, recognized that God granted *repentance. "Drawing" may echo *Septuagint language for God drawing his people to himself (Jer 31:3; cf. Hos 11:4).

6:45. Jewish expositors often explained a Torah text in view of a passage from the prophets. Jesus cites Isaiah 54:13, which is not far from another context offering drink to God's people (55:1) or from Isaiah 53, which John uses elsewhere (12:38).

6:46. On God's invisibility, even in part to Moses, see comment on 1:18.

6:47-51. Jesus contrasts the new and old manna in good midrashic style, like a good Jewish expositor. Most fundamentally, the manna in the wilderness conferred only temporary life, whereas Jesus confers eternal life. Virtually the entire wilderness generation perished in the wilderness (6:49) through disobedience, despite manna and the Torah.

6:52. Again Jesus' hearers interpret him too literally. Jewish people had many forbidden foods, but they and all the Greco-Roman world as well abhorred cannibalism (which some abominable cults and some barbarians reportedly practiced occasionally). Many non-Christian Romans later misinterpreted Christian language about the Lord's Supper: "eating the body and blood of their Lord" sounded like cannibalism to outsiders and thus aroused more persecution against the *church. In a Passover context (6:4), however, Jesus is being identified figuratively as the Passover lamb (Ex 12:8); cf. also divine Wisdom in comment on John 6:35.

6:53. Eating the flesh of the Passover lamb was required (Ex 12:8); but drinking the blood of the lamb (or of any creature) was always forbidden (Lev 17:10-11), avoided even in meat (Gen 9:4). Perhaps some might have also recalled the expression "the blood of grapes," meaning wine (Gen 49:11), which was essential to the Passover meal. Moreover, both Sirach and *Philo speak of drinking divine Wisdom.

6:54-58. On the literal level (cannibalism and drinking blood) obeying Jesus' statement should have merited judgment, not salvation; thus they are confused. Some sages spoke in riddles, a practice for which Jesus is known (his *parables, etc.). Only those wise enough to continue with him would penetrate the meaning of his teaching.

6:59. Synagogues could function as community centers and were not limited to use on the Sabbath. Although most of the remains of the Capernaum *synagogue are from a later period, evidence remains that points to the first-century synagogue on which the later synagogue was built.

6:60-71
Perseverance and Apostasy

6:60-61. The *disciples' grumbling recalls how the Israelites treated Moses in the wilderness. "Stumbling" (NASB) was a common figure of speech for sinning or falling away.

6:62. Here Jesus may use a standard Jewish "how much more" argument: If you cannot receive the message of the cross, how much more difficult will it be for you to accept my *resurrection and return to the Father? For the impossibility of earthly things understanding heavenly things, see comment on 3:11-12.

6:63. Jesus provides here the interpretive key to what preceded: he is not speaking literally, as if they are to eat his literal flesh; he speaks of life through the *Spirit. Some Jewish interpreters were masters at figurative interpretation; but his followers still fail to understand him (6:66).

6:64-65. On Jesus' knowledge, see comment on 2:23-25.

6:66. John portrays the departure of these disciples as apostasy, which Judaism regarded as one of the worst sins. The loyalty of disciples brought honor to teachers in antiquity; their abandonment led to dishonor.

6:67-71. Even among his closest followers, one is a betrayer. That even Jesus faced such

betrayal would encourage John's readers, who had experienced some apostates in their own churches (see the discussion of setting in the introduction to 1 John). On the "Twelve," see comment on Mark 3:14-15. For "Iscariot," see comment on Mark 3:16-19.

7:1-9
The Unbelief of Jesus' Brothers

7:1. In Jesus' day, Galilee and Judea were under separate jurisdictions (that of Antipas and the Roman governor, respectively), so that someone in trouble in one part of the country would be safer to remain in the other part. The Judean ruling class controlled many affairs in Judea and could refer capital cases to Pilate.

7:2. The Feast of Tabernacles was one of the three most important festivals of the Jewish year and was celebrated for eight days in Jerusalem. Jewish pilgrims from throughout the Roman and Parthian world would gather. The men would live in booths (made of branches and the like) constructed on rooftops or elsewhere, commemorating God's faithfulness to his people when they lived in booths in the wilderness (women and children were not required to live in the booths). This feast was known for its joyous celebration.

7:3-4. From the standpoint of general ancient political theory, the advice of Jesus' brothers is correct; they may not know the specific matter of the Jerusalem authorities' opposition. Most teachers taught in public places. Moralists praised as virtuous frank or open speech (v. 4), whereas secret acts were deemed deceitful. But cf. John 6:30.

7:5. Brothers were normally among one's closest allies; kin ties were very important, and intrafamily conflicts were considered particularly tragic.

7:6-9. Pious Jewish men who lived as near as Galilee were supposed to go to the feast. It would be normal for Jesus to travel with his extended family (*Josephus spoke of whole towns going). The issue is not that he will not go, but that he will only go "secretly" at first, so as not to hasten the appropriate time of his execution (cf. 7:6 with 2:4). Although Jesus' "not yet" prevents his statement from qualifying as deception per se, Scripture's general demand for truth was qualified in particular cases, most often for saving life (e.g., Ex 1:19; 1 Sam 16:2-3; 2 Kings 8:10).

7:10-36
Divided Opinions

7:10. Festal pilgrims typically traveled in groups (Josephus even speaks of entire towns going). Because of Jerusalem's elevation, pilgrims would "go up" to it. Greco-Roman biographers often liked to describe their subjects' appearances, flattering or not. That none of the Gospels does so suggests that Jesus' appearance may have been average enough to allow him to pass unnoticed in a crowd: probably curly black hair, light brown skin, perhaps a little over five feet in height—unlike the Aryan pictures of him that circulate in some Western churches. (He could be taller; some suggest an average height closer to five foot seven. The *Shroud of Turin, which is purported to be Jesus' burial cloth, makes him taller, in the epic Hebrew tradition—1 Sam 9:2. But scholars debate its authenticity.) Although *Diaspora Jewish men, like Greek and Roman men, were normally clean-shaven, coins portray Palestinian Jewish captives in this period with full beards and hair down to their shoulders. Nevertheless, most Judeans had not seen Jesus at close range, so while Jesus' appearance was probably not strikingly distinctive, we cannot be certain about the details.

7:11-13. In contrast to some later stereotypes, ancient Jewish views were very diverse on a number of issues. "One who leads astray the multitude" (NASB) or "one who deceives the people" (NIV, NRSV) was a serious charge, applied to those who led other Jews to idolatry or apostasy. Deuteronomy prescribes death as the penalty (13:5, 12-18), and some *rabbis even felt that such persons should be given no chance to repent, lest they be able to secure forgiveness though their followers had perished. Some Jewish sources as early as the second century charged Jesus with this crime.

7:14. Teaching was often done in public places, including in the temple courts. Some popular teachers drew large crowds there.

7:15. Most children in the Greco-Roman world could not afford even a primary education. But many Palestinian Jewish children, except perhaps from the poorest homes (which a carpenter's family usually was not),

would learn how to recite and probably often how to read the Bible, though most probably could not write. The issue here is not whether Jesus is literate or can recite Torah, but that he has never formally studied Scripture with an advanced teacher, yet he expounds as well as any of the scholars without depending on earlier scholars' opinions.

7:16-17. Some Jewish sages agreed that willingness to obey preceded genuine understanding. Learning by doing was a standard part of Jewish education, which included imitating one's teacher. (Sometimes this may have been taken too far. In a probably fictitious story, one *disciple was said to have hidden under his rabbi's bed to learn the proper way to perform the marriage act.)

7:18-19. Prophets were to be God's agents (see "*apostle" in the glossary). False prophets were technically to be executed; but the prophet like Moses was to be followed (Deut 18:9-22). To seek to kill a true prophet obviously contravened the *law.

7:20. Demoniacs were often thought to act insanely; in this case the crowd thinks Jesus is paranoid. But even this charge could imply the suspicion that he is a false prophet (7:12): false prophets were sometimes thought to channel spirits (indeed, many pagan magicians claimed such spirit-guides). The penalty for false prophets was death (Ex 22:18; Deut 18:10), so it is ironic that they would accuse him of having a *demon while denying any intention to kill him. Josephus tells of one true prophetic figure in this period (he does not quite label him a "prophet") who was regarded as insane and demon possessed; the Gospels suggest that some viewed another this way (John the Baptist—Mt 11:18).

7:21-23. Jesus asks the crowd to reason consistently (sound and fair judgment was paramount in Jewish teaching): why is it wrong for him to heal supernaturally on the sabbath, when circumcision (which wounds) is permitted on the sabbath? A later first-century rabbi argued similarly: circumcising on the eighth day (involving a single member) takes precedence over the sabbath, so saving a whole life (which involves all one's members) also does so. Some practices at the festivals (such as killing the Passover lamb and waving the lulab, i.e., palm branch, at the Feast of Tabernacles) were likewise held to take precedence over the sabbath. Jesus employs a "how much more" argument, frequent in the Gospels and in Jewish teaching more generally.

7:24. Many thinkers, including many *Pharisees, would have agreed with Jesus' admonition here.

7:25-26. When a speaker was troublesome but popular, the less brutal ancient authorities sometimes discreetly waited for the best opportunity to deal with him rather than acting immediately.

7:27. Some scholars have pointed to a tradition (attested mostly but not exclusively in later sources) that the *Messiah would be hidden for a time before he appeared, and thus no one would know where he was from (cf. the irony in 9:29). Later sources compare him with Moses.

7:28-29. Jesus declares that where he is "from" is obvious: he is "sent from" the Father. This expression means that he is a commissioned agent, an authorized representative, of the Father (see "apostle" in the glossary).

7:30. The idea of an appointed (or fated) hour of death was fairly common in ancient Mediterranean sources, so the present claim would be intelligible to a wide audience.

7:31. In most Jewish traditions, the Messiah was not a miracle worker, except to the extent that the works of a new Moses figure would validate his prophetic claim to lead the people.

7:32. The aristocratic priests were dominant in Jerusalem's leadership; some aristocratic Pharisees (though probably a much smaller number in Jesus' day) also belonged to the coalition, though they did not dominate it. In Jesus' day the Pharisees as a *movement* had no authority to arrest anyone, although the chief priests did; John might update the language for readers of his own day. Most scholars believe that the main Palestinian opposition that Jewish Christians faced in the decades after A.D. 70 came from Pharisees. The officers are the Levitical temple guards.

7:33-36. Sages sometimes spoke in riddles, inviting those who were wise to understand their teaching. John again employs the motif of misinterpretation: if the Jewish authorities misinterpret Jesus so badly, how can they claim to understand the Scriptures rightly? "Greeks" refers to Hellenized *Gentiles, perhaps

descended from Greek and Macedonian settlers; "dispersion" (NASB) refers to Jewish people scattered among them. Jesus' hearers apparently suspect that he will use the foreign Jews as a base of operation for reaching the Gentiles to whom they seek to be witnesses (a situation that ironically occurred, according to the book of Acts).

7:37-39
Rivers of Water

7:37. The "last day" of the Feast of Tabernacles (7:2) probably refers to the eighth day. For at least the first seven days of the feast, priests marched in procession from the Pool of Siloam to the temple and poured out water at the base of the altar. Pilgrims to the feast watched this ritual, which Jews throughout the Roman world thus knew about; it was even commemorated on souvenir jars they could take home with them. "Come to me" may echo the summons of Wisdom to come eat and drink of her (Sirach 24:19, 21).

7:38. Scripture reading at this feast is at least as old as Nehemiah 8:1-18; early Jewish tradition suggests that the readings on this last day of the festival (7:37) included the one passage in the Prophets that emphasized this feast, Zechariah 14, which was interpreted in conjunction with Ezekiel 47. Together these texts taught that rivers of living water would flow forth from Jerusalem or the temple, bringing life to all the earth. Jewish teachers often depicted the temple as the navel, or belly, of the world—that is, the center of the world (the way that Greeks viewed Delphi), so one might view the waters as proceeding from this belly or center. The water-drawing ceremony (7:37) (originally meant to secure rain) pointed toward this hope.

Because the water of verse 38 flows to and not from the believer (v. 39), 7:37-38 may be punctuated to read: "If anyone thirsts, let this one come to me; and let whoever believes in me drink. As the Scripture says . . . " (The original manuscripts had no punctuation.) Verse 38 may thus declare that Jesus fulfills the Scriptures read at the feast, as the foundation stone of a new temple, the source of the water of life (cf. 19:34; Rev 22:1).

7:39. Most of Judaism did not believe that the *Spirit was prophetically active in their own time but Scripture promised the full outpouring of the Spirit in the messianic age or the world to come. Water often symbolized Torah (*law) or wisdom in Jewish texts, but John follows *Old Testament precedent in using it for the Spirit (Is 44:3; Joel 2:28; esp. Ezek 36:25-27).

7:40-52
The Division Deepens

7:40. "The Prophet" is the "prophet like Moses" (Deut 18:15, 18; see on 6:14-15). Although the connection is not explicit here, the hearers might have thought of the living water God provided in the wilderness in Moses' day (Ex 17:1-7).

7:41-42. Like civic pride, regional prejudice was common in antiquity. Contradicting what others had said in 7:27, some people cite the place where the Messiah was to originate, based on Micah 5:2; that the Messiah was of Davidic descent was unanimously held. Although John included no birth *narratives, the conjunction of Matthew, Luke and widespread Christian traditions known by the early second century (to pagans interrogated by Hadrian) suggests that John's hearers know that *Christ was born in Bethlehem. They would thus regard Jesus' opponents here as ignorant.

7:43-44. Public divisions were common in ancient Mediterranean society.

7:45-46. On the *Pharisees in Jesus and John's day, see comment on 7:32. Powerful and wise speech was highly regarded in antiquity; in that era, listening to public speakers was a form of entertainment as well as of learning (the former function has been largely replaced in affluent societies by television). The Levite temple guards would have heard many teachers in the temple, yet they are particularly impressed by this one. Rarely, but on occasion, elsewhere in antiquity armed men failed to arrest someone after hearing his discourses (an earlier case is mentioned by ancient Roman historians).

7:47. On the "misleader," see comment on 7:12.

7:48. The Pharisees are clearly mistaken here (cf. 3:1-2). John uses irony, a common ancient literary technique, to underscore his point: Jesus' opponents are closed-minded

and dense. Aristocrats despised demagogues who appealed to the uneducated masses, and often tried to protect the masses from being deceived by them.

7:49. Trained *rabbis often looked down on the *'amme ha'arets,* "the people of the land," common people who did not even try to follow rabbinic interpretations of the *law. Many texts indicate the animosity between Pharisaic rabbis and *'amme ha'arets* (e.g., *Akiba contended that before becoming a rabbi he was one of the *'amme ha'arets* and wanted to beat up rabbis). On a lesser scale, analogous attitudes may sometimes be observed among educated elites today; but the rabbis reasonably believed that one could not live the law without knowing it, and they did not think that *'amme ha'arets*, who did not know rabbinic interpretations, knew it.

7:50-51. Although municipal elites may not have always acted fairly, Pharisees and some others could insist on following proper Jewish legal procedure: a defendant must be allowed to speak for oneself. Given the elite's attitude to those who do not know the law (7:49), John's irony (see comment on 7:48) is eloquent here: Nicodemus challenges them on a basic matter of legal procedure accepted by Moses (e.g., Deut 1:16; 19:16-17) and all Jewish interpreters.

7:52. "Search and see" was a familiar phrase inviting a person to check the Scriptures. This response reflects regional prejudice rather than knowledge of the Scriptures (despite their attitude in 7:49): 2 Kings 14:25 demonstrates that they were mistaken. Later rabbis admitted that prophets arose from every tribe. Especially outside Sepphoris and Tiberias, Galileans (who were mostly rural) may have been more conservative than much of the Jerusalem elite, but Jerusalemites often perceived them as backward.

7:53–8:11
The Woman Taken in Adultery

Omitted by all the earliest manuscripts, this passage is generally agreed to be a later addition to the Fourth Gospel. Although it may be a true story, as many scholars think, it should not be read as part of the context in John.

7:53–8:1. For Jesus spending nights on the Mount of Olives, cf. 18:1-2; Luke 22:39; cf. also Mark 11:1, 11.

8:2. Most people rose about sunrise. Teachers often taught in the temple courts; cf. 7:14.

8:3. John, who deals only with "*Pharisees" and chief priests, nowhere mentions "*scribes," who are more frequent in the other Gospels; scribes functioned as teachers of the *law. On adultery, see comment on 1 Thessalonians 4:4-6.

8:4-5. Scripture commanded the execution not only of the adulteress but also of the adulterer; if the woman was genuinely caught in the act, the adulterer had surely been identified as well. The law of Moses demanded the execution of this woman, but Rome had removed capital jurisdiction from Jewish courts, except for temple violations. Thus the Jewish leaders test whether Jesus will reject the law, compromising his patriotic Jewish following, or reject Roman rule, which will allow them to accuse him to the Romans. Pharisees and later *rabbis were quite scrupulous about the biblical requirement of witnesses (Deut 17:6; 19:15), so it was necessary to claim that they had caught her in the act. Since she was caught in the act, however, it seems suspicious that the man is not brought.

8:6-8. Roman judges wrote their sentences before reading them aloud. Some think that Jesus may have written an acquittal. God wrote the Ten Commandments with his finger (Ex 31:18; Deut 9:10); perhaps Jesus writes the first line of the tenth commandment in the *Septuagint of Exodus 20: "You shall not covet your neighbor's wife." This text might declare them all guilty of adultery (Mt 5:28). Jesus' hearers, however, seem unaware of what he is writing; this proposal is thus at best speculation. (Some people also drew circles for ultimatums, but while the term here allows also for drawing figures, Jesus nowhere explains the writing.)

The witnesses were normally the first to throw the stones, but false witnesses were to pay the same penalty they had hoped to inflict on their victim (Deut 17:7; 19:19).

8:9-11. It was a commonplace of Jewish teaching that even the most pious had committed sins. God had the power to judge or forgive sins.

8:12-29
Accepting the Witness of the Light

In the likelihood that 8:1-11 is not part of the context, 8:12–10:21 still takes place on the last day of the Feast of Tabernacles (7:2, 37).

8:12. Jewish literature was generous with the title "light of the world," applying it to Israel, Jerusalem, the patriarchs, the *Messiah, God, famous rabbis and the *law (cf. 1:4-5); but always it refers to something of ultimate significance. One of the most spectacular celebrations of the Feast of Tabernacles was a torchlight ceremony with dancing in the temple's court of women (commemorating the pillar of fire in the wilderness); this feast, along with Hanukkah (10:22), was thus known for splendid lighting (though John also uses the image in 12:46). That Jesus offers his light to the whole world, to all the nations, may suggest an allusion to Isaiah 42:6; 49:6. Walking in darkness (cf. Jn 9:4; 11:9) is a natural metaphor for stumbling (Is 59:10; Jer 13:16), falling from the right way (Jer 18:15; Mal 2:8) or being destroyed (Ps 27:2; Jer 20:11).

8:13-18. Ancients normally condemned public self-praise. The law of Moses required two witnesses to confirm any case (Deut 19:15; cf. 17:6), and subsequent Jewish interpretation made this requirement stricter; Jesus might employ the standard Jewish argument "how much more": if the witness of two men is valid, how much more that of Father and Son? Perhaps relevant to 8:17: if later traditions are applicable to this period (which is not clear in this case), this was the season in which Jewish people especially contemplated judgment (during the closely associated New Year's and Day of Atonement holy days).

Jews spoke of the law as "God's law" or "our law"; rabbis presented only their pagan and heretical challengers as calling it "your law" (8:17). In John (who argues that Jesus fulfills the law), however, this expression is surely ironic: see the introduction on "the Jews."

8:19-20. Their response is (v. 19): If he is a witness, he must appear in the court; and they complain that they have no access to the voice of God. Jesus' reply is apparently: that is the problem. Treasuries were standard in ancient temples; the Jerusalem temple's wealthy treasury (containing money, expensive garments, and other goods) was said to adjoin the Court of Women, where the lighting ceremony (8:12) and dancing took place throughout the nights of the festival. The treasury itself may have been used only for storage, but 8:20 can be read, "near the treasury."

8:21-22. Many *Gentiles approved of suicide, but most Jews rejected it except under the most drastic circumstances (see comment on Acts 16:27). Although it is far from clear, it is possible that they think in terms of a deceased father; those who trafficked in ghosts would be viewed with hostility (Lev 20:27). In any case, they do not see Jesus as a particularly pious person here. Yet John's irony is again at work: Jesus does return to the Father through his death on the cross.

8:23. The contrast between the realm above (God's realm) and the realm below (where mortals lived) was common in Jewish *apocalyptic literature, but heavenly revealers in apocalypses were angels or very special heroes of the past (helping to prompt the question of 8:25). Jesus' hearers cannot accept his implications, which depict Jesus more like divine Wisdom descended from heaven than like a boy who grew up in Nazareth (6:42; 7:41).

8:24-25. Dying in sin was a serious matter, for at death one's final opportunity for *repentance had passed (cf. Ezek 18:21-32). (For this reason, Jewish teachers exhorted those being executed to confess their sins and expect their death to *atone for their sins.) Jesus agrees that one must repent but insists that genuine repentance must include faith in him. Although *ego eimi* can mean "I am he," it can also refer to the divine name (Is 43:10, in Greek inviting them to believe that *ego eimi*; John builds toward the more explicit claim of 8:58).

8:26-27. That God was "true" was central to Jewish understanding of his character. According to Jewish law, an agent must accurately represent his sender, and to the extent that he did so was backed by his sender's full authorization.

8:28-29. "Lifting up" (cf. 3:14; 12:32) is from the *Septuagint of Isaiah 52:13—the context of which early Christians applied to the crucifixion (Is 52:14–53:12).

8:30-47
Debating Parentage

8:30-31. Although Jesus' listeners initially believe, they are ready to kill him by the end of the passage (8:59; cf. Ex 4:31; 5:21). Just as *Gentile converts or converts to Jewish movements had to persevere as well as join, and teachers wanted their *disciples to continue in their teaching, so true followers of Jesus must persevere (on perseverance, see also Ezek 18:24-26). This report could also encourage John's circle of *churches (see introduction to 1 John).

8:32. The Greek concept of truth emphasized reality; the *Old Testament word translated "truth" had more to do with integrity or faithfulness to one's word or character. Jewish thought sometimes characterized God as the Truth, so Jesus' hearers should realize that he refers specifically to God's truth in the Jewish sense.

8:33. Jesus' hearers typically misunderstand him in a natural sense. Since freeborn ancients used slave status as an insult, they might object that they have never personally been slaves. Nevertheless, their reference to Abraham shows that they understand Jesus as referring to the Jewish people as a whole. Their response is surprising, since Jewish teachers generally acknowledged that their people had been subjected under the yoke of at least four kingdoms: Babylon, Persia, Greece and Rome. But many expected God to ultimately break the yokes of the other nations (an extreme form of this belief led to the revolt of A.D. 66–70). They taught that the other nations were ruled by guardian angels and the stars, but that Israel was ruled by God alone.

8:34. Philosophers often used "free" to mean free from false ideas, passion or constraint; Judaism spoke of being free from sin.

8:35. Although slaves were considered part of a household and could be "inherited," they were not permanent members; they could be sold, and often they were freed. Indeed, Old Testament *law mandated that Jewish slaves be freed in certain years. By contrast, barring disinheritance, a son was always part of a household (cf. Gen 21:10). Jesus may also make another allusion here: "house" (which here, as often, means "household," "family" or "home") might possibly include a wordplay with God's house, the temple (2:16); only the "sons" will have a permanent share there (Ezek 46:16-17; cf. also Is 56:4-5).

8:36-37. In popular Jewish belief in some circles, descent from Abraham virtually guaranteed salvation except for the most wicked; Israel was chosen and destined for salvation in him. Judaism celebrated Abraham's righteousness, a righteousness Jesus' critics here did not imitate (8:40).

8:38-39. "Father" could mean "ancestor," and on that level Abraham was their father (v. 37—although many would have had some Gentile converts in their ancestry). But metaphorically a father was someone whose ways one imitated, often a teacher, or whose nature one revealed, such as a spiritual progenitor.

8:40. Abraham was used as the ultimate model for Jewish piety (hospitality, faith, and his role as model *proselyte and maker of proselytes), and Jewish tradition celebrated his reception of God's disguised messengers in Genesis 18. (Jewish teachers later even appealed to his merits as a basis for God's favor.)

8:41. Insinuation was common in ancient *rhetorical conflicts. To suggest that someone had one father by law but another father by nature was to suggest that one's mother was guilty of adultery. Recognizing this implication, the interlocutors insist on the purity of their descent: "children of Abraham" was equivalent in Jewish literature to "children of God" (cf., e.g., Ex 4:22), because God had adopted Abraham's descendants. (Some scholars have also seen here an allusion to the later rabbinic charge against Jesus that his mother bore him to a Roman soldier rather than as a virgin, though this charge is not clear in this debate.)

8:42-45. Jesus' interlocutors would not deny that the devil was the original murderer (cf. 8:37, 40) and denier of truth (cf. 8:32); Jewish tradition stressed that his lie had led to Adam's death (cf. Gen 3). People could be called "children" figuratively of those they resembled or whose ways they imitated; for becoming children of God instead, see comment on 3:3, 5. Because Jesus' interlocutors want to kill him and reject his truth, their behavior demonstrates who is their real father; the issue is not ethnic but spiritual. Commentators usually associate the devil's initial murder with his deception of Eve into spiritual death or

(perhaps less likely, since no deceiver is explicit) Cain's murder of Abel. (In a much later Jewish tradition, the devil was Cain's actual father.) In ancient forensic rhetoric a defendant often returned the accuser's charges (cf. 7:20). The devil (see *Satan) as liar likely evokes the serpent's deception of Eve; Jewish literature continued to emphasize his role as deceiver (as well as tempter).

8:46-47. In court, the accused typically demanded proof from their accusers. Ancient defense rhetoric showed that the accusation was morally not characteristic of the upright defendant; it also often shifted charges onto accusers, thereby also impugning their motives for bringing a case. But whereas defendants would sometimes "confess" to faults that were not indictable crimes, Jesus claims to be above reproach. Jewish teachers normally acknowledged that everyone sinned (a few excepted the patriarchs).

8:48-59
Greater Than Abraham

8:48. Although many Judeans looked down on Galileans, both would have been insulted to be compared with *Samaritans. Jesus' hearers within the *narrative are probably unaware of his fraternizing with Samaritans (4:40), which would not play well to a Jerusalem audience. The basis for this charge might be similar theology: Samaritans insulted the temple and challenged the Jewish people's exclusive heritage in Abraham (see comment on 4:12). It was customary in ancient rhetoric to return one's accuser's charges (Jesus associated them with the devil, and they associate him with a *demon). Jews denied that Samaritans were pure descendants of Abraham (cf. 8:41). The charge of demon possession (also 10:20) challenges his prophetic credibility (see comment on 7:20). The discussion also reflects John's irony: only the Samaritans (4:9) and *Pilate (18:35) recognize that Jesus is *Jewish*.

8:49-50. According to Jewish *law, one who rejects a person's appointed agent also insults and rejects the one who sent that agent.

8:51-53. They could have understood him spiritually or in terms of the *resurrection, since some Jewish sources do speak in such terms (e.g., *4 Maccabees 7:18-19); most Jewish people except the *Sadducees would have agreed that Abraham and the prophets were spiritually alive with God. They continue to understand him too literally, however. (Even in one Jewish story where Abraham did not want to die, God made special arrangements to persuade him to give in.)

8:54-55. Ancients condemned public self-praise, but one could cite another's endorsement. God would not share his glory with another deity (Is 42:8; 48:11). "He is our God" was the basic confession of the covenant in the *Old Testament (e.g., Ex 6:7; Lev 26:12; 1 Chron 17:22; Jer 31:33; Ezek 36:28). Yet those loyal to the covenant—those who truly keep God's law—were said in the Old Testament to "know" God (e.g., Jer 9:24; 31:31-34; Hos 2:20).

8:56. Jewish tradition emphasized that during his vision in Genesis 15:12-21 Abraham had been shown the future kingdoms that would oppress Israel and the messianic era beyond them. This experience links Abraham with Moses (see comment on 1:14-18) and Isaiah (cf. Jn 12:39-41) as among those who had seen God's glory.

8:57-58. Although the main point is that Jesus is too young to have known Abraham, his interlocutors might also imply that he is too young for much authority; fifty was the minimum age for involvement in some kinds of public service (and maximum for some others, Num 8:25).

If Jesus merely wished to imply that he existed before Abraham, he should have said, "Before Abraham was, I *was*." But "I am" was a title for God (Ex 3:14), which suggests that Jesus is claiming more than that he merely existed before Abraham. This title of God may have been fresh on the minds of Jesus' hearers at the feast: later tradition says that during the Feast of Tabernacles, the priests uttered God's words in Isaiah: "I am the Lord, I am he" (Is 43:10, 13; the *Septuagint of Is 43:10 has *ego eimi* "I am"). (Although we cannot be certain of this tradition's date, it certainly does not derive from this Gospel.)

8:59. Jesus' hearers do not miss his point in 8:58; they take his words as blasphemy (a mere claim to *messiahship was not considered blasphemous, although it could be offensive; they understood him to claim deity). Stoning was an expected punishment for blasphemy (Lev 24:16, 23), but God's people had some-

times attempted it against God's own agents (Ex 17:4; Num 14:10; cf. 1 Sam 30:6). The temple was constructed from massive stone blocks, not the sort of stones that people could throw; but in Jesus' day construction was still going on, and mobs usually found objects to throw, as *Josephus says *Zealots later did in the temple and a crowd did in a *synagogue.

In the Greek tradition, deities sometimes made themselves or favorite mortals invisible. More relevant here, God had earlier hidden some of his servants for their safety (Jer 36:26); here Jesus hides himself. Jesus' departure from the temple might symbolize that: the glory had departed (Ezek 10–11); the departure of God's presence on account of Israel's sin was a common theme in later Jewish texts.

9:1-12
Healing the Blind

9:1. The pool of Siloam (9:7), presumably not far from where this incident occurs, was also near the temple (which Jesus had just left, 8:59). Blind people could make a living only by public charity, and they could make it best near the temple, where many people passed and people would tend to think charitably (cf. Acts 3:2). The *disciples see this blind man as they are leaving the temple area (8:59).

9:2. Most people in antiquity, including Jewish teachers, believed that suffering, including blindness, was at least often associated with sin, though Jewish *law provided protection for a blind person. Jewish people acknowledged punishment for ancestral sin; many believed in prenatal activity; and some allowed even for prenatal sin.

9:3-5. Jesus uses commonplace images: no one (except night watchmen and shepherds) works in the dark (v. 4); because modern lighting was unavailable, that normal forms of work (and usually even battles) ceased at nightfall was common knowledge. On the light of the world, see comment on 8:12.

9:6. Spittle was sometimes associated with healing in pagan circles, so it would naturally represent an agent of healing in popular thought. But spittle was still more widely considered vulgar and disgusting, and its application would make the man uncomfortable if he knows what it is. Some find here an allusion to the creative act in Genesis 2:7 (cf. Jn 20:22).

9:7. Healing through washing appears in the account of Naaman in 2 Kings 5:10-14. It is not clear whether "Siloam" meant "sent," but Greek teachers as well as Jewish teachers from *Philo to the *rabbis commonly made arguments based on wordplays, which were often based on fanciful etymologies.

This pool was inside Jerusalem's walls in Jesus' day, with large masonry and four porches. Although Siloam was used as a water supply and for baptizing converts to Judaism, it has more direct significance here. This was probably still the last day of the Feast of Tabernacles (7:2, 37; see comment on 7:53–8:11), and the water of Siloam was the sacred water used for this feast (see comment on 7:37-38). Here Jesus employs the ritual water (cf. 2:6; 3:5), but it works only because the man is "sent."

9:8. Beggars in antiquity were often turned down and despised; Judaism emphasized charity, but the shame attached to begging normally deterred those who did not need to resort to it.

9:9-12. Those blind from birth (9:1) were not known to recover (9:32)—at least not without direct supernatural intervention.

9:13-23
Interrogating the Witnesses

The key word in 9:12-31 is "know": everyone claims repeatedly what they know and do not know. The *Pharisees, who supposedly know the *law, turn out to know nothing; whereas the healed man, who knows only Jesus, has had an experience with God that his more scholarly interrogators cannot refute.

9:13. Local elders (or in some places, like *Essene communities, priests filled this role) served as judges in local communities before A.D. 70; but Pharisaic teachers gradually began to achieve much dominance in religious teaching in Palestine after 70. Writing in the 90s, John uses the language of his day to communicate the point to his readers, many of whom have faced opposition or expulsion from their own *synagogues (see comment on 9:24-34).

9:14-16. This is a natural Pharisaic response on the sabbath (5:9-12; see comment on Mk 2:23-3:6). The Pharisaic school of *Hillel allowed praying for the sick on the Sabbath; but the Pharisaic school of *Shammai was

dominant in Jesus' day. Most, however, would have viewed as a Sabbath violation making a clay poultice on the Sabbath (so long as the person was not in danger of dying). Kneading (dough, and by analogy clay) was one of thirty-nine classes of work forbidden on the sabbath. Pharisees were divided among themselves on many issues in Jesus' day, and they had still not settled those issues by the end of the first century, when John was writing.

9:17. "Prophet" is an inadequate but positive title (cf. 4:19, 44; 6:14; 7:40). Some of the more academic circles in early Judaism were apparently more skeptical that prophets continued in their day, although popular circles were often open to them. "Prophets" could also be associated with unrest or criticism, and so were often problematic for Jerusalem's institutional leaders.

9:18-21. The blind man could have remained under his parents' roof at night and earned his keep by begging in the day, although this is not clear. But the reason the Jewish leaders ask his parents about his blindness is that they would know if he was born blind. Both Greek and Jewish courts of law could compel persons to witness against their will. "Of age" means any time past puberty. After about age thirteen a Jewish boy became responsible for his own keeping of the commandments (this point becomes explicit only in later rabbinic texts but was probably already implied in coming-of-age rituals in this period).

9:22-23. Pharisaic rules were scrupulous about cross-examining witnesses fairly and without prejudice; these interrogators thus violate Pharisaic ethical teaching. Excommunication was one of the severest forms of discipline administered by a synagogue community and was apparently rare and thus very harsh in the time of Jesus. (The practice is also attested among other disciplines in the *Dead Sea Scrolls 1QS 6.24–7.25; cf. Ezra 10:8.)

9:24-34
Excommunicating a Disciple

Throughout this section, the interrogators ignore the basic rules of evidence and fairness that later *rabbis diligently emphasized. Most scholars today believe that John's hearers, or many of them, had faced the danger or reality of expulsion from their synagogues (16:2; cf. 12:42-43). The faithfulness of this man (in contrast to the betrayal of the man in 5:14-16) would encourage them to remain faithful too.

9:24. "Give glory to God" can invite praise, but in an interrogation setting it can invite confession of sin (cf. Josh 7:19; 1 Esdras 9:8), in this case perhaps for following a "misleader" (see comment on 7:12). Interrogations sometimes proceeded in a heavy-handed way to procure a desired outcome (e.g., *Gentiles sometimes tortured slaves until they confessed what was suspected). Greek literature often mocked the overconfident person wise in their own eyes.

9:25. In contrast to arrogant persons (cf. 9:24), philosophers (like Socrates) normally admitted their ignorance and pursued knowledge. Although the man's affirmation of ignorance may be sincere, it is possible to interpret the passage otherwise; sometimes people feigned ignorance *rhetorically.

9:26-27. Diligent cross-examination was important in Jewish *law (cf., e.g., Susanna 48-62; Mishnah *Avot* 1:9). Although most people accepted arguments from the experience of miracles, some rabbis whose opinions appear in later sources insisted that standard rabbinic interpretations of Scripture outweighed even visible miracles.

9:28. Both Philo and later rabbis spoke of being *disciples of Moses, suggesting that the idea was common. John's point, however, is that these interrogators are wrong (5:45).

9:29-30. Leaving someone anonymous was sometimes a way to denigrate their value. The interrogators confess that they do not know where Jesus is from. Some scholars note that the circumstances of birth of a person accused of leading people astray would sometimes be investigated to determine if the misleader was an illegitimate child; if this point is in view here at all, the interrogators have failed to investigate the matter. More importantly, denying knowledge of where someone was from could repudiate or belittle them, demonstrating their lack of significance. Ironically, they undercut their own claims of knowledge (9:24); where Jesus is significantly from is "above" (8:23). Irony was a common literary technique in antiquity.

9:31. This view reflects good Jewish piety:

everyone taught that God heard the pious but rejected the prayers of the ungodly (cf. Ps 34:15; Prov 15:8, 29; 21:27; 28:9). This is the major premise in the healed man's argument.

9:32-33. The minor premise of the argument (9:31) is that an extraordinary miracle was done; the conclusion is that Jesus is a righteous man. Syllogism—the practice of demonstrating a conclusion from two accepted premises—was a common way of arguing a case in antiquity.

Blindness from birth was thought an especially difficult ailment to cure; in the rare instances when such extraordinary healings were claimed at a pagan healing shrine (e.g., a later-written report of empty eye sockets filled), they became a cause for much praise to the pagan god held responsible for them. But while extant Jewish tradition reports healings of blindness (Tobit 11:12-13), it does not report the healing of one born blind. (The man's "never since the world's beginning" is emphatic, and probably *rhetorical overstatement; there were a few claimed exceptions in the Gentile world of which he was probably unaware. But even if John's audience knew and believed other claims of healing they would have excused the man's *hyperbole.)

9:34. Later rabbis emphasized being humble and teachable; but despite the proper Jewish argument the man gave in 9:31-33, the authorities expel him on the premise that he was born in sin—which the reader knows to be false (9:2-3). How formal excommunications were in this period is unclear, but he is certainly expelled from participating in the local center of religious life (see comment on 9:22-23).

9:35-41
The Seeing and the Blind

9:35-38. The healed man responds like John's probable Jewish Christian hearers: in faith, unlike their opponents. The title "*Son of Man" is potentially ambiguous, but as an object of faith presumably alludes to Daniel 7:13-14. The man responds based on his experience of Jesus (see comment on 9:25-27).

9:39-41. Greek and especially Jewish tradition used "blindness" figuratively in a moral, intellectual or spiritual sense (e.g., Is 6:9-10; Jer 5:21); sometimes this was conjoined with physical blindness (e.g., the Greek seer Tiresias; the Israelite prophet Ahijah, 1 Kings 14:4). The reversal of physical and spiritual blindness is a motif in the prophets (e.g., Is 42:16-19); the religious authorities, who are sure they are not spiritually blind, are the blindest of all.

10:1-21
Shepherd, Sheep and Robbers

The original text of the Bible had no chapter breaks; this passage continues Jesus' words to the *Pharisees in 9:41. It is based on *Old Testament images of God as the shepherd of Israel (Gen 48:15; 49:24; Ps 23:1; 28:9; 77:20; 78:72; Is 40:11; Ezek 34:11-31), of Israel as his flock (Ps 74:1; 78:52; 79:13; 100:3) and of abusive or unfaithful religious leaders as destroyers of his flock (Jer 23:1-2; Ezek 34). Faithful human shepherds (Jer 3:15) included Moses, David (2 Sam 5:2; Ps 78:71-72) and the Davidic *Messiah (Mic 5:4), but God appears most often as Israel's chief shepherd. Although Moses and David were shepherds, urban people throughout the Roman Empire often looked down on shepherds as low-class and coarse. From the ancient Near East to Greek epic, however, shepherds were a common ancient figure for rulers.

In this context, the healed man who follows Jesus but is excluded from the *synagogue is one of Jesus' sheep; Jesus is the divine shepherd of Israel; and those who excluded the man recall Israel's unfaithful leaders condemned in the prophets. Thus, although these leaders seek to exclude the man from God's people, God himself affirms that the man (and those like him) do belong to his people.

10:1-2. During the cool winter months, sheep were kept inside a pen at night; the pen often had a stone wall, which might have briers on top of it. (Winter was approaching at the time of this feast.) Ancient sources portray the pen as a protection from wolves (10:12) and other predators. Although in warmer parts of the Mediterranean sheep could ideally find pasture at any time of year, where this was not possible they might remain in the fold during winter (soon approaching, in view of 7:2 and 10:22).

One could build such pens at caves (1 Sam 24:3), a square on a hillside surrounded by

stone walls, an enclosed yard in front of a house, and anything from a roofed enclosure to a temporary shelter using thornbushes instead of rocks, depending on the circumstances. The door here may suggest formal walls, perhaps of stones. One observer of Middle Eastern shepherding, Kenneth Bailey, suggests that because the thief must "go up" to surmount the wall in 10:1, it may be like some modern village family courtyards, with walls more than two meters high. ("Go up" does not always require such an interpretation, however; cf., e.g., Gen 38:12; 41:2.) Various families may share a courtyard for this purpose; this might be distinct from the setting in 10:7-9 (see comment there).

When speaking technically, ancient law distinguished thieves from robbers: the former broke in, whereas the latter often lived in the wilderness and assaulted passersby. When linked figuratively, though, they can belong to the same semantic domain. Shepherds continually had to guard against losing sheep to either kind of enemy (or other predators, 10:12). People dreaded thieves and robbers, which were common (esp. at night) and could be harshly punished.

10:3-4. Sheep were considered among the most obedient of animals. In the Old Testament, Israel "heard God's voice" when they obeyed the *law and his message through his prophets. Those who were truly his sheep—in covenant relationship with God—knew him (see comment on 10:14-15). (John's readers hear him through the *Spirit, a practice that most of their contemporaries did not believe was possible in their own day; cf. 16:13-15.) Sheep could have names based on color, like "snowy" (white), or other characteristics. It is said that shepherds customarily knew each of their sheep by name. In the Old Testament, God called his special ones, his closest servants, "by name" (Ex 33:12, 17; cf. Is 43:1). (God knowing the names of all stars reveals his omniscience [Ps 147:4; Is 40:26]; likewise, he is able to know each person individually.) Flocks of various shepherds often mingled together, but shepherds could easily separate out their own sheep, for example to put them in or lead them from their pen, or lead sheep elsewhere. They could do this because the sheep knew their shepherd's voice; it is said that some even trained sheep to respond to the signals of particular flute melodies.

10:5. Ancient sources do report (and modern experience confirms) sheep fleeing from strangers. In this context the strangers are the thieves and robbers (v. 1)—the Pharisees—who have sought to mislead the sheep (9:40-41). The synagogue leaders who expelled John's Jewish Christian readers claim to be true shepherds, but when John's audience hears this passage they will think of them quite differently.

10:6. Jesus' preceding figure fits Jewish definitions for a *parable; indeed, in the *Septuagint, the present term translates the same Hebrew term that is translated "parable" in the *Synoptic Gospels.

10:7-8. Although wolves (10:12) and other intruders were sometimes known to penetrate sheepfolds, often they feared to enter them, and even when ravenously hungry they sometimes assaulted the walls in vain. As opposed to the apparently walled enclosure in 10:1, some suggest that the sheep pen here might be a temporary enclosure topped with thorns, closer to pasture for seasonal grazing; lacking a separate door, it could depend on the shepherd to sleep across the gateway, a practice sometimes reported in modern times. Although shepherds in warmer regions could keep sheep in pasture areas all year (grazing in higher altitudes in summer and lower in winter), in cooler areas such as the Judean hills they spent part of the year in more formal pens and part of the year in the pastures, where temporary pens might be constructed. This explanation makes sense here (10:7, 9), but mixed metaphors were common and Jesus might simply alternate between shepherd and door images because he fulfills more than one role; like God in the Old Testament, he is Israel's shepherd, but he is also the way to the Father. On sheep not hearing strangers, see comment on 10:5.

10:9. For the door, see comment on 10:6-8. Sheep were led "in" and "out" (cf. shepherd leaders in Num 27:17; 2 Sam 5:2) of the sheepfold to and from pasture. Coming and going offered a Semitic expression for freedom of movement and together sometimes meant "all the time" (cf. Deut 28:6, 19; 2 Kgs 19:27; Ps 121:8). In at least some regions of the ancient

Mediterranean world, shepherds led sheep to begin grazing around sunrise, led them to drinking around 10 a.m., led them to shade, where possible, during midday heat, and then drinking and then grazing again until evening. In the evening they returned to the fold, whether the temporary or permanent variety.

10:10-11. The thief (in the context, unfaithful leaders; cf. v. 5) acts for his own good, not that of the flock (hungry thieves might steal sheep to eat them); a shepherd risks his life to protect his flock from animals and thieves. Shepherds were known for intimate concern for their sheep, an image applicable to God (Ps 23:1; Ezek 34:2-6, 11-16). Pharisees considered shepherds members of an unclean profession, and aristocrats despised them as vulgar lower-class workers; thus Jesus' opponents would not readily identify with the protagonist of the story, but in Scripture God was Israel's chief shepherd (see the introduction to 10:1-18). Sheep were completely dependent on shepherds, who provided shelter and guidance and helped them when they gave birth or were sick or injured. "Life" was short for "*eternal life," the life of the world to come, in Jewish parlance; Jesus provides this relationship with himself in the present. See comment on 3:16.

10:12-13. A hired helper was not responsible for attacks from wild animals (cf. Ex 22:13) and worked for pay, not because the sheep were his own. Ancient sources sometimes complain about hirelings who did not protect the animals the way they should. Biblical prophets condemned religious leaders who let God's sheep be scattered, not concerned with what concerns God (Jer 23:1; Ezek 34:6). Commonly ancient sources (including fables) contrasted sheep with wolves, regularly portraying wolves as predators of sheep. The image was used both literally and figuratively.

10:14-15. The Old Testament often described Israel's covenant relationship with God as "knowing" him, which meant having an intimate and obedient relationship with him (e.g., Jer 31:34; Hos 6:6). The intimacy anticipated here appears to exceed even the intimacy that earlier biblical prophets had with God. See John 10:3-4 and 16:13-15. As a perfect reflection of God, Wisdom was expected to provide people intimacy with God like prophets (Wisdom of Solomon 7:26-27); probably more important, all of God's people would "know" him in the time of the new covenant (Jer 31:33-34).

10:16-18. The image of gathering the folds together into one flock in Old Testament language meant gathering the dispersed sheep of Israel, scattered among the nations (cf. Ezek 37:21-24; Mic 2:12); the "one shepherd" in Ezek 37:24 is the Davidic king (cf. Ezek 34:23). The regathering of Israel in the end was one of the basic hopes of ancient Judaism, reflected in writings and prayers. But Jesus may include *Gentiles; *proselytes, or converts to Judaism, became part of God's people.

10:19-21. The Jewish community again experiences schism over Jesus' identity (cf. also 7:43; 9:16), as it was also experiencing in John's day. On charges of demonization, see comment on 7:20.

10:22-42
In the Temple at Hanukkah

Jesus attends an extrabiblical festival in Jerusalem, commemorating Israel's deliverance in the time of the *Maccabees. Ironically, Israel's truest deliverer faces rejection from some of his people at this festival of national deliverance.

10:22. Hanukkah, the Feast of Dedication, was not a required pilgrimage festival, but the eight-day celebration of lights in the temple was beautiful, and many pious Jews from nearby Galilee would come to Jerusalem. It was the next festival after those immediately connected to the Feast of Tabernacles (7:1-10:21).

10:23. The vast outer part of the temple had porches on all four sides; the Royal Porch, on the south, had four rows of pillars. Solomon's Porch was on the east side of the temple, with two rows of pillars (as on the west and north sides). The south portico was called Solomon's because people thought that its pre-Herodian masonry had survived from Solomon's temple (*Josephus, *Jewish War* 5.184-85; *Jewish Antiquities* 15.397-400; 20.221). Greek public buildings often included such porches, and they had long been a popular place for public lectures and discussions. Even as early as Hanukkah (10:22), it could be cool in Jerusalem in winter, so people would be especially inclined to walk under the colonnades, as here.

(On avoiding travel in winter, see comment on Acts 27:9.)

10:24. See 8:25; cf. also the discussion of the theme of the messianic secret in the introduction to Mark. These Jews would have either misunderstood his claim or used it to charge him with sedition (cf. 18:29-35).

10:25-27. On hearing Jesus' voice, cf. comment on 10:3-4.

10:28-29. A shepherd who would protect his sheep against any thief or predator would have to be ready to pay a great price (10:12, 15), but this is the price of faithfulness (Jer 23:4). On no one snatching from his hand, compare also Psalm 95:7, where Israel is "the sheep of his hand"; this allusion would fit the mention of hearing Jesus' voice (10:27), since the same verse in the psalm exhorts his people to hear God's voice.

10:30. His hearers might think of the relation between Israel and God, but Jesus' wording about his unity with the Father is too explicit for that: instead he echoes the basic confession of Judaism that God is one (Deut 6:4). For Jesus to be one with the Father (albeit distinct from him) is tantamount to a claim to deity. (He has probably already applied earlier texts about God to himself in this context; see comment on 10:28-29.)

10:31-33. Cf. 5:18, 8:59; as in the other instances, Jesus' opponents understand his claim to deity, even if they do not catch all the ramifications. Hanukkah (10:22) celebrated deliverance from the wicked ruler Antiochus Epiphanes, who made himself to be God; John's hearers, however, know that the Father sent Jesus, rather than he exalting himself (1:14; 5:23, 36; 6:38). Jesus implicitly compares his good work with his opponents' attempt to stone him; ancient defense *rhetoric often contrasted the honorable behavior of the accused with the shameful behavior of the accusers and sought to expose the accusers' own crimes. Ingratitude toward a benefactor was reprehensible, and direct enmity toward a benefactor even more so. The festival honored the Maccabees' good works; Jesus' opponents want to stone him for his (cf. Ex 17:4; Num 14:10; the term used here appears in 2 Sam 16:6, 13).

10:34. On "your law," cf. 8:17. Some employed the term "*law" broadly to include all of Scripture, as here, where Jesus cites a psalm. Psalm 82:6 in context refers to powerful people, probably the kings of the earth viewed as God's divine council; those kings considered themselves divine, but they would perish like mortals. In a Jewish tradition attested in second-century *rabbis, however, this verse was sometimes applied out of context to Israel as recipients of the divine law (God's word at Sinai gave them immortality, but they lost it through disobedience), as Jesus may know. Or Jesus may simply be evading the issue by a further riddle, noting that he has not explicitly defined his words.

10:35-36. Jesus might respond with a standard Jewish "how much more" (*qal vahomer*) argument: if (as you read it) Israel was loosely called "gods," how do you object to me saying that I am God's Son, without even understanding my point? (Even more generally, a Jewish tradition protested that the wicked complain about righteous people calling God their Father; Wisdom of Solomon 2:16.)

Many commentators have argued that Jesus' being "sanctified" or set apart to his mission (cf. also 17:17) may relate to the context of the Feast of Hanukkah, or "Dedication" (10:22). Hanukkah commemorated the consecration, rededication or setting apart (as again holy) of the Jerusalem temple in the time of the Maccabees in the second century B.C. For Jesus as the foundation of a new temple in John, see 2:21 and comment on 7:37-38; such an image would be particularly compelling after the traumatic destruction of the temple in A.D. 70.

10:37-38. Jewish tradition emphasized right motives but allowed that obeying a commandment from inadequate motives was better than not obeying at all.

10:39-42. "Beyond the Jordan" presumably means Perea, in Jesus' day ruled, like Galilee, by Herod Antipas—and well outside the jurisdiction of the Jerusalem leaders.

11:1-16
Announcement of Lazarus's Sickness

Jesus' first sign in this Gospel is at a wedding; his climactic one, at (or more technically, after) a funeral. (In ancient sources, weddings and funerals typified the most joyful and most sorrowful occasions, respectively.) Less cer-

tainly, if Jesus' first sign (water turned to wine) evoked in reverse Moses' first plague (water turned to blood), his climactic sign (raising Lazarus) might evoke Moses' final plague (death, in that case of the firstborn).

11:1. Bethany was close to Jerusalem (v. 18); emphasizing Jesus' Galilean ministry, Mark omits this miracle and is followed by Matthew and Luke. "Mary" was the most common Jewish woman's name in the period; "Martha" is rarer, though attested; "Eleazar" is fairly common, sometimes in the Greek form, "Lazarus." (The three names even occur together, along with others, in a burial cave in Bethany, but we do not know if the names reflect the persons in John 11.)

11:2-5. Visiting and praying for the sick was a pious obligation in Judaism, but Jesus' reputation as a healer is undoubtedly the main reason for informing him of Lazarus's sickness. Informing him would serve as a polite request (cf. 2:3).

11:6. Given the urgent request for a miracle-worker, Jesus' delay may have seemed culturally offensive. Perhaps by the time Jesus receives news, however, and certainly before he could have reached Bethany, Lazarus was already dead (11:14, 17). Lazarus was in the tomb four days by the time Jesus arrived (11:17, 39), people buried corpses on the day of death, and it was only a day's journey each way, just over twenty miles. The journey to Bethany may have taken slightly longer than the journey from there, since it would be uphill (in the Judean hills, Bethany may have been nearly 2700 feet above sea level, whereas the Jordan plain, where Jesus was in 10:40, was roughly 1100 feet below it). For temporary rebuffs to test faith, cf. 2:4.

11:7-8. Although the Jerusalem priesthood was respected in Galilee, it wielded more power and influence in Judea; Antipas, the ruler of Galilee, did not tolerate direct interference in his territory. (In John's day, the Pharisaic establishment was also settled in Judea, where it presumably wielded more influence than in Galilee.)

11:9-10. On walking in darkness and stumbling, see comment on 8:12. Anyone who has walked on unlit paths on a dark night understands the metaphor, but even the language was familiar in first-century Palestine (in the *Dead Sea Scrolls, children of righteousness walk in the light but those ruled by the evil one walk in darkness; 1QS 3.20-21).

11:11-16. Again the *disciples interpret Jesus too literally (v. 12)—although "sleep" was a common metaphor for death in Jewish texts and throughout the ancient world (Greek myth even portrayed Sleep and Death as twin brothers). But even though they may not understand that Jesus' death is the cost of giving Lazarus (and others) life, they are prepared to die with him (v. 16). Even though disciples loved their teachers, this is a rare expression of commitment in practice; in general, Jewish people emphasized only being prepared to die for God and his *law.

11:17-37
Comforting the Mourners

11:17-19. The note of proximity (11:18) may heighten the element of danger (11:8), but also explains the presence of additional "Judeans" in 11:19. Visiting and consoling the bereaved in the days immediately following a close relative's loss was an essential duty of Jewish piety. The neighbors would provide the first meal after the funeral. Lazarus would have been buried on the day of his death.

11:20. The first week of deep grief after a close relative's burial would be spent mourning in one's house, sitting on the floor, while others brought food and sympathy (considered an important element of piety). This custom, called *shivah* (for "seven" days), is continued in Jewish tradition and is very helpful for releasing grief. Mourners abstained from adornment for the next three weeks and from common pleasures for the next year. Because mourners would be present to console the family, Mary remains in the home while Martha slips out.

11:21-22. Prayers for comfort were standard, and this might be the import of verse 22. Conversely, Martha may be asking in verse 22 for her brother's resuscitation, and verse 24 may test Jesus, pressing him further for the favor (2 Kings 4:16; cf. 4:28). Ancient Near Eastern peoples often sought favors from benefactors in such self-effacing ways, as opposed to the more direct modern Western approach ("Give me . . . ").

11:23-27. The common belief of Palestinian

Judaism in this period was that the dead would be raised bodily at the end; indeed, *Pharisees considered those who denied this doctrine (specifically *Sadducees) to be damned for doing so. Apparently most Jews who affirmed future *resurrection also accepted an afterlife before the resurrection.

11:28. Martha informs Mary about Jesus' coming "secretly" perhaps for his safety, but perhaps also because someone needed to remain home to entertain the guests. According to custom, members of the family were supposed to remain home mourning for the first seven days (unless perhaps going to weep at the tomb, 11:31).

11:29-32. The time and consolation of an important religious teacher who had come a long distance would be especially meaningful, though local students and teachers of the *law joined in funeral processions when it was possible for them to do so. Supplicants fell at one's feet (11:32) to beg favors, but one could also fall before God in worship or prayer.

11:33-37. Unlike most individuals, Greek and Roman philosophers emphasized sobriety and remaining calm and untroubled by bereavement; Jewish tradition, by contrast, expressed grief emotionally. Most people regarded as praiseworthy a protagonist who shared others' grief; also, in the ancient Mediterranean world, women's tears were sometimes known to move men to special action. Jesus' "anger" (the normal sense of the term for him being "moved" in 11:33, 38) might be grief over people's unbelief (cf. Num 14:11; Mk 4:40).

11:38-44
Raising Lazarus

11:38. People were often buried in caves. Although some tombs were vertical shafts, as a cave this one probably had the body laying horizontally. The body would be left to decompose for one year, then its bones would be placed in an ossuary (bone box), which in turn would typically be slid into a slot on the wall. Stones (often disk-shaped) covered many tomb openings and would keep out animals, the elements and occasionally robbers.

11:39. The body would be wrapped and left lying on the floor in the tomb's antechamber; only after a year, when the flesh had fully decomposed, would family members return to collect the bones into a box, which they would then slide into a slot on the wall. After four days (11:17), decomposition was well under way, especially because it was probably no longer winter (11:55). Whatever spices they may have used to delay the stench (see comment on Mk 16:1) would no longer be sufficient. Some scholars note a later rabbinic tradition that the soul left the body only after three days; if the idea is this early, the fourth day could emphasize the miracle's greatness.

11:40. Moses promised Israel that they would "see God's glory" when God acted on their behalf (Ex 16:7, though in a context of their initial unbelief).

11:41-42. Lifting one's face to heaven appears in some other ancient Jewish prayers (e.g., Ps 123:1; **Jubilees* 25:11). For the preliminary prayer, cf. 1 Kings 18:36.

11:43-44. The deceased would be wrapped in long cloth strips, often mentioned in ancient Jewish texts. This wrapping was thorough, binding the limbs to keep them straight and even the cheeks to keep the mouth shut; the facecloth may have been a yard square. John's ancient audience would recognize that this tight wrapping would have made it hard enough for a living person to walk, not to mention a formerly dead person coming forth from the entrance to the tomb; this difficulty probably further underscores the miraculous nature of this event. Men could not wrap women's corpses, but women could wrap both men and women, so Lazarus may have been wrapped by his sisters.

11:45-57
The Religious People Plot to Kill Jesus

11:45-46. On the *Pharisees here, see comment on 7:32. Most ancient miracle stories include acclamation but lack rejection, but *New Testament miracle stories often include the latter as well.

11:47-48. The Pharisees and chief priests call together literally a "Sanhedrin," probably referring here to the supreme court of Israel or those of its representatives who are available. Their concern is a legitimate one validated by history: those perceived as political messiahs threatened their own power and Judea's sta-

bility, inviting Roman intervention; the Romans accepted only one supreme king, Caesar. *Josephus testified to this concern of the priestly aristocracy, and one reason Joseph Caiaphas maintained his office longer than any other *high priest of the first century (A.D. 18–36) was that he kept the peace for the Romans. But this is another touch of John's irony (a common ancient literary device): this was their view, not that of the Romans (18:38; 19:12); and although they handed Jesus over to the governor for execution, the Romans ultimately did take away their temple and nation, in A.D. 70, anyway.

Josephus shows that Jewish aristocrats (not unlike Roman ones) plotted to remove those they considered dangerous. Sometimes sympathizers leaked this information to those being plotted against. Historically, we should expect that at least some of the Sanhedrin was involved in Jesus' execution: Romans normally depended on local accusers to bring cases to their attention, and would expect a hearing before the local elite first. Most scholars accept as authentic part of Josephus's comments about Jesus, sometimes including the remark that it was Jerusalem's aristocrats who influenced *Pilate to execute him (*Jewish Antiquities* 18.63-64).

11:49. Various ancient Jewish sources complain about frequent corruption in the first-century high priesthood. The high priesthood, like some Greek priesthoods (e.g., at Eleusis), had originally been a lifelong office. It had never been reduced to an annual assignment, like most priesthoods in Syria or Asia Minor, but John's "priest that year" may poke fun at how the Roman governor had power to change the *high priests, or at how the high priest's deposed relative could still meddle so much in these affairs (18:13); or he may simply mean (with probably the majority of commentators) "high priest in the particular year of which we speak," because officials' terms were used to date events.

The high priest presided over the Sanhedrin. To have a high priest inform his colleagues, "You do not know anything," is the epitome of John's irony.

11:50. Whether one should be sacrificed to protect the many (if, say, the Romans demanded an innocent person be handed over) was an issue of debate in early Judaism, but never in terms of actual murder (11:53). Josephus claimed that King Agrippa II urged his people to forego vengeance concerning injustice for the sake of peace; but Jewish teachers in the rabbinic tradition said not to betray a single Israelite to rape or death even if the result would be the rape or execution of all. The chief priests here think in terms of expediency (a common Greek ground for moral and *rhetorical debate). Many of the chief priests helped control their people to keep peace with the Romans (to whom they also owed their own local political power).

11:51. Here the high priest means one thing on the level of his own hearers, but his words have another meaning that would be more obvious to John's readers: others (both Greeks and Jews) also believed that those appointed as God's representatives could sometimes speak God's truth without meaning to do so. Some Jewish traditions seem to associate *prophecy with the priesthood.

11:52-53. Jewish people expected the gathering of their dispersed people (God's children) in the end time. (John may reapply this spiritually; 1:12.)

11:54-55. The temple courts had countless pools for ritual purification; on this point, cf. also 2:6 and 3:25. Those coming from a great distance, especially in the *Diaspora, wanted to arrive early to ensure that they were pure for the festival; those with corpse impurity would need to arrive at least a week early.

11:56-57. Those speaking presumably could not believe someone as pious a religious teacher as Jesus is popularly supposed to be would not show up for one of the great pilgrimage festivals required by the *law, especially when he had to come only from Galilee.

12:1-11
Mary's Gratitude, and Dying to Live

For more details, see comment on Mark 14:1-11. Three kilometers east of Jerusalem, Bethany was one of those villages near Jerusalem where Passover pilgrims could spend the night with hosts. Even six days before the festival, Jerusalem would be filling with pilgrims (esp. those needing purification and those from the *Diaspora, who could not calculate the exact

timing of arrival but needed to avoid arriving late). Given 18:28 and 19:14, this meal may be Saturday evening after sundown (hence allowing Martha to serve). Just possibly this could portray Jesus as entering Jerusalem (12:12) when the Passover lambs were set aside (Ex 12:3, 6), but this interpretation is not clear.

12:1-2. One typically "sat" at normal meals; one "reclined" on couches at special meals like feasts or banquets. Unless the Gospel writers simply adopt Greek language for the meals consistently (Greeks normally reclined), Jesus was invited to many banquets—this one probably in his honor. Early traveling teachers were often invited to lecture at meals in return for free meals and lodging. In that culture, women often served at table.

12:3. The Roman "pound" (NASB) or "pint" (NIV) may have been roughly 324 grams, about twelve ounces. A flask would normally contain not more than an ounce, so Mary is tremendously extravagant here. Actual "myrrh" could take the form of either powder or liquid, perfume or ointment; its manufacturers derived it from resin from a sort of short balsam tree in the horn of eastern Africa and southern Arabia. John, however, employs the Greek term here more generically, the specific aromatic substance being spikenard, a very expensive fragrant oil from a plant in the mountains in northern India.

It was common to anoint the heads of important guests, but for their feet a host normally would simply provide water. Expending such expensive perfume on feet was shocking; she treats even Jesus' feet as worthier than a normal head. (Given the following context, Mary may have thought of a royal anointing.) Further, religious Jews resented married women who uncovered their heads and exposed their hair to men's gazes; because Mary's brother and sister but not her husband are mentioned, she may well have been unmarried (thus young, widowed, divorced, or—rare as this was for women—adult yet never married); but acting thus toward a famous (albeit single) *rabbi might still raise some pious eyebrows. In any case, normally only servants (see comment on 1:27) would even touch the master's feet with their hands, much less their hair.

12:4-5. Because such ointment would have been so expensive, scholars often think that it was a family heirloom. In any case, it represented nearly a year's wages for an average worker and would be reserved for only a dramatically special occasion.

12:6. Some rabbis delegated their school's financial concerns to their *disciples; some other groups, like the *Essenes and some Greek philosophers, held property in common. Only those whose virtue was most trusted were permitted to keep group funds (cf. 13:29); thus Judas's treachery is all the more scandalous.

12:7. Kings (cf. 12:13-15) were anointed, but so were corpses; fragrant spices could be added to help cover the initial odor of decomposition. On anointing corpses, see comment on Mark 16:1; they were first anointed to clean them and then washed with water. This was an important act on Mary's part; those executed as criminals may have sometimes been denied anointing before burial (though not Jesus; see 19:39).

12:8. Jesus' reply alludes to Deuteronomy 15:11, which urges generosity to the poor, who will always be in the land; the context promises that God will bless his people if they care for the poor. Jesus thus does not play down giving to the poor but emphasizes his impending death; he must be his followers' first commitment.

12:9-11. The religious leaders decide to have Lazarus killed. John's irony: those who receive life by Jesus' death must die because of it; witnesses get martyred. Irony was a common ancient literary device.

12:12-22
The World Follows

12:12-13. Branches were also waved to celebrate triumphs or in homage to rulers (cf. 1 Maccabees 13:51; 2 Maccabees 10:7). Large palm branches were used at the Feast of Tabernacles in the fall (cf. Lev 23:23, 40), often brought from lower-elevation Jericho; some pilgrims constructed temporary shelters for Passover (*Josephus, *Jewish Antiquities* 17.213, 217), for which they could have brought such branches; or local branches could be used. The branches described here are small enough for the colt to walk on. Palm branches, which had been one of the nationalistic symbols of Judea since the days of the *Maccabees, were consistently used to celebrate military victories and

probably stirred some political messianic hopes among the people. (Carrying branches was also part of the worship at the feast depicted in Ps 118:27.)

Pilgrims to the feast were typically welcomed by crowds already there, so it is unlikely that the whole crowd recognized the significance of Jesus' entry. Nevertheless, Jesus was well-known, especially among the Galileans who had come to the festival. In view of the crowd's acclamation in 12:13, the image that may have come most readily to the minds of John's ancient hearers is probably that of a royal entrance procession. Hopes for the restoration of the Davidic *kingdom also ran high at this time of year. "Hosanna" means "Please save!" Although the expression could be appropriate for imploring a king for deliverance (cf. the Hebrew of 2 Sam 14:4; 2 Kings 6:26), it could also address God, which is how it functions in Psalm 118:25. This Hebrew term and "Blessed is he who comes in the name of the Lord" come from Psalm 118:25-26. Psalms 113–118, called the Hallel, were regularly sung at Passover season, so these words would have been fresh in everyone's minds.

12:14-16. One expected military heroes to ride horses or be drawn in chariots; Jesus came as a meek, nonmilitary official would, following Zechariah 9:9. (Later rabbis also took Zech 9:9 as messianic, due to the mention of the king.)

12:17-19. Again employing irony (a literary technique common in antiquity, as it is today), John lets the *Pharisees denounce themselves: "You do nothing profitable!" Their complaint that the world has begun to follow Jesus leads into 12:20.

12:20. Although some suggest that these "Greeks" are Jews who live in the Greek East, they are probably ethnic or cultural Greeks (the normal sense of the term), God-fearers not yet fully converted to Judaism who nevertheless would come to worship at Jerusalem (cf. Acts 8:27). Many of the attending "Greeks" could be from the region, including the Decapolis and larger Syria. Jews and Greeks were known for their mutual hostility in Palestine, nearby Syria and Egypt.

12:21-22. Philip is one of the only disciples of Jesus with a Greek name. Until A.D. 34 (i.e., after these events), Philip's town of Bethsaida belonged to the tetrarchy of Philip rather than that of Herod Antipas; the town would have had contact with the predominantly *Gentile Decapolis. The cities of the Decapolis were culturally Greek. The announcement of verse 21 prompts Jesus' knowledge that his hour has arrived (v. 23); his mission has begun to touch the whole "world."

12:23-34
Jesus' Death Approaches

12:23-26. On "the hour" see 2:4; on "glory" see 1:14. "Glorified," like "lifted up" (v. 32), refers back to the *Septuagint of Isaiah 52:13, which prefaces the death of the suffering servant (Is 53), whom early Christians recognized as Jesus. For most people in the Roman empire, crucifixion, where one was hanged naked to die slowly in front of crowds, was the most shameful form of death; but for John, it reflects Jesus' glory.

Grain images were naturally common in antiquity. Technically (from a botanical standpoint), an embryo is already growing in a seed of wheat when it falls; it usually breaks through the seed coating after two days in moist soil. The text uses the image in a way more directly intelligible, however, for Jesus' and John's audiences. As in 12:25, some others also recognized that losing one's life in this world preserves it for the greater reward of *eternal life (**1 Enoch* 108:10; **2 Baruch* 51:15-16).

12:27. Ancient philosophers and biographers often praised those who were not troubled in the face of death (in contrast to the Gospels).

12:28. Prayers for the glory of God's name were common (see comment on Mt 6:9). Jewish tradition often discussed voices from heaven, which were frequently regarded as a substitute for *prophecy. (See comment on Mk 1:11 for more detail.)

12:29-30. In ancient Jewish stories, God often answered prayers by sending angels, which may have seemed less dramatic to some of his hearers than a voice from heaven. (On the persistent misunderstanding of the crowds, see comment on 3:9-10.) Thunder sometimes appears in theophanies, and God's voice sometimes sounded like thunder (2 Sam 22:14; Job 37:2, 5; 40:9; Ps 18:13; 29:3-7; also in several Sibylline oracles). (Greeks also associated thunder

with the chief deity, in their case, Zeus.)

12:31. God is the ruler of the world in nearly all Jewish texts, but these texts also speak of fallen angels ruling much of the world under his decree and recognize that the prince of the evil angels (i.e., *Satan, also called Sammael, etc.) ruled most of the peoples in the world except Israel (or, in the *Dead Sea Scrolls, all but the remnant). John would agree that God has always been ultimately sovereign over all; but here he speaks of Satan's dominion in human affairs and of the present defeat of demonic spiritual forces, which Judaism expected only in the time of the *kingdom.

12:32-33. The "lifting up" (also 3:14; 8:28) alludes to Isaiah 52:13 and refers to being lifted up on the cross. This fits the allusion to Isaiah 52:13 in "glorified" (see comment on 12:23-27) as well. Ancients (e.g., *Cicero) spoke of people being "lifted up" on a cross, and sometimes ancients played on the expression: lifting up could refer to hanging or to exaltation (Gen 40:20-22; Gentile writers).

12:34. The *Old Testament predicted that the *Messiah's rule would be eternal (Is 9:6-7; cf. 2 Sam 7:16); so also the *Son of Man's (Dan 7:14). (Especially in the time of John and later, some Jewish teachers moved away from identifying the Son of Man with the Messiah; no less a rabbi than *Akiba was reproved by his colleagues for supposing that the Son of Man, like God, would receive his own throne.)

12:35-50
Belief and Unbelief

12:35-36. The Dead Sea Scrolls also contrast light (symbolizing good) and darkness (symbolizing evil), calling the righteous "children of light" and their opponents "children of darkness." The former "walk in the light" and the latter "walk in darkness." Jesus' hearers would easily understand his language.

12:37-38. Isaiah 53:1 is from the same passage to which "glorified" and "lifted up" refer (Is 52:13; see comment on 12:32). The point is: Israel's very unbelief in the servant-Messiah fulfills Scripture.

12:39-40. On the text (Is 6:10), see comment on Mark 4:12. At points the quotation follows the Hebrew as opposed to the Septuagint translation into Greek. John omits Isaiah's "deaf" image, probably to focus on the blindness image that recalls his own discussion in 9:39-41.

12:41. Isaiah 6:1-5 refers clearly to Isaiah seeing a vision of God, the Lord of hosts, in his glory when he received this message, but John explains that this manifestation of God was the Son, Jesus (v. 41), also seen by Abraham (8:56) and Moses (see comment on 1:14-18). The Septuagint of both Isaiah 6:1 and 52:13 speak of "glory" or being "glorified"; the former text applies to God and the latter to God's "servant." Both texts also speak of being "lifted up" or "exalted," as does Isaiah 57:15 (referring to God). Ancient Jewish *midrash, which interpreted texts based on shared key terms, could have treated the servant as divine (though for theological reasons probably only the Jewish Christians would have done so).

12:42. Because John selects details most applicable to his own day, it appears that not even all the *synagogue leaders of his time are of one mind about believers in Jesus. Those who are not hostile to the Jewish Christians, however, seem to remain publicly silent on the issue. The admission that even some of their opponents recognize the truth would encourage John's audience in their situation (see comment on 9:22).

12:43. The Greek word translated "glory" (NRSV) or "praise" (NIV, KJV) can also be translated "reputation" or "honor" but contrasts here with Jesus' glorification (12:23). Ancient moralists sometimes condemned those who sought much glory; but achieving honor and status and avoiding shame were central obsessions, especially in urban masculine culture.

12:44-45. Many scholars believe that 12:44-50 recapitulates a number of major themes in the Gospel. Ancient writers often summarized or recapitulated their argument at the end of a work or of a section. Jewish literature portrayed personified, preexistent divine Wisdom as the image of God (Wis 7:26); others, like Moses, could reflect his glory, but Jesus is the glory Moses and others saw (12:41, 46; cf. 1:18 and comment on 1:14-18).

12:46. On the "light," see comment on 8:12; on the contrast of light and darkness as a common image for God's *kingdom versus that of his opponents, see comment on 12:35-36.

12:47. Judaism believed that God's *law was the standard by which he would judge his

people at the end time; Jesus thus presents his words as equivalent to those of God.

12:48-49. One was to receive an agent or ambassador with the honor due his sender. An agent or ambassador was also expected to represent his sender accurately.

12:50. For life in God's word, see comment on 1:4. Rabbis sometimes explained that keeping even the smallest of God's commandments warranted eternal life (by which they meant life in the world to come), whereas disobeying even the smallest forfeited that life. Jesus describes his personal commission from the Father similarly.

13:1-11
Footwashing

John intertwines foreshadowings of the betrayal and cross with the footwashing. Jesus follows Mary's example of servanthood (12:3).

13:1-2. Before the banquet, diners would normally wash a hand, eat appetizers, and then recline (13:12) and wash both hands for the main meal. (Because they reclined and had only one hand free, those preparing the food sliced it before the meal.) Meals could be accompanied by music, lectures, other entertainment, or deep discussion; Jesus here provides a teaching session.

13:3-5. The couches would be arranged around tables containing the food, with the upper part of each person's body facing the food and their feet away from the table. Jesus would go to the outside of this circle to wash each person's feet. A wealthy home might recline three or four people on each of three large couches; whether couches were available here (or mats, or cloaks), the arrangement may be similar. The person would lean on the left elbow, leaving the right hand free to reach food on the table.

After travelers had come a long distance, the host was to provide water for their feet as a sign of hospitality, as exemplified by Abraham (Gen 18:4). Yet loosing sandals and personally washing someone else's feet was considered servile, most commonly the work of a servant or of servile or submissive persons (cf. 1 Sam 25:41). Travelers' sandals need not be covered in dung, as some scholars have suggested (although in Rome people were known to occasionally empty chamber pots from their windows, sometimes to the misfortune of passersby below). Side roads were very dusty; the main streets of Jerusalem, however, would have been kept clear of human waste, especially in the Upper City, where Jesus likely ate this Passover meal historically. (Finding an upper room sufficiently large to host all the *disciples would have been more difficult in the poorer Lower City.) In any case, travelers and people walking in the streets normally washed their feet when entering a home. Jesus' removing his outer garments to serve them would also appear as a sign of great humility before them.

By so serving, Jesus prefigures his death as the suffering servant of Isaiah 53 on behalf of the many. Jesus' milieu celebrated honor and feared shame. Unlike most elite men in Greco-Roman society, Judaism valued humility; but like other societies, it also upheld societal roles. Jesus overturns even positions of social status. Rabbi Judah ha-Nasi (about A.D. 220) was said to be so humble that he would do anything for others—except relinquish his superior position; seating according to rank was crucial. Jesus goes beyond even this.

Ancient evidence suggests that Jesus may have poured water over the feet into a basin. Sometimes one would pour cold water into the basin first, and then hot water. Possibly Jesus uses a basin used for handwashing before the meal.

13:6-8. Jesus' act violates cultural status boundaries so thoroughly (see comment on 13:3-5) that Peter finds it unthinkable.

13:9-11. The "bath" here may allude to ceremonial washing that Jesus and the disciples had undergone before the feast (11:55), but Jesus applies it in a spiritual sense. This figurative sense of cleansing was common enough that the disciples should have been able to understand his meaning. John's repetition of Jesus' statement of 13:10 in different words in 13:11 is not surprising; ancient writers valued variation and few people expected casual quotations to follow exact wording (cf. also Lk 24:46-49 with Acts 1:4-8; Gen 39:17-19; 1 Sam 15:3, 18).

13:12-20
The Meaning of Footwashing

13:12-14. *Disciples normally served their teachers, after the model of Elisha serving

Elijah and Joshua serving Moses. One expression of service, however, was not required even of disciples: dealing with the teacher's feet; Jesus goes beyond the service expected even for disciples. Although people often sat on chairs, they normally "reclined" (as here) for banquets (like Passover).

13:15. Disciples were expected to learn by imitating their teachers.

13:16. Some slaves were prominent when compared with free peasants, but any authority slaves exercised was derived from their masters, and slaves were always subordinate to their masters. An agent was always subordinate to his sender, his authority limited to the extent of his authorization.

13:17. The literary form of "beatitude" was common in the *Old Testament and early Judaism. Judaism also emphasized that one should not only know but also obey God's *law.

13:18. Here Jesus cites Psalm 41:9, a psalm of a righteous sufferer; lifting up one's heel to another was an act of disdain (cf. Mk 6:11). Betrayal by a friend sometimes happened, but was counted the most heinous form of betrayal. To eat at table with another formed a permanent covenant of peace (sometimes ideally extending even to descendants), so to betray one's host at a meal was especially treacherous. (To give one example of the covenant bond: two warriors about to engage each other in battle relinquished the fight after learning that one's father had hosted the other's at table a generation earlier.)

13:19. Jesus' wording here evokes Is 43:9-10, where God announced the future in advance (cf. Is 41:26; 44:7, 11; 48:3-7) so that his people might know that he alone was God.

13:20. In ancient cultures, one responded to agents, ambassadors or other representatives according to one's feelings toward the person who authorized them.

13:21-30
The Betrayer's Mission

13:21-22. Betrayal by one's own *disciple would be a cause of embarrassment and reproach in the ancient system of honor and shame. Greek philosophers stressed remaining always tranquil and untroubled in spirit, but not everyone in antiquity shared this value. Although the Fourth Gospel stresses Jesus' deity, it also stresses and frequently illustrates his humanity (1:14). In the *Old Testament God's passionate feelings also frequently surface (e.g., Judg 10:16; Is 63:9-10; Jer 2:30-32; 9:1-3; Hos 11:8).

13:23. Men would recline (on couches, where available) at feasts. (According to traditional Greek custom often observed in the eastern Mediterranean, women would not dine in the same room with a gathering of men outside their family; this custom was changing in some areas, however. Passover was a more family-oriented setting.) Each person, facing to the right, would recline behind the person to his right, but with the head further forward on the couch; thus the beloved disciple could lean his head back and be even with Jesus' chest. (They would lean on the left elbow with the right arm free. They could not easily, then, cut up their own food; it would come presliced at the banquet, and they could normally eat with their fingers.) This beloved disciple (presumably John) has one of the most honored positions at the feast, perhaps implicitly contrasting him with Peter in 13:24. (Ancients did not always compare only good and bad, but, as in this case and in 20:4-8, sometimes good and better.) Given verse 26, Judas may have the position to Jesus' left. If so, Jesus offers Judas one final expression of love; the position to the left of the host was often the most honored position in a banquet.

13:24-27. For the host to dip a piece of bread in the common bowl (on Passover, the bowl may have contained *charoset,* a sweet mixture, and bitter herbs) and hand it to someone was normally a sign of honor to the person who received it. Jesus is in complete control here (cf. Mk 14:20).

13:28-30. Some pietists would do a charitable work before Passover to secure God's favor. It would not have been customary to go outside on Passover night (Ex 12:22), and the bazaars would have been closed then, but in John's *narrative (unlike Matthew, Mark and Luke) Passover apparently begins the following day (18:28; see comment there). (Many interpreters believe that John also thinks on a symbolic level here; cf. 3:19-21.) A group's treasurer (see on 12:6) being a thief could generate scandal, though Judas is about to commit an even more heinous betrayal.

13:31-35
Glory and Love Defined

The context of these verses is betrayal and Jesus' death.

13:31-32. On glorification, see comments on 1:14 and 12:23-27.

13:33. Teachers sometimes called their disciples "children" (cf. 1 Jn 2:1), and disciples called teachers "my father" (cf. Mt 23:9). Jewish literature included "testaments" of dying or departing famous heroes of the past giving important teachings to their children, to be read by future generations. Others have simply compared the more general form of farewell discourses; because Jesus is leaving, it is natural for him to provide final instructions to his disciples, whether or not John consciously follows the testamentary form here.

13:34-35. The *Old Testament had commanded love (Lev 19:18); what makes Jesus' commandment new is the new standard and example: "as I have loved you"—in the context, to the point of laying down one's life for others. Jewish ethics emphasized learning by imitation, including imitating God's good character. Disciples were expected to learn by following the examples of their teachers. (In antiquity, love for one's own group did not need to imply that one not love those outside it.)

13:36–14:1
Following to the Cross?

13:36-37. Although Peter is sure that he will follow Jesus to the death, he does not understand that death is precisely where Jesus is going (14:5). For the misunderstanding motif, see, for example, 3:4; for background on it, see the introduction to Mark. Teachers often lectured in response to questions.

13:38. The first night cock crowing in Jerusalem occurred by about 12:30 a.m., according to some reports (others place it later), though only night watchmen were normally awake to hear it (most people went to sleep at sundown, except on special nights like Passover). Other crowings also occurred during the night. That the rooster crowed to mark the advent of dawn is more widely reported in ancient sources because this was the cock crowing most people knew. In either case the point is that Peter's denial will follow almost immediately after his promise not to deny Jesus.

14:1. "Your" is plural, and thus Jesus addresses all the *disciples; in the *Old Testament God often told his servants not to fear. But to pair faith in Jesus with faith in God would sound blasphemous to most ancient Jewish hearers (although they could have found a less offensive way to interpret the phrase; see Ex 14:31; 2 Chron 20:20).

14:2-7
Where Jesus Is Going, Enigmatic Version

As the chapter proceeds, it becomes evident that the coming again specifically in view in verse 3 includes Jesus' coming after the *resurrection to give the *Spirit (v. 18); but this point is not immediately clear at the beginning (v. 5).

14:2. The "Father's house" could evoke the Father's household (8:35) or the temple (2:16), where God would forever dwell with his people (Ezek 43:7, 9; 48:35); in any case, it designates the place of his presence. (A small number of early Jewish texts also speak of future homes for the righteous in God's presence; e.g., versions of **1 Enoch* 91:13.) The "dwelling places" (NASB, NRSV) might allude to "rooms" (NIV, GNT) in the new temple, where only undefiled ministers would have a place (Ezek 44:9-16; cf. 48:11). Whatever the particular background of the image (perhaps simply an ordinary house), John presumably understands this language figuratively for being in Christ, where God's presence dwells (2:21); the only other place in the *New Testament where this term for "dwelling places" or "rooms" occurs is in 14:23, where it refers to the believer as God's dwelling place (cf. also the verb "dwell"—15:4-7; see further the comment on 14:6-7).

14:3-4. In this context, John probably means not the Second Coming but Christ's return after the resurrection to bestow the Spirit (14:16-18). In Jewish teaching, both the resurrection of the dead (which Jesus inaugurated) and bestowal of the Spirit indicate the arrival of the new age of the *kingdom. Jesus explains where he is going and how they will come to be there in 14:6-7.

14:5. *Disciples asked their *rabbis questions to clarify the teaching. Four questions

were also asked in the extant household Passover celebration, but they differed from the questions here and the shared number may be mere coincidence (13:36-37; 14:5, 8, 22).

14:6-7. Jewish sources contrast the way of righteousness (wisdom, truth, etc.) and the way of falsehood (evil, etc.); Scripture and true Wisdom informed people of the righteous way. Some think the "way" might also echo Isaiah's way back to the new Jerusalem through the wilderness (cf. 1:23). In this case the background is less critical than the force of the image, however. Jesus answers Thomas's question thus: The Father is where I am going, and I am how you will get there.

"Truth" characterized God's nature (e.g., Ex 34:6; Is 65:16) and later came to be even a Jewish title for God; it is uncertain if it was in use this early. The primary significance of the statement, however, is that Jesus is the embodiment of the truth, God's covenant faithfulness (1:17), which was embodied in God's "word" in the *Old Testament (17:17; Ps 119:142, 151). Just as Judaism affirmed that there was only one God and thus one right way (his *law, either in the short version supposedly given to the *Gentiles or the full version given to Israel), Jesus here affirms that he is the only way to the only God.

14:8-17
Revealing the Father Clearly

14:8. John may wish his readers, most of whom were more immersed in the Bible than most modern readers, to think of Exodus 33:18, where Moses asked to see God's glory; see comments on 1:18 and 14:21-22. Philip might thus request a theophany.

14:9-10. Various Jewish sources portrayed divine Wisdom (see comment on 1:1-18) as the image of God. In the context of an allusion to Ex 33:18 in Jn 14:8, Jesus is the glory that Moses saw (see comment on 1:14-18). The *Old Testament sometimes spoke of God's Spirit inspiring or anointing the prophets for his work; Jesus' words here go beyond that idea.

14:11. God had earlier granted signs to invite faith (e.g., Ex 4:4-9; 19:9; Num 14:11).

14:12-14. Here scholars debate whether "works" (KJV, NASB, NRSV) refers to righteous deeds, as often in Judaism (e.g., 8:39), or to miraculous works such as Jesus performed (5:17; 10:32), or to both. (The works are probably quantitatively greater because Christ's work is multiplied through *all* his followers.) In this context Jesus' words are an invitation to radical faith: Jewish tradition allowed that some very pious teachers could receive from God almost anything they asked because of their intimate relationship with him, but never applied this possibility to the majority even of the pious. *Magic had no emphasis on relationship with the power addressed and sought only to manipulate forces for the manipulator's ends (contrast 14:15). A broad invitation to confident faith such as appears in this passage was not common in antiquity. (Cf. 2 Kings 2:9.)

Ancient Judaism used "name" in so many overlapping senses that the context tells us more here than the background. In the Old Testament "name" often meant reputation or renown, and when God acted "on account of his name" it was to defend his honor. "In the name of God" could mean as his representative acting on his behalf (Ex 5:23; Deut 18:19-22; Jer 14:14-15), according to his command (Deut 18:5, 7), by his help (Ps 118:10-11; Prov 18:10) or using his name in a miraculous act (2 Kings 2:24). (When rabbis passed on traditions "in the name of" other rabbis it simply means that they were citing their sources, their basis of authority for the tradition.) In prayer, calling on a deity's name simply meant addressing him (1 Kings 18:24-26, 32; 2 Kings 5:11; Ps 9:2; 18:49). In the Old Testament and later Judaism "Name" could also simply be a polite and roundabout way of saying "God" without uttering his name.

In this context "name" might mean something like: those who seek his honor and speak accurately for him, who are genuinely his authorized representatives. Nothing could be further from the pagan magical use of names that sought to manipulate spiritual forces for one's own ends.

14:15. Here Jesus evokes another Old Testament idea, with Jesus filling the role of God: those who love God keep his commands (e.g., Ex 20:6; Deut 5:10, 29; 6:5; 11:1, 13, 22; 13:3-4; 19:9; 30:6, 14). In Ezekiel 36:27, the gift of the *Spirit enables one to keep the commandments (Jn 14:16).

14:16. The background for calling the Spirit "advocate" (NIV; NLT) or "Helper" (NASB, ESV)

is debated; some suggest a courtroom image: one sense of the term is "advocate," "defending attorney"; see comment on 16:8-11. Much more generally, it can mean "intercessor" or even simply "helper." In Jewish depictions of God's heavenly court, angels and divine attributes could serve as accusers or advocates, but *Satan is the primary prosecutor, and God (or his favored attribute of mercy, or Michael) defends Israel. Here the Spirit is "another" advocate like Jesus (cf. 9:35-41, where Jesus defends the man put out of the *synagogue and accuses his accusers); Judaism was also familiar with the idea of a "successor" who carries on a predecessor's work. Although Judaism normally viewed the Spirit as an aspect of God rather than as a person, this passage goes beyond that perspective (cf. Rom 8:26).

14:17. The Spirit of truth guides God's people in the way of truth—into fuller revelation of Jesus, who is the truth (14:6; 16:13). The *Dead Sea Scrolls contrast the spirit of truth with the spirit of error (cf. 1 Jn 4:6). The Old Testament sometimes (rarely) spoke of the Spirit of God dwelling in or filling some servants of God (e.g., Ex 31:3; 35:31; Num 27:18; probably Gen 41:38; Dan 4:8-9; cf. also several early Jewish texts); this was promised for all God's people in the future (Ezek 36:27).

14:18-31
Jesus' Coming and Revealing

14:18-20. "Orphan" language (v. 18) sometimes extended figuratively to other forms of bereavement. In the *Old Testament, "orphans" (NASB, NIV) were powerless and needed a legal defender. The context here refers to Jesus' coming to them and leaving his presence in them by the *Spirit (20:19-23). For background on the Spirit dwelling in people, see comment on 14:17.

14:21-22. *Apocalypses and other Jewish sources sometimes spoke of mysteries revealed to special persons. Israel believed (rightly) that God had given them a special revelation in the *law that the nations did not have. The language of "manifesting" (KJV) or "revealing" (NRSV, GNT) himself to them probably recalls God's revealing himself to Moses on Mount Sinai (see comment on 1:14).

14:23-24. Jewish teachers spoke of God's presence residing in a special way among those who studied his law, and especially in the temple; Jesus speaks of God's presence residing in each believer continually as something like an individual temple for his presence. That God dwelt in his temple and among his people was standard Old Testament teaching (cf. Ex 25:8; Lev 26:11-12; Ezek 37:27-28); that his laws were written in the hearts of his faithful and that his Spirit moved among his prophets were also taught in the Old Testament. But Jesus broadens and personalizes this perspective in a manner unparalleled in extant ancient literature. The *Dead Sea Scrolls speak of the Spirit being active among the remnant of God's people, but this activity is not nearly as extensive as the prophetic and charismatic activity found in the New Testament. Instead, the fulfilment is more like Ezekiel 36:27, where God's Spirit dwells in all his people.

14:25-26. Some of the functions Jesus lists here for the Spirit were attributed in Judaism to divine Wisdom (e.g., Wis 7:21; 8:7; 12:2), which was associated with God's Spirit as well as his law in some popular, pre-Christian Jewish writings (cf. also Neh 9:20; Ps 143:10). In a Jewish context, "teaching" could include elaborating and expounding; rote memorization was also an important part of ancient learning.

14:27. Jewish teachers highly extolled peace (especially in terms of relationships with others). Many philosophers and some rabbis, such as *Hillel (according to later tradition), also valued tranquility and/or peace. The Roman empire promised peace in its propaganda but was usually at war.

14:28-31. For verse 29, see comment on 13:19; for verse 30, see comment on 12:31; for "love" and "commandments" in verse 31, see comment on 14:15. Jesus' obedience to the Father includes his mission to the cross in 14:31, where perhaps he also summons his followers to participate in that call ("let *us* go"). Thus the world could know Jesus' true identity (12:32-33; 17:21).

15:1-8
Dwelling in the Vine

The word "abide" (KJV, NASB, NRSV), "remain" (NIV, GNT) or "dwell" (15:4-10) is the verb form of "dwelling place" (see comment on 14:2, 23). In the *Old Testament God had promised to

dwell with his obedient covenant people always (Ex 25:8; 29:45; Lev 26:11-12; Ezek 37:27-28; 43:9). The Old Testament and Jewish literature sometimes portrayed Israel as a vineyard (e.g., Is 5:7; Jer 12:10), or less frequently as a vine (e.g., Ps 80:8; Ezek 19:10; Hos 10:1). Nevertheless, the image of organic union elaborated here goes beyond most available analogies (though see comment about the *Spirit at 14:17).

15:1. As just noted, the Old Testament and Jewish literature sometimes portrayed Israel as a vineyard (e.g., Is 5:7), or less frequently as a vine (e.g., Ps 80:8; Hos 10:1), and God as the vinegrower (Is 5:1-3). A celebrated golden vine in the temple may have symbolized Israel's power, and Jesus may here portray the *disciples as the remnant of Israel (see comment on 15:16). Also relevant in light of John's depiction of Jesus in 1:1-18, Wisdom could be portrayed as a fruit-bearing vine (Sirach 24:17), inviting others to come to her, eat and drink, and obey (24:19-22). But Wisdom is compared with various trees (24:13-17) and invites hearers to eat her fruit, not bear it (24:19-21). Again, therefore, the image of union in this passage is more organic than in the most closely analogous texts. The most basic point of the imagery is the obvious dependence of branches on the vine for their continued life.

Vineyards were pervasive in the Mediterranean world, including in Judea and (where most scholars locate John's audience) in Asia Minor. Small farmers, including most Galileans, had vines along with fig and olive trees.

15:2-3. The three common domestic fruit "trees" were the fig, olive and vine, and of these, the olive and vine (esp. the latter) required most attention. Those tending vines (and some kinds of trees) would cut away useless branches lest they wastefully sap the strength of the plant; in the long run, this diverted more strength into the branches that would genuinely bear fruit. The weaker the vine, the more harshly one pruned it, reducing short-term fruit but ensuring a greater measure of fruit the following year. Farmers pruned in two different ways: they pruned fruitful branches to make them more fruitful, and (as in 15:6) they removed unfruitful branches entirely.

In the spring in Italy, farmers would tie vines to their supports (trees or, more often, wooden posts) and offer an initial trimming; further pruning of tendrils could occur during summer and as late as October. Some advised pruning only when the vine was strong enough to bear it, with the strongest pruning just after the fall vintage. In Palestine, fruitless branches were removed especially during winter.

Here is another of John's plays on words (see comment on 3:3): the term he uses for "prunes" normally means "cleanses," reflecting a motif in John (e.g., 2:6; 13:10). Although the term applied to ritual purity, both Greek and Jewish sources also applied it to inward purification of the heart. The Old Testament prophets often called on Israel to "bear fruit" for God (e.g., Is 27:6; Hos 14:4-8); in an agrarian culture, one might depict God's *law as bearing fruit in the righteous (**4 Ezra* 3:20).

15:4-8. Dead, fruitless branches of vines are obviously of no use for carpentry; their only possible value is for fuel. Jewish teachers believed that God had awful punishments in store for apostates, because those who had known the truth and then rejected it had no excuse (cf. 15:22-24; for burning, see "*Gehenna" in the glossary). Although it may be coincidence based on common customs, the destruction of vine branches appears in an image of judgment in Isaiah 18:5.

15:9-17
Abiding in Love

15:9-11. Keeping the commandments (here epitomized as love) was supposed to bring joy (Ps 19:8 and often in later Jewish teachings).

15:12-13. Dying for others was considered heroic in Greco-Roman stories, and friendship to the death (dying with or, better when feasible, for a friend) was considered a high moral value (see comment on 15:14-15). But Jewish ethics did not usually share this general Greek emphasis, although it emphasized dying for the *law if need be. Rabbi *Akiba (within a few decades of John) pragmatically argued that one's own life took precedence over another's. Although it is unlikely that Jesus is directly influenced by the Greek view of friendship, John's *Diaspora audience probably would have been familiar with it and so would have appreciated his point.

15:14-15. There were different kinds and levels of friendship in antiquity, and Greco-Roman writers often commented on the topic. Friendship could involve political or military alliances and was often pursued in self-interest; kings or lesser *patrons who supported dependents called *clients were (especially in Roman circles) said to be engaging in "friendship"; *Pharisees also met in circles of "friends." The traditional Greek concept of friendship emphasized equality among companions, and some philosophical schools like the *Epicureans especially emphasized such friendship. Patron-client friendships were unequal, a socially greater supporting a lesser; thus friendship need not involve equality of rank.

The main ideals of friendship in ancient literature included loyalty (sometimes to the death), equality and mutual sharing of all possessions (cf. 16:14-15), and an intimacy in which a friend could share everything in confidence. Jesus especially emphasizes the last point in 15:15, where he distinguishes a friend from a servant, who might also be loyal but would not share intimate secrets. Jewish writers like *Philo emphasized friendship with God, sometimes even contrasting it with servanthood, as here.

The *Old Testament called two people friends of God: Abraham (2 Chron 20:7; Is 41:8) and Moses (Ex 33:11). Jewish tradition amplified on the friendship and intimacy of both of them with God. If an Old Testament allusion is in view here, it may be to Moses (see comment on 14:8). In another familiar source, Wisdom made people friends of God and prophets (Wisdom of Solomon 7:27). If this text emphasizes Jesus' sharing his heart with his followers, the context communicates the character of his heart: love.

15:16-17. Jewish teachers emphasized repeatedly that Israel was chosen and commissioned by God (initially in Abraham [Neh 9:7], the secondary possible allusion in v. 15, though the emphasis on Israel's chosenness is more pervasive than this); see comment on 15:1. Although Jesus, like most Jewish teachers, welcomed most listeners, he chose his own core *disciples. This language evokes OT texts about God choosing his people (Ps 135:4), normally not because of their own merit (Deut 7:6-7; cf. 9:5); this was a special privilege (Deut 14:2). (Sometimes God is also said to choose individuals or groups within Israel for tasks, e.g., Ex 35:30; Deut 18:5; 21:5; 1 Sam 10:24; 1 Chron 15:2; 28:10; 29:1; 2 Chron 29:11.) It can give the disciples confidence in their fruitfulness (Judas left the group in 13:30). On asking "in the name," see comment on 14:12-14.

15:18–16:4
The World's Hatred

Ancient writers often liked to lay comparisons and contrasts side by side. After emphasizing unity, love and friendship in 15:1-17, Jesus turns here to the world's hatred.

15:18-20. Given the sort of political alliances characteristic of Mediterranean urban life, friendship with someone (15:13-15) entailed also sharing common enemies. Jewish people often believed that the *Gentile nations hated them because they were chosen and sent by God and suffered on his account. They would resent Jesus' grouping most of them with "the world," but other persecuted minority sects in Judaism (like the *Essenes at *Qumran) also included the majority of Israel, whom they regarded as apostate, as among the world, their enemies.

15:21. Jewish people spoke of suffering (even martyrdom) for the sake of God's name (e.g., Ps 44:22); Jesus here speaks thus of his own name (cf. Mt 5:11; Mk 13:13). When Israel kept covenant with God, they were said to "know" him; in their disobedience, they did not "know" him (e.g., Is 1:3; Jer 2:8; 4:22; 5:4; Hos 5:4).

15:22-24. Judaism taught that greater knowledge brought greater responsibility; thus in one line of tradition, the nations were accountable to keep only seven commandments, whereas Israel, who had received the *law, had 613 commandments. Jesus also teaches that revelation increases moral responsibility (elsewhere, e.g., Lk 12:41-46).

15:25. Here Jesus quotes from a lament of a righteous sufferer (Ps 69:4; cf. 35:19; 109:3), which Jesus elsewhere applied to his sufferings (cf. Jn 2:17). On "their law" see 8:17 and 10:34.

15:26. On the forensic work of the *Spirit as advocate, see 14:16; here he is not only advocate but witness.

15:27. The believers are also witnesses for Jesus before the court of the world (cf. 16:2)

and God's tribunal. The Jewish people viewed the *Holy Spirit especially as the Spirit of *prophecy (usually in the *Old Testament and even more often in later Jewish literature); God would thus empower the *disciples to speak as prophets. (This promise also fits the idea that God's people would be anointed by the Spirit to witness God's truth against the nations before God's final tribunal; cf. Is 42:1; 43:10-12; 44:3, 8-9.)

16:1. Advance warning was helpful; cf. comment on 13:19.

16:2-4. Even in the *Diaspora, *synagogues could enforce discipline on members violating Jewish laws. Capital jurisdiction, however, belonged to Rome; any other killing was a lynching not approved by the Roman state. In the context of discussing witness, Jesus warned that his followers would face trouble in synagogues as elsewhere (see Mk 13:9-11), but this point may have special relevance for John's audience. Most scholars believe that Christians in John's day were being expelled from some local synagogues, perhaps under the influence of Palestinian Pharisaic propaganda (see the introduction to John and comments on 9:34 and 12:42). Hostile Jewish non-Christians in Asia Minor do not appear to have killed Christians directly (in violation of Roman law); but some nevertheless may have participated in getting followers of Jesus killed (in later Smyrna, cf. *Martyrdom of Polycarp* 17.2; 18.1, although scholars do not accept the entire story as accurate). By betraying Jewish Christians to the Roman authorities and claiming that Christians were non-Jewish, they left Christians with no legal exemption from worshiping the emperor and difficulty explaining how they remained loyal to the empire. Worried that Christians were a messianic and *apocalyptic movement that could get them in trouble with Rome, many synagogue leaders may have thought their betrayal of Christians would protect the rest of their community (cf. 11:50). Persecutors could believe that they acted for God (cf. Is 66:5), perhaps by following Phinehas' model of zeal (Ps 106:30-31; 1 Maccabees 2:24-26, 54). Ancient thinkers sometimes pointed out that, before God or the bar of history, it was the unjust court rather than the victim that was on trial.

16:5-15
The Spirit's Witness

The *Spirit testifies of Jesus to the world (16:8-11, duplicating the earthly witness of Jesus) and to Jesus' followers (16:13-15). The opponents of John's readers did not claim to have the Spirit or to hear the Spirit speaking to their hearts as he had spoken to the prophets (many may have claimed to feel close to God but did not claim to hear him directly, in contrast to Christians and some apocalyptic visionaries). John encourages his readers that their intimate, personal relationship with God in the Spirit distinguishes them from their opponents.

16:5-7. The Advocate (see comment 14:16) comes to the believers, which implies that his ministry to the world (16:8-11) is through them (cf. Neh 9:30). This idea fits the common *Old Testament and later Jewish perspective on God's Spirit as the Spirit of *prophecy. Because the Spirit's activity in 16:8-11 matches that of Jesus earlier in the Gospel (e.g., 3:17-21; 8:46), the Spirit may mediate Jesus' presence through believers' preaching of him (the "Word"; cf. 1:1-18) in a way to some degree analogous to how early Judaism could envision the Spirit or Torah mediating God's presence (see, e.g., comment on Mt 18:20).

16:8-11. As was common in ancient arrangement of material, 16:8 introduces three points then developed in 16:9-11. Here the believers' Advocate may become a "prosecutor" of the world, as sometimes in the Old Testament (Jer 50:34; 51:36; Lam 3:58-66; cf. Ps 43:1; 50:8). Many Jewish people believed that God would make Israel prevail over the nations before his tribunal in the day of judgment; for John, the judgment has already begun (3:18-19). Roman courts had no public prosecutors and depended on an interested party to bring charges, although trained *rhetoricians then debated on behalf of those who could afford them. The Spirit here brings charges against the world before God's heavenly court (see Mt 5:22), as a witness against them (see Jn 15:26).

Verses 9-11 probably mean that the world's unbelief constituted their sin; *Christ being the heavenly Advocate (1 Jn 2:1) constituted the believers' righteousness; and the judging of the world's ruler (see comment on 12:31)

spelled the judgment of the world. Thus for John it is not Jesus and his people (chaps. 18–19) but the world that is now on trial. One may also compare a common motif in the Old Testament prophets: the covenant lawsuit where God summons his people to account for breach of the covenant.

16:12-13. The Psalms speak of God leading his people in truth, in his way of faithfulness (Ps 25:5; 43:3; cf. 5:8); in John, this language implies a fuller revelation of Jesus' character (14:6). Intimate friends shared confidences (see comment on 15:15). The Spirit will thus relate to the *disciples as Jesus has (15:15), so that believers' relationship with Jesus in John's day (and in subsequent generations) should be no less intimate than relationships with him were before the cross.

16:14-15. This intimacy (v. 13) may evoke a sharing of possessions that characterized ideal friendship in antiquity (see comment on 15:15); some applied this principle even to "friendship" with the gods. The specific sense of the sharing language in this context, however, is that God shares his heart with all his people, as he once shared his word with his prophets (Gen 18:17; Amos 3:7; cf. again God's Wisdom in Wisdom of Solomon 7:26-27).

16:16-33
Seeing Jesus Again

After his *resurrection, Jesus would return to the disciples to impart life (14:18-19), and through the gift of his *Spirit he would remain with them forever (20:19-23).

16:16-22. Women suffered and, as in many parts of the world even today, often died in childbirth. The prophets commonly used birth pangs as an image of suffering, often stemming from judgment (Is 13:8; 21:3; 42:14; Jer 4:31; 6:24; 13:21; 22:23; 30:6; 49:22-24; 50:43; Mic 4:9-10; cf. Ps 48:6). In some *Old Testament texts, these pangs signified what Jesus' contemporaries would understand as the birth pangs of a new, messianic era (Is 26:17-19; 66:7-10; Mic 5:1-4; cf. Is 9:6; 53:12–54:1; 62:5; Hos 13:13-14). Labor pains, resurrection and "a little while" appear in Isaiah 26:16-21; in Isaiah 66:8-14, after Zion travails to birth the restored people of God (66:8), God's people "see" and "are glad" (66:14; cf. Jn 16:22).

Early Judaism sometimes came to apply these birth pangs specifically to the final period of suffering before the end of the age, which would be followed by the resurrection of the dead (cf. *Dead Sea Scrolls 1QHa 11.8-11; **1 Enoch* 62:4; *rabbis). Jesus' resurrection inaugurates a new age, so that the life of the coming world is now available to the disciples in the present (see comment on 3:16).

16:23-24. See comment on 14:12-14, especially on the use of the "name" in prayer.

16:25-28. Following the Old Testament wisdom tradition, Jewish teachers often used proverbs and riddles, as Jesus does throughout this Gospel. Although the disciples are not ready for the full understanding of the new relationship with God that Jesus describes (16:12), he is getting them ready.

16:29-30. In the context of the Fourth Gospel, that Jesus knows their question before they ask reveals his special insight; see comments on 1:42 and 2:24-25.

16:31-32. The scattering of sheep may refer to Zechariah 13:7 (cf. Mt 26:31). The Old Testament often reports that God's flock was scattered for want of a devoted shepherd (e.g., 1 Kings 22:17; Ezek 34:5-6, 12, 21; Zech 11:16; cf. Is 53:6; Jer 23:1; 50:17), as one would expect with flocks (e.g., Ps 119:176; 1 Maccabees 12:53).

16:33. Early Christians recognized that final victory would come, as Jewish prophets and teachers said, when the *Messiah comes in the future; but they also recognized that the Messiah had already come and therefore had inaugurated triumph in the midst of present (eschatologically expected) tribulation.

17:1-5
Jesus Reviews His Mission

Jesus here reveals his unique relationship with the Father, sharing his glory; see comment on divine Wisdom in 1:1-18. From 12:23-33 it is clear that Jesus returns to this full glory only by way of the cross, even though for most people crucifixion epitomized shame rather than honor and glory. Many note that prayers and blessings are common in testaments (final instructions of a departing sage or hero in Jewish literature). Concluding sections frequently recapitulate major themes covered; many themes in Jesus' teachings in this Gospel recur here.

17:1. Lifting one's eyes to heaven was a

common posture of prayer (cf. perhaps Ps 121:1; 123:1). "Glory" here has a double sense, another instance of wordplay; see comments on 1:14 and 12:23-27. Moses reflected God's glory in Exodus 33–34, but Jesus is to be "glorified" in the same sense as the Father, with his preexistent glory (17:5).

17:2. The *Old Testament also often used "flesh" (KJV) in the sense of humanity ("people"—NIV; "mankind"—NASB). Only at the end, in the final *kingdom, did God promise to delegate his authority to a particular ruler (Is 9:6-7; Dan 7:13-14); this background suggests that Jesus' death and *resurrection represent no mere temporal event but the climactic inbreaking of a new world.

17:3. On knowing God, see 10:4-5. Not knowing good and evil (Gen 2:9; 3:22), but knowing God was life (cf. Ezek 37:14). Other Jewish texts written in Greek also identified knowing God with *eternal life (e.g., Wisdom of Solomon 15:3); here one must have a personal relationship with Jesus Christ.

17:4-5. On finishing the work, see 4:34 and 19:30. Moses reflected God's glory (Ex 34:29), but Jesus, who shares the Father's preexistent glory, is greater than Moses here (cf. Jn 1:14-18). The Old Testament declared that God would not give his glory to another (Is 42:8; 48:11); Jesus' sharing the Father's glory in this sense is a claim that he is divine. Judaism did have an analogy with which to compare Jesus' divine claim here: God's Wisdom reflects his glory (Wisdom of Solomon 7:25-29). John's Jewish Christian readers may have understood Jesus' identity in analogous (albeit superior) terms (see comment on 1:1-18).

17:6-19
Jesus Prays for His Disciples

This passage addresses the inevitable conflict between Jesus' followers and the world. Jesus' followers here assume the role assigned to Israel in most extant Jewish portrayals of the end times and that assigned to the remnant (the children of light) in sectarian texts such as the *Dead Sea Scrolls; they constituted the whole number of the righteous and as such were a persecuted minority within society.

17:6. In the *Old Testament Moses announced God's name (Ex 3:13, 15); more importantly, when God revealed his name, he revealed his character and attributes (Ex 33:19; 34:5, 14; for the future, see Is 52:6).

God's name also meant his honor or reputation. To "hallow" or "sanctify" God's name was to demonstrate its holiness, its sacredness. In contemporary Jewish teaching, righteous deeds hallowed God's name, and wicked ones dishonored it; the *kiddush hashem,* or sanctifying of God's name, was one of the most fundamental principles of Jewish ethics preserved in later rabbinic sources. Most Jewish people prayed for the future time when God would sanctify his name throughout the earth (see comment on Mt 6:9).

17:7-11. Although the comparison would be inadequate, some ancient hearers may have thought of how Moses received God's words and passed them on to Israel, who alone of the nations received his *law; on Jesus and Moses, see comment on 1:14-18 (esp. 1:17). The ideas of Jesus' being glorified among the *disciples and the use of God's name (17:11) may also expound Jewish traditions related to Moses in the book of Exodus. On unity, see comment on 17:20-26.

17:12. Some suggest that the fulfilled Scripture here might allude to Psalm 41:9, cited in John 13:18: the verb for "lost" appears often for the wicked in the Psalms. Jewish teaching recognized that God dealt more severely with apostates than with those who were born pagans, because apostates had known the truth but turned away from it. "Son of perdition" (NASB) or "of destruction" reflects a Semitic idiom essentially meaning, "one who would be destroyed." The passage may play on the related terms for "lost" and "destruction."

17:13-15. Jewish texts often speak of God guarding or protecting his people.

17:16-19. The Old Testament and Jewish tradition emphasized Israel's separation from and often hatred by the world. God had "sanctified," that is, "consecrated" or "set apart," Israel for himself as holy, especially by giving them his commandments (e.g., Lev. 11:44-45). (Today Jewish people still often celebrate this sanctification by the commandments in the blessing over the lighting of sabbath candles.)

God's word in Scripture was truth (Ps 119:142, 160). If God had sanctified his people, or set them apart among the nations by giving them the law, how much more are followers of

Jesus set apart by his coming as the Word made flesh (see comment on 1:1-18); Jesus treats his disciples here as the true remnant of Israel, that is, the saved covenant community within Israel. (Throughout most of the Old Testament, only part of Israel in any given generation followed God; in some times, like those of Joshua and David, the remnant was large; in other times, like Moses' generation or that of Elijah, it was small.) Other Jewish groups, notably the *Essenes who likely authored the Dead Sea Scrolls, also felt that the rest of their nation had gone astray and that they were the true remnant; the theme appears in the Old Testament prophets (cf. Is 10:20-22; Joel 2:32; Amos 9:8-12). Whereas some of the Essenes sought to separate physically from the rest of Israel, however (cf. Dead Sea Scrolls 1QS 5.18; 9.8-9; CD 13.14-15), believers in Jesus remained in contact with the world despite being different from it (Jn 17:14-16).

17:20-26
Jesus Prays for Future Disciples

The unity of Father and Son models the unity to be experienced by their people in whom they dwell. Israel emphasized that their God was "one" (Deut 6:4) and recognized the importance of this factor in their own solidarity among the nations, in a world hostile to them. This passage stresses a similar idea but in a manner more related to the idea of God's personal indwelling introduced in chapter 14 (see especially comment on 14:23-24). God is glorified among his people (though he shares it with no one in the fullest sense) in Isaiah 44:23; 46:13; 49:3; 55:5; 60:1-2; God also sanctified his dwelling places with the glory of his presence (Ex 29:43).

The emphasis on unity would also speak to John's readers, who are troubled by opposition from the *synagogue and perhaps from secessionists from their own ranks (see introduction to 1 John); it is also likely that ethnic or cultural unity—perhaps among John's (emigrant?) Galilean and Asian constituencies (see the introduction to John)—is partly in view (10:16; 11:52; 12:20-23); John clearly emphasizes ethnic reconciliation in *Christ in chapter 4 (the *Samaritans). At any rate, followers of Jesus constitute a small minority in a hostile world and need each other to survive as much as other minorities normally do. On concern for coming generations compare, e.g., Psalm 78:3-7. Division was a pervasive problem in antiquity, and both philosophers and (especially often) orators challenged cities to seek unity among themselves. Jewish people celebrated God's special love for Israel; the magnitude of God's love for Jesus' followers here is evident in the comparison with the Father's special love for the Son, a Son whose death he allowed to save the others (3:16-17).

18:1-11
The Betrayer Arrives

Biographies usually conclude with an account of the protagonist's death, developing it particularly if the death was very significant. Jewish people and some *Gentiles celebrated martyr stories. The passion *narratives draw on such elements but form something distinctive. Greeks also had apotheosis stories about mortals transformed to deities, usually at their death; in John, however, Jesus is returning to the glory he had with the Father before the world (cf. Wisdom returning home in **1 Enoch* 42:2).

Contrary to detractors, how Jesus is treated in the account fits what we know of the treatment of dissent in antiquity. Apart from outright threats (like armed bands in the wilderness), Rome depended on local aristocracies in the provinces to arrest and accuse troublemakers, though Rome itself inflicted the death penalty (18:31). A generation after the scene depicted here, one Joshua son of Hananiah cried out judgment against the temple; the chief priests had him arrested and handed over to the governor. After refusing to respond to the governor's interrogation, Joshua was flogged, *Josephus says, until his bones showed (*Jewish War* 6.301-5). Because they considered that prophet insane and because he had no followers, he was then released—in contrast to Jesus, who had a movement and was viewed as a greater potential political threat. The priestly aristocracy were determined to maintain control at all costs, including by suppressing freedom of speech. The current Sanhedrin consisted especially of immediate descendants of Herod's political appointees, and other Jews (from Josephus to the *Dead Sea Scrolls to the *Pharisees) criticized a

number of *high priests in this era as corrupt and sometimes brutal.

18:1-2. "Kidron Valley" is literally the "winter-swollen-brook Kidron": this brook flowed only in the rainy season—winter—so crossing it in April would not involve even getting wet. It had a long history (2 Sam 15:23), and the site is still identifiable. Jesus and his *disciples had met there other times; cf. Luke 22:39. Gardens were sometimes walled enclosures.

18:3. Romans and others typically depended on local informers, a role that Judas fills here. Many scholars have noted that this military contingent is described in a manner much like Roman cohorts (so NASB). Nevertheless, the same language was equally used of Jewish units, and this unit is probably the Levite temple guard. (Roman troops would not be used for a routine police action like this one, would not be lent to the chief priests, and Romans would not have taken Jesus to the house of Annas—18:13—whom they had deposed.)

A full cohort in the Roman sense could have involved six hundred soldiers, but a detachment from the cohort is all that John need mean here. Both the temple police and Romans carried torches (two kinds are mentioned here) at night, although only a few need have carried them. The moon would be nearly full at Passover.

18:4-6. "I am" can mean "I am he (whom you seek)," but it can also allude to Exodus 3:14, translated literally. A Jewish tradition, purportedly pre-Christian (attributed to the early *Diaspora Jewish writer Artapanus), said that when Moses pronounced the name of his God, Pharaoh fell backward. (If Jesus' hearers had thought he was pronouncing the divine name, they might have also fallen back in fear, because magicians were said to try to cast spells in that name.) During some kinds of religious experience in many cultures, including Christian religious experiences historically (including during the Great Awakenings in the eighteenth and nineteenth centuries), people have sometimes been overwhelmed and fallen to the ground (cf. also, e.g., 1 Sam 19:24; Ezek 1:28; Dan 10:9).

18:7-9. That Jesus' word (17:12) should be fulfilled just as Scripture is suggests his divine rank and mission. Although some Jewish writers allowed that *prophecy continued in their own time, they rarely accorded such revelations the same status as Scripture. Where no massive or violent threat existed, Romans and their allies often preferred to detain a ringleader rather than all the followers, if it was believed that the movement could not survive without its leader anyway.

18:10. As slave of the high priest, Malchus would be a powerful person with much authority; it is possible (though by no means certain) that Malchus was helping to lead the expedition. On the possible symbolic effect of his disfigurement, see comment on Mark 14:47.

18:11. Greeks might think of Socrates' cup of hemlock, but more relevant for Jesus' (and John's) Jewish context, the cup often functioned as a symbol of judgment in the prophets (see comment on Mk 10:39).

18:12-27
At the House of Annas

18:12. The officer mentioned here is literally applied to tribunes of cohorts (in principle about six hundred strong); but see comment on 18:3; comment on Acts 4:1.

18:13-14. Annas was *high priest from A.D. 6–15, when the Romans deposed him. According to Jewish *law, the high priest was entitled to rule for life; thus some Jews no doubt considered the Roman deposition of Annas invalid, and he continued to command great respect. He was father-in-law of Caiaphas, and all five of Annas's sons became highest priests at some point; he retained enormous influence until his death in A.D. 35. He was wealthy and powerful, but later Jewish literature (written by successors of those he opposed) does not speak well of him. The high priesthood had been the most powerful office in Jewish Palestine until the Roman period.

Capital cases were to be heard by a plurality of judges (according to later tradition, a minimum of twenty-three). No individual could legally act as judge in a capital case, but this law did not stop Annas from exercising his political power and privately interrogating Jesus. Perhaps he would have excused himself by a law that those tried by the supreme Sanhedrin for misleading the people first had to be tried by two lower courts. But that law may be Pharisaic and may be later

than the first century, and it is doubtful that Annas is attempting to follow any law. The predominantly Sadducean priestly aristocracy would certainly not follow the Pharisees' rules: they had to please the Romans, not the Pharisees. Roman law, like the Pharisees, posed limits on judges' activity, but in the provinces politics trumped legal ethics when peace was at stake.

18:15-17. For more detail, see comment on Mark 14:66-69. Well-to-do homes had servants as doorkeepers, though these servants might do double-duty with other jobs; an extensive estate such as this one would have a full-time porter. Doorkeepers would determine (especially at night) whom to admit and would observe who entered and left the premises. Even once people entered, if they were unfamiliar they could be asked their identity. According to later rabbinic teaching, Jewish people were permitted to deny even their Jewishness, especially by evasion (cf. Mk 14:68), to save their lives. Direct denial that allowed God's name to be reproached, however, was considered shameful. Peter probably lacks acquaintance with these specific rules, but they may illustrate his cultural setting, which did not always regard denial as severely as Jesus regards it.

18:18. The cold weather is not surprising for an April night in Jerusalem.

18:19. The changing of scene back and forth was a standard suspense-building technique in ancient literature; then, as today, it was good writing.

John does not claim that the "high priest" here is the official one Rome recognized (see 18:13, 24); like other *New Testament writers and *Josephus, John follows the common practice of labeling all prominent members of the priestly aristocracy "high priests." Later tradition suggests that those questioning a "misleader" (see comment on 7:12) would ask about disciples.

18:20. Secret teachings were sometimes considered subversive, but Jesus taught publicly. Although *rabbis offered particular special teachings only to small groups of disciples (e.g., teachings on creation and on God's throne-chariot), they had a tradition that one must teach the law openly, in contrast to false prophets, who taught "in secret." Appeals to public knowledge added *rhetorical strength to one's argument.

18:21. According to much later forms of Jewish law, interrogators were not supposed to force the accused to try to convict himself. But if this law is in effect in Jesus' day, which is at best uncertain, the priestly aristocracy, upheld by Rome and acting on what they believe to be right for the people, does not concern itself with it. As throughout the empire, powerful people could even get away with judicial murder, and other people were well aware of this.

18:22-24. Striking a captive was certainly against Jewish law. This act shows how abusive and uninterested in any form of Jewish legality Annas is; his interest in the case is political, not legal. This also fits the picture of the high priests supplied by other minorities in Judaism who had conflicts with them (Pharisees and *Essenes). See comment on Mark 14:1, 43. Jesus may be indicating that he has not violated Exodus 22:28 (which forbade cursing authorities); cf. Acts 23:3-5. Interrogating him further in a private home rather than in the Sanhedrin's meeting place on or near the temple mount violated ancient Mediterranean legal protocol. This may represent the early morning "official" meeting to produce the charge. People often cringed before the authorities; Jesus stands for truth.

18:25-27. For a disciple to repudiate a teacher was a great humiliation for the teacher. Ancient writers often contrasted characters; Peter's denial here contrasts starkly with Jesus' courage (18:20-24). On the cock crowing, see comment on 13:38.

18:28-38a
Jesus Before Pilate

18:28. Roman officials began meeting the public (especially their *clients) at daybreak and finished by noon; "early" is no exaggeration, and here may mean about 6 a.m. Although visiting officials were often swamped with plaintiffs, the priestly aristocracy, who controlled Judea for the Romans, would be able to secure an audience with him on short notice. Clamoring before *Pilate in large numbers was usually effective, because a riot was the last thing he wanted. The "Praetorium" (NASB) here was Herod the Great's old "palace" (NIV), used by the Roman prefect when he

came to Jerusalem from Caesarea during the feasts. (It was not, as some earlier commentators thought, the Fortress Antonia on the Temple Mount, where the usual Roman garrison was stationed.) He came precisely to ensure that order was maintained during the feasts, when Jerusalem was overcrowded and riots were most apt to break out.

That observant Jews (including the priestly aristocracy) would not enter this palace, lest they be defiled and thus unable to eat the Passover, fits Jewish practice. *Gentile residences were considered ritually impure, primarily because of the association with idolatry (which Pilate certainly practiced). (That priestly aristocrats cared about purity is clear archaeologically from the ritual baths common in their homes.) Their fidelity to purity regulations ironically highlights the corrupt leaders' failure to observe legal propriety in the context.

A possible conflict with the other Gospels at this point has led to considerable debate as to when the Passover described in the Gospel passion narratives occurred. According to Matthew, Mark and Luke, Jesus had already eaten the Passover with his disciples this night; whereas according to John, the priests plan to eat it the following night.

Of the many explanations for the apparent discrepancy, the two most prominent are probably these: (1) Several Jewish groups had different calendars and did not celebrate Passover on the same day. A dispute about when the month had begun (based on the appearance of the new moon) would also affect when the feast would be eaten. Some scholars have suggested that Jesus' disciples celebrated it a day early, thus without a lamb slaughtered in the temple. (2) Either John or the other Gospels—probably John—is making a symbolic point (John stresses that Jesus is the Passover lamb; cf. 19:14, 36; 1 Cor 5:7). Later Jewish tradition also reports that Jesus was crucified on Passover, but this report could be based on the approximate time in earlier tradition. John's language would not technically be incorrect in any case in the present verse, since many used "Passover" loosely for the Feast of Unleavened Bread, which immediately followed; nevertheless, "eat the Passover" is a very odd way to speak of eating the bread during the rest of the feast (cf. also 13:1).

18:29. Precedent exists for a Roman official's having to go outside to respect Jewish sensitivities (on the sensitivities, see comment on 18:28). Except in matters requiring military intervention, an official charge would be necessary before Pilate would be required to hear the case. Roman law had no public prosecutor in the modern sense and depended on private accusers to bring charges (although rhetoricians could be hired to debate a case, they were not supplied by the state). Accusers spoke first in a case.

18:30-31. Pilate regards the matter as one of religious law, hence to be tried in a Jewish court if the person claims to be Jewish and so submits to a Jewish court's jurisdiction; this was Roman practice throughout the empire (also, e.g., Acts 18:14-15). Pilate is also known not to have been cooperative when dealing with Jewish religious matters; unless the situation got out of hand, he did not need to cooperate as long as his probable *patron Sejanus controlled the emperor Tiberius in Rome (see comment on 19:12). *Philo reports that Sejanus was anti-Jewish, and both Philo and Josephus portray Pilate as brutal. From Pilate's initial attempt to bring idolatrous Roman standards into Jerusalem to his plundering of the temple treasury to build an aqueduct to issuing coins with the emperor's image, Pilate had displayed insensitivity to Jewish concerns. Yet Pilate also belonged to a lower order of nobility than most governors, and was politically vulnerable apart from Sejanus's patronage; ultimately he usually gave in to the demands of the Jewish aristocracy. Slowness to accept the chief priests' recommendations might reflect spite for them rather than commitment to justice. Over time, though, he probably became more politically accommodating to the locals (thus he remained in office till A.D. 36, even though his political patron in Rome, Sejanus, was executed in 31.)

Pilate expected Jewish courts to judge all internal religious cases, but capital offenses required Roman verdicts, and apart from desecrating the temple only a political charge would suffice for that. Although scholars have debated the matter, Rome apparently did not permit Jewish courts to exercise the death

penalty, except in the case of a *Gentile intruding into an inner court of the temple. They could flog and probably decree a person worthy of death; but executions not authorized by the Romans were illegal. The Romans had to try all other capital offenses. (Some later rabbinic sources place the abolition of Jewish courts' right to execute the death penalty in A.D. 70 [other rabbis place it about A.D. 30], but this would have given Palestinian Jewish leaders a right not shared by most other local officials under Rome, a right we would therefore expect contemporary apologists for Judaism like Josephus to attest. Normally only governors and client rulers exercised the "right of the sword." The Sanhedrin's possession of it is not attested early, and later rabbis often idealized the earlier legal situation, even reading their own authority back into the pre-70 period. The right to execute violators of the temple was also permitted in the case of violators of other sacred shrines, like the sanctuary at Eleusis; but the right was rarely extended beyond this violation.)

18:32. They used not stoning but crucifixion for executing noncitizens charged with treason (thus fulfilling Jesus' word about being "lifted up"—12:32-33).

18:33-35. Pilate follows a Roman procedure called *cognitio,* an inquiry to determine what really happened. As prefect, he would make the final decision and answer to no one for it unless a complaint were sent to Rome; but he investigates the matter nonetheless.

The priests charge Jesus with claiming to be a king, which is a charge of *maiestas,* treason against the emperor. (Herod Antipas was later exiled for simply requesting the title, which an earlier emperor, Augustus, had granted Herod the Great.) This was an especially deadly charge under Tiberias, the current emperor. Some other Jewish "prophet"-leaders later invited Roman intervention.

18:36-38a. Jesus' nonresistance distinguishes him from true revolutionaries in Judea. The idea that Jesus' *kingdom is not based on military or political force is repeated throughout the Gospels, but most of Jesus' hearers never grasp that meaning in his words (after all, why call it a "kingdom" if it was nonpolitical?). Pilate hears the term "truth" and probably interprets Jesus in another sense: a philosopher or some other teacher. As an educated Roman, Pilate should have known that many philosophers portrayed themselves as ideal rulers (see comment on 1 Cor 4:8); although he probably had little attachment to philosophers himself, he would have viewed them as harmless. No one could be more nonrevolutionary in practice than a *Cynic or *Stoic philosopher, no matter how antisocial Cynic teachings might be. "Truth" in *Old Testament and Jewish tradition was God's covenant integrity; the concept would sound more abstract to many Gentiles.

18:38b–19:3
Pilate Meets the Masses

18:38b. Roman law prohibited treason, not wandering, antisocial philosophers. From Pilate's Roman perspective, he had no reason to condemn Jesus.

18:39. Roman governors were not obligated to follow local (or other) customs, but out of political prudence often did so, especially at crowded festivals. Well-liked precedents like pardons were usually kept. Although unattested in extant Palestinian sources (as are many customs), the specific custom mentioned here is the sort of custom the Romans would have allowed. Roman law officially permitted two kinds of amnesty, the *indulgentia* (pardoning a condemned person) and—closer to what Pilate probably has in mind here—*abolitio* (acquitting a person before judgment). Romans and Greeks seem to have granted mass amnesty at some other regular feasts, and Romans occasionally acquitted prisoners in response to the cries of crowds.

18:40. The term translated "bandit" (NRSV, GNT) or "robber" (KJV, NASB) could mean what those titles usually imply, or, in light of Josephus's usage, could imply that Barabbas is a revolutionary (cf. NIV), a point clear in Mark 15:7. (Some warn that it is difficult to distinguish between self-seeking bandits and those desiring only to terrorize foreigners.) In either case, Barabbas was the kind of person Rome *would* want to execute. Many ancient writers used irony. The irony here cuts deeply: the people preferred a real revolutionary to Jesus, who was denounced for treason as a would-be king but had no actual record of participation in insurrection. Judean leaders on other occa-

sions used loud delegations to force governors to accept their demands.

19:1. Beatings were a regular punishment themselves, but flogging and scourging, much more severe, also accompanied death sentences. On other occasions governors had persons scourged as a warning although they did not regard them as genuine threats (cf. Josephus, *Jewish War* 6.304-5), or even handed over Roman soldiers for execution if needed to preserve public order (2.231).

In the provinces, soldiers normally administered this punishment. The person being punished would be stripped naked, then stripped to a post for the beating. Jewish *law allowed only thirty-nine lashes with a calf-leather whip; Roman law allowed scourging till the soldier grew tired, and texts report that bones or entrails were sometimes bared. Romans beat free Romans with rods, soldiers with sticks, but slaves and probably despised non-Romans with whips whose leather thongs enclosed sharp pieces of metal or bone.

19:2. Soldiers played games like throwing knucklebones, coins or dice; the chance to play games with this prisoner would come as a welcome respite from their customary boredom in a foreign land. Adorning a prisoner as a king and beating him occurred on other occasions, even when the person was not claiming kingship. Common, coarse street mimes seem to have often included mock kings arrayed in mock splendor; the Jewish ruler Agrippa I was ridiculed in this manner in Alexandria. Non-Jewish soldiers, many drawn from Syria, were often anti-Jewish and happy to ridicule a Jewish "king."

Greek vassal princes typically wore a purple chlamys—purple dye being the most expensive—and a wreath of gilded leaves. The "purple robe" that the soldiers put on Jesus may have been a faded scarlet lictor's robe or an old rug. The crown of thorns, perhaps from the branches of the thorny acanthus shrub or from the date palm (the latter would have looked more realistic), may have been meant to turn mainly outward (mimicking the wreaths of *Hellenistic kings) rather than painfully inward; nevertheless, one could not have prevented some thorns from scraping inward, drawing blood from Jesus' scalp. Only the highest king would wear an actual crown instead of a wreath, so they are portraying him as a vassal prince.

19:3. "Hail" is sarcasm derived from the customary salutation of the Roman emperor, "Ave (Hail), Caesar!" Normally in the eastern Mediterranean world one would kneel when offering such an acclamation. The abuse of prisoners (a practice not unknown today) was probably common and was sometimes public.

19:4-16
Politics over Justice

19:4. Not known to be unnecessarily cooperative with the local leaders, Pilate characteristically holds out giving in to them as long as possible. The governor's investigation has yielded a verdict: not guilty (18:35-38a). Under normal circumstances, this verdict would stand.

19:5. The garb of a mock king, as in the case of the Alexandrian dressed up to ridicule Agrippa I (see comment on 19:2), portrays Jesus to the mob not as a true king but as a harmless fool. Irony and sarcasm were common in ancient sources; the title "man" may contrast ironically with their charge: "God's Son" (19:7); it may be a mock royal acclamation, as in "Behold the king!" in 19:14 (contrast the opening acclamation of the Gospel—1:29). In another irony, it might be relevant that Pilate's "Behold the man" recalls the opening words identifying Israel's first king in 1 Sam 9:17.

19:6. Pilate's challenge may be derisive: the Jewish authorities did not have the legal right to execute capital offenders, and if they had they would normally have stoned them rather than crucified them.

19:7. The *Old Testament called the *Messiah (and all David's line) the *Son of God (2 Sam 7:14; Ps 2:7; 89:27); in a more general sense, all Israel was called God's child (Ex 4:22; Deut 8:3; Hos 11:1). But even falsely claiming to be the Messiah was not a capital offense in standard Jewish teaching, as long as one were not a false prophet advocating other gods. Political rather than theological considerations made such claims dangerous; *Roman* rather than biblical law made royal claims a capital offense. Even on their own terms, Jesus' accusers are thus mistaken about the *law's teaching about him (10:34-36); but John may intend more irony: he be-

lieved the Old Testament predicted that God's Son would die (cf. Is 53).

19:8. Pilate hears the charge very differently. Although many wandering philosophers claimed to be sons of gods and were not taken seriously, some teachers were thought to actually possess divine wisdom or power, and Pilate might be cautious not to offend such a powerful being. They also knew stories of deities coming in disguise and judging those who rejected them. Some Romans were cynical about the gods, but most believed in them, and Pilate might be especially cautious, given the reputation of Jewish magicians for being among the best in antiquity.

19:9. In ancient accounts, sometimes philosophers and especially Jewish martyrs refused to satisfy their judges.

19:10. Pilate's decree was legally binding in all capital cases; he did not even have to accept the recommendations of his *consilium,* or advisory council. He was authorized to judge in all cases regarding public order, even if no specific laws had been violated. Roman law did not take silence as an admission of guilt, but without a defense a defendant would be convicted by default. In any case, the issue with Pilate is no longer guilt or innocence but weighing the religious and political consequences of both decisions.

19:11. Judaism understood that rulers held authority only temporarily delegated them by God, who would judge in the end; "above" was sometimes a Jewish way of speaking of God (frequent in John). Here Jesus may imply that the authority of Caiaphas, unlike that of Pilate, is illegitimate; the high priesthood was to be for life, but high priests had been deposed and others installed at the whim and for the political expediency of the Romans. The Roman governor Valerius Gratus (A.D. 15–26) chose Caiaphas as a high priest cooperative with Rome, an approach Caiaphas had continued under Pilate.

19:12. Romans respected courage in the face of death (e.g., one ancient writer praises an ancient Spartan boy who silently let a fox eat away his entrails rather than break the rules of military training). Jesus' answer may also confirm Pilate's fear that Jesus is a genuinely divine messenger rather than a deluded street philosopher.

On October 18, A.D. 31, Sejanus, Pilate's political sponsor in Rome, fell from power, and Pilate had much to fear from any bad reports about him. But Jesus' trial probably took place before A.D. 31, and the accusation of 19:12 would be a fearful one even with Sejanus in power: the emperor Tiberius was suspicious of the least talk of treason, and a delegation to Rome providing the slightest evidence that Pilate had supported a self-proclaimed king could lead to Pilate's beheading. *Philo tells us that Pilate also backed down much earlier in his career when the Jewish leaders threatened to petition the emperor against him (*Embassy to Gaius* 301-2).

"Friends" of powerful *patrons were their political dependents, and to be the "friend of the emperor" (NRSV) or the "friend of Caesar" (KJV, NASB, NIV) was a special honor. "Friend of the king" had been an office in Greek and ancient Near Eastern palaces (including Israel, from David through Herod the Great; cf. 1 Kings 4:5; 1 Chron 27:33); "friend of the emperor" was likewise an official title with political implications. As a client of Sejanus, Tiberius's praetorian prefect and most trusted confidant at this point, it is possible that Pilate may have acquired this title (cf. Tacitus, *Annals* 6.8); otherwise it is intended figuratively.

19:13. Bad reports about one could hinder political ambitions. Some commentators have thought that the "Stone Pavement" is the pavement in the fortress Antonia on the temple mount, but that pavement seems to date from a later period. Instead the text undoubtedly refers to the raised, outdoor paved area near Herod's palace, where the governor resided when he visited Jerusalem. Other sources confirm that both Pilate and a later governor addressed audiences from this platform. Evidence suggests that the governor had to pronounce death sentences *pro tribunali,* from the judgment seat (see comment on Rom 14:10-12).

19:14. In slightly different wording, "Behold, your king" repeats part of the quotation in 12:15 (Zech 9:9), so that Pilate unwittingly proclaims truth. The "day of Preparation" (19:14, 31, 42) was the day that the Passover lamb would be slaughtered to be eaten that night (see comment on 18:28). (Jewish people reckoned days from sunset to sunset, so what most

people today would call Friday night they considered the beginning of the sabbath, or Saturday.) Later *rabbis estimated that offerings began earlier on Passover eve, but the slaughter of Passover lambs probably had to continue all day and was finally completed about the time the evening offering was slaughtered, roughly at the time (but not the day) when Jesus died in the *Synoptic Gospels (about 3 p.m.).

The "sixth hour" normally should mean noon but by a different (and much less likely) reckoning here could mean 6 a.m., close to dawn. John could use it for a symbolic connection with 4:6 or a symbolic connection with Passover (many scholars argue here that the slaughter of Passover lambs began about noon; this argument rests, however, on late and in this case improbable sources). (The other large Johannine work, Revelation, also uses time symbolically.) In any case, the narrative setting is noon, the hottest hour of the day; people would not normally be in public except for very important matters.

19:15. For Pilate to free someone accused of treason or of insulting the emperor's *maiestas* would invite the same accusation against himself, especially at this time under Tiberius, one of the most paranoid rulers of the first century. Although not accommodating when he did not need to be, Pilate is known to have acceded to mob demands on other occasions. As a provincial governor he officially had full discretion to decree the penalty. Crucifixion was the standard Roman method of execution for slaves, revolutionaries or other provincials who were not Roman citizens (such as most Palestinian Jews).

The authorities' cry is typical of the irony of John: Jewish people prayed daily for the royal Messiah, and one Jewish prayer that came to be part of the Passover celebration at least in later times acknowledges no king but God (see also comment on 8:33). (In this period, that precise language may have characterized those desiring to revolt against Rome.)

19:16. Although Pilate was not known for cooperating with the chief priests, neither was he such a poor politician as to risk negative reports about himself over a "minor" case. When a governor decreed that one would be executed, he would say something like, "You will mount the cross."

19:17-22
The Crucifixion

19:17. Normally prisoners were marched through crowds of onlookers, using a public execution to warn against rebellion. Condemned criminals normally carried their own cross (the horizontal beam, the *patibulum,* not the upright stake) to the site of the execution, where it would be affixed to the upright stake (*palus*). The victim was usually stripped naked for the procession and execution as well, although this full nakedness must have offended some Jewish sensibilities in Palestine.

Thus Jesus would probably be led from Herod's old palace, in the Upper City, through the garden gate (against the more traditional route envisioned by tourists).The probable site of Golgotha was outside the city wall and not far from Herod's palace—perhaps a thousand feet north/northeast of it. Roman custom placed crucifixions, and Jewish custom located stonings, outside towns rather than at their center (in the *Old Testament, cf. Lev 24:14, 23; Num 15:35-36; Deut 17:5; 21:19-21; 22:24; in the *New Testament, cf. Lk 4:29; Acts 7:58).

19:18. Romans could crucify people even on trees, but this public execution at a festival probably involves a more formal cross. Some scholars suggest that several stakes, normally at most about ten feet high, stood in Golgotha ready to be reused whenever executions occurred. (The stakes were low enough that dogs nibbled the feet of some crucifixion victims.) On the top of the stake or slightly below the top was often a groove into which the horizontal beam of the cross would be inserted after the prisoner had been fastened to it with ropes or nails (see some further comment on Mt 27:26).

19:19. Sometimes one would carry a *titulus* stating the reason for the condemned person's crucifixion, although it is not clear that it was usually displayed above the cross in this period. The charge against Jesus: one who attempted to usurp the prerogatives of royalty, which were properly dispensed only at the decree of Caesar. Jesus is charged with high treason against the majesty of the emperor, a charge that Jesus' followers would not have made up (followers of one executed for treason were themselves suspect).

19:20. The site of execution was necessarily outside the city, although the soldiers preferred that it be nearby (see comment on 19:17). Jewish people in the Roman Empire dealt with three or four basic languages: Greek, Latin, *Aramaic and Hebrew (of these, Greek especially was spoken outside Palestine and shared its prominence with Aramaic inside Palestine, which was the dominant language further to the east). Jewish inscriptions to foreigners were written in Greek and Latin. Even in Jerusalem, some very important inscriptions meant to warn all peoples were in both Greek and Latin; Josephus, *Jewish War* 5.194.

19:21-22. No longer faced with the possibility of mob unrest or a complaint to Tiberius, Pilate returns to his characteristic lack of cooperation. In about this same year, Pilate minted a cheap coin of Tiberius bearing the augur's wand—a pagan symbol quite offensive to Jewish sensibilities.

19:23-37
Jesus' Death

19:23. The "outer garments" would be the rectangular cloth used in bad weather, the inside "tunic" a sleeveless, tightly fitting shirt. Usually the latter was made of two cloths stitched together, so a seamless tunic was more valuable. Roman law as later codified in Roman legal Digests granted the soldiers the right to the clothes the executed man was wearing; it was customary to execute the condemned man naked. The basic unit of the Roman army was the *contubernium,* composed of eight soldiers who shared a tent; half-units of four soldiers each were sometimes assigned to special tasks, such as execution quads.

19:24. John's mention that the soldiers do not want to "tear" it might allude to the *high priest's garment in the *Old Testament (Lev 21:10), which Josephus mentions was also seamless. This interpretation, however, probably reads too much into the text; the wording in Leviticus is quite different. That it was seamless may simply suggest that, as a woven rather than knitted garment, it was more valuable. John finds two distinct acts in Psalm 22:18 (a common ancient Jewish method of interpretation), as Matthew does in Zechariah 9:9 (see comment on Mt 21:4-7). Casting lots was a conventional way to decide disputed matters, leaving the decision to deities (see comment on Acts 1:26); the soldiers may have brought dice or other games to pass the time, or they may create makeshift lots on the spot.

19:25. The evidence is disputed as to whether relatives and close friends were allowed near crucifixions; they probably usually were. In either case, the soldiers supervising the execution may have looked the other way in practice if they had no reason to forbid it; the prerogatives of motherhood were highly respected in the ancient world. People usually permitted women more latitude in mourning, even in cases when the person being mourned was a criminal, hence often not to be mourned. At the same time, ancients usually considered women less courageous on average than men, and the absence of most male *disciples could shame the absent men.

19:26-27. Because Jesus may not be elevated far above the ground, Jesus' mother and disciple can hear him without being extremely close to the cross. A dying person could make an oral testament even from the cross, so long as witnesses were available; the eldest son might be responsible for his widowed mother's care, and testaments sometimes delegated such care. If a widow's eldest son died, normally younger sons would care for her; Jesus had brothers (cf. 7:3-5). Yet Jesus formally places his mother under his disciple's protection, providing for her after his death. Dying fathers could exhort sons to take care of surviving mothers (which they normally would do); for a disciple to be accorded a role in his teacher's family was a great honor to the disciple (disciples sometimes called their teachers "father").

A primary responsibility which Jewish custom included in "honoring one's father and mother" was providing for them (cf. 1 Sam 22:3) in their old age. Jesus' mother is probably in her mid to late forties, is probably a widow and lives in a society where women rarely earned much income; she is therefore officially especially dependent on her eldest son, Jesus, for support, although after his death her younger sons would support her.

19:28. Some scholars have suggested that Jesus may have recited the rest of Psalm 22 after the verse cited by Mark (15:34); in the

light of Mark 15:35, this suggestion is not likely, but those who were most biblically informed would know how the psalm continued, and some think that John could allude here to the same psalm (Ps 22:15).

19:29-30. "Hyssop" was not the most natural instrument to use for this purpose. If this plant is identified as the *Origanum maru l.*, its stalk is over three feet long; others claim that it is a very small plant that could not have reached far, and they suggest a play on words with the similar-sounding term for "javelin." In either case, John presumably *mentions* hyssop because of its significance in the Passover (Ex 12:22), fitting the symbolism of John 19 as a whole. A low cross (cf. 19:18) would not have required a long reed. "Sour wine" probably refers to *poska,* consisting of cheap wine vinegar mixed with water; it was often used by soldiers and laborers to quench their thirst; cf. vinegar in Ps 69:21.

19:31-33. Those bound with ropes often survived on the cross several days (e.g., Josephus, *Life* 420-21). The dying man could rest himself on a wooden seat (Latin *sedile*) in the middle of the cross. This support allowed him to breathe—and prolonged the agony of his death, until (often) blood loss or dehydration killed him. When the soldiers needed to hasten death by asphyxiation, they would break the legs of the victims with iron clubs so they could no longer push themselves up; *Cicero and others attest this custom of leg breaking. Romans might have allowed the bodies to rot on the crosses (and feed vultures), but Deuteronomy 21:23 and Jewish sensitivities about the sabbath require that these executions be speeded up, and Romans often accommodated Judean leaders' wishes particularly during the crowded festivals. (Josephus declares that Jewish people always buried crucifixion victims before sunset.)

19:34. Some scholars suggest, on some evidence, that Roman execution squads sometimes pierced victims to ensure that they were dead. Jewish tradition also required certification that a person was dead before the person could be treated as dead, but Jewish observers would not treat the body as disrespectfully as this Roman does. (Probably less relevant, according to a probably first-century Jewish tradition, the priests were supposed to pierce Passover lambs with a wood pole from their mouth to their buttocks.)

A foot soldier was armed with a short sword and a *pilum,* or lance; the *pilum* was of light wood with an iron head, and was about three and a half feet long. Such a lance could easily penetrate the pericardial sac that surrounds and protects the heart and contains watery fluid. A Greek might read this description as referring to a demigod, because Greek gods had ichor (which looked like water) instead of blood. But the person who has read the Gospel from start to finish would see in it a symbolic fulfillment of Old Testament and Jewish hopes; see comment on 7:37-39.

19:35. Eyewitness accounts were considered more valuable than secondhand accounts, and narrators who were eyewitnesses (like Josephus) make note of that fact. Narrator-authors in antiquity also sometimes described themselves in the first person, third person, or both.

19:36. John here could allude to Psalm 34:20 or (fitting the context here) to the prohibition of breaking the bones of the Passover lamb (Ex 12:46; Num 9:12), or (some suggest) John could *midrashically blend allusions to both texts. Pre-Christian Jewish tradition preserves this practice of avoiding breaking the lamb's bones (**Jubilees* 49:13), and Jewish teaching (second century or earlier) stipulates a maximum corporal punishment for breaking the Passover lamb's bones.

19:37. Although a late rabbinic passage interpreted Zechariah 12:10 messianically, the passage itself seems to refer to *God's* having been pierced by the people of Jerusalem (before the coming of Jesus one would have assumed a figurative sense, "pierced with sorrow"). This would fit John's Christology, although cf. also Zechariah 12:8. (Pronouns with divine referents seem to change readily in Zechariah; cf. 2:8-11 and 4:8-9, unless an angel is in view—4:4-6.) The same passage in Zechariah (12:10) apparently refers to God pouring out his *Spirit.

19:38-42
Jesus' Burial

The traditional Catholic and Orthodox site of Jesus' tomb is probably fairly accurate. Ev-

eryone knew that burials must be outside city walls, yet this site is within Jerusalem's walls. Archaeology reveals, however, that Herod Agrippa I expanded the walls of Jerusalem while he was king of Judea (A.D. 41–44) and that this site was *outside* the walls at the historic time of Jesus' burial. The memory of the site thus goes back to within roughly a decade of the event, hence is a fresh and likely accurate memory.

19:38. Crucifixion victims were usually thrown into a common grave for criminals and were not to be mourned publicly after their death; had the Romans had their way, the corpses would not have been buried at all, but such behavior would have needlessly provoked otherwise peaceful local residents. Local Jewish leaders probably normally deposited the bodies in criminals' graves for a year before handing them over to families. But exceptions seem to have been made at times if family or powerful *patrons interceded for the body, naturally inviting comment as in the Gospels. Burying the dead was a crucial and pious duty in Judaism, and an important act of love; being unburied was too horrible to be permitted even for criminals (Josephus, *Jewish Antiquities* 4.202, 264-65). Scripture and tradition mandated it before sundown (Deut 21:23; Josephus, *Jewish War* 4.317). To accomplish his task before sundown and the advent of the sabbath, Joseph of Arimathea has to hurry.

Roman authorities did sometimes hand over bodies to friends or relatives who desired to bury them. Nevertheless, Joseph's request for Jesus' body was an act of courage. Especially for someone outside the family to make the request, it could identify one with the person executed for treason. Far from Joseph's wealth and influence protecting him, it could have also made him a target of special scrutiny and envy. Joseph acts more courageously here than do Jesus' previously public *disciples.

19:39. If this measure of Nicodemus's mixture is one of weight, it is as much as seventy-five modern pounds (more than thirty kilograms; Roman pounds were lighter than modern pounds); less likely, some have suggested a measure of volume identified with the *Old Testament *log,* hence less than seventy fluid ounces. In either case it is a lavish expression of devotion, as in 12:3; but seventy-five pounds is perhaps a hundred times costlier than the lavish gift of 12:3. Other accounts of lavish devotion for beloved teachers are occasionally reported (a *Gentile convert allegedly burned eighty pounds of spices at the funeral of Gamaliel I, Paul's teacher); indeed, five hundred servants carried all the spices for Herod the Great's funeral (Josephus, *Jewish War* 1.673; *Jewish Antiquities* 17.199). Myrrh was used for embalming the dead, and aloes for perfume.

19:40. John mentions the Jewish custom; Jewish people did not burn dead heroes, as some Gentiles did, or mutilate them for embalming, as Egyptians did. Bodies were wrapped in shrouds, sometimes expensive ones, especially prepared for burials. Jewish sources are emphatic that none of these actions may be undertaken unless the person is clearly dead; thus those burying Jesus have no doubt that he is dead. Here strips of linen rather than a full shroud are used, perhaps because of the imminent approach of the sabbath at sundown.

White linen garments were worn by Jewish priests, by some other ancient priests (devotees of Isis) and by angels in Jewish tradition (e.g., 2 Maccabees 11:8); they were also wrappings for the righteous dead. Spices reduced the odor of decomposition.

19:41. On the locale, see "near the city" in verse 20: according to Jewish custom, burials had to be outside the city walls (one may compare the outrage of pious Jews over Antipas's building Tiberias on a graveyard). To be buried in a tomb not yet used was no doubt a special honor and would make the tomb difficult to confuse with others in the vicinity. Tombs were sometimes in garden areas (cf. 2 Kings 21:18, 26). Most Judean tombs were private burial sites belonging to families; often caves were used, and often entrances were sealed with a large, disk-shaped stone that could not be removed from within and were moved from outside only with considerable effort. A tomb belonging to a wealthy person such as Joseph might have a stone a full yard or meter in diameter. Other tombs in this area suggest some wealth of the tomb owners (cf. Mt 27:60). On the site, see comment on Matthew 27:60.

19:42. The sabbath (or the coming of Passover—18:28) interrupted all other activities. One could wash and even anoint a body on the sabbath, due to the rapid decomposition of bodies, but more complete burial activities would have to wait. (Because Jesus was condemned as a criminal, there would be no public funeral.) The women needed to return home before dark. Joseph and Nicodemus did not need to "lay" Jesus there very carefully; this would have been only a preliminary burial even had the sabbath not approached, to be completed fully a year later, after the flesh had rotted off the bones.

20:1-10
The Discovery

Some have doubted the empty tomb story simply because Paul does not mention it (although he presupposes it, since by definition Jewish "*resurrection" left no corpse behind; cf. 1 Cor 15:3-4), but the *disciples could not have credibly proclaimed the resurrection in Jerusalem if Jesus' body were still in the tomb. Although ancient laws of evidence differed somewhat from modern ones (they depended heavily on probability), ancients, like moderns, would not have staked their lives on a report without investigating the tomb! Given how readily holy sites were venerated, many early believers probably also preserved the site of the tomb. Those modern critical scholars who have suggested that the original disciples meant only that they had a spiritual experience but did not claim that Jesus rose bodily read their own modern culture into the *New Testament: "resurrection" meant bodily resurrection and nothing else, and no one would have persecuted the disciples for claiming that they had had merely a spiritual experience. Mere belief in ghosts and apparitions was widespread and would not have embroiled them in significant controversy.

20:1. The nearest of kin would remain home mourning for seven days; Mary Magdalene, who might have grieved as much as the family, might have remained inside had it not been necessary to complete the work left unfinished due to the sabbath (19:42). But Jewish mourners as well as pagans were often known to visit tombs within the three days after the burial.

The first day of the week began at sundown on what we would call Saturday night, so the sabbath had ended hours before she approaches the tomb; going out at night, however, was rare. Although not coming at night, Mary does not wait till full light of dawn; that she would approach the tomb before daylight demonstrates her eager devotion to Jesus. Disk-shaped stones were often rolled in front of the entrances of tombs and were so heavy that they frequently required several men to roll them away.

20:2-3. Romans saw to it that those crucified were dead; on the rare occasion where a crucifixion was stopped and a person taken down and given medical help, they usually died anyway. Apart from a resurrection, which no one expected, Mary could only imagine that the body had been stolen (not very common in Jewish Palestine), that the authorities had confiscated it (to put it temporarily in a criminals' common grave), or that owners of the site had moved it. Ancient Jewish men did not accept women as reliable witnesses for most legal purposes (their witness was also limited in Roman courts), because many believed they were too moved by emotion. It had also been dark when Mary first reached the tomb. Still, they would in any case want to learn what happened to the body.

20:4. Comparison of characters was important in ancient writing and a standard *rhetorical technique; it could often elevate one person without denigrating the other, especially if they were friends. Athletic prowess was one ancient basis for comparison, especially concerning young men. Depictions of physical prowess were part of *narratives extolling characters (e.g., *Josephus outswims most others in *Life* 15). That the beloved disciple is faster than Peter fits some other comparisons in the Gospel (13:23-24; 21:7).

20:5. The stooping suggests a tomb with a low entrance leading to a lower pit; the lighting or the positioning of Jesus' body (e.g., on shelves to either side) would explain why the head veil was not visible before entering.

20:6-7. Had robbers stolen the body (a rare practice) they would have taken it hastily in its wrappings; had they left the wrappings, they would have left them in disarray (and likely left the body with it). Whoever left the

wrappings, left them there neatly. The face cloth separate from the linen is not merely "folded up" (ESV) but "rolled up" (NASB, NRSV, GNT). Again, this could be an indication of neatness, but some think that it was still rolled the way it had been when it was wrapped around Jesus' head—that his body had risen straight out of the wrappings and cloth.

The skeptic's proposal that Jesus had only swooned and then recovered would not explain how he could have loosed the strips tied around him or escaped a sealed tomb, but it also ignores the nature of crucifixion: Josephus had three of his friends taken down alive from a cross, but two of them died *despite medical attention* because their bodies had been so weakened from the crucifixion.

20:8-10. This disciple's faith may have been due to parallels with John 11 or to the way the cloths were laid (20:6-7) or to how this event climaxed the disciples' earlier experience with Jesus; John implies that they would have already believed it from Scripture had they understood.

20:11-18
The First Appearance: Mary Magdalene

Ancient Mediterranean culture did not value highly the witness of women; that Jesus first appears to a woman would not have been fabricated and shows us how Jesus' values differ from those of his culture. Even the later *church did not always maintain Jesus' countercultural stance, and they would hardly have chosen such initial witnesses in an environment where this account would reinforce pagan prejudices against Christians (see comments on Eph 5:22-33).

20:11. Jewish people took the first seven days of mourning so seriously that mourners could not wash, work, have intercourse or even study the *law. Jewish culture was serious about expressing rather than repressing grief. That the body is missing and thus people are prevented from bestowing final acts of love would be regarded as intolerably tragic; even Gentile tomb robbers usually left the body behind.

20:12-13. Among the many associations of white, angels were normally thought to be arrayed in white; see further comment on 19:40; black garments were used for mourning.

20:14. In Jewish tradition, angels could appear in different forms (e.g., Tobit 5:4; 12:19). Jewish traditions in *Pseudo-Philo also speak of God changing the appearance of some *Old Testament human characters so they would not be recognized, and this evidence might reflect more widespread Jewish tradition.

20:15. Gardeners were at the bottom of the social scale, and a gardener there would have tended to the gardening (cf. 19:41), rather than to the tomb itself. But Mary has no better guess concerning his identity. (That he could be a tomb robber does not occur to Mary; tomb robbers were unlikely to come during the mourning period, when visits to the tomb were still frequent, and such robbers would be extremely rare in Jewish Palestine.)

20:16. "Rabboni" means "my teacher" and is more personal and less formal than the title "Rabbi."

20:17. It may be relevant (depending on one's interpretation of 20:17) that ancient texts sometimes included predictions of events fulfilled only after the close of the *narrative. On ascensions, see comment on Acts 1:9-11. The verb translated "Touch me not" (KJV) is a present imperative and might be better translated "Stop clinging to me" (NASB). The reason she must release him is that she must go testify for him in the short time remaining in view of his coming ascension—despite the cultural opposition to sending a woman to testify to such an important event and one so impossible for unbelievers to accept. "Brothers" suggests that 3:3 is now in effect. People applied sibling language figuratively to members of one's people, fellow disciples, friends, and others.

20:18. Ancient Mediterranean culture esteemed the testimony of women far less than that of men (and in some circles did not normally accept it). Jesus' sending Mary with the message transcended usual cultural expectations.

20:19-23
Appearing to Other Disciples

20:19. Even aside from the Feast of Unleavened Bread still going on, the heaviest period of mourning normally lasted seven days, so none of them would have left Jerusalem for Galilee yet anyway. The *disciples would remain inside to mourn. Residences often were equipped with bolts and locks. Bolted doors

would prevent anyone from entering (a heavy bolt could be slid through rings attached to the door and its frame), unless one could walk through closed doors. Jesus' appearance in the locked room suggests a *resurrection body whose nature is superior to that often envisioned in other ancient Jewish literature. "Peace be with you" (i.e., may God cause it to be well with you) was the standard Jewish greeting, but it was meant to communicate peace (like a thoughtful "God bless you" today).

20:20. Wounds were sometimes used as evidence in court or to show how much one had sacrificed for the cause. Here their function is to identify that it is the same Jesus who died; scars could be employed to identify someone. In much of Jewish tradition, the dead would be resurrected in the same form in which they died before God healed them, so that everyone would recognize that the person who stood before them was the same one who had died (cf. **2 Baruch* 50:2-4; *rabbis). "Hands" includes one's wrists, which was presumably where the spikes would have been driven; a nail through the palm would not have secured the person in place on the cross, since the victim's weight would have ripped the hand open (though they were also tied).

20:21. In Jewish tradition prophets often appointed their successors. Judaism sometimes conceived of prophets as God's agents; the sender authorized agents with his authority to the extent that they accurately represented him (see "*apostle" in the glossary).

20:22. Jesus' breathing on them recalls Genesis 2:7, when God breathed into Adam the breath of life (it might also be relevant that later Jewish tradition sometimes connected this passage with Ezek 37, when God's Spirit or wind revives the dead). Jewish literature especially connected the *Holy Spirit with the power to prophesy, or speak for God. In the *Old Testament and early Judaism, God himself is the sole giver of the Spirit.

20:23. Acting as God's agents (20:21) the disciples could pronounce the divine prerogative on his authority (i.e., pronouncing it when he would do so).

20:24-31
Appearing to Thomas

20:24-25. In different languages, both "Thomas" and "Didymus" mean "twin," possibly a nickname. Only the evidence of his senses would persuade Thomas that the other *disciples had not seen merely a phantom or apparition; a ghost or spiritual vision as in pagan tradition, or an image produced by a magician, would not be corporeal. The *resurrection body, by contrast, was clearly corporeal, although the exact nature of such corporeality may have been debated among early Christians. Thomas does not doubt that his friends think they saw something; he doubts only the nature of their experience.

20:26. See comment on 20:19. Now that a week had passed, the feast would be over and the disciples would thus soon be ready to return to Galilee unless they received orders to the contrary.

20:27. Soldiers could bind victims to crosses with rope, but also could nail them to crosses through their wrists.

20:28. Thomas's response, the climactic confession of Jesus' identity in this Gospel, is a confession of Jesus' deity; cf. Revelation 4:11. Pliny, a governor writing near the probable location of John's readers two or three decades after John, reports that Christians sing hymns to *Christ "as to a god." By contrast, the Roman historian *Suetonius reports that the emperor Domitian (probably reigning when John was writing) wanted to be honored as "Lord God" (*Life of Domitian* 13). Most importantly, "Lord" and "God" appear together repeatedly in the *Septuagint as divine titles, including in forms similar to "my Lord and my God" (Ps 35:23 [34:23 LXX]; Hos 2:23 [2:25 LXX]).

20:29-31. Jesus' blessing (v. 29) applies to the readers of John who believe through the apostolic testimony (v. 31), and Thomas's confession (v. 28) helps define the content of saving faith in verse 31. Verse 30 is the culmination of John's signs motif: signs sometimes lead to faith and sometimes lead to opposition. Narrators sometimes noted that they had many more stories than they could recount (v. 30).

21:1-14
Appearing in Galilee

Some modern scholars have thought that John 21 was not part of the original Gospel of John because it seems anticlimactic. But the conclusion (book 24) of the most popularly read

work of Greco-Roman antiquity, the *Iliad,* is also anticlimactic; ancient readers and writers would not have viewed epilogues as "later additions" or the like because of their anticlimactic character.

21:1-3. Even around the lake of Galilee, agriculture constituted the primary occupation; fishing was nevertheless a major industry there, and fishing there often provided an ample income. Fishing was often done at night (cf. Lk 5:5). Some people have reported that fish are more easily caught at night than in the day on the Sea of Galilee (here called Tiberias); they could then be sold in the morning. Nets were probably made of rope woven from substances like flax or hemp. At night fish tended to be in the deep water, so were more easily caught with a dragnet, a net with a narrow end pulled by the men in the boat and a wider end sunk by attached weights. Fishermen working at night could use torches to illumine their work. We do not know for certain what tools the *disciples had used—only that they had not caught anything.

21:5-6. Jewish tradition recognized God as sovereign over fish (e.g., Tobit 6:2-5), which no doubt encouraged many fishermen's prayers. Some suggest that the steering oar was normally on the right side of the boat, so that casting was normally done from the left. In any case, Jesus' command is unusual, given their failure to catch fish all night.

21:7. Peter should not need help recognizing Jesus, but cf. 20:4-5. For comparisons of Peter and the beloved disciple, see comment on 20:4-5. Many hearers in antiquity respected youthful or athletic prowess, and many also viewed fishermen as tough; they might also view Peter swimming to Jesus as an athletic expression of his devotion to him. "Naked" was used as a relative term (it could mean "without an outer garment"). Greeks stripped for strenuous work, but religious Palestinian Jews avoided nakedness in public. Peter has an inner garment or at least a loincloth on; but even in the cool of dawn he may have worked up enough of a sweat to have kept his outer garment off. (The Sea of Galilee is lower in elevation than Jerusalem.) The term that John uses for Peter girding on his outer garment suggests that he wrapped it around his waist.

21:8. Deep fishing with a dragnet was often better for the night, but a single boat's net was usually more useful for fishing in shallower waters during day. Peter swam; a hundred yards is too far out for Peter to have waded.

21:9-10. Although Jesus provides as he did in chapter 6, this time he gives them a chance to share as the lad had in 6:9. The very small class of leisured, wealthy landowners in the Roman Empire despised manual labor, but most manual laborers seem to have taken pride in their work (they mention their occupations on their tombstones); Jesus affirms their fishing, even though that too had been his provision (21:5-6).

21:11. On Peter's lavish display of physical prowess devoted to Jesus, see comment on 21:7. Jerome claimed that ancient zoologists counted 153 kinds of fish, but extant copies of their writings do not support his hypothesis, which may have stemmed from an attempt to explain this verse; various counts of their number circulated. Various symbolic interpretations of "153" have been offered (from Hebrew words that total 153 when their numerical value is reckoned, to it being a triangular number that would have impressed ancient *Pythagorean philosophers). But ancient miracle stories would stress numbers to heighten the reality of the miracle (e.g., 2 Kings 19:35); 153 is no doubt used because the disciples were impressed enough to have counted the fish. (What fishermen would not have counted such a catch?) The risen Lord has provided them more fish than they could possibly eat by themselves.

21:12-14. The host or the head of the household would usually pass out the bread; cf. 6:11. The term for the meal here in this period could also apply to a light midday meal, though it had earlier applied to a light morning meal (cf. 21:4).

21:15-23
Two Commissions

21:15-17. Most scholars view the two Greek words for "love" here as being used interchangeably, as they are elsewhere in John and generally in the literature of this period; use of synonyms for *rhetorical variation was common in antiquity. The point is not (against some popular interpreters) in the different terms, but that love for Jesus must be demon-

strated by obedience to his call and service to his people. As a "follower," Peter is one of the sheep himself (10:4; on "sheep," see comment on Jn 10:1-18; for the background on faithful shepherds to feed them, see Jer 23:4; cf. Ezek 34).

21:18-19. Predictions in antiquity were often enigmatic; this one indicates that Peter will not have control even over dressing himself (cf. 21:7) for a journey—in this case, being prepared for execution. Some others employed dependence as an image of powerlessness. Stretching out hands could apply to supplication, but in this context may fit instead voluntary submission to binding, which preceded execution. Some early Christian texts, perhaps developing the idea here, apply "stretching out hands" to crucifixion. For "glorifying" God like Jesus in martyrdom, see 12:23-27; strong tradition declares that Peter was crucified in Rome under Nero about A.D. 64.

21:20-23. Jesus told Peter that the beloved disciple's call was not a matter for Peter to know about, but this tradition was misinterpreted to mean that the beloved disciple would live till Jesus' return. The point is that Jesus has the right to choose who will be martyred and who will survive. According to strong (though not unanimous) tradition, John was one of the few original *apostles to escape martyrdom.

21:24-25
Attestation of Witnesses

21:24. Greco-Roman and Jewish legal documents typically ended with attestation by witnesses. "We know that his witness is true" may be a postscript added by John's own *disciples, attesting to the veracity of his eyewitness, although it is not beyond John to write such words himself (19:35; cf. the plural witness in 1 John, e.g., 1:1-4).

21:25. When writers had more data before them than they could record, they often noted that they were being selective. Thus, for example, the exploits of Judas Maccabeus were too many to narrate all of them (so 1 Maccabees 9:22), or no human could recount all the sufferings of the Achaians (Homer, *Odyssey* 3.113-17). Greek, Jewish and *Samaritan writers often included *hyperboles like this one as well, sometimes speaking of how the world could not contain the knowledge a particular *rabbi had of the *law, and so forth.

Acts

Introduction

Authorship. The style and themes of Acts clearly reflect the same authorship as those of the Gospel of Luke. Luke varies between Greek contemporary prose style and a Jewish style of Greek heavily influenced by the *Septuagint.

The author claims to be an eyewitness of some secondary incidents (see comment on Acts 16:10), to have therefore known direct sources for much of his information, and to have acquired thorough knowledge of the rest (Lk 1:1-4). The idea of modern scholars that Luke's use of "we" in Acts to indicate something other than his actual presence reflects a modern agenda rather than sensitivity to the first-century background, for historical works in antiquity barely ever used "we" fictitiously.

Once one accepts the possibility that a traveling companion of Paul authored the work, the tradition that Luke (a physician, Col 4:14) is the author of Luke-Acts has nothing against it and fits what little we know about Luke. A number of terms in Luke-Acts are frequent in medical literature, although most of these terms also occur elsewhere, so this terminology alone would not prove Lukan authorship. Physicians could be lower class, even slaves, but were generally well educated; the presence of women in that field (especially midwifery) may have made some physicians more conscious of women's concerns (which Luke-Acts is).

Date. Most scholars date Luke-Acts between 70 and 90, with a smaller number dating it in the 60s and a still smaller number dating it later. Because Acts breaks off before Paul's death, some scholars have suggested that Acts (and hence Luke or its hypothetical earlier draft, proto-Luke) was written before A.D. 64. Others, reading Luke 21, suggest a date after A.D. 70, saying that Acts breaks off about A.D. 62 for literary reasons or because Luke needed only *positive* legal precedents. (Acts is not a biography of Paul, and Luke has reason to end on the climactic note of the *gospel reaching Rome.) The evidence is not conclusive on either side, but because Luke clearly used the Gospel of Mark as a source, dating Luke-Acts to A.D. 62 would call into question the usual dating of Mark to A.D. 64. Because of this and possible allusions to the temple's past destruction, the majority of scholars therefore date Luke-Acts later, sometime after 70. Neither the dating of Mark nor that of Luke-

Acts is secure, but this commentary tentatively accepts a date for the latter in the early to mid-seventies. Later dates appear less likely. Because Acts recalls in some detail riots that would be counterproductive to narrate unless one could not avoid the truth that they happened, it undoubtedly reflects recent memories that must be addressed. (The charge that Paul was guilty of stirring riots, 24:5, would disturb people loyal to Roman order, and the riots would need to be explained both during his custody and in the wake of his execution.)

Purpose: Legal. One purpose of the work is to record consistent legal precedents in favor of the early Christians. In Acts every Roman court declares Christians not guilty, and this record has so impressed some scholars that they have suggested Luke wrote Acts as a court brief on Paul's behalf. Acts, however, is a *narrative, not a list of precedents. More likely, Luke cites a wide range of legal precedents from different local courts (which would be helpful but not binding) for the same reason that *Josephus does on behalf of Judaism: to argue that Christianity should enjoy continued legal protection in the empire. Luke thus gives Christians legal ammunition (Lk 21:15) and paves the way for later Christian lawyers and philosophers like Tertullian and *Justin Martyr, who would argue for the toleration of Christianity. That Paul's custody and several speeches consume the final quarter of Acts reveals how important it is for Luke to answer the false charges against him.

Purpose: Apologetic. The apologetic in Acts extends beyond Roman law and beyond Paul's case. All history was written with a purpose; it was influenced by *rhetoric and (to a lesser extent) wider literary and dramatic conventions, and was also used to illustrate moral principles. Josephus uses it to justify God and Israel after the war of A.D. 70; *Plutarch and *Livy use it to teach morals; even *Tacitus writes as an aristocrat longing for the grandeur of old Rome. History with a theme or focal point (church history, social history, African-American history, etc.) is no less history for having an interest or editorial perspective. Luke's apologetic purpose is often advanced in the book's speeches.

Acts works on several fronts: the gospel confronts Roman law courts, Greek philosophers, rural Asian farmers and others on their own terms, and nothing can stop it. A major theme is the relationship of Christianity to Judaism. Ancient religions were respected by virtue of their age, and Christians needed to demonstrate that the *Old Testament was their book and that they were the authentic voice of Judaism (despite the opposition of much of the Jewish community of Luke's day to this claim). Luke develops this theme by displaying the fulfillment of Old Testament motifs.

Genre: History. The majority of scholars view Acts as a historical monograph, that is, a historical work focused on a specific topic (in contrast to many historians' multivolume histories of expansive subjects). Historians were permitted a

wide degree of latitude on details, although they were expected to get the bulk of a story right insofar as their sources were accurate. By ancient standards, Luke is meticulously careful with his sources in the Gospel (Lk 1:1-4), and we may regard him as no less trustworthy in Acts, where we can often check him against letters of Paul (few of which would have been available to Luke). Some sections of Acts also include eyewitness accounts of someone who journeyed with Paul; contrary to the opinion of some scholars, "we" normally *did* literally mean "we" in ancient narratives. Luke is a careful enough editor that had he not meant to include himself in the company of Paul, he would not have allowed an earlier source's "we" to stand. First-person pronouns appear in historical writing (such as Josephus) as well as novels, but only historical works had historical prologues (Lk 1:1-4; Acts 1:1-2).

Many historical writers also sought an entertaining, lively style just as novelists did; thus the mention of "plot devices" in the following commentary means only that Luke was a good writer, not that he was an inaccurate historian. He was, however, a more popular and less rhetorical historian than most extant ancient historians; like them, he was interested in recounting a cohesive story, but unlike them, he was not interested in showing off lavish rhetoric. "Historian" was not a distinct profession and was practiced by many educated people. Even elite historians who were professional orators, however, like Tacitus, could stick very close to the events (and the substance, though usually not the wording, of speeches) as their sources provided them.

The question of the speeches' historicity invites special comment. Ancient writers never recorded speeches verbatim (cf. even Acts 2:40); they took notes if they were present, got the gist and were guided by their knowledge (when available) of the speechmaker's style and proper speechmaking technique. Historians sometimes fabricated speeches (as Josephus does for a speech at Masada with no surviving credible witnesses) but used the basic thrust of the speech when data about it was available. Luke's editing brings out some consistent themes in the apostolic-proclamation speeches in Acts, but we may also be confident that they also reflect whatever Luke knew of the speeches or kind of speeches in those settings. Acts's speeches are significant for the book's purpose; they make up roughly one-fourth of the book.

Luke-Acts may be closer to standard forms of Greco-Roman historical writing than are the other Gospels, which resemble ancient biography. Whereas Matthew, Mark and John wrote forms of ancient biography, Luke's second volume shows that he wrote history as well. Some multivolume histories had a volume or two devoted to an individual person; when viewed by itself, that volume would be read as biography, but when read with the rest of the work, as a part of a larger history.

Luke and Acts are each roughly the same length as Matthew, with Mark one-half

and John two-thirds that length, indicating scrolls of standardized lengths (Matthew, Luke and Acts were each close to the maximum length for normal scrolls, between thirty-two and thirty-five feet). In the first volume, Luke writes about Jesus; in the second volume, Luke writes about the *Spirit's activity in the Jewish and *Gentile *churches, especially through the figures of Peter and Paul. Many ancient writers would make comparisons between figures as part of their historiographic technique. (*Plutarch is especially known for paralleling Greek and Roman figures in his biographies; perhaps more to the point, 1 Kings 17–2 Kings 13 seems to compare Elijah and his successor Elisha.)

Message. Aside from the themes already mentioned and typical Lukan emphases on prayer, signs and wonders, and the Spirit, Luke's whole book is structured around world evangelization (1:8), with six or eight summary statements throughout the book displaying the spread of the *gospel (see 6:7; 9:31; 12:24; 16:5; 19:20; 28:31). For Luke, the ultimate goal is crosscultural communication and world evangelization, and the requisite power to carry out the task is only the *Holy Spirit.

Commentaries. For the background used here, see in greatest detail Craig S. Keener, *Acts: An Exegetical Commentary,* 4 vols. (Grand Rapids: Baker Academic, 2012–). Many other commentaries also provide much useful background, including C. K. Barrett, *A Critical and Exegetical Commentary on the Acts of the Apostles,* 2 vols. (Edinburgh: T & T Clark, 1994–1998); Darrell L. Bock, *Acts,* BECNT (Grand Rapids: Baker Academic, 2007); F. F. Bruce, *The Acts of the Apostles: The Greek Text with Introduction and Commentary,* 3rd ed. (Grand Rapids: Eerdmans, 1990); James D. G. Dunn, *The Acts of the Apostles* (Valley Forge, PA: Trinity Press International, 1996); Joseph A. Fitzmyer, *The Acts of the Apostles: A New Translation with Introduction and Commentary,* AB 31 (New York: Doubleday, 1998); Luke Timothy Johnson, *The Acts of the Apostles,* SP 5 (Collegeville, MN: Liturgical Press, 1992); Mikeal C. Parsons, *Acts,* PCNT (Grand Rapids: Baker Academic, 2008); and Ben Witherington III, *The Acts of the Apostles: A Socio-Rhetorical Commentary* (Grand Rapids: Eerdmans, 1998). Other helpful works for background include especially Bruce Winter, ed., *The Book of Acts in Its First Century Setting,* 6 vols. (Grand Rapids: Eerdmans, 1993–), all vols.; Eckhard J. Schnabel, *Early Christian Mission*, 2 vols. (Downers Grove, IL: IVP Academic, 2004); and F. J. Foakes Jackson and Kirsopp Lake, eds., *The Beginnings of Christianity,* 5 vols. (1933; reprint, Grand Rapids: Baker, 1979). Examples of excellent monographs on specific topics include, among many others, Loveday C. A. Alexander, *Acts in its Ancient Literary Context: A Classicist Looks at the Acts of the Apostles,* LNTS 298 (London: T & T Clark International, 2005); Colin J. Hemer, *The Book of Acts in the Setting of Hellenistic History*, ed. Conrad H. Gempf, WUNT 49 (Tübingen: Mohr Siebeck, 1989); Youngmo Cho, *Spirit and Kingdom in the Writings of Luke and Paul: An Attempt to Reconcile these Concepts* (Waynesboro, GA: Paternoster, 2005); Martin Hengel and Anna Maria

Schwemer, *Paul Between Damascus and Antioch: The Unknown Years* (Louisville, KY: Westminster John Knox, 1997); Osvaldo Padilla, *The Speeches of Outsiders in Acts: Poetics, Theology and Historiography,* SNTSM 144 (Cambridge: Cambridge University Press, 2008); Stanley E. Porter, *Paul in Acts* (Peabody, MA: Hendrickson, 2001); Brian M. Rapske, *The Book of Acts and Paul in Roman Custody* (Grand Rapids: Eerdmans, 1994); Rainer Riesner, *Paul's Early Period: Chronology, Mission Strategy, Theology* (Grand Rapids: Eerdmans, 1998); and Clare K. Rothschild, *Luke-Acts and the Rhetoric of History: An Investigation of Early Christian Historiography,* WUNT 2.175 (Tübingen: Mohr Siebeck, 2004).

1:1-5
Preparing to Go

In a two-volume work it was common to recapitulate the theme or the end of the first volume in the beginning of the second. Thus Luke 24:36-53 is recapitulated in Acts 1:1-14, repeating many points in greater detail. Historians had freedom to arrange materials in their own words and to paraphrase, and readers would have regarded different wording in two volumes of the same work as variation for the sake of readability, not as an accidental oversight. (This pattern also should warn us not to read modern expectations of verbatim quotation into ancient works that no one read that way.)

1:1. This is not an uncommon way to begin a second volume. "Began" is common Lukan style and could simply reflect a Semitic or Koine (the common Greek dialect) figure of speech, but theologically it may indicate that Acts continues a report of Jesus' works through the *church. Theophilus may be the *patron, or sponsor, of the work, to whom Luke formally dedicates it (as was frequent; see comment on Lk 1:3-4). A writer could also dedicate a work to any person of status who might help circulate the work or whose name in the dedication might be thought useful to circulating the work. Theophilus was a common *Diaspora Jewish name and undoubtedly represents a real person; although the name means "lover of God," symbolic dedicatees were virtually unknown.

1:2-3. Sample evidences were reported in Luke 24, and the forty days here (perhaps mirroring Luke 4:2) allows for the Galilean ministry reported in the other Gospels. Greeks also wanted eyewitnesses to document the epiphanies (or appearances) of their gods or goddesses, but those appearances were not clearly physical or sustained over such a long period of personal contact.

1:4. "Gathering together" (NASB) is literally "took salt together," but this was already an idiom for table fellowship. Eating together was the ultimate sign of physicality (in many Jewish traditions, angels could not genuinely eat human food; cf. Lk 24:42-43) and intimacy (see comment on Lk 5:29-32).

1:5. The *Holy Spirit was associated both with purification (thus "*baptism") and wisdom or *prophecy in segments of ancient Judaism. But the emphasis was usually on the ability to prophesy (speak for God under his inspiration), and Luke especially emphasizes this aspect of the Spirit (see esp. 2:17-18).

1:6-11
Coming and Going

1:6. This question was the most natural one for the *disciples to ask Jesus. He had been talking about the *kingdom (1:3), and the references to the outpouring of the *Spirit in the *Old Testament were all in the context of Israel's restoration (Is 32:15; 44:3; Ezek 36:25-28; 37:14; 39:29; Joel 2:28–3:1).

1:7. See Matthew 24:36. Jewish *apocalyptic writers often saw history as divided into epochs determined by God, yet they sometimes used their calculations of the epochs to predict that they were near the end. Jesus says that the Father has determined the time but not revealed it. Some Jewish sources believed that human obedience could hasten the end; others that God had ordained the time immutably. (Because much of Judaism embraced both God's sovereignty and human will, these options need not always have been mutually exclusive.)

1:8. Although the time of Israel's restoration might be unknown, the end-time mission given to Israel, to be Spirit-anointed witnesses (Is 42:1, 4, 6; 43:10-12; 44:3, 8), is being given now. The disciples are thus to serve as the prophetic remnant within Israel, and Isaiah's witnesses for God here are witnesses for Jesus. (When Israel had disobeyed God, he had always kept a remnant; see comment on Rom 11:1-5.) In Luke-Acts, "power" is often expressed in healings and exorcisms (Luke 4:36; 5:17; 6:19; 8:46; 9:1; Acts 3:12; 4:7; 6:8; 10:38), which can be construed as signs of the kingdom era (Is 35:5-6 in Luke 7:22).

Different ancient texts referred to different places by the phrase "ends of the earth." Writers commonly meant Ethiopia (8:27; cf. Luke 11:31), but in Acts the short-term strategic goal is Rome (perhaps the phrase's use in *_Psalms of Solomon_* 8:15), to make an urgent impact on the empire. From a long-range perspective, however, all peoples are meant (Ps 67:1, 7; Is 45:22; 49:6; 52:10). Scripture informs this mission (Lk 24:45-49), especially Isaiah's

emphasis noted above (see esp. Is 49:6, cited in Acts 13:47). Many Jewish writers portrayed Jerusalem as the world's center (certainly theologically). Many scholars treat 1:8 as a summary statement of or outline for Acts; many ancient documents included such statements (often much more detailed than Luke's).

1:9-11. In Greek stories, various heroes ascended to heaven, usually by dying and becoming gods (like Heracles on his funeral pyre). For Luke, however, the ascension is only a confirmation of Jesus' status at the *resurrection, a coronation of the king who was both human and divine all along. Jewish accounts of Elijah (from the Old Testament) and others (from later traditions) taken up to heaven show that Jewish readers would understand the ascension, but again, the difference is between the exaltation of a pious man and the exaltation of the Lord, to faith in whom they are to summon humanity. Angels ascended and descended, but Luke's contemporaries did not regard these angelic movements as unique events. (Judaism also spoke figuratively of divine Wisdom ascending or descending but never in a *narrative context, because Wisdom was a personification, not a historical character.)

The most obvious ascension known to Jewish people from Scripture was Elijah's ascension in 2 Kings 2. In that same context, Elijah's successor Elisha received a double portion of Elijah's spirit to carry on the task (2:9-10). Here Jesus' ascension prepares for the church's prophetic empowerment (Acts 2:17-18) by the Spirit that empowered Jesus.

Moses had passed on his work to Joshua, Elijah to Elisha, and *rabbis and philosophers to their disciples. This model of succession created occasional "succession narratives" that described the passing on of a teacher's call. Jesus' ascension immediately after the commission of 1:8 leaves believers as his successors, responsible for the job of world evangelization, until his return in the same glorified body (1:11). Clouds often aid ascents in ascension narratives; one may think here of the cloud of divine glory (in texts like Ezek 10:4, but especially Dan 7:13, used in Luke 21:27). Angels (as well as priests and others) were often portrayed as wearing white robes (e.g., Dan 10:5; *1 Enoch* 71:1; 2 Maccabees 11:8).

1:12-14
The Prayer Meeting

Given the fifty days from Passover to Pentecost, and subtracting Jesus' time in the tomb and the forty days of 1:3, this meeting may have lasted close to a week. (In church tradition, possibly based on this passage, it is ten days before Pentecost.)

1:12. Mount Olivet was the place of the Lord's expected coming (Zech 14:4; cf. Zech 14:5, evoked in Luke 9:26). It was about half a mile east of the temple and several hundred feet above it—close to "a sabbath day's journey," which was two thousand cubits (sometimes estimated at roughly 2,880 feet). (*Essenes had a shorter measure, but Luke's measure corresponds with the tradition probably most commonly observed by religious Judeans.) This expression is used as a measure of length, not to indicate that it was the sabbath.

1:13. The wealthy part of Jerusalem was the Upper City, where upper rooms were more common and more spacious. Although upper rooms in many Palestinian homes were nothing more than attics, ancient texts do report gatherings of large numbers of sages in more spacious upper rooms.

The list of the names of the Twelve varies slightly in different *New Testament texts. But business documents from the period show that it was common for people to have two identifying names, either or both of which could be used. The insertion of "brother" before Judas in the KJV is unlikely; ancient inscriptions use Greek phrases like "Judas of James" to mean "Judas *son* of James." Some have taken "zealot" as a technical term in use by Luke's day, but it could also mean one "zealous for the *law."

1:14. Given the forty days of 1:3, Jesus' time in the tomb and the fifty days between Passover and Pentecost, the *disciples continued to wait for close to a week. Given the culture's usual downplaying of women's public roles, the full participation of women is noteworthy. Nevertheless, women were not necessarily segregated from men in *synagogue services, as some have maintained. The text need not imply uninterrupted prayer by each individual, but it must mean more prayer than

usual or Luke would have no reason to mention it.

1:15-26
Replacing an Apostate Apostle

Retaining the number twelve for the leaders remained important for its symbolic message about the restoration of God's people (cf. Lk 22:30). When the probably *Essene community of the *Dead Sea Scrolls chose a group of leaders that included twelve special officials (cf. 1QM 2.1-2; 11Q19 57.11-13), it was meant to symbolize that this community was the true remnant of Israel, faithful to God even though the rest of the nation was apostate. Jesus had chosen twelve special disciples to make the same point, so the number had to be restored to twelve official leaders at least until the point of having twelve had been effectively communicated. Judas had forfeited his place by apostasy.

1:15. According to a Jewish tradition of uncertain date, 120 elders first passed on the *law in the time of Ezra. Then again, the Dead Sea Scrolls required one priest for every ten men, so 120 may be the number of people a team of twelve leaders could best accommodate; other disciples may not have all been present at one time. But Luke may simply record the number to emphasize that many more than the Twelve gathered.

1:16-17. The masculine address, "Men" (here and often in Acts) was a regular Greek way of addressing large assemblies, and did not always exclude the presence of women (cf. 1:14). Jewish people believed that Scripture "had to be fulfilled" and that God was sovereign over the events of history. Greco-Roman writers used fate as a plot-moving device, but Luke sees history moving in accordance with God's revealed purposes in Scripture.

1:18-19. *Digressions were common in ancient literature; Luke makes a brief one here. The account has features in common with and diverging from Matthew 27:1-10; these similarities and differences can be explained on the basis of two authors reporting different details and ancient historians' freedom on such details. (Some ancient spoofs on suicide attempts report ropes breaking while a person was attempting to hang himself or herself, but these accounts were normally fictitious and at best would have been uncommon in real life! More plausibly, Luke might depict the fate of the corpse if it was cut down.)

1:20. "It is written" was a common Jewish quotation formula. Here Peter might follow the Jewish interpretive principle *qal vahomer,* a "how much more" argument: if the psalmist (Ps 69:25; 109:8) could speak thus of prominent accusers of the righteous in general, how much more does this principle apply to the epitome of wickedness, the betrayer of the *Messiah? (*New Testament writers appropriately apply many of the points of Ps 69, a psalm of the righteous sufferer, to Jesus.)

1:21-22. Eyewitnesses (cf. 1:8) were very important in ancient times, as they are today; hence the need to select someone who had been with Jesus from his *baptism to his *resurrection. Going "in and out among" people was idiomatic in the *Old Testament for freedom of movement and close association.

1:23. Double (in the case of Joseph Barsabbas, triple) names were quite common, especially with common names (like Joseph) that required qualification. "Barsabbas" is *Aramaic for "son of the sabbath"; normally such a name would apply to someone born on the sabbath.

1:24-25. Greeks and Romans often claimed that particular deities knew or saw matters, and Judaism regularly emphasized the true God's omniscience. Judaism affirmed that God knew people's hearts (Ps 7:9; Jer 17:10), and some called God "Searcher of hearts."

1:26. The lot was often used to select people for special duties in the Old Testament (1 Chron 24:7; 25:8) and in the Dead Sea Scrolls; Romans and Greeks and other peoples also cast lots for this purpose. Lots were also used to decide other matters (so the rabbis, the Jewish historian *Josephus and others), and as a form of divination in Greek circles. Jewish people used the lot because they believed in God's sovereignty (God even made it work for pagans in Jon 1:7, to expose Jonah's disobedience; cf. also Esther 3:7), although they forbade all forms of divination. Lots could be stones or pottery fragments, sometimes with markings, placed in containers (vessels or bags); one designating a person could fall out during shaking, or people could draw lots designating different outcomes.

2:1-4
The Proofs of Pentecost

Scholars have compared some of the signs of the *Spirit's coming in Acts 2:1-4 with the revelation of the *law on Mount Sinai and other theophanies and especially with expectations for the end time. (Many Jewish expectations for the end appear as fulfilled in the NT, because the *kingdom's promised *Messiah had come and been resurrected.) Jewish people associated the outpouring of the Spirit especially with the end of the age (1:6), and several signs God gave on the day of Pentecost indicate that in some sense, although the kingdom is not yet consummated (1:6-7), its powers had been initiated by the Messiah's first coming (2:17).

2:1. Pentecost was celebrated as a feast of covenant renewal in the *Dead Sea Scrolls; some texts celebrate the giving of the law on Mount Sinai, but these sources are later than Acts. Some commentators have suggested that Luke intends a parallel between Moses' giving the law and Jesus' giving the Spirit, but other scholars argue that little in Acts 2 suggests that Luke makes the connection, even if some Jewish Christians before him might have. Perhaps Luke's real or at least main reason for mentioning the feast, however, is the crowd it would have drawn in terms of both size and geographic diversity; see comment on 2:5.

2:2. God elsewhere used wind to symbolize his Spirit, who would revive the dead at the future restoration of Israel (Ezek 37). This symbol shows the eruption into history of what was anticipated for the future.

2:3. Storm phenomena (cf. 2:2) and fire sometimes appear in theophanies in the *Old Testament (including at Sinai, Ex 19:18). Moreover, God cast his glory on each tabernacle in which he chose to dwell before the exile (Ex 40:34-35; 1 Kings 8:10-11). But fire was also used to describe God's impending judgment in the day of his fury and thus could serve as a sign of the future (Is 66:15; cf. comment on Lk 3:16). (Others have suggested an allusion to fire's use in purifying metals; cf. Mal 3:2-3.)

2:4. Some (esp. those who emphasize Sinai allusions here) note the ancient Jewish interpretation in which God offered the law at Sinai first to the seventy *Gentile nations, each in their own language. Some scholars have adduced instances of incoherent speech in other cultures as parallels to this speaking in tongues, but most scholars today view the purported parallels from Greco-Roman antiquity as weak. Luke presents this speech not as incoherent but as worship in languages they do not know, and he points to an Old Testament background in the gift of *prophecy (see comment on 2:16-18). Inspired worship in others' languages suits Luke's larger emphasis on cross-cultural inspired speech (witness, in 1:8).

2:5-13
The Peoples of Pentecost

The most sensible setting for the encounter Luke describes here is the temple courts, where one could preach to such a large crowd (2:41). If the *disciples are still meeting in the "upper room" of 1:13 (this point is debated), they would be near the temple and could have moved to the temple courts; very large upper rooms were found only in Jerusalem's Upper City, near the temple.

2:5. Many Jewish people from throughout the Roman and Parthian worlds would gather for the three main feasts (Tabernacles, Passover and Pentecost). Because Pentecost was only fifty days after Passover, some Diaspora visitors who had spent much to make a rare pilgrimage to Jerusalem stayed the seven weeks between the two feasts. Pentecost was probably the least popular of the three pilgrimage festivals, but *Josephus attests that it was nevertheless crowded. Besides those who stayed between the festivals, some other Diaspora Jews settled in their people's "mother" city (see comment on 6:1).

2:6-8. The Jews from Parthia would know *Aramaic; those from the Roman Empire, Greek. But many of them would also be familiar with local languages and dialects spoken in outlying areas of their cities. (Even most Palestinian Jews were functionally bilingual, as are people in many parts of the world today.)

2:9-11. Although these are Jews, they are culturally and linguistically members of many nations; in keeping with his theme (1:8), Luke thus emphasizes that even from the *church's inception as an identifiable community, the Spirit proleptically moved the church into

multicultural diversity under Christ's lordship.

Among suggested backgrounds for the list of nations here, the most compelling is the proposal that Luke has simply updated the names of nations in the table of nations in Genesis 10. As the Bible's first such list, it was the most obvious background that Luke shared with his hearers. The nations of Genesis 10 were in the very next chapter scattered at the tower of Babel, where God judged them by making them unintelligible to each other; here God transforms the judgment in a miracle that transcends the language barrier.

Many Jews had never returned from exile in Mesopotamia, and most of these lived in Parthia. Many Jews also lived in some of the provinces of Asia Minor, in Syria, and in Alexandria and Cyrene in north Africa; for Jews in Rome, see comment on 28:17; see also "*proselyte" in glossary. "Arabians" applies especially to the Nabateans, a kingdom headquartered in Petra, though Nabateans were widespread, including many in Herod Antipas's territory of Perea. Jerusalem had much trade with Nabatea. Although the Nabateans were mostly pagan, Jews succeeded in converting some to Judaism.

2:12-13. Hecklers were common and speakers had to learn to deflect their ridicule. This scene occurs in April, and the grape vintage ended by early fall; in speaking of (literally) "sweet wine," the speakers are mocking, not trying to make a factual statement. Ancient writers sometimes described inspiration in terms of drunkenness; Greeks believed in frenzied inspiration by the gods, and in particular *Philo, a Jewish writer thoroughly in touch with Greek ideas, wrote of divine intoxication. Thus experiences of the transcendent (whether God-inspired or moved by base spirit possession) sometimes appeared to outsiders as ecstasy similar to drunkenness. Some denounced particular ideologies as madness (see comment on 26:24-25). (Although drunkenness was common in Greek parties, it would viewed negatively in Jewish Palestine.)

2:14-21
The Prophecy of Pentecost

2:14-15. In Greco-Roman society, public speakers would normally stand to speak. "Men of [a locale]" was a very frequent form of direct address in ancient speeches. Peter answers the questions (2:12-13) in reverse order. People usually got drunk at night (cf. 1 Thess 5:7), at banquets, not at 9 a.m.; people might have a hangover in the morning, but only in the rarest cases would anyone act drunk then.

2:16-18. "This" (2:16) refers to the speaking in tongues (2:6, 12), which Peter says fulfills Joel's message about the *Spirit of *prophecy, perhaps evoking an implied Jewish *qal vahomer* ("lesser to greater") argument: If the Spirit can inspire them to speak languages they do not know, how much more could he inspire them to prophesy the word of the Lord in their own language? Visions and dreams were especially prophetic activity, and Peter underlines this point by adding "and they will prophesy" at the end of 2:18 (not in Joel).

Peter reads Joel's "afterward" (2:28) as "in the last days," a phrase that in the prophets normally meant after the day of the Lord (Is 2:2; Mic 4:1), which fits Joel's context (Joel 2:30–3:3). Because the future age was to be inaugurated with the *Messiah's coming, it has been inaugurated in at least some sense because the Messiah, Jesus, had come—a point the outpouring of the Spirit on his followers is meant to demonstrate. Luke elsewhere emphasizes the crossing of barriers noted here (such as gender and age) and especially the ministry to all peoples implied in "all flesh."

2:19. Joel 2:30 has "wonders" but not "signs"; Peter may add "signs" because he wishes to show that at least some requisite signs took place on earth (Acts 2:22; cf. Deut 26:8). "Blood, fire and columns of smoke" is especially the language of war.

2:20-21. In Joel the sun would be blotted out and the moon discolored especially by the locust (and/or human) invasion (Joel 2:2, 10; 3:15). Peter suggests that in some anticipatory sense, this final time of God's salvation for Israel has begun. Tongues prove that the Spirit of prophecy has come, which proves that salvation has come, which proves that the messianic era has come, and thus that the Messiah has come.

Peter breaks off his quote from Joel here, but resumes with the final line of Joel 2:32 ("as many as the Lord calls") at the end of his sermon (Acts 2:39). Thus his sermon is a conventional Jewish (*midrashic) exposition of

the last line he quoted, and answers the question: What is the name of the Lord on whom they are to call? In the Hebrew text, "Lord" here is the sacred name of God (Yahweh), which readers in a Judean *synagogue would pronounce as the word for "Lord" (Adonai); in the Greek text that Peter probably cites to communicate with hearers from many nations, it is simply the Greek word for "Lord," but all biblically literate hearers would know that it means "God" here.

2:22-40
The Preaching of Pentecost

Kenneth Bailey has argued that Peter's sermon here involves an extensive *chiasmus, a reverse-parallel literary structure: A. Jesus whom you crucified (2:23, 36b); B. David said, "The Lord . . . is at my right hand" (2:25, 34b); C. David died/did not ascend (2:29, 34a); D. David prophesied/the Spirit is evidenced (2:30a, 33c); E. God swore/the promise of the Spirit (2:30b, 33b); F. *Christ enthroned (2:30c, 33a); G. David foresaw/the eleven testify (2:31a, 32b); H. Jesus' *resurrection (2:31b, 32a); I. Jesus did not rot (2:31cd). Point G connects the disciples' witness with prophetic empowerment (see comment on 1:8).

2:22. See comment on 2:19. Speakers sometimes explicitly appealed to what their hearers already knew. "Signs and wonders" also characterized the first exodus (Deut 26:8).

2:23. Both Jews and most *Gentiles recognized that a divine plan or plans prevailed in human life. Most early Jews did not regard God's sovereign plan and human choice and responsibility as mutually exclusive. Crucifixion was a particularly shameful form of execution that Romans applied especially to slaves and low-class provincials. Some anti-Semites have used texts like 2:23 to attack Jewish people in general, but Peter's critique of their corporate responsibility (cf. killing by means of others in 2 Sam 12:9) is no harsher than that of *Old Testament prophets (e.g., Amos, Isaiah, Jeremiah), and cannot rightly be used as if it were.

2:24. Although noting Jesus' death (2:23), Peter focuses on his *resurrection; speeches generally lingered on their central point. He derives the phrase "pangs of death" from the Old Testament (e.g., LXX 2 Sam 22:6); his language of being "loosed" or "freed" from these may reflect Semitic idiom from the Old Testament.

2:25-28. Peter quotes Psalm 16 to establish his point (developed in Acts 2:29-32): God would raise the *Messiah from the dead. Jesus' resurrection without corruption fulfills the psalm's highest aspiration.

2:29-31. Peter argues that the psalm cannot refer to David, because David did see corruption (rot). (A tomb in David's honor had been dedicated outside Jerusalem, along with one of Huldah the prophetess.) Rather, the psalm refers to David's ultimate descendant, who was widely agreed to be the Messiah (the anointed king), by definition (Acts 2:30; Is 9:6-7; Jer 23:5-6; cf. Ps 89:3-4; Ps 132:11).

2:32. Having noted the Scripture, Peter now proclaims that he and his colleagues were eyewitnesses that Jesus fulfilled it, and their witness is confirmed by the outpouring of the Spirit, which has no other biblical explanation (2:16-21, 33).

2:33. In the Old Testament, God pours out his Spirit (as was explicit in Joel 2:28-29 in Acts 2:17-18); Jesus' role here is quite exalted (see comment on 2:34-35).

2:34-35. Jewish interpreters often linked texts using the same word or phrase (the principle was called *gezerah shavah*). Peter thus introduces Psalm 110:1, a more clearly messianic passage that includes "right hand" and speaks of exaltation just as Psalm 16 does. (Those commentators who see a link with Moses here point out a Jewish tradition that Moses ascended to heaven to receive the *law; but the text makes better sense as a simple exposition of the psalm in question.) Ancient Near Eastern art sometimes depicted defeated enemies as under the conqueror's feet.

2:36. Peter shows that the resurrected one of Psalm 16 is the one whom David in Psalm 110 called "the Lord." Thus he bears the name of "the Lord" that Joel mentioned (2:32; see comment on Acts 2:21).

2:37-38. See "*repentance" and "*baptism" in the glossary. Peter instructs the people how to call on the Lord's name (2:21): be baptized in Jesus' name. Because baptism was a sign of conversion to Judaism normally reserved for pagans, Peter's demand would offend his Jewish hearers and cost them re-

spectability. He calls for a public, radical testimony of conversion, not a private, noncommittal request for salvation with no conditions. "In the name of Jesus Christ" distinguishes this sort of baptism, requiring faith in Christ, from other ancient baptisms; this phrase simply means that the person being baptized confesses Christ. (Acts always uses this phrase with "be baptized"—the passive, never the active; presumably it thus does not denote a formula said over the person being baptized, but rather indicates the confession of faith of the person receiving baptism; see 2:21 and 22:16.)

Although different segments of Judaism tended to emphasize different aspects of the Spirit (e.g., purification and wisdom in the *Dead Sea Scrolls, or *prophecy by the *rabbis and many others), and Luke's writings specifically emphasize the Spirit of inspiration and prophecy, Luke concurs with other *New Testament writers that the Spirit's work is theologically all one package (cf. comment on 8:14-15).

2:39. Those who read the whole book of Acts will suspect that those who "are far off" are the *Gentiles (Is 57:19; cf. Acts 2:17), though Peter probably is thinking of Jewish people scattered outside Palestine. This universal outpouring of the Spirit was reserved in the Old Testament for the end time and was expected to continue throughout that time. Isaiah 57:19 is the source of the wording.

2:40. Ancient historians edited and arranged speeches; they did not cite them verbatim (nor could anyone have done so unless the speech was short—*rhetoricians sometimes continued for hours—and the speaker provided the author his prepared manuscript). The best historians merely communicated the gist insofar as their sources allowed this. Luke thus summarizes Peter's point. The exhortation here evokes Deuteronomy 32:5, which also laments a crooked generation (using the same description in the *Septuagint).

2:41-47
The Power of Pentecost

Ancient historians sometimes included summary sections (as here in 2:41-47). Luke's account of the *Spirit's outpouring climaxes with a transformed community of believers. Luke may here include another chiastic structure:

A People turning to Christ
(through proclamation, 2:41)
  B Shared worship, meals (2:42)
    C Shared possessions (2:44-45)
  B' Shared worship, meals (2:46)
A' People turning to Christ
(through believers' behavior, 2:47)

2:41. Considering *Josephus's estimate of six thousand *Pharisees in all Palestine, three thousand conversions to the new Jesus movement in Jerusalem is no small start! Still, it is a limited percentage; even without festal pilgrims, Jerusalem's population in this period was probably seventy thousand or higher (some estimate eighty-five thousand; in contrast to lower earlier estimates). The temple mount had many immersion pools that worshipers used to purify themselves ritually; mass *baptisms could thus be conducted quickly under the *apostles' general supervision.

2:42. Most special groups in antiquity ate together (Greek associations, Pharisaic fellowships, etc.). Many Greek associations met for communal meals only once a month, however (contrast 2:46). This earliest Christian practice of daily meals (less practicable in later New Testament settings) is thus noteworthy.

Table fellowship denoted intimacy and trust. Music or other entertainment, but also discussions and even lectures, were frequent at common meals in antiquity; the topic of discussion recommended by Jewish pietists was Scripture. Given such background and especially what this text says about teaching and prayer (possibly including participation in the temple prayers—3:1), early Christian fellowship undoubtedly centered more on intimate worship, sharing and learning the Scriptures and the apostolic message than its modern Western counterpart often does.

2:43-45. The Greek language Luke uses here resembles language that *Pythagoreans and others used for the ideal, utopian community; others also compare the ancient ideal of "friends" sharing things in common. Luke clearly portrays this radical lifestyle positively, as the result of the outpouring of the Spirit.

Some Jewish groups, such as the group that lived at *Qumran, followed a model similar to that attributed to the Pythagoreans and turned all their possessions over to the leaders of the community so they could all withdraw from society. Differences also remain clear: the Christians do not withdraw from society, and they apparently sell off property to meet needs as they arise (4:34-35), continuing to use their homes (though often as meeting places for fellow Christians, 2:46). These actions do not reflect an *ascetic ideal, as in some Greek and Jewish sects, but instead the practice of radically valuing people over possessions, acknowledging that Jesus owns both them and their property (cf. 4:32). Such behavior reportedly continued among Christians well into the second century, and it was long ridiculed by elite pagans (poor pagans were more appreciative and sometimes converted through it) until pagan values finally overwhelmed the church.

2:46-47. By way of contrast with the daily meetings here, Greek associations (trade guilds, etc.) often met just once a month. Temples were among the most spacious and useful public places to gather, and people often congregated there, especially under the colonnades. There were hours of public prayer at the morning and evening offerings (3:1).

3:1-10
Healing in His Name

Luke here provides the most prominent example of the wonders he mentioned in 2:43, on one of their occasions of prayer in the temple (cf. 2:42, 46).

3:1. There were hours of prayer at the morning and evening offerings (cf. 2:42); the time of prayer for the evening offering mentioned here is about 3 p.m. (The *Dead Sea Scrolls and later sources suggest also a third time of prayer, probably at sunset.)

3:2-3. The "Beautiful Gate" may have been a popular title for what later sources call the Nicanor Gate (named for its Alexandrian donor), covered with bronze. *Josephus indicates that the temple's main and largest gate was made of the most expensive bronze, more beautiful than gold (*Jewish War* 5.201-4). (Some identify the beautiful gate instead with the Shushan Gate facing east, but based on sources possibly no earlier than the fifth century.) In either case, it was accessible from Solomon's Portico (cf. 3:11). Any gates leading to the outer court or to the Court of Women on the east may have hosted beggars on its steps who could appeal to those entering.

Although Scripture forbade further entrance only to the unclean, some scholars (noting rules at *Qumran) suspect that the purity-centered temple establishment would have excluded the disabled from the inner courts. Begging alms at public places was common in antiquity, although other peoples did not stress individual charity as the Jewish people did. In Judaism only those who could not work made their living this way, but charity was highly regarded, and the blind or those unable to walk would not have to go hungry, especially if they were near the temple. Congenital infirmities were thought harder to cure than other kinds (Jn 9:32).

3:4-10. Ancient miracle workers usually prayed or invoked spirits rather than commanded the sick person to be healed (the *New Testament also recommends prayer—Jas 5:14); but the *Old Testament has ample precedent for doing miracles by simply declaring the word of the Lord, as a prophet speaking God's will (e.g., 2 Kings 1:10; 2:14, 21-22, 24; 4:43; 5:10). "In the name of Jesus Christ" here probably means "acting as his representative, (I say to you)" or "Jesus cures you" (Acts 3:16; 4:10-12; 9:34; cf. comment on Jn 14:12-14). It credits Jesus exclusively with the honor for the healing (as in 3:12-16).

Many people in the Greco-Roman world were suspicious of potential charlatans who practiced religion or philosophy to acquire wealth for themselves; the *apostles' lack of resources (3:6) helps to confirm their sincerity.

3:11-26
A Preaching Opportunity

Signs and wonders often provide opportunity for witness in Acts, but Luke's primary emphasis is always on the proclamation of the good news itself.

3:11. From the steps of the Beautiful Gate Peter, John and the beggar pass through the temple courts to the eastern colonnade, which supposedly remained from Solomon's temple (see comment on Jn 10:23).

3:12. Jewish people often thought wonderworkers did miracles (e.g., causing rain) by their great piety. Luke emphasizes that the *apostles were normal people, filled with God's *Spirit (Acts 14:15).

3:13. The "God of Abraham, Isaac and Jacob" was celebrated in the daily prayers; "servant" (3:13, 26) alludes to Isaiah's servant (see comment on Mt 12:15-18), who also was "glorified" (the *Septuagint of Is 49:3, 5; 52:13). See the glossary entry on "*Pilate."

3:14. "Holy One" applied especially to God in Jewish literature; "Righteous One" was also commonly a title for God, although it applied to Enoch, Noah, some *rabbis and others as well; the Dead Sea Scrolls spoke of their founder as "the teacher of righteousness." The context would indicate to whom the title applied. It could apply to Isaiah's servant evoked in Acts 3:13; see Isaiah 53:11.

Because the healing did not occur during a feast, most of Peter's audience is now Jerusalemite or Palestinian (contrast 2:23); but the corporate accusation against his hearers here is no stronger than denunciations of *Old Testament prophets (e.g., Amos 2:6–3:8). Calling a revolutionary (Barabbas) a "murderer" (cf. Lk 23:19) starkly distinguishes the apostles from the sort of people who had revolutionary sympathies.

3:15. "Prince" (NASB) or "author" (NIV) was used for founders and protectors of Greek cities, for heads of clans or military judges (Old Testament), or for commanders who lead the way; it was sometimes applied to Greek divine heroes such as Heracles. Here it may mean the leader who pioneered the way of (*resurrection) life (contrast the murderer of 3:14), who forged on ahead of others to make the way for them to live as well. Luke's language employs irony and antithesis (frequent literary devices): when the Jerusalemites accepted a murderer (3:14), they killed the author of life.

3:16-17. The Old Testament and Judaism regarded willful sin (Num 15:30-31) as far more heinous than sins of ignorance (Num 15:22-29), but both were sinful, and they also regarded ignorance of God's truth as sinful (e.g., Is 1:3; 29:11-12; Hos 4:6). Most people in antiquity viewed ignorance as reducing the guilt for crimes.

3:18. Later Jewish teachers sometimes said hyperbolically that the entire message of the prophets dealt with the messianic era or Jerusalem's restoration, or with other favorite topics. Some later rabbis said that a *Messiah would suffer and spoke of two Messiahs, one who would suffer and one who would reign, but the Christians seem to have been the first to proclaim the concept of a suffering Messiah.

3:19. Jewish teachers differed on whether Israel's *repentance had to precede its ultimate restoration, or whether God would simply bring it about in a predetermined time (or, as is possible in early Christians' theology, on some level both). Normally in the Old Testament prophets, Israel's repentance had to precede it; following the Old Testament, some later Jewish traditions (e.g., *Jubilees* 1:15-18; 23:26-27) stressed Israel's repentance as the goal of history.

3:20-21. *Christ would not return again until the time to restore Israel (1:6) and the world had come. *Stoic philosophers spoke of the universe's "cycles": it was periodically destroyed by fire and reborn. But Jewish people expected Israel's restoration; this was a central message of the Old Testament prophets (e.g., Is 40:9-11; Jer 32:42-44; Ezek 37:21-28; Hos 11:9-11; 14:4-7; Amos 9:11-15), and Peter seems to have it in view here (see Acts 1:6-7; though cf. cosmic associations in Is 11:6-9; 65:17-18).

3:22-23. Other New Testament texts also apply Deuteronomy 18:15 and 18 to Jesus. Some other sources (e.g., *Samaritan documents and the Dead Sea Scrolls) also applied this text to a future prophet like Moses. In the first century, some leaders whose followers thought they were prophets tried to duplicate miracles of Moses or Joshua (by trying to part the Jordan or to make Jerusalem's walls fall), probably indicating that they sought this role. Josephus states that their miracles failed, however; Jesus' resurrection places him in a quite different category.

3:24-26. Peter's hearers are spiritually "heirs of the prophets"; on the prophecies, see comment on 3:18. Because Abraham's blessing for the nations/families of the earth (Gen 12:3; 22:18) was to come through Israel, the servant (3:13) had been sent to be the blessing to them first.

4:1-12
Arraigned by the Temple Authorities

4:1. The *Sadducees controlled the temple hierarchy and most of the resident priesthood. The *sagan,* or captain of the temple guard (a local police force permitted by the Romans and made up of Levites; cf. Neh 13:22), is known from other sources and is probably the same official called "the king's captain" in Herod the Great's day. Later tradition reports that he was a Sadducean aristocrat of very high rank and also that he could be very harsh, even with his own guards.

4:2. Sadducees disagreed with the Pharisaic doctrine of the *resurrection, but *Pharisees posed less of a threat to them than the Christians, for the Pharisaic doctrine was only a theoretical hope for the future. From the Jewish perspective, the apostolic witness that one person had already been raised would proclaim that the resurrection had been inaugurated. By guaranteeing rather than simply teaching the future hope of the resurrection, the *disciples threatened the Sadducees' security as leaders of the people.

4:3. Peter and John had come up to the temple about 3 p.m. (cf. 3:1), hence sundown is near. No longer dealing with someone overturning tables in the temple, the aristocracy is content to follow the law and wait till the next day to try them (night trials were illegal, and most business of any regular sort stopped by sundown).

4:4. Estimates of Jerusalem's population at this time vary from twenty-five thousand to eighty-five thousand; the higher range is more likely in view of more recent research. *Josephus said that there were only six thousand Pharisees in Palestine. A total of five thousand Jewish Christian "men" in Jerusalem, not including women and children (so the Greek here), is thus quite substantial. (Whoever counted or provided the estimates apparently employed the typical ancient practice of numbering only the men.) Because they were in the outer court, the converts surely included women as well.

4:5. The Jewish authorities mentioned here represent the Sanhedrin, the Jewish ruling court of Jerusalem; presumably they gather in their meeting hall in the vicinity of the temple.

4:6. These officials were widely known. Like other writers of his day (especially Josephus), Luke uses "*high priest" loosely for any officials of the high priestly household; Caiaphas was officially high priest at this time (see comment on Jn 11:49; 18:13). The *rabbis and *Dead Sea Scrolls (as well as other sources like **2 Baruch*) offer an unflattering picture of the final generations of the temple aristocracy, with whom they did not get along. Even Josephus, a first-century Jerusalem aristocrat himself, depicts abuses, plots and even violence among the leading priests.

4:7. Trial scenes, as much as pirates and other hardships, were standard suspense-builders in ancient stories. Throughout the empire, nonelites also recognized that they were subject to the decisions of the elites, who controlled the courts as well as most other institutions.

4:8. In the *Old Testament, the *Spirit often came upon God's servants for specific tasks (e.g., Ex 35:31; Judg 14:6) and is especially often associated with *prophecy and prophetic speech (i.e., the ability to speak what God is saying).

4:9-12. Salvation "in the name" (v. 12) alludes to Peter's earlier exposition of Joel 2:32 (Acts 2:21); the term translated "saved" includes making whole (i.e., healing the man—so v. 9, literally). Peter learned this use of Psalm 118:22, cited here in verse 11, from Jesus; see Luke 20:17. The "good deed" (4:9, NRSV) or "benefit" (NASB) is literally a "benefaction": a kind act for which one would normally be praised. In ancient legal debate, a person who could argue that it was actually a praiseworthy act for which they were on trial cast the accusers in a negative light. It was common to charge one's accusers with a crime, and that reversal is simple enough here: Jerusalem's elite instigated Jesus' execution (cf. also possibly Josephus, *Jewish Antiquities* 18.64).

4:13-22
God's Authority Rather Than the Hierarchy's

4:13. The elite were surprised by the *apostles' "boldness" or "confidence." Moralists and philosophers often praised such frankness, loyalty to truth without fear of consequences, even when addressing rulers. Biblical prophets often demonstrated the same sort of behavior,

and it could also characterize martyrs (cf. *4 Maccabees 10:5). "Unschooled" means not trained in Greek *rhetoric (public speaking), unlike much of the priestly aristocracy. (It could also mean that they were not trained under a recognized rabbi, if the aristocrats were too arrogant to count Jesus as a recognized rabbi.) Ordinary people did not always resent this "unschooled" label, but they knew that elites looked down on them. Many popular Greek philosophers used to boast that they were not educated in rhetoric and lived simple lives, so what strikes the Sanhedrin as a weakness of Peter and John might strike many of Luke's readers as a strength. But the reason for their "uneducated" boldness is obvious: they had been educated by Jesus, who was himself bold and "uneducated." (It was widely understood that disciples regularly reflected the lifestyle and character they had learned from their teachers.)

4:14-16. Both the disciples and the priestly aristocracy recognize that there is no valid basis for a legal charge. Still, as custodians of the temple, the priestly aristocracy has the police power to control what they consider subversive teachings on what they consider their grounds. Authorities sometimes accommodated popular sentiment to prevent unrest, but despised demagogues who enticed the uncritical populace with what the elite viewed as flattery or idle promises. Some later Jewish teachers argued that miracles would not validate another's teaching if it did not accord with their own reasoning from Scripture and tradition.

4:17-18. In a society emphasizing honor and shame, the elite would lose face if they allowed the apostles the final word. Authorities in the Roman Empire might be satisfied to execute a movement's ringleader if the group did not threaten further instability. The apostles so far pose no clear serious threat, so that a warning is deemed sufficient.

4:19-20. Philosophers often stressed obeying God rather than people, following truth rather than social convenience; Socrates, who refused to be silent even on pain of death, was a notable example. The *Old Testament prophets (such as Nathan, Elijah and Jeremiah, who confronted kings, or Uriah, who suffered martyrdom—Jer 26:20-23) are even clearer examples. Some modeled nonviolent civil disobedience (Dan 3:16-18; 6:10, 13); Maccabean martyrs offered particularly stark examples. Whether the readers' background is Greek or Jewish, it would be clear to them who is on the side of right.

4:21-22. Although the municipal authorities back down, they do not admit wrongdoing, which would be a matter of shame. Pharisees were more popular with the people, but the politically dominant *Sadducees were less in touch with the people. Elites usually despised populist speakers, whom they considered demagogues, who had exceptional influence with the people.

4:23-31
Praise in the Face of Persecution

4:23-24. Although choruses in Greek drama recited lines together, here "with one accord" (KJV, NASB) simply means "together, in unity" (the same word occurs in 1:14; 2:46; 5:12). This is not a unified liturgy as eventually became standard in *synagogues; scholars do not even all agree that prayers were recited in unison in most Palestinian synagogues in this period. Instead, the text probably means simply that someone inspired by the Spirit led the prayer.

The title for God as "Master" or "Sovereign Lord" here was used for deities in Greek sources and, more relevantly here, for the one true God in Jewish sources. The prayer begins by confessing God's sovereignty (his power to answer prayer) with lines from Psalm 146:6, a context praising God's faithfulness to vindicate the oppressed; he is greater than their opponents.

4:25-26. Psalm 2 refers plainly to a royal descendant of David, and would be applied particularly to the *Messiah ("the anointed one") against whom the rulers were gathered. (Later rabbis applied this text to Gog and Magog, nations gathered against the Messiah and Israel).

4:27-28. In verse 27 the believers recognize the fulfillment of that opposition in Jesus' opponents (even Jewish "peoples," though the psalm focused on *Gentile ones). Others also employed "Herod" as a title for Herod Antipas (e.g., Josephus, *Jewish Antiquities* 18.104-6, 243-255). The rejection of the servant might evoke Isaiah (see Is 53:3, 7-9; comment on Acts 3:13),

especially in view of his anointing here (Is 61:1; cf. Lk 4:18; Acts 10:38). This is a recognition that the opposition to Jesus (and to themselves) is according to God's will. God acting "by his hand" reflects *Old Testament language.

4:29-31. Prayers for vindication were common in the Old Testament and Judaism (see 2 Chron 24:21-22; Ps 109:6-20; Jer 15:15; see also Rev 6:10), but this is a prayer for faithfulness and boldness (cf. Ps 138:3). Occasionally ancient texts reported shaking of places in response to prayers; the parallels most obvious to most of Luke's audience specifically would be biblical theophanies (e.g., Ex 19:18), especially the shaking of God's house in the context of Isaiah's empowerment for his mission (Is 6:4). Although Judaism boasted stories of rare miracle workers and paganism had local healing shrines and some magicians, a movement trusting God for such widespread miracles through individuals (cf. Acts 2:43; 5:12) is unparalleled.

4:32-37
Continuing Revival

As in 2:41-47, the outpouring of God's *Spirit here leads not only to miracles and inspired verbal witness but also to actively caring for one another and sharing possessions. For background, see comment on 2:43-45.

4:32-33. In the *Old Testament, God's favor and the Spirit could be "upon" individuals (cf. Num 11:24-29; Ezek 11:5).

4:34-35. In the *Dead Sea Scrolls, community officials distributed contributions to the community; later sources suggest that in most of Palestinian Judaism, supervisors of charity distributed funds given them. For discussion of the sharing, see also comment on 2:44-45.

4:36. Many Jews lived in Cyprus. "Joseph" was a quite common Palestinian Jewish name, inviting the addition of a nickname. The *Aramaic "Barnabas" can mean "son of encouragement" (i.e., encourager) or perhaps "son of a prophet," that is, prophet and exhorter (cf. 13:1). Nicknames were commonly given to describe personal attributes.

4:37. Donations like Joseph's happened often (4:34), but Luke wishes to state a positive example before the negative one (5:1-11) and to introduce an important character here (9:27). Contrasting positive and negative examples was a recommended technique of ancient speaking and writing. Although Levites did not own land under Old Testament *law, they commonly did own it in the first century (cf. Barnabas's relatives in 12:12-13), and some, like the Sadducean priests, were even rich.

5:1-11
Addressing Sin in the Camp

Ancient writers often compared positive and negative examples; Luke contrasts Barnabas (4:36-37) with Ananias and Sapphira (5:1-11). In the *Old Testament, the sin of one man who had kept spoils for himself had once brought judgment on all Israel and the death of many, and only the death of the transgressor allowed Israel to move forward again (Josh 7). God took the corporate purity of his people, and the importance of sincerity in claims to total commitment, very seriously.

5:1. Ananias (reflecting the Hebrew Hananiah) was a common name; "Sapphira" was rare and seems to have belonged especially to well-to-do women. Since husbands usually married wives of comparable social status, this couple probably has more money than most.

5:2-3. The Greek term *nosphizo* here may evoke Joshua 7:1, where an "insider" acts secretly regarding property not one's own. Achan kept some of Jericho's forbidden wealth and brought judgment on the entire assembly until he and his family (who knew of his activity) were executed. Gehazi also took wealth, lied about it, and was punished (2 Kings 5:27).

5:4. Ancient groups that required members to turn over their possessions usually had a waiting period during which one could take one's property and leave (see the *Dead Sea Scrolls and the *Pythagoreans). The early Christians act not from a rule but from love, but this passage treats the offense of lying about turning everything over to the community more seriously than others did. The Dead Sea Scrolls excluded such an offender from the communal meal for a year and reduced food rations by one-fourth; here God executes a death sentence. Both 2 Kings 5:20-27 and a Greek inscription from Epidauros show that most ancient people knew the danger of lying to gods, God or one of his representatives.

5:5. God protected the sanctity of the tabernacle by striking down wicked priests (Lev 10:1-5). Judgment miracles were recognized in Greek tradition and are frequent in the Old Testament (e.g., Num 16:28-35; 2 Sam 6:6-7; 2 Kings 1:10, 12; 2:24; 2 Chron 26:16-21). Judgment miracles also appear in later Jewish tradition; for example, when an adulteress drank the bitter waters of the temple (Num 5) she immediately died; or some *rabbis allegedly disintegrated foolish pupils with a harsh look.

5:6. Ancients covered corpses to preserve the dignity of the deceased. It was customary to bury people on the day they died, although normally the wife would know of the burial (5:7). If relevant here, bodies might also need to be carried out of a holy place (cf. Lev 10:4-5). Perhaps Ananias and Sapphira owned no family tomb because they had handed over so much property to the *church.

5:7-11. The Old Testament (e.g., Deut 21:21) and later Judaism (*Dead Sea Scrolls, rabbis, etc.) in many cases prescribed the death penalty so that others might "fear" (v. 11), to deter further crime. Judgment miracles sometimes had the same effect (Num 16:34; 2 Kgs 1:13-14).

5:12-16
Miracles Increase

Although a few ancient teachers were known as miracle workers, only the most prominent were reported to have done miracles like those attributed to the *apostles here (with Elijah and Elisha as major biblical models for Jewish ones), and these reports are not from contemporary sources. More contemporary sources credited such miracles to deities housed in temples (for the early Christian view of which, see 1 Cor 10:20).

5:12. On Solomon's "porch" (KJV) or "Colonnade" (NIV), see 3:11 and comment on John 10:23.

5:13. "No one else" seems to refer to nonbelievers rather than to other Christians (2:42, 47; in contrast to some Greek sects like that of Pythagoras, which reportedly counted only selected people worthy of entering his presence, or the unapproachability of Moses at times, Ex 34:30). Many non-Jews attended *synagogue and believed in Israel's God without fully converting and keeping Jewish rules (see comment on 10:2); it is possible that a similar group of Jewish outsiders who respect the Jesus movement without converting to it is in view here. In context, people fear to associate with the movement without full commitment, knowing the fate of Ananias and Sapphira.

5:14-16. Ancient people thought that one's shadow was attached to oneself. In Jewish *law, for example, if one's shadow touched a corpse one was as unclean as one who physically touched the corpse; some Greeks felt that one could suffer harm through injury to one's shadow. The public's emphasis on needing to touch healers may be drawn from magical superstition (power as a substance was a pagan magical concept), but God still meets their need through his appointed representatives (cf. 19:11; Mk 5:28-30).

5:17-32
Arrested Again

5:17. The *Sadducees were politically powerful but never gained the popularity that the *Pharisees enjoyed. Although the political situation required them to maintain relations with the Pharisees, it is not surprising that they would be "jealous" (cf. Mk 15:10) and act with hostility toward the apostles. *Josephus described the Sadducees as a "sect" (alongside Pharisees and *Essenes), the same term Luke uses here (so most translations; cf. "party"—NIV, GNT; see also Acts 15:5; 26:5); Josephus also wrote for a Greek audience, for whom the term could mean a philosophical school. Ancient sources (biographies, novels and histories) often cite jealousy as a motivation for hostile behavior; envy was common in the honor-based, competitive and stratified culture of ancient Mediterranean cities.

5:18. Jails were normally used for detention until trial, not for imprisonment as a punishment. The Roman garrison in this period controlled the Fortress Antonia on the temple mount; the Levite temple police thus jail the apostles in a different location, though it might also be near the temple. The elite had accommodated the apostles' popularity so far, but now risked losing face if they continued to fail to act.

5:19. Stories of miraculous escapes from prison appear occasionally in Greek tradition

(e.g., the Greek deity Dionysus, imprisoned by King Pentheus, in Euripides's *Bacchae* and subsequent writers) and in one pre-Christian story about Moses in the *Diaspora Jewish writer Artapanus. Of course, even the exodus from Egypt was a miraculous deliverance from captivity (cf. also Lev 26:13; Ps 107:10-16).

5:20-21. The gates of the temple opened at midnight, but the people returned only at daybreak. The hearing for the apostles had been scheduled for daylight, because trials were not to be held at night (4:3, 5).

5:22-23. These guards are fortunate that they are Levites policing for the Jewish temple aristocracy rather than recruits under the Romans or Herod Agrippa I, who might have executed them (see 12:18-19).

5:24-25. Such events would cause these leaders to lose face further.

5:26. Jewish tradition suggests that the Levite temple guards were known for violence during the corrupt administrations of these *high priests; but political sensitivity determines their actions here. Once out of control, ancient mobs often stoned those who acted contrary to their sentiments.

5:27. The high priest presided over the Sanhedrin, or ruling judicial council.

5:28. Transgressors were often given a first warning (hence the first and now a second hearing). But now the apostles' defiance had publicly challenged and shamed the city's leaders, who had approved Jesus' execution; it therefore risked unrest, something too dangerous to tolerate. "Bringing blood on them" is a serious charge, invoking the biblical concept of blood guilt. Biblically, those guilty of murder had to be punished to remove judgment from the land. The charge against the apostles is that they are trying to incite unrest against the municipal aristocracy which the Romans approved, by accusing them of responsibility for Jesus' execution. (The Sanhedrin conversely viewed Jesus' execution as eliminating a revolutionary who was creating unrest.)

5:29-30. See comment on 4:19-20. The apostles claim that the Sanhedrin *is* responsible for Jesus' execution. A famous line attributed to Socrates was his obedience to God rather than his judges (*Plato, *Apology* 29D); the elite, educated Sadducees would have known this, whether or not Peter did. Although people were sometimes crucified on trees, no one treated that as the only way to crucify people; the use of "tree" here (literally) alludes to Deuteronomy 21:22-23, which the *Dead Sea Scrolls applied to crucifixion. Philosophers valued frankness and truth rather than diplomatic language at the expense of truth; Luke's audience undoubtedly appreciate these words much more than the Sanhedrin did. It was customary for defendants to charge their accusers in court, but it was considered dangerous to charge one's judges.

5:31. See comment on 3:15. The Sadducean leaders of the Sanhedrin might view the apostles' claim that Jesus is a king after all, reigning for God and vindicated by him after the Sanhedrin had executed him, as an error; but more significantly in this case they would view this claim as a direct challenge to their political power and wisdom.

5:32. On witnesses, see 1:8; the *Holy Spirit is the Spirit of *prophecy inspiring them to witness, so that the apostles claim to speak for God, an authority higher than the Sanhedrin. Many expected the Spirit to be available only in the end time or only to the extremely pious. The apostles' reply indicates that they do not regard the Sanhedrin as obedient to God (contrast 5:29).

5:33-42
A Pharisaic Moderate's Support

Whether Sadducean aristocrats with political agendas or Pharisaic teachers with pietistic agendas, all the Sanhedrin members claimed to be followers of Israel's God and would not wish to oppose him.

5:33. The apostles' refusal to be intimidated threatens the honor assumptions of the elite. Because it is not a festival and the procurator is thus out of town, the apostles' critics probably could have lynched them, as illegal and against all protocol as it would have been (cf. chaps. 6–7); they lacked legal authority under the Romans to conduct executions. Pharisaic traditions reported that the leading priestly families in this period sometimes used force to guarantee their will. But lynchings were rare, and once tempers are subdued they revert to a more traditional punishment (5:40).

5:34-35. That Gamaliel I, reputedly the

most prominent pupil of the gentle *Hillel, was widely respected may be an understatement; he was probably the most influential Pharisaic leader of the time and held prestige as a Jerusalem aristocrat as well. Later *rabbis extolled his piety and learning, and accorded him the title "Rabban," which later belonged to the rulers of the Pharisaic courts. Josephus mentioned Gamaliel's aristocratic son Simon, indicating the family's power in Jerusalem. (The later tradition that Gamaliel was Hillel's son is probably wrong.)

Pharisees had comparatively little political power and did not believe in executing someone for political reasons. Even if the Christians were in serious error, as long as they kept the *law of Moses the Pharisees would not believe in punishing them. Pharisees were known for leniency and devised rules that, if followed, made executions quite difficult (a conclusion particularly convenient since Rome normally prohibited locals from exercising the right to executions anyway). Luke portrays Gamaliel I as acting according to the Pharisees' noble ideals (see also 22:3).

5:36. Gamaliel compares the Jesus movement with some populist revolutionary movements, revealing a misunderstanding perhaps widely shared in the Sanhedrin. If Josephus is accurate, Theudas arose about A.D. 44—some ten years after Gamaliel's speech. The name Theudas is not a common enough name to make an earlier revolutionary named Theudas likely, although the name does occur (e.g., in a Jerusalem tomb inscription). Luke may simply fill in names of the most prominent revolutionary leaders known by his own period rather than a less-known name Gamaliel might have cited (historians sometimes adjusted characters' speeches in their own words); the alternative would be that either Luke or Josephus is mistaken. But ancient historians had more flexibility with the content of speeches than with events, and that would be especially a speech to which the apostles themselves were not privy.

Theudas was a Jewish "magician" (he probably viewed himself as a prophet) who gathered followers to the river Jordan, promising to part it. The Roman governor Fadus sent troops who killed and captured members of the crowd; Theudas was beheaded (Josephus, *Jewish Antiquities* 20.97-98).

5:37. Judas the Galilean led the tax revolt of A.D. 6 (Josephus, *Jewish War* 2.56, 118; *Jewish Antiquities* 18.23). The Romans retaliated by destroying Sepphoris; Judas's model led to the revolutionaries who later came to be called the *Zealots. Judas's sons also revolted in the war of 66-70; they were crucified (*Jewish Antiquities* 20.102; cf. *Jewish War* 2.433-34). Judas was helped by a certain Saddok—a Pharisee. Gamaliel would naturally view such revolutionaries more favorably than the *Sadducees would, since the Sadducees had more vested interests in Roman rule.

5:38-39. Continuance was often viewed as a proof of divine help; "fighting against God" (found in combating Jewish martyrs in 2 Maccabees 7:19) may reflect a familiar Greek saying, perhaps originating with the Greek tragedian Euripides but quoted in anthologies for students learning Greek. Many of those in the Sanhedrin might have used such anthologies and hence been familiar with this expression. Gamaliel and many others would also know the context in Euripides: after a god miraculously released his followers from a prison (see Acts 5:19), one who opposed that god was ultimately destroyed.

Waiting for the Romans to take care of this problem would appeal more to Pharisees, who in this period were more convinced than the Sadducees that a future *Messiah should intervene to establish God's cause and overthrow the current order. (They were also far more affirming of the idea of *resurrection.) Like many of his successors, Gamaliel wants no trouble with Rome, but he is sure that the Romans could take care of revolutionaries themselves—unless God is with the revolutionaries. By comparing the Jesus movement to followers of Theudas and Judas, however, he shows that he still misunderstands it in merely political terms.

5:40. The Pharisaic element would especially listen to Gamaliel, having great respect for teaching of their elders; perhaps reconsidering the extremeness of an illegal lynching, the predominant Sadducean element also concurs. Lynching or even handing over to the governor for execution leaders of a popular movement could provoke a popular backlash, so they hoped to manage the problem differ-

ently. Scourging as a civil punishment unconnected with execution is well-known (Lk 23:16; see comment on Jn 19:1); such beatings were intended to inflict public humiliation as well as pain. If the beating resembled later rabbinic practice, the victim would be bound to a post or laid on the ground, then flogged with a calf-leather strap twenty-six times on the back and thirteen on the chest. Even if Sadducees considered Pharisees too lenient in general, they undoubtedly would observe Deuteronomy 25:2-3, especially in public (see comment on Mt 10:17).

5:41. In Jewish tradition, the righteous could rejoice when they suffered, because of their reward in the world to come; nevertheless, disobeying a ruler's decree was considered courageous, and Judaism extolled martyrs who did so. (The apostles' continuing to teach publicly in the temple courts is especially courageous.) Perhaps relevant to *Gentiles in Luke's audience, many philosophers also taught rejecting worldly definitions of shame and learning to celebrate sufferings as a way of redefining true freedom. Ancient hearers would respect this description of the apostles. When Jewish people suffered on behalf of the "Name," they normally meant the divine name, a concept here transferred to Jesus' name as divine (cf. Acts 2:21, 38).

5:42. "Teaching" is primarily instruction; "preaching" is especially proclamation of the saving *gospel.

6:1-7
The Seven Distributors of Charity

Those with political power generally repressed complaining minorities; here the *apostles hand the whole system over to the offended minority that had felt marginalized. In so doing, they affirmed a minority that would someday yield the *church's future.

6:1. Some scholars think that the "Hellenists" (NRSV) here are simply Greek-speaking Palestinian Jews, but most Jews in Palestine were bilingual, and Greek was probably the first language for many Jerusalemites. The more likely proposal is that this text refers to Greek-speaking *Diaspora Jews who have settled in Jerusalem, as opposed to more bilingual natives of Judea and Galilee.

The Bible mandated caring for widows, who had no other means of support if they had no family nearby. Judaism took this responsibility very seriously. But because it was considered virtuous to be buried in the land of Israel, many foreign Jews would come to spend their last days there, then die and leave a disproportionate number of widows. (In later centuries, Palestinian rabbis provided further theological incentive to immigrate to the holy land: according to one common tradition, the dead would be resurrected only in Israel, so the righteous dead of other lands would have to roll the whole way back to Israel underground. This was supposed to be a very unpleasant experience for the corpses!)

Thus an apparently disproportionate number of foreign Jewish widows lived in Jerusalem, which did not have enough foreign Jewish *synagogues (6:9) for their distributors of charity to supply all the widows adequately. This urban social problem of Jerusalem spilled over into the church.

6:2-4. "Seven" was a reasonable number for leaders; *Josephus suggests that an average of seven elders governed most towns (*Jewish Antiquities* 4.214, 287; *Jewish War* 2.571). Moses also delegated his work to other leaders who met some spiritual and moral qualifications (Ex 18:21), so Moses could focus on interceding for the people before God (18:19) and teaching his Word (18:20). The term for "select" need not imply voting, but given the usual Greek practice familiar to Luke's audience, that might be what he intends. (There seems to be some evidence for some elective offices in Jewish circles as well. Greek voting could be through ballots or raised hands.) Distributors of charity filled an office in later Palestinian Judaism. Reputation was important for the sake of public credibility; see comment on 1 Timothy 3:7. There was *Old Testament precedent for having the people themselves choose these distributors and the leader ratify their choice (Deut 1:13), and the *Essenes reportedly elected their officials. When Moses laid hands on Joshua, the latter was filled with the *Spirit of wisdom (Deut 34:9; cf. Ex 28:3; 31:3; 35:31).

6:5. Tomb inscriptions show that some Jerusalemites had Greek names whether or not their parents or grandparents had lived outside Judea. But even in Rome, under forty percent of Jews had any Greek in their name,

and only one or two of the apostles had a Greek name. That all seven of these men have Greek names suggests that they are obvious *Hellenists (6:1), first-or second-generation Jewish immigrants to Palestine—hence members of the offended minority. One is even a *proselyte—a former *Gentile who had converted to Judaism; many of these lived in Antioch (cf. 11:19).

6:6. The laying on of hands communicated blessing in the Old Testament (cf. Gen 48:14; still occasionally attested in the apostolic period), but the idea here seems to be that of ordination or transfer of spiritual power for ministry, as in Numbers 27:18, 23 (cf. 11:25); Joshua was filled with the Spirit of wisdom because Moses laid hands on him (Deut 34:9). Later *rabbis ordained rabbis by laying on hands (with heavy pressure), called *semikhah* (cf. 1 Tim 4:14; 2 Tim 1:6). (Rabbis applied this rite of laying on hands only to sacrifices and to ordaining scholars.) If so, the apostles considered their new colleagues' office of social ministry quite important.

6:7. In ancient literature, summary statements sometimes concluded literary sections. There were probably well over two thousand priests in Jerusalem alone. Although most upper-class priests were *Sadducees, the poorer priests, many of whom came to Jerusalem only several weeks of the year, were not; some priests were even *Pharisees. Priests were accorded high status in the *Qumran community, and Luke's Diaspora audience would have probably been impressed with them as well. Priests did not represent any given ideology or economic status (Josephus complains that rich priests sometimes oppressed poorer priests), but their conversion here shows that the Christians are making inroads even into the temple establishment, or at least the lower eschelon of priests who served there.

6:8–7:1
Stephen Arraigned

Despite Jesus' orders to engage in the *Gentile mission (1:8), the *apostles had stayed in Jerusalem and remained there as late as 15:2. It is ultimately the bicultural minority within the Jerusalem church that holds the strongest promise for the future. Luke gives us examples of two leaders from that minority (6:5), Stephen (chap. 7) and Philip (chap. 8).

6:9-10. Stephen's fellow Hellenists were debating new ideas more than the church's Hebrew faction (see comment on 6:1). Jerusalem had many synagogues (though not the 480 of later tradition), including some of those mentioned here. Freedpersons constituted a particular class in Greco-Roman society in the first generation; later rabbis ranked freedpersons just below proselytes, but they were probably not thinking primarily of Roman freedpersons. The specific term here is the Latin loanword *libertinus;* the synagogue was established by freed slaves of Roman citizens, who were therefore Roman citizens themselves. Most were probably Judeans enslaved by the Roman general Pompey in the first century B.C., afterward freed by Roman Jews; as Roman citizens, those who returned to Jerusalem would have high status, a status maintained by their descendants so long as they continued to marry and bear other descendants of citizens (cf. 22:28). Archaeologists have found an inscription (the "Theodotus inscription") from a Greek-speaking Jerusalem synagogue from this period; Theodotus's father, Vettenos, was probably a Jew from Rome and, given the name, probably a freedman.

Later sources attest the synagogue of the Alexandrians and that of the Cilicians; the capital of Cilicia was Tarsus, Paul's hometown (for Paul's possible descent from Jews enslaved by Pompey, see comment on 16:37). Other ancient cities with large Jewish immigrant populations also sported diverse synagogues. Luke's description here may be a single synagogue of freedmen constituted by those who have returned from the various locations where they or their ancestors settled for a time after being freed.

6:11. Some ancient *rhetorical handbooks that taught public speakers how to win court cases explicitly instructed them how to prepare false witnesses to be persuasive. "Blasphemy" here does not have the later technical sense of pronouncing the divine name of God but the more general sense of the Greek term, namely purported disrespect for God. Ironically, perjury (6:13) was always considered disrespectful to deities.

6:12. Ancient courts normally depended on accusers to arraign those they wished to

charge. The Sanhedrin was not likely to be favorably disposed toward Stephen; the Jewish *law of rebuke required a warning, but the Sanhedrin had already warned the leaders of this movement (5:40), and from this point the Sanhedrin would have to take action.

6:13-14. On training false witnesses, see comment on 6:13. Ancients viewed perjury as an affront to the god in whose name the false witnesses had sworn an oath. False witnesses in a capital case were to be executed if found out (Deut 19:18-19; also under Roman law), but in this case Stephen will seem to confirm half their charge in reply to the *high priest's interrogation (7:1). He is for the law (cf. the bulk of his quotations in chap. 7) but in some sense challenges the unique role that many of his contemporaries assigned to the temple (chap. 7); for "this holy place" (6:13), see comment on 7:33. Even publicly predicting the temple's destruction could lead to arrest and scourging (as happened a generation later to a figure reported in Josephus). The temple was famous for its beauty and grandeur; it was also central to Jerusalem's economy (e.g., Josephus claims that its completion in A.D. 62–64 put eighteen thousand people out of work). Jewish tradition praised those who had suffered to preserve the ancestral traditions based on Scripture; its defenders would regard Stephen as apostate. The accusers spoke first in a case.

6:15. Like Jesus (Lk 9:29) and Moses of old (Ex 34:29-30, 35), Stephen is somehow transfigured; Stephen will soon mention an angel's glory to Moses (Acts 7:30, 35) and will see Jesus' glory (7:55-56).

7:1. The high priest opens the questioning of the accused; his broad statement would give Stephen the opportunity to deny the charge.

7:2-7
The Abraham Narrative

Reciting Israel's history in ways to make points was common (historical retrospective, e.g., 1 Sam 12:7-12; 1 Maccabees 2:49-69; Sirach 44–50), and one need not study Acts 7:2-53 long before the point becomes clear: Stephen answers the charges (6:11, 13-14). Although he upholds the *law, making his case profusely from Scripture, he denies that the temple or even the land of Israel is necessarily central to God's short-term working in history. Although *Old Testament prophets had made the same case (e.g., Jer 7; Jonah), Stephen is bound to draw at least as much opposition as they did. Where Stephen's points differ from the standard Hebrew text, they generally agree with the *Septuagint or sometimes the *Samaritan text.

7:2-4. Abraham was the respected ancestor of the Jewish people, the model of faith and obedience, lauded in many Jewish texts. Palestinian Jewish tradition strongly emphasized the specialness of the land of Israel, and some teachers even claimed that God revealed himself directly only in the land of Israel (with a few explainable exceptions; *Mekilta Pisha* 1:35-88). Here, although God calls Abraham to the Promised Land, he reveals himself to Abraham in Mesopotamia, far to the east. In Luke's *narrative, the experience of God's glory that Stephen infers in Genesis 12:1 will anticipate Stephen's own in Acts 7:55. Genesis does not portray Abraham's father as dying before Abraham's departure for the promised land, but some other Jewish traditions do so.

7:5-7. Although Abraham was the ideal man of God, neither he nor his descendants for four centuries were allowed to possess the Holy Land. Alluding to Genesis 17:8, Stephen in Acts 7:5 adapts it with inheritance language from Numbers and Deuteronomy and "not even a foot" from Deuteronomy 2:5. In Acts 7:6-7, Stephen uses especially Genesis 15:13 to anticipate a subsequent section of his speech, regarding Israel in Moses' time.

7:8-16
The Joseph Narrative

Samaritans viewed Joseph and Moses as the greatest leaders of the past. Jewish literature also spoke of them highly.

7:8. For the covenant of circumcision, see Genesis 17:13.

7:9. The patriarchs were jealous of the one whom God planned as their deliverer (Gen 37:11; cf. 37:4). They were the ancestors of most of the Jewish people (for which reason some postbiblical Jewish stories tried to mitigate their guilt). Thus Stephen begins the secondary emphasis of his sermon: you oppose the real leaders God gives you. Returning charges was characteristic of defense speeches, and Stephen is already preparing for this offensive strategy

that supplements his defensive one.

7:10. The place where God exalted and blessed Joseph was Egypt, not the Promised Land.

7:11-13. Joseph rescued his family, but at first they did not recognize him. They heard of the grain in Egypt in Genesis 42:2; Pharaoh's hospitality appears in Genesis 45:16-20.

7:14. Citing the Old Testament in Greek for a Jewish audience whose first language is Greek, Stephen follows the Septuagint rather than the Hebrew text for the number of people in Joseph's family—seventy-five (the usual Hebrew text has seventy; two Hebrew texts from the *Dead Sea Scrolls agree with the Septuagint; but Deut 10:22 suggests that seventy is the earlier reading).

7:15-16. Summaries sometimes condense, telescope and omit information so that some details are missing. Thus Jacob, not Abraham, bought this site (Gen 33:19), although Abraham bought another site for a tomb in the Promised Land (Gen 23). Jacob, Joseph and his brothers died in a foreign land, although their bones were later moved to the Holy Land (cf. comment on 6:1). Scripture does not record that they were all buried in Shechem. (Jacob was buried near Hebron—Gen 23; 49:29-32; 50:13; Joseph was buried at Shechem—Josh 24:32. *Josephus has the other sons buried at Hebron, but because they died after Jacob's burial, their burial at the same time and place as their brother Joseph seems somewhat more likely.) But Stephen here agrees with Samaritan tradition, which naturally accorded Shechem this honor because it had become the leading city of the Samaritans (see comment on 8:5). Judean purists would be interested in their ancestors being buried not only in the promised land, but in the Judean part of it.

7:17-34
The Moses Narrative

Stephen follows the Old Testament closely, avoiding the extensive elaboration on Moses' life found in other writers of the period. Here he ties together both his preceding themes: God reveals himself outside the Holy Land, and Israel rejects its deliverers. His connection of Old Testament leaders, noting a pattern of rejection, is not his own invention but is rooted in Genesis and Exodus themselves. Compare, for example, Joseph and Moses, as shown in table 5.

By highlighting connections among biblical leaders (to foreshadow the ultimate leader, Jesus), Stephen merely develops connections

Table 5. Old Testament Parallels Between Joseph and Moses

Joseph	Moses
Brothers sold him into slavery	Family, who were slaves, saved him from slavery
Midianites sold Joseph into Egypt	Midianites welcomed Moses when he fled Egypt
Joseph became Pharaoh's "father" (Gen 45:8)	Moses became a son to Pharaoh's daughter
Joseph was abruptly exalted from slavery, made a prince over Egypt	Moses abruptly lost his Egyptian royalty by defending slaves
Joseph made all Egypt Pharaoh's slaves (47:19)	Through Moses God freed slaves
Through Joseph God delivered Egypt during famine	Through Moses God devastated Egypt's economy
Joseph, exiled in Egypt, marries the daughter of an Egyptian priest	Moses, exiled from Egypt, marries the daughter of a Midianite priest
The name of Joseph's first (of two named) sons evokes Joseph's sojourn in a foreign land	The name of the first (of two named) sons evokes Moses' sojourn in a foreign land
Future deliverer's leadership initially rejected by brothers	Future deliverer's leadership initially rejected by his people

Table 5 is adapted from Craig S. Keener, *Acts: An Exegetical Commentary* (4 vols.; Grand Rapids: Baker Academic, 2012–2014), 2:1363.

already implicit in earlier biblical *narrative.

7:17-18. That they "grew and multiplied" echoes Exodus 1:7; the other king who did not know Joseph quotes Exodus 1:8. Israel's hard times in Egypt, during which a deliverer was needed, resemble the difficulties in first-century Palestine; many people were looking for another prophet like Moses to deliver them from oppression.

7:19. In the *New Testament period, non-Jews often left their children out to die, but Jews (and in this period, Egyptians) abhorred this practice; here Luke uses the same term often used for child abandonment, increasing revulsion for Pharaoh. In Luke's period some rescued discarded babies, but most often reared them as slaves; it was known, however, that the biblical Pharaoh did not want babies rescued. Stephen's hearers might think also of the wicked *Gentile oppressor Antiochus Epiphanes, who killed Israel's babies (1 Maccabees 1:61; 2 Maccabees 6:10). For Pharaoh's mistreatment of Israelites summarized here, cf. Exodus 1:9-11, 22.

7:20. Cf. Exodus 2:2. Some writers (especially though not exclusively later *rabbis, perhaps adapting earlier stories about Noah) related fantastic stories about Moses' birth (that his beauty at birth was so great that it lit up the room, that he was born circumcised, that his mother hid him "in her womb" for three more months, etc.); Stephen reports exactly what the Old Testament says about Moses' birth.

7:21. Cf. Exodus 2:5-6, 10. Josephus also interpreted Pharaoh's daughter's action in Exodus 2:10 as adoption (though using a less technical phrase for it than Stephen, who plays on the Septuagint wording). Adoption was widely practiced in the Roman world; the adopted son lost his former legal identity and was counted the legal son of the adopter. Most ancient Jewish sources elaborate the biblical narrative more extensively than Stephen does here; for example, Jewish tradition elaborated on Pharaoh's daughter (e.g., naming her Thermuthis, Tharmuth or later Bithiah).

7:22. Like Josephus, other writers elaborated extensively on Moses' Egyptian education and legendary exploits as an Egyptian general. Stephen infers Moses' Egyptian education, presumably correctly (for all boys in the royal family), yet he simply tells what needs to be told. His emphasis on Moses' Gentile education would not disturb his Greek-speaking hearers the way his emphasis on geographically diverse revelations may have (e.g., 7:2-4, 10). His mention of Moses' Gentile education, though brief, contributes to Stephen's polemic that God planned to reach beyond Israel even from the beginning.

7:23. "Forty" could reflect the average figure for a generation and other numbers in the narrative (Ex 7:7; Deut 34:7). But it also roundly fits other Jewish traditions (forty-two in **Jubilees* 47:10-12; forty in later rabbinic sources, e.g., *Sifre Deuteronomy* 357.14.1).

7:24. Cf. Exodus 2:12. Like both later rabbis and earlier Greco-Jewish writers such as *Philo and Artapanus, Stephen presents Moses' murder of the Egyptian in a positive light; writing Jewish history for Gentile readers, Josephus omits the incident entirely.

7:25-28. Cf. Exodus 2:13-15. Although Moses sacrificed his standing in Egypt to identify with his people, as a bringer of deliverance (the word usually translated "salvation") for them, they rejected him. See comment on 7:35-37.

7:29. Jewish tradition elaborates Moses' escape (e.g., that Moses killed the assassin sent to slay him), but Stephen's speech sticks to the basic story. Exodus reports Moses' sons (2:22; 4:20; 18:3-6; 1 Chron 23:15); in a narration notable for its conciseness, the *digression on this point may underline Moses' interethnic union (Ex 2:21-22; cf. Num 12:1), highlighting Luke's theme of good news for Gentiles.

7:30-34. Added to the forty years of 7:23, the figure in 7:30 allows Moses' age of eighty in Exodus 7:7. God not only revealed himself to Moses on Mount Sinai and sent him to Egypt, but he also called the mountain "this holy place" (v. 33), a term Stephen's accusers reserved for the temple (6:13). Stephen's narration condenses Exodus 3:2-10.

7:35-41
A Rejected Savior Like Moses

7:35. Like Jesus, Moses was rejected by his people as a deliverer. In 7:35-38, Stephen four times begins with "This one"; orators employed such emphatic repetition to drive home a point.

7:36. Like Jesus, Moses did signs and wonders.

7:37. As many Jewish people and the Samaritans recognized, God would send a deliverer like Moses (Deut 18:18). In the style of a good ancient Jewish expositor of Scripture, Stephen asks, "In what way will the prophet be like Moses?" He answers: he will be rejected by his people (7:35, 39); his hearers' very opposition proves his point (cf. Is 53:1-3).

7:38. The Jewish people celebrated that Moses had received the *law and passed it on to Israel (Stephen uses terms that might translate those used for Jewish teachers receiving and passing on traditions, though not as strong as those in, e.g., 1 Cor 11:23). The term that Stephen uses for the "congregation" in the wilderness was a legitimate Greek translation for the assembly of Israel (though less common in the Septuagint than the word also translated as "*synagogue"), but it is also the early Christian word for "*church," allowing Stephen another connection between Moses and Jesus.

7:39. Yet Moses' own generation rejected him; why is it so hard to believe that the one whom the Jewish leaders of Jesus' generation rejected might not also be a deliverer for them?

7:40-41. That Egyptians worshiped animal figures was widely known and widely despised in the Greco-Roman world (where most preferred human figures for deities). Egyptians worshiped some cow-figures; Israel may have borrowed this practice. The episode of the golden calf was so embarrassing that Josephus omitted it. It was the incident in Israel's history of which the rabbis were most ashamed; they felt it was the most sinful of Israel's acts. But they grew defensive when pagans queried them about it, and several centuries later they argued that the pagans who accompanied Israel, not Israel, made the calf (against Ex 32:1-6). Israel had worshiped idols right after deliverance under Moses; yet, Stephen is going to imply, his accusers also follow the "works of their [human] hands"—an expression often used for idols in the Bible and other Jewish sources but equally applicable, in a literal sense, to their humanly built temple (Acts 7:48).

7:42-50
God's View of the Temple

Now Stephen replies to the charge directly: Scripture does not support the importance his opponents attach to the temple. To the keepers of the temple—which was the symbol of the unity of Jewish people throughout the empire—Stephen's accusation sounds like the sort of accusation that *Samaritans or other despisers of the Jerusalem temple might bring. Even the schismatic *Essenes condemned only the impurity of the leadership in the temple, while longing for a restored temple.

7:42-43. The "star" and "host of heaven" might imply astral deities (Deut 4:19; 17:3; 2 Kings 17:16; 21:3, 5; 23:4-5); by this period most people in the Mediterranean world viewed stars as divine. In a *prophecy also favored in the *Dead Sea Scrolls (Amos 5:25-27; see CD 7.14-17), Stephen plays on the term translated "tabernacle" (KJV, NASB) or "shrine" (NLT): Israel carried the tabernacle of a pagan god in the wilderness. He follows the Septuagint rendering of the deities' names. "Beyond Damascus" becomes "beyond Babylon," perhaps to warn of an impending captivity in addition to the earlier captivity in Babylon (cf. Lk 21:24).

7:44-47. Stephen quickly qualifies that God did tell Moses to build the tabernacle in a particular way (see comment on Heb 8:1-5), and the tabernacle had remained until David's time; the temple was not built till Solomon's time. Stephen does not deny that God blessed and approved the building of the Old Testament temple; but he denies that God meant it to be the idol that he argues his hearers have made it. In verse 46 Stephen echoes Psalm 132:5.

7:48-50. Isaiah 66:1-2 attest that God does not need the temple made with human hands; his own hands made everything. Although Stephen focuses on the Law (more emphasized by both *Sadducees and many *Diaspora Jews), like many synagogue expositors he afterward explains the Law in terms of a reading from the Prophets. The title "made with hands" may recall 7:41 where, as often elsewhere in Scripture and Jewish tradition, it applies to idols. In verse 50, God's "hand" made everything, so he is not limited to houses made by human "hands" (7:48).

7:51-53
Stephen's Climax

Stephen preaches like the prophets he mentions. Closing arguments of speeches often included intense emotion. The conclusion of a Greco-Roman deliberative speech was meant to produce change or decisive action. Stephen's speech also includes elements of forensic speech, however—more to convict his hearers than to defend himself. Forensic speeches often charged the accusers with the very sort of crime with which they charged the defendant—in this case, with subverting God's *law (cf. 6:13). Courageously, Stephen condemns not only his accusers but also his judges; such behavior, when followed on rare occasions by philosophers and prophets, often led to losing one's case or (as in a serious case like that of Socrates) martyrdom.

7:51. "Stiff-necked" and "uncircumcised heart" are standard prophetic insults in the Old Testament; they appear together in Deuteronomy 10:16. Moses emphasized circumcision (7:8), but those who were spiritually uncircumcised were especially cut off from the covenant (e.g., Deut 10:16; 30:6). Stephen could hardly choose harsher words. His point is that his hearers, like their ancestors, reject God's messengers; the *Holy Spirit was especially seen as the Spirit who had inspired the prophets (with implications for the application of Acts 7:52).

7:52. Jewish tradition had heightened Israel's responsibility for the death of the prophets (1 Kings 18:4, 13; Neh 9:26; cf. 2 Chron 24:20-22; Jer 26:21-23) beyond what was found in the Old Testament, so Stephen's hearers could not deny his charge. Like Socrates in Greek tradition, but more relevantly like Jesus, Stephen allows his words to provoke his accusers to kill him, thereby proving his point: they are like their ancestors who killed the prophets.

7:53. Aside from the angel who appeared to Moses in the bush, the Old Testament does not say that God mediated the law through angels; Jewish tradition had added them to heighten reverence for the law (Deut 33:2 LXX; Josephus, *Jewish Antiquities* 15.136; perhaps Ps 68:17-18; 4Q521; cf. also Gal 3:19; Heb 2:2). Stephen concludes that his accusers are wrong; they, not he, are guilty of breaking the law, and are thus uncircumcised in heart. Like Socrates who turned the charge of impiety against the gods upon his accusers, he knows what the result will be: martyrdom.

7:54–8:4
The First Martyr

After speaking like the prophets and noting that prophets get martyred (7:52; cf. 7:9, 35), Stephen experiences a prophet's martyrdom. Romans did not permit subject peoples to execute capital punishment, but Stephen's hearers are so enraged that they lynch him according to their own Jewish *law. Stephen's death proves his point, laying the theological groundwork for the expansion of the Jesus movement outside Palestine; it also leads to further persecution and thus the direct spread of the faith (8:1); and it sows a seed in a certain Saul (7:58)—a seed whose fruit would later be reaped on the road to Damascus (9:3-4; cf. the similar themes shared by Stephen's and Paul's preaching in Acts).

Ancient writers sometimes paralleled figures, and *disciples often imitated their teachers; Stephen's death follows the example of Jesus: compare Acts 7:56 with Luke 22:69; Acts 7:59 with Luke 23:46; and Acts 7:60 with Luke 23:34. Luke may also reverse the charges in his portrayal: note comments below on the *Son of Man standing (7:55), the false witnesses stripping themselves (7:58) and Stephen's prayer for them (7:60). Such reversal of charges was standard in forensic rhetoric; ancient thinkers also sometimes spoke of unjust courts (such as the one that condemned Socrates) being those really on trial before truth or world opinion.

7:54-55. Looking to heaven was a common posture in prayer. Witnesses typically stood to testify, and judges normally stood to render verdicts (certainly when referring to God; cf. Ps 3:7; 7:6; 9:19; 10:12; 12:5; 17:13; 82:8; Is 3:13); the point might be that Jesus, the true judge, is now vindicating his servant even as his opponents prepare to condemn him. As elsewhere in the narrative, Luke leaves no doubt as to who is really on trial before God (see comment on 7:57-58, 60; cf. Is 54:17).

7:56. In Daniel 7:13-14, the coming of the Son of Man would vindicate the righteous

(Israel) against their oppressors (the nations); Stephen's hearers would know in which category he places himself and in which category he places them.

7:57-58. Death by stoning was a common mob action throughout the ancient world, but it was also a legal form of execution in the Torah (including for blasphemy, Lev 24:16). Mob violence and lynchings often used stones, including in Judea; Scripture reported God's people stoning or threatening to stone his agents (e.g., Ex 17:4; Num 14:10; 2 Chron 24:21). Although Stephen's death is a lynching, Jewish traditions about appropriate methods of execution might shed some light on how Stephen's accusers killed him. According to tradition, a condemned criminal would be taken out to the edge of a city (cf. Num 15:35-36) and thrown over a drop at least twice his height. The witnesses would be the first (cf. Deut 17:7) to hurl large stones on top of him, aiming for the chest (though precision was impossible), till the victim died. Under Jewish law, they were to strip the *criminal* before killing him; here Stephen's accusers strip *themselves,* probably because they are hot, as Greeks stripped for athletic activities. (Such self-stripping also appears in some other ancient accounts of violence.) But Luke may record the detail to identify the guilty parties—those stoning Stephen figuratively admit their own guilt by stripping themselves. (Stripping was customary before beatings or execution; nakedness also publicly humiliated those so stripped, especially given Jewish and Middle Eastern revulsion against being seen naked.) Under Mosaic law, false witnesses in a capital case were to be executed themselves (Deut 19:19).

Luke's first-time hearers probably know the name Paul, but perhaps not his other name, Saul (13:9); like a good ancient (or modern) writer, Luke might reserve an important revelation for later. "Young man" or "youth" is not very precise; the usual sense of "youth" extends from fourteen (or twenty-one) to twenty-eight years old, but the word used here can extend up to forty (though Saul is much younger than that here). In Jewish tradition (based on Num 4:35) one did not qualify for some offices before age thirty, but this point is probably irrelevant to Saul's mission in 9:2, especially if he is single (a common Jewish tradition also encouraged men to marry by age twenty). That Saul is in his twenties (the most common age to which the term translated "youth" referred) is a reasonable guess. People associated young men with vigor, intense feelings, rashness and valor in battle or other violence. Those who could gain respect while young were considered exceptional (cf. Gal 1:14).

7:59. Stephen's prayer parallels Jesus' cry in Luke 23:46. Ancient writers often liked to draw parallels between different figures; Luke wants his readers to see that Stephen, an ideal representative of the church, follows in the steps of his Lord in martyrdom.

7:60. His final cry parallels Luke 23:34; see comment on Acts 7:59. At least according to later rabbinic ideals, the person being executed was to confess his sin and pray, "May my death *atone for all my sins." Stephen confesses not his own sin but that of his false accusers (see 7:57-58). Sometimes Jewish people (and less often *Gentiles) would kneel in prayer (as a sign of submission), often with hands lifted toward heaven (1 Kings 8:54; 2 Chron 6:13; Ezra 9:5). Ancients often described death euphemistically as "sleep" (so literally here).

8:1. It took persecution and the scattering of believers—especially the bicultural, foreign Jews (11:19-20)—to get the *church to begin to do what Jesus had commanded them back in 1:8. As the second-century North African theologian Tertullian pointed out, "the blood of Christians is the seed" of the church's growth.

8:2. Dying unburied was the greatest dishonor possible in the ancient Mediterranean world; many Gentiles even believed that those who died unburied were denied entrance to the netherworld, hence condemned to roam as ghosts. Usually only the cruellest of rulers would deprive even their enemies of burial, though it was sometimes denied criminals; but some prohibited burial for the worst criminals, leaving it to vultures and dogs to pick their bones clean. Most people, however, considered it honorable to bury the dead, and risking one's life to bury the dead (e.g., in the stories of Antigone or Tobit) was considered honorable and heroic. Adult sons or those closest to the deceased would take charge of burial. Although Judaism required burial (often in a criminals' dishonorable grave), and

publicly mourning the dead was normally a pious duty in Judaism, Jewish law forbade public mourning for a condemned criminal. Stephen's pious friends ignore the illegal ruling of the highest Jewish court to honor their friend.

8:3. Prison was normally a holding place till trial; that Saul detains women as well as men suggests that he is more zealous than most of his contemporaries would have felt necessary (Gal 1:13-14; Phil 3:6). Crackdowns usually targeted men, but women were included during the most severe crackdowns (e.g., in the cult of Dionysus in earlier Rome). Perhaps the only charge against the church members is an assumption of their opposition to the temple, aroused by Stephen's speech.

8:4. Although Acts focuses on prominent individuals (as was common in ancient history), we learn here that many people were involved. Most ancient religions were spread by traveling merchants or other travelers more than by prominent individuals.

8:5-13
The Conversion of Samaria

Having finished narrating his first example from the Seven (Stephen), Luke now turns to his second example, one of those "scattered" in 8:4.

8:5. "The city of Samaria" could refer to the *Old Testament site of Samaria, now a pagan Greek city called Sebaste, dedicated to the worship of the emperor and full of occult influences (see comment on 8:10). But the bulk of Sebaste's people were Greeks rather than *Samaritans, so the phrase probably refers to the main Samaritan town of the district of Samaria, later called Neapolis, on the site of ancient Shechem (cf. 7:15-16). This was the religious center of the Samaritans. Inscriptions from Mount Gerizim show that at least many Samaritans knew Greek, and in this urban center the *Hellenist Philip could preach in his first language.

8:6-8. Signs were accorded high evidential value in antiquity. That the modern Western educated elite tends to denigrate them is more a commentary on our culture than on theirs; most cultures in the world today (virtually all cultures not influenced by Western deism or atheism) accept some forms of supernatural activity. People often respected exorcisms that included outward signs of the spirit coming out, as here.

8:9. Magicians usually drew large followings in antiquity; given the prominence of Jewish magicians in Greco-Roman antiquity, a Samaritan magician should not surprise us; Samaria had even more Greek influences than Judea. Like the Old Testament, official leaders in mainstream Judaism opposed *magic, but later magical *papyri show considerable Jewish influence, and even a minority of later *rabbis reportedly indulged in something like sorcery, claiming simply to exploit insight into the secrets of God's laws of creation. Whether someone was called a miracle-worker or a magician often depended on whether the writer liked him, but in general magicians were thought to act less publicly and particularly to act more for personal gain.

8:10. In nearby Sebaste many Greeks were synthesizing the various Greek gods into one universal male deity and the goddesses into another female one. This synthesis followed a trend that had been developing among some educated Greeks for centuries. A second-century Christian writer suggested that Simon claimed to be the avatar, or incarnation, of the male form of the deity, while his consort Helena was its female form. Samaritans themselves were monotheistic, but syncretism was common on a popular level. Throughout history and in many cultures today people are convinced about God through what missiologists have called "power encounters," where God's power is revealed as greater than that of those claiming to be spiritual competitors (earlier, cf. e.g., Ex 7:10-12; 1 Kings 18:28-39).

8:11. Judaism allowed that *Gentile sorcerers could perform signs; many Jews attributed this to Belial (*Satan). The Old Testament taught that pagan sorcerers could duplicate some of God's signs on a small scale (Ex 7:11, 22; 8:7), but that their power was definitely limited (Ex 8:18-19; 9:11).

8:12. Familiar with Samaritan opposition to Judaism, Jewish people would have found this scenario remarkable. Already circumcised, Samaritans would have converted to Judaism by *baptism alone; but such conversion rarely if ever occurred, because it would have seemed tantamount to betraying one's own people. For Philip, a Jew, to present the *gospel in such

terms that a Samaritan could follow a *Messiah proclaimed by Jews (probably by not demanding adherence to the Jerusalem temple) would be viewed by many Judeans as a betrayal of Judaism. Philip follows the same theological program of decentralized witness supported by Stephen in chapter 7 and outlined by Jesus in 1:8.

8:13. Some writers have argued that Simon was not genuinely converted, given his subsequent behavior (8:18-24), but this issue depends on the meaning of "conversion"; like Judaism in the same period, early Christianity lamented not only false converts but also apostates (e.g., 1 Sam 10:6; 16:14; 2 Pet 2:21; 1 Jn 2:19).

8:14-25
Apostolic Ratification of the Samaritan Conversions

Philip's crosscultural ministry has broken new ground, of the sort that might draw opposition from some conservative elements in the Jerusalem church (8:12). It is thus important for Luke to describe the response of the Jerusalem *apostles and the blessing of God on the work.

8:14-15. From a theological standpoint, the work of the *Spirit is one package (2:38-39), but in the experience of the church not all aspects of his work are necessarily manifested simultaneously. Luke emphasizes the prophetic-empowerment dimension of the Spirit (1:8) so much that he rarely mentions other aspects of the Spirit's work known in the *Old Testament and early Judaism; this prophetic-empowerment aspect could be in view here, although Philip's hearers were already converted in 8:12.

8:16. "Into the name" is a literal translation that could reflect the language of ancient business documents, meaning that the converts have transferred ownership of their lives to Christ. Conversely, it could simply reflect the increasing ambiguity of Greek prepositions in this period (thus simply meaning, "with reference to Jesus"). Cf. "*baptism" in the glossary.

8:17. Ancient Judaism provides rare examples of laying on hands for prayer (one in the *Dead Sea Scrolls); in the Old Testament hands were laid on to impart blessings in prayer (Gen 48:14-20), among other matters (see comment on 6:6).

8:18-22. The only category into which many Greeks could fit the miracles performed by the apostles would have been that of magical works, but this text clearly distinguishes an amoral, magical interpretation of the miracles from the apostolic miracles, which are much more like those of Old Testament prophets such as Elijah and Elisha. Sorcerers could buy magical formulas; no one could buy the Spirit. One of the ways ancient observers distinguished *magic from miracle is that the former involved greed and self-aggrandisement. Those defending miracle-workers often had to distinguish them from magicians.

8:23-24. "Gall" and "bitterness" appear together in the *Septuagint of Lamentations 3:15, 19, for suffering, but most relevantly in Deuteronomy 29:17; 32:32, in the context of paganism. "Bond of injustice" may reflect Isaiah 58:6.

8:25. After the new mission was pioneered by the bicultural witnesses of Acts 6, the apostles finally begin to develop their own mission (1:8). Far from the apostles fixing or correcting Philip's inadequate conversion of the Samaritans (as some commentators have suggested), the whole *narrative indicates that they recognize and ratify the propriety of his work and develop what he began. Because *Aramaic would be the dominant language of the Samaritan villages (as opposed to Neapolis; see comment on 8:5), Peter and John could press into villages where Philip had not ministered.

8:26-40
Conversion of an African Official

Luke devotes nearly as much space to the conversion of this one foreigner, who can function as an indigenous witness in his own culture, as to the mass conversion in Samaria. Because *Samaritans were not considered fully Jewish, this is the first fully *Gentile convert to Christianity (probably unknown to most of the Jerusalem church—11:18).

8:26. Two roads led south from near Jerusalem, one through Hebron into Idumea (Edom) and the other joining the coast road before Gaza heading for Egypt, both with plenty of Roman milestones as road markers. Old Gaza was a deserted town whose ruins lay near the now culturally Greek cities of Askalon and New Gaza. Philip might have no one to preach to on a little-traveled road that would

lead by a deserted city, and after the revival in Samaria this command must seem absurd to him; but God had often tested faith through apparently absurd commands (e.g., Ex 14:16; 1 Kings 17:3-4, 9-14; 2 Kings 5:10). The term translated "south" can also mean "noon"; traveling at noon was very rare (see 22:6; comment on Jn 4:5-6), so this detail, if intended, would make the command seem even more absurd.

8:27. The Greek term *Aithiopia* ("Ethiopia") referred not specifically to modern Ethiopia, but to Africa south of Egypt. Ethiopia figured in Mediterranean legends and mythical geography as the very end of the earth (sometimes extending from the far south to the far east), and the most commonly mentioned feature of Ethiopians in Jewish and Greco-Roman literature (also noted in the *Old Testament—Jer 13:23) is their black skin; some sources also depict their hair and other features in ways that leave no doubt that black Africans are in view.

He hails from a black Nubian kingdom south of Egypt partly in what is now the Sudan, a kingdom that had lasted since about 750 B.C. and whose main cities were Meroë and Napata (this should not be confused with Abyssinia, which came to be called Ethiopia in more recent times and converted to Christianity in the fourth century A.D.). Meroë was so powerful that Rome settled for a peace treaty and trade ties rather than its empire venturing south of Egypt. This official and perhaps members of his entourage would have known Greek, necessary for his kingdom's trade with cities in Egypt. He is probably a Gentile "God-fearer" (see comment on 10:2). As the queen's treasurer, this man is a high and powerful official. Meroë was wealthy, so the treasurer probably supervised considerable wealth. The empire's capital, also named Meroë, was roughly one hundred miles northeast of modern Khartoum and roughly two hundred miles south of modern Egypt—no small journey to Jerusalem. Although this kingdom had some trade with Rome, even the treasurer for Meroë's queen would not normally have business so far north.

Various queens of this African kingdom bore the title "Candace" (*kandak'a*), which Greeks viewed as a dynastic title of the queen mother of Ethiopia, whom they believed ruled in Ethiopia. In fact queens may have born this title whether or not they were reigning; at least some, however, did rule Ethiopia. If the Candace here is regnant, she might be Queen Nawidemak or one of the queens about whom we lack sufficient knowledge.

When meant literally (which was not always the case—Gen 39:1 LXX), "eunuch" referred to a castrated man. The term's fivefold repetition in this narrative probably signals that the official was a true eunuch, as was often the case of close associates of queens in some regions. Although eunuchs were preferred court officials in the East, many Mediterranean peoples mocked them as deficient in manliness. The Jewish people opposed making men eunuchs, and Jewish *law excluded eunuchs from Israel; the rules were undoubtedly instituted to prevent Israel from neutering boys (Deut 23:1). Thus this official, while Jewish in faith (8:27, 30), would not have been accepted as a full convert to Judaism. But God could certainly accept eunuchs (Is 56:3-5, even foreign eunuchs; Wisdom of Solomon 3:14). An Ethiopian "eunuch" in the Old Testament turned out to be one of Jeremiah's few allies and saved his life (Jer 38:7-13).

8:28. Most people walked, the more well-to-do rode animals, but only the most well-to-do had chariots or carriages. Expensive carriages could be covered and have four wheels, and could be drawn by horses, donkeys, mules or oxen. (The official would probably use the carriage only as far as Alexandria; from there he would sail south on the Nile.) As a wealthy person, he could have had a reader, but as an educated person, he may have been reading the scroll himself (as Luke's wording probably suggests). People were occasionally known to read while sitting in expensive carriages; thus the chariot may be moving while the eunuch is reading.

8:29-30. Although taught along with reading aloud in modern times, the skill of reading silently was not practiced as often in antiquity; those who could read generally read aloud. Meroë had its own language and alphabetic script. Nevertheless, because of Meroë's trade contacts with Greek-speakers in Egypt, the official knew Greek (the trade language in Egypt's cities). Because Philip understands what he is reading and they go on to commu-

nicate, the official may be reading a copy of the *Septuagint. The situation here is obviously divinely arranged (cf., e.g., Gen 24:13-27). The chariot probably was not traveling quickly; its maximum speed might be only twenty-five or thirty miles per day. People in antiquity valued youthful vigor, a vigor Philip employs to good effect here.

8:31. Often only one attendant would accompany the official in a chariot; the wealthy eunuch might have more, but there is still room for Philip.

8:32-35. Earlier servant passages in Isaiah refer explicitly to Israel, but 49:5 distinguishes the servant from the rest of Israel, and in 53:1-3 he is rejected by Israel; in 53:4-12 he bears the sins of Israel, although he himself is not guilty (53:9; contrast 40:2) and suffers voluntarily (53:12). The official's confusion is understandable, but one can well imagine how Philip explained the passage. (Luke does not report all of Is 53, but the context is implied; because chapter and verse references had not yet been assigned, one had to cite part of a passage to let the readers know where one was reading.) Three chapters later Isaiah speaks of God welcoming foreigners and eunuchs (Is 56:3-8).

8:36-38. There are some wadis near Gaza (wadis are dry creek beds that fill with water during the rainy season); because Jewish *baptism presupposed full immersion, this is no doubt what Luke intends here. As a eunuch (a designation highlighted by Luke five times), the official could not be a full *proselyte, hence would have been denied circumcision (Deut 23:1). Now, however, he expresses readiness to embrace baptism. As a God-fearer, the Ethiopian undoubtedly understands the usual Jewish view that full conversion includes baptism; in Jesus, he is welcomed fully into God's people (cf. Is 56:3-5).

8:39. Christianity especially began to expand in Abyssinia through lay witness in the third century, and that empire was declared "Christian" about the same time as the Roman Empire was. Nubia (the region of this official) converted later; no certain record of this Ethiopian's witness remains, but with Luke we may suppose that he testified of his faith in high places.

Some magicians claimed the ability to fly (not very commonly demonstrated!), but the language of Philip's removal suggests supernatural movement more like that suggested as possible for Elijah (1 Kings 18:12; cf. 2 Kings 2:11, 16) or other biblical sources (Ezek 3:12, 14).

8:40. Ancient writers sometimes framed sections with parallel language; Philip's preaching as he is going might echo 8:4 and 8:25. Philip's continuing ministry involves the coastal plain, again in advance of Peter's mission in the same region (see 9:32, 43; 10:24). The Judean Azotus, about four kilometers from the Mediterranean sea, had been the Old Testament's Philistine city of Ashdod. It was twenty to twenty-five miles northeast of Gaza (about a day's walk) and about thirty to thirty-five miles west of Jerusalem, situated roughly halfway between Gaza and Joppa. Caesarea Maritima (the coastal Caesarea, not Caesarea Philippi) was over fifty miles to the north of Azotus, just off the same coastal road; this city, Judea's Roman capital, will become significant for Acts in 10:1 (cf. 21:8). Although Jews also lived in Gaza, Azotus and Caesarea, these cities all included large numbers of Gentile residents; Philip foreshadows the mission of other *Hellenists (11:20).

9:1-9
Jesus Arrests Saul

The three accounts of Paul's conversion in Acts display some differences (chaps. 9, 22, 26; all fit the accounts in his letters). Classical literature sometimes reports messages given to messengers and then repeats them verbatim on their delivery. *Rhetorical style by Luke's day preferred variation, which makes the repeated *narratives much less repetitious, hence more interesting to read. Luke's three accounts fit their varied audiences.

9:1. Saul may have been a prominent person (cf. Gal 1:14) from a prominent family (cf. Acts 22:3; 26:5) to have direct access to the *high priest.

9:2. Official letters of introduction authorizing or recommending their sender were common, and *Josephus confirms that Palestinian agents could take orders from the Jerusalem Sanhedrin. Jewish communities outside Palestine respected the high priest, and letters from him authorize Saul to carry out his mission with the full cooperation of *synagogues there. (Saul rather than the high priest

initiates the action here.) Because Jerusalem high priests earlier exercised extradition rights over fugitive Judeans when they ruled Palestine, local synagogues in Syria may have still recognized this right, although the local ruler would probably not. These synagogue communities could cooperate with Saul in his mission to weed out the Jewish Christians. Contrary to some modern romanticized readings, intra-Jewish conflict occurred and sometimes even became violent (see, e.g., 1 Maccabees 3:8; *Dead Sea Scrolls CD 1.20-21; Josephus, *Jewish Antiquities* 20.213).

The *Essene sect at *Qumran also described itself as "the way"; this was a natural designation for a group that believed that it alone followed the way of righteousness (cf., e.g., Prov 8:20; 12:28; 16:31; they also explicitly drew on Is 40:3). Essenes had apparently also settled in Syrian Damascus, if their writings on this point are meant literally. Tens of thousands of Jews lived in Damascus (as many as eighteen thousand were massacred there in A.D. 66).

9:3. Damascus lay roughly 135 miles north of Jerusalem on the Great North Road, about a six days' walk (shorter if they rode horses, as is possible, but cf. 9:8). The light from heaven indicates the Shekinah, God's presence (related to the concept of *yeqara*, "glory"), as God often revealed his glory in the *Old Testament. A number of Old Testament calling narratives include a theophany or other direct experience; see Exodus 3:1–4:17; Isaiah 6:1-13; Jeremiah 1:4-19; Ezekiel 1:1–3:15; cf. Judg 6:11-24. Jewish people also recognized that God might suddenly intervene to convert a persecutor (2 Maccabees 3:24-36).

9:4. In the Old Testament and Jewish literature, people often fell to the ground when confronted with divine or angelic revelations (e.g., Ezek 1:28; Dan 8:17). Usually the revealer then commands the person to stand (e.g., Ezek 2:1; Dan 8:18); the lack of such instruction here likely suggests that Saul's behavior is not an object of divine favor. In Jewish literature names are often repeated when God calls to someone, drawing special attention to what is about to be said (e.g., Gen 22:11; 46:2; Ex 3:4; 1 Sam 3:10). In Jewish literature, a voice from heaven almost always belongs to God himself; usually it was in *Aramaic or Hebrew, as is apparent here (from the form of "Saul" and from 26:14). Given the nature of the revelation, "Lord" here means more than "Sir"; perhaps Saul wonders if God or an angel is addressing him, or perhaps he simply cannot believe he is opposing God.

9:5-6. Persecuting his followers is persecuting Jesus, because they are his representatives (Lk 10:16). Letters of recommendation (cf. Acts 9:2) often identified the sender with the person recommended; here Jesus identifies with his persecuted followers. In the Old Tesament God evaluated the treatment of some people as if it were treatment of himself (Ex 16:8; 1 Sam 8:7; Prov 19:17).

9:7. The reaction of Saul's companions is analogous to that in Daniel 10:7.

9:8. God sometimes struck people with blindness to stop them from an evil purpose or as a temporary measure to get their attention (Gen 19:11; 2 Kings 6:18-20; note also the contextual play on spiritual blindness and sight in 2 Kings 6:17).

9:9. Three days was not uncommon for a fast (Esther 4:16); but without water one would become dehydrated, and to continue without water would eventually lead to death. *New Testament examples usually conjoin fasting with prayer, but fasting was commonly an expression of mourning or *repentance. According to this narrative, Saul does not change religions; he learns the true way to follow his Jewish religion. Social studies of conversion suggest that a convert sometimes retains some basic structures of thought but initially reverses his or her approach.

9:10-19a
Ananias's Mission

The pairing of Ananias's and Saul's visionary experiences, like the pairing of those of Cornelius and Peter in chapter 10, confirm the supernatural character of the revelation (as in some other ancient sources; e.g., Judg 7:9-15).

9:10. Another individual bears the name Ananias elsewhere in Acts (23:2), but this was a common name, the Greek form of the Hebrew Hananiah (e.g., Jer 28:1; Dan 1:6). His response is the proper one for an obedient servant of God ready to obey orders (1 Sam 3:10; Is 6:8). His biblically appropriate response to a theophany (cf. Gen 22:11; 46:2; Ex 3:4;

1 Sam 3:4-8; Is 6:8) contrasts with Saul's less informed approach above. (Damascus, capital of modern Syria, was then the capital of the Nabatean Arabs.)

9:11-12. Each is informed about the other in a vision. Such twin visions occur rarely in ancient literature (e.g., *Apuleius, *Metamorphoses* 11.13; cf. Tobit 3); when they occur they allow no misunderstanding that the event was divinely coordinated (cf. Gen 41:32). Ancient Jewish hospitality was great, and accommodations with a fellow Jew in Damascus would not be hard for Saul to secure, whether or not Judas has advance notice of Saul's coming. Cities built before the *Hellenistic era, like Damascus, would have many narrow, winding streets. Damascus, however, was reconstructed on the Greek grid pattern, with fairly evenly spaced east-west and north-south streets. Many scholars believe that Straight Street is the long, main east-west street through Damascus, where tradition still places Judas's ancient home (near the street's west end). This important street ran parallel to the Barada River, which passed through Damascus, and was fifty feet (fifteen meters) wide, with colonnades on either side. (We cannot be certain that this was the street, however.) Once one found a street, one normally asked neighbors for directions to the house (although according to local tradition, Ananias's house was near the same street, albeit near the eastern end).

Jews are attested in ancient Tarsus, the capital and most prominent city of Cilicia in southern Asia Minor. Civic strife was apparently characteristic of Tarsian (and more generally Cilician) culture; Cilicia's reputation for viciousness might reflect the influence of the region's common violence a generation or two before. A Hellenized city prosperous from trade, it also had prominent schools and boasted many philosophers, though many of its own residents chose to do advanced studies abroad. But cf. comment on 22:3.

9:13-14. Ananias is naturally less eager to obey his orders (9:10) after he finds out what they are (but he does obey, 9:17). Even after saying, "Here I am" (9:10; cf. Ex 3:4) one might voice objections (e.g., Ex 4:10; see also Acts 10:14). On commands that seem absurd, see 8:26.

9:15-16. The language here is that of *Old Testament call or commissioning narratives; Saul is apparently converted already and is about to be called to ministry. "On behalf of my name" or "for my name" (NIV) means either for Jesus' honor or that these sufferings would be incurred while Saul is acting as his representative (cf. comment on Jn 14:12-14).

9:17. "Brother" was often used for coreligionists, fellow members of the same Greek association or fellow Jews (usually in Acts it applies to fellow believers in Jesus).

9:18-19a. Saul would know the popular Jewish story of the healing of Tobit's blindness, in which white film and scabs (the same language in Greek as here) were removed (Tobit 3:17; 11:11-13); the analogy might underline for Saul the miraculous character of his own experience. Damascus had plenty of places available for *baptism (e.g., the river Barada, running through Damascus near what may have been "Straight Street").

9:19b-31
Confrontations in Damascus and Jerusalem

9:19b-21. Although Saul had carried the letters authorizing his mission (9:2) on his own person and presumably not delivered them, word of his mission had gotten around in Damascus's Jewish community. "*Son of God" is characteristic of Paul's style more than Luke's; writers tried to imitate the style of those whose speeches they reported, and it is not likely that Luke would know Paul's style this early unless he knows him personally (which he undoubtedly did; see the introduction to Acts; 16:10).

9:22. Saul's position presupposes that he is already expert in the Scriptures; now he turns this expertise against his former mission.

9:23-24. Saul's Jewish opponents plan to assassinate him, not to execute him legally; but his own account in 2 Corinthians 11:32-33 indicates that they had secured the cooperation of the (*Gentile) Nabatean ethnarch. Saul's preaching in other cities under the control of Aretas IV of Nabatea (9 B.C.–A.D. 40) for as long as three years (Gal 1:17) had possibly aroused such opposition. The collusion of such interests made Paul's situation in Damascus politically impossible. A city's gates

would be closed at night, though individuals might be able to exit with permission.

9:25. Houses were sometimes built into city walls; Saul's escape method has biblical precedent (Josh 2:15; 1 Sam 19:12). A pre-Arabic, Roman-period tradition claims that Ananias's house was built on the wall; if the tradition is early (by no means certain; it could simply reflect on Paul's experience), the house might have even been that of Ananias. That he has gained *disciples there suggests that he has worked like a Christian *rabbi, or teacher, and that he has the requisite training to present himself as such (cf. 22:3; but contrast Mt 23:8).

9:26-29. As provocative as his evangelistic predecessor Stephen, Saul appears headed for the same fate, until he is sent to Tarsus. The only representatives of the *apostles he gets to know well are Peter and James (Gal 1:18-19).

9:30. Caesarea, perhaps two days' journey away on the Judean coast, was the Roman capital of Judea, and Paul could catch a ship from there northward to southern Asia Minor. "Sending him off" may imply also that they paid his fare. Because he had been born in Tarsus (22:3), he possibly had relatives there; but his training had been thoroughly Palestinian Jewish (Phil 3:5), so it is during this period in his life that Saul begins to relate especially to Gentiles from Asia Minor (modern Turkey).

9:31. In ancient literature, summary statements sometimes concluded literary sections.

9:32-43
Continuing Miracles Through Peter

9:32. Lydda and Joppa (9:36) were the most prominent cities on the coastal plain that were almost completely Jewish. Lydda, about twenty-five miles northwest of Jerusalem, was the most significant Jewish city of the Sharon plain. Capital of one of the Judean districts that included non-Jews, it escaped most of the devastation of the later Judean revolt and eventually hosted many prominent rabbis and a rabbinic school.

9:33. Jewish piety included visiting the sick. Although Aeneas is a familiar *Gentile name, a number of Jews also bore it (which seems likelier here). Aeneas could have been paralyzed from a stroke or another problem with the central nervous system, or from an accident (such as a fall from a roof), or from tuberculosis affecting the spine, or from some other cause. Apart from massaging the person with olive oil, little treatment was available.

9:34-35. Sharon is not a town but the coastal plain that extended from Lydda toward Mount Carmel in the north. Most writers in Greek designate it a "plain" or the like, but Luke has a simple transliteration of the Hebrew expression. The Christian presence was still notable in Lydda in the second century A.D.

9:36. Joppa, modern Yaffa, now joined with Tel-Aviv, was a profitable port city, about eleven miles from Lydda. It was about 30 miles south of Caesarea Maritima (8:40; 10:1, 5), and controlled one of Judea's administrative districts. It was under Jewish control for about forty years until it came under direct Roman authority in A.D. 6. Tabitha is a Semitic name and Dorcas a Greek one (both meaning the same thing, "gazelle").

Jewish women were active in charity projects. In Greco-Roman culture in general women were sometimes *patrons, and it has been suggested that Tabitha may have been a patron or benefactor of the widows mentioned in verse 41. But whether officially (as a benefactor) or unofficially, she was looking out for their interests.

9:37. Jewish dead were always washed before burial. Only women prepared women's bodies for burial. The upper room may evoke 1 Kings 17:19, 23; 2 Kings 4:10-11, 32 (although on other occasions also bodies were kept in upper rooms).

9:38. It is important that Lydda is near Joppa, because corpses had to be buried right away (ideally before sundown). The distance of fewer than twelve miles meant perhaps roughly four hours' journey each way (for the messengers to Peter and Peter to Joppa); because it was customary to bury the corpse before sundown, even if Tabitha had died early in the day they could afford no delay.

9:39. Upper rooms were usually small (1:13 is an exception), generally attics built on the flat rooftops; this one is at least large enough to accommodate a few people. Making clothing was one of the domestic tasks assigned to women in that culture. Well-to-do

Roman women had maids to do it but were still considered responsible for it getting done. Caring for widows was a fundamental act of piety in early Judaism; Tabitha had been their benefactor. If we may extrapolate from a somewhat later painting somewhat further to the east, Judean women, or at least those with some means, may have worn ankle-length tunics with wide sleeves at the elbows; over this tunic they might wear a shorter dress.

9:40. In accordance with Jewish scruples, Tabitha's body would be covered before Peter is brought into the room. On Peter's sending the others out, cf. 1 Kings 17:19; 2 Kings 4:33.

9:41-42. The resuscitator normally presented the raised person to the suppliants who had requested the resuscitation (1 Kings 17:23; 2 Kings 4:36; Lk 7:15).

9:43. It was customary to name people by their occupation or parentage. Tanning was a despised trade; because of the odors associated with animal carcasses (perhaps less offensive to a fisherman), tanneries usually existed only outside towns. Strict observers of Pharisaic opinions likewise avoided tanners whenever possible, because their stripping of animal hides continually involved them with unclean carcasses. Second-century rabbis reported that tanners were forbidden in cities, especially Jerusalem (many rabbis were more lenient if the tannery were near water, as Simon's house is—10:6). They even insisted that a tanner must allow his wife a divorce if she could not endure the smell! But Judaism stressed hospitality, and Peter, who probably never followed Pharisaic opinions anyway, is happy to receive it.

10:1-8
Cornelius's Vision

Compare comment on the twin visions of Paul and Ananias in 9:12.

10:1. Herod the Great had renamed Strato's Tower "Caesarea" in honor of the emperor; it now had a splendid theater seating more than four thousand, an amphitheater, temples and a massive harbor complex. By this period, it was a mixed city of both Jews and *Gentiles, with the latter predominating, but the two groups often were in conflict; a generation later, local Syrians slaughtered much of the Jewish population (*Josephus estimates twenty thousand in one hour in A.D. 66; *Jewish War* 2.457). Most local soldiers were anti-Jewish. Nevertheless, some Gentiles honored, and even converted to, Judaism there.

The residence of the Roman governor of Judea (23:23-24), Caesarea held a regular Roman garrison of a cavalry unit and five infantry cohorts. (Even during the brief reign of Agrippa in A.D. 41–44, Gentile troops remained stationed there; Josephus, *Jewish Antiquities* 19.356-65.) The soldiers were auxiliaries, that is, provincials recruited to the Roman army; most were Syrian by birth, although they received Roman citizenship on retirement. Centurions commanded units of roughly eighty men (rather than their official designation of one hundred). Unlike the aristocrats who could directly become tribunes or legates, centurions were often soldiers who worked their way up through the ranks. Some took twenty years to achieve this rank; others achieved it more quickly.

His century was part of a "regiment" (NIV, GNT) or cohort (NASB, NRSV), one-tenth of a legion, made up of up to six hundred men. Five cohorts were stationed in Caesarea and another in Jerusalem. We have attestation for this particular cohort in Palestine a few decades later. More than one cohort in antiquity bore this name; the name simply indicates that the cohort's original members were Italians, sometimes reflecting a cohort's earlier history. Sometimes auxiliaries took a Roman name (such as Cornelius) when enlisting, receiving citizenship only later; but perhaps Cornelius was a Roman citizen and a member of the legion in Syria, lent to an auxiliary cohort for service there (perhaps because of complaints about the behavior of local auxiliaries). Others think that he was retired.

Military service was a preferred occupation. Some estimate that only roughly half those who enlisted survived the twenty years of service (generally ages seventeen to thirty-seven; it became twenty-five years of service later in the first century), but apart from legions that saw heavy fighting the actual figures were probably higher. In any case, rewards for survivors were high. Noncitizens could not join legions but could become auxiliary troops who received citizenship upon their discharge.

10:2. Cornelius is clearly not yet a full convert to Judaism (10:28), but his almsgiving

and the appreciation of Jews who know him (10:22) testify to his devotion. Although the term "God-fearer" had a broader usage, it generally functions technically in Acts and in some other Jewish sources for righteous Gentiles who had not been circumcised. Josephus, *Philo, inscriptions and even the pagan philosopher *Epictetus mention this class of incomplete converts. Inscriptions indicate a high level of religious interest among many of the soldiers.

If these events are before 41, as many scholars think, Cornelius would probably be retired (centurions could retire at the age of sixty) by the war of 66–70 (if he was not already retired at the time of this *narrative, as some think). Nevertheless, most Jewish Christian readers after A.D. 70 would not be fond of Roman officers stationed in Syria-Palestine, and this account would challenge their prejudices. Recruits had all sworn oaths of allegiance to the divine emperor.

Cornelius's "household" (NASB, NRSV) or "family" (NIV, GNT) is of interest. Luke would certainly know that military personnel were not officially permitted to marry. Cornelius might be retired, but otherwise he would not be married *officially*. Soldiers, often recruited from the local areas where they served, commonly had illegal concubines whom superiors ignored, but centurions were moved around somewhat more often and thus could maintain long-term informal marriages with local concubines less often than other soldiers might. Thus while Cornelius may have unofficially married a concubine, it is also possible that he did not. It was considered proper for a wife to share her husband's religion, so if he *was* married, her shared devotion here would be natural. But the term translated "household" could include servants or *freedpersons; although a cheap slave would cost about one-third of a regular soldier's annual pay, centurions received fifteen times the pay of rank-and-file soldiers. "Household" here might mean simply "servants" (v. 7).

10:3. The "ninth hour" (KJV, NASB) is about 3 p.m.—he keeps the Jewish hours of prayer, which corresponded to the morning and evening offerings in the temple (3:1).

10:4-8. In the *Old Testament as well God looked out for many Gentiles who were seeking him, whether or not they had yet become full converts (e.g., Josh 6:25; 2 Sam 12:9-10), and revealed himself to individuals other than Abraham's descendants (Gen 5:24; Num 22–25). "Memorial" (v. 4) may be the language of sacrifice (Lev 2:2), which would be fitting for prayers offered during the time of sacrifice in the temple. Ironically, Joppa (Acts 10:5; cf. 9:36-43) was where Jonah began fleeing to avoid preaching to Gentiles (Jon 1:3).

10:9-16
Peter's Vision

Compare Cornelius's vision in 10:1-8; on such cases of "double vision," compare the comment on 9:12.

10:9. Caesarea was about thirty miles north of Joppa. If Cornelius's messengers left even immediately after 3 p.m. (10:3) on the same day (some commentators believe they left the next day), they must have traveled part of the night on foot, or (less likely) Cornelius must have found horses for them to ride, because here they approach Joppa by noon ("the sixth hour"—KJV, NASB). Thus their task must be urgent.

The flat rooftops were used for drying vegetables and for prayers. If one reclined under a canopy, the rooftops were cooler even at midday than the poorly ventilated rooms of most Palestinian homes (although this home may be larger than most; cf. 10:17). Noon was not a regular hour of prayer (3:1), so Peter prays in addition to the traditional hours followed by many of his contemporaries.

10:10. Peter is not hungry from any special fast; noon was the normal time for a meal in Rome and some other locations and may have been in Joppa as well. Some Jewish writers described mystical experiences when the soul would be so filled with God that one would lose touch with one's surroundings; but in contrast to those who sought mystical experiences, Peter has done nothing intentionally to bring it about.

10:11-13. Even Palestinian Jews most lenient in other regards kept kosher. By conservative standards, any animals that were clean by themselves would have been contaminated by contact with the unclean animals. Thus this vision would present a horrifying situation for any first-century Palestinian Jew (and the vast majority of foreign Jews as well):

God commands Peter to eat all these animals, some of which are unclean, forbidden creatures. Hungry he may be (10:10), but he is not *that* hungry!

10:14-16. In another vision half a millennium before, God had similarly called Ezekiel, a priest, to eat something unclean, and he had offered the same protest; in that case, God granted an improvement (Ezek 4:13-15). Jewish people had preferred death to eating unclean (nonkosher) food in the time of the *Maccabees; thus Jewish readers would be appalled that God would require anything so disgusting (from the perspective of cultural cuisine) and impious (from an *Old Testament perspective). The point of the vision, that God can declare anything clean, applies especially to the Gentiles Peter is about to meet (10:28; 15:9). Repetition of a revelation is not unusual (1 Sam 3:4-10).

10:17-23a
Receiving the Gentiles

10:17. Joppa was a large town, but knowing Simon's profession and that his house was near the sea would make it easy to find him. In many cities of the Roman world, people of the same trade would live in the same district; most people in Joppa would know the right district. Moreover, tanners normally lived outside or near the edge of a city, preferably near a water source. Asking directions was common. That Simon has an outer gate indicates that he is a man of some means.

10:18. Being knowledgeable about Judaism themselves (10:2), Cornelius's messengers "call out" rather than simply going up to the house to enter (10:28), although as representatives of a Roman centurion they could surely have done so with official impunity.

10:19-21. Peter "went down" to them possibly by a ladder but much more likely by an outside staircase leading from the flat roof.

10:22. Although many stories tell of Jewish teachers talking with *Gentiles, strict Jews would not enter a Gentile's house or allow a Gentile in theirs. Thus Peter faces a problem in being invited to Cornelius's house. Although more lax Jews would probably not object (v. 23a), Peter has to be concerned about stricter elements within the Jerusalem *church, which eventually included even *Pharisees (15:5).

10:23a. Pharisees and other pietists were concerned about impure table fellowship; lodging Gentiles overnight, no matter how exhausted the guests may have been, contradicted strict Jewish piety (though it was understood that in some regions one could not avoid Gentiles altogether). Although some allowed eating with Gentiles, so long as the food was "pure," others opposed eating with Gentiles altogether. Many forbade eating with them on the principle that they were evil company (**Jubilees* 22:16). Perhaps Simon, being a tanner, is less concerned with strict rules; although most of his customers were probably Jewish, Joppa was a mixed town and his was a profession despised by strict pietists anyway. (Even later *rabbis allowed some short-term business contacts with Gentiles and recognized that some shops employed both Gentile and Jewish workers.) But Peter's vision probably has something to do with the treatment the guests receive.

10:23b-33
Cornelius Receives Peter

10:23b. Peter's companions are no doubt brought partly to serve as witnesses that he behaves properly (10:45; cf. Deut 17:6; 19:15).

10:24. The return journey is less rushed (if the messengers rode to them, which is uncertain, Peter and his companions lack horses). Had they left around sunrise, after the Gentiles had lodged in his house overnight (NASB "he arose"—v. 23), and walked at a fast pace without stopping, they could have arrived at Cornelius's house that evening, but they did not. "The following day" here means that they all stopped for overnight lodging along the way (v. 30), presumably in a mixed town (perhaps in Apollonia, just under halfway along the Mediterranean coast, or perhaps a town further along the way). That Cornelius is patiently "waiting" (NASB, GNT) for them means not only that he trusted his servants not to run off but also that he is eager to hear Peter's message. Whereas Roman policy had failed to reconcile Jew and Gentile in Caesarea, divine visions succeeded, at least for the circles of their recipients.

"Friends" here could include social dependents as well as peers (see comment on Acts 19:31). The term translated "relatives" (NASB,

NIV) can also mean "countrymen." If it means relatives, it could mean distant relatives who were soldiers stationed in the same city, although that coincidence is unlikely. Because soldiers in this period were often stationed in the region from which they come, these may be local Syrian kin of either Cornelius or his wife or concubine (if he had one; cf. comment on 10:2). It is not the usual way to describe one's immediate family (cf. also on 10:2), but it is even less likely to include servants. That he had "called them together" suggests that they are not infants (cf. also v. 46), and nothing in this passage requires the reference to infant *baptism that some writers have seen here (v. 48).

10:25-26. Greco-Roman paganism believed not only in gods but in semidivine men, often sons of the gods, who had supernatural powers (14:11; 28:6; cf. 12:22-23). One would offer obeisance to gods by falling at their feet and worshiping them, as Cornelius does to Peter here. Cornelius should know better (10:2) than to treat Peter with such reverence; perhaps he intends only a special form of homage (as was customary for Eastern rulers), which a servant of Jesus finds inappropriate (cf. Lk 22:25-27). Even Greeks considered it hubris for a mortal to accept worship, and respected those who declined divine honors. Yet people often fell at others' feet or sometimes grasped their knees (an ancient Greek approach) to beg for mercy or an essential request.

10:27-29. Devout Jews would not enter into idolaters' homes lest they unwittingly participate in idolatry; some may have extended this custom to not entering any Gentile's home. Strict Jews considered it unclean to eat Gentiles' food or to drink their wine; although this purity regulation did not prohibit all social contact, it prevented dining together at banquets and led much of the Roman world to feel that Jews were antisocial. Cornelius is probably accustomed to accepting reluctant (10:22) snubs, so Peter's statement in 10:28 would mean much to him. Hospitality obligations would demand (sooner or later) the new guests being fed, which would also raise questions about table fellowship (see comment on 10:23).

10:30-33. See comment on 10:3-6. By ancient reckoning, "four days" means at least parts of four different days (thus the NIV, "three days ago").

10:34-43
Peter's Message

10:34-35. Peter begins this speech to Gentiles with a complimentary *exordium*, or preface, according to *rhetorical custom (and perhaps polite propriety in any case). Judaism heavily emphasized God's impartiality; cf. Romans 2:11. Some Gentile thinkers also envisioned their chief deity Zeus as impartial and universal.

10:36. Jewish people in general would call *God* "Lord of all" (Wisdom of Solomon 6:7; 8:3). "Preaching peace" alludes to the concept of Israel's redemption, found in Isaiah 52:7 and similar passages, although even God-fearing Gentiles might not catch this allusion (but perhaps cf. Is 57:19 in Acts 2:39). This was a better hope than the empire's fictitious promise of "Roman peace."

10:37. "Judea" here apparently includes Galilee and is used in the broader sense (common in *Diaspora usage) of "the Jewish land." This makes sense in addressing Gentile hearers.

10:38. "Doing good" is literally "benefacting"—the sort of thing a ruler, deity, or some other powerful person would do when bestowing gifts or mercy on those of lower status (often cities or groups). Depending on how much Cornelius knows about Judaism, he may recognize that anyone anointed with the *Holy Spirit in his own time would be considered extraordinary by his Jewish contemporaries. On the *Christ as "anointed one," see "*Messiah" in the glossary; the present allusion is to Is 61:1 in Luke 4:18.

10:39. Hanging on a tree alludes to Deut 21:22-23, where it is a shameful death.

10:40-41. Some Greeks seem to have believed that heroes or gods sometimes remained invisible; cf. also Num 22:23, 27-28; 2 Kings 6:16-17. But Peter has no thought here of Jesus' remaining selectively invisible; rather, he comes only to those whom God had chosen.

10:42. Although subordinate human judges do appear for the judgment of the dead in both Jewish and most often Greek tradition, Jewish tradition especially emphasizes God as the ultimate judge.

10:43. Many prophets had messianic prophecies, but only a few of them (e.g., Is 53) directly connected the *Messiah and the for-

giveness of sins. Peter probably means this in a general sense: all the prophets testify of forgiveness through God's *grace, which will be provided in the time of the Messiah (cf., e.g., Jer 23:5-6).

10:44-48
Saved Gentiles

10:44. Luke's audience, familiar with public speeches, would understand that Peter's speech remained *rhetorically incomplete; the *gospel message, however, is complete. Interruption was a common literary device; when enough has been said, the author allows the speaker to be interrupted. Of course, it happened in real life as well as in the literature that imitated it; public speakers were often interrupted by individuals in the crowd. "Fell upon" is equivalent to "filled" here (cf. 2 Chron 7:2-3). The *Spirit "upon" appears in both of Luke's most prominent programmatic texts from Scripture (Lk 4:18; Acts 2:17-18); in the *Old Testament, the idiom usually refers to empowerment, whether to prophesy (most often), lead, or show superhuman strength (Num 11:17, 25-26; Judg 3:10; 6:34; 1 Sam 19:20, 23; Ezek 11:5).

10:45-47. Most Jewish teachers felt that the Spirit inspired only the most pious with divine utterances, or that the Spirit would mark God's people in the future age. That Gentiles would receive the gift was unthinkable. Most importantly, the Spirit was an *eschatological promise only for the people of the covenant (e.g., Is 44:3; Ezek 39:29). Gentiles obviously could not receive the gift if God had not accepted them, so he clearly *had* accepted them—even without circumcision.

10:48. *Baptism was used as a public declaration of conversion (see comment on 2:37-38)—but accompanied by circumcision, which is not demanded here. Peter's lodging at a Gentile home for several more days would compound the offense to Jewish piety but drives home Peter's lesson (10:28).

11:1-18
Called to Account

11:1. On "brethren" (KJV, NASB) or "brothers" (ESV), see comment on 9:17.

11:2-3. Not all Jews were this strict, but some were, especially in Judea (see comment on 10:23), and the Jerusalem leaders here are as strict about eating as were the *Pharisees in Luke's Gospel. Table fellowship created a covenant between host and guests. Most Jews welcomed God-fearers (10:2), but *Gentiles had to be circumcised to convert fully to Judaism. (This requirement is a natural inference from the *law and continues to be an issue as late as 15:1, 5.) No one objected to Peter preaching *Christ to Gentiles; the issue is that he ate with them even though as Gentiles they were ritually unclean (10:28; cf. Gal 2:12).

11:4-15. See comment on 10:9-46. On repeating a story in slightly different words, see the introduction to 9:1-9. Claiming (truly or falsely) divine authorization or sanction (v. 12) was a common means of defending one's actions in antiquity; Peter's ultimate evidence, then, is in 11:16-17.

11:16-17. Peter may imply a standard Jewish "how-much-more" argument: if God gave them the greater *baptism, how could he withhold the lesser one? Because Judaism used baptism alongside circumcision to signify conversion, if God had baptized someone in his *Spirit, he had certainly accepted their conversion—with or without circumcision.

11:18. The believers in Jerusalem marvel that God has given "even the Gentiles" (cf. NIV, NRSV; likelier than merely "also"—KJV, NASB, GNT) the gift. Jewish people believed that Gentiles could be saved by converting to Judaism; many also believed that Gentiles could be saved simply by being righteous, which for some meant keeping the seven laws God gave to Noah (according to developing Jewish tradition). But no one had believed that Gentiles could be welcomed on the same terms as Jewish people, who had been chosen for salvation by God's sovereign *grace. More importantly, more conservative Jewish movements (such as the *Essenes) believed that even most Jewish people were lost, so the salvation of the Gentiles without fully embracing Judaism appeared difficult.

11:19-30
The Ministry at Antioch

The Jesus movement shifts from a predominantly rural movement in Galilee to an urban movement in Jerusalem to a cosmopolitan movement in Antioch. Such a rapid transition is virtually unparalleled in antiquity and indi-

cates considerable social flexibility. That Judaism had already adapted to these various settings over the centuries provided a conduit for these rapid transitions within the Jewish Christian community.

11:19. The large Jewish communities in Phoenicia, Cyprus (4:36) and Antioch (6:5) were natural places for Jewish Christians to settle after 8:1-4.

11:20-21. Antioch on the Orontes in Syria was the third (or possibly fourth) largest urban center of the Roman empire (after Rome and Alexandria), though population estimates range from one hundred thousand to six hundred thousand. As the seat of Syria's Roman governor, it was the headquarters of Rome's Syrian legion. Rome granted it the privilege of being a "free city," mostly governing itself. With a famous cult center of Apollo within walking distance and Seleucia, its port city off the Mediterranean coast, only a brief river journey, it boasted numerous *mystery cults and was known for its pagan religious diversity.

Because of its cultural pluralism, it included an upwardly mobile and *generally* accepted Jewish element with many "God-fearers" (see 10:2) and was far less segregated than Alexandria. The Jewish community here was large; some guess roughly twenty thousand, perhaps around ten percent of the city's population. Antioch, in contrast to most predominantly *Gentile cities in the region, spared its Jewish inhabitants in the war of 66–70, though they did not fully trust them. Some more liberal non-Palestinian Jewish people saw their witness to the God of Israel among the Gentiles as making monotheism reasonable and contacting the best in pagan philosophy; circumcision was to them a lesser issue. Antioch's cosmopolitan nature allowed for much interchange of different cultural ideas. Many *proselytes and God-fearers attended Antioch's *synagogues. Thus Antioch was a more natural place for Gentiles (here, perhaps "Hellenizing" Syrians) to hear the *gospel without circumcision than Judea was (15:1).

11:22-24. Barnabas trusts God's work in people (9:27; 15:37-39).

11:25. Tarsus was about a hundred miles to the north, but Jerusalem was more than three hundred (to the south). This is no short journey, but Barnabas knows of Paul's calling.

11:26. "Christians" occurs in the *New Testament only here, as a nickname given by outsiders, and in 1 Peter 4:16, as something like a legal charge. The title is formed on the analogy of adherents to a political party: the "Caesarians," the "Herodians," the "Pompeians" and so forth. Had it been interpreted politically ("partisans of the executed Judean king") it could have stirred persecution, but here it apparently functions merely as derision. At least by a later period, Antiochans were known for making fun of people. By the early second century, however, Jesus' followers had welcomed the title.

11:27. That the movement had a number of prophets would impress those outside the movement; few if any movements even claimed to have many prophets acting together, although Greek oracles still operated at cultic centers (less popular than in the past), and *Josephus claimed that many *Essenes could prophesy. Syria was known for its oracles, so Antiochans are probably also impressed by Christian prophets.

11:28. A person would rise to speak in an assembly. A series of famines devastated Mediterranean agriculture in the time of Claudius: *papyri show high grain prices around A.D. 46; a grain shortage in Rome nearly led to Claudius's being mobbed in the streets (about A.D. 51); Queen Helena of Adiabene bought Egyptian grain "for large sums" (due to famine there) to help Judea (about 45–46).

11:29. Antioch was a wealthy city with many trade connections, and some of the Jewish community there was also wealthy. Most Jewish relief efforts were local except in severe cases, for instance, when Queen Helena helped famine-stricken Palestinian Jews. But this local focus was due more to the nature of the Roman Empire—where multiprovincial organizations were suspect—than to the nature of Judaism; cf. comment on 2 Corinthians 8–9. Wealthy *patrons often alleviated food crises in cities, but here all the believers participate. What is significant here is that the believers act in advance of the famine through faith in the *prophecy (cf. Gen 41:33-36)—even though the hardship is likely to strike Antioch as well.

11:30. "Elders" reflects the traditional Israelite leadership structure for towns and villages, continuing in this period. Ancient historians had to compromise between following the action of their story and events occurring elsewhere at the same time; Luke postpones taking up the completion of the project until 12:25.

12:1-24
Peter's Deliverance

12:1. This Herod is Agrippa I, brother-in-law, and son of a half-brother, of Antipas, the Herod of the Gospels whose attempt to gain as much power as Agrippa cost him his own kingdom. (Antipas's fatal jealousy of Agrippa was instigated by his own consort Herodias—*Josephus, *Jewish Antiquities* 18.7.1-2, 240-44, 250-54—although she had helped her brother Agrippa out after he had wasted all his money in Rome and returned to Palestine in debt—*Jewish Antiquities* 18.6.1-2, 143-49.) Herod Agrippa I had partied with Gaius Caligula in Rome; when Caligula became emperor, Agrippa I became the first official Jewish "king" since his grandfather Herod the Great. Although Caligula kept Agrippa in Rome, the following emperor Claudius sent him to Judea, where he reigned from 41 until his death in 44. Because his grandmother Mariamne was a Hasmonean princess, he was ethnically Jewish as well as Idumean (in contrast to Herod the Great). He was thus very popular with the people, on behalf of whom he used his influence. He was pro-*Pharisee and frequented the temple.

12:2. Formerly often performed with an ax, in this period beheading was performed with the sword and was the more merciful form of execution given to Roman citizens and others for whom crucifixion was considered too cruel. As king, Agrippa had the legal right of life and death that had been denied the Sanhedrin before and after him. Like Judaism, early Christians believed that death did not come apart from the sovereign purpose of God.

12:3. Luke may specify the Feast of Unleavened Bread to recall to the reader the time of Jesus' execution (Lk 22:7). Although Agrippa gave generously to *Gentiles outside Judea, his policies made him much more popular with his Jewish subjects (to whose majority whims he catered) than with his pagan subjects. He identified with and appealed to Judean values despite his past aristocratic Roman lifestyle. He worked hard to please people, and had sometimes spent lavishly to do so, though ancient writers (normally from the elite) viewed with contempt "demagogues" who catered to what elite writers regularly portrayed as the fickle whims of the "masses." His brief reign seems to have ignited conservative nationalist sentiments that ultimately clashed with Roman rule.

12:4. Agrippa I resided in Jerusalem. Luke does not mention the specific place of Peter's imprisonment, but the fortress Antonia on the temple mount is one possibility. As a trusted client ruler of Rome, Agrippa could have his own army, so the soldiers mentioned here need not be Romans, although they are described in terms of Roman organization. The basic unit of the Roman army was the *contubernium,* composed of eight soldiers who shared a tent; half units were sometimes assigned to special tasks, as here (sixteen soldiers total). Perhaps these groups of four worked in four three-hour shifts during the night. Agrippa perhaps feared armed resistance. Luke may use "Passover" in its general sense in this period to refer to the entire Feast of Unleavened Bread. Following Roman custom, he was known to execute criminals for public entertainment. Executions during festivals provided optimum propaganda value, though Romans usually waited until afterward.

12:5-6. Prisoners who were chained between guards (as often they were—21:33; cf. 28:16, 20) had no human hope of escaping. Peter was chained between two guards, with the other two watching the door.

12:7-11. On miraculous escapes, see comment on 5:19-20. Agrippa wielded much more direct power than the Sanhedrin had, and his guards were much more efficient. Prisons did not supply clothes, so the cloak and sandals (12:8) are Peter's own. Outer garments were often used for sleep at night, so Peter may have been using it as a blanket. To "gird" himself might refer to wrapping a sash or belt around his waist, or tucking his robe into his sash, to allow free mobility. In a popular Greek story, Dionysus had made chains drop off and locked doors open; doors opening "by

themselves" appear in ancient literature from Homer to Josephus (see esp. Euripides, *Bacchae* 447-48). They appear in the *Hellenistic Jewish story of God freeing Moses from Pharaoh's prison (Artapanus in Eusebius, *Preparation for the Gospel* 9.27.23). Thus we can understand why Peter might think he is dreaming.

12:12-13. A home with an outer gate, a servant girl who could serve as a porter and a gathering much farther back in the house would suggest the home of a fairly wealthy resident of Jerusalem's Upper City. (For another indication of the family's wealth, cf. Col 4:10 with Acts 4:36-37. As Levites—4:36—they may have had ties with the priestly aristocracy; many well-to-do priests lived in the Upper City.) Thus the home is not far from the temple mount (hence not far from the fortress Antonia, where Peter may have been held). In fact, one branch of Jerusalem's main street (although Luke's term here could refer to an alley) ran along the temple's western wall from the Antonia southward; from there Peter could cross Wilson's Arch into the Upper City. That Rhoda (a common slave name) has to come to the door, rather than being a full-time porter, however, suggests that though they had means, they were not extremely wealthy. Household slaves often lived in better economic conditions (and had far better chances of improving their positions, including gaining freedom) than free peasants, but they had other disadvantages. Among Gentiles, female household slaves could be subject to sexual harassment; but Jewish ethics despised this behavior (though it happened), and this household headed by a woman made it much less likely here.

Believers met in homes rather than church buildings for the first three centuries of the *church (e.g., Rom 16:5). Greek and Roman associations without their own buildings usually met in homes, and many *Diaspora *synagogues apparently started the same way. House gatherings thus followed association patterns available (as well as practical) in the culture.

"Mary" was the most common woman's name in Palestine. "Mark" is a Latin name, but as a *praenomen* it need not indicate Roman citizenship; still, the name was rare in Palestine, and its use hardly indicates antipathy toward Rome or its interests in Jerusalem, and may again suggest the family's wealth (see 12:13).

12:14-16. In Greek comedy, a slave sometimes utters foolishness; here, however, it is her free hearers who serve for comic relief. Given the purpose for this prayer meeting (12:5), their surprise (and Peter's having to keep pounding on the gate—which could wake up some of the other neighbors, who are probably from aristocratic priestly families and hence potentially dangerous) is ironic; ancient hearers probably would have picked up on the irony (cf. Lk 24:10-11, 37). In some popular Jewish traditions the righteous would become like angels after death.

12:17. The hand gesture for silence was a raised right hand, extending the smallest finger; a gesture preparing for one's speech extended the thumb and next two fingers. "James" (literally "Jacob," as with every use of "James" in the *New Testament) was a common Jewish name; this is not the James of 12:2, but the James of 15:13, 1 Corinthians 15:7 and Galatians 2:9. Jewish sources tell us that this James, Jesus' younger brother, was highly reputed for his devoutness in Judaism (cf. Acts 21:18-20), and when he was later martyred some leading Jerusalemites protested his death (Josephus, *Jewish Antiquities* 20.200-203). *He* would thus be more safe from Agrippa, who catered to the conservative Jewish masses (12:1-3).

12:18-19. Given the soldiers' precautions (chains, doors and different guards posted for each—12:6), it was humanly impossible for Peter to have escaped without all the guards having aided him. Agrippa examines them for information, perhaps under torture, but they have none. Under Roman law, a guard whose prisoner escaped would pay for it with the penalty due the prisoner—in this case, his own life (cf. 16:27; 27:42), a custom Agrippa, deprived of a favor for the masses, chooses to follow (at least with the final shift of guards). Since Agrippa cannot acknowledge divine intervention on Peter's behalf, he executes the guards for their complicity or negligence.

12:20. The *Hellenistic (culturally Greek) cities of Tyre and Sidon were dependent on Agrippa's territories for vital food supplies; he had been withholding trade from them (perhaps a special problem now; 11:28).

12:21. Agrippa I liked to flaunt his power;

his self-display had unfortunately led to anti-Jewish riots in Alexandria earlier. His public meeting with these emissaries is in the theater of Caesarea, built by his grandfather Herod the Great; the foundations of this theater still remain today. (This was a mercantile port city easily accessible to Tyrian and Sidonian delegates.) According to Josephus this speech occurred on a festival day in honor of the emperor (*Jewish Antiquities* 19.343).

12:22-24. The first-century Jewish historian Josephus reports that on this occasion Agrippa flaunted his power, and his flatterers praised him as a god—the sort of flattery toward royal *patrons common for centuries in the Greek East. But in the Roman period Caesar expected even pagans who were not emperors (such as the general Germanicus in Egypt) to humbly deflect such praise. Because Agrippa does not repudiate their praise, he collapses immediately. Josephus reports that he was carried to the palace, where he died at the age of fifty-four, after five days of stomach pains (Josephus, *Jewish Antiquities* 19.344-50). Deaths from bowel diseases and worms were thought among the most horrible (e.g., 2 Chron 21:15-19; 2 Maccabees 9:5-9; Josephus, *Jewish War* 7.453).

12:25–13:3
Antioch Sends Out Missionaries

Despite the commission of 1:8, the Galilean *apostles are still in Jerusalem (15:6). The leaders of the *church in Antioch, however, discovered success in the *Gentile mission (11:19-26) and are moved to ratify the apostolic call of two of their number.

12:25. The journey from Jerusalem to Antioch was over three hundred miles. It was customary for ancient teachers to take *disciples with them, and it was safer to travel in groups.

13:1. All the overseers of this church are probably understood to be both prophets and teachers. What sounds normal in early Christianity would sound phenomenal to its culture, for prophets were thought to be rare. Simeon and Manaen (= Menahem) are Jewish names, suggesting strong Jewish representation still in the leadership of the church (no doubt because they had better background for teaching Scripture). But Simeon's surname "Niger" was a very respectable and common Roman name; he may be a Roman citizen, although this is not clear—the name was also used by Jews and is here apparently a *nickname*. Nicknames were common and usually significant in antiquity; the meaning of Simeon's Latin nickname suggests a dark complexion and allows for the possibility that he was descended from *proselytes from the Romanized coast of North Africa (as could have been the case also with Lucius). Cyrene, on the North African coast, had a large Jewish population and a large Greek population as well as including indigenous residents from the area. Jewish residents revolted there in A.D. 115–17 and were decimated.

That Manaen (who may be in his sixties) was "brought up" with Herod could mean they had the same wet nurse, but the term also had broader connotations. Slaves who grew up in the master's household with the son who would inherit them were often later freed by the son, who had been their companion at play; even as slaves they were powerful because of their relation to the owner. Other boys brought up with princes at the royal court and tutored by the same elite teachers also attained prominence. Especially in Greek culture, friendships from youth determined political alliances and favors. Thus, until the fall of Herod Antipas ("the tetrarch") perhaps a decade before, Manaen had held a socially prominent position (and could well be Luke's main source, directly or via Paul, for the Antipas material unique to his Gospel).

13:2-3. Fasting was rare among Gentiles, although sometimes used in mourning. Jewish people fasted to mourn or repent, and some fasted to seek revelations; special fasts for prayer related to mourning were called in the face of great crises such as droughts. Here fasting is apparently simply conjoined with seeking God in prayer. The *Holy Spirit was especially known as the Spirit of *prophecy, so "the Holy Spirit said" probably means that one of the prophets prophesied. For the laying on of hands, see comment on 6:6.

13:4-12
The Pronconsul of Cyprus Believes

Messengers customarily traveled by twos. Students of the *law also preferred having companions to study with, even on journeys; Saul,

Barnabas and Mark (v. 13) no doubt discussed Scripture during many of their long walks. Roman roads were good and generally safe during the day, and travel was easier than it ever had been or would be again until close to the modern period.

13:4. Antioch lay inland on the Orontes; its port roughly fifteen miles to the west was the heavily fortified, free mercantile city Seleucia. Seleucia was Antioch's port city on the Mediterranean. The island of Cyprus is a natural destination if Barnabas knows the culture and has relatives there (4:36). In addition to being Barnabas' homeland (and connected politically to Paul's homeland Cilicia a generation earlier), Cyprus was prosperous and strategically located at a connection of many sea routes.

13:5. Salamis was the chief city of Cyprus, with (by some estimates) more than a hundred thousand residents (its theater seated fifteen thousand). It was a port city only perhaps sixty miles from Seleucia, a straight voyage by ship. As visiting teachers skilled in the law, Barnabas and Saul would be asked to speak in local *synagogues (with its large Jewish community, Salamis must have had several synagogues). Roughly seventy years later, in the early second century (A.D. 116), the Cypriot Jewish community is said to have attacked Salamis in a revolt and to have itself been destroyed.

13:6. New Paphos (also called Augusta), a harbor town on the west side of Cyprus, had long been the provincial capital and maintained some trade relations with Judea. The area around Paphos (especially at old Paphos, some seven miles to the southeast) was traditionally associated with the local cult of the goddess Aphrodite. Jewish magicians were reputed to be among the best in the Roman Empire (though forbidden in Scripture and mistrusted among pious Jews). It was not unusual for Roman aristocrats to attach philosophers to their court; while magicians would be less appealing, the proconsul probably sees Bar-Jesus ("son of Joshua") as a useful prophetic adviser from a "Jewish" perspective. Even some emperors had astrologers as advisers, and "Magi" were highly reputed for predicting the future. (Romans generally distrusted *magic, but *Josephus said that Felix, a Roman governor of Judea, counted among his friends a Cyprian Jew reputed to be a magician. His name is not Bar-Jesus, but he and Bar-Jesus attest to the same activity of Jewish magicians on Cyprus and their appeal to some Roman officials.)

13:7-8. Sergius Paulus was proconsul of Cyprus (the highest Roman official on the island) about A.D. 45–46. As always, Luke has the correct, specific local title of the Roman official, even though these titles varied from place to place and decade to decade, and the only way to check all the proper titles would be to go to those places. Although we lack the names of most (more than eighty percent) of the proconsuls of Cyprus, for Sergius Paulus to be proconsul there at this time fits his known senatorial career. He was one of the first senators from the east. Inscriptions indicate that his Roman family lived in southern Asia Minor. A rectangular room in what is thought to be the governor's palace in Cyprus contains a raised apse where the governor may have sat; as it has survived, the room is decorated with floor mosaics and wall panels, including a scene about the mythical hero Achilles as a baby.

13:9. Roman citizens had three names. As a citizen, Saul had a Roman *cognomen* ("Paul," meaning "small") given (or sometimes inherited) at birth (not at Paul's conversion, against some); his other Roman names remain unknown to us. "Paul" was a fairly respectable Roman name and rare among non-Romans, especially in the Greek East; it is difficult to imagine why Jewish parents would give their child this name if they were not Roman citizens. Inscriptions show that Jews sometimes took Roman names that sounded similar to or carried meanings similar to their Jewish names. Paul's Roman name sounded similar to his Jewish name (Saul, from the name of the *Old Testament's most famous Benjamite; cf. Phil 3:5). This is not a name change; now that Paul is moving in a predominantly Roman environment, he begins to go by his Roman name.

13:10-11. Paul's rebuke of Elymas sounds like an Old Testament judgment oracle. In Jewish literature, temporary blindness was sometimes a judgment to prevent further damage from sin (**Letter of Aristeas* 316); see 2 Kings 6:18 and comment on 9:8.

13:12. The proconsul's employ of a Jewish "prophet" demonstrates his openness to Judaism (v. 6), but Paul and Barnabas show superior power and a better presentation of Judaism than Bar-Jesus had provided.

13:13-52
Sermon in Pisidian Antioch

The cities that Paul and his companions visit in 13:13–14:26 were along the same Roman military road, the Via Augusta, which was built roughly half a century before.

13:13. Pamphylia was north of Paphos, on Asia Minor's southern coast. They probably landed at Attalia, the main harbor, then proceeded by road to Perga, approximately ten miles north and at least five miles from navigable water. It was part of the district Pamphylia-Lycia in this period (A.D. 43 to about 68). Perga was one of the leading cities of Pamphylia, perhaps as large or nearly as large as Salamis (see comment on 13:5).

13:14. Antioch near Pisidia (not to be confused with Syrian Antioch in v. 1) was a Roman *colony; it was ethnically Phrygian (and officially Galatian, as part of that province), but people identified it as near Pisidia to distinguish it from another Phrygian town of the same name. The second largest town in the province of Galatia, its wall enclosed some 115 acres, with probably more than five thousand Roman citizens of the colony, plus a much larger number of other residents. The town was fairly prosperous, sustained by the produce of the surrounding territory; as a colony, it boasted of its ties with Rome. A prominent local Phrygian deity was *Men Askaenos,* but the town's most prominent temple was one devoted to the worship of the emperor.

If Sergius Paulus (13:12) had supplied them with letters of recommendation (cf. 9:2) to the local aristocracy, they would receive immediate hospitality; his own relatives were from this region. (Some of the largest land holdings in the region belonged to the Sergii Paulli, about halfway between Antioch and north Galatia's capital.)

Pisidian Antioch lay more than a week's walk (roughly 125 miles, 200 kilometers) uphill into the mountainous interior (3600 feet above sea level). Instead of rugged mountain trails they could follow the paved Via Sebaste from Perga; it continued on after Antioch to Iconium (13:51) in the east. Based on later remains and writings, some people sat on benches along the synagogue walls or elsewhere, with the most prominent sometimes on a raised platform with the Law scroll. Regular Jewish public gatherings at the synagogue in this period were normally only on the sabbath and festivals.

13:15. Other sources make clear that people read Scripture in synagogues in this period (see comment on 1 Tim 4:13). In a later period, the biblical readings (especially from the *law) were fixed; this might not be the case this early, especially in the *Diaspora (and especially from the prophets). Later the synagogue sermon would be a homily on the texts read, similar to the one in this chapter; homilies (expositions of texts) were probably already used in this period. In this period, synagogues probably did not have regular preachers, and maybe not always expositions; but educated members did try to explain the Scripture readings. "Rulers of the synagogue" are attested in Jewish inscriptions throughout the empire. In many cases the titles are honorary—for example, for *Gentile donors—but sometimes they do refer to Jewish people (even if they achieved their influence as wealthy donors or community leaders), as here and normally in the *New Testament.

13:16. Many scholars have drawn parallels between Paul's speech here and the synagogue teaching form that came to be known as the "proem homily"; others have questioned whether the proem homily can be documented this early so far from Palestine (the similarity could reflect the influence of Greco-Roman *rhetoric on both). Whichever is the case, Paul's Scripture-laced exposition in 13:16-43 contrasts plainly with 14:15-17 and 17:22-31, showing that Paul adapted to different audiences in his speeches, as he did in his letters. Such adaptation was recommended rhetorical practice (as well as common sense). In Jewish Palestine, one sat to expound the law; in the Diaspora one would normally stand to speak. If Diaspora Jewish speakers used gestures similar to Greeks, the hand motion mentioned here may involve the right hand stretched out, with the thumb pointed

upward, the bottom two fingers folded inward, and the two fingers beneath the thumb extended. Speakers often started with an appeal to "listen" to them.

13:17-21. "450 years" may be a rounded figure that includes the estimated four centuries in Egypt (see 7:6) and 40 years in the wilderness. The forty years of Saul's reign is taken from early Jewish tradition, also preserved in Josephus (although alternative traditions also existed).

13:22-24. David's reign is the climax of centuries of waiting through other models of leadership; Jesus is the descendant of David, the *Messiah of whom the prophets spoke. Thus they proclaim one greater than the ancient hero David.

13:25. Only servants dealt with the master's feet; John thus claims he is not even worthy to be the coming one's servant (though *Old Testament prophets were called the Lord's "servants").

13:26. "Children of Abraham" are his Jewish hearers; "God-fearers" here may refer to interested Gentiles (cf. 10:2) or perhaps full *proselytes (cf. 13:43).

13:27. Luke's speech summary might allude to texts that he cites elsewhere. For the Jerusalemites' fulfilling the Scriptures in condemning Jesus, see especially Isaiah 53, which states that the servant would be rejected by his own people; early Christians also cited psalms of righteous sufferers (Ps 22 and 69). Luke does not cite all Paul's references, because he would not have room in his scroll to record the whole speech (see comment on 2:40).

13:28-29. The Sanhedrin lacked capital authority; only Rome could legally execute Jesus.

13:30-32. Paul needed to bolster especially this section of his proclamation with Scripture (13:33-35), because Judaism did not expect the death of a Messiah or his *resurrection *within* history.

13:33. Psalm 2:7 was already applied to the messianic enthronement in Judaism (most clearly in the *Dead Sea Scrolls). Psalm 2 celebrated the promise made to David of an eternal dynasty, a promise that was repeated regularly in the temple worship, in the hope of the ultimate Davidic king who would fulfill it completely.

13:34. Paul cites Isaiah 55:3 (and perhaps originally 55:4, with its hope for the Gentiles) to indicate that Israel's future hope was bound up with the promise to David. Paul might connect "David" in his quotation in verse 34 with the implicitly assumed author of the psalm cited in verse 33.

13:35. Rabbis used a technique called *gezerah shavah* to connect passages that used the same key word; thus here Paul may use "holy" in Isaiah 55:3 to lead into a citation of Psalm 16:10, which guarantees that the object of David's promise would never rot (cf. also Acts 2:25-28).

13:36-37. "Sleep" was a common metaphor for death. Paul *midrashically demonstrates that David could not have fulfilled the promise himself, so it must apply to his descendant.

13:38-41. Paul concludes with Habakkuk 1:5; he says "in the Prophets" (NASB) because some of the smaller books of the prophets were grouped together and treated as a single book. Habakkuk refers to impending judgment under the Chaldeans (1:6), which only the righteous remnant will endure by faith (2:4, a verse possibly cited in the fuller Pauline exposition behind Luke's summary at Acts 13:38-39); here the principle is applied to the judgment of the end. The Dead Sea Scrolls apply the text to those who violated God's covenant by disbelieving the Teacher of Righteousness (the founder of the *Qumran community).

13:42-43. Luke speaks here of *proselytes, but other Gentiles were interested as well (13:44-45). According to *Josephus, many *Gentiles attended synagogues with great interest. Even as late as the fourth century, the Christian preacher John Chrysostom complains that Gentiles—in this case Christians—were still attending synagogue services. Those who were interested in Judaism but unattracted to circumcision might well find Paul's message appealing.

13:44. When famous speakers (e.g., Dio Chrysostom) would come to town, much of the town would go to hear him. Word of a skilled new speaker thus spread quickly in cities, especially a smaller inland town like Antioch. Most of the Gentiles who came had worshiped at the major imperial temple in Antioch, and probably most also had worshiped the local deity *Men Askaenos*. Paul, probably originally more comfortable giving

expositions of Scripture than public speeches in the Greek style, is billed as a *rhetorician or philosopher.

13:45-46. Paul and Barnabas's response to their opponents here has some Old Testament precedent (cf. Lk 4:24-27; Amos 9:7) but goes further. It had always been God's purpose to bless the Gentiles in Abraham (Gen 12:3), but the tenacity of ancestral religions as part of cultural tradition is well known; when ethnic religion loses its uniquely ethnic component it may attract outsiders but simultaneously weaken its own constituency.

13:47. Here they quote the mission of the servant of Isaiah 49:6. The servant is clearly Israel in 49:3-4; in 49:5-7 it is the one who fully carries out the servant's mission and suffers on behalf of Israel (as in 52:13–53:12), whom the early Christians recognized to be Jesus. As followers of Jesus, Paul and Barnabas take up the servant's mission, part of which was revealing the way of salvation to the Gentiles.

13:48-49. Because the Jewish people believed that they were predestined for salvation by virtue of descent from Abraham, the idea that many Gentiles had been "ordained to *eternal life" (KJV) could be offensive—but was apparently what Isaiah 49:6 implied (see Acts 13:47).

13:50. Ancient sources report that many prominent women were interested in Judaism (partly because their wealth gave them leisure to consider it, partly because they, unlike men, did not have to face circumcision if they became serious about it, and partly because it did not diminish their status the way it diminished that of men); these women in turn could influence their powerful husbands. (Women appear on only forty percent of tomb inscriptions, yet they comprise fifty percent of proselytes and eighty percent of God-fearers.) Local aristocracies made up a fraction of the population but held great wealth and most of the political power; from them came *decurions* for the local councils, and their opposition could drive someone out of town. In Pisidian Antioch, these leaders would have been Roman citizens, descendants of the Roman veteran colonists who founded the city, who took great pride in their status. The two leading families of Antioch known to us were the Caristanii and relatives of Sergius Paulus. But the leaders' authority was only local, and by going to Iconium Paul and Barnabas move out of their jurisdiction.

13:51-52. Iconium was further along the same road (the Via Sebaste) at the very east end of Phrygia-Galatia (assuming, as is probable though disputed, that this region was called "Galatia" in this period). Iconium was apparently more than eighty-five miles beyond Antioch, so the *apostles walk for at least four days in 13:51. Using the main road, the Via Sebaste (Augustus Highway), made them easier to follow (cf. 14:19). They had no choice but to take this road unless they wished to retrace their steps; this was the only easily passable east-west route available in this mountainous terrain.

Showing one's heel or shaking dust was a visible way to show rejection. Jewish tradition suggests that many Jewish people on returning to the Holy Land would shake the dust of a pagan land from their feet; because the temple was considered holier than the rest of Israel, they would also shake the dust from their feet when they entered the temple. Paul and Barnabas probably imply that those who reject their message are pagan and stand under God's judgment. Jesus had commanded his *disciples to follow this practice even in Jewish Palestine (Lk 10:10-12).

14:1-7
Opposition in Iconium

14:1-4. Although Iconium was a wealthy and prosperous town, it was hardly the size of a city like Ephesus or Smyrna. It was apparently not yet a Roman *colony. "Greeks" might distinguish Paul's hearers here not only from Jews but also from the less Hellenized people of the countryside (despite Iconium's identity also as Phrygian). Whereas urban culture in the empire tended to be uniformly Greco-Roman, rural society preserved local language and customs, and a town like Iconium would have its share of both. Traveling teachers would undoubtedly have drawn more attention in a town like Iconium than in larger cities. Inside the synagogue the language would be Greek. Outside the synagogue, because the native language of Iconium was Phrygian, Paul and Barnabas may address mainly the Greek-speaking upper social strata, or they may speak

through interpreters (cf. 14:11, 14); but it is more likely that most of the crowd understands Greek, even if it is not their first language.

Among the deities that the *Gentiles of Iconium worshiped, the most prominent was Cybele, the Phrygian mother goddess; Phrygian *mystery cults were also common. But Iconium's civic religion included the cult of the emperor, and in general Gentile religion there was more Greek than Phrygian. Inscriptions testify that the Christian faith spread and Iconium later became a major center of Christianity in Asia Minor.

14:5. Under law, city magistrates could do whatever necessary to quell disturbances; in the case of Paul and Barnabas, the officials could quell the disturbance simply by legally banning them from the city. Thus the plot to kill them goes beyond the law.

14:6-7. Iconium was in Phrygia near the border of Lycaonia, which contained Lystra and Derbe. In this period Iconium was a Greek city culturally distinct from the surrounding countryside; most ancient writers counted it part of Lycaonia, but it was culturally Phrygian, so writers sometimes counted it part of Phrygia (whose culture and political administration it shared). It shared elements of each local culture; from a political standpoint it belonged to the larger province of Galatia. (Some argue that Iconium was in Isaurian rather than Lycaonia in this period; at the least, they left the Phrygian linguistic and cultural sphere for Lycaonia.)

Some people considered flight undignified, but others recognized it as common sense in some situations. Jewish teachers preferred it to death, unless flight required denying the *law of God. The estates of the Sergii Paulli are about 110–20 kilometers north of Iconium, but there were few possible evangelistic goals to the north, and the *apostles venture south. Although they continued on the paved Via Sebaste, their flight was likely not pleasant; the plateaus of Lycaonia tended to be cold and poorly watered. The road to Derbe, over sixty miles southeast of Lystra, may not have even been paved.

14:8-20a
Preaching at Lystra

14:8. Lystra, a thriving market town, was about twenty to twenty-five miles (thirty-five to forty kilometers) south-southwest of Iconium. For half a century Lystra had been a Roman *colony, beginning with the settlement of perhaps a thousand Romans; its own citizens were accorded privileges as citizens of Rome. It valued its local culture and its Roman character alongside Pisidian Antioch and against the geographically closer Greek cities of the region. Greek flourished in the countryside, but nearly a third of Lystra's inscriptions are Latin (though some of it poor Latin). But although it viewed Antioch as a sister city, it emphasized its Roman character less than did Antioch.

Although some philosophers lectured in halls or served wealthy *patrons, many preached their philosophical wares on street corners or in marketplaces; powerful speakers like Dio Chrysostom criticized philosophers like *Epictetus who reserved their lectures for the classroom. Higher classes normally disdained those who preached in the open market, but would-be sages may have outnumbered those who could hire them in more professional settings. Like some ancient philosophers, Paul here preaches on the street rather than in a *synagogue (perhaps Lystra has none; see 14:19). Paul's approach should not surprise us; his own letters indicate that he shares some of this philosophical ideal (1 Cor 4:11-13), and he often uses the *Cynic-*Stoic preaching style in them (which could be used both on the street and in the classroom). What is surprising is not that Paul would occasionally preach this way but that he draws such a vigorous response; perhaps the controversy his opponents create helps him. Secluded philosophers tended toward academic discourse, while those on the streets were ready to denounce the folly of their hearers to secure their attention.

14:9-11. The parallels between the healings in 3:6-8 and 14:8-10, like many other parallels in Luke-Acts, are probably deliberate, fitting ancient literary conventions that highlighted such possible parallels. Local Phrygian legend told of an ancient visitation by Zeus and Hermes to Phrygia. In the story only one couple, Baucis and Philemon, received them graciously; the rest of the population was destroyed in a flood. Knowing some form of the story in their own language, the Lycaonians

are not about to make the same mistake ancient Phrygia had made; they want to honor Paul and Barnabas, whom they mistake for gods. People sometimes considered miracle workers as gods. Lystra's colonists, who were Roman citizens, employed Latin for official business; those speaking Lycaonian here are the longstanding indigenous residents of the area (who may have been more prone to listen than the more elite citizens).

14:12. Hermes was the messenger of the Olympian gods who spoke for the more dignified Zeus (though in other stories Zeus was less dignified and out chasing women or occasionally boys for his sexual delights). Like most early Jewish and Christian writers (cf. also Is 46:5-7), Luke is not above making fun of what he viewed as paganism's folly.

14:13. Inscriptions show that Hermes and Zeus were worshiped together in the Phrygian region. An inscription allows that Lystra's temple of Zeus may have had multiple priests, though only one is acting here. People could wear garlands at festivals, but sacrificial animals were often decorated with garlands before being offered. Oxen and bulls were among the most expensive sacrifices; priests sometimes were wealthy benefactors who donated their services to the community, including at times sacrifices. Temples "outside the city gates" or "just outside the city" (NIV) were quite common in Asia Minor; some scholars, however, believe that the gates belong instead to the sacred enclosure of Zeus (it is not clear that Lystra had walls in this period). The disabled man had probably been healed at the gate, because disabled people often made their living by begging, and beggars normally found their best income at such places of transit (cf. 3:2).

14:14. Villages of the East usually kept their own ancient language after Greek had become the language of the cities. Landowning citizens of Lystra spoke Latin, but outside the town proper people spoke Greek and the local dialect; Lystra was a market town for the surrounding territory. (outside Lystra, most inscriptions are Greek, but names are local, suggesting use of a mother-tongue in addition to the more geographically widespread trade and literary language.) Although the hearers would have understood Greek, they spoke among themselves in their mother tongue. Paul and Barnabas are preaching to the masses, the abundant Anatolian noncitizens who lived there; only at verse 14 are they informed of what the crowds are saying. Jewish people were required to tear their robes when they heard blasphemy (forming an ironic contrast with 14:19!)

14:15-16. One may contrast this speech, to rural farmers, with the somewhat similar philosophic speech in 17:22-31 and the very different synagogue homily in 13:16-47; *rhetoric emphasized adaptability to one's audience. "Turning" was biblical language for *repentance, and "vain things" for idols; "the living God" is also biblical language, and "maker of . . . all that is in them" evokes Ps 146:6 (cf. Ex 20:11; Neh 9:6). Although using biblical language, Barnabas and Paul preach to these Anatolian farmers in terms they would not need to know the Bible to understand, emphasizing the God who rules nature, who was already recognized by paganism. Jewish people often pointed to pagan philosophical teachings on the supreme god, which Jews felt contradicted the pagan worship of idols. Jews called idols "vain" (futile), in contrast to the "living" God. Jewish people sometimes believed that God allowed a lower moral standard for *Gentiles; but idolatry, like sexual immorality, was not an issue on which God would permit compromise. They often mocked the worship of other gods (see comment on 19:37). Perhaps God's patience here evokes Wisdom of Solomon 11:23.

14:17. Phrygia was fertile, and Phrygians especially worshiped the mother goddess who was supposed to provide fertility to the earth. Lycaonia was less fertile, but Lystra's residents were mostly rural in orientation. Various philosophers, especially Stoics, believed that nature itself testified to the character of the supreme god. Jewish teachers agreed that nature testifies to God's character (this is biblical; cf. Ps 19:1; 89:37) and taught that he provides all peoples with health, food and so forth. Scripture already emphasized that God was the source of these agricultural blessings.

14:18-20a. The visitors from Antioch had no legal authority outside their own territory, but they are able to persuade the mob to accomplish what had failed in Iconium (14:5-6).

A mob could change its views quickly (cf. Lk 23:18), especially in a case like this one: when Paul and Barnabas deny the gods, they would be considered impious and hence would appear to fit a different category of ancient paganism. Now they were not gods after all, but dangerous magicians. (Whereas gods were popularly regarded as generally beneficent, sorcerers were viewed as secretive and usually harmful.)

Iconium was only twenty miles away, but Antioch was four or five days' travel, nearly a hundred miles from Lystra by road. Nevertheless, it is known that Antioch and Lystra were in contact with each other, considering themselves sister cities. Sources show that particularly effective speakers could sometimes (though not always) calm mobs. Stoning was an appropriate penalty for blasphemy (for Luke's audience an ironic treatment of the monotheistic preacher in 14:14-18). See 7:58 for details on Jewish stoning, but stoning was also the most common form of urban mob violence in the Gentile world. Stones, tiles and cobbles were readily available in ancient streets. When Jewish crowds stoned a transgressor, they sought the transgressor's death; Paul's survival undoubtedly points to divine protection. Normally such executions were performed outside the city, and they may have dragged him out of the city for purity reasons; that he not only survived but could walk afterward must be understood as miraculous.

14:20b-28
Consolidating the Work

14:20b. The site usually considered Derbe today was some sixty miles (about ninety-six kilometers) southeast of Lystra; Luke reports that the journey toward Derbe started on the next day, but presumably it took more than a day to complete. Unlike the Via Sebaste from Iconium to Lystra, this road was apparently unpaved. Derbe had only recently begun to achieve some status (it became a Greek polis, Claudioderbe, only in Claudius' reign); but it would be out of the way of their enemies. Luke does not report *legal* action against Paul and Barnabas in Lystra, but even if there had been, decrees from one town were not automatically binding in another.

14:21. From Derbe they could have crossed the Taurus mountains (it was presumably not yet winter) to Paul's home town of Tarsus (perhaps over a week's walk, about 150 miles), but they wanted to revisit the *churches. Returning to towns where they had faced persecution required courage (praiseworthy in ancient accounts), though the opposition may have usually involved mob actions (even with officials' cooperation) rather than official decrees. It would offer a model of faithfulness to local believers who could not leave so easily.

14:22. Judaism also demanded perseverance (as opposed to apostasy). Much traditional Jewish teaching spoke of a period of intense suffering before the time of the *kingdom (cf. Dan 12:1); Paul could allude to this idea in verse 22, although "tribulation" (KJV, NASB) here could also be more generic.

14:23. Elders had always governed and judged in towns and villages in the *Old Testament (and in much of the rest of the Mediterranean world as well), and the evidence is abundant that this form of rule continued in many places in the *New Testament period. Many ancient synagogues had several elders who filled a religious office (acting as councils rather than as individuals); indeed, a "council of elders" ruled the massive Jewish community in Alexandria. Normally rule was exercised by a council of elders, not a single elder. On fasting, see comment on 13:2.

14:24. It was known that Pamphylia was near Pisidia; given their proximity, ancient writers sometimes treated Pisidia and Pamphylia together. Both peoples were reputed to be especially adept in augury (predicting the future by the flights of birds)—forbidden by the Old Testament prohibition of divination (Deut 18:10).

14:25. Perge (see comment on 13:13) in Pamphylia was largely *Gentile, perhaps explaining why Luke does not mention the *apostles preaching there in 13:13-14; perhaps they have gained more confidence now. The Via Sebaste probably ended in Perge, so they would have taken a lesser road to Attalia. Attalia was Pamphylia's main port, and it lay on the mouth of the Catarractes. Most of Attalia lay on a steep elevation just above the sea. That port town included some high-status Roman settlers (notably the Calpurnii), and had many ships sailing to Syria, being a major port for trade with that region.

14:26-28. When they return to Antioch, Paul and Barnabas report on their missionary work to the sending church. Although Jewish people in the *Diaspora were concerned to propagate a favorable impression of their religion and to gain converts when possible, they do not seem to have engaged in a concerted effort at what we call "mission." Yet synagogue communities throughout the Diaspora informally remained in contact through travelers who reported news, and reports of large numbers of converts to Judaism would have been considered news when it occurred. The Antiochan church's commitment probably goes beyond such interest, because the early Christians' interest in missions was far more central than that of other Jewish sects; Luke-Acts is clear that missions is at the heart of Jesus' purpose for his church. For "open door" as an idiom, see comment on 1 Cor 16:9.

15:1-5
The Controversy

15:1. Many Jewish people believed that *Gentiles were saved simply by avoiding major sins (such as idolatry and sexual immorality; later *rabbis summarized these as seven laws allegedly given to Noah); some others believed that Gentiles had to convert to Judaism by being circumcised (if male) and (according to most of this group) baptized (whether male or female). (*Josephus reported that some Jews insisted on a Gentile king being circumcised, whereas others believed that his acceptance of Jewish faith was sufficient. Indeed, some of Josephus's colleagues demanded the circumcision of Gentiles who had come to them for refuge, but Josephus himself forbade this requirement.) Of course, even those Jewish people who believed that righteous Gentiles could be saved without converting to Judaism did not accept them as part of God's people Israel unless they converted (cf. comment on Galatians, where inclusion in God's people, rather than salvation, may be in view).

15:2. Strife was common in ancient Mediterranean public life. These believers would "go up" because Jerusalem is higher in elevation than Antioch (the image of "ascending" to Jerusalem recurs often in the *Old Testament). The *churches of the *Diaspora, like the *synagogues, were ruled by local elders, not by a hierarchy in Jerusalem; but just as synagogues respected messengers from the temple authorities in the homeland, the non-Palestinian churches need to resolve the issues raised by those purporting to speak for Judean Christians (15:1). (Josephus pointed out that Jerusalemites, priests and those who knew the *law well were given great respect by others. He reported that some who were qualified in this way were sent to subvert his own similar qualifications as an officer in Galilee.)

15:3-4. Their testimonies, like Peter's (11:12; 15:8), appeal to divine attestation, which was widely accepted in both Jewish and Gentile circles. But many strict *Pharisees believed that even miracles were insufficient attestation if they contradicted traditional interpretations of the law (15:5).

15:5. "Sect" or "party" was a standard way of referring to the Pharisees (and other Jewish groups like *Sadducees and *Essenes), found also in Josephus. Among the Pharisees, the stricter school of *Shammai may have prevailed at this time; the school of *Hillel, which predominated later, was more generous toward Gentiles. Other Jews respected Pharisees for their piety, and the Jerusalem church no doubt accorded them high status for their knowledge of the law. Nationalism and conservative sentiments had been on the rise in Judea since the hopes stirred by the brief reign of Agrippa I (A.D. 41–44; see comment on 12:1) a few years earlier.

15:6-11
Peter's Response

In ancient *rhetoric, citing a voice respected by one's opposition was strategic. Having the backing of the leading minister to the traditional constituency (Gal 2:7) on one's side (Acts 10–11) is certainly strategic in granting credibility to the very different ministry of the Antioch church.

15:6-7. The *apostles do not rule without the elders, and both engage in vigorous debate, as Jewish teachers did in their schools. Jewish assemblies often sought to function by majority opinion or consensus among themselves rather than fiat. In later rabbinic schools, rabbis often had to agree to disagree, though submitting to majority opinion; this assembly seeks to achieve consensus (v. 22). The *Es-

senes reportedly worked by consensus, but it was difficult to achieve in most of ancient society, which was very divisive.

15:8-9. The Spirit was an *eschatological gift for Israel (Ezek 36:27). Gentiles were continually impure by virtue of their state as Gentiles; for this reason, they were expected to undergo *proselyte *baptism when they converted to Judaism. Peter, however, emphasizes that God enacts that "cleansing" (NASB, NRSV) or "purifying" (NIV, KJV; cf. 10:15) simply through their faith. For God knowing the heart, see 1 Samuel 16:7.

15:10-11. Here Peter may refer to the common Jewish tradition of the "yoke" of God's *law or his *kingdom as opposed to the yoke of worldly care. Most Jewish people saw the law not as a burden but as a gracious gift; they believed that its duties freed them from real burdens (cf. Mt 11:29-30). If he refers here to the law, Peter may think of its inadequacy only in the sense found in Jeremiah 31:32: the ancestors broke it, but under the new covenant God would write the law in their hearts (Jer 31:33-34). Later rabbis sometimes offered more lenient rulings for the sake of the majority of their people, who could not live by the stricter ones.

15:12-21
James's Response

15:12. See comment on 15:3-4. "The multitude" (KJV, NASB) means "the assembly" (NIV, NRSV), as in the *Dead Sea Scrolls.

15:13-14. In the *Old Testament "a people for his name" (KJV, NASB, NRSV, literally; or "a people for himself"—NLT) normally meant Israel (whom he "took" for his name in Ex 6:7); James derives this title for Gentile Christians from Amos, whom he cites in verse 17.

15:15-16. James refers to "the Prophets" (plural) in this case presumably because he is speaking of the scroll containing the twelve smaller books of the prophets, including Amos.

"Tabernacle of David" (Amos 9:11) probably means the "house [line] of David," fallen into such pitiable disrepair that it is called merely a tabernacle (KJV, NASB), or tent (NIV). Rebuilding David's house would mean raising up a *Messiah after the Davidic line's rule had been cut off. The Dead Sea Scrolls also cited this text as messianic, along with 2 Samuel 7:10b-14.

15:17. James uses the *Septuagint, appropriate for an argument that will be used in the Diaspora; later rabbis mixed and matched variant readings as they suited their point. Amos 9:12 says "the remnant of Edom," but by slightly changing the spelling (as Jewish interpreters often did to make points), the Septuagint (followed by James and Luke here) can read the text as if it said "the remnant of Adam," meaning "of humanity." (Amos 9:12 refers to "possessing" Edom, and nations being "called by my [God's] name" (NASB) could refer to conquest rather than willing submission. But God's people are also "called by his name" (Deut 28:10; Is 63:19; Jer 14:9; Dan 9:19). The point is that the nations will come under the rule of God (cf. Is 19:24-25; Zeph 3:8-9; Zech 2:11; 9:7), and the context in Amos (9:7) suggests that God is concerned for the nations themselves.

15:18. James may blend in an allusion to Isaiah 45:21.

15:19-20. God forbade Noah and his descendants to eat meat with blood in it (Gen 9:4); Jewish people thus deemed as unacceptable even for Gentile consumption animals killed by strangling without draining the blood. The few requirements James suggests they impose may derive from requirements for Gentiles living among Israelites in Leviticus 17–18 and are representative of the handful of laws that Jewish tradition came to believe that God gave Noah. According to the more lenient Jewish position, any righteous Gentiles who kept those basic laws would have a share in the world to come. Because even stricter Pharisees had to get along with the majority of more lenient people, these teachers did not try to invalidate other teachers' rulings if they had majority consent. James provides a compromise approach that gives each side the basic element of what they need to work together (and not lose face with their constituencies): even conservative Jewish believers should treat Gentile Christians as saved provided they follow the minimal Jewish expectations for God-fearers. This means that cooperation was possible based on shared common ground; it does not mean that everyone in the Jerusalem church consented to Paul's view (articulated in his letters) that Gentiles were full members of God's people.

15:21. James's statement here could mean that Moses already has enough observers of his *law; or it could mean that believers are to abstain from the practices in verse 20 lest they offend the many people of verse 21. *Synagogues existed in major cities throughout the empire, and those who wished to observe the law as *proselytes could learn about it there.

15:22-35
The Church's Decree

15:22. When views were disputed in the later rabbinic academies, the majority view always prevailed; here a partial compromise (in favor of the Antioch church) seems to command consensus. Other Jewish groups also had "general sessions," such as at *Qumran, where the priests, elders and people would gather. "Silas" and "Silanus" are attested as names used by Jewish people; the nearest Latin name is "Silvanus" (1 Thess 1:1). (Some also suggest that "Silas" may be an *Aramaic equivalent of the Hebrew "Saul.")

15:23. That ethnic *Gentiles should be called "brothers and sisters" is significant (though sometimes Jews had called Gentile allies this; cf. 1 Maccabees 12:6; 14:40). The greetings are standard for Greco-Roman letters; the address shows that it is a circular letter, to be copied and circulated by its messengers to these different regions. Central authorities sometimes sent their authorized agents bearing circular letters. Both novels and historical works sometimes cited the contents of letters. The letter is of average length (papyrus letters averaged eighty-seven words, and this one is just over a hundred). Antioch was the leading city of Syria; Cilicia adjoined Syria and was administered as a common province with it in this period.

15:24. One sign of the respect the Jerusalem church shows the Gentile believers is the care with which they craft the letter; 15:24-26 is a "periodic sentence," the most intricately designed rhetoric in the entire book of Acts. Division and rivalry characterized ancient urban life, but moralists often exhorted people to unity; "harmony" was a major topic of ancient civic rhetoric and the discussion of moralists (on consensus, see comment on 15:22).

15:25-27. In accordance with custom, the messengers they send to deliver the decree will be widely respected as trustworthy and representative of the council (analogies occur elsewhere, e.g., **Letter of Aristeas* 40).

15:28. Because the *Holy Spirit was frequently associated with prophetic inspiration or special enlightenment, readers would understand that the apostles and elders are claiming that God directly led the decision of their community. "It seemed good" (also v. 22) appears in Greek decrees in the sense, "Be it resolved" or "it was decided," often associated with votes in citizen assemblies (or decrees from emperors or local councils).

15:29. See comment on verse 20. Greco-Roman letters normally ended with "Farewell," as here.

15:30-31. Most people could not read, especially a letter in such sophisticated Greek; someone would read it while others listened.

15:32-35. The frequency with which prophets turn up in Acts would seem phenomenal to ancient readers. Although some ancient *Essenes and others claimed to be prophets, this was a rare phenomenon and no group boasted prophetic activity to the extent that Christians did; many Jews felt that there were no genuine prophets in their own time. To send people away "in peace" indicates that they had been received in an acceptable manner (Gen 26:29, 31; 2 Sam 3:21-23).

15:36-41
Returning to the Mission Field

15:36-40. That Israelite literature reported the failings of its heroes even during the epic period may be noteworthy, but by this time it had long been standard for Greco-Roman biographers to admit their heroes' weaknesses. Luke surely intends us to see God's blessing on the new Paul-Silas team (15:40; cf. 16:37), but this does not signal his approval of the dispute between Paul and Barnabas, handled so unlike the council in 15:22.

15:41. Cilicia (Paul's home province) adjoined Syria (which included Antioch, from which he was being sent); see comment on 15:23. From Tarsus, the new team could then take the Roman trade route over the Taurus mountains (it would not be winter) to Lycaonia.

16:1-5
Spreading the Word

On Derbe and Lystra, see 14:8, 20. Palestinian Jews considered intermarriage between Jews and pagans a horrible sin (Tobit 4:12; 1 Esdras 8:68-96; 9:7-9), but views were no doubt more lenient in places like Lystra, where the Jewish community was smaller. Under Jewish *law at least as early as the second century, a person was presumed Jewish if his or her mother was Jewish. But even if that ruling was in effect in Paul's day (which is questionable), Timothy would not have been accepted as fully Jewish, because he had not been circumcised. (Wives were expected to submit to their husband's religion, and Timothy's father had probably refused to let him be circumcised.)

Paul makes him a full Jew for the sake of his witness to the Jewish community (cf. the different situation addressed in Gal 2:3-4, where the issue is not witness but coercion). Paul opposed forcing circumcision on Gentiles (Acts 15:1-2), but not someone Jewish or partly Jewish identifying with their Jewish heritage for witness to their community. The Gentile community already recognized Christians as proclaimers of a form of Judaism; thus, offended as many of them were by the idea of circumcision, they would not be more offended by a circumcised Jewish Christian than by an uncircumcised Christian. For the decrees, see 15:29 (though these were specifically addressed only to Syria and Cilicia, see 15:23).

16:6-10
The Spirit's Guidance

16:6. The Greek phrase here may view Phrygia and Galatia together as a unit (though cf. 18:23); most scholars believe that Paul's letter to the Galatians covers the Phrygian regions included in Acts 14. The phrase here likely involves "Phrygia-Galatia," that is, the southern part of the province of Galatia encompassing traditional peoples of Phrygia. ("North" Galatia is about two hundred kilometers away from the most obvious route between Lystra and Mysia.) "Asia" is the Roman province in western Turkey, whose leading city was Ephesus; journeying west on a major road that passed Colosse and Laodicea would have taken him there. In antiquity, both Israelites and *Gentiles sought divine guidance. Most Jewish groups believed that the *Holy Spirit was no longer active in the *Old Testament sense, and none paralleled the magnitude of the Spirit's working regarded as normal among the early Christians.

16:7. They were opposite Mysia, possibly at a city on its eastern border in northern Phrygia; there they could turn right to Bithynia in the north (a strategic region), or left to Mysia and Asia in the west. They pass northwest through Mysia in 16:8.

16:8. The Troad (including Troas) was in northwest Mysia. Troas was directly to the west of much of Mysia; Bithynia was a senatorial province northeast of Mysia. Thus Paul and his companions go from eastern Mysia (near Bithynia and just north of Phrygia) westward toward Alexandria Troas, which was about ten to fifteen miles south-southwest of the more famous ancient Ilium, Homer's Troy. (Because Rome traced its mythical lineage to Troy, the site had symbolic significance for Rome.) Troas was not the most accessible site, so they probably journeyed there not for convenience but because it was a strategic site not forbidden to them by the *Spirit. Troas, a Roman *colony with population estimates as high as a hundred thousand, had a mixed population of Roman citizens and natives who never quite adjusted to one another's presence; it was also where two major routes from the East toward Rome converged, and those traveling from Asia to Macedonia or the reverse regularly passed through the port of Troas. Alexandria Troas's artificial harbor had made it the leading mercantile port between Macedonia and Asia Minor, and Greco-Roman history and legend amplified the area's importance.

16:9. Macedonia had been a Roman province since 146 B.C. In some respects it was strategically more important to Rome than Achaia (most of Greece) was, because it was the link between Rome and the whole eastern part of the empire along the Via Egnatia (the Egnatian Way), a road originally constructed about 148 B.C. The narrow body of water between Troas and Thrace was the famous divider of Asia and Europe. (Old Troy's status as a traditional boundary between Europe and Asia was highlighted, for example, by Alex-

ander the Great's invasion of Asia there; by contrast, the *gospel of peace here moves from Asia to Europe. Romans counted themselves as part of Europe, but believed themselves descended from a Trojan.) Because deities in Greek religion used visions to send people on missions, even unconverted Gentile readers would understand Luke's point here.

16:10. Most people believed in divine guidance through dreams, or at least through some dreams. In contrast to the views of some scholars (who regard "we" as a fictitious literary device because it appears in some novels as well as in historical works), "we" in ancient historical texts nearly always *meant* "we." (A fictive eyewitness claim might have also made the narrator more central to the *narrative or emphasized his presence on more dramatic occasions such as Pentecost; Luke instead indicates his presence in passing here, leaving off at Philippi, then picking up at Philippi years later [20:6] until the end of the book.) Luke is writing a historical work (novels did not have historical prologues or address very recent historical characters), so he is no doubt reporting that he was with Paul as an eyewitness on this and subsequent occasions when he uses the term. Personal eyewitness experience was considered the most dependable source for history. Historians sometimes mentioned their own presence or activity in either the first person or the third person (or both).

16:11-15
A Response in Philippi

16:11. The mountainous and thus easily visible island of Samothrace (with Mount Fengari over five thousand feet high) is the first port travelers would reach; it was about halfway on the voyage and was a major landmark. Its northern port city (also called Samothrace) was a natural location for spending a night in port. Samothrace was famous for the nocturnal mysteries of the Cabiri. Neapolis was one of the two best ports of south Macedonia, directly serving Philippi (the other major port was Thessalonica). A voyage from Troas to Neapolis covered over 150 miles; a two-day voyage indicates favorable winds (cf. 20:6), probably from the northeast. Except during the winter (mid-November to early March), sea travel was quicker and less expensive than land travel, allowing one to cover perhaps a hundred miles a day.

16:12. Neapolis was the port of Philippi, which lay about ten miles to the northwest across Mount Symbolum. This was the eastern end of the Via Egnatia, which led westward to Dyrrhachium, an Adriatic port from which one could sail to Italy. Philippi had been a Roman *colony (see comment on Phil 3:20) since Rome had settled veterans there in 42 B.C. Some 85 percent of Philippi's inscriptions are in Latin, roughly double the proportion in an earlier colony Paul visited, Pisidian Antioch. Although not all its residents were citizens of Philippi, its citizens also held Roman citizenship. Its population is sometimes estimated at five to ten thousand. Although prosperous, it was more an agricultural than commercial center, unlike many urban areas Paul visited.

Thessalonica, not Philippi, was Macedonia's capital; moreover, Amphipolis (17:1) held the designation of "first" city of the district. Philippi was considered in the "first part" or "first district" (GNT) of Macedonia, which was divided into four districts. More importantly for Luke's account, Philippi was also a "first" or "leading" city of the province in the sense that it was one of the most eminent there (alongside Thessalonica); it was the wealthiest and most honored city of this district.

16:13. "Place of prayer" was a customary non-Palestinian Jewish term for a *synagogue, but the gathering here seems to be without a building. According to later Jewish pietists concerned about assimilation, a minimum of ten Jewish men was necessary to constitute a regular synagogue and thus indicate a city where Jewish people would be likely to form their own community; this number of Jewish men may not have lived in Philippi. But in places with no official synagogue, Jewish people preferred to meet in a ritually pure place near water; ritual washing of hands before prayer seems to have been standard in *Diaspora Judaism, and excavations show the importance of water to synagogues.

The nearest major body of flowing water, the Gangites (a tributary of the Strymon), is about one and a quarter miles (2.4 km) west of Philippi. It was thus more than a "sabbath day's journey" by Pharisaic standards (see comment on 1:12), suggesting that they were more con-

cerned with assembling near a pure place than with the technicalities of Palestinian legal ideals. If Luke has this river in view, the "gate" is probably the colonial archway of the city, through which the Via Egnatia (cf. 16:9) went out to the Gangites. Some others prefer a site on the Krenides creek, nearer the city, or to the east, at a stream that existed in antiquity.

16:14. Conservative Roman writers often complained that women pursued religions from the eastern Mediterranean, and both *Josephus and inscriptions attest that tremendous numbers of women (far more than men) were attracted to Judaism. The sphere of religion was the one sphere in Greek culture where women were given some public responsibility, and the Diana cult in Philippi may have made women more prominent than in other Greek centers. Macedonian women traditionally exercised more freedom than Greek women, and Roman women also had more freedom than Greeks (relevant for Philippi as a Roman colony heavily influenced by Roman custom). But Greek religion consisted of ritual, not teaching, and without a local *synagogue there would be little study of the *law. Thus these women would have had little training in Scripture and would welcome Paul's teaching. Many men looked down on preachers who catered to women, especially when they felt that these speakers undermined women's loyalty to their family religion.

The name "Lydia," though common, would be especially natural for a woman from Thyatira, which was in the region of ancient Lydia. Thyatira was known for its dyers' guilds and textiles, and inscriptions show that other Thyatiran business agents also sold purple dye in Macedonia, becoming prosperous. (Although Macedonians, like inhabitants of most of the empire, were generally poor, Macedonia had historically been one of the more prosperous provinces.) Some plausibly suggest that her name and trade may indicate that she was a freedwoman (former slave); many traders in purple dye were freedwomen who continued to work as agents of their former masters' businesses. Other traders, however, were free born. The most expensive purple was dye that Tyrians, in Phoenicia, extracted by crushing shellfish. Some estimate that it took 10,000 shellfish to produce a little of the costly dye; despite the foul odor associated with the dye, its rareness made it a symbol of wealth and power. Some suggest that Thyatira used a cheaper form of purple from the madder plant (see comment on 16:15).

16:15. By this period, some women gained wealth through business; even slave women could become managers, just like slave men. More than likely Lydia has some means as a seller of purple, a luxury good associated with wealth throughout Mediterranean culture for over a thousand years. (The dye had been especially procured from the murex shellfish near Tyre, but in Macedonia it could have been procured from the mollusks near Thessalonica. Thyatiran purple often came from the madder plant, not the more expensive Tyrian shellfish.) Well-to-do women sometimes became *patrons, or sponsors, of pagan religious associations; those attracted to Judaism helped support Jewish causes.

Paul and his companions might have been staying at an inn till the sabbath (a less than ideal choice; inns were notoriously dangerous and immoral), but Lydia immediately offers the proper Jewish hospitality and invites the *apostles into her home, thus serving as a patron of their work (cf. 1 Kings 17:13-24; especially 2 Kings 4:8-11). Jewish people often displayed hospitality by welcoming fellow Jews into their homes (sometimes for up to three weeks) if they had reason to trust them. Some people would have looked askance at the group staying in a woman's home, but she was not alone, having a "household" (which could include servants). She appears to be the head of a household consisting mainly of servants, though it is not impossible that she is married to a husband who simply leaves her religious activities alone (contrast the usual custom in Acts 16:31-32; cf. 2 Kings 4:8-23). Widowhood could explain Lydia's independence, though it could also be explained in other ways (being a divorcée or a freedwoman).

16:16-22
Exorcisms and Economics

16:16. This slave girl (as in 12:13, the Greek implies that she is very young) has literally a "spirit of a pythoness"—the same sort of spirit that stood behind the most famous of all Greek oracles, the Delphic oracle of Apollo

whose priestess was called a pythoness (she was named after the "Pythian Apollo," slayer of the great Python). Thus Paul and his companions confront a powerful *demon here.

16:17. "Most High God" is ambiguous, a common designation for God in Jewish texts but also occurs in pagan sources for Zeus or for the Jewish God with whom pagans sometimes identified Zeus. Magical texts show that pagans respected this supreme God, often identified with the Jewish God, as the most powerful. The spirit ambiguously reduces the missionaries' deity to a chief role in polytheism.

16:18. Exorcists sometimes tried to use names of higher spirits to evict lower spirits (see comment on 19:13); but for the use of "the name of Jesus Christ" here, signifying that Paul acts as Jesus' agent, see comment on 3:6 (cf. also comment on Jn 14:12-14).

16:19. On shared ownership, see comment on Matthew 6:24. The "authorities" here are the "magistrates" (v. 20), the most common Greek title for the Latin *duoviri,* the two Roman officials of Philippi, who probably called themselves by the more dignified title of "praetor." What most translations call the "marketplace" was normally the square agora at the center of a Greek town, the center of all civic activity. Philippi, however, was a Roman colony. The commerical agora was nearby, but the passage refers to the central agora, the colony's Roman rectangular forum. It stood on the main road, the Via Egnatia, that passed through the city. At 230 by 485 feet, the forum could hold many people. In the ancient system, accusers were responsible for charging the accused before the magistrates, here at the raised platform near the forum's main, north entrances. The raised platform was the rostrum or bema, approached by stairs on both its sides.

16:20. People could be jailed for disturbing the peace; normally the plaintiffs could be assured the court's favor if their social status was higher than that of the defendants. The accusers are property-owning Philippian citizens, hence Roman citizens (see comment on 16:12), hence fancy themselves of higher status than the foreign preachers (unaware of their citizenship, 16:37).

The charge of "property damage" would be difficult to prove, so they charge them with disturbing the peace—a prisonable offense—and that they preach non-Roman customs. These charges were particularly sensitive in a Roman colony since the emperor Claudius' recent expulsion of Jews from Rome (see comment on 18:2). The Jewish-Roman contrast (16:20-21) is a taste of common ancient anti-Judaism, although the assumption that one could not be both Jewish and Roman will not hold up in this case (16:37). Proponents of traditional ways always demanded avoidance of new or alien gods, and one of the main complaints Romans brought against Jews was that they were always converting people to their religion (especially when the converts were Roman women). Although the Jewish population of Philippi was very small, there was a large native non-Roman population, and other immigrants from the East had settled there.

16:21. Philippi was extremely Romanized; despite its location, over half of its inscriptions are in Latin, more than usual in most eastern Mediterranean colonies. Because Philippi was a Roman colony (16:12), its citizens enjoyed Roman rights, used Roman law, were exempt from tribute and modeled their constitution on that of Rome. Foreigners and noncitizen residents did not acquire Roman rights simply by settling in Philippi.

16:22. Unless the accused were Roman citizens, they could be beaten even before trial as a means of securing evidence (this was called the *coercitio*); in practice, lower-class persons had few legal protections. Roman magistrates' six attendants, called lictors, walked single-file before duoviri and carried *fasces,* or bundles of rods, which they could use for beatings, as here. Normally, as here, the accused were stripped first. Public beatings served not only to secure evidence but also to humiliate those beaten and to discourage their followers. The mob's role here reflects badly on the magistrates, who were officially responsible to maintain order. Roman citizens were not allowed to be beaten with rods, but ancient reports show that local officials sometimes ignored this rule in practice, so Paul and Silas could not be certain to gain exemption even if they protested. (Governors acted with greater freedom in Judea, the setting the pair knew best. It turns out that Philippi, however, with its close ties to Rome, took the rule quite seriously; 16:38.)

Perhaps because of the mob situation, or because this advantage had not yet occurred to them, or because they did not have their travel documents on hand, or simply because they wished to put the court in a situation where it would have to negotiate afterward (16:37-39), Paul and Silas cannot or do not reveal their citizenship.

16:23-40
Prison Ministry

16:23. Some jailers were public slaves. Prison directors (whether slave or free, as may be likelier here; cf. 16:33-34) could receive good pay. Prisons were typically filthy, risking infection for the men's wounds. Jailers were often known for, and sometimes chosen for, their brutality. Women did not have separate facilities, but men were the majority of prisoners.

16:24. The jailer guards them "securely" (16:23)—far more than needed for those who have just been beaten with rods. A prison's "inner cell" was usually its harshest, least ventilated, and most degrading part; jailers sometimes secured all prisoners there for the night for security reasons, here undoubtedly producing crowding. (Such conditions led to excess heat and dehydration, as well as spreading sickness.) Wooden stocks, anchored to the floor, were often used for torture as well as detention, with extra holes so the legs could be forced into painful positions. They were normally reserved for prisoners of low social status; prisoners in stocks could barely shift position.

16:25. Jewish sources praised the ability to glorify God amidst suffering and shame, and Greco-Roman philosophers praised the wisdom of being content and thankful in one's situation. Ancient sources honor sages who lived consistently with their teachings about endurance. Most people were usually well into their sleep around midnight, which was also not a customary time for Jewish prayers (though cf. Ps 119:61-62). Prisoners apparently often slept on the floor, using a cloak for a cover.

16:26. Miraculous deliverances are common in Jewish and other traditions (cf. the exaggerated deliverance of Abram by an earthquake in *Pseudo-Philo, *Biblical Antiquities* 6:17). Earthquakes are known to occur near Philippi, but an earthquake severe enough to split the staples of prisoners' bonds from the wall could have brought down the roof as well but miraculously does not. Although some ancient intellectuals offered naturalistic explanations for earthquakes, most people viewed them as acts of deities.

16:27. When confronted with execution (in this case, for letting prisoners escape), Romans considered suicide a noble alternative (contrast Mt 27:5). Falling on one's sword was a preferred Roman method. (Many Jews, however, considered it normally shameful, as people generally considered it under normal circumstances. Ancient Christian sources oppose suicide.) Although a jailer would not be responsible for earthquake damage, he could be responsible if deemed negligent in adequately securing the prisoners (cf. 12:19). The jailer was asleep (though we cannot say whether his subordinate guards or servants were).

16:28. The other prisoners may have remained for fear of the guards (the jailer "calls for" torches—v. 29—hence he has subordinates) or because of the missionaries' witness (v. 25). Roman law treated escape from custody as a criminal act, but often treated with favor those who refused to escape.

16:29-30. An inner cell (16:24) would be very dark, even if it had not been night; the jail official requests torches or perhaps lamps from his subordinates. Asking how to be saved is a motif in Luke-Acts (Lk 3:10; 10:25; 18:18; Acts 2:37); the jailer in this case may be familiar with the report about their teaching (see the "way of salvation" in 16:17; the report in 16:23 is merely a summary). The term translated "sir" often means this in direct address, but in other contexts can mean "lord" (as in 16:31).

16:31-32. Romans expected the whole household to follow the religion of its head; they also expected the head to lead his household to the worship of Roman gods. Here conversion is not automatic; the whole household must hear the word.

16:33. Prisoners normally were unable to wash or trim hair in jails. Since jails were usually in city centers, many sources of water were available in the public area of Philippi near the likely area of the prison, helpful for the jailer's washing of the prisoners and their washing of his household in *baptism (al-

though these could have increased the risk of being seen by Philippi's night watchmen). If the jailer removed them from the prison, he risks punishment for negligence if they escaped (cf. 16:23; but cf. also 16:28).

16:34. Prison rations were meager at best; normally prisoners depended on those outside the prison to supply food. In view of 16:20-21, the jailer risks getting in serious trouble here. If discovered, a jailer eating with prisoners was punishable, potentially even by death (and minimally by loss of job; cf., e.g., Josephus, *Jewish Antiquities* 18.230-33). Because the jailer would not likely have fully kosher food available, Paul and Silas accepting his food (cf. Luke 10:8) might be offensive to some fellow Jews, who sometimes subsisted even on figs and nuts in prison to avoid eating unclean food.

16:35-36. Perhaps the magistrates felt that public humiliation would have been sufficient punishment to silence the troublemakers. Or the magistrates could have regarded the earthquake as a sign, perhaps from the gods or dangerous magicians. The financial intercession of Lydia may have helped, but because she was not likely a citizen her effectiveness with the officials was less likely.

16:37. Because public stripping and beatings involved shame, that shame would follow the new *church unless Paul and Silas can receive a measure of public vindication. Even Paul's name probably indicates his citizenship; usually only Roman citizens bore this cognomen, and Jewish people rarely if ever bore it if they were not citizens. (Silas' Roman name is "Silvanus," e.g., 2 Cor 1:19.) Roman citizenship in the provinces in this period was a mark of high status. (Paul's ancestors may have been among Jewish captives taken by the Roman general Pompey; these slaves received Roman citizenship when they were freed. The Julian law forbade binding or beating Roman citizens without trial; sometimes ancient officials ignored these rules, but Philippi, proud of its Roman heritage, did not. No one would lie about Roman citizenship once they had nothing to gain from it except to recoup their honor; falsely claiming citizenship was a capital offense, and, given enough time, documentation could be checked.

16:38. Ancient writers tell of a Roman citizen who cried out that he was a citizen during a scourging, thereby humiliating his oppressors, who had not properly recognized his high status. By waiting until after the beating (cf. 22:29) to inform the authorities that they were citizens, the missionaries had placed the magistrates themselves in an awkward legal position: now the magistrates, not the missionaries, are forced to negotiate. The duoviri could act without trial only against noncitizens, and had simply assumed without inquiry that Paul and Silas were not Roman citizens. Paul and Silas could bring a case against the magistrates; if found guilty of depriving Roman citizens of rights, the magistrates could be barred from office, and their city could (in principle, though it was rare) lose privileges. This strategy might help secure the future safety of the fledgling Christian community.

16:39. The magistrates had no legal authority to expel Roman citizens without trial, but a trial would bring up their own breach of law; thus they are reduced to pleading. To force Paul and Silas to leave secretly would reinforce the public humiliation; Paul demands vindication. The officials still want them to leave to prevent trouble, but by forming their escort from the jail (which was probably in or near the forum) the officials had to humble themselves and offer at least some vindication to those they beat in Philippi, a highly honor-conscious city.

16:40. To visit the believers shows boldness and refusal to accept the humiliation; but per the officials' request, Paul and Silas do leave quickly. The western city gate was thirteen hundred feet (four hundred meters) from the forum. Through it ran the Via Egnatia, on which Paul and Silas would have headed north alongside the Krenides and then west to the river Gangites; ahead on the same road are the cities of 17:1.

17:1-9
Turmoil in Thessalonica

17:1. Amphipolis on the Strymon (thirty-three miles, over fifty kilometers, beyond Philippi), Apollonia (twenty-seven miles, forty kilometers, or a day's travel, beyond Amphipolis), and Thessalonica (thirty-five miles west of Apollonia) were all on the Via Egnatia (16:9, 12); this road continued further westward into

Illyricum (Rom 15:19), but Acts reports only Paul's turn to the south, off this road, to Berea (17:10). Roads were usually no more than twenty feet wide, but they were better and safer than most European roads before 1850, and especially inviting to those who traveled on foot or with donkeys or mules.

Luke may well mention Amphipolis and Apollonia as night stops; these were slightly uphill from Philippi hence could represent significant haste, though it is possible that they did stop elsewhere on the way or stayed longer than overnight. The longest leg of the journey, however, to Thessalonica, was mostly downhill. Thessalonica was an important city in this period, Macedonia's largest port, capital of its old second district and now residence of the provincial governor. Although the real population must have been much lower, the highest estimates of Thessalonica's population place it at about two hundred thousand, roughly ten times the population of the average ancient city. While Rome did not grant Thessalonica "*colony" status (unlike Philippi; see 16:12), it made it a "free" (mostly self-governing) city.

17:2-3. Thessalonica's non-Greek religious importations included not only Judaism but the Egyptian cult of Serapis and Isis. Paul had to be there long enough to receive support from Philippi (Phil 4:15-16), about a hundred miles away; until then, his occupation, which would allow him to set up shop in the agora, must have supported him (1 Thess 2:9).

17:4. Macedonian women had earlier gained a reputation for their influence, which they probably still exercised in this period (though they did not always exercise as much influence as men of their own social class). As *patrons within *church or *synagogue, upper-class women could also enjoy higher status than was available to them in society at large due to their gender. Social conditions made it easier for well-to-do women than for men to convert. *Gentile women are attested as following Judaism far more often than Gentile men.

17:5. Despite the city's economic strength, many people in Thessalonica were poor and many were unemployed. Ancient examples attest that the idle unemployed of the marketplace, usually despised in ancient sources, could be stirred to mob action. Jewish inhabitants were a small minority in Thessalonica, so those Jews whom Paul did not persuade (v. 4) would need help to oppose Paul effectively. The most likely site for the Jewish quarter in Thessalonica is not far from the forum. "The people" (KJV, NASB, GNT) means the citizen body (cf. "assembly"—NRSV); as a "free city," Thessalonica's gathered citizen body performed judicial functions.

17:6. Jason was a common Greek name but was also common among Hellenized Jews, as inscriptions and business documents alike testify (cf. Rom 16:21). He is probably a Jewish host with whom Paul and Silas stay while working there. *Delatores,* or accusers, were necessary to open a case under Roman law; dragging a person to court was one way to ensure their appearance. Polemical *hyperbole about "the world" was common in ancient literature. Anti-Jewish Gentiles in this era sometimes slandered Jews as "stirring unrest," but the charge here comes from Paul's own people. So serious was the charge that it could warrant even execution.

17:7. Romans could understand proclaiming another king (i.e., the *Messiah—v. 3) as treason against the majesty of the emperor; they could take mention of signs indicating this new ruler's coming (see 1–2 Thessalonians) as predictions of the current emperor's demise, and such predictions violated imperial edicts. That Jesus had been crucified on the charge of sedition only lent further credibility to the charge against Paul and his associates. Citizens who pledged loyalty to Caesar also pledged to report any possible treason; Thessalonica's devotion to the imperial cult made this a religious matter as well. Thessalonica had a temple for the worship of the emperor and its coins honored Julius and Augustus Caesar as gods. The distorted accusations here, however, are slander; ancient *rhetorical handbooks in fact supported attacking opponents' character with any believable charges. Like John, Luke likes to show the denseness of the *gospel's opponents; cf. 17:18.

17:8. Luke uses the precise designation for Thessalonica's city officials, "politarchs" (also v. 6), a term virtually restricted to Macedonia; there were between three and seven politarchs at given times during the early Roman Empire period. Rome gave them a free hand to run the

city, although they ultimately had to answer to Rome for inappropriate actions. Evidence indicates that local officials in the eastern Mediterranean were responsible for enforcing loyalty to Caesar.

17:9. As their host (v. 6), Jason is held responsible for their actions and required to post bond for them, as if they were members of his household. Nevertheless, the officials possibly recognized that Paul and Silas posed little real threat to order, and simply accommodate the mob to allow the situation to quiet down. Usual punishments for genuinely stirring unrest were serious. By contrast, a fine was a lenient penalty as far as Roman courts went, and a bond to curtail troublemakers would not have been unusual. But given the charge (v. 7), had Paul himself been caught, he might not have been so fortunate. The politarchs' decision would stand till they left office (cf. 1 Thess 2:18). Laws and rulings in Greek cities did not apply outside their area; so long as Paul and Silas keep moving, his antagonists must charge him anew in each city.

17:10-15
Response at Berea

17:10. One who fled trial could be presumed guilty, but given the seriousness of the charge and the local forces against them, Paul and Silas are better off escaping. The Via Egnatia (17:1) continued westward, but it is now safer to travel south, off the major Via Egnatia. Berea, some fifty miles southwest of Thessalonica, was not even on the main coastal road south; off the beaten path, it might throw off pursuers for awhile. Still, it was a significant town, possibly the second most important city in the province of Macedonia as well as a center of the imperial cult. Some considered fleeing by night cowardly, but it was also acknowledged as the most practical way to escape undetected.

17:11. Judaism regarded nobly those who checked everything against the Scriptures and diligently listened to teachers; Greek philosophers likewise praised those who listened attentively.

17:12. For the special mention of women (especially before men), see comment on 17:4.

17:13. Thessalonians had no legal jurisdiction in Berea, but mobs are not prone to follow the law and could create political pressure in Berea as they had in Thessalonica.

17:14. Messengers rarely traveled alone, and travelers over long distances were safer to travel in the company of those they knew. If a direct land route to Dion on the coast existed, Paul journeyed some thirty miles; if not, he may have been forced into a roundabout journey of some fifty miles. Once reaching Dion, he could take a ship south to Athens. The intervening land of Thessaly was apparently sparsely inhabited in this period, and Paul may have also wished to be farther from his slanderers on this occasion.

17:15. At least three miles inland, Athens had port towns, such as the walled seaports Piraeus and (less used in this period) Phalerum. Cf. 1 Thessalonians 3:1.

17:16-20
Entering Athens

Athens's fame rested mainly on the glories of its past; even as a philosophical center, its primacy was challenged by other centers in the East such as Alexandria and Tarsus. (Even in its immediate vicinity Corinth had long surpassed it in power, population and prosperity.) But Athens remained the *symbol* of the great philosophers in popular opinion, so much so that it made a useful foil for other cities or groups (for example, later *rabbis liked to tell stories of earlier rabbis besting Athenian philosophers in debate). Romans did not always trust philosophers, but Acts records other speeches to appeal to those with less philosophical tastes. This speech is Paul's defense of the gospel before Greek intellectuals.

17:16. Some majestic temples on Athens's Acropolis, such as Athena's temple (the Parthenon), were visible from afar; sanctuaries and images stood even in Piraeus and other ports of Athens. The second-century travel narrator Pausanias depicts in detail the various idols that consumed much public space in Athens; one could not avoid them. Shrines filled the agora and Acropolis, city streets were often lined with statues of men and gods, and Athens was decorated with the *Hermae,* pillars mounted with heads of Hermes; many visitors wrote of the evidences of Athenian piety. From an aesthetic standpoint, Athens was unrivaled for its exquisite architecture and statues. Paul's

concern is not aesthetics, however, but the impact of idols on human lives.

17:17. Inscriptions attest the Jewish community in Athens, but it was not prominent. Those without an official post in rhetoric could at least speak in the marketplace.

17:18. *Epicureans were influential only in the educated upper classes, and their views about God were similar to deism (he was uninvolved in the universe and irrelevant); if there were gods, they were only those known through sense knowledge, like stars or planets. Life's goal was pleasure, which they defined as the lack of physical pain and emotional disturbance. *Stoics were more popular, opposed pleasure, and criticized Epicureans (though not as much as they had in previous times). Here, as in 23:6, Paul practices the maxim "divide and conquer": 17:22-29 is calculated to gain a Stoic hearing, but Paul and the Epicureans have much less common ground.

Although Stoics still professed belief in the gods, many philosophers were considered impious, because they questioned the old traditions, although allowing them for the masses. The charge against Paul, "proclaimer of strange deities" (NASB), would remind Greek readers of the charge of impiety against Socrates centuries earlier (cf. 17:19-20; e.g., Xenophon, *Memorabilia* 1.1.1; Dio Chrysostom, *Orations* 43.9). Others had been prosecuted for the charge in earlier centuries, and it still violated the Athenian psyche in Paul's day.

"Babbler" (NIV, NASB) translates a Greek expression applied originally to birds pecking up grain but which came to apply to common chatterers in the marketplace or those who simply gathered and spread scraps of others' opinions. But in the same verse Luke lets these critics demonstrate their own ignorance: they think Paul is preaching *gods* (plural), because he preaches Jesus and *resurrection—"Resurrection" (Anastasis) was also a woman's name.

17:19-20. Socrates had also been "led" or "brought" to the Areopagus many centuries before, as was well known. Socrates was the ideal philosopher, and Luke may portray Paul as a new Socrates for his Greek audience; given the outcome of Socrates's speech (which, like Stephen's, provoked his hearers to martyr him), this allusion builds suspense, although no one would expect the Areopagus to execute anyone for ideas in this period.

The Areopagus is here the council, not the site earlier used for this council (the literal hill of Ares). In this period the council may have met in the Stoa Basileios, in the Agora where Paul had already been ministering (v. 17). Because Rome had made Athens a "free" city, it had its own ruling bodies: another council, the city assembly, and, highest of all, the Areopagus. It was Athens's chief court, consisting in this period of probably roughly a hundred elite members. They had authority to evaluate new cults coming to town, and city officials would also evaluate potential lecturers who sought official platforms (though mere discussion in the market would require no accreditation).

17:21-31
Before the Areopagus Council

Paul's views are quite different from those of the Stoics, but he emphasizes the points of contact, even when they are only verbal (e.g., Paul believed that God's presence was everywhere, but not in the Stoic sense, which could divinize creation itself)—until the climax of his sermon. Defenders of Judaism had worked for centuries to make their faith philosophically respectable, and here, as in his letters, Paul draws heavily on his Jewish predecessors' arguments. Ancients valued the rhetorical skill of being able to communicate relevantly to different audiences; Paul communicates in synagogues (13:16-41), to farmers (14:15-17), and to the philosophically educated (17:22-31). Given its brevity, this speech summary is rhetorically sophisticated, with many rhetorical devices (e.g., alliteration) in Greek, and some high-class Greek (e.g., use of the optative).

17:21. Athens was proverbial for its residents' curiosity and their captivity to novelty. By the first century, Athenian desire for entertainment also extended to gladiatorial shows, but the city was especially known for seeking intellectual stimulation.

17:22. It was customary to begin a speech by complimenting the hearers in the opening *exordium,* designed to secure their favor. Some scholars think that this practice was forbidden at the Areopagus, but numerous examples show that even in Athens, speakers usually

praised their hearers. "Religious" meant that they were religiously observant, not that he agreed with their religion. Paul's hearers would naturally assume it to be a compliment; Luke's audience will recognize the term's potential ambiguity (cf. KJV: "superstitious"). Many people thought of philosophers as unreligious (even though Stoics tried to accommodate the beliefs of the masses; see comment on 17:18). But Paul is thinking of the religious interest expressed in the idols (17:16).

17:23. A visiting speaker would sometimes start by commenting on a city's splendid sites, building rapport with the audience. Paul preaches here no "foreign deities" (17:18), but a deity that was near them (17:27-28). One Athenian tradition about the altars—associated with one of the very poets Paul may quote in 17:28 (Epimenides)—would have served Paul's point. During a plague long before Paul's time, no sacrifices had successfully propitiated the gods; Athens had finally offered sacrifices to the unidentified deities of the sites where the sacrificial sheep lay down, immediately staying the plague. These altars of nameless deities were still standing, and Paul uses them as the basis for his speech. Paul does avoid, however, the practice of some of his Jewish predecessors and some second-century Christian successors of accusing pagan philosophers of plagiarizing their good ideas from Moses.

17:24. While rooted in Scripture, most of Paul's speech until the end emphasizes points of contact shared with Stoicism (his letters also reveal his familiarity with some Stoic language). For at least three centuries Jewish apologists (defenders of Judaism) had worked to make their faith respectable to Greek philosophers, so Paul is able to draw on a long heritage here. His rhetoric here is of the highest quality, as would be essential before the Areopagus. Paul preaches differently to philosophers (here) than to farmers (14:15-17) and synagogues (13:16-47); good rhetoricians were supposed to be able to adapt to their audiences. Paul's language here is fully biblical, yet chosen also to be intelligible to his audience.

Some philosophical trends in this era combined deities, moving toward a single supreme god. Non-Palestinian Jews sometimes identified their God with the supreme God of the pagans, hoping to show pagans that their highest religious aspirations were best met in Judaism. *Epicureans rejected temples and sacrifices; Stoics believed that God permeated all things and therefore was not localized in temples (cf. Is 66:1, cited in Acts 7:49), though by this period some Stoics sacrificed in them. The idea had a respectable intellectual pedigree; nevertheless, Paul's words would contrast starkly with all the temples (those of Hephaistos, Athena, Ares, Zeus and the deified Augustus) in plain sight of the council!

17:25. Stoics and Greek-speaking Jews emphasized that God "needs nothing," using the same word Paul uses here; the concept was also biblical (Ps 50:8-13), as was God giving breath to all (Gen 2:7; Is 42:5).

17:26. For Jews, creation from "one" meant from Adam; it contradicts an Athenian tradition of a special origin of Athenians from the soil. Jews and many Greeks agreed that God was creator and divider of the earth's boundaries and of seasons' boundaries; here, however, Paul probably has in mind especially human epochs and (as in Genesis 10) the boundaries of peoples. Jewish people commented especially on the four world empires of Daniel 2:37-44 and 7:3-8, which they believed climaxed in Rome. Stoics also believed that the universe periodically dissolved back into God, but on this belief they had no point of contact with mainstream Judaism.

17:27-28. Jewish people usually spoke of God as a father to his people (in the *Old Testament, e.g., Deut 32:6; Is 63:16; 64:8; Jer 3:4). But Greeks (including some Stoic thinkers), *Diaspora Jews and some second-century Christian writers spoke of God as the world's father in the sense of creator, as here. Stoics believed that deity pervaded all things, though *Hellenistic Jews applied such language to God's omnipresence, not (as in many early Stoics) to pantheism. "In him we live and move and have our being" (Acts 17:28) has long been attributed to the Greek poet Epimenides (from the same poem as Tit 1:12), who in one tradition was the person who advised building altars to the unknown gods (cf. 17:23). The other quotation, "we are his offspring," is likeliest from the third century B.C. Greek poet Aratus, who was from Paul's region, Cilicia (a similar line appears in the Stoic

Cleanthes). It appears in Jewish anthologies of proof texts useful for showing pagans the truth about God, and Paul may have learned it from such a text. (Greeks cited Homer and other poets as proof texts in a manner similar to how Jewish people cited Scripture; they also exhibited their education by their array of quotations.) Some philosophers criticized poets as too mythological, but others freely used their wording to prove their own case.

17:29. Many philosophers viewed images of deities as at best props to remind people of the deities; most at least retained them for their symbolic value, however, unlike Jews, including Paul (v. 30).

17:30. Speakers sometimes reserved their most controversial arguments for the end of the speech, first building agreement where possible. After building rapport with some of his hearers through much of the speech, here Paul breaks with his audience's views; although philosophers spoke of conversion to philosophy through a change of thinking, Paul here clearly communicates the Jewish doctrine of *repentance toward God. Many philosophers emphasized knowledge of God; Paul's claim of their ignorance (here and in v. 23) would not be flattering.

17:31. The Greek view of time was that it would simply continue, not that history had a future climax in the day of judgment. (The closest idea, the Stoic conception of a cyclical repetition of history, is quite unlike the biblical prophets' future "day" of judgment.) Most offensive is Paul's doctrine of the *resurrection; see comment on verse 32.

17:32-34
Response of the Intellectuals

Although Paul's message to the intellectual elite of his day does not produce massive immediate results, his ministry to the Areopagus is effective, apparently reaching even some of the elite.

17:32. Unlike many philosophers, *Epicureans (17:18) denied the soul's immortality: they believed that the soul was material, like the body, and died with it. Greeks traditionally believed in a shadowy afterlife in the underworld (perhaps similar to the *Old Testament *refa'im*); some no longer believed in afterlife; some now accepted reincarnation (found in some philosophers); under *Plato's influence some Greeks sought to free the immortal soul from worldly existence so it could escape back to the pure heavens from which it was created. Stoics believed that the soul lived on after death (although, like everything else, it was cyclically resolved back into primeval fire), but like other Greeks they could not conceive of a *resurrection of the body. Many Greeks believed in ghosts (disembodied souls) on the earth, but physical "resurrection" would conjure images of reconstituting corpses. Those who wanted to hear him again apparently maintained intellectual interest in something "new" (cf. 17:21); Epicureans (17:18) were likely among the mockers.

17:33-34. The Areopagus probably held about a hundred members but included only those of highest status in this university community, so the conversion of Dionysius is significant. Modern readers who judge Paul's work in Athens a failure on the basis of 1 Corinthians 2:1 have missed Luke's point (the emphasis of Acts is on his success, and the original readers of Acts could not simply turn to 1 Corinthians).

Damaris would not have been a member of the ruling Areopagus court and might have simply been listening in the marketplace (17:19-20), but she may have belonged to the elite. Although traditionally the most educated and publicly seen women in Athens were prostitutes and foreigners, some schools of philosophers (including Epicureans, Pythagoreans and some Stoics) had some women *disciples, though they were always a minority. Damaris may have been a philosopher, or (more likely) the student of one.

18:1-11
The Church in Corinth

18:1. Corinth was fifty-three miles (eighty-five kilometers) west of Athens, so the next natural stop for Paul; but it was also strategic. Rome destroyed Corinth in 146 B.C.; some Greeks continued to live on the site, but it was revived as a city again only when Julius Caesar refounded it as a Roman *colony in 44 B.C. Although one of Athens's ancient rivals, after being revived it had long since surpassed Athens. Its citizens were citizens of Rome, and official inscriptions emphasize its Roman

character, but many Greeks (and others) continued to live there, with an apparent influx of more non-Romans in this period. Roman Corinth was the political and economic center of Greece, the capital of the Roman province of Achaia and the transit point for all maritime trade between Rome and the prosperous Roman province of Asia.

18:2. Like Tiberius, an earlier emperor, Claudius officially expelled the Jewish community from Rome (probably around A.D. 49); probably only some of the Jewish community actually left, but those who left undoubtedly included leading figures in the controversy that precipitated the expulsion. (Jews who were Roman citizens probably would not have been forced to leave.) *Suetonius, a Roman historian, is often understood as indicating that the Jewish community was expelled because of disturbances about the *Messiah, perhaps caused by opposition to Jewish Christians. Given Luke's emphasis on legal precedents in favor of Christianity (18:14-16), it is easy to see why Luke would omit that detail. Corinth was a major conduit for trade with Rome and a primary destination of Roman ships; it was heavily Romanized and a natural destination for someone leaving Rome for the East.

18:3. In the ancient economy, people of the same trade usually lived together in the same part of town and formed trade guilds. Their trade guilds normally adopted a patron deity, and they ate sacrificial food at their regular banquets together. This cultic orientation of trade guilds would exclude practicing Jews from the fellowship, making Jews delighted to find other Jews of their own trade.

Women could be artisans, and many worked alongside their husbands in small shops. Arrangements varied, but multistory apartment buildings with ground-floor workshops were common; a number of urban artisans lived onsite, sometimes in a mezzanine level above their ground-floor shops. (We cannot be certain about the arrangements here.) Although many sold from shops in their homes, it is also interesting that Corinth's *agora* (central marketplace) had one of the longest lines of colonnaded shops in the empire.

By this period, the term translated "tentmaker" was also applied to leatherworking in general; scholars debate which is intended here. Leatherworkers were artisans; Paul could have also carried his leatherworking tools from city to city. Artisans were typically proud of their work, despite the long hours they had to invest to succeed, and were higher than peasants in status and income; but they were despised by higher classes, who thought most labor with one's hands degrading (see the conflicts described in the introduction to 1 Corinthians; comment on 1 Cor 4:12). Some sages worked (*Cynics even begged), but the elite usually preferred to pay sages a salary or be their patrons. (Many Jewish teachers viewed labor more positively; boys learned trades as apprentices, often to their own fathers.) Artisans' long hours in their shops afforded them much time to talk while doing their work, but Paul apparently is able to discontinue the labor (1 Cor 4:12) when his companions bring a gift from the Macedonian *church (v. 5; 2 Cor 11:8-9; 12:13; Phil 4:15).

18:4. Many foreign religions had settled in Corinth, including Egyptian religions (mushrooming in popularity by the second century). An inscription from a Corinthian *synagogue has also been recovered near the *agora* (central marketplace); its location suggests that some members of this synagogue had wealth and social status (see vv. 7-8). The inscription is from a later century, however, and the Jewish situation in Corinth after Claudius's decree (18:2) may have felt less comfortable (note also the probable attendant influx of more Roman Jews). In any case, most Jewish Corinthians in this period were probably immigrants or children of immigrants, holding the somewhat stigmatized status of resident aliens.

18:5. A gift from the Macedonian Christians apparently allowed Paul to spend less time on manual labor (2 Cor 11:8-9; 12:13; Phil 4:15).

18:6. One could shake a garment to warn violators of God's law that God would judge them (Neh 5:13). In Ezekiel, one who fails to warn people to *repentance has blood on one's head, that is, is morally responsible for the people's judgment (Ezek 3:18-21; esp. 33:4).

18:7. The church met in houses for the first three centuries (12:12; Rom 16:5). Synagogues also sometimes gathered in homes until the Jewish community could afford a special building, and between persecution and the

need for funds to free slaves, feed the poor and support missionaries, the churches had no money left for buildings anyway. Some scholars note that patrons' homes in Corinth normally reclined nine to twelve in the *triclinium* (the best room) and as many as forty others in the adjoining *atrium* (the largest furnished room). Larger homes are possible, since homes varied in size; most homes were much smaller. (Poorer people could live in upper-story tenement apartments that offered little more than room to sleep.)

For God-fearers, see comment on Acts 10:2. The status and thoroughly Latin name of "Titius Justus" identify him as a Roman citizen and part of the Roman culture (Corinth was both Greek and Roman in this period); he may have been from one of the Roman families established there in the time of Julius Caesar. Some have identified him with Gaius (Rom 16:23; 1 Cor 1:14); Roman citizens had three names (Gaius being a *praenomen*).

18:8. "Crispus" is a typical Roman name. It was not uncommon for Jewish people to have Latin names ("Crispus" and "Crispina" appear several times in Jewish inscriptions), but the proportion of Latin names among Paul's associates is so much higher than generally in inscriptions (even though inscriptions were normally made by the well-to-do) that it is likely that a number of Paul's Jewish and Greek associates were also Roman citizens. To be "synagogue ruler" means that Crispus is a person of status and wealth, responsible for the synagogue services. Given the many public baths and fountain houses in Corinth, finding nearby water for *baptism would not be problematic.

18:9-10. In "assurance oracles," God often told people not to fear because he was with them (e.g., Gen 15:1; 26:24; 28:15; Jer 1:8; 15:20). In Greek literature gods or goddesses often appeared to people at night, frequently while they slept; but such revelations from God or his angels are no less common in the *Old Testament (e.g., Gen 26:24; 28:12-15; 31:24).

18:11. This duration probably meant that the biennial Isthmian Games occurred when Paul was in Corinth, perhaps providing both some additional "tent-making" or leather business, and additional opportunities to spread his message.

18:12-17
Gallio's Refusal

18:12. A proconsul governed Achaia (most of Greece) from 27 B.C. to A.D. 15 and from A.D. 44 on. Gallio apparently began his two-year term of office July 1 of A.D. 51 (or possibly 52); it was cut short by sickness, so we may reasonably date this appearance in A.D. 51–52, somewhat more likely before the end of 51. His brother, the *Stoic philosopher *Seneca, Nero's tutor, speaks well of him. Luke could not have had access to names of such officials at precise dates unless he learned them from Paul; there were no reference works listing them.

As proconsul, Gallio would decide important cases at his judgment seat in the morning. This "judgment seat" (KJV, NASB) is probably the then-recently constructed ceremonial rostrum that archaeologists have found on the south end of the Corinthian forum, in full view of the public, although some scholars have suggested a tribunal (cf. NRSV) in an administrative building at the forum's eastern edge.

18:13. If Paul's views put him outside Judaism, his followers would not have the protection Roman tradition gave to Judaism by virtue of its antiquity. Corinth's dedication to the imperial cult might potentially render suspect nonparticipants who lacked the excuse accorded to the Jewish community as members of an ancient religion. Others, however, doubt that the governor was enforcing imperial worship in Corinth, where commitment to Rome was not much in question.

18:14. A Roman magistrate's first decision was whether to accept a charge and so decide a case. Gallio's wording in 18:14-15 fits standard Roman legal usage.

18:15. Although some Corinthian Jews were likely Roman (and Corinthian) citizens, most would be considered resident aliens. Gallio dismisses the case. Roman courts decided violations of Roman law; but various individual edicts throughout the empire had given Jewish courts jurisdiction over internal Jewish affairs, and Gallio is not about to meddle in them. Gallio thus accepts Paul's religion as a variant form of Judaism, rather than

a new and illegal religion (*religio illicita*). Although precedent was not binding in Roman law, it was important and could be followed by other provincial governors; if involved in legal cases, Luke's Christian readers can cite this case on their own behalf.

18:16. That Gallio "drove them away" (NASB), perhaps with the force of his lictors' (attendants') rods, betrays more than a tinge of Roman impatience for Jewish religious disputes. Many upper-class Romans viewed Jews as uncultured troublemakers, classing them alongside other religions from Syria and Egypt (cf. 16:20-21). The emperor's own action in 18:2 would give free rein to other *Gentiles' disrespect of Jewish people.

18:17. Law courts (especially if held at the forum, or *agora*) were typically loud and crowded, and tempers flared. Luke may mean that the Jewish community disciplined a leader who was a Christian sympathizer (if this is the same Sosthenes as in 1 Cor 1:1—it was a somewhat common name), or that they beat their leader for getting them into political trouble. Or Luke may mean that, given Gallio's expression of his anti-Jewish sentiments, some local Gentiles felt free to vent their own. Other Roman officials had encouraged or done worse. Crowds often became unruly during public hearings, though they would normally lead to violence in front of the governor himself only if he were thought sympathetic to the abusers' cause. If the synagogue officials had publicly charged Paul to dissociate themselves from a potential troublemaker (cf. 19:33-34), the plot backfired.

18:18-23
Paul Returns Home

18:18. On the naming of Priscilla before her husband here, see comment on 18:26. Cenchrea was Corinth's port on the Aegean side of the isthmus; it also harbored temples of Isis, Artemis, Aphrodite, Asclepius and Poseidon. Travel was easier, faster and cheaper by ship than by land. But ships were generally meant as cargo transports, so seafarers had to bring their own food and bedding.

Some pagan priests (e.g., of Isis) shaved their heads; hence a pagan observer who did not know Paul could have taken him for such a priest (in view of the Isis temple in Cenchrea). But Jewish people shaved their heads after completing a Nazirite vow, and Paul's faith in Jesus had not diminished his own Jewishness in the least (21:23-24). Technically one shaved at the completion of the vow when offering sacrifice (Num 6:18), thus in Jerusalem. Paul may have shaved before a vow fulfilled later in Jerusalem in Acts 18:22 (if he stopped in Jerusalem) or two years later in 21:17-26. Or Paul may have taken a less Jerusalem-centered approach of *Diaspora (non-Palestinian) Jews who had not the time or money to travel to Jerusalem very frequently. Even in Judea, one could vow to abstain from various matters (here, cutting one's hair) without it being a technical Nazirite vow (see comment on Mt 26:29).

18:19. Ephesus was the leading city in the Roman province of Asia and the governor's seat. Many centuries old by this period, it may have held at least a hundred thousand people in Paul's day (many estimate even twice that number). It was often ranked the fourth city in the empire. It hosted many foreigners, and a recent economic elite not dependent on ancestral nobility. The Jewish community had long held rights there as Ephesians (*Josephus, *Against Apion* 2.39).

18:20-21. "If God wills" was a standard statement of pious Greeks and some Jews.

18:22. Summer winds were generally northerly but often east of north, which made Caesarea easier to reach by ship than Antioch's port city of Seleucia. But because Antioch was such a major destination (probably the empire's third largest city), sailing to Caesarea, only to walk more than two hundred miles north to Antioch, seems out of the way. Many commentators thus suspect that Paul stopped in Jerusalem as well (thus "went up" to greet the church—Jerusalem being in the hills), though this is not explicit (in the Greek; it is reasonably added in some translations). (The Roman province of "Syria" in 18:18 can include Judea; see Lk 2:2-3.)

18:23. The general time of year seems fairly clear: only by late spring or early summer was the land route open from Antioch through the Cilician Gates (a pass in the Taurus mountains) on into Galatia and Phrygia; it would become impassable again in winter.

18:24-28
Apollos's Enlightenment

18:24. Many Alexandrian Jews had names compounded with "Apollo," a prominent Greek god (Apollos might be a contraction for Apollonius). As in other ancient uses of the term, "eloquent" (NASB) or "learned" (NIV) most likely means "formally skilled in *rhetoric," the more practical form of advanced learning to which well-to-do pupils could attain (the other was philosophy).

Alexandria, the empire's largest city after Rome, may have had the largest Jewish community in the empire outside Syria-Palestine, with numerous synagogues. For the most part, however, only Greeks (perhaps a third of the residents) were citizens of Alexandria. The Jewish aristocracy (including *Philo) had worked hard to be culturally acceptable to the Greek privileged class, and they resented their own inferior status. (Most of the ethnocentric Greeks in Alexandria despised Jews and Egyptians, who made up the other possibly two-thirds of their city; thus they spoke of "Alexandria near Egypt.") Later, the clash of cultures and oppression of Jews ultimately led to a Jewish revolt—and the massacre of the Jewish community.

18:25. Scholars disagree whether "fervent in spirit" (NASB) refers to Apollos's own spirit or to him being fervent in God's *Spirit. Although the matter is debated, early Christian usage and context might favor the latter.

18:26. Normally husbands were named first, unless the wife was of higher status, but Priscilla (the formal form of which is "Prisca," as in Paul's letters) is named first twice as often in the *New Testament as Aquila. Her role here is fairly unusual by ancient standards (enough that it drew notice from some ancient commentators and apparent discomfort in the later Western text). Although most men in Mediterranean antiquity resented women speaking in public and generally did not respect women teaching, Priscilla teaches privately, and many men did recognize exceptions for exceptional women.

18:27-28. Letters of recommendation were standard in Greco-Roman society (see comment on 9:2). Apollos's learning might well appeal to the educated elite of the Corinthian church (see the introduction to 1 Corinthians). *Rhetoric (see comment on 18:24) was highly prized in urban Greco-Roman society, notably in Corinth.

19:1-7
The Spirit Poured Out in Ephesus

19:1. Ephesus afforded an opportunity to influence all of Asia (not meaning the continent, but the Roman province "Asia" in what is now western Turkey). It was the most populous city of the most prosperous and populated province in the empire. Although Pergamum remained the official capital of Asia, Ephesus became the chief city with the real seat of provincial administration. Some argue that Paul's approach by the "upper country" (NASB) means that he took a higher road further north, one that would lead to the Cestrus valley, rather than the customary route by the Lycus and Meander valleys. Highland travel could avoid the intense heat of the lowlands if the travel were in summer.

"*Disciples" means adherents or students, here perhaps of John (19:3; but cf. 18:25). The Roman world was cosmopolitan, and other Palestinian Jews also settled in Ephesus, which had a large, ancient and influential Jewish community.

19:2. They had to have heard something about the Holy Spirit (Ps 51:11; Is 63:10), though they had not heard that the Spirit had *come* (cf. Jn 7:39). In most of ancient Judaism and in Luke-Acts, the *Holy Spirit is the Spirit who inspired the prophets. Paul can somehow tell these disciples lack this measure of inspiration, despite much sound knowledge (18:25).

19:3-5. For John's *baptism, see comment on Mark 1:5; for baptism in Jesus' name, see comment on Acts 2:38. Water sources were widely available in and near Ephesus. The Selinus River passed the Artemisium; probably more accessible were Ephesus' many public baths and fountains (other cities also had these).

19:6-7. The tongues and *prophecy, as inspired speech, evidence their reception of the Spirit of prophecy; see comment on 19:2.

19:8-12
Word Spreads in Ephesus

19:8-9. Established philosophers and other teachers often lectured in rented halls; this

could have been a guild hall, but because it is named for a person it seems likelier a "lecture hall" (NIV), where Tyrannus is the landlord or (somewhat more probably) the customary lecturer. "Tyrannus" (a common name in Ephesus) might be a nickname, perhaps for a severe teacher. Public life in Ephesus, including philosophical lectures, ended by noon; most people in antiquity rested for one or two hours at midday, and advanced education lectures might finish by 11 a.m. Thus if Tyrannus lectured in the mornings Paul used it in the afternoons (perhaps doing manual labor in the mornings, cf. 20:34). In any case, residents of Ephesus would view Paul as a philosopher or sophist (professional public speaker). Many early Greco-Roman observers thought that Christians were a religious association or club (like other such associations in antiquity), or a philosophical school that took the form of a such an association. To outsiders, groups that taught ethics and lacked the sacrifices and idols characteristic of most religious groups could appear like philosophic schools.

19:10. Ancient audiences would understand the *hyperbole of "all Asia" (cf. 19:17, 20); such hyperbole fits frequent ancient usage. Nevertheless, in antiquity travelers did spread word quickly around a region; Luke reiterates the theme in 19:17 and 19:20. Ephesus genuinely was a cosmopolitan center from which word would spread quickly, especially if Paul were training disciples (as philosophers and *rabbis typically did) and sending them out to spread the message.

19:11-12. Paul's "handkerchiefs and aprons" (NIV) could be rags tied around his head to catch sweat and his work aprons tied around his waist (cf. 20:34; or, less commonly suggested, pieces of his teaching uniform); some suggest that they were taken without his knowledge. Although practitioners of *magic might try to use materials associated with a powerful person, Luke repudiates magic in the following context (19:13-19). Sometimes power was communicated by contact even in the *Old Testament (e.g., 2 Kings 13:21); if contact in the Old Testament communicated uncleanness, it could also be used to communicate God's power (cf. Num 27:23; Deut 34:9; 2 Kings 4:29). Cf. Acts 5:15.

19:13-20
The Inadequacy of Magic

Although some Ephesians who knew no better may have regarded Paul as a magician, God seems to have healed them anyway to draw their attention to his message (19:11-12); but God did not bless unauthorized use of Jesus' name. Ephesus was widely reputed for its trade in *magic and the need for exorcisms and protection against evil spirits.

19:13. Magic was widespread, but Ephesus had a reputation as one of its centers. Magical exorcists often invoked the names of higher spirits to cast out lower ones. According to magical theory, exorcists could coerce a deity or spirit to do their will by invoking its name. Exorcists sometimes "adjured" spirits (cf. comment on Mk 5:7). Ancient magical texts show that many exorcists were Jewish or drew on some knowledge of Judaism, and these texts include every possible permutation of vowels as guesses for pronouncing the unpronounced name of God (cf. comment on 2:20-21). Others invoked Solomon's name in expelling *demons (*Josephus, *Jewish Antiquities* 8.47). Some later ancient magical texts invoked the name of Jesus alongside other formulas, recognizing, as do the exorcists in this *narrative, its efficacy when employed by Christians to expel demons.

19:14. "Sceva" is a Latin name; although Judeans used "*high priest" loosely for the highest members of the priestly aristocracy, it is possible that Sceva simply appropriated the title for himself, since few in the *Diaspora could have easily checked. Inscriptions and texts testify to other irregularities in Jewish priestly claims outside Jewish Palestine. Because Jewish chief priests would be thought to have access to the sacred name (v. 13) and hidden names, especially of the supreme god, were thought to wield great power in magical circles, Sceva is probably highly reputed in those circles. "Sons" could mean they were part of Sceva's guild, although it is probably meant literally.

19:15. Spirits behind oracles could grant recognition to inquirers (cf. 16:17); these spirits instead insult the exorcists. Ancient literature reports that demons were typically unimpressed with orders from those who had

no power over them, although they feared God and could be controlled by the manipulation of spirits more powerful than themselves (who may have appreciated the influence this gave them with the magicians).

19:16-17. Paul has more power than the magicians (cf. Gen 41:8, 39; Ex 7:11). Both in antiquity and today, some of those thought to be spirit-possessed can act violently, sometimes demonstrating feats of pain immunity or unnatural strength.

19:18. When people recognize that Paul's Jesus cannot be manipulated like lower spirits, they understand that he is a servant of God and not a mere magician. Some translate "confessing practices" (NASB, NRSV) as "divulging spells," a possible meaning; divulging secret spells was believed to deprive them of their power.

19:19-20. Magical *papyri contained spells; Luke's term "books" or "scrolls" (NIV) may refer to such papyri. Briefer charms were rolled up in small cylinders or lockets used as amulets around the neck. These magical incantations were so common in Ephesus that some concise magical terms used in charms and amulets were apparently called *Ephesia grammata,* or Ephesian writings. Books were commonly burned in antiquity to repudiate their contents (in the *Old Testament, cf. analogously the destruction of idols in Deut 7:5, 25; 1 Chron 14:12). The total price of what is burned comes out to about fifty thousand days' wages for an average worker.

19:21-22
Changing Course

Ancient writers sometimes had statements outlining the rest of the book (this one resembles Lk 9:51), though clearly Paul also did have these plans (Rom 15:24-26). Luke shows that Paul had already planned to leave Ephesus before he knew that trouble was coming (19:23-41), and also sets the pace for the rest of the book, outlined as one more trip through Greece, then to Rome via Jerusalem. Joshua served Moses, Elisha served Elijah, and Gehazi served Elisha; sages in a later period (esp. rabbis) also sometimes expected disciples to serve them. If this is the same person, Erastus may have been the *aedile,* or commissioner of public works, in Corinth for a time (see comment on Rom 16:23); if so, this text shows that status in the *kingdom and in the world are not determined on the same terms.

19:23-41
Artemis and Economics

When Jewish people could show that not they but their enemies started riots, they could appeal for the government's reaffirmation of their rights; Luke is emphatic that not Paul but his enemies started the riot. As often, religious piety becomes a thin cloak for personal economic interests. The temple of Artemis served as a bank as well as a temple, and people from all over the world deposited funds there. Amassing significant wealth, the temple apparently controlled more than seventy thousand acres of agricultural land, and some of the temple's wealth benefitted the city itself. About A.D. 44 (roughly a decade before Paul's arrival), inscriptions there show that the proconsul had to get involved in the temple treasury due to some serious financial irregularities: temple monies were being funneled to private individuals. In Ephesus, politics and religion were as heavily intertwined as religion and economics, and local civic pride was inseparable from the worship of the Ephesian Artemis.

19:23. The month of Artemis's reputed birth was called Artemisium and hosted a major festival in her honor, at which Asiarchs (see comment on 19:30-31) would be present (v. 31). Some scholars have suggested that this narrative makes the most sense if it happened at that time; although this theory is possible, loyalty to Artemis ran strong all year long, and processions from Ephesus went out to the temple once or twice a month. The Asiarchs who knew Paul best were those who resided in Ephesus anyway.

19:24-25. Ephesus was growing rapidly, the most prominent city in the empire's wealthiest province. "Demetrius" was a common name in Ephesus and elsewhere. Metalworkers were usually of low status, though in Ephesus some craftsmen joined the rising class of new and even respected wealth. Members of the same trade united to form professional guilds, or *collegia,* which set standards for their own trade and united to defend their economic interests. Gathering them would not be difficult, since members of similar trades normally lived in the same section of a city; silversmiths'

shops in Ephesus were probably close to the theater, apparently on what was later called Arkadiane Street, the full half-kilometer length of which ran from the harbor to the theater (on which see 19:29). Miniature shrines were made as souvenirs and amulets; most of the ones we know about were terra cotta, so Demetrius was probably one of the most prestigious shrine-makers. Demetrius's guild may be that of silversmiths or metalworkers more generally, many of whom did make statuettes of Artemis. Small gold and silver images of Artemis weighing three to seven pounds were dedicated in her temple. Sculptures and other artwork featuring Artemis were common in Ephesus.

19:26. "Not gods at all" was the refrain of Isaiah (e.g., 37:19; 44:9-20; 46:1-11), other prophets (Jer 2:11) and Judaism. Although Demetrius exaggerates (the way ancient audiences expected demagogues to do), mass conversions could have a local impact. By the early second century the Roman governor of a nearby province complained that the temples of the gods were being forsaken due to conversions to Christianity. After the arrest of many Christians, the governor reported, more people did buy animals for sacrifices again (Pliny, *Epistles* 10.96).

19:27. In the view of many intellectuals, speakers who manipulated religious emotion without offering evidence were demagogues; nevertheless, orators often sought to stir indignation against their enemies. Ephesus did not take well to anyone insulting their patron goddess; earlier, forty-five residents of Sardis accused of assaulting a group of followers of the Ephesian Artemis received the death penalty. Artemis, Ephesus' patron deity, appears on coins and many statues from Ephesus. "The world worships" reflects the fact that the Ephesian Artemis, distinct from other forms of Artemis, had cult centers dedicated to her in at least thirty-three places in the Mediterranean world. Her fame is widely attested in antiquity: she commanded followers in visions to spread her cult; her temple, on a platform that measured 130 by 70 meters, was roughly four times the size of the Parthenon in Athens and was listed as one of the seven wonders of the ancient world; Jewish texts also mention her temple. It was a mile and a half northeast of Ephesus proper. Ironically, Artemis's worshipers depicted her as compassionate, and her temple was to be a place of refuge even for foreigners.

19:28. Riots and unrest were common in Asia Minor's cities in this period. Crying out "Great is [such and such a deity]" seems to have been a standard way of expressing devotion. People could be worked into a frenzy, chanting together. Ephesians often employed the title, "great goddess Artemis," and used the acclamation reported here and others like it.

19:29. News and trouble spread quickly in ancient cities, which were very crowded (at least in Rome, perhaps two hundred people per acre, a population density found today in the West only in slums). Evidence currently suggests that silversmiths worked in a business district on the road between the harbor and the theater; the street would be crowded during the day, and, more clearly, the large market near the theater would be full of people. Thus one could easily stir a large portion of the populace before entering the theater. The citizen assembly held its normal meetings in this open-air theater, which in this period accommodated some twenty thousand people, was almost five hundred feet in diameter and contained many statues of deities. This was not a regularly scheduled assembly of the citizens, but some, assuming that officials had summoned the crowd, may have believed it was a special assembly.

19:30-31. Asiarchs were the most prominent men of the province; former Asiarchs retained the title, and some filled the office more than once. Many lived in Ephesus; of more than two hundred Asiarchs known from over the course of antiquity, over half came from or were related to Ephesus alone. Because of their elite status, some of them had probably also presided in one-year terms over the cult of the emperor and the goddess Roma. Different cities in the Greek East competed for the honor of having the largest imperial cult, so its priests were important to local civic pride. They had authority over the theater, but here they cannot quell this riot; they can only try to stop their Jewish Christian friend from entering. In accordance with Roman customs, they may have viewed their "friendship" with Paul in terms of providing him support as pa-

trons; the wealthy often enhanced their public reputation by acting as patrons of arts or respected teachers. Benefactors acted in return for honor. The public controversy, however, risks their embarrassment, inhibiting Paul's entrance; they may count it more prudent to work through the town clerk (19:35), a member of their class.

19:32. Greek comedy frequently parodied people's stupidity; Luke's hearers could laugh at the crowd not knowing the purpose of their rioting (cf. 21:34), even though this ignorance characterizes mob psychology well. Luke may employ the Greek term for "citizen assembly" here ironically: it is in fact a mob, not a legal gathering (v. 39). In addition to its regularly scheduled gatherings, the citizen assembly could have emergency meetings, which some participants in the present gathering may assume has happened.

19:33-34. Ancient sources confirm that securing a hearing in a noisy assembly was difficult. Various cities had taken action against their resident Jewish populations at times, and Jewish people in Roman Asia sometimes had to offer defenses of their rights. They were normally careful not to offend the local residents, and Alexander no doubt intends to explain that the Jewish community did not instigate the current confusion; they want to dissociate themselves from this more controversial monotheist (cf. 19:9, 26). But Greek anti-Judaism was common and *Gentiles often resented Jewish monotheism and dietary "separatism." The knowledge that the Jewish community accepted only one God leads to the assumption that the Jewish community instead wishes to explain their *responsibility* for the riot. (This event may help explain the Asian Jewish community's dislike for Paul in 21:27.) Controversial public trials were also often punctuated with shouts.

19:35-36. The clerk here makes a deliberative speech, intended to change the mob's course of action (v. 36). The "city clerk" (NIV) was the top civic official in Ephesus, who made known the citizen assembly's rulings and represented the city to the Roman provincial officials also headquartered in Ephesus. Civic pride was common in the cities of Asia Minor, and praising a city was common in the opening of a civic speech. Slightly later sources from Ephesus show that it prided itself on being "guardian" of the imperial cult; no less did the city pride itself on being wardens of their famous local cult.

Other statues worshiped in ancient Asia Minor also purportedly fell from heaven. No records survive of this claim for Ephesus's Artemis image; the clerk might even be simply currying favor with the religiously motivated crowd. Luke's own audience might laugh at what "everyone" here supposedly "knows"; they understand that rather than falling from heaven, the statue was "made by hands" (19:26). The bulbous appendages on the statue have been variously identified as breasts, castrated appendages, fruits, or bee or ostrich eggs; these interpretations suggest an Asian fertility goddess related to the local mother goddess and quite different from the Greek virgin Artemis. (Other scholars suggest that the objects represent planets, which fits the picture of Artemis as deliverer from Fate and its astrological agents.) Whatever the appendages are, literary sources show that in this period the Ephesian Artemis remained the virgin huntress of traditional Greek religion.

19:37. "Temple robbery" was considered one of the most impious of crimes, a capital offense, and the term eventually came to stand for sacrilege in a broader sense. Some Jewish apologists claimed that Jewish people did not mock other deities (Josephus, *Jewish Antiquities* 4.207; *Against Apion* 2.237; *Philo, *Life of Moses* 2.205), but many Jewish people did mock them (e.g., Wisdom of Solomon 13:10–14:7). In Greek, the masculine noun for deity with a feminine definite article here seems strange, but inscriptions reveal that Ephesians sometimes used precisely this form for their patron goddess Artemis.

19:38. The proconsul met with the gatherings of citizens on various days in nine different cities of the province, hence was available in Ephesus only on particular days; from the wording some suspect that he was in Ephesus at the time. Each province had only one proconsul, but some think that Luke may use the plural because the proconsul of Ephesus had recently died (A.D. 54), after which several officials carried out his administrative functions till the new proconsul arrived. Alternatively, it could simply be a gener-

alizing plural. Publicly naming Demetrius would shame him before the assembly; Demetrius might try to recoup honor by bringing charges (19:38) and certainly by depicting himself as defender of the Artemis cult. The city clerk's source of information may be from Paul's Asiarch benefactors (19:31), who would belong to the clerk's social circle.

19:39. A later source suggests that this assembly met three times a month. Rome allowed Ephesus to hold public meetings legally, having granted it the title of a "free" city. The lawful gathering of the citizen assembly, however, differed significantly from a mob (as here): the former met with Rome's favor, but the latter could lead to Roman disciplinary measures against the city (in principle even revocation of their status as a free city).

19:40-41. Other examples show that leaders of cities warned their people that Rome would hear of their riots; other riots are recorded as having happened in Ephesus, although Rome never did withdraw their privileges. But the special privileges Ephesus enjoyed as a "free city" (including its own senate) depended completely on Rome's favor, and other cities had had such privileges revoked. A famous late-first-century *rhetorician named Dio Chrysostom warned the citizens of another Asian city that those who abused the right of free speech had that right taken away.

20:1-6
To and from Greece

The *narratives of Acts 20 and 27 presuppose correct data on the length of travel between the places listed and take into account seasonal wind patterns and so forth. In short, they read like the report of an eyewitness.

20:1-2. Hinted in Acts only at 24:17 but clear in his letters, Paul's purpose is to collect the offering of the Macedonian (Philippi, Thessalonica) and Achaian (Corinth) *churches to help the poor Christians in Jerusalem, to demonstrate the unity of Jewish and *Gentile Christians (see comment on Rom 15:26; 1 Cor 16:1, 5; 2 Cor 8–9). He may have gone through Illyricum from Macedonia's Via Egnatia (Rom 15:19; cf. comment on Acts 16:9); if so, many months pass before he reaches Achaia.

20:3. The three months may be three winter months, during which travel was difficult. Paul wrote Romans from this area (Rom 15:26-28). Although some sailors and shipowners were Jewish, most were Gentiles. On a ship to Syria, however, many travelers may have been Jewish—especially if the ship planned to reach Syria by Passover (Judea was part of the Roman province of Syria); cf. Acts 20:6. Travel to Philippi may have consumed two weeks if they traveled on foot; Paul will miss Passover but still has time to reach Jerusalem for the next major pilgrimage festival, Pentecost (20:16).

20:4. *Disciples often traveled with teachers, More relevantly here, just as prominent representatives from each of the Jewish communities would bring the annual temple tax to Jerusalem, so Paul has traveling companions from different Christian communities serving the poor in Jerusalem (20:1-2; cf. earlier, 2 Cor 8:18-24). This offering would show the Jerusalem church that the Gentile Christians still recognize the Jewishness of their faith (see Rom 15:26-27). Travelers, including pilgrims headed for Jerusalem, often voyaged in groups, especially those carrying much money (including those carrying the temple tax).

20:5-6. The "we" picks up where it left off; Paul had left Luke in Philippi (16:10-17). They spend the week in Philippi for the Passover and Feast of Unleavened Bread. When one adds the remaining days (with parts of days reckoned as wholes, as generally in antiquity) presumed in the narrative, from their arrival in Philippi to their arrival in Jerusalem requires over thirty days. Thus they would arrive in Jerusalem before Pentecost (fifty days after Passover) in time for this one of the three major pilgrimage festivals (20:16). "Five days" (i.e., parts of five—perhaps four) was a slow voyage to Troas (16:11) but may include the half-day land journey from Philippi to Neapolis. Paul's letters show that at some point he had founded a church at Troas.

20:7-12
Resuscitation at Troas

20:7. Most religious associations in the Greco-Roman world met together once a month. Although some early Christians may have met daily (2:46), at some point they began meeting

especially on the first day of the week (Sunday), probably because of the *resurrection (Lk 24:1) and to avoid conflicting with *synagogue gatherings on the sabbath (Saturday).

This may be a special meeting, because Paul is leaving the next day. Christians may have often met early, before sunrise, but would have to work Sunday mornings like everyone else in the empire; so this meeting may have have begun late Sunday afternoon or Saturday at sunset. It depends on whether one reckons days from midnight to midnight, like the Romans and modern Westerners, or from sundown to sundown, like ancient Jews. In the former case, the first day means Sunday; in the latter, it started on what we consider Saturday evening. Most likely, this meeting began Sunday evening and ended Monday morning. Whatever view one takes, because most people went to bed not long after sunset, midnight was well into one's sleeping time. (Lacking electric lighting, people usually rose at sunrise, hence most people did not stay up late.) Long speeches were common in antiquity—though not usually at night! Paul wants to impart as much insight as possible before his departure the next day.

20:8. Lamps would be needed in night meetings. Scholars sometimes speculate that the odor or heat of the oil lamps may have helped produce drowsiness; more likely, the lamps showed that the meeting had taken the best precautions available against sleep. Most homes did not have so many lamps, so people have come ready and eager for Paul's long night of teaching.

20:9. Open windows were generally blocked off in the winter, but during summer one could sit in a large one to cool off. (Only a very few windows in this period had glass; they were especially rare in the eastern Mediterranean.) Either the heat from the lamps (midnight in April at Troas was not normally hot) or likelier the crowdedness of the room had forced Eutychus to take a window seat. Many looked down on pupils falling asleep (though lectures were normally in mornings, not at midnight!). Homes in much of the empire were a single story, but they were often in apartment buildings with two or more stories in more crowded urban areas. While most apartment dwellings were small, they might have met (with residents' approval) in the long hall (with windows) that connected the apartments. This is a fall from what the British would call the second floor (which most languages call the "third floor"), which is not necessarily fatal; but someone who was sound asleep could not break one's fall.

20:10. For Paul's action, cf. 1 Kings 17:21-22 and 2 Kings 4:34-35.

20:11-12. When people had not seen each other for a long time, it was common to stay up late filling each other in on one another's lives.

20:13-17
Continuing the Journey

More than many modern readers, ancient readers were often interested in travel details; educated people knew many of these locations. As elsewhere, Luke's travel details (e.g., the sequence of locations and the length of time spent traveling between them in view of seasonal wind patterns) fit the geography precisely, as one could expect for an eyewitness account.

20:13. Assos, the best harbor between Troas and Adramyttium, was about twenty miles directly overland from Alexandria Troas, the main port; this was about a day's journey on foot. The actual road, however, was not direct; following the coast, it was closer to thirty-eight miles. We can only speculate why Paul chose the land route, though walking would be cheaper than buying passage on a boat.

20:14. Mitylene was the largest city on the island of Lesbos, with two functioning harbors. Sailing in from the north, they would have come to the deeper northern harbor, near a smaller island that contained part of Mitylene's population.

20:15. They take the customary sea route, across from the large island of Chios (probably near Cape Argennum. From Chios it was quicker to sail by the island of Samos and straight to Miletus, rather than cutting in toward the Asian coast to Ephesus. They put in at the Lion Harbor at Miletus, which sported a temple of Apollo; the city also had a sizable Jewish community (as did Samos, where the worship of Aphrodite and Isis was prominent).

20:16-17. Waiting for messengers to bring elders from Ephesus would require a minimum of four days. Various reasons for Paul avoiding Ephesus are possible, including any or all of

the following. Their ship had avoided the busy harbor of Ephesus, which was out of the way by the route across Chios and Samos; this ship may have been the only one available going the right direction and with room for all, but had not been going to their exact destination; or the captain could have changed plans. Perhaps more likely, hospitality obligations would risk detaining him in Ephesus. Although Luke does not mention it, some of Paul's elite supporters or former supporters may have felt that it was better for both Paul and his supporters if he remained away from the city (19:23–20:1; esp. 19:38; cf. 21:27 and comment on 19:31).

The land route for messengers to reach Ephesus was over thirty miles, so they would have to travel quickly to arrive by Paul's third day; for those who could leave their work, to do so would be a big sacrifice. But Paul's mission to Jerusalem was urgent; he needed to present the offering at a festival, when Jerusalem would be full and this symbol of the church's ethnic unity would make the loudest statement. It may have also appeared safer for Paul and his Gentile guests. After Pentecost, it would be three months before the next major pilgrimage festival.

20:18-35
Paul's Farewell Speech

Farewell speeches developed a standard form in antiquity. (Jewish "testaments," in which a dying or departing figure left important, wise instructions for his children or followers, were one specific kind of farewell speech; against some scholars, they are less relevant here, because Paul bids farewell rather than dies at the end of the speech.) The language of the speech is more like Paul's than Luke's. Although historians tended to rewrite speeches in their own words, regular *rhetorical training included practice in imitating others' styles (*prosopopoia*). Because Luke presumably had little access to most of Paul's letters (they were not collected from various churches till long after Paul's death), he must have learned Paul's style from direct contact with him. In this case the speech includes even Pauline phraseology and possibly undeveloped hints of the Scripture texts he used, supporting an eyewitness account (he alludes in 20:26 to Ezek 33, and probably in Acts 20:28-29 to Ezek 34:1-8). Ancient speakers were expected to avoid self-praise except in special circumstances such as offering a positive example. The endearing language of the speech fits other intimate speeches (like philosophic discourse to disciples), and the emotional "pathos" was appropriate to farewell speeches.

20:18-19. Appeals to what an audience already knew were common. Many philosophers customarily appealed to their hearers in endearing terms, such as Paul uses here, and reminded them that any reproofs were given as signs of true friendship, as opposed to the flattery of false friends. That this language was common means only that it was culturally relevant to the hearers' needs, not that it was merely an empty *rhetorical form; Paul and most others who used such language also meant it sincerely. Likewise orators often employed moving emotional language, but many who spoke with emotion also felt it. In ancient rhetoric, noting one's misfortunes or struggles against adversity could help dispose audiences well toward oneself.

20:20-21. Moralists often emphasized that they were frank and withheld nothing needed for their hearers' benefit. Ancients often conceptualized the world in private (domestic) and public spheres; the best sages were thought able to address both. Romans considered what was only private to be potentially subversive, but Paul spoke publicly as well.

20:22. True intellectual heroes in Greco-Roman tradition were those who believed their teaching so much that they were willing to die for it. Paul stands in the *Old Testament prophetic tradition of speaking God's message no matter what the cost, but he also presents his message in a manner that resonates with the best in his hearers' culture.

20:23. "The *Holy Spirit's testimony" surely includes prophecies (21:4); early Judaism viewed the Spirit especially as the agent that had inspired the prophets.

20:24. Farewell speeches often explained the need that compelled one's departure. "Finish the course" (e.g., NASB) or "finish the race" (NIV) is an athletic image; philosophers and moralists often used such images to describe their own mission (cf. GNT).

20:25-27. The image of secondhand guilt for someone's blood is common in the Old

Testament (e.g., Deut 21:1-9), but here Paul refers especially to the watchman who does not warn the wicked to turn from his or her way (Ezek 3:18-20; esp. 33:8-9). If Paul is explaining a text, it would not be surprising to proceed to the shepherd image of Ezekiel 34 in Acts 20:28-29.

20:28. "Overseer" was usually a Greek term for a ruling officer, but it appears in the same sense in the *LXX, and the *Dead Sea Scrolls include a Hebrew equivalent. The image of shepherd as a leader (ideally a benevolent one) was pervasive in antiquity, but those schooled in Scripture would think especially of Old Testament language for the leaders of God's people. God would call shepherds to account for how they watched over his flock; see Ezekiel 34:1-8 and comment on John 10:1-18. "Take heed" was standard language for moral exhortations.

20:29-30. Both figuratively and literally, ancients often contrasted predatory wolves with helpless sheep, which the shepherd (20:28) must defend. "Wolves" were viewed as treacherous, unfaithful, deceptive, and greedy for plunder or to exploit in other ways. Jesus had warned of false prophets, and Jewish *apocalyptic texts foresaw great trials for the righteous before the end.

20:31. Exhortation often appealed to people to remember. "Night and day" was a standard way of saying "all the time"; parts of a night and of a day could be reckoned as the whole, and "three years" includes a year and at least parts of two others (cf. 19:8-10). Good public speakers were supposed to feel their speeches enough to express proper emotion and to move the crowds emotionally; both might be moved to tears.

20:32. Jewish people believed that they had been "set apart" by God's covenant. "An inheritance among all those who are sanctified" (NASB) (i.e., "set apart," "separated" or "consecrated" for God) refers to the Jewish hope that God's people would inherit the world to come, just as Israel had "inherited" the Promised Land. Paul applies this language to the believers present.

20:33. Philosophers were often accused of seeking personal monetary gain, and many (especially those who acted from sincere motives) had to deny it, providing supporting evidence for their denial. "Clothes" (NASB) were part of one's substance in the ancient East, just as silver coins were.

20:34. Sages sometimes presented themselves as examples or models. Working with one's hands was not humiliating to an artisan, but in most cities the small upper class (who drew their income from landowning) and most of the philosophical elite despised manual labor. Many *rabbis had trades, but philosophers preferred charging fees, sponging off rich *patrons or (especially in the case of *Cynics) begging. The motives of those who gave freely (what ancients called benefaction) were harder to question, as philosophers who lived off charity and moralists who demanded no return often pointed out. In Ephesus Paul's manual labor may have generated less concern than elsewhere; Ephesus had both many wealthy artisans and a rising class of *nouveau riche,* gradually supplanting the earlier elite class.

20:35. One could close a speech by quoting a familiar maxim. Cf. Luke 6:20-21, 24-25, 35, 38.

20:36–21:6
The Affection of Paul's Friends

20:36-38. Brief kisses might be used in momentary greetings, but repeated kissing and embraces were signs of great affection, such as one would bestow on a family member, a dear teacher or a close friend; thus Paul had bonded deeply with these Christians (cf. 1 Sam 20:41; comment on Rom 16:16). Although some Romans and Greek philosophers believed that it was not proper for men to cry, narrative sources often report it in moving circumstances, such as a sad parting. Narratives sometimes thereby use pathos to emphasize how the persons they describe valued each other (e.g., 1 Sam 20:41). Accompanying a departing loved one to the ship displayed affection.

21:1-2. They put into Cos overnight; a small island, it was on the usual route to Rhodes and had a large Jewish community. (Its chief coastal city was also named Cos.) Wealthy and famous Rhodes was a regular stopping place for ships; its capital bore the same name as the island, and had an influential Jewish community. It had one of the best harbors; on the island's northeast, it faced Patara and was very acces-

sible from Cos to its northwest. Alexandrian grain ships hugging close to the coast of southern Asia Minor frequently made tedious stops at each port, due to the uncertainty of land breezes; thus after they have put in at the prominent Lycian port of Patara in southern Asia Minor, Paul and his companions find a larger ship sailing across open water directly for Phoenicia, cutting along the south of Cyprus, still under a slight time constraint (20:16). Patara was a major port from which Alexandrian grain ships voyaged to Rome (though less significant than Myra, 27:5). At Patara they found a larger ship that could sail the 350 miles (roughly 550 km) across the open sea to Tyre (a voyage of perhaps four or five days) without hugging the coast and putting into many small ports.

21:3. The southern shore of Cyprus, by which they passed, was shallow and had no harbors, so the ship did not try to put in there. The Roman province of Syria included not only Antioch to the north but also Phoenicia and Judea to the south; they had saved considerable time by sailing across the open sea toward Tyre, which would provide safe harbor throughout the year. A large ship could take a month to unload fully; apparently this one takes a week (21:4-6).

21:4. Tyre was just two days' walk from Ptolemais, so mere ship's delays were not what kept them there. Jewish people and Christians could expect hospitality from other members of their groups wherever they traveled; it was an expected part of their culture, honored their host and was an incomparably superior alternative to spending the night in inns, which usually doubled as brothels.

In light of the standard Jewish view that God's *Spirit especially inspired *prophecy, prophecy is surely somehow involved in their exhortation. Yet this phrase is not Luke's usual description of prophecy and probably indicates that they were simply warning him not to go *on the basis of* their prophecies about what would happen (20:23; 21:11). Ancients recognized that prophecies were often ambiguous; among Greeks, they were sometimes virtually riddles. Interpretations of prophecies could be fallible (cf. Jer 35:5; Lk 7:19-20). In Elisha's day, other prophets recognized that Elijah would soon depart (2 Kings 2:3, 5, 7), but their understanding was incomplete (2 Kings 2:15-18); Elijah and Elisha had the fuller understanding (2 Kings 2:2, 4, 6, 9-10), as does Paul here (Acts 21:13-14).

21:5-6. Tyre was known for its smooth sand beaches.

21:7-16
Agabus's Prophecy

21:7. Greetings were a prominent part of ancient Mediterranean culture. Ptolemais was some thirty miles (roughly 48 km) south of Tyre. Ptolemy II had made Ptolemais, a strong fortress once named Acco, an important harbor. It had been under Roman control for over a century, but Claudius had made it a Roman *colony just recently, in A.D. 51. Jewish people as well as *Gentiles lived there (*Josephus, *Jewish War* 2.477)

21:8. Caesarea was thirty to (more commonly estimated) forty miles south of Ptolemais, and if the text suggests that they made the journey in one day, they must have gone by boat. Given the nature of ancient hospitality, much time was probably spent in conversation; guests carried news, and Luke may have heard stories shared by Philip and his former persecutor Paul.

21:9. Some Gentiles associated virginity with spiritual power (as with a special Roman order of celibate women called the Vestal Virgins), but the point of "virgins" here is probably that Philip's daughters are young, under the age of sixteen (cf. 2:17). (Palestinian Jewish women usually married fairly young, between the ages of twelve and eighteen.) The verb tense indicates that they prophesied regularly or habitually. Despite frequent gender and age prejudice in antiquity, most people did respect prophetesses. The Jewish tradition about Job's prophetically endowed daughters (in the **Testament of Job*) might be later, but it illustrates the high esteem in which such prophetesses were often held in antiquity.

21:10. Agabus "came down" from the mountainous part of Judea, including Jerusalem. Caesarea was the Roman headquarters for Judea, but Luke here uses "Judea" in the narrower sense of Jewish Palestine or the region of ancient Judah, rather than the stricter Roman sense. Caesarea had a mixed Jewish and Gentile population.

21:11. *Old Testament prophets often acted

out their prophecies in ways similar to Agabus's action here (e.g., Jer 13:1-11; 27:2). Some commentators point out that the details were not all fulfilled literally (it was the Gentiles who bound him, although his accusers were Jewish), but one need not study the Old Testament prophets long before it is clear that they were allowed a large measure of poetic license, even though the essential message had to be accurate (e.g., 2 Kings 19:7, 28, 33, 35). The girdle was a long cloth wrapped around the waist several times and sometimes used as a pocket; not everyone wore them in this period.

21:12-14. Greeks and Jewish people under the influence of Greek oracular thinking saw predictive oracles especially as preventive warnings (e.g., Jer 18:7-8; Jon 3:4-10); but Paul is convinced that God wants him to face the test (see comment on 21:4). Accounts of martyrs frequently include exhortations to avoid the martyrdom (on account of age, youth, etc.); people also often urged their friends against leaving and against danger. Paul's friends act out of love but must acknowledge his mission (v. 14).

21:15. The journey from Caesarea to Jerusalem would take two or (probably) three days; they lodge overnight with Mnason (v. 16).

21:16. Cyprus had a large Jewish community, some of whom had migrated to Jerusalem and been among the first *disciples (4:36). Mnason must be a person of means to be able to host this sizeable group (20:4-5). "Mnason" was an old Greek name; Jews more often preferred the Greek name, "Jason," but occasionally used "Mnason" too (e.g., a later *rabbi in Rome). Mnason is thus apparently a *Hellenistic Jew; that he provides hospitality for Paul's Gentiles is significant (see 10:23, 28). That Jewish Christians from Caesarea travel with Paul's Gentiles underlines that church's unity, as did Philip's hospitality; Caesarea was bitterly and often violently divided between Jew and Gentile.

21:17-26
Paul's Jewish Identity Affirmed

21:17. This gracious reception would necessarily include hospitality for the whole delegation—including offering lodging in Jewish Christian homes to uncircumcised *Gentile Christians (although Paul himself could have stayed with his nephew's family—23:16). This line thus has more significance than would normally strike the modern reader (see comment on 10:28).

21:18-19. Paul delivers the collection from the Gentile Christians at this time (24:17; cf. comment on 20:1-4).

21:20-22. The Jerusalem believers accept the Gentile work but in so doing are confronted by a conflict with their culture. Jerusalem is not what it had been in Acts 2; tensions are rising, and in the temple *sicarii,* or assassins, are murdering aristocrats suspected of collaborating with the Gentiles. Jewish nationalism has been on the rise since the brief reign of Agrippa I (see comment on 12:1), and nationalism's exclusivity often makes it intolerant of supposedly faithful members of its people who have fellowship with members of other peoples. Thus it is incumbent on Paul to prove the integrity of his Jewishness; he cannot compromise the Gentile mission, but he will intentionally affirm his Jewish heritage at any cost short of unbiblical exclusivism.

The Jerusalem *church is providing an effective indigenous witness within its culture, which is good; but most did not understand Paul's valuable mission to other cultures. James says literally that "many ten thousands" of Judeans believe (v. 20)—though Palestine's estimated Jewish population might be just half a million and the estimated number of *Pharisees just six thousand. It could be *hyperbole, but the estimated number of believers here is not implausible; Jerusalem alone may have had close to eighty thousand residents, and the surrounding Judean countryside would include far more people. James himself was martyred, along with some other *law-observers, by the *high priest a few years after this time, but his witness to his culture had been so effective that those diligent in the law (possibly Pharisees) demanded the removal of his killer from office. The rise of Judean nationalism, however, was also affecting Judean believers. Jews almost universally despised apostates from Judaism and those whose teaching was held to undermine the law. Rumors spread quickly, and those away from the centers of power (earlier, e.g., Caesar from Rome) could not readily defend their reputations.

21:23-26. These precautions are to protect

Paul from false accusations, especially if he is going to move about publicly in the temple courts. Paul pays the fees for the devout Jerusalem Christians who are completing a Nazirite vow. One shaved one's head on the seventh day if corpse impurity interrupted a vow and offered sacrifice in the temple on the eighth day (Num 6:1-21), but the minimum period of the vow according to widespread Jewish tradition in this period seems to have been thirty days, so scholars differ on the exact meaning here; that Paul is purified and helps them need not mean that he participated in their vow. Those (like Agrippa I) who used their own funds to pay the expenses of Nazirites were considered pious (Josephus, *Jewish Antiquities* 19.293-294).

21:27-36
Riot in the Temple

Under Cumanus, the Roman governor immediately preceding Felix (23:24), a Roman soldier lewdly exposed himself in the temple area; Josephus estimated that ten thousand people were trampled to death in the ensuing riot (*Jewish War* 2.224-27; doubled in *Antiquities*). When another soldier burned a Jewish Law scroll, Cumanus acceded to the crowds' demands and executed him (*Jewish War* 2.229-31). Hostility against *Gentiles and collaborators with Gentiles had been mounting, and in less than a decade would lead to a war that would produce massacres (reportedly over twenty thousand Jews slaughtered in Caesarea in an hour; *Jewish War* 2.457-58) and culminate in the temple's destruction.

21:27. "Asia" means the Roman province of Asia, in what is now western Turkey. The chief city of Roman Asia was Ephesus, where Paul had incurred some enemies in the Jewish community (19:9, 33-34); thus they recognized an Ephesian Gentile in 21:29.

21:28. The temple mount consumed most of northeastern Jerusalem. Although Scripture welcomed Gentiles to the temple (1 Kings 8:41-43), a later understanding of purity led to their separation from the Court of Israel (exclusively for Jewish men) and even the Court of Women (which excluded Gentiles; Josephus, *Against Apion* 2.102-5). The barrier between the outer court, open to the Gentiles, and the Court of Women was about four feet high, with warning signs posted at intervals in Greek and Latin: "Any foreigner who passes this point will be responsible for their own death" (the inscriptions are reported in ancient literature and one has been found by archaeologists; cf. Josephus, *Jewish Antiquities* 15.417; *Jewish War* 5.194; 6.125-26). This was the one offense for which Jewish authorities could execute capital punishment—even on Roman citizens—without consulting with Rome. (This special privilege was also accorded the Greek temple at Eleusis; but Rome delegated the right of execution only in rare cases like these, because local nationalists could otherwise use the penalty against Rome's own supporters.)

21:29. Ephesus was the chief city of the Roman province of Asia, and the Jewish community there knew Paul and his companions well (19:33-34; cf. 18:19-21, 26). Although the assumption of these Jews from Asia is false, it is occasioned by Paul's relationships with Gentile Christians, which he would not compromise.

21:30. Antipathy toward Gentiles and their collaborators was growing (and would lead to war with Rome less than a decade later). Reports of temple desecration could lead to uncontrolled riots; a few years earlier, as noted when a Roman soldier exposed himself in the temple, a riot led to hundreds of trampling deaths (never one to underestimate, Josephus guesses twenty thousand; *Jewish Antiquities* 20.112). They drag Paul "out of the temple," from its inner courts, into the outer Court of the Gentiles. Most of the temple's gates each had two doors, somewhere around fifty feet high (around fourteen meters) and more than twenty feet (or about seven meters) wide (Josephus, *Jewish War* 5.202-5); the largest gate was perhaps eighty feet (roughly twenty-five meters) high and more than sixty feet (close to twenty meters) wide (*Jewish War* 5.205).The *sagan,* or chief of the Levite temple guard, may have ordered the doors at the Court of Women shut to keep out other intruders or to keep the violence certain to ensue from spilling into the temple proper; bloodshed violated a sanctuary. (Josephus regarded the shedding of blood in the sanctuary as the "abomination of desolation"; keeping bloodshed from the sacred precincts

was important.) Alternatively, outer gates may have been shut to prevent escape; or (perhaps most likely) all gates were shut for the moment.

21:31. That the report "came up" to the officer and (in 21:32) the soldiers came down fits the topography of the temple. On the northern part of the Temple Mount was the fortress Antonia, which housed a permanent Roman garrison of 480 to (at its heaviest strength) 600 men; from its towers guards watched for disturbances, especially during festival seasons (relevant here; see 20:16). (Its southeastern tower was more than one hundred feet, or over thirty meters, high, allowing guards to observe the entire temple mount; Josephus, *Jewish War* 5.242.) To rush into the outer court of the temple, they had only to rush down the stairs from the fortress. The "commander" is a *chiliarch,* or tribune, literally commander of 1,000 but actually of 480 to 600 troops. Most tribunes were drawn from the small, well-to-do Roman "knight" class, using the office briefly as a political stepping stone. (This tribune is an exception; see 22:28.)

Judea's Roman governor lacked a full legion (some six thousand troops), but had five auxiliary cohorts, each with about 480–500 infantry. Most cohorts stayed with the governor in Caesarea, but one resided in the Fortress Antonia, on the northern side of the Temple Mount; the cavalry in 23:23 suggests a cavalry unit at this time (which added 120 riders to the infantry). The garrison's strength was bolstered for festivals, possibly relevant here (cf. 20:16).

21:32. Because "centurions" (KJV, NASB, NRSV) is plural, many soldiers are likely in view (a centurion commanded about eighty troops, although this rapid, emergency deployment may not involve such precision). These troops would be enough to disperse a crowd (cf. Josephus, *Jewish Antiquities* 20.111), although they had not always been effective in the recent past. The beating was presumably to kill Paul, to avenge the temple's sanctity.

21:33-34. Paul is apparently bound between two soldiers (12:6); chains were considered shameful. Apparently believing reports that the crowd has captured a troublemaker, the tribune reasonably asks for coherent witnesses with specific charges; guesses vary (21:34; cf. one guess in 21:38). Ancient audiences were well aware that confused mobs were unreliable; such were those who opposed Paul (cf. 19:29, 32).

The "barracks" by the temple is the old castle Antonia, called Baris by the Hasmoneans but renamed for Mark Antony by his friend Herod the Great.

21:35. The steps of the fortress Antonia led directly down to the temple's outer court.

21:36. Some Greek writers of this period liked to draw parallels between analogous historical figures; Luke's record here parallels Jesus and Paul (Lk 23:18).

21:37–22:2
Paul and the Tribune

21:37. In the eastern part of the empire, Latin was confined to use in the military and in documents concerning Roman citizens. The public administration of Syria-Palestine used Greek, which was also the first language of the Jerusalem aristocracy, and most Jewish people in Palestine knew at least some Greek. The "tribune" (NRSV) or "commander" assumes that Paul is a particular troublemaker (v. 38); most rabble-rousers he would know of would have spoken *Aramaic by choice. But most Egyptian business documents of this period were in Greek, which Egyptian Jews normally spoke; he thus should not be surprised that one he supposes to be an Egyptian speaks Greek. The point is not that Paul speaks Greek; it is that he speaks it without an accent, like someone educated and fluent in the language by Aegean standards, which the tribune assumes the Egyptian Jew who had caused problems would not be. Egyptians were normally supposed to have a distinctively Egyptian accent.

21:38. *Josephus wrote (*Jewish War* 2.261-63) of a Jewish false prophet from Egypt who gained a following of roughly thirty thousand (a figure less realistic than those given in Acts), leading them from the wilderness to the Mount of Olives. The Roman governor Felix (23:24) defeated him, but the Egyptian himself escaped. Many of the messianic-prophetic figures reported in this period gained followings in the "wilderness," probably partly because they were safer there from official intervention, but perhaps also expecting deliverance to come like a new exodus under a new Moses.

The word for "assassins" (NASB) or "terrorists" (NIV) here is *sicarii.* These were Jewish terrorists who carried curved daggers under their cloaks and brutally stabbed to death aristocrats in the midst of crowds in the temple, then slipped back into the crowds unseen. A few years after this encounter they kidnapped people to secure the release of their own adherents held by the procurator. Others terrorized the countryside. Josephus's final reports of them are at the fortress Masada, where they finally perished in A.D. 73. The tribune might be confusing two different kinds of threats, perhaps based on conflicting guesses from the crowd (21:34).

21:39. Romans and Greeks in this period often looked down on Egyptians (21:38), but Tarsus was a respected city. Citizenship in a Greek city gave one higher status than the many who were merely "residents" of the city (who were in turn considered above transients and rural people). One became a citizen only by birth in a citizen family or as a grant from the city authorities. City pride and rivalry were fierce in antiquity, especially in Asia Minor, and Tarsus was a prominent city. It was one of antiquity's chief educational centers. Rome had made Tarsus a "free" city, the highest honor a city in the empire could receive next to being a Roman *colony. Tarsus's citizens were not automatically *Roman* citizens (it was not a Roman colony), but dual citizenship was allowed in this period. Paul saves his disclosure of Roman citizenship as a trump card in case he needs it later. Although most Jews were not citizens of Gentile cities, some of their most prominent members were. Paul's Roman citizenship was more important than his Tarsian citizenship, but perhaps based on what he had learned in 16:37-40, he saves that privilege for later use in case he needs it.

21:40. The tribune grants Paul permission to speak, probably hoping that he will clarify his identity to a crowd he thinks has wrongly supposed him a leader of temple assassins. Good speakers were supposed to be able to quiet crowds (cf. 19:35), and certain gestures would indicate a request for attention (the tribune's presence would have helped). "Hebrew" (a language Paul would have studied; cf. 22:3) is possible, but is here probably a loose expression for *Aramaic (so NIV), long the vernacular of much of rural Syria-Palestine and all lands to the east (cf. Neh 8:8). It is especially significant for Paul's purposes that Aramaic was the vernacular of the Jewish nationalists, and that Paul speaks it as well as they (cf. Phil 3:5). Neither the tribune nor his Asian Jewish accusers (21:27-29) would understand any of what Paul is saying, however; Aramaic is similar to Hebrew, but bears little relation to Latin and Greek (see 22:24).

22:1. This typically Greek way to begin a speech reflects the extent to which Greek culture had permeated Palestine (Greek loanwords even occur throughout rabbinic Hebrew; Paul's hearers would not automatically associate his words with Gentile culture). The parallel with Stephen (7:2), who provoked his audience to martyr him, also builds suspense for Luke's readers.

22:2. Those who thought that they had caught a *Diaspora collaborator with the Gentiles must have reconsidered after they heard his fluent Aramaic (see comment on 21:40).

22:3-21
Paul's Speech in the Temple

Rhetoricians urged building rapport with one's audience at the beginning of a speech, if possible. Of the three accounts of Paul's call, this is the one clearly designed for a nationalistic Jewish audience; good *rhetoric included adaptation for one's audience. Despite his clear Jewishness, however, his refusal to compromise God's call to the *Gentiles in the end incites the crowd's wrath (22:21-22). Paul was always sensitive to his audience but never willing to compromise the *gospel. Speeches usually included a *narrative component; this component takes up Paul's whole speech, perhaps because he is not permitted to complete it. The outcome of this speech during the Pentecost season (20:16) contrasts starkly with the outcome of Peter's Pentecost message in chapter 2.

22:3. Tarsus was famous for its education, but while many Tarsians did their studies there, many also went abroad. Alexandria might be a more prestigious center for studying rhetoric, but for the study of Torah a *Diaspora Jew could have no greater place for education than Jerusalem. Paul, however, may have emigrated before this advanced stage. In

ancient statements, "brought up" and "educated" (NASB) typically refer to different periods in a person's life; thus Paul was raised in Jerusalem (cf. 23:16; see comment on Phil 3:5) and studied to become a teacher of the *law under the prestigious Gamaliel I—the famous successor of *Hillel (see comment on 5:34-35). (Paul's family was probably well-endowed to be able to fund such an education.) Although he was born in another country, he can therefore explain that he is really a Jerusalemite by upbringing and an orthodox Pharisaic teacher by training.

As a son in an educated and perhaps aristocratic home (his father being a citizen; cf. also 9:1), Paul may have begun to learn the law around his fifth year and other Pharisaic traditions around his tenth year, and to pursue training to be able to teach the law sometime after turning thirteen (cf. also Gal 1:14 and his letters' debate style). He would have probably completed his role as *disciple no later than age twenty (and perhaps much earlier). Although Gamaliel's household may have included education in Greek, Paul's tertiary academic focus, in whatever language, was Scripture; those focused on rhetoric or philosophy normally did tertiary study elsewhere. People who could afford to do so normally sat on chairs (or reclined on couches for banquets); sitting at someone's feet was taking the posture of a disciple. Paul's model for "zeal" may have been Phinehas, who killed for God (Num 25:13), and his successors in the *Maccabees, who because of zeal killed those they considered traitors in Israel (1 Maccabees 2:26, 54; 3:8; cf. *4 Maccabees 18:12). Within eight years of Paul's speech the revolutionaries were calling themselves "*Zealots," those zealous for God; this title may thus have appealed to Paul's more nationalistic hearers.

22:4-5. See comment on 9:2. Prisons were usually temporary sites for detention until trial or punishment. A different *high priest is now in office than when Paul received letters of authorization (23:5), but Paul may depend on the leaders' collective memory.

22:6. People normally tried to avoid the noonday sun if possible, seeking shade for themselves and their animals and often eating and/or taking a siesta at that time. Nevertheless, it was unavoidable on urgent missions and on long journeys which required that much of the day be spent traveling.

22:7-15. The background is essentially the same as in 9:4-17, although this speech emphasizes different features, such as Ananias's Jewish piety, which would commend themselves to Paul's nationalistic hearers. Minor differences of detail would not have concerned ancient audiences the way they sometimes concern modern ones.

22:16. Some *Old Testament texts speak of ritual washing away of sins (Lev 14:19, 31; 16:30; Num 8:21), but other texts apply the language figuratively (e.g., Ezek 36:33; 37:23; 43:22), most prominently Ezekiel 36:25.

22:17. The ancient Near East and eastern Mediterranean world had a long tradition of receiving revelations (often dreams) in sanctuaries or holy places. God had revealed himself to his servants in such places in the Old Testament (1 Sam 3:3-10; 1 Kings 3:4-5), and Paul's hearers would regard the temple as the most appropriate place to receive revelations (cf. comment on 7:2-7).

22:18. If Paul had been in danger in the past (as he narrates here), he is in even more danger now, with hostilities rising against Gentile collaborators; Paul would not be able to speak long after this point and could not realistically intend to get past the *narratio* of his speech (the narrative part occurred early in a speech).

22:19. At least in later times, the *chazan,* or *synagogue attendant, was normally responsible for beating wayward Jews as public discipline for their crimes, after judges (probably elders; *rabbis in a later period) pronounced judgment. If Paul had been given this responsibility, it was due to some respected authorization (similar to that mentioned in 22:5).

22.20. See comment on 7:58.

22:21. Like Jesus (Lk 4:22-30), Paul knows that this statement will offend his hearers, given the escalation of Jewish-Gentile tensions in Palestine in recent years, tensions that would soon escalate into war (A.D. 66–73). But he cannot compromise the gospel that makes siblings out of believers from different peoples and backgrounds. Ironically, it is Paul's commitment to welcome Gentiles that will lead momentarily to his Roman custody.

22:22-29
Examining Paul

22:22. The reaction is predictable; see comment on 21:20-22; cf. Luke 23:18, 21. On interruption, see comment on 10:44.

22:23. Throwing dust on one's head was a sign of mourning; removing it from one's feet meant removing what was unholy (13:51); they may also shake dust from their removed garments to repudiate Paul (cf. 18:6). Here they might wish to stone him but have nothing else to throw at him at the moment (cf., e.g., 2 Maccabees 4:41). They may throw off their cloaks for the same reason (perhaps they also tore them, as one would after hearing blasphemy), although Luke may record it ironically to underline their guilt: see comment on 7:58.

22:24-25. Even had Paul not been a Roman citizen, the tribune would have no authority to try a provincial belonging to another jurisdiction (21:39), after he had quelled the unrest. But it was legal to scourge slaves or aliens, to extort confessions or to determine the truth concerning a situation. In younger days, Paul had experienced Jewish synagogue beatings and lictors' rods. But this scourge is with a more dangerous Roman whip, which typically included either iron chains ending in metal balls or leather thongs into which pieces of metal or bone were woven. It could tear open the flesh, leaving it hanging in bloody strips or even exposing bones. It could easily lead to the victim's death, and would certainly scar and probably maim him. Centurions were sometimes left to supervise executions and related duties.

But the Porcian and Valerian laws exempted Roman citizens from such beatings without trial. Paul's citizenship excluded him from being tortured for information, and together with his being untried, it excluded him from punishment.

22:26-27. In this period, Roman citizenship was not common in the east, especially among the non-elite, so no one had expected it for this prisoner. Paul might wait until he has been chained for the same reason as in 16:37: he now has legal room to maneuver against *them*. Law prohibited even *binding* a Roman citizen without trial; although not all governors followed the law, the tribune would be wise to avoid a breach that could bring him into trouble with the governor. If one claimed to be a citizen, officials were supposed to treat him as such until documentation could be procured or checked.

22:28. Scholars note that one could achieve Roman citizenship in several ways: one could be (1) born to a Roman father (so Paul); (2) a citizen of a Roman *colony (say, Pisidian Antioch, Corinth or Philippi); (3) a retired auxiliary soldier; (4) given a special privilege from Rome (granted to groups or individuals), sometimes as part of a municipal aristocracy or other group honored by Rome; or (5)—and this was most common after being born in Rome or in a colony—a slave freed by his or her owner (so perhaps Paul's ancestors).

This tribune or commander, Lysias, bought his citizenship by a bribe, which was common under the preceding emperor, whose name he took (23:26). To achieve the status of a tribune, he must have had a powerful *patron or been one of the rare individuals who toiled his way up through the ranks to this position, probably partly with more bribes. Tribunes were usually equestrians (the Roman knight class) working their way up the political career ladder; this one had not even been born a Roman citizen. But the current governor himself was not an equestrian, so Lysias may not have experienced much disadvantage.

Lysias the tribune may want to assess Paul's relative status. Some commentators note that the cost of citizenship bribes declined toward the end of Claudius's reign, so he may be suggesting, "You probably acquired your citizenship more cheaply than I acquired mine!" (Claudius's successor reduced such corruption, so the information Luke reports here reflects the period in question.) Paul may have replied in Latin: he was *ingenuus,* a citizen by birth (though cf. his family in 16:37). Those who were born citizens had higher status in that regard than those who achieved it; Paul thus has superior citizenship status in some sense.

22:29. See comment on 22:26-27. Not all officials would have cared about violating the law—some Roman procurators crucified Jerusalem aristocrats who were Roman citizens—but a tribune was not a governor, and could be held more accountable for actions if accusations came and the governor deemed it politically expedient.

22:30–23:10
Before the Sanhedrin

The Sanhedrin was the highest Judean court. The *Pharisees and *Sadducees disagreed on many points. The Pharisees apparently had less power and representation on the council, but some of them (like the aristocratic Simon son of Gamaliel I) would have had some power.

22:30. Because Paul's offense is clearly a religious one related to the temple, the perplexed official is going to try to ascertain the charge by consulting the Sanhedrin. This council met regularly (though not all members were present on every occasion) and would undoubtedly grant a hearing requested by the Roman garrison's tribune.

23:1. *Rhetorically, Paul's claim here (cf. also 24:16; Phil 3:6) may seek to build rapport with devout hearers in his audience (cf. Acts 23:6). In court cases, much often hinged on the person's known character; whenever the accused could claim to have lived his life previously free of reproach, it counted in one's favor rhetorically.

23:2-3. Ananias was *high priest from A.D. 47 to 58 or 59, at which time Agrippa II removed him (see comment on 24:27). Ananias was popular and powerful but also a Roman vassal, known for his greed in a period when rapacious aristocratic priests were stealing the tithes belonging to the poorer priests. Aware of his abuses, the *Zealot revolutionaries killed him in A.D. 66, perhaps eight years after this hearing. Sadducees were known for their harshness. Slapping one on the cheek was a grievous insult (see comment on Mt 5:39), sometimes experienced by prophets (1 Kings 22:24; 2 Chron 18:23); officials could use it to defend their honor, but it was technically illegal and considered unfair in a court setting.

Jewish *law forbade unjust treatment (e.g., Lev 19:15), including condemnation before the accused was proved guilty. Paul's appeal to Scripture may build rapport with devout Pharisees (cf. Acts 23:6), who were known for careful adherence to Scripture and who were less comfortable with the high priest's abuses of power. Judicial rhetoric often returned charges on the accuser; Paul accuses his abuser of violating the law. He also pronounces judgment like a prophet; Ananias was murdered by revolutionaries in A.D. 66. A "whitewashed wall" was one whose weakness or ugliness might be concealed—but not changed—by a veneer of whitewash: an appropriate condemnation of abusive leaders of Israel (Ezek 13:10-11; 22:28). Walls facing the street in the eastern Mediterranean were often whitewashed. Ancient sources often honor those courageous enough to confront tyrants.

23:4-5. One should not speak abusively of magistrates (Ex 22:28), but Ananias's behavior undermines the integrity of his office. Paul has simply appealed to God's true judgment to reverse the charge and punishment. The *high priest normally sat in a special place and exercised obvious authority (though he would not wear his special, high-priestly robes for this kind of setting). Either he does not do so here because the gathering is informal, or (more likely) Paul answers ironically, because of the official's corruption and improper claim to power. Socrates and others had endeavored to show themselves more pious in the matter concerning which they were accused than their judges were, which naturally led to condemnation by an angry court. Paul is content to show his piety by citing Scripture (which will appeal to the *Pharisees; 23:6).

23:6. "Son of Pharisees" could be a figurative expression for discipleship; if meant literally, it would be likelier that his father joined the sect after moving from Tarsus (we have little evidence for Pharisees in the *Diaspora). Other sharp-witted Jewish strategists of this period, like *Josephus not many years later (*Life* 139, 28), also practiced this method of "divide and conquer." Paul finds supporters to whom he can appeal. The hope of the *resurrection was central to Judaism, and many martyrs had died staking their hope on it. Paul's views did not violate any central tenets of Pharisaism; he was now a "Pharisee plus," who taught that the resurrection had already been inaugurated in Jesus. Pharisees recognized that no true Pharisee would have committed the crime with which Paul had been charged by the original crowd (21:28). Moreover, Paul maneuvers strategically: if the tribune can be persuaded that his opposition's motives are merely theological, this verdict will later help his case before the governor (24:20-21).

23:7. Pharisees and Sadducees were notorious for their disagreements, especially over the doctrine of the resurrection; Pharisees taught that Sadducees had no part in the world to come, because they did not believe in life after death (at least not in a form acceptable to most other Palestinian Jews).

23:8. Some scholars contend that the Sadducees believed only in the five books of Moses; but even if this were the case, they must have believed in the angels that appeared in Genesis. Luke's parenthetical comment here probably refers to the Sadducees' denial of the developed angelology and demonology of the Pharisees (12:15 is not Pharisaic), or maybe ideas about people becoming angels after death or being resurrected in angelic form. "Spirit" may address a different issue: The Sadducees reportedly did not believe in life after death; belief in an afterlife before the resurrection allowed Pharisees to accept that Jesus could have appeared to Paul as a spirit (cf. 22:7-8; 23:9) even if they did not accept his resurrection. Many Jewish people believed that resurrection bodies would be like angelic bodies; some also portrayed the intermediate state in angelic terms.

23:9. From the Pharisaic standpoint, if Paul were being condemned for being consistent with his doctrine of the resurrection, then it is natural that the Sadducees want him convicted and likewise natural that the Pharisees and Sadducees should oppose each other on this matter. Later Pharisaic reports declare that the Sadducees would have no share in the world to come, because they did not believe in it. Pharisees, who believed in angels and afterlife, could allow that Paul had a revelation from some spirit.

23:10. Mobs sometimes tore people apart. Raucous though they were, disputes in courtrooms chaired by high officials rarely came to blows; nevertheless, it sometimes happened, even in elite bodies. For example, Josephus shows that in this period some members of Jerusalem's elite became so hostile toward each other that they threw stones at each other (*Jewish Antiquities* 20.180, 213). Ancient sources do report that the Sanhedrin and even the Roman Senate broke into confusion sometimes.

The site of the council chamber favored by most scholars today (based especially on Josephus) adjoins the temple on the southwest, perhaps a third of a mile (or half a kilometer) from the Fortress Antonia, where the Roman garrison lay. Nevertheless, Lysias probably had soldiers with him (for safety if nothing else; 21:38). Soldiers from the "barracks," the Fortress Antonia, on the northwest of the temple mount, would have approached this hall along the west side of the temple, for a distance of over a thousand feet. Prisoners could be detained in the Fortress Antonia, but it also could be a place of relative comfort; it included a bathhouse and rows of rooms.

23:11-22
The Plot Against Paul

23:11. See comment on 18:9-10.

23:12-13. Vows of abstinence (promises to abstain from something for a designated period of time) were common. One would swear an "oath" by calling a deity to witness, inviting the deity's vengeance if one broke one's word. Revolutionary-minded Jews considered some assassinations pious acts; Herod the Great had once executed ten Pharisees who had formed an association by oath for the purpose of killing him. If Paul's enemies eventually broke their oaths to kill him, Jewish *law would simply require them to bring *atonement offerings to the temple; thus their oath here does not mean they would literally starve.

23:14-15. Ambushes by robbers and terrorists were common (e.g., Josephus, *Jewish War* 4.538), especially at night. During these years shortly before the Jewish war with Rome, the *sicarii* (21:38) regularly assassinated Jews suspected of collaboration with the Romans, and all Palestine was uneasy; this report is thus quite believable. That some aristocratic priests, who in the war of 66–70 turned out to have their own violent agendas, would cooperate in this plot is not surprising. Some of them, and especially some younger members of their families, had revolutionary sympathies, though much of this class remained more loyal to Rome (cf., e.g., Josephus, *War of the Jews* 2.409; 5.6). (These priests would be some high Sadducean members of the council, not Pharisees.) As noted at 23:10, Paul's place of detention was probably not far from the council chamber; soldiers bringing him would have to

march the thousand to fifteen hundred feet between the Antonia and (probable) location of the council chamber (see comment on 23:10), most of it in fairly narrow formation through public space adjoining the temple.

23:16. Ancient writers report a number of plots foiled on account of "leaks." Ancient historians report leaks from the Roman Senate, the Jerusalem Sanhedrin and groups such as this one. If Paul's sister was raised with him in Jerusalem, the whole family had presumably moved there from Tarsus after Paul's birth, rather than only having sent him there to study. If she married into a similar (Roman citizen) family, Paul's nephew would be a Roman citizen, perhaps aiding his access at the Antonia. People could visit prisoners at the guards' discretion (easier for light detentions, but sometimes facilitated with bribes).

23:17-18. In custody, persons of status were sometimes guarded by centurions; on occasion they even became friends (Josephus, *Jewish Antiquities* 18.230-31). Paul's access to centurions indicates that his custody is a relatively light one at this point; his status as a Roman citizen in the East would have helped him.

23:19-21. Taking one by the hand was often a gesture of peace, welcome or assurance.

23:22. The tribune must act quickly and discreetly or be seen favoring this report over counterclaims by Jerusalem's aristocrats. Assassins also killed collaborators, so discretion would help protect Paul's nephew.

23:23-32
The Commander's Countermeasures

23:23. Somewhere around this period Rome began using units of eight hundred to a thousand soldiers; until this transition, units of 480 soldiers, or (for partly mounted units, as here) 480 infantry and 120 horsemen, were more common. The commander's assignment of two hundred soldiers with the centurions (perhaps a paper strength; two centurions might command only 160 troops in practice) to guard Paul would weaken the garrison in Jerusalem's fortress Antonia significantly; thus they must return quickly (23:32). Some evidence suggests that the two hundred "spearmen" (NASB; NRSV; the term is rare) may be non-Roman light auxiliary infantry. Given the unrest in Palestine and night attacks by robbers, especially prevalent under governor Felix's tenure, a smaller contingent would not be safe in the hills of Judea at night.

The Roman procurator or governor resided in Caesarea, visiting Jerusalem only for the feasts (to insure order). Whether or not Felix came in person for Pentecost (which has just occurred, 20:16; 24:11), he is now in Caesarea; governors usually strengthened the Jerusalem cohort during festivals, so possibly additional troops were stationed in Jerusalem at this time, some of which would be scheduled to return to Caesarea soon. Caesarea was the military headquarters for Judea (the Roman overseer for all Syria-Palestine resided in Syria); a few years after this scene, Syrian residents slaughtered thousands of Jews there.

Leaving at 9 p.m. (the night's "third hour"), might supply sufficient darkness to keep the nature of their activity obscure, while leaving enough of the night to keep them well on their way to Antipatris. Even then, only a protracted march would get them well on their way; Caesarea was sixty miles away.

23:24. Ancient historians do not portray very favorably Tiberius Claudius Felix (*Tacitus said Antonius; Josephus, in a better position to know, said Claudius; an inscription may support Josephus's position but the matter is disputed); he governed from A.D. 52 to probably 59. He married three princesses in his lifetime; most relevant among these, shortly after he became procurator of Palestine, he convinced Drusilla to divorce her husband and marry him (24:24). Although technically unqualified, he secured his position because his brother was Pallas, a powerful freedman of Claudius, emperor from 41 to 54. Tacitus reported that Felix was corrupt, having a king's authority but a slave's mind (from a Roman aristocrat, the latter was hardly a compliment). Josephus likewise condemned him as thoroughly corrupt, accusing him of bloody massacres and repression. He remained procurator until A.D. 59 or 60 (see comment on 24:27).

23:25. The empire (except perhaps for Egypt) had no postal service except for official government business; most people sent letters via persons who were traveling, or (for official imperial business) by the Roman military's

imperial post. The commander sends this letter with the soldiers. Its legal terms confirm that it is a formal referral; as part of Paul's court dossier, it would have been available to both Paul's supporters and accusers.

23:26. This was the standard greeting in letters, and the respectful title was standard for an equestrian official (equestrians were the so-called knight class). Although Felix was not equestrian, his power and status as procurator made that fact irrelevant. Indeed, despite his low birth, his three successive wives (Drusilla probably being the final one) were all from royal households. Lysias is a Greek name; because he achieved citizenship under the emperor Claudius (notorious for selling the privilege indiscreetly), this *patron's name has become part of his own.

23:27-29. Subordinate officials sometimes put their own slant on a story to make themselves sound good to their superiors; this commander, who may have worked his way up through the ranks (22:28), knows how to play the game well. Given ancient Mediterranean emphasis on gratitude obligations, Lysias can trust Paul as an honorable person not to put Lysias in a bad light with Felix, an action also not in Paul's interests.

23:30. Local officials (and as Rome's chief representative in Jerusalem, this military tribune was an official) had to determine which cases should be referred to the procurator. This was obviously such a case. Given the heavy case load in Caesarea, there could be a long delay in Paul's case; Lysias' urgent actions may help move the case up on the docket (though ultimately the status of the official plaintiffs will effect this result in any case; 24:1).

23:31. Troops were able and trained to undertake all-night marches when necessary, as Josephus and other ancient historians testify. When military discipline was properly observed, soldiers exercised daily, and were drilled regularly with forced marches of twenty miles at four miles an hour; sometimes the drills were closer to five miles per hour. Antipatris was less than thirty miles (about forty-five kilometers) south of Caesarea, about a day's march. But by the shortest route Antipatris was at least thirty-five to forty miles (fortunately downhill) from Jerusalem, hence the troops would have to march all night (and into the morning) at a much faster pace than normal travelers. (Such rapid forced marches are reported for soldiers in emergency situations, such as nocturnal surprise attacks.) Antipatris bordered Judea and Samaria, and was a natural stopping place on the inland road between Jerusalem and Caesarea.

23:32. The infantry's return journey need not have been undertaken so rapidly, nor with so much protection, because it would be in daylight and brigands more frequently and dangerously struck at night. It would be unwise, however, to leave the Antonia garrison's force depleted very long (cf. 23:23). The mounted troops continuing to Caesarea could proceed across the mostly *Gentile open plain more quickly without infantry protection, but the infantry had been needed during the night journey in mountainous terrain infested with Judean brigands.

23:33–24:9
The Hearing Before Felix

The technical details of the trials here accord so well with other evidence on Roman legal procedure that some noted Roman historians use them as major source material for understanding Roman provincial judicial proceedings. Ancient writers often highlighted parallels between major characters; Luke's Gospel reports three hearings of Jesus (two before the governor and one before a Herodian ruler), and Acts reports three hearings of Paul once he is in Roman custody (two before governors, one before Herod Agrippa II). Courts kept written summaries of the speeches offered. Courts used the shared language of participants, in this case, Greek.

23:33. Caesarea was divided between Jewish and *Gentile residents, with harsh tension between them. Josephus (admittedly known to inflate figures) claims that, with the outbreak of war a few years later, Gentiles massacred over twenty thousand Jews in Caesarea in a single hour.

23:34. Normally people read aloud, so Paul would hear the letter. It was good protocol to check the jurisdiction to which a person belonged before deciding a case. Officials had the authority to try the accused, wherever he might be from, for crimes committed in their region of jurisdiction; but they could also refer

the case of the accused to the governor of the latter's home province, a procedure less complicated for Felix here. Some ancient writers liked to draw parallels between related historical figures; here, cf. Luke 23:6-9.

Cilicia was an imperial province, the capital of which was Tarsus. But during Paul's period (not, however, Luke's period), Cilicia was governed as part of Syria. The Syrian legate had too much territory to concern himself with a relatively minor case, so Felix assumes jurisdiction rather than troubling his superior.

23:35. Hearings for Roman citizens arraigned on capital charges required painstaking examination, if Felix were to follow the law. Accusers normally initiated proceedings in a Roman court, so Felix awaits their arrival. The procurator's residence in Caesarea was a palace built by Herod the Great; Paul was thus kept elsewhere in Felix's own residence. Officials generally provided better accommodations for prisoners of higher status.

24:1. Given Judea's political situation, Felix would defer to the *high priest and grant an immediate hearing. The status of the forces against Paul is serious; Felix was now governor because Ananias and his associates won a case against Felix's predecessor in office (Josephus, *Jewish War* 2.243-47), but Felix's relationship with Ananias may not have been entirely positive. Although Tertullus bears a fairly common Latin name, he could easily be a Jewish Roman citizen like Paul. As noted here, the plaintiffs would summarize the nature of the case before Paul was brought in.

24:2. Although a full speech could last for two hours, abbreviated forms (such as we have here) were recorded and kept as legal documents; Luke could thus cite actual court summaries here. The prosecution would always begin first, both in Roman and in Jewish trials. Tertullus begins his speech with a standard *captatio benevolentiae*—flattery to secure Felix's favor. (*Rhetoric manuals emphasized winning the judge's favor, and speeches before public officials always opened by praising them. "Peace" and "foresight" are common topics of praise for administrators, and also relevant to this case.) Although flattery was sometimes true, this example is blatantly false: revolutionaries had escalated under Felix's corrupt, repressive administration, which brought neither peace nor reforms. Tertullus's speech includes flowery rhetoric (including some alliteration) but is weak on facts.

24:3. "In every way and everywhere" is a good rhetorical flourish (rhetoric valued repetition of sounds).

24:4. Many valued conciseness, and one could offer claims or promises of brevity. As here, speakers could also apologize for wearying the official as if they had not really finished praising him; this was a rhetorical technique for flattering someone even beyond the limits of one's own rhetorical skills or credibility.

24:5-6. Compare the analogously triple charge of Luke 23:2; some historians liked to parallel different historical figures. Paul's accusers make themselves out to be allies of the Romans, who especially in these years were concerned about Jewish unrest throughout the empire. "Pest" (NASB) or "pestilent" (NRSV) and "throughout the world" resemble a charge the emperor Claudius had leveled against Jewish agitators. Profaning the temple was a capital charge, and inciting people to riot against Rome was *maiestas,* treason; Rome treated sedition (stirring unrest) as one of the worst crimes. Tertullus could accuse Paul only of *trying* to desecrate the temple, because no witnesses had apprehended a *Gentile with him in the temple (21:29).

If one's opponent in court were known to be a persuasive speaker, it was also common to warn about his crafty speaking ability; and character defamation (often freely invented) was a major part of winning ancient lawsuits.

"Sect" is not a derogatory term in itself. The term was employed simply to designate various Greek philosophic schools and (by *Josephus) various schools of thought in Judaism (such as *Pharisees or *Sadducees). "Nazarenes" (a term Jewish Christians in time generally applied to themselves) was perhaps originally an insult, calculated against the obscurity of Jesus' hometown (cf. Jn 1:46).

24:7-8. The text of verses 7-8a is questionable (see marginal notes in translations). Invitations for judges to examine matters for themselves (as in 24:8b) were frequent in forensic rhetoric. Of course, judges could investigate and decide with or without the liti-

gants' permission, so the invitation was just another way of *implying* the correctness of one's assertions.

24:9. It was common in forensic rhetoric for accusers to amplify charges with unsupported assertions of guilt; speakers on both sides normally also claimed to present only the facts. Assertions by a number of people of status could carry weight, and Felix had political as well as judicial considerations in this case (members of Jerusalem's aristocracy, some of them Roman citizens, versus a Roman citizen who, according to them, was a leader in a widespread movement). A few years earlier, Judeans protested so severely after a Roman soldier burned a Law scroll that the Roman governor had him executed.

24:10-21
Paul's Defense Before Felix

Paul's *rhetorical skills prove more effective than those of his paid accuser Tertullus.

24:10. The defendant spoke after the accuser in Roman trials, as soon as he was given permission to do so. Paul also includes a *captatio benevolentiae* (see comment on 24:2-3), although a more modest and believable one than that of Tertullus. Felix may have held office since A.D. 52 (i.e., for four to six years) and had been in Judea in another capacity earlier. Proclaiming one's confidence in the judge's fairness was an implicit statement of innocence, and other trained speakers appealed to this in court cases as well.

24:11. Here Paul begins a *narratio,* a stating of the case's facts or of events leading up to the case; a narratio could be brief when necessary. Paul shows himself skilled in the rhetoric of his day. That he came to worship supports his character; the timing presumably coincides with Pentecost (20:16), suggesting that he had come for the festival (cf. 20:16), like many other good Jews. Luke's narrative names some of the many witnesses to the timing of Paul's arrival. Someone who traveled so far to worship is not the sort of person who would try to defile the temple.

24:12. This verse is a *propositio,* the proposition or thesis of Paul's speech; this was a standard part of ancient speeches. Paul begins, as speakers sometimes did, by refuting the opponent's charges.

24:13. Although ancient courts preferred arguments from probability over eyewitness accounts, proof was essential. For example, Herod's son Antipater, after much proof of his guilt, offered only oaths in favor of his innocence, so the Syrian legate Varus had him executed. Speakers often (and fairly often accurately) charged their opponents with lacking proof; in this kind of case, the burden of proof rested with the accusers.

24:14. In 24:14-17, Paul reinforces a positive portrayal of his character, important in defense speeches; he is not the kind of person who would have committed the crime with which he was charged. Roman lawyers also had defenses for those who confessed their guilt, admitting that the deed was wrong (*concessio*); they could claim they meant well (*purgatio*) or simply beseech pardon (*deprecatio*). But while Paul admits a deed, he does not admit that it is wrong or ask pardon for it. Instead, like some other forensic speakers, he confesses a non-crime. This creates a masterful defense: First, this is an issue of internal Jewish *law, not a crime under Roman law, and therefore worthy neither of Roman trial nor of Roman execution at Jewish instigation. Further, the Christian faith springs from the *Old Testament and is thus an ancient religion, which should be protected as a form of Judaism under Roman toleration. Confessing what was not a crime was a strategic rhetorical move; it would heighten one's credibility while doing nothing for the opponents' charge that the defendant had broken the law.

24:15. Sadducees who denied the future *resurrection of the righteous represented a minority position within Judean Judaism; Felix would know that Paul spoke for a majority position on this point. Pharisaism and the rest of Judaism that believed in the resurrection of the righteous were divided on the resurrection of the wicked. Some believed that the wicked would be raised for judgment (either temporary torture followed by annihilation, or eternal torture); others believed that they would not be raised. The early Christians who comment on the matter accept a resurrection of the wicked to judgment (Jn 5:29; Rev 20:5), the most natural way to read Daniel 12:2.

24:16. Establishing one's character was important for the defense. Here Paul means that

one who truly believed the hope stated in verse 15 would be careful to do right before God and people. This is an implied argument from probability, a strongly favored line of argument in ancient law courts. Pharisees and other believers in future judgment often questioned its deniers' basis for morality.

24:17. Almsgiving was highly regarded in Judaism; it demonstrates Paul's solidarity with his people and their ancestral customs. Again on a probability argument (v. 16), this point would make the charge of violating the temple absurd. Also, a defendant sometimes sought to show the ingratitude of plaintiffs prosecuting their benefactor (cf. 4:9). (The offerings refer to Paul's collection, more emphasized in his letters, e.g., Rom 15:26-27.)

24:18-19. Temples were to be places of refuge, yet Paul had been apprehended during worship. It was standard practice in legal rhetoric to reverse the accusers' charges onto them; speakers often could also insinuate someone's guilt. Paul here implies that his accusers rather than himself were responsible for the riot. Moreover, the original accusers have not shown up, and therefore could be charged with abandoning the case, a punishable offense (for frivolous prosecution). The current "plaintiffs" are not eyewitnesses and could not withstand cross-examination, and the original plaintiffs have abandoned the case! By the conventions of Roman law, the case should simply be dismissed at this point; that Felix fails to dismiss it suggests the political dangers of doing so.

24:20-21. Speakers sometimes saved the climactic argument for the end. Paul's concluding, ultimate argument is that his accusers previously disputed only his affirmation of the resurrection, that is, a theological charge (that he had cunningly brought up!), which the tribune had attested (23:29). Roman magistrates would view this as a matter of internal Jewish religious disputes, nothing on which to judge a case of Roman law. Moreover, when plaintiffs changed charges in the midst of the legal process (cf. 23:6, 29; 24:5-6), the case was supposed to be thrown out.

24:22-27
Felix's Procrastination

Paul's case (24:10-21) was legally airtight; Felix should have thrown out the case. Doing so, however, would have alienated members of the Judean elite. Had Paul not been a Roman citizen with a possible supporting constituency, Felix might have even handed him over (cf. Lk 23:23-24).

24:22. Lysias would be considered the independent witness; but Felix already has sufficient facts, and is simply stalling for political reasons, much to the chagrin of Paul's accusers and (still more) Paul himself. By setting no timetable for Lysias's coming, Felix fairly obviously postpones the case; he had authority to defer it as long as he wished.

It would have been difficult for Felix not to have known of the massive Judean Jesus movement (21:20), especially given his Judean wife (24:24), but he and the Romans by this period were treating it as politically innocuous, unlike the many bandits in the countryside.

24:23. Prisoners of status usually received lighter custody, especially if the charges against them were not persuasive. Paul is probably still kept in the procurator's own palace (23:35), making it easy for Felix to visit him. Centurions sometimes oversaw prisoners of status (cf. 23:17). Apart from very meager prison rations, prisoners depended on friends to bring food and other items; guards sometimes charged bribes for access to prisoners, but Felix's instructions here could forestall that.

24:24. Officials who interviewed prisoners privately for their own ends were often considered corrupt.

Drusilla was the youngest daughter of Herod Agrippa I (see comment on 12:1) and sister of Agrippa II and Berenice (see comment on 25:13). She married the king of a small region in Syria, but at the age of sixteen divorced him at Felix's instigation to marry him instead. Although it violated normal Roman policy for a governor to marry a woman from his province, Felix had much power as long as his brother Pallas remained in favor in Rome (cf. comment on 23:24). Drusilla is about twenty years old here.

24:25. Although wealthy households often sponsored philosophers to provide interesting insights at dinners or tutor family members, God's prophets were less pleasant than most philosophers (Jer 38:14-23). Justice and self-control were among the favored topics of

many moralists, but the future judgment was especially Jewish teaching and probably not the side of Jewish teaching the procurator was accustomed to hearing. (Future judgment was not emphasized by most upper-class Jews under Greek influence, such as Sadducees or a handful of aristocratic Pharisees such as *Josephus—who could accommodate Platonic views of the afterlife—or like *Philo, whose views accommodated *Hellenism to the furthest possible extent.)

24:26. Felix was not known to be particularly just; Josephus complained that he sent priests to Caesar on a trifling charge. Josephus also complained that the procurator Albinus, several years after Felix, released anyone—including revolutionaries—from jail whose relatives paid him something. All ancient sources agree that Felix also was corrupt, and this verse should not surprise us. Bribery and corruption were punishable offenses, but very common, including among many governors; Josephus reports this among various governors of Judea. If locals complained, however, a governor could be removed from office for the offense.

24:27. When Felix was being replaced by Porcius Festus (probably July of A.D. 59, though some say 60, or even 55–56), Jewish leaders from Caesarea finally went to Rome and accused him. Roman law had permitted provincials to accuse their governors since 149 B.C., and a number of governors faced prosecution. Fortunately for his sake, his powerful brother Pallas, although no longer in power in Nero's court, retained sufficient influence to protect him from Judean retribution (*Jewish Antiquities* 20.182). "Wishing to do the Jews a favor" (NASB) here may mean that he needs any Jewish mercy he can get, as he is leaving for the hearing in Rome. (At the same time, he would not want to create other enemies or charges by deciding against another interest group.) Governors did not usually try to clear the slate of backlogged cases before leaving office; the new governor might have to start judicial proceedings all over again.

25:1-12
Hearing Before Festus

*Josephus's portrait of Porcius Festus is much more positive than his portrait of Felix or Albinus. Festus was an efficient and mostly just administrator; he also corrected disturbances and caught many of the revolutionaries. Josephus also indicates that Festus died in office (*Jewish Antiquities* 20.197), apparently having served in Judea only a year or two. A Roman administrator might struggle to balance the interests of justice for an individual and political sensitivity to the local elite, especially if there was a potential for unrest. Extensive parallels between Jesus' hearings in Luke 23 and Paul's in Acts 25–26 indicate that Luke wishes to parallel them, as some other historians paralleled figures; Luke's point is that Christians must follow in Jesus' footsteps.

25:1. Festus's residence would be in Caesarea, but it was politically appropriate to visit the local authorities centered in Jerusalem.

25:2. Relations between Felix and the Jewish authorities had been strained; a new governor, however, meant a new chance to introduce agendas previously deferred. Agrippa II appointed a new *high priest, Ishmael son of Phabi, probably shortly before Festus's arrival (Josephus, *Jewish Antiquities* 20.179, 182). As was customary, the plaintiffs advance the complaint.

25:3-5. They wanted Paul moved; given the frequent assaults by revolutionaries throughout the country, members of the priestly aristocracy would not necessarily appear to have sponsored the violence against Paul (as violent as the agendas of some of them were reported to be, according to Josephus and other early Jewish sources). Festus would be eager to correct the bad relationship of the previous administration, hence to accommodate local politics. He thus moves the issue up on the docket, but does not breach protocol (nor plan to remain long in Jerusalem).

25:6. Sitting on his tribunal (NASB), *pro tribunali,* means that this is an official hearing.

25:7-8. A case could be reopened based on new evidence, but it would be thrown out if no such evidence were presented. Ancients often claimed (often rightly) that their legal opponents offered no proof. A speaker often summarized and then refuted opponents' charges; like court recorders, Luke also summarizes Paul's response here. The accusations against Jewish *law and temple (21:28) would be relevant to a Roman magistrate only if Paul had

violated the sanctity of the temple (see comment on 21:28), a charge that had not been demonstrated. An implication of treason (*seditio*) against Caesar, however, would be fatal. Changing charges in the midst of a case was illegal, but with a new governor Paul's enemies have started the case anew.

25:9. History reports that Festus was a fairer and more cooperative governor than most who ruled Judea; he undoubtedly wishes to engender a good relationship with the provincials here.

25:10-11. Roman citizens had the right to appeal to Caesar's tribunal (*provocatio ad Caesarem*), although the emperor in this period (Nero) normally delegated the hearing and judging of cases to others. Later, the governor Pliny in Bithynia executed many Christians but sent those who were citizens to Rome for trial. Noncitizen provincials had no automatic right to appeal a governor's decision (except to accuse the governor of extortion or on a capital charge). Defendants often expressed willingness to die if found guilty as a way to emphasize their innocence or their indignation at the charge. The current emperor to whom Paul appeals is Nero; still under the more positive influences, he had not yet become notoriously immoral or begun to persecute Christians.

25:12. A Roman judge normally had a *consilium,* or council, with whom to confer; because a governor might not be learned in the law (*iuris prudentes*), it was important for him to have some advisors who were, although he was ultimately free to disregard their counsel. This was an unusual case. A citizen could appeal even to the emperor, especially for a capital sentence (*appelatio*), but appealing before a case had been heard (*provocatio*), as Paul does here, was unusual, because it was not necessarily advantageous. Nevertheless, Festus has reason to comply with Paul's request. Under ordinary circumstances, appeals were granted. Moreover, in any case the political implications of dismissing an appeal to Caesar were unpleasant (a critic could potentially accuse the governor of usurping imperial privileges), whereas the benefits of sending Paul to Rome free Festus from having to disappoint the Jerusalem leaders if his own juridical conclusions differ from theirs. Although many Roman governors of Judea ignored inconvenient rules, Festus is the one governor of Judea in this period whom Josephus presents as most faithful in carrying out Roman policies (*Jewish War* 2.271-72).

25:13-22
Festus and Agrippa II

Some argue that Luke did not necessarily have inside information concerning the conversation, since he could safely infer its substance from the outcome (25:26); ancient historians could make such inferences and shape them as readable *narrative.

25:13-14. When Agrippa I died (12:23), his son, Agrippa II (here), was only seventeen; his daughters were Berenice (sixteen), Mariamne (ten) and Drusilla (six). Agrippa II ruled a small part of Palestine and worked with the Roman administration. He was an advocate for his people but was also loyal to Rome and later struck a coin in A.D. 89 commemorating Rome's triumph over the Jewish rebels. *Josephus's record shows that Agrippa visited Roman officials frequently, especially when they first arrived. Because Agrippa was authorized even to appoint *high priests (*Jewish Antiquities* 20.179, 196), Festus can obtain Judean advice more important than that of Paul's accusers. Festus later took Agrippa's side in a dispute with the priests.

Berenice (which ancient writers sometimes abbreviated as Bernice, as Luke does) was Agrippa's sister. Some ancient writers maligned her close relationship with her brother Agrippa, slandering it as incestuous, but their charge, whether motivated by politics, anti-Judaism or love of gossip, is unlikely. Berenice later became the mistress of the Roman general Titus, who besieged Jerusalem. Though he was fifteen years her junior, he promised to make her empress once he became emperor. Anti-Jewish public opinion, however, ultimately forced him to renege on the promise, so she finally left Rome brokenhearted. Jewish aristocrats who sided with Rome during the war (like Josephus, at least after his capture) portray Agrippa II and his sister very favorably, and they remained alive when Luke was writing.

25:15-16. Roman law required that the accused be permitted to confront his accusers

and defend himself against charges in a public hearing.

25:17-21. "Crimes that I could recognize as such" in 25:18 might reflect a Roman legal formulation. The real issue here is one of Jewish *law—one not tried by Roman courts. Luke again shows the Roman impression that Christianity was part of Judaism and thus should be accorded legal toleration.

25:22. Compare Luke 23:8; historians and biographers often looked for parallels among characters in history. As a newcomer, Festus would naturally want the counsel of Agrippa, who knew Judaism but was more sympathetic to Roman interests than the priestly aristocracy was proving to be. Agrippa had a good Greek education, and Festus might have gravitated to him as one of the few local people with whom he could discuss such matters. If Festus follows Agrippa's advice, he need not worry about Jerusalem aristocrats' complaints against his recommendation being conveyed to Caesar's tribunal (cf. 25:26).

25:23–26:1
The Hearing Before Agrippa Begins

25:23. The pomp Luke mentions here was characteristic of royal families, including Jewish ones (e.g., 1 Maccabees 11:6). The "commanders" (NASB) or "officers" (NIV) are as many as five tribunes, Roman commanders of the five cohorts in Caesarea (cf. the sixth tribune in Jerusalem, 21:31, although given the political mobility of those in this office, Lysias might no longer be there).

25:24-26. "Lord" (v. 26) was a common title for the emperor by this period. Romans, unlike Greeks, would not yet be using it as a divine title. Festus regards particularly Agrippa, as a Romanized Jew, as both unbiased and competent to give Festus advice.

25:27. A governor would not dare to send a case to the emperor's court frivolously; Festus needs to provide a document explaining the prior inquiry (a cover letter, *litterae dimissoriae*). The charge against Paul is political, but all the evidence involves Jewish religion, which would be incomprehensible to Roman procurators. Agrippa II is the first official competent in both Roman and Jewish *law to hear Paul's defense; he will thus supply the evaluation for Festus's letter to Nero. If this Jewish king does not think Paul guilty, Festus has protected himself against complaints from Jerusalem's aristocratic priests.

26:1. On receiving permission from the judge (in this case, unofficially Agrippa), one could speak. Paul's hand is stretched forth in customary *rhetorical style; gestures were an important part of ancient training in public speaking. Studies of ancient gestures suggest that the gesture opening this kind of speech might include pushing together the thumb and middle finger as the outstretched arm moved from right to left.

26:2-11
Paul's Pious Background

Standard defense speeches varied somewhat in form but had general consistency, as exhibited here: the complimentary address to the judge (26:2-3), the *narratio* (narration of events—26:4-18) and finally the *argumentio* (proofs for one's case—26:19-23). Whereas in 24:10-21 Paul sought to show his innocence and seek toleration for his message, here he further argues that his message is true.

26:2-3. Here Paul offers the *exordium* of the speech, in which it was customary to praise the judge (*captatio benevolentiae*). Paul is able to do so honestly; Agrippa's interest in the *law was known (though it did not always satisfy the priests), and his realm became a safe haven for Jewish practice after the Jewish-Roman war of 66–70. Requests to hear the speaker patiently appear frequently in ancient speeches.

26:4. Luke's summary focuses on the speech's *narratio,* or preliminary narration of events leading up to the legal situation; here it stretches from 26:4 to at least 26:18 (and perhaps 26:20). Defendants often challenged charges by appealing to their known character. On Paul's youth in Jerusalem, see 22:3; speeches praising a person often started with the person's honorable upbringing, when possible.

26:5. The appeal to many potential witnesses is not unusual; it occurs even in *Plato's version of Socrates' defense. Also frequent were appeals to common knowledge, often on the part of the audience, and the insistence that one was more upright or pious than one's accusers in the matter on which one was accused. *Pharisees were less strict than *Es-

senes, but most Judeans had significantly less contact with Essenes.

26:6-7. Two of the most basic future hopes of most Judeans were the *resurrection of the bodies of the righteous and the restoration of the twelve tribes at the same time. Although the *Sadducees and many *Diaspora Jews may have doubted future resurrection, it was probably the majority view in Palestinian Judaism.

26:8. Ancient courtrooms often counted arguments from probability more heavily than they counted what we would consider hard evidence (such as reliable witnesses); Paul must thus counter the supposition that a resurrection is improbable by reminding his hearers of God's power and that resurrection is rooted in the most basic Jewish hope.

26:9-10. Favorable testimony from a source expected to be hostile counted more heavily; as a former persecutor Paul has special credibility. Ancient writers sometimes used "casting a vote" figuratively for agreement with decisions; Paul himself had been too young (Acts 7:58; cf. Gal 1:14) to belong to the Sanhedrin. ("Casting a vote," literally, "a pebble," was also likely a pun here, similar to some others in antiquity; while witnesses cast their stones, Paul cast what he could, his pebble, i.e., his consent, since pebbles had long stood for voting.) Roman rule forbade executions without the governor's consent, but they could not prevent lynchings; their Judean forces stayed in Jerusalem and especially Caesarea. Paul's account here thus paints members of the class to which his accusers belonged as complicit in his past crimes.

26:11. Pliny, governor of Bithynia in the second century, noted that former Christians could easily be moved to worship the gods, but complained that genuine Christians could not be forced to do so, even on the pain of death. Pagan rulers who had earlier tried to force Jews to abandon their ancestral customs had encountered the same resistance, which pagan officials generally considered obstinate.

26:12-23
The Risen Christ Calls Paul to the Gentiles

26:12-13. On "midday" or "noon" (NIV), see 22:6. In 26:13 Paul uses clearly Jewish language for a theophany, a revelation of God's glory.

26:14. Falling down was a common response to divine (and sometimes even angelic) revelations in the *Old Testament and Jewish tradition. The "heavenly voice" (which some segments of Judaism thought had replaced *prophecy) was often thought to speak in Hebrew or *Aramaic. "Kicking against the goads" was a Greek proverb about fighting a god; its best known form appears in Euripides' *Bacchae* 794-95, which is also the ultimate source for the term translated "fighting against God" in 5:39. It is not cited in the other accounts of Paul's conversion, but it is appropriate in an address to Agrippa, who had an ample Greek education. Greeks displayed their education by providing classical allusions. A "goad" was a pricked utensil used to get animals to move in the right way; ancient writers often applied it figuratively.

26:15-18. Jesus' words to Paul evoke Old Testament passages about prophets' calls (Jer 1:5-8) and Israel's call to the *Gentiles (Is 42:6-7, 16). "An inheritance among those who have been sanctified" (NASB) or "the set-apart ones" refers to the Jewish hope that they as God's set-apart people would inherit the world to come, just as Israel had "inherited" the Promised Land.

26:19-21. A Roman aristocrat like Festus may dislike Paul's mission to move Gentiles to repent, but he would not understand the Jewish opposition. Agrippa II, who had pagan friends and knew well the mounting animosity of Judean Jewry against Gentiles, would understand Paul all too well, and it is to him that Paul directs these words. One ancient defense was that one acted by necessity; this could take the form of having to obey a god. In 26:21, Paul again reverses charges; see comment on 24:18-19.

26:22-23. Paul begins marshaling evidence at this point (26:8) that the faith he represents is in continuity with the Old Testament religion tolerated by the Romans as an ancient and ethnic religion.

26:24-32
The Court's Evaluation

26:24. Magistrates could interrupt with questions and challenges, as here. Undoubtedly referring to Paul's Jewish learning (26:4-5) and probably also his visionary claims (26:13-19),

Festus gives the usual answer that educated Romans gave to concepts so foreign and barbarian to them as *resurrection. Greeks associated some "madness" with prophetic inspiration; philosophers often considered themselves sober and the masses mad (cf., e.g., Musonius Rufus 20, p. 126.2-3 Lutz), but the masses sometimes considered philosophers mad (possibly relevant to Festus's claim here).

26:25. A term in Paul's reply ("utter"—NASB; "saying"—NIV) may imply that he *is* speaking under inspiration (the same term is used in Acts only at 2:4, 14). But "sober" (or "reasonable"—NIV) speech was a virtue appreciated by Romans, related to the ideas of dignity and respectability; "sober" could contrast with "mad" (26:24), and philosophers, who considered themselves the sanest of all, emphasized their sobriety.

26:26. The charge "speaking in a corner" was an idiom for private speech, and some argue that it was sometimes used to criticize sages who avoided helping the public with their perspectives. Romans mistrusted private meetings as potentially subversive. By the second century Christians were often charged with being secretive (although sometimes they were meeting secretly to avoid being arrested), but Paul argues that Christian claims are public facts, dismissed or ignored by others only because of the others' bias. Speakers often appealed to public knowledge.

26:27. Paul returns to his argument from Scripture, directed toward Agrippa although incomprehensible to Festus (26:22-24).

26:28. Agrippa evades the force of Paul's appeal to the prophets by protesting that Paul would make him play the role of a Christian by answering Yes. The rejoinder may be witty rather than harsh.

26:29. Paul is not embarrassed to admit his desire to convert Agrippa. Mentioning Paul's chains heightens pathos; speakers often emphasized emotional appeal at the conclusion of their speech. Often a prisoner's right hand would be manacled to a guard's left; the iron chains frequently weighed ten to fifteen pounds.

26:30-31. Paul is not guilty before Roman law, and this is the only conclusion that Roman law would care about. Nor is he offensive to Agrippa's more liberal form of Judaism, which abhorred revolutionaries and did not accede to the demands of the Jerusalem aristocracy.

26:32. Agrippa's opinion would have been included in the cover letter for the case. Because Paul had used his Roman right to appeal to Caesar's tribunal, Agrippa and Festus can only refer him there with a letter specifying their own opinion. This necessity was likely political rather than legal, and it extracted Festus from a difficult political situation vis-à-vis Paul's local accusers. This appeal had earlier saved Paul's life (25:3), and now it provides him free passage to Rome (cf. 19:21) and a public forum for the *gospel there.

27:1-8
The Voyage to Rome Begins

Both eyewitness reports and novels included descriptions of storms and shipwrecks; eyewitness reports could tell their story using patterns also found in epic. This *narrative is clearly eyewitness history; the details of the voyage, including the number of days it took to reach particular harbors given the winds mentioned, fit exactly the report of one who had undertaken such a voyage. This point was shown already in the nineteenth century by an experienced Mediterranean mariner.

27:1. Governors at times assigned special duties to centurions and a handful of their soldiers with them. In custody, persons of status were sometimes guarded by centurions; on occasion they even became friends. Given his name, "Julius" may be a Roman citizen, assigned to guard Paul the citizen, though Julius's soldiers may still be noncitizen auxiliaries. "Augustan" (NASB, NRSV) was often an honorary term; multiple legions and presumably cohorts carried this title, and one cohort known in Syria-Palestine from this period bore that name. Centurions could be moved around. The "other prisoners" may include some sent for trial as Roman citizens, but a higher number of those sent normally were convicted criminals to be killed in the games for the entertainment of the Roman public.

27:2. Shippers had low status but often made large profits. Ancient Mediterranean ships were quite small by modern standards; most of them weighed less than 250 tons, although Alexandrian grain ships (27:6) were much heavier (often estimated at eight

hundred tons or more). Caesarea, where they embark, was a major port; its famous and massive artificial harbor was earlier constructed by Herod the Great. Because Adramyttium, southeast of Troas, was the ship's home port, it was apparently returning northward to Asia Minor, where Julius and the prisoners could transfer to a larger vessel. Imperial messengers normally traveled by land, unless a ship were convenient, as this one proved to be. As an agent of Rome, Julius could requisition passage on ships without paying for it. A prisoner's friends or servants would be permitted to accompany him only if the captors allowed this; the nature of Paul's judges' verdict (26:31-32) has clearly given him light treatment, since two companions accompany him.

27:3. Sidon had a double harbor and was some sixty-nine nautical miles (perhaps a day's voyage) north of Caesarea, where they had started; their rapid progress suggests smooth sailing at this point. Loading and unloading cargo could take days (or longer) at a busy port, so passengers often went ashore. Ships' primary purpose was to transport cargo; passengers thus were responsible to bring their own food and other supplies. (At night they slept on deck either in the open or in tents that they brought and erected.) Soldiers normally would need to requisition provisions for themselves and their prisoners from locals, so Paul's friends' voluntary support (cf. 24:23) exempts Julius from this unpleasant task here. Although it could be politically dangerous to display loyalty to a prisoner, ancients valued true friendship that remained loyal no matter what one's circumstances (cf. also 28:13-15).

27:4. The ship is opposed by the usual winds of late sailing season, which blew from the northwest, the direction that they wished to travel. Unable to sail directly northwest toward Myra, they sail on the east of Cyprus, which shields them from westerly winds. Thus, remaining close to the Syrian coast east of Cyprus, and northward to the south of Asia Minor, their voyage is much slower than the reverse voyage across open sea (21:1-3), although aided in their westward movement along the southern coast of Asia Minor by land breezes. Even in better weather, however, ships normally sailed north to Asia Minor before turning west to the south of Crete.

27:5. Myra, a common destination for Alexandrian grain ships, was two miles from its harbor, Andriace. The soldiers and their prisoners could have gone on by land, but the centurion is able to find another ship (27:6).

27:6. Grain ships bound to and from Rome accounted for a vast proportion of Mediterranean trade; ships from Alexandria, Egypt, would travel northward and then westward to bear their cargoes to Rome. This journey took from as little as forty days to over two months (with up to another month to unload the cargo in Italy), although the reverse voyage from Rome to Alexandria could take as little as nine to thirteen days. A particularly large ship could be about 180 feet long, forty-five feet wide and (at their deepest) over forty feet deep; estimates of the amount of grain imported to Rome annually range from two to four hundred thousand tons, probably over a hundred thousand tons of that being imported from Egypt. Because of the fertile Nile valley, Egypt supplied possibly a third of Rome's grain. Egyptian peasants who raised the grain could not always feed their families, but the grain was disbursed free to citizens of Rome to maintain stability in the heart of the empire. Rome provided economic incentives for shipowners, securing as much grain for Rome as possible. Although in this period owned and operated by private merchants, this was the largest mercantile fleet known to Europe before the 1700s. The Alexandrian fleet was the quickest means of transportation from Syria to Rome.

27:7. Cnidus lay partly on a peninsula, partly on an island, and had two harbors. Ships that sailed over against Cnidus were keeping north of Rhodes. Between storms, they could venture the two or three days from Cnidus to Salmone, on Crete's northeastern tip, the easiest place to reach in view of the winds from the northwest. Crete was the largest island of the Aegean Sea. It had few harbors in the north, and the current, seasonal winds from the northwest could wreck a ship against the coast. But the south coast of Crete had more harbors, and the south winds there were more gentle.

27:8. Fair Havens is a bay two kilometers

west of Lasea; sheltered by small islands, it would protect ships from strong winds. Nevertheless, this fishing village was not a pleasant place for the crew and passengers to spend winter. Six miles (ten kilometers) beyond Fair Havens, however, Crete's southern coast veers sharply northward after Cape Matala, exposing a ship to the full harshness of a northwesterly wind blowing across the land. To find the better winter harbor of Phoenix further west, therefore, the ship would likely sail northwest across open sea through the Gulf of Mesara toward their destination, but in so doing would gamble that they would not suddenly face a northwester.

27:9-19
The Crisis at Sea

Danger was so common at sea that some estimate that a fifth of voyagers faced danger on significant voyages; perhaps half of all voyages faced delays. Shipwrecks were so common that archaeologists have identified more than a thousand ancient shipwreck remains. Luke had good reason to supply many details; ancient readers were interested in stories about such experiences.

27:9. Ships usually left Alexandria in the spring, but could be delayed administratively in Italian ports. Those that returned to Alexandria before late August might venture a second trip; later voyages were more risky, but shipowners' profit determined whether such voyages would be undertaken. Owners (often newly wealthy urban merchants) could borrow money to pay for their cargo; the loan would be canceled if the ship were lost, but such loans could run as high as thirty percent of the cargo's cost. Indeed, eager to import more grain, the previous emperor, Claudius, had offered special financial incentives to shippers who would bring grain even in winter (*Suetonius, *Life of Claudius* 18.2-3). If sailing became too dangerous, ships might winter along the way and resume their voyage in the spring. The "fast" here refers to Yom Kippur, the Day of Atonement, which occurs in September or October. Sea travel became more dangerous as winter approached (2 Tim 4:21; Tit 3:12). Shipping was completely closed down (except for the brave or foolhardy) from around November 10 to as late as March 10, but September 15–November 10 and March 11–May 26 could be risky periods as well. Given the financial incentives of multiple annual runs for the grain ships, however, some shipowners took the risks.

27:10. Paul's Roman citizenship and perhaps status as leader of a movement or one with an approving letter from Festus keep him in the presence of the centurion. Pagans undertaking sea voyages always sacrificed to the gods and sought their protection. Bad omens, astrological interpretations or dreams sometimes prevented a ship from sailing if they were taken seriously. Before going to war Romans would check the entrails of animals, the flight of birds and other forms of divination; religious advice was always important to those contemplating a potentially risky venture. Paul might sound to them like the kind of seer who could predict the future without divination. (Unlike Greeks, Romans respected divination more than this kind of *prophecy.) His hearers will take Paul more seriously later in the chapter.

27:11. Most of the elite considered shippers of low status, but the latter often did make huge profits. Although Paul's travel experience and spiritual reputation might allow Paul a hearing, the centurion, who must decide whether to leave with the ship, gives greater credence to the nautical knowledge of the captain (and the decision of the "majority," 27:12). Yet such a decision was often made more on economic than nautical grounds. Ships' contents were expensively insured in case of shipwreck. Grain ships sometimes traveled together; this one is making the voyage alone and is probably one of the latest vessels of the shipping season. The captain at best hopes to make it to a better and/or further harbor before the seas close down for the winter (27:12); he cannot hope to reach Italy this late in the year (27:9).

27:12. Most of Crete's southwest coast is steep, but one city with an excellent harbor was Phoenix, on the southern side of a Cretan isthmus. Phoenix was probably a common winter harbor; its site is probably a bay across from Loutro, though the topography has changed since antiquity. The voyage would be more than fifty miles (eighty kilometers). The "majority," presumably of people with rank, come to a consensus.

27:13-14. A south wind would help them stay close to shore and bring them safely to their destination. They would pass Cape Matala four miles to the west, following the coast, but then might try to sail west-northwest in the open across the gulf of Mesará for some thirty-four to thirty-six miles to reach Phoenix. Unfortunately, in this region the south wind often changes suddenly to a dangerous wind from the northeast (a *gregale*); the conflicting air currents increase the danger. Mountains just one or two kilometers north of Fair Havens could have initially obstructed the sailors' view of storms coming from the north. They may have seen them when crossing the bay, but (not being from this region) could not have known that the nearby Platanos Valley could funnel the wind toward them and blast them out to sea. The "Euraquilo" mentioned here (NASB; the term mixes Greek and Latin) may be a wind blowing from the east by northeast—the most dangerous kind of wind.

27:15. With a favorable wind in their mainsail, these ships could cover about fifty nautical miles in daylight, or ninety miles in twenty-four hours. But ancient ships had square mainsails and could face into even a normal headwind only with much effort; this wind was more powerful.

27:16. Cauda's probable location (modern Gavdhos) was over twenty miles southwest of where the storm probably caught them in the bay of Mesará. It offered no place to anchor on the side of the island they were passing; the momentary shelter from the storm's force, however, allowed for some quick maneuvers. The "boat" or "lifeboat" (NIV), a dinghy, was used for landings, to maneuver the ship for tacking and so forth. Often these boats were towed behind, typically with a sailor in it. Here, filled with water or in danger of breaking loose from the ship or being smashed against it, it has to be brought on deck to be rescued.

27:17. The "supporting cables" (NASB) or "ropes" (NIV) were frapping cables used to undergird the hull against the raging sea in times of fierce storms; they may have been slipped around the stern or prow and worked backward to brace the whole hull.

If they continued on their present course too far (four hundred miles) to the southwest, they would eventually be destroyed in Syrtis Major (modern Gulf of Sidra), a dreaded shoal west of Cyrenaica along the African coast. (Syrtis Minor was further west than their path risked carrying them.) Ancient literature is replete with accounts of ships trapped in these shallows, then destroyed when the water levels rose. Even in good weather, Alexandrian grain ships sailed northward to Asia and then westward to Italy, rather than directly northwest, because a sudden change in winds could wreck them on this shoal.

27:18. Other sources illustrate that jettisoning some of the cargo is the natural step at this point; in crises like this one no distinction is made between valuable and cheap cargo (Jon 1:5; also *Josephus, others). They do not discard all the cargo here (27:38); ships carried at least 68 tons, large ones (such as this one) usually carried over 250 tons, and some could carry up to 1200 tons. Unloading such a ship once docked could take twelve days. Hurling merchandise into the sea required less caution, but the crew certainly could not finish the task in one day. The grain was probably stored in sacks piled six feet high, which could be moved manually only with great effort, without the equipment normally available on docks.

27:19. If, as many commentators think, Luke refers to the yard ("tackle"—NIV)—a spar that could be nearly the ship's own length—it would take many of those on deck to lower it down to the deck. One would secure it if possible, but in the severity of this storm, they cannot afford the encumbrance created by retaining it.

27:20-44
The God of Safety on the Sea

27:20. Stars were needed for navigation. Pagans felt that those who died at sea never entered the realm of the dead; instead their souls wandered aimlessly forever above the waters in which they perished.

27:21-22. Paul might speak below deck; in any case, some people were able to project their voices so as to be heard widely, even with competing noise. Ancient people often evaluated the sincerity of philosophers (e.g., Aristippus) according to how calm they stayed under pressure. People believed that a true philosopher consistent with his teachings would remain calm in a dangerous storm at

sea (so Pyrrho the Skeptic), whereas a false prophet such as Peregrinus would not. The others' lack of eating could stem from fear or seasickness. The conventional address "Men" need not imply that all 276 persons aboard are male (see comment on 1:16).

27:23-25. It was not unusual for ancient writers in the middle of a story to report earlier events they had not yet mentioned.

Many believed that ships would be destroyed because of the impious aboard, or spared because one of special piety was aboard. A story is told that even some unreligious men began to supplicate the gods during a raging storm; the philosopher Bias, aboard the same ship, urged them to be quiet, lest the gods recognize they were aboard and sink the ship! Like Jonah's behavior in the *Old Testament (Jon 1:6-16), this attitude contrasts sharply with Paul's concern for all aboard. (A few other people, like Caesar, were said to have claimed that a ship could not sink with them on it, but Paul's claim is because of God's mission and message, not because he is personally indispensable.) Various deities claimed the role of protector at sea, like Isis or the Dioscuri (28:11); but God is the true protector.

27:26-27. Running aground was dangerous, but Paul prepares them for this news. The sea around Malta (28:1) is far south of what is called the "Adriatic Sea" today but was included in the "Sea of Adria" in antiquity. The rate of drift per day and the trajectory they would have followed from Cauda to avoid Syrtis has been calculated; it was exactly fourteen days to reach Malta (28:1). If the wind was below gale strength at this point, a ship heading toward Malta from the east could hear water breaking against land even at a mile and a half from Point Koura.

27:28. Sailors would judge the depth of the water by lowering lead weights smeared with grease on a hollow underside, to pick up samples from the sea floor. The soundings suggest that they were at this point near Koura, east of Malta; they may have passed within a quarter mile of it. Roughly half an hour would pass between twenty and fifteen fathoms, showing that they are approaching grounding dangerously quickly, probably with underwater rocks that would rip open the hull.

27:29. Because they are shoaling quickly with low visibility, they use anchors as brakes. These were normally cast from the bow, but here they are cast from the stern, probably so the stern cannot be blown around into the rocks or because they will advance bow-first in the morning light. The anchors were probably used in succession to prevent the vessel from being smashed against the reefs.

27:30. Other cases are known of crew members' trying to escape a doomed ship in a small boat; these boats were not meant as lifeboats and fitted only a handful of people. Sailors were sometimes slaves; at other times they sailed to make a living; but they had little stake in the ship.

27:31. The sailors' expertise will be needed aboard to ground the ship. The centurion and soldiers, being armed, could take charge.

27:32. On the next day they could have used the small boat to ferry people to land (although it would have taken many trips); without it, they would have to run the whole ship aground. Although the captain might hold more rank on the ship than a passenger centurion (against some earlier views of the Roman grain fleet), in an emergency the soldiers would exercise more authority—if only because they were the ones with the weapons.

27:33-34. "Not a hair of one's head" was a proverbial expression in the Old Testament (1 Sam 14:45; 2 Sam 14:11; 1 Kings 1:52); but it would make sense even to hearers who were not familiar with it.

27:35-36. The meal here is done in the traditional Jewish manner: the head of the household thanked God and distributed the bread. Most passengers would have brought their own food on the ship, probably especially bread (the most fundamental staple of the ancient Mediterranean diet) and other food that did not require cooking. Some of the raw wheat in 27:38 could also be edible in this emergency, though it could be difficult to digest.

27:37. Large ships frequently carried several hundred people; Josephus even claimed that he had traveled aboard a ship with six hundred people. Most ships that hugged the coasts weighed less, but large ones could weigh 250 tons. Alexandrian grain ships (such as in 27:6; 28:11), built for the open sea, were larger, many weighing 340 tons, some

over eight hundred tons, and a few to twelve hundred tons.

27:38. They need to lighten the ship further (27:18), in order to run aground as close to land as possible. Once wet, grain would also pose a hazard to the ship, since the grain could swell to twice its original volume and split the hull. Many suggest that they had so far retained some of the cargo as ballast (heavy material kept in the hold of a ship to steady it); whether or not this is the case, such ships carried hundreds of tons of wheat, so they could not have finished the job in 27:18. An Alexandrian ship's cargo would be wheat.

27:39. Apart from some topographic details that have changed over the centuries, the traditional site of St. Paul's Bay in northeastern Malta fits all the details of the narrative. Ships often stopped at Malta, but normally in better weather and at safe harbors.

27:40. These actions are normal for a disabled ship trying to come near land. A helmsman would pull and push a tiller, or handle, to control two steering paddles (oars) connected as rudders. The sailors had apparently bound the rudders to prevent unwelcome movement, but now needed to steer. Ships normally had a large, square sail and (mentioned here) a smaller, triangular foresail; the latter could be removed when slowing down when coming into a harbor, but here the objective is to reach the beach as quickly as possible.

27:41. Between St. Paul's Bay and the island of Salmonetta on the northwest is a shallow channel about three hundred yards wide. The ship may have wedged on a sandbar there, while waves pound the immobilized rear of the vessel.

27:42-43. Chained prisoners cannot swim; unchained prisoners can escape. Guards were responsible for the prisoners' safe custody. They would be less liable for their charges if the prisoners "died at sea" than if they escaped. In any case, most of these prisoners were likely going to be fed to animals for public entertainment in Rome; out of consistency, Julius might have a hard time later explaining how he spared one prisoner (Paul) and not others, so he spares all.

27:44. The boards might be taken from the grain holds below deck. Papyrus is not waterproof; Luke would have to put any notes in a sealed container and keep it atop a plank. Although some survivors of a shipwreck so close to shore would be likely, the survival of all passengers (likely including the aged, infirm and children), after two weeks without eating and many or most being unable to swim, would be viewed as extraordinary. In Greco-Roman literature, someone's escape from disaster at sea could serve as evidence of that person's religious purity even before a court.

28:1-10
Miracles on Malta

28:1. Malta (ancient Melite), some fifty-eight miles south of Sicily, was on the shipping route from Rome to Egypt, whereby empty ships would sail quickly to Alexandria to load up more cargoes. It was the stop immediately after Syracuse in Sicily (28:12). The alternative proposed site for Luke's island, near Dalmatia (Meleda, modern Mljet, also called Melite in antiquity), is based on a misreading of "Adria" in 27:27 and has no merit; winds from the northeast could not have driven them there, nor would they have sailed from there to Syracuse instead of Italy (28:12).

28:2. Ancients valued hospitality, particularly to survivors of shipwrecks. The Maltese were of Phoenician descent, and most commoners there spoke and read only Punic (the late Phoenician dialect of the Carthaginians). But Roman citizens and retired soldiers also lived there, the elite spoke Latin or Greek, and the island was certainly not considered culturally primitive. The title "barbarians" ("barbarous"—KJV; "natives"—NRSV, NASB; "islanders"—NIV) could apply to all non-Greeks, or, as here, to anyone who did not speak Greek. Greeks did not ordinarily expect kind treatment from them, but Luke's use of the term is not derisive; he indicts Greek ethnic prejudice at the same time that he displays God's providential care through them. The temperature during that season would have been typically below 60 degress fahrenheit when raining, and being wet probably made people feel even cooler.

28:3. In cold weather some snakes can look stiff like twigs until the heat of a fire stirs them. Snakebites were a topic of medical concern in antiquity. Poisonous snakes are now extinct on heavily populated Malta,

probably partly because the forest cover that once existed is now gone.

28:4. Ancients could argue even in courts that their survival of troubles at sea proved their piety and hence innocence; on the importance of arguing Paul's innocence, see the introduction to Acts. In some stories, the impious escaped one form of terrible death (e.g., at sea) only to face something worse (besides Greek stories, see Amos 5:19). "Justice" was a goddess who executed the will of Fortune or the Fates; although both Romans and local Punic tradition had personified Justice as a deity, Luke translates the observers' idea into the idiom of Greek poets. Animals were considered one means of divine punishment. Several groups of Jewish catacombs dating between the second and fifth centuries A.D. have been found on the island; but if Jewish people were on the island in the first century, this *narrative does not mention them.

28:5. For divine protection from or healing of snake bites, see, e.g., Num 21:6-9; for protection more generally, e.g., Ps 91:13; Dan 6:22. (Some Jewish traditions also emphasize Adam's rule over the beasts [Gen 1:26] or its restoration in Is 11:6-9.)

28:6. Whenever similar stories were told, those who survived bites from poisonous snakes or lizards were considered holy men (e.g., the pious Jewish holy man Hanina ben Dosa); Greco-Roman paganism often considered such holy men to be divine or semidivine. The change of mind on the part of Paul's viewers could strike the ancient reader as humorous, as in some similar accounts in antiquity where a human was mistaken for a particular divinity. Ancient writers often paralleled or contrasted figures; cf. here 10:25-26; 12:22-23; 14:11, 15.

28:7. Hospitality was an important virtue, especially toward people who had been shipwrecked and were stranded without possessions. Both Greek and Latin often employ "first" (as here) for leading citizens, and the title is attested on Malta. Publius is a Latin *praenomen,* and as a top official he had probably received a grant of Roman citizenship; the title assigned to him here has been found in Greek and Latin inscriptions as the proper title of the island's governor.

28:8-9. The most common form of fever was malaria (typhoid also occurred); the description here could fit malaria, with intermittent attacks. Fevers could last briefly or for a year, and could be mild or fatal. Some ancient treatments were superstitious, but many physicians treated winter fever by giving fluids. Dysentery most often accompanied fever during summer, but the dysentery may have persisted or exploited the man's weakened condition, or the fever may stem from dysentery. Some commentators also note that in subsequent times the Maltese were affected by a special sickness due to a microbe in the milk of the goats there; although such organisms would have mutated over the centuries, perhaps a similar illness is in view here.

28:10. People typically were expected to respond to benefactions with other gifts or honors.

28:11-16
Journey to Rome

28:11. As an agent of Rome, Julius could requisition passage on ships without paying for it. The seas opened as early as February 7–8 or as late as March 10, depending on the weather; in the year in view here they seem to open toward the earlier date. On Alexandrian ships, see comment on 27:6; like most ships wintering on the island, this one would have left Alexandria too late in the season and spent the winter in a Maltese harbor rather than risking the voyage on to Rome at that time. Ships were named for their patron deity (e.g., "the Isis") in whose protection they trusted and whose image was used as the ship's figurehead. The Dioscuri (Castor and Pollux, twin heroes; Pollux, a son of Zeus, shared his immortality with his brother during half the year) were considered special protectors of ships, on whom one might call in a storm. They were also popular deities in Rome and in this region.

28:12. Well-fortified Syracuse was the chief city of Sicily, on its southeast, with a rich Greek and Roman heritage and renowned for its beauty; it boasted two harbors and was perhaps a quarter the size of Rome itself. The voyage there was roughly a hundred miles.

28:13. Rhegium was the Italian harbor closest to Sicily, with a long history as a Greek settlement but also Roman citizenship. In the first century, mercantile vessels, including the Alexandrian grain fleet, put in at Puteoli some

twenty miles west of Naples (although the harbor Claudius had improved at Ostia eventually surpassed it). To have reached Puteoli in two days meant that they had made optimum time (about ninety miles a day). Yet from Puteoli they still had far more than a hundred miles left to Rome.

28:14. The Jewish community in Puteoli had been there a long time, as had Egyptian and Phoenician cults. As a regular port receiving visitors from the East, it naturally received foreign religions as well as goods. Thus it is not surprising to find Christians there; but readers of Luke's day might be more surprised that these Christians offer such extensive hospitality to Paul's captors, who (probably in view of Paul's role during the storm) accept it from them. The journey from here to Rome would be perhaps 120 to 130 miles, some of it through hill country; it might take up to a week. On the journey they would proceed first to Capua (some twenty miles on the Via Campana) and from there follow the Via Appia (the "Appian Way").

28:15. Honorary delegations would come from cities to meet a visiting dignitary; local Christians, probably familiar with Paul's letter to the Romans and some Christian leaders in Rome who know him, honor Paul in this way, coming even much further than ordinary delegations. (For information about some of the Roman believers, esp. their leaders, see Rom 16.) In older times, isolated inns had grown into larger settlements that retained the names of the inns. One of these was the Tres Tabernae, or Three Inns, 33 Roman miles from Rome on the ancient and famous Appian Way. (A Roman mile was a thousand average-sized paces for a Roman soldier, eventually standardized as about 4,851 feet, about 92 percent of the English mile of 5,280 feet [i.e., about 1479 meters].) The "Market of Appius," or Appii Forum, was about 43 Roman miles (39.5 miles; 63.5 kilometers) from Rome on the same paved road. Jewish communities had existed in Italy for a long time and may have formed the basis for the first Christian groups there (cf. 2:10).

28:16. Rome had as many as a million residents, though not all fit within its traditional walls. Along the Appian Way, Paul and the others would enter Rome's Porta Capena, through an area with many poor immigrants. Paul was loosely chained by the wrist to a soldier (28:20), presumably a member of the Praetorian Guard, Caesar's elite personal guard in Rome, which consisted of nine or twelve cohorts. The relatively light confinement reported here was used only for prisoners of status who posed no threat (officials would know of the opinion in 26:31), though he did not receive the lightest custody (i.e., without chains). Paul would have considerable freedom within the home, which may have been an apartment in one of Rome's many blocks of tenements; he could have met with visitors in the building's courtyard, if available.

Two soldiers normally guarded dangerous prisoners; the single soldier (cf. also the single chain of 28:20) suggests that Paul was considered a minimal security threat. The guard likely belonged to the Praetorian Guard, the elite part of the Roman army used in Italy itself. The Praetorian Guard was commanded by the Praetorian prefect, one of the most powerful men in Rome, who was at this time Afranius Burrus. Burrus was officially responsible for all prisoners from the provinces to be tried by Caesar's court, although the task itself was probably delegated to a lower officer.

28:17-31
Paul, Jews and Gentiles in Rome

28:17. Rome had a significant Jewish community (a common guess is forty to fifty thousand) organized in numerous *synagogues. Many lived in the impoverished area across the Tiber; the majority spoke predominantly Greek. The "local Jewish leaders" (NIV) are leaders (apparently bearing titles such as "rulers of synagogues," "gerousiarchs," and "rulers") of different synagogue communities; in contrast to Alexandria's Jewish community, no single leader or body ruled over the whole Jewish community in Rome. The Jewish congregations in Rome were all autonomous, and Christians could spread their views among the various synagogues with relative freedom. The Jewish community there had also made many Roman converts and sympathizers (to the chagrin of many male Roman aristocrats). Many of these sympathizers would be happy to embrace a version of the Jewish faith that accepted them fully without circumcision. Many

Jewish believers may have been expelled a decade or so earlier due to tensions over Jesus' identity (see comment on 18:2), however, and though many would have returned on Claudius's death, it is not clear that they returned to the synagogues.

28:18-20. In terms of ancient logic and *rhetoric, that Paul was "forced" to appeal is an argument from "necessity," often used to show that a particular behavior was not wrong in a given case. Paul is not, he says, out to bring a countercharge (see comment on 24:19) or embarrass his people, already a sometimes marginal minority in Rome. Paul must also explain his chain, normally a mark of dishonor. Paul continues to emphasize the continuity between the *Old Testament message and his own; this point would be important to Jewish leaders and also to Roman officials, who needed to understand that the Jesus movement was rooted in an ancient religion worthy of toleration (even if, after 70, Judaism was unpopular in some circles).

28:21-22. Paul's accusers may not yet have arrived (cf. 28:11), but they may also have abandoned the case. Unable to win their case in Judea, Paul's accusers would have even less chance in Rome; if accusers did not eventually come, a case was to be decided in favor of the defendant. Those who failed to prosecute a charge could also be accused of having fabricated it. By A.D. 62, the Jewish community in Rome had an advocate with the emperor in his wife (and former mistress) Poppaea Sabina—until Nero kicked her to death while she was pregnant. The Roman Jewish community may have had conflicts over the identity of Jesus a decade earlier (see comment on 18:2). These leaders could not but know about this large movement (a few years later Nero killed hundreds of Christians), but they may have lacked an educated Jewish Christian leader who could dialogue with them about it. It is by no means clear that the Roman Jewish community was uniformly hostile to the Christian movement (28:24), but they naturally had questions, especially if their previous (probably partial) expulsion in 18:2 was related to Christian teachings.

28:23-28. Paul's citation of Isaiah 6 climaxes a theme throughout Acts: that most of God's own chosen people reject their *Messiah while *Gentiles accept him is not amazing but the fulfillment of Scripture. Toward the end of their work, writers often recapitulated major themes that came up earlier in their book.

28:30. At the end of two years, if no accusers had arrived and no charges had been sent against him (28:21), the case against him might be closed by default. Careful records were kept, so the system would not simply lose track of its prisoners, especially in Rome itself. Paul was later arrested again and beheaded (according to strong tradition, in Nero's persecution, which began in A.D. 64), but Luke wishes to end on a note of positive legal precedent, before the corruptions introduced by Nero's tyranny. A number of ancient works had sudden endings; and following the pattern of other Jewish and Christian works (but in contrast to many Greek works), Luke wishes to end happily. Open endings sometimes look beyond the narrative's closing to the promised or foreshadowed future (here, the completion of Acts 1:8).

28:31. That Paul could preach under the very nose of the Praetorian Guard suggests that, before Nero instituted his persecution against Christians for political reasons, they were tolerated under Roman law. Luke's defense of Christianity on legal and philosophical grounds paved the way for second-century defenders of Christianity and points the way for Christian lawyers, statespersons and others to work in society today.

New Testament Letters

Letters. The vast majority of ancient letters were short—an estimated average is eighty-seven words. Most of the *New Testament letters (except Philemon, 2–3 John and Jude) are long even by the standards of literary letters; some, like Romans, are extremely long (about seventy-one hundred words compared to an average of about three hundred in *Cicero and about one thousand in *Seneca). Given the costs of papyrus and labor, a letter such as Romans could have cost more than twenty denarii—perhaps some two thousand dollars in earnings equivalent in the recent U.S. Lacking access to shorthand, Paul may have dictated Romans (Rom 16:22) painstakingly over the course of eleven hours. Such letters were more literary undertakings than most other ancient letters.

Later rhetoricians followed the typical Greek penchant for categorization and provided guidelines for the educated to write different types of letters: letters of rebuke (e.g., Galatians), letters of friendship or family, aesthetic letters (read among the elite for enjoyment), official letters and letter essays. These categories offered samples for the practice of writing letters, but genuine first-century letters were not confined to airtight categories.

Rhetoric. Many scholars have associated Paul's letters with *rhetoric, the study and use of proper forms for public speaking, so we introduce the character of ancient rhetoric here. (Some *church fathers and Renaissance and Reformation interpreters also read Paul in light of Greco-Roman rhetoric.) Certainly at least one church cared about rhetoric and apparently judged Paul's letters (which exhibit his argumentation) stronger than his speaking (which would also include accent, gestures and the like), to Paul's dismay (1 Cor 1:17, 20; 2:1-5, 13; 4:19-20; 2 Cor 10:10-11; 11:6). Paul studied in Jerusalem not as a rhetoric or philosophy major but as a Bible major (cf. Acts 22:3)—whereas orators flaunted their cultural literacy by lavish quotations from Greek literature, Paul expounds Scripture. Perhaps his training in rhetoric amounted to what today might be a couple of homiletics courses, augmented through his argumentative dialogues with others in subsequent years. Nevertheless, he not only spoke Greek but he spoke and wrote good Greek that

reflects his sensitivity to cultural idioms. In the Greco-Roman world, it was impossible for him not to dialogue and communicate with people influenced to one degree or another by rhetoric.

Greek higher education usually concentrated on rhetoric, although some students specialized in philosophy instead. Those who could afford it learned basic reading and writing under a *grammaticus,* often beginning around age ten or twelve, and the fewer who could afford the next stage proceeded to the *sophistes* or rhetorician, often around the age of fifteen or sixteen. Most who had advanced education completed it by around age eighteen.

Rhetoric was the indispensable tool of politicians, lawyers and other public figures, an essential focus of upper-class education. Its training included speech imitation and composition, oratory, practice in extemporary exposition on diverse topics, gestures, grammar, proper citation technique and so forth. The majority of urban people not specifically trained in rhetoric picked up its basic outlines from listening to public speeches, which pervaded urban public life.

Types of Rhetoric. Those who wrote rhetorical handbooks divided rhetoric into three main categories, although these overlapped in practice: epideictic (or encomiastic), praising or blaming someone in the present; deliberative, convincing someone to act in a particular way (directed toward the future); and judicial (or forensic), the rhetoric of law courts (dealing with actions of the past). Attempts to strictly classify Paul's letters according to any one of these forms usually fails because in practice speeches mixed the forms.

Rhetoric in New Testament Letters. Most ancient letters were simply business documents or personal notes; such letters averaged eighty-seven words. Even most letters from orators (such as *Cicero, Pliny the Younger or Fronto) contain few rhetorical devices; certainly one could not outline them as speeches. Many of Paul's letters, however, contain significant argumentation, which was especially the domain of rhetoric. For this reason it is helpful to note Paul's use of rhetorical devices and conventional forms of argument. More debatably and controversially, some scholars find larger patterns of argumentation matching the typical outlines of speeches. It should be noted, however, that actual speeches did not always conform to the outlines proposed in handbooks; and even the most didactic of letters from members of the rhetorically trained elite do not normally fit such outlines.

Because certain rhetorical conventions were simply part of formal speaking in their day, many writers like Paul may not have been conscious of their own rhetorical artistry. It is nevertheless helpful for the modern reader, accustomed to different forms of public speaking and argumentation, to understand the rhetorical techniques that ancient writers often used. Paul was undoubtedly more conscious of and concerned for his culturally relevant communication technique in his most formal letters (e.g., Romans) or when challenged by upper-class readers (e.g., in

1 and 2 Corinthians), and my treatment of the rhetoric in these letters is accordingly more detailed than that of his other letters. Some objected to Paul's delivery (cf. 1 Cor 2:3; 2 Cor 10:10; 11:6), but Paul fills some of his letters with more rhetorical devices than some orators would have deemed suitable for mere letters.

Purpose of Letters. Although most brief papyrus letters were merely personal or business communications, some wrote letters with a long-term purpose, intending publication and ideally wide circulation even if addressed to an individual. The prophetic letters in the *Old Testament (2 Chron 21:12-15; Jer 29; 36; cf. also Rev 2–3) show that in Jewish circles letters could be viewed as inspired if dictated by a prophet (1 Cor 7:40; 14:37).

Letter essays were general treatises that depended more on the author's context than on the situation of the readers. Most letters, however, were addressed to the audience's situation; later epistolary theorists stressed adapting letters to the situation of the readers. James might be a letter essay; probably all of Paul's extant epistles (including Romans) are addressed to specific situations.

Stereotypical Forms in Letters. Different kinds of letters sometimes addressed different standard themes (now loosely called *topoi*). For instance, ancient letters of consolation repeated some basic themes, just as modern sympathy cards, epitaphs or eulogies do. The use of conventional themes does not mean insincerity, however; for example, rhetoricians like *Cicero emphasized that one should *feel* what one was preaching, rather than merely reproduce stereotypical forms emotionlessly. For information on introductions and conclusions of letters, see comments on Romans 1:1-7; 16:21-24 and 25-27.

Reception of Letters. According to some estimates, literacy in the Roman world was around ten percent (much higher for elite urban males, lower for others); although reading was more common than writing, and urban areas had more education than rural areas, many persons in the congregation would be unable to read. Reading was usually done aloud even in private; churches receiving Paul's letters would have them read publicly in the congregation's services, probably often by those who normally read Scripture in the meetings (for those who had Scripture scrolls available). Readers might try to help communicate the thought with appropriate intonation and gestures.

How to Understand Letters. Letters had no chapter or verse breaks when they were first written (these were added later); thus one should read the whole letter to catch the flow of thought and never extract verses from their context. Ancient readers recognized that one should try to understand the author's purpose in writing, and they already knew their own cultural situation. When we read the letters, we should try to assume the original situation and then catch the writer's flow of thought by reading through the whole context. We may put ourselves, as best as possible, in their situation and consider how the principles apply in our situations today.

Collections of Letters. Sometimes the letters of a famous person would be collected for publication. Paul's letters were collected some time after his death, but possibly as early as the end of the first century as local churches shared their own treasures and memories of a key leader in the *Diaspora mission.

Tensions Among Letters. Because most letters addressed specific situations, similar phrases could be used to address very different problems. Most writers were eclectic philosophically, drawing from a variety of different sources; even the *Dead Sea Scrolls testify that the same audience could accept different kinds of religious language (*law, ritual, *apocalyptic, hymns, *narrative). It is therefore difficult to determine differences of authorship, or to argue for the presence of apparent theological contradictions, based exclusively on differences among Paul's or other early Christian letters.

Works on Ancient Letter Writing. The most readable and helpful introductions to the *genre include Stanley K. Stowers, *Letter Writing in Greco-Roman Antiquity,* LEC 5 (Philadelphia: Westminster, 1986); David E. Aune, *The New Testament in Its Literary Environment,* LEC 8 (Philadelphia: Westminster, 1987), pp. 158-225; and E. Randolph Richards, *Paul and First-Century Letter Writing: Secretaries, Composition and Collection* (Downers Grove, IL: InterVarsity Press, 2004). For rhetoric, see, e.g., S. E. Porter, ed., *Handbook of Classical Rhetoric in the Hellenistic Period 330 B.C.–A.D. 400* (Leiden: Brill, 1997); R. D. Anderson Jr., *Glossary of Greek Rhetorical Terms Connected to Methods of Argumentation, Figures and Tropes from Anaximenes to Quintilian* (Leuven: Peeters, 2000); D. E. Aune, *The Westminster Dictionary of New Testament & Early Christian Literature & Rhetoric* (Louisville: Westminster John Knox, 2003); and J. D. Harvey, *Listening to the Text: Oral Patterning in Paul's Letters* (Grand Rapids: Baker, 1998). For background to Paul and his thought, see, e.g., A. J. Malherbe, *Paul and the Popular Philosophers* (Minneapolis: Fortress, 1989); many articles in J. P. Sampley, ed., *Paul in the Greco-Roman World: A Handbook* (Harrisburg, PA: Trinity Press International, 2003); on Paul more generally, see, e.g., Stephen Westerholm, ed., *The Blackwell Companion to Paul* (Oxford: Blackwell, 2011). Hays, *Echoes of Scripture in the Letters of Paul* (New Haven: Yale University Press, 1989); Christopher D. Stanley, *Paul and the Language of Scripture: Citation Techniques in the Pauline Epistles and Contemporary Literature,* SNTSMS 69 (Cambridge: Cambridge University Press, 1992).

Romans

Introduction

Authorship. All *New Testament scholars accept this as a genuine letter of Paul. Churches naturally preserved letters of Paul; it would have been unnatural for anyone to have forged letters in his name during his lifetime or until long after his genuine letters had become widely known and circulated as authoritative. On the basis of letters clearly written by Paul to address specific situations of his day (e.g., 1 Corinthians) and other letters that share a common style with them, even the most critical New Testament scholars rarely dispute the Pauline authorship of particular letters (including Romans, Galatians, 1–2 Corinthians, Philippians, 1 Thessalonians and Philemon).

Rome's Jewish Community. Rome may have had a million inhabitants; supported by its empire, it imported at least two hundred thousand tons of grain annually. Estimates of the Jewish community in this period range between roughly twenty thousand and fifty thousand, thus (by the usual educated guesses) perhaps five percent of the population. Rome's Jewish community was predominantly poor, although some groups of Jewish people there were wealthier than others and better educated. Different groups lived in different parts of the city (mostly in ethnically segregated communities) and had their own leaders. It is thought that many of the predominantly Jewish house *churches existed in the Jewish ghetto across the Tiber, many Jewish residents working on the docks there. Rome included a community of Jewish Roman citizens, mostly descended from Judeans enslaved by Pompey and then freed by other Jews in Rome (*Philo, *Embassy to Gaius* 155). More than half of the Jewish residents of Rome had Latin names.

The primary language of the Jewish community in Rome, however, was not Latin but Greek, the language in which Paul writes (seventy-six percent of their burial inscriptions are in Greek, twenty-three percent in Latin and one percent in Hebrew or *Aramaic). Many Roman conversions to Judaism created resentment among other aristocratic Romans and led to tension between the Jewish and *Gentile elements in the city. Relevant to this letter, ancient literature suggests that many Romans looked down on Jewish people especially for circumcision (cf. Rom 2:25-29;

4:9-12), Sabbath-keeping (cf. 14:5-6) and food customs (cf. 14:2-23).

Jewish soteriology. Jewish beliefs in the empire in Paul's day were diverse on many points, but most agreed on central issues such as the value of circumcision, Torah, and the temple for Jewish identity. E. P. Sanders challenged many earlier readings of Paul that assumed pervasive Jewish legalism, but the emerging "new perspective" has yielded a conglomeration of different solutions rather than a unified understanding of Paul. Sanders persuasively made the case for *grace in ancient Judaism, but other scholars note that Judaism was diverse, and even a religion insistent on grace (such as Christianity) has its share of legalists. (Merely emphasizing reward or punishment for deeds, however, is not necessarily legalistic, also appearing in Paul, e.g., 2 Cor 5:10.)

Paul's depiction of opposing positions follows standard *rhetorical conventions for polemic in his day, caricaturizing his opponents for the purpose of *reductio ad absurdum*. His argument is rhetorically designed to persuade a first-century audience, even though today he might need to argue differently for a different audience. (For example, Rom 2:17-24, condemning an extreme Jewish teacher, and more general Psalms verses cited in 3:10-20, would not technically make all Jewish individuals sinful. Paul does believe that all people have sinned, but his supporting arguments use the rhetoric that was effective in his setting.)

Paul thus challenges not Jewish people or Jewish views as a whole but some Jewish attitudes and practices. He does this most often in letters such as Romans and Galatians where he addresses the relationship of Gentile believers to Israel's heritage. For the Jewish people, observance of the *law was a matter of culture regardless of views about salvation. For Gentile converts, however, imposing observance of the law's Israel-specific markers as a condition of belonging to Christ's community raised starkly the question of what believers rely on for salvation. Paul recognized Christ as the way of salvation and dependence on him as its necessary condition. For Paul, the *Spirit provides the inward circumcision and law that meets what outward circumcision and observance of ancient regulations could only symbolize or approximate (cf. Jer 31:31-34; Ezek 36:26-27).

Situation. Although Jesus's movement in Rome started among Jewish believers (cf. Acts 2:10), most of the believers in Rome by the time Paul writes were probably Gentiles (cf. Rom 1:5; 11:13; 16:4; esp. 1:13), possibly because many of the Jewish Christian leaders had been temporarily expelled for half a decade (see comment on Acts 18:2). Sometime in the 40s A.D., probably in 49, the emperor Claudius expelled some or much of the Jewish community from Rome, apparently over debates about the *Christ (cf. Suetonius, *Life of Claudius* 25.4). The Roman church was thus composed largely of Gentiles until Claudius's death in A.D. 54, when his edict was automatically repealed, and a number of Jewish Christians returned to Rome (Rom 16:3). Jewish and Gentile Christians (as well as Gentiles influenced by

Jews, and lax Jews less observant of the law) had different cultural ways of expressing their faith in Jesus (cf. Rom 14); Paul thus uses the *gospel to address, among other matters, a church experiencing tension between two valid cultural expressions of the Christian faith.

Paul probably wrote Romans around 55–58 (I tend to favor closer to 58), shortly after Claudius's death. A decade after Claudius's death and perhaps six years (give or take two) after Paul wrote this letter, Christians of all ethnic backgrounds would suffer together in Rome (*Tacitus, *Annals* 15.44). That the church remained strong after Nero killed hundreds testifies to how much the movement had grown.

Theme. Paul's gospel, or good news, was the message about Jesus that could save Jew and Gentile alike (Rom 1:16-17). Given the situation noted above, what the Roman Christians needed was what we could call ethnic reconciliation and cross-cultural sensitivity in Christ. Paul reminds Jewish hearers that they are as damned without *Christ as Gentiles (chaps. 1–3); that spiritual, not ethnic, descent from Abraham is what matters with respect to personal salvation (chaps. 4, 9); that all people (including Abraham's ethnic descendants) are also descended from the sinner Adam (5:12-21); and that the law does not justify Israel (chaps. 7, 10). He reminds Gentiles that they were grafted into Judaism and therefore dare not be anti-Jewish (chap. 11) and that they must respect the practices of their Jewish siblings (chap. 14). Christ (15:1-13) and Paul (15:14-33) are agents of ethnic reconciliation, and unity (16:17-20) is the paramount issue. Paul wants them to accept each other and glorify God together (15:5-12; in 15:9-12 he offers his strongest and climactic texts supporting Gentile salvation).

Paul also explains in this letter that he has not yet visited them because his mission to the unreached is urgent (Rom 15:20-22); the same mission will require him to move beyond them to reach Spain (Rom 15:23-24; cf. 1:13-14). Both of these missions, however, are also part of Paul's vision of reaching all peoples for Christ.

Genre. Some scholars have argued that Paul's letter to the Romans is a letter-essay, explaining his gospel without relating to the specific needs of the Roman church. In view of the previous discussion of situation and theme, however, it seems that Paul lays out the facts of the gospel in chapters 1–11 and then summons his readers to reconciliation and mutual service in chapters 12–15; thus the letter functions more like "deliberative" rhetoric, an argument intended to persuade the readers to change their behavior.

Subsequent History. Protestants have traditionally stressed justification by faith, a doctrine emphasized in Romans and Galatians, because Luther found this doctrine helpful in addressing indulgences and other ecclesiastical corruptions in his day. But it is important to understand not only this doctrine but also why Paul needs to stress it. Most Jews already believed that the Jewish people as a whole were saved by God's grace, and most Jewish *Christians* recognized that this grace was available

only through Christ; the issue was on what terms *Gentiles* could become part of God's people. Did they need to become ethnically Jewish (adopting circumcision and Israel-specific laws) to become spiritual children of Abraham? In arguing for the ethnic unity of the body of Christ, Paul argues that all people come to God on the same terms, no matter what their background. Not even outward observance of God's law can make one right before God's justice; only through Jesus can people be righted. Paul may stress justification by faith, a truth most of his readers would know, in part so he can emphasize reconciliation with one another, a reality they still need to learn.

Commentaries. Detailed commentaries providing significant background include Robert Jewett, *Romans: A Commentary,* with Roy D. Kotansky, ed. Eldon Jay Epp, Hermeneia (Minneapolis: Fortress, 2007); James D. G. Dunn, *Romans,* WBC 38A and B, 2 vols. (Dallas: Word, 1988); Joseph A. Fitzmyer, *Romans: A New Translation with Introduction and Commentary,* AB 33 (New York: Doubleday, 1993); Douglas J. Moo, *The Epistle to the Romans,* NICNT (Grand Rapids: Eerdmans, 1996); and Thomas R. Schreiner, *Romans,* BECNT (Grand Rapids: Baker, 1998). Works on a mid-level range include Brendan Byrne, *Romans,* SP 6 (Collegeville, MN: Liturgical Press, 1996); Charles H. Talbert, *Romans,* SHBC (Macon, GA: Smyth & Helwys, 2002); and Thomas H. Tobin, *Paul's Rhetoric in Its Contexts: The Argument of Romans* (Peabody, MA: Hendrickson, 2004). A helpful shorter commentary with background is Craig S. Keener, *Romans* NCC 6 (Eugene, OR: Cascade, 2009); for an introduction to issues in the book, see, e.g., Richard N. Longenecker, *Introducing Romans: Critical Issues in Paul's Most Famous Letter* (Grand Rapids: Eerdmans, 2011). For views on the background, see especially Karl P. Donfried, ed., *The Romans Debate,* rev. ed. (Grand Rapids: Baker Academic, 1991); Krister Stendahl, *Paul Among Jews and Gentiles and Other Essays* (Philadelphia: Fortress, 1976). E. P. Sanders, *Paul and Palestinian Judaism* (Philadelphia: Fortress, 1977), provides a helpful corrective to earlier criticisms of Jewish views on the law, although some details of his approach are now much debated; for Paul's view on the law in Romans, see, e.g., C. Thomas Rhyne, *Faith Establishes the Law,* SBLDS 55 (Atlanta: Scholars, 1981).

1:1-7
Introduction

Letters customarily opened with the name of the sender, the sender's titles (if any were necessary), the name of the addressees and a greeting. For example: "Paul . . . to the church at . . . greetings." Persuasive speeches often began by establishing the speaker's credibility, what the Greeks called *ethos.* This beginning did not prove the speaker's point but disposed the audience to hear him respectfully.

1:1. Paul's name was normally a cognomen held by Roman citizens, rarely if ever used by Jews who were not Roman citizens, so his citizenship would likely be assumed (cf. Acts 16:37). A slave of someone in high position had more status, authority and freedom than a free commoner; the emperor's slaves were some of the highest-ranking people in the empire, as the Roman Christians would know. In the *Old Testament, prophets from Moses on were generally called "servants" or "slaves" of God.

The ideas of being "called" and "set apart" go back to Old Testament language for Israel and, more important here, Israel's prophets; for "*apostle," see the glossary.

1:2-3. When Israel's prophets proclaimed "good news," they could associate it with the restoration of God's people (Is 52:7), which the prophets elsewhere associated with the ultimate Davidic ruler and the *resurrection (Ezek 37:1-14). "Through his prophets" concurs with the Jewish doctrine of the Old Testament's inspiration and final authority; "according to the flesh" (NASB) means simply that Jesus was physically descended from David.

1:4. "Spirit of holiness" was a common Jewish name for the *Holy Spirit, the Spirit of God. A regular *synagogue prayer regarded the future resurrection of the dead as the ultimate demonstration of God's power. Although Romans could hear the phrase "*Son of God" as portraying Jesus as a rival to the emperor, this letter is full of quotations from the Old Testament, where it referred to the Davidic line, thus ultimately to the promised Jewish king (see 1:3; cf. 2 Sam 7:14; Ps 2:7; 89:27). Paul here regards Jesus' resurrection as the Spirit's coronation of him as the *Messiah and as humanity's first taste of the future resurrection and *kingdom.

1:5-6. The prophets promised that a representative remnant from among the nations would turn to God (Is 2:2; 11:10; 19:23-25; 42:1, 6; 49:6; Zech 2:11). Paul applies to these believers biblical language for God's people, such as "called" (1:6-7) and "consecrated ones" (1:7).

1:7. "*Saints" or "those who have been set apart" or "consecrated" goes back to the Old Testament image of God's people as set apart for himself. Like Paul (see comment on 1:1), they too are "called" (1:6-7); Paul embraces them as fellow heirs in the mission, not as inferiors.

The standard Greek greeting was "greetings" (*chairein*—Jas 1:1), a term related to "*grace" (*charis*); Jewish people greeted one another with "peace," and Jewish letters sometimes began, "Greetings and peace" (2 Maccabees 1:1; for "mercy and peace," see **2 *Baruch* 78:2-3*). Paul adapts this standard greeting, a well-wishing, into a Christian prayer: "The grace and peace of God and Jesus be with you." (On "wish-prayers," see comment on 1 Thess 3:11.) Placing the Father and Jesus on equal footing as providers of grace and peace elevated Jesus above the role given to any mere human in most of Judaism. "Father" was also a title for God in Judaism (usually "our Father").

1:8-17
Paul's Thanksgiving

Although less pervasive than prayers and reports of prayers, thanksgivings sometimes appeared in the openings of the bodies of ancient letters; when Paul omits one (Galatians) it is conspicuous.

1:8. "All roads lead to Rome"; due to the connections of the whole empire with Rome, Christians everywhere knew about the faith of believers in the capital.

1:9. Letters commonly included an opening prayer (cf. 1:7) or the report of prayer. For "in my spirit" (NASB; NIV) the modern idiom would be "from the bottom of my heart," "with all my heart" (GNT; NLT). It was common to call as witness the one who knew one's heart—God. Recurrent prayer was sometimes described as "remembering," "reminding" or making mention to God.

1:10. On "by God's will" or "if God wills," see comment on Acts 18:20; on Paul's plans to go to Rome, see Acts 19:21 (the following

chapters of Acts relate how he finally got there).

1:11-12. Longing to see a friend was a conventional matter to mention in ancient letters, which were used to convey a sense of one's presence when the writer and reader were (as often) far apart.

1:13. Addresses such as "beloved" or "brothers and sisters" were common in letters. On "*Gentiles," see comment on 1:5-6, although in 1:13-15 one should keep in mind Paul's special call to the Gentiles (11:13). Earlier the banning of Jews or at least prominent Jewish Christians from Rome (Acts 18:2) could have delayed Paul's coming, but ultimately the delay stems from his mission (Rom 15:20-22).

1:14-15. Gentiles (1:13) included two categories, by the Greek division: Greeks considered everyone else in the world "barbarians" (cf. "non-Greeks"—NIV); they also often considered themselves wise and others foolish. Some educated Jewish people classed themselves as Greeks, but Greeks considered them barbarians. Paul will introduce the Jewish division of humanity in verse 16, but here he uses the Greek one; in both cases, he affirms that God is for all peoples.

1:16. Verses 16-17 seem to be the *propositio,* or thesis statement, which begins Paul's argument. Paul stresses that the good news of salvation (especially Israel's deliverace in Is 52:7) is for all peoples (see discussion of the situation in the introduction to Romans); if to both Jews and Greeks (Greeks were often the most anti-Jewish), then to all peoples between Jews and Greeks.

1:17. In Greek the term translated "righteousness" often means "justice." With reference to God, in the *Old Testament and in the *Dead Sea Scrolls, "God's righteousness" includes that aspect of his character on account of which he vindicates his people and shows their faithfulness to him to be right; sometimes it also expresses his mercy (e.g., Dan 9:16). Thus it relates to "justification," or legal acquittal and vindication. (In Romans, many English versions translate the same Greek word as both "righteousness" and "justification.") Because God's creative word brings into being, his verdict in practice is also transformative.

The Hebrew and Greek versions of Habakkuk 2:4 differ on a pronoun, which Paul thus omits (since the disputed detail is irrelevant to his argument anyway). In the context of Habakkuk 2:4, the righteous are those who will survive the judgment because they have faith (i.e., are faithful to God). (Biblical saving faith was not passive assent but actively staking one's life on the claims of God. It was a certainty sufficient to affect one's lifestyle; cf. Rom 1:5.) Paul apparently applies this text to those who trust in *Christ and so are saved from the final judgment. That his contemporary readers would understand his application is made clear by the similar application of Habakkuk 2:4 in the Dead Sea Scrolls.

1:18-23
Willful Idolaters

Paul's argument is similar to one in the Wisdom of Solomon, a popular Jewish work widely circulated by this period. His arguments would thus have been easy for his readers to follow. Jewish people viewed idolatry (1:18-23) and sexual misconduct (1:24-27), particularly homosexual intercourse (1:26-27), as sins committed by *Gentiles; Paul sets them up for condemnation of vices they too may have shared in 1:28-32.

1:18. "Heaven" was a Jewish circumlocution for God, and the phrase here is a typically Jewish way of saying "God is angry." (That wrath is "revealed" parallels the revealing of God's merciful righteousness in the *gospel in v. 17.) The truth that the wicked suppress is the truth of God's character (1:19-20), which they distort by idolatry (1:23).

1:19-22. *Stoic philosophers argued that the nature of God was evident in creation; most Gentile intellectuals affirmed divine design in nature. *Cicero at that time could even assert that no race of humanity was so uncivilized as to deny the existence of the gods, and along with others he argued that the human mind points to what God is like. Jewish people scattered throughout the Greco-Roman world used this sort of argument to persuade pagans to recognize the true God. Even later *rabbis tell delightful stories about how Abraham reasoned back to the first cause and showed his fellow Gentiles that there was really only one true God. According to Jewish tradition, God had given seven laws to Noah, for which all humanity was responsible (in-

cluding the prohibition of idolatry). But unlike Israel, who had to keep all 613 commandments in the *law (according to later rabbinic count), most Gentiles disobeyed even the laws of Noah. In a social world built around benefaction and honor, ingratitude (1:21) was one of the worst offenses, and grateful expressions of honor the one obligation expected of recipients of gifts.

1:23. Even Greeks disdained animal images of deities (practiced by the Egyptians), but Greeks worshiped deities in human form. In later Jewish tradition, idolatry was the final stage of sin to which the evil impulse (see comment on 7:10-11) would reduce a person; it was one of the worst sins. Yet the language Paul uses to describe *pagan* idolatry is drawn from *Old Testament passages about *Israel's* idolatry (Deut 4:16-20; Ps 106:20; Jer 2:11); this is a setup for his argument for Jewish readers in chapter 2.

1:24-32
Other Pagan Deeds

Pagan gods acted immorally in the popular myths; one who worshiped them (1:23) would end up acting the same way. Having distorted God's image (1:23), which was originally in male and female humans (Gen 1:26-27), humanity now distorted its own sexuality (Rom 1:24-27). Ancient Jewish people recognized that both idolatry and sexual immorality characterized *Gentiles.

1:24-25. The refrain "God gave them over" (1:24, 26, 28) suggests how God's wrath (1:18) works: he lets people damn themselves as they warp their own humanity. As in the *Old Testament, God can turn people over to their own hardness of heart (e.g., Is 6:9-11; 29:9-12; Jer 44:25-27; some writers have called this "penal blindness"); cf. Psalm 81:12 (about Israel).

1:26-27. Greek men were often bisexual; not only was homosexual behavior approved (some writers, like speakers in *Plato's *Symposium,* preferred it to heterosexual behavior), but elements of the culture socialized boys in this direction. Probably due to a deficiency in the number of women (which many attribute to female infanticide), marriages were often made between thirty-year-old men and women who were eighteen or even younger; husbands usually did not respect them. Men had access to only three forms of sexual release until such late marriages: slaves, prostitutes and other males. Men often preferred boys on the edge of puberty or adolescents. Lesbianism, though less widely reported, is also attested.

Although many upper-class Romans were affected by Greek ideals, some other Romans, including a number of Roman philosophers, disliked homosexual practice. Greco-Roman moralists sometimes opposed gender reversal as "against nature," which would resemble the Jewish argument from God's original purposes in creation (Gen 2:18). This argument appealed to the procreative function of intercourse in nature and the way that male and female organs fit together. Jewish people, whose Scriptures already condemned homosexual acts wherever they were mentioned (including Lev 18:22; 20:13), also borrowed the argument that homosexual acts were "against nature" (cf., e.g., *Philo, *Life of Abraham* 135-37; *Special Laws* 3.37-39; *Josephus, *Against Apion* 2.273-75; *Pseudo-Phocylides 190-92). Although Jewish texts speak of Jewish adulterers and thieves, they nearly always treat homosexual behavior as a Gentile practice. (Socialization affected sexual development.)

Paul did not choose this example of sin to be controversial with his readers; his Jewish and Roman Christian readers alike would have agreed with him that both idolatry and homosexual behavior are sinful. But this example is a setup for his critique of sins less often denounced (Rom 1:28-32).

1:28-32. Ancient writers (Greek, Roman, Jewish; cf. also Lev 18) sometimes employed "vice lists," as here. Like skillful ancient speakers, Paul drives home the point with both repetition and variation: "filled with" four fundamental evils; "full of" five kinds of sin; listing eight samples of sinners; and noting that they lack four crucial virtues. But unlike idolatry and homosexuality (Rom 1:18-27), sins like greed, jealousy, slander, arrogance and ignorance also occur in Jewish lists as sins some Jewish people committed. Like Amos (see Amos 1–2), Paul here sets up his readers for chapter 2: Gentiles are not the only ones who are damned.

2:1-11
No Partiality

Not only *Gentiles (1:18-32) but also Jewish people (2:1-29) sinned. Paul engages in a lively *diatribe style (a common ancient teaching style), by using rhetorical questions and especially by challenging an imaginary opponent. Paul thus demolishes possible objections to his position in a vivid manner.

2:1-3. Speakers often argued on the basis of syllogisms, which consisted of a major premise (here, 2:1), a minor premise (2:2) and a conclusion (2:3). Both philosophers and Jewish teachers accepted that people should live what they preach, hence few could dispute Paul's point. Philosophers saw sin as a moral folly, and Jewish teachers saw it as an affront to God but as universal. Paul demands that people be consistent with their denunciations, which meant taking sin more seriously than most people did. Skilled speakers would sometimes single out a hearer (2:1, 3); cf. Isaiah 22:17; Micah 6:8.

2:4. The *Old Testament and Judaism agreed that only God's *grace made *repentance possible (e.g., Deut 30:6). This principle never denied a person's responsibility to respond to that grace once it was offered (e.g., Deut 5:29; 10:16).

2:5. The Old Testament prophets often referred to "the day of wrath" (the "day of the Lord"), when God sat as judge in his court and judged the world by his justice (e.g., Is 2:11-12; 13:6, 9, 13; Ezek 7:19; 30:2-3; Joel 1:15; 2:1-2, 31; 3:14; Amos 5:18-20; Obad 15; Zeph 1:7; 1:14–2:2; Mal 3:2; 4:5). Some Jewish traditions speak of treasuring up good works for the future, but the *rhetorical opponent Paul addresses here has stored up the opposite (cf. Deut 32:34-35; Hos 13:12).

2:6-11. On verse 6, cf. Psalm 62:12 and Proverbs 24:12. The structure of this passage is chiastic (i.e., inverted parallelism, an ancient literary form): God's impartiality (vv. 6, 11); to doers of good (vv. 7a, 10b), future rewards (vv. 7b, 10a); to the wicked (vv. 8a, 9b), punishment (vv. 8b, 9a).

Justice in judging was widely emphasized, and Judaism commonly stressed God's impartiality (although Israel's preferential treatment at the day of judgment was also explained as righteous); cf. Deuteronomy 10:17. Judaism also acknowledged that the wise person worked for long-range rewards (Rom 2:7; cf. Prov 21:21; 22:4).

2:12-16
Stricter Judgment

Paul's point is that everyone should know better than to sin, but those with more access to the truth will be judged far more strictly than those without. Woe to those who thought themselves righteous by comparing themselves with others! Judaism was right that most pagans did evil; but Jewish people knew God's standard better than the pagans and still did evil. This point underlines Paul's argument of the common predicament of Jews and Gentiles under sin.

2:12. Paul is stricter than most of Judaism here. Most Jews acknowledged that Gentiles could be saved simply by keeping the most crucial commandments (what some traditions called the Noahide commandments; see comment on 1:19-20), because they did not have the whole *law. Paul argues that anyone who has sinned with or without the law will be strictly judged (unless *atonement for the sin is accepted in Christ, as he argues in 3:24-26).

2:13. Jewish teachers agreed that hearing the law was not enough; one must also obey it. Few would challenge Paul's argument on this point.

2:14-16. Paul plays on the Greco-Roman philosophical view of the law of nature written in people's hearts, according to which all people had some measure of innate knowledge of right and wrong, although it was less explicit than the written law. (Greek moralists and especially *Stoic thinkers heavily emphasized the knowledge of the "conscience.") That they could know enough to do right some of the time renders them without excuse for ever doing wrong. Only when God's law is fully written on the heart in *Christ (8:2; Jer 31:33) will it be internalized enough for people to live out God's righteousness.

2:17-24
Disobeying the Law

This *diatribe style often used by philosophers was meant to teach and exhort rather than to attack; the imaginary opponent represents an

idealized wrong position, which the speaker or writer destroys *reductio ad absurdum* (by reducing it to its absurd logical conclusion). The opponent of 2:17-29 is the idealized hypocrite but points out the evils of any measure of hypocrisy. (Similar attacks were made on "pretentious philosophers" in Greco-Roman diatribes.)

2:17-18. Jewish sages often warned that sages should be humble and not boast in their knowledge. But Israel could boast in their sole possession of the *law, because they alone worshiped the one true God. Ancient communication valued repetition to drive home a point; in 2:17-20 Paul offers eleven claims for the interlocutor.

2:19-20. Some of Paul's language here comes from the *Old Testament (Is 42:6-7; cf. 42:18-20).

2:21-23. Appealing to ancient *rhetoric and communication ideals, Paul in 2:21-23 drives home his point with antithesis (contrasting points) and the technique of starting and ending with parallel language (x . . . y/x . . . y). Diatribe often used brief, pointed rhetorical questions. Philosophers typically reviled the inconsistency of their hearers' lifestyles. Temple robbery was considered one of the most impious crimes, and even though Jewish teachers warned against disturbing pagan temples, pagans sometimes thought Jews inclined toward such crimes (Acts 19:37). But those who would rob temples would have to value their contents.

2:24. In the context of Isaiah 52:5, *Gentiles blasphemed God because of Israel's suffering; here they do so because of Israel's sin (cf. Ezek 36:20-23). Jewish teachers complained that public sin profaned God's name among the Gentiles; misbehaving Jews could bring reproach on the whole Jewish community. (A case in point, possibly known to much of Paul's audience, was a charlatan in Rome a generation earlier whose behavior had led to the expulsion of Jews from Rome under Tiberius; *Josephus, *Jewish Antiquities* 18.81-84.)

2:25-29
True Judaism

Moses had complained that Israel was uncircumcised in heart (Lev 26:41), and the prophets had reinforced this conviction (Jer 4:4; 9:25-26; cf. Is 51:7). God's people were responsible to circumcise their hearts (Deut 10:16), and someday God would circumcise their hearts (Deut 30:6). Later *rabbis commented little on this issue; Paul makes it central and defines religious Judaism in terms of possession of the *Spirit (Rom 2:29; an internalized law—8:2; cf. Ezek 36:27), the heart of God's covenant to which outward circumcision could merely point as an external symbol. Both Jewish and Greco-Roman writers emphasized caring what the deity thinks, not what other people think (Rom 2:29). In verse 29, Paul might play on the meaning of "Judah" ("praise"), from which the title translated "Jew" comes.

3:1-8
God's Justice: Why Then Israel?

Jewishness was special—but not for salvation. Some might object that Paul thinks God had been unfaithful to his covenant, in which case God would be unjust; but Paul argues that Israel, not God, had been unfaithful to the covenant.

3:1. These are the objections of the imaginary interlocutor, a common device for furthering one's argument in a *diatribe (see comment on 2:1-11). The objections are reasonable: was not Israel a special, chosen people? Determining "profit" (KJV) or "benefit" (NASB) was a common device among philosophers for evaluating the worth of a behavior or idea.

3:2. *Digression, even long digression, was a normal part of Greco-Roman writing; Paul develops and completes this "first of all" only in chapter 9. Judaism often emphasized that God entrusted his *law to Israel, and Paul here agrees.

3:3. "What then?" (NASB) was a common *rhetorical question used to further the argument of a diatribe. God's faithfulness to his covenant was good long-term news for Israel as a whole; as in the *Old Testament (e.g., in Moses' generation, contrary to some Jewish tradition); however, it did not save individual Israelites who broke covenant with him.

3:4. "May it never be!" (NASB) or "Not at all!" (NIV) was also a common rhetorical retort to the rhetorical questions of imaginary opponents (especially in some philosophers like *Epictetus). It was used to show the absurdity of the opposing objection. Paul declares that

God's justice is ultimately unassailable, as wrongdoers must confess (quoting Ps 51:4). "Everyone is a liar" comes from Psalm 116:11; as part of the familiar Hallel psalms, it may have been recognized by his audience.

3:5-6. God's "righteousness" here is his "justice" (NRSV), as defined in terms of his faithfulness to his covenant word to Israel (3:3).

3:7. "Sinner" was an awful insult in Jewish circles; for Paul to call *everyone* sinners (Rom 1–2) would be shocking. God could be glorified and his justice vindicated even by its contrast with human rebellion, but this point in no way vindicated the rebellion.

3:8. Philosophers also often had to clear up misrepresentations of their teaching. Cf. Acts 21:21.

3:9-18
Proof from Scripture

Some would string together texts ("pearl stringing") with common elements at the opening of *synagogue homilies and in the *Dead Sea Scrolls, though rarely at such length as here. Paul draws especially passages from the Psalms, most linked by the common element of body parts mentioned, and some mentioning death. The Psalms passages apply mostly to enemies; only the quotation from Isaiah 59:7-8 (in Rom 3:15-17) contextually applied to all of Israel. Linking the texts *midrashically, however, allows Paul to draw on the language of all of them.

3:9. Another objection from the imaginary protester allows Paul to return to his argument that Jew and *Gentile are equally in need of salvation. To be "under" sin was idiomatic for being subject to its rule.

3:10-12. Here Paul quotes Psalm 14:1-3 (= 53:1-3; cf. 1 Kings 8:46; Ps 130:3; 143:2; Prov 20:9; Eccles 7:20). Because the psalm repeats twice the line "no one does kindness," Paul changes one to "no one righteous" to connect with his larger argument; Jewish teachers commonly adapted the language of texts accordingly.

3:13-18. The principle for attaching these proof texts to one another is similar to the rabbinic principle of *gezerah shavah* (which linked Old Testament texts by a key word). All these verses mention body parts: throat, tongue, lips, mouth (3:13-14; respectively, Ps 5:9; 10:7; 140:3), feet (Rom 3:15-17; Is 59:7-8) and eyes (Rom 3:18; Ps 36:1). Jewish teachers emphasized that the evil impulse (see comment on 7:10-11) ruled all the parts of the body (by later enumeration, 248 parts). The preponderance of mouth-related sins here may be intentional, especially if Roman Christians are complaining about each other (see chap. 14).

3:19-31
The Law and Righteousness

3:19. Paul's use of Scripture shows that Jews as well as *Gentiles are sinful. The Jewish people were those "under" (see comment on v. 9) the *law; "the law" could loosely include the Psalms and the Prophets (the rest of the *Old Testament), as in 3:10-18. People were "silenced" in a law court when they could raise no objections in their own defense (cf. Ps 107:42; Job 40:4-5; 42:6).

3:20. Most of Judaism also agreed that all people sinned sometimes and that they needed God's *grace; although some Jews suggested exceptions, they considered them extremely rare. Paul here forces his readers to be consistent and to recognize that Gentiles would thus be saved on the same terms as Jews. This verse echoes Psalm 143:2, which pleads for God's mercy based on his righteousness and faithfulness (143:1). The Greek text has literally "all flesh will not be justified" (for which most translations use some variant of the less awkward English "no flesh will be justified"—NASB); "all flesh" is a standard Hebrew expression for all humanity (or, in some contexts, for all creatures). The sense of "works of the law" is debated here, as in a *Qumran text (4QMMT); probably it evokes biblical language about "doing" the law, hence remains general, though Jewish distinctives would reinforce Paul's point the most.

3:21. "The Law and the Prophets" was one way to speak of the whole Old Testament; in chapter 4 Paul will argue how these texts teach righteousness by faith (v. 22). But God's justice is not dependent on human performance of the law and thus not based on an advantage available only to Israel (3:2). Jewish teachers believed that Israel was special with regard to salvation and that their reception of the law at Sinai vindicated God's choice of them.

3:22. "No distinction" (NASB, NRSV) among sinners refers to Jew and Gentile; both must approach God on the same terms, through Jesus Christ. This statement challenges the values behind the tensions in the Roman *church (see discussion of the situation in the introduction to Romans).

3:23. Judaism viewed "sin" as a moral offense against God (in contrast to the less dramatic usual Greek sense of the term). Jewish sources agreed that everyone sinned (with rare exceptions, like a young child); Greek moralists said that some faults were inevitable. Although the matter may be debated, "falling short of God's glory" here might allude to the Jewish idea that humanity lost God's glory when Adam sinned (cf. 5:12-21).

3:24. "Redemption" (freeing a slave) was a standard Old Testament concept; the Old Testament terms often involve the paying of a price. God "redeemed" Israel, making them his people by grace and by paying a price for their freedom (the Passover lamb and the firstborn of Egypt), before he gave them his commandments (cf. Ex 20:2). In Paul's day, the Jewish people were looking forward to the messianic redemption, when they would be delivered from earthly rulers; but the malevolent ruler here is sin (3:9).

3:25. The term here translated "propitiation" (NASB) or "sacrifice of *atonement" (NRSV) refers to the mercy seat, the cover of the ark of the covenant (in the *Septuagint). This site was consecrated to God by blood each year on the Day of Atonement (Lev 16:14-15); "blood" here therefore presumably interprets Jesus' death as an atoning sacrifice. Some other early Jewish sources used the image for a person's death that turned away God's wrath from Israel (*4 Maccabees 17:22). Although in Jewish tradition prayers, alms and other good deeds could turn away wrath (Sirach 3:3, 20; 32:1-3; Wisdom of Solomon 18:20-21), the law also required bloodshed: something had to die to appease the wrath properly due a person's sin. God mercifully "passed over" (Ex 12:13) sins before the cross, in anticipation of the sacrifice that would take place there. (One might compare the rabbinic view that *repentance defers judgment until the Day of Atonement atones for sin, although nothing in the text suggests that Paul has this idea in mind here.)

3:26. To the Greek mind, justice meant "fair [but not necessarily equal] distribution" (the inequality of justice may be illustrated in that Roman justice assigned higher penalties to lower social classes); it was nevertheless agreed that magistrates should rule according to "justice." Judaism emphasized God's justice and recognized that he, like a just judge, could not simply acquit the guilty. Later rabbis in time developed a rift in God's character: his attribute of mercy pleaded before him on Israel's behalf, triumphing over the accusations of his attribute of justice.

Paul allows no such rift; he says that God could be just and simultaneously vindicate as just those who depend on Jesus, only because the sentence of wrath was executed on Jesus in their place (3:25). The rest of Judaism believed in God's grace; the differences between Paul and his Jewish contemporaries here are that Paul insists that this grace came at such a great price to God, and that Gentiles can receive it on the same terms as Jewish people.

3:27-28. "Principle" (in an older version of the NIV) read a particular theological position into the translation in spite of the context. Instead, Paul probably poses two ways of approaching the "law" (NASB; current NIV): by human effort or by faith (cf. 7:6; 8:2; 9:31-32). Faith is the right way, which the law itself teaches (3:21, 31).

3:29-30. The basic confession of Judaism was God's oneness (Deut 6:4). Paul thus argues: if there is only one God, he must also be God of the Gentiles (see Is 45:21-25).

3:31. Jewish teaching contrasted "annulling" and "establishing" the law. Ancient writers often used transitions between preceding and following points. Because the law teaches righteousness by faith (as Paul goes on to argue in chap. 4), anyone who teaches this idea upholds the law.

4:1-22
Abraham Made Righteous by Faith

As Israel's ancestor, Abraham was regarded as the model for their faith; later *rabbis also regarded him as the model *proselyte (convert to Judaism), because he was considered a *Gentile before his circumcision. Jewish readers believed that they had been chosen in Abraham and that virtually every Israelite

would be saved by God's *grace if they maintained the covenant. Gentiles who wished to become part of the chosen community, however, had to be circumcised and join Israel in doing the righteous deeds of the *law, as Abraham did.

This section is a good Jewish *midrash, or commentary, on Genesis 15:6. Jewish and Greco-Roman debaters often proved their cases by examples, and this text was a favorite example used by ancient Jewish teachers.

4:1. *Diatribes typically used *rhetorical questions such as "What shall we say then?" as transitions to the next point. Jewish tradition spoke repeatedly of "our father Abraham."

4:2. If anyone was righteous in Jewish tradition, it was surely Abraham. The model *Pharisee, he served God from love; the model proselyte, he brought many other Gentiles to faith in the one true God. He destroyed idols and stood for God's truth. These extrabiblical Jewish traditions often declared that Abraham's merit sustained or rescued Israel in subsequent generations.

4:3. Rabbis regularly offered biblical citations, sometimes prefacing them with, "What does Scripture say?" Jewish teachers often commented on Abraham's faith as reflected in Genesis 15:6, which they read as "faithfulness," one of his works. Paul reads it contextually as dependence on God's promise and stresses the word "reckon" (NASB) or "credit" (NIV), a bookkeeping term used in ancient business documents for crediting payment to one's account.

4:4-5. Still expounding Genesis 15:6, Paul refers here to Abraham. As just judge, God was not believed to acquit the guilty (Ex 23:7), so Paul's declaration is rhetorically provocative, calling attention to transformed status in Christ. When God the just judge "reckons righteousness" to someone, he acquits them as not guilty. But this idea is not merely legal: when God speaks, he creates a new reality (Gen 1:3); see Romans 6:1-11.

4:6-8. Using the Jewish interpretive principle *gezerah shavah,* which links different texts containing the same key word or phrase, Paul introduces Psalm 32:1-2, which he uses to explain what "reckons" means. Omitting the next line on moral righteousness (not yet relevant to his point), Paul recognizes that the "reckoning" of the psalm is based on God's grace rather than on the psalmist's perfection (Ps 32:5). Psalm 32 was ascribed to David; Paul now has both Abraham and David as witnesses to his case.

4:9. The "blessedness" (NIV) or "blessing" (NASB) here is that of which 4:7-8 spoke; in standard Jewish fashion, Paul expounds the details of the text he has cited.

4:10. Here Paul appeals to another Jewish interpretive rule (one we also value today)—context. Abraham was made righteous by faith over thirteen years before he was circumcised (Gen 15:6; 16:3-4, 16; 17:24-25; some Jewish interpreters made this even longer—twenty-nine years). This fact challenged the great significance Judaism gave to circumcision, although Jewish teachers were correct that the *Old Testament had used it as the mark of the covenant. Abraham's faith was surely greater years later when he offered up Isaac, and presumably also at the circumcision, but he already had justifying faith before God in Genesis 15:6.

4:11-12. Circumcision was the "sign" of the covenant (Gen 17:11; **Jubilees* 15:26); but Paul interprets it also as a sign of Abraham's *prior* righteousness according to Genesis 15:6. It was a sign of the covenant and not the covenant relationship itself. Many Jewish ears would recoil at Paul's argument, which makes Gentile Christians full heirs of Abraham without either circumcision or ethnic descent from Abraham. It is one thing to say that uncircumcised Gentiles could be saved if they kept basic Noahide laws, as many Jews believed (especially avoiding idolatry and immorality); it is quite another to put them on the same level as the Jewish people—apparently treating them as proselytes without circumcision. People often spoke of those whose ways one imitated as one's figurative ancestors.

4:13. Abraham was told that he would inherit the "land"; but in Hebrew the word for "the land" also means "the earth," and Jewish interpreters had long been declaring that Abraham and his descendants would "inherit" the whole world to come.

4:14-16. Paul forces the reader to choose between completed righteousness by faith (based on God's grace; Judaism acknowledged grace) and completed righteousness by a knowledge of the law, which would have made

Israel more righteous than the Gentiles, regardless of faith.

4:17. Judaism agreed that God could speak things into being (e.g., Gen 1:3). Paul says that God's promise to Abraham was thus enough to transform Gentiles into his children (especially because God decreed Abraham father of many nations just before telling him to be circumcised—Gen 17:5).

4:18-22. Faith as defined in Abraham's experience is not passive assent to what God says; it is an enduring dependence on God's promise, on which one stakes one's life and lives accordingly. On the level of meaning, Paul and James (Jas 2:14-26) would agree. Faith stronger than death (4:19) prepares for the application in 4:24.

4:23–5:11
The Believer Declared Righteous

No one could boast before God (2:17; 3:27; 4:2), but there is cause for a different kind of boast in hope of restored glory (5:2; cf. 3:23), in tribulation (5:3) and in God through *Christ (5:11).

4:23-25. Paul begins to apply his exposition about Abraham to his readers (the application carries through 5:11). Ancient teachers (Jewish and Greco-Roman) often used examples to exhort their hearers or readers to think and act differently. Paul might allude here to language from Isaiah 53:5-12. The two clauses of 4:25 are rhetorically balanced, but they address different kinds of causes (the second being a goal, what some ancients considered a teleological cause).

5:1. "Peace" meant a relationship of concord between two persons much more often than it meant individual tranquility; thus here Paul means that the believer is always on God's side.

5:2. "Hope of God's glory" might imply the restoration of Adam's "glory" (3:23; 5:12-21); it probably also evokes the *Old Testament prophecies that God would be glorified among his people (e.g., Is 40:3; 60:19; 61:3; 62:2).

5:3-4. Progressions like this one (tribulations, endurance, character, hope) represent a special literary and rhetorical form called concatenation (or climax, or sorites), also found in other texts. Again Paul demonstrates his skill in making his point in culturally relevant ways. Philosophers emphasized that hardships proved the quality of the wise person, who knew better than to be moved by them; the truly wise person should be tranquil in hardships. The Old Testament and Jewish tradition show men and women of God tested and matured by trials; nevertheless, the Old Testament also includes the internal struggles of its heroes, like Abraham, Sarah, David, Elijah and Jeremiah, rather than their continual tranquility.

5:5. Jewish people viewed the *Holy Spirit especially as the Spirit who had enabled the prophets to hear and speak for God. In this context, Paul means that the Spirit points to the cross (5:6-8) and so enables Christians to hear God's love for them. In many Jewish traditions, the Spirit was available only to those most worthy; here the Spirit is bestowed as a gift (cf. Wisdom of Solomon 9:17). On the Spirit being "poured out," see Joel 2:28; on not being ashamed of hope, cf. perhaps Psalm 119:116.

5:6-9. Well-educated Greco-Roman readers were aware of the Greek tradition in which "the good man" was extremely rare. Greeks considered laying down one's life for someone else (especially a friend) heroic, but such sacrifice was not common; among Jewish people it was not particularly praised. Blood was not a dominant part of death by crucifixion, so its mention probably evokes sacrifice; blood propitiating a deity (to turn away wrath, 5:9) was intelligible in ancient Israel, among Jews, Greeks and others.

5:10-11. Greeks spoke of people in opposition to one another being "reconciled," being made friends again, but did not speak of people being reconciled to *God*. The Jewish members of the Roman *church could be more familiar with this sort of language (from some early Jewish texts like 2 Maccabees 8:29). Sometimes *Gentiles sought to be "reconciled" to a deity by payments or reparations, but for the offended party, especially the all-powerful deity, to initiate reconciliation was highly unusual. Jewish teachers often used the "how much more" (5:10) form of argument.

5:12-21
A Common Heritage in Sin and Righteousness

Paul's Jewish readers might have argued for their unique descent from Abraham the

righteous (4:1–5:11), but Paul points them instead to their common descent with the *Gentiles from the line of Adam the sinner. His argument would have greater force to his Jewish readers than Genesis alone might imply, because their traditions had made Adam much more prominent than he had been in the *Old Testament (where he is rarely mentioned outside Genesis).

Jewish people in this period believed that Adam's sin introduced sin and thus death into the world, and most believed that all his descendants replicated his rebellion by sinning (**4 Ezra* 3:21; **2 Baruch* 18:1-2; 54:15, 19). Jewish interpreters generally believed that Adam's glory, lost at the Fall, would be restored to the righteous in the world to come. Later *rabbis expounded on Adam's immense size (some even claimed that he filled the whole earth!). (The structure of Genesis, from Adam to Noah [5:29; 9:1-2, 7] to Abraham [12:1-3] and so on, suggests that God was working to restore humanity, and from Abraham's line the deliverer of Gen 3:15 would finally come.)

5:12-14. "All sinned" (v. 12), even those who, unlike Adam (v. 14), had no direct law to disobey (v. 13). Paul is not, however, denying personal responsibility for sin on the part of Adam's descendants. Jewish writers claimed that Adam brought sin and death into the world (*4 Ezra* 7:118; *2 Baruch* 54:15), but they also believed that each of his descendants made his or her own choice to follow in Adam's footsteps (*4 Ezra* 3:21; 7:118-26; *2 Baruch* 18:1-2; 54:15), becoming each "our own Adam" (*2 Baruch* 54:19). Personification was a frequent literary technique, possibly applied here to Sin and Death.

5:15. Comparison of characters (not always of equal weight) and paired antitheses were familiar in ancient *rhetoric; as the letter was read allowed, this section would build to a rhetorical crescendo. The fivefold repetition of the term translated "transgression" or "trespass" in 5:15-20 would rhetorically reinforce the point. Biblical tradition sometimes viewed people in terms of corporate personality, one standing for many. All who were in Adam by birth became sinners; all who were in *Christ by true *baptism (6:4) became righteous.

5:16-21. On comparisons here, see comment on 5:15; comparisons were not, however, always between equals. Much of the argument of 5:15-21 is a standard Jewish argument, *qal vahomer,* an argument from lesser to greater ("how much more"). Greco-Roman logic also used this interpretive technique; many Jewish ways of arguing from Scripture were part of the general interpretive methodology of antiquity.

Jewish people believed that Israel would reign in the life of the world to come (cf. 5:17; Dan 7:22), as Adam and Eve reigned before the Fall (Gen 1:26-27).

6:1-11
Dead to Sin

6:1-5. This passage develops the implications of corporate personality in 5:15-21. For Jewish people, *baptism was the act by which non-Jews converted to Judaism, the final removal of *Gentile impurity; by it one turned one's back on life in paganism and sin, vowed to follow God's commandments, and became a new person with regard to Jewish *law. A person who became a follower of Jesus likewise gave up his or her old life; through participation with Christ's death, Paul says, their death to the old life in sin, which was crucified in Christ, is an accomplished fact.

6:6-7. The "old man" ("old self" in many translations) is life in Adam versus life in *Christ (5:12-21). Ancient sages often warned against slavery to passions, false ideas and the like. Manumission, or freeing slaves, was a very common practice in antiquity; death, of course, ended all obligations (as in 7:2-3). (Some note later rabbinic teaching that conversion to Judaism ended a Gentile's previous relationships, so that Jewish owners had to allow slaves' conversion only under special circumstances.)

6:8-10. Paul applies the implications of corporate union with Christ in 5:15-21. He might also think of the *eschatological character of faith in Christ (cf. 6:5); the end time would overthrow sin. (Later teachers believed that the "evil impulse" [see comment on 7:14-25] would trouble even the most pious until the time of the *Messiah, when the evil impulse would be slain.) For Paul, the Messiah has come, and sin's power has been killed.

6:11. The finished work of Christ means that the believer has already died to sin and

now needs to acknowledge this—to "reckon" it done in faith (6:11; this is the same term for God's reckoning righteousness in chap. 4). Ancient philosophers often believed that the most fundamental issue was reason, knowledge or understanding. They urged people to embrace the truthful view of reality, accepting wisdom. For Paul, this true wisdom is in Christ, and efficacious not by virtue of preconversion human character but because of what Christ has accomplished. One should embrace one's identity in terms of one's destiny with Christ, not one's past in Adam.

6:12-23
Free from Sin, Servants of Righteousness

As noted above, ancient sages often warned against slavery to passions, false ideas and the like.

6:12-13. In some contexts, "instruments" (NASB, NIV) could be translated "weapons," as in 13:12 (the sense here is debated).

6:14-21. Some scholars have seen here the idea of "sacral manumission": a slave could be freed from the service of one master by officially becoming the property of a god and the god's temple. What is much more clear is that many philosophers regularly used "slavery" and "freedom" in the sense of slavery to false ideas and pleasure, and freedom from such ideas and pleasure as well as from their consequences, like anxiety. Philosophers often emphasized being one's own master.

Judaism could speak of being free from sin. Later Jewish teachers believed that because Israel had the *law, the evil impulse that made the Gentiles sinful could not enslave them. They also taught that Israel had become God's slaves when they were freed from slavery in Egypt.

6:22. In the *Old Testament, Israel was "sanctified" (NASB, NRSV) or set apart as special for God; in standard Jewish teaching, *eternal life was the life of the world to come, inaugurated at the *resurrection from the dead.

6:23. Slaves could and often did receive some "wages." Although the slave's owner legally owned the slave's possessions, the slave could use this property or money (called a *peculium*), sometimes even to purchase freedom. That such wages were normally a positive symbol makes Paul's words here all the more striking. The "free gift" contrasts with such wages.

7:1-6
Dead to and Freed from the Law

The Jewish people believed that they were saved by God's gracious choosing, not by meticulous observation of the commandments. Nevertheless, most sought to keep the commandments as best they knew how, as part of their culture, and this set them apart from *Gentiles. Paul here addresses another major divider between Jew and Gentile in his effort to bring the two together (see the introduction to Romans), because even a Gentile who converted to Judaism would take years to know the *law as well as a Jewish person who had been raised in it did.

7:1. Some later Jewish teachers argued that one who converted to Judaism was a new person—to such an extent that one's former relatives no longer counted as relatives. Paul can use this line of reasoning differently: just as a person became dead to his or her old master (here, sin) at conversion (see comment on 6:1-5), that person became dead to the old law in which he or she was held.

7:2-4. According to biblical law, both death and divorce severed previous relationships; Paul emphasizes the one that fits his analogy in the context. (Because one never spoke of a woman's former husband as her "husband" after the divorce, no one would have understood Paul's words here as annulling certain kinds of divorce; cf. 1 Cor 7:15.) If Paul knew that some Jewish teachers envisioned the law as God's daughter, he shifts the image here; moreover, it is the believer, not the law, who has died (6:2-5). United with Christ's *resurrection and probably envisioned as now the bride of Christ, believers bear not physical offspring but "fruit."

7:5. Philosophers often contrasted reason (which was good) with the passions (which were bad); Jewish teachers came to speak of these in terms of the good and evil impulse. See comment on 7:15-25.

7:6. Most Jewish people felt that the full power of the *Spirit had departed from Israel with the prophets and would only return with the *Messiah's coming; here Paul contrasts the

new act of God in the coming of the Spirit with the old instructions only written on tablets (see Ezek 36:26-27; cf. Jer 31:31-34). Greek interpreters had traditionally distinguished between interpreting laws according to principles and according to exact wording; Palestinian Jewish interpretation was very interested in the exact wording (sometimes even literally to "letters" and spellings of words).

7:7-13
Sin Unfairly Exploited the Law

Scholars dispute whether Paul here refers literally to his own past life or uses "I" generically for sinners (or *Gentiles, or perhaps more likely, Israel) under the *law. Because there is more precedent for teachers using themselves in illustrations (e.g., Phil 3:4-8) than for them using "I" (as opposed to a *rhetorical "you" or "one") generically (but cf. 1 Cor 13:1), it is possible that Paul uses his own previous experience under law, viewed in retrospect, to illustrate life under law in general. What is clear is that Paul regards the law as good; the problem is human sin, and trying to make the law an instrument of self-improvement or salvation rather than a teacher of righteousness.

7:7-8. The opening rhetorical question is the natural one after the parallelism of 6:1-23 with 7:1-6. "You must not covet" is the tenth of the Ten Commandments, the only one that goes directly beyond one's actions to the state of one's heart. The point is that one might not regard coveting as transgressing God's law if one were not so informed by the law.

7:9. When a Jewish boy came of age around thirteen (as in the later *bar mitzvah,* similar to Roman coming-of-age rituals), he became officially responsible for keeping the commandments. Paul may refer to something even earlier in his life, because consciousness of violation would have preceded this; for example, many Jewish boys in financially secure Judean homes began to be schooled in the law at age five.

7:10-11. Jewish teachers recognized the power of human sin (the evil impulse), but said that study of the law enabled one to overcome it and (following, e.g., Deut 4:40; 8:1; Baruch 3:9; 4:1-2) that the law brings life. Paul says that the law became instead the vehicle of his death. (Some scholars think that "deceived" alludes to Eve in Gen 3:13. If Adam were speaking in the verse, it would fit Rom 5:12-21 better. Although "sinned and died" alludes back to 5:12-21, it is less clear that Paul alludes to Adam here. The verb for Eve's deception is common and differs from here.)

7:12-13. Paul argues in Romans that Jew and Gentile come to God on the same terms (see the introduction to Romans), and that the law is not a direct advantage for salvation (2:12-15), although it is valuable for knowing more *about* salvation (3:2, 31). His whole purpose in this section is to explain that the problem is not the law; it is human sinfulness that leads people to disobey the law in their hearts.

7:14-25
The Struggle of Human Effort Under the Law

Many commentators have thought that 7:14-25 describes Paul's struggle with sin at the time he was writing the passage, because he uses present-tense verbs; a majority of scholars, however, currently demur. *Diatribe style, which Paul uses in much of Romans, was graphic, and its historical presents create vividness and Paul has been describing his past life under *law (7:7-13). A number of scholars today also argue that this passage is *prosopopoiia,* in which one rhetorically speaks with the voice of another character, "impersonating" a person or thing, in this case Adamic humanity or (perhaps more likely) Israel under the law. (For a rhetorical use of "I," cf. 1 Cor 8:13; 10:29-30; 13:1-3, 11-12; perhaps Gal 2:18-21; "we" in Rom 6:1.) On this view, Paul could contrast the spiritual worthlessness of self-centered religious introspection (count the "I's" and "me's") in Romans 7 with the life of the Spirit by *grace in Romans 6 and 8.

Many philosophers (particularly *Stoics) portrayed a conflict between one's reason and one's bodily passions; they believed that proper knowledge produced change. Many *Diaspora Jews believed that learning the law helped them subdue passions. Jewish people spoke of an evil impulse, and later teachers of the law insisted that learning the law enabled one to overcome the evil impulse. In contrast to all such proposed solutions, Paul replies that

knowing moral truth had not freed him from sin. But Jewish people also expected sin to be eradicated in the day of judgment. As some *rabbis later put it, "God will take the evil impulse out in the sight of the nations and slay it"; or as Paul put it, Christians are dead to sin and freed from its power (chap. 6). Paul's point in the context is that one must receive righteousness (including the power to live rightly) as a gift of God's grace, not as an achievement by human effort (cf. 1:17; 8:4). (This reading of the passage accords with most Greek, as against most Latin, church fathers.)

7:14. On "flesh" (NASB, NRSV) in the sense of human sinfulness, see comment on 8:1-11. The *Old Testament spoke of God's selling his people into bondage to their enemies, and of God's redeeming his people from slavery to their enemies. Selling into bondage is the opposite of redemption, of freedom from sin in 6:18, 20 and 22. That the law is "spiritual" means that it is inspired by the *Spirit (see comment on Spirit in 8:1-11).

7:15-22. Philosophers spoke of an internal conflict between the reason and the passions; Jewish teachers spoke of a conflict between the good and evil impulse. Either could identify with Paul's contrast between his mind or reason—knowing what was right—and his members in which passions or the evil impulse worked. The language of moral helplessness here resembles some tragic depictions of passion overpowering reason (e.g., in dramas about Medea, who wickedly killed her children). See further comment in the introduction to 7:14-23.

7:23. Other moral teachers also described the struggle between reason and passions (or against the evil impulse) in military terms and spoke of waging war against the passions; see comment on 13:12 (cf. also 7:8, 11: "opportunity" was sometimes used in terms of military strategy).

7:24. "Wretched person that I am!" was a standard cry of despair, mourning or self-reproach; it often appears in tragic laments. Some philosophers complained that this was their state, imprisoned in a mortal body. When they spoke of being freed from their mortal bodies, however, they meant that they would be freed simply by death; Paul's freedom came by death with *Christ (6:1-11).

7:25. Paul probably summarizes 7:7-24 here: the dual allegiance of the person trying to achieve righteousness only by human effort, without becoming a new creation in Christ.

8:1-11
People of the Spirit Versus People of the Flesh

In the *Old Testament "flesh" (e.g., NRSV, NASB) could designate any mortal creature but especially designated human beings. It connoted weakness and mortality, especially when contrasted with God and his *Spirit (Gen 6:3; Is 31:3; cf. Ps 78:39). By the *New Testament period, this connotation of weakness was extended to moral weakness, as in the *Dead Sea Scrolls, and could involve "human susceptibility to sin," or "self-centeredness" as opposed to "God-centeredness." A life ruled by the flesh is a life dependent on finite human effort and resources, a selfish life as opposed to one directed by God's Spirit. Paul's use of "flesh" and "Spirit" refers to two spheres of existence—in Adam or in Christ—not to two natures in a person.

"Flesh" per se is not evil in the New Testament writings; *Christ "became flesh" (Jn 1:14), though not "sinful flesh" (Rom 8:3), and we live "in the flesh" in the sense of "in the body" (Gal 2:20). (The earlier NIV translation "sinful nature," usually corrected in the current version, was potentially misleading, because some people today think of spirit and flesh as two natures within a person, whereas "Spirit" here is *God's* Spirit—it is not a special part of a person but the power of God's presence. Romans 7:15-25 describes a struggle of two aspects of human personality—reason and passions—trying to fulfill divine morality by human effort; but this struggle is not in view here, where people either live that struggle by the flesh or accept God's gift of righteousness by the Spirit. Although "flesh" may be connected with bodily existence, the radical bifurcation of a human being into a morally upright "spiritual" part versus an immoral "bodily" part is a Neo-Platonic or *Gnostic idea foreign to Paul.)

But flesh, mere bodily existence and human strength, is mortal and inadequate to stand against sin (which abuses bodily members that could have been harnessed instead by the Spirit). Although the term is

used flexibly in the Bible, in one sense we *are* flesh (especially in the Old Testament use of the term); the problem is not that people are flesh but that they live life their own way instead of by God's power and *grace. Flesh is an arena of existence, but life there should be led not by bodily passions, like animals, but by God's Spirit.

The Spirit especially anointed God's people to prophesy in the Old Testament but also endowed them with power to do other things. Here, as in the Dead Sea Scrolls and occasionally in the Old Testament, the Spirit enables a person to live rightly (see especially Ezek 36:27). In Judaism, the Spirit indicated God's presence; here the Spirit communicates the very presence, power and character of Christ.

8:1-4. Whether the *law brings life or death depends on whether it is written in one's heart by the Spirit (Ezek 36:27) or practiced as an external standard of righteousness, which is unattainable by human effort (cf. 3:27; 9:31-32; 10:6-8). The expression "to deal with sin" (8:3 NRSV) probably evokes a *Septuagint phrase for "an offering for sin" (NASB), fitting the images of *atonement (cf. 3:25; 5:9) and sacrifice (cf. 1 Cor 5:7).

8:5-8. Philosophers often urged people to set their minds on eternal, heavenly or divine things rather than on the passions and transitory affairs of this world. *Philo condemned those whose minds were taken up with the matters of the body and its pleasures. Some philosophers urged their adherents to neglect bodily matters anchored in mortality, meditating on heavenly matters; for Paul, however, it is God's Spirit that enables this new framework. Philosophers valued tranquility, but Paul's wording follows Isaiah 26:3: it is the mind that trusts God that has peace (cf. also *resurrection life in Is 26:19).

Philosophers divided humanity into the enlightened and the foolish; Jewish wisdom literature and the *Qumran scrolls divided humanity into righteous and wicked. In articulating such different ideal types, the writers did not normally claim that anyone, including themselves, was *perfectly* wise or perfectly righteous. Paul here divides humanity into two classes: those who have the Spirit (Christians) and those left to their own devices. As with other such divisions of humanity, Paul is not claiming that people of the Spirit act perfectly, but rather that they belong to a different sphere than those who lack the Spirit.

The "frame-of-mind of (dominated by) the flesh" in 8:5 probably summarizes the state of the person in Rom 7:22-23. Some people believed that inspiration came only when the human mind was emptied, as in some Eastern mysticism. But Paul speaks of the "mind of the Spirit" as well as the "mind of the flesh." Instead of opposing reason and inspiration, he contrasts a frame of mind that is merely human (and thus susceptible to sin) with a frame of mind that is directed by God's inspiration.

8:9. Most Jewish people did not claim to have the Spirit; they believed that the Spirit would be made available fully only in the time of the end. After the *Messiah had come, all those who were truly God's people would have the Spirit working in them (cf. Is 44:3; 59:21; Ezek 39:29).

8:10. Jewish people in this period often distinguished soul and body, just as the Greeks did, although for Jews the division usually functioned only at death. (Some Jewish writers were more influenced by Greek categories than others.) But Paul does not say here that the (human) "spirit is alive" (NASB); literally, he claims that the "Spirit is life" (KJV, NRSV, GNT). Thus he means that the body was still under death's sentence, but the Spirit who indwells believers would ultimately resurrect their bodies (8:11). God's Spirit would raise the dead (Ezek 37:14).

8:11. Jewish people believed that God would raise the dead at the end of the age. Paul modifies this teaching by only one step: God has already raised Jesus, and this event is a sure sign that the rest of the resurrection will happen someday.

8:12-17
Led by the Spirit

The Jewish people looked back to their deliverance from Egypt as their first redemption and some looked forward to the *Messiah's coming as a new exodus, God's ultimate act of salvation. In this hope they were prefigured by the prophets, who sometimes portrayed the future deliverance in terms of the exodus from Egypt (e.g., Hos 11:1, 5, 11).

8:12-13. Those who lived according to the flesh (as bodily creatures in their own strength) would die, but those who lived by the *eschatological Spirit (who in most Jewish thought and often in the *Old Testament prophets characterizes the life of the *age to come; Ezek 36:27, 37) would be resurrected by him; see introduction to 8:1-11 and comment on 8:10-11.

8:14. The Old Testament often comments that God "led" Israel through the wilderness (Ex 15:13; Deut 3:2; Ps 77:20; 78:52; 106:9; 136:16; Jer 2:6, 17; Hos 11:4; Amos 2:10; for the new exodus, see Is 48:20-21; Jer 23:7-8) and called Israel his "sons" or "children" when he redeemed them from Egypt (Ex 4:22; Deut 14:1; 32:5, 18-20; Ps 29:1; Is 1:2, 4; 43:6; 45:11; 63:8; Jer 3:19, 22; Hos 1:10; 11:1, 10). In both devotional and historical language, God's leading was sometimes associated with his Spirit (Neh 9:20; Ps 143:10; Is 63:14).

8:15. Here Paul again plays on the idea of the exodus from Egypt; God's glory led his people forward, not back toward slavery (cf. Ex 13:21; Neh 9:12; Ps 78:14; for new exodus, Is 58:8; Zech 2:5). He adopted them as his children (cf. 9:4). Here the Spirit, often associated with inspiration in ancient Jewish sources, inspires the believer to experience their intimate relationship with God. On "Abba," see comment on Mark 14:36; although only a few Roman Jews spoke *Aramaic, they probably knew Jesus' special address for his Father as "Papa" in his time of suffering (Mk 14:36; cf. Gal 4:6). Roman adoption—which could take place at any age—canceled all previous debts and relationships, defining the new son wholly in terms of his new relationship to his father, whose heir he thus became.

8:16. Philosophers spoke of conscience testifying (cf. 2:15; 9:1); Jewish people believed that the Spirit had testified to God's truth against Israel and the nations by the prophets. But here the Spirit's prophetic message is good news to the believer's heart. As a legal act, Roman adoption (cf. 8:15) had to be attested by witnesses; the Spirit is here the attesting witness that God adopts believers in Jesus as his own children.

8:17. God had promised Israel an "inheritance" in the Promised Land, and Jewish people spoke of "inheriting the world to come"; on inheritance and adoption, see comment on 8:15. Many Jewish people believed that a period of suffering would precede God's revelation of glory at the end.

8:18-27
Birth Pangs of a New World

8:18. Many Jewish people contrasted the present age with the *age to come, when God would reign unchallenged. Paul's Jewish contemporaries would agree with him that the righteous would be greatly rewarded for any sufferings in this world.

8:19. Following *Old Testament tradition (Is 65:17-18), Jewish people generally believed that the whole world order would be transformed at the time of the end (although not all believed that it would be cosmic in scope or that the present order would perish in a cataclysmic manner). In Greek, Paul's repetition of three words beginning with *apok-* or *apek-* would be *rhetorically appealing.

8:20. Greek tradition declared that the world had been declining from its past Golden Age to the present. Jewish tradition debated whether it was good that humanity had been created and suggested that Adam's sin had brought harm and the domination of evil powers to all creation. *Stoic philosophers believed that the elements would come unraveled and nothing but the primeval fire was really eternal. Cosmic pessimism was rampant in the first few centuries A.D.; many people believed that decay and Fate reigned supreme.

8:21. The Greco-Roman world dreaded "corruption" (NASB) or "decay" (NIV); only the eternal, unchanging things in the heavens would last—the human body and everything else on earth would decompose. The language of "being set free from slavery" (NASB, GNT), "God's children" and probably "glory" may allude to the Old Testament exodus *narrative, which prefigures the future salvation (see comment on 8:12-17).

8:22. In Exodus, God's people "sighed" or "groaned," and their groaning under hardship was an unintended prayer that hastened God's redemption of them (Ex 2:23). Paul also connects "groaning" (Rom 8:22, 23, 26) with birth pangs here. Some Jewish traditions portrayed the time just before the end as birth pangs (see comment on Mt 24:6-8), the great suffering that would bring forth the *Messiah

and the messianic era. For Paul, the sufferings of the whole present time are birth pangs, meaningful sufferings that promise a new world to come.

8:23-25. "Firstfruits" was the actual beginning, the first installment, of the Judean harvest (Lev 23:10); the presence of the Spirit in believers is thus the actual beginning of the future world. Believers had experienced redemption (Rom 3:24) and adoption (8:15) but still awaited the fullness of that experience at the *resurrection of their bodies by the Spirit (8:11).

The Israelites were redeemed from Egypt, but the consummation of their salvation was delayed a generation by their disobedience in the wilderness; it was nearly forty years before they entered the Promised Land. Paul can explain Christ's salvation in the same way, because it is a new exodus (see comment on 8:12-17): the beginning and completion of salvation are separated by the period of God's leading through the tests of the present age (8:14, 18).

8:26. Judaism usually viewed the Spirit as an expression of God's power rather than as a personal being; like John (chaps. 14–16), Paul views the Spirit as a personal being (cf. 2 Cor 13:14). Jewish teachers portrayed God's personified mercy or angels like Michael as intercessors for God's people before his throne; Paul assigns this role to Christ in heaven (Rom 8:34) and to his Spirit in his people (8:26). The Spirit joins here in the birth pangs, no less eager for the new creation than God's children are (see comment on 8:22-23).

8:27. All Jews agreed that God searches hearts (1 Kings 8:39; 1 Chron 28:9), an idea that occurs often in the New Testament, and in some later rabbinic texts even appears as a title for God ("searcher of hearts").

8:28-30
God's Eternal Purpose

8:28. *Stoic philosophers believed that everything would work out for the best—from the vantage point of God, although no other individual being (including lesser gods) would continue. Judaism believed that God was sovereign and that he was bringing history to a climax, when he would vindicate his people and turn their past sufferings to their advantage as he rewarded them (see comment on 8:18). For Paul, the ultimate good of these hardships is their work in conforming believers to Christ's image in the end (8:29).

8:29. Some Greek thinkers emphasized becoming like the deity, but the "image" ("likeness") idea is most prominent in Jewish sources. In Jewish thinking, Wisdom was God's purest image (see, e.g., Wisdom of Solomon 7:26; comment on Col 1:15), but Jewish texts often also speak of Adam or humanity in general as made in God's image (following Gen 1:26-27; for the sense in Genesis, cf. Gen 5:3). God's children will all be conformed to the image of the firstborn of the new creation, the new Adam (Rom 5:12-21).

8:30. On predestination, see chapter 9. The predication of predestination on foreknowledge (8:29) need not cancel all free will; most of Judaism accepted both God's sovereignty and human responsibility. (The idea that one has to choose between them is a post-New Testament idea.)

8:31-39
God's Triumphant Love

Many believers in Rome had probably experienced expulsion less than a decade earlier (A.D. 49; see Acts 18:2), perhaps returning only around 54; presumably unknown to them and to Paul, many would have to give their lives in Nero's persecution less than a decade later (A.D. 64). Before elaborating the point in 8:29-30, Paul offers an emotionally rousing climax to chapter 8. Ancient speakers could stir audiences with *rhetorical questions (8:31-35), lists of sufferings (8:35, 38-39) and repetition (in this case, an inverted parallel structure, or chiasm, in 8:35-39).

8:31. The *Old Testament often speaks of God being "with" or "for" his people (Ps 56:9; Is 33:21; Ezek 34:30; 36:9); therefore, the psalmist asks, what could anyone do to him (Ps 118:6)? Anyone who challenged them challenged him (see Is 50:8; cf. 54:17).

8:32. On the idea of inheriting all things in the world to come, see comment on 4:13; cf. comment on 5:17.

8:33-34. These verses echo Isaiah 50:8: because God vindicates the psalmist, who dares bring a case against him? Jewish texts express confidence that God would ultimately vin-

dicate Israel, as he did each year on the Day of Atonement; Paul bases his confidence of believers' vindication on the advocacy of Christ (see comment on 8:26). Jesus being at God's right hand echoes Psalm 110:1.

8:35-36. Verses 35-39 form a *chiasmus (an ancient literary structure based on inverted parallelism): nothing can separate us from Christ's love (8:35a, 39b), no matter what it is (8:35b-36, 38-39a), which makes believers more than overcome their opposition (8:37). Lists of hardships were common in Greco-Roman literature (especially used to show that the wise person had passed all tests and lived what he believed). "Nakedness" was applied to insufficient dress, not only to complete exposure. "Sword" was the standard mode of citizen execution in this period, and the citation from Psalm 44:22 (applied by second-century *rabbis to martyrdom) reinforces the certainty that martyrdom is in view here (8:36).

8:37. *Stoics valued remaining unbowed in suffering; Jewish people praised this fortitude in their tales of martyrs. Israel believed they would triumph in the day of judgment because God was for them; Paul assures believers that they triumph in their present tests because of what God has already done on their behalf (8:31-34).

8:38. Given the context of cosmic opposition here, we should probably take "principalities" and "powers" (KJV, NASB) here with "angels" as referring to the spiritual forces ruling the nations and bringing opposition against God's people. Many ancient Jewish writers used these terms in this way.

8:39. "Height" and "depth" may well simply personify the heavens above and Hades (the realm of death) below (cf. Ps 139:8); taken together, this was a good Jewish way to encompass all creation (cf. Is 7:11). Some scholars have suggested that they are astrological terms; the spiritual forces who ruled the nations were often believed to do so through the stars, and many people in the Mediterranean world of the first few centuries A.D. feared the inevitable power of Fate working through the stars. For Paul, it is not Fate, the stars, angelic powers, or heaven or hell that determines the lives of believers; rather, the faithfulness of Jesus (8:31-34) does.

9:1-5
Israel's Rightful Place

Romans 9–11 climaxes Paul's argument so far that individual Jews and *Gentiles must come to God on the same terms (see the introduction).

9:1-3. Paul's love and willingness to sacrifice himself for his people would remind his biblically informed hearers of Moses (Ex 32:32), although God did not permit Moses to sacrifice himself either (Ex 32:33-34; cf. Rom 8:39). A speaker's or writer's tears or sorrow was also ideally expected to move the audience or reader.

9:4-5. "Covenants" may be plural to include an allusion to God's covenants with the patriarchs, or to his frequent renewing of his covenant with his people in the *Old Testament, also recognized in later Jewish texts.

The blessings Paul had assigned to believers in Jesus (8:2, 15, 18, 29) historically have belonged to Israel, according to the Old Testament. By recognizing *Christ as God (NIV and other translations of 9:5; cf. 1:25 for the same construction), Paul makes the point even more emphatically: God himself came to humanity through Israel. Paul's list would please *rhetorically sensitive ancient hearers; in Greek, the pattern of feminine nouns in 9:4 end in *-thesia, -a, -ai, -thesia, -a, -ai*.

9:6-13
Not Saved by Ethnic Descent

It was not God's promises (9:4-5) but the faithfulness of his people (9:1-3) that failed. Jewish people often believed that their people as a whole was saved, in contrast to the *Gentiles. Israel's salvation began with God choosing Abraham (chap. 4). Paul argues here that ethnicity is insufficient grounds for salvation, as the *Old Testament also taught (e.g., Num 14:22-23; Deut 1:34-35; Ps 78:21-22; 95:8-11; 106:26-27); God can save on whatever terms he wishes.

9:6-9. Abraham had two sons while Sarah was alive, but only one received the promise (Gen 17:18-21), though both were blessed.

9:10-13. Isaac had two sons, but only one received the promise. This was determined before their birth (Gen 25:23; cf. Mal 1:1-3). Although God may have chosen Jacob because he foreknew Jacob's heart (Rom 8:29), the point here is that God has the right to choose

among the chosen line. Paul reminds his contemporaries that not all Abraham's descendants received the promise, and he could have elaborated further had he so needed; the rest of the Old Testament was clear that many Israelites broke the covenant (Ex 32:33-35; Num 11:1; 14:37; 16:32-35; 25:4-5; Deut 1:35).

9:14-18
God's Choice in Moses' Time

9:14-15. In Exodus 33:19, God has the right to choose whom he wills. In the context, he has forgiven Israel as a whole because Moses has found favor in his sight (33:12-17), and God would show Moses his glory (33:18-23) because Moses is his friend (33:11). God's choice of individuals, however, was not arbitrary but took into account people's response to God (32:32-34), although God had initially called both Israel and Moses unconditionally.

9:16. Paul may echo biblical warnings that escape belongs not to the swift but depends on God's favor (Eccles 9:11; Jer 46:6; Amos 2:14-15).

9:17-18. God showed mercy by not destroying Egypt (Ex 9:15-16), allowing Pharaoh to remain so God could further display his power. Paul makes the wording even more emphatic: God raised up or stirred this particular Pharaoh for the purpose of showing his power, that "the Egyptians may know that I am the Lord," as Exodus repeatedly says (e.g., 9:16). God clearly hardened Pharaoh's heart (Ex 9:12, 35; 10:27; 11:10), but not until Pharaoh had hardened his own several times (Ex 7:22; 8:15, 32). In other words, God elevated a particular person to fight against him; but that person also made his own choice, which God foreknew, before God punished him with a continuously hard heart (cf. Rom 1:24-25; 2 Thess 2:10-12). The *Old Testament affirms both God's sovereignty (e.g., Deut 29:4) and human responsibility (e.g., Deut 5:29), assuming that God is sovereign enough to ensure both (although human choice could not nullify God's word; cf., e.g., 1 Kings 22:26-30, 34-35).

9:19-29
God Chooses Gentiles

Jewish hearers might celebrate God's right to harden Pharaoh (9:17), but Paul will shockingly exploit the principle to a different end: God can harden and show mercy as he wills, whether people are Jewish or *Gentile (9:24-33).

9:19-21. Paul here uses the language of Isaiah 29:16, 45:9 and 64:8, which the *Dead Sea Scrolls often used in prayers. The point is that God made people, and God can therefore do with them as he wills. In the context the application is especially that he can choose either Jews or Gentiles, not that his predestination is arbitrary.

Most Jewish people believed that their people as a whole had been chosen for salvation; they viewed predestination in corporate, *ethnic* terms. Paul here discusses predestination in the context of the salvation of Israel (9:1-13) and the Gentiles (9:23-29), emphasizing that because God can sovereignly choose to *elect whom he wills, that need not be on the basis of descent from Abraham. God's sovereignty means that he is free to choose on another basis than his covenant with ethnic Israel (3:1-8); on some readings of this context, he can choose on the basis of (foreknown) faith in Christ (4:11-13; 8:29-30). Most ancient Jewish thinkers did accept both God's sovereignty and human responsibility to choose rightly without viewing these as contradictory.

9:22-23. God endured vessels like Pharaoh for the sake of those who would receive mercy; honoring his name throughout the earth (Ex 9:16 in Rom 9:17), he could also save Gentiles.

9:24-26. In context, Hosea 2:23 and 1:10, which Paul cites here, refer to God's restoring Israel, despite his temporary abandonment of them (1:9). If God could abandon but then restore Israel, he could also graft Gentiles into Israel if this were his will (cf. Rom 11:30-32).

9:27-28. Jewish teachers often linked texts based on a common key phrase; both Hosea 1:10 and the Isaiah quotation here note that Israel was "like the sand of the sea." Here Paul quotes Isaiah 10:22-23: the prophet warned that only a remnant would survive and return to the land after judgment. If God saved only a remnant in the *Old Testament and promised that only a remnant would survive judgment, Paul questions why Jewish people of his own day would feel secure that their Jewishness would save them. (Paul adds "children of Israel" from Hos 1:10; blending texts was common in ancient citations.)

9:29. Now Paul cites Isaiah 1:9, which makes the same point as Isaiah 10:22-23 (which he just quoted). In the context in Isaiah, Israel has acted like Sodom, the epitome of sin (1:10); they are fortunate to have any survivors (1:7-9), because God demands justice (1:16-17), not mere sacrifices (1:11-15).

9:30–10:4
Israel's Wrong Righteousness

Of the two approaches to righteousness and the *law in 9:30–10:10, only the way of faith saves sinful people. Why had Israel so often failed God in the *Old Testament, with only a remnant surviving? Because they pursued the law in terms of human effort (see comment on 9:29) instead of depending on God, who transforms the heart. Although the term "faith" is rare in translations of the Old Testament (Paul already used most of the references in 1:17 and 4:3), Paul believes that the idea permeates the Old Testament, where God's people must respond to his *grace from their hearts.

9:30-31. Israel rightly sought the law but missed its point by stressing works rather than faith (see comment on 9:29)—faith was the law's point (3:21, 31). The two approaches to the law (one right and the other wrong) are essential to Paul's argument (3:27; 8:2; 10:5-8).

9:32-33. Here Paul follows a common Jewish interpretive practice of blending texts together (Is 8:14; 28:16), arguing that Israel failed because they did not follow the way of faith. Because Isaiah 28:16 probably alludes back to Isaiah 8:14, Paul's blending of the two is especially reasonable, although perhaps only his more biblically literate hearers caught what he was doing. The point is that the same stone that caused Israel to stumble (Is 8:14, which also speaks of the stone as a sanctuary) would save those who believed (Is 28:16). Paul returns to not being ashamed in 10:11.

10:1-2. Jewish literature from this period often praises zeal for the law, even to the point of violently resisting those who wished to repress Jewish practice of the law.

10:3-4. On God's righteousness, see comment on 1:17. "End of the law" can mean the "goal" or "climax" to which the law points, or that people should stop using the law in the wrong way.

10:5-10
Two Approaches to Righteousness

Educated Greeks and Romans often cited classical sources to support their arguments; like other Jewish teachers, Paul cites the Jewish and Christian canonical source, the Scriptures.

10:5. One approach is based on a particular Jewish interpretation of Leviticus 18:5: those who keep the commandments merit *eternal life. (Texts such as these—cf. also Deut 4:1, 26, 40; 5:33; 8:1; 16:20; 30:16, 20—originally promised long life on the land. But by Paul's era Jewish interpreters understood these texts as promising eternal life, apparently holding this view alongside the view that God *elects Israel as a whole to be saved.) This kind of righteousness would prove difficult for *Gentiles without years of enculturation or study of the *law. Paul also established in Romans 1–3 and chapter 7 that this kind of righteousness does not work (see comment on 9:30-32).

10:6-7. Paul here does *midrash, expounding a text in good Jewish fashion. In context, "Who will ascend?" in Deuteronomy 30:12 means, "Who will ascend again, to bring the law down again?" (Moses ascended only to Sinai, but in Jewish tradition he ascended all the way to heaven to receive the law; in Deuteronomy, God provided the law from heaven.) "Who will descend?" in Deuteronomy 30:13 means "Who will descend into the Red Sea to cross it again?" (Although not in this text, the *Septuagint often translates "sea" as "abyss," as Paul does here.) God had redeemed his people at the Sea, according to the *Old Testament and Jewish tradition; now, God has consummated his saving acts in Christ, and the same principle applies to him. (Paul adapts the opening wording slightly to work in a midrashic allusion to Deut 9:4, which, with Deut 9:5-6, reminds Israel that they are not righteous.)

10:8. Deuteronomy 30:14 refers to the law; as long as it is written in the heart (cf. 30:6; Ps 37:31; Is 51:7), God's people could live out its righteousness (cf. Deut 30:11; Jer 31:31-34). Paul says that this principle applies all the more to the message of faith that the law teaches (3:31); *grace, not human effort, leads to righteousness (8:2-4).

10:9-10. Paul emphasizes "mouth" and "heart" here because he is expounding Deuter-

Table 6. Paul's Use of Deuteronomy 30:12-14 in Romans 10:6-10

Deut 30:12-14	Paul's application of the principles in Rom 10:6-10
Do not say, "Who will ascend to heaven?" (to bring down God's gift of the law; 30:12)	Do not say, "Who will ascend to heaven?" (to bring down God's gift of Christ; 10:6)
Do not say, "Who will descend into the sea?" (for salvation; 30:13)	Do not say, "Who will descend into the abyss?" (for salvation; 10:7)
The word (the law) is near you (30:14)	The word (the gospel) is near you (10:8)
In your mouth and in your heart (30:14; probably recitation of the law, cf. Deut 6:6-7)	Confess with the *mouth* that Jesus is Lord; believe with the *heart* that God raised him from the dead (10:9-10)

onomy 30:14 (cited in the previous verse), which speaks of the message of faith in one's mouth and heart.

10:11-21
Salvation for All Peoples

10:11-12. Paul again cites Isaiah 28:16 (see Rom 9:33), which he is still explaining. His emphasis is on the "whoever" (NASB, GNT), by which he argues that the text must apply literally to *Gentiles as well as Jews.

10:13. Jewish teachers commonly expounded a text by citing other texts that shared the same key word; hence Paul ties in another verse (Joel 2:32) that has the word "whoever" to explain that in Isaiah 28:16 "not be disappointed" (NASB) or "not be put to shame" (NIV) means "be saved."

10:14. Paul provides a *rhetorical chain in 10:14-15 that would have appealed to ancient hearers. He expounds the implications of Joel 2:32: salvation is meant for whoever will seek it, Jew or Gentile, but this availability of salvation presupposes that they must have the opportunity to hear the message.

10:15. Paul also has Scripture to verify that bearers of the good news must be "sent" (this term is the verb form of the noun translated "*apostle," hence "apostled"); people are not saved without the opportunity to hear. Isaiah 52:7 announced that there was good news, but heralds still had to bring it to the people.

10:16. Several verses after Isaiah 52:7, Isaiah reports the response to the good news the heralds bring (53:1), and Paul's readers probably know how this text continues: Israel rejected the good news (53:2-3) about one who would die on their behalf (53:4-12; cf. Rom 4:24-25).

10:17. Paul confirms his earlier interpretation of Deuteronomy 30:14 (in Rom 10:8): the saving message is none other than the proclaimed message of Christ.

10:18. Psalm 19:4 refers in context to the testimony of creation. If Paul refers to the context and is not simply making an analogy, it may be relevant that Jewish teachers often grappled with the question of whether Gentiles who had not heard the truth could be held responsible for it. They concluded that Gentiles could at least infer the oneness of God from creation and thus should avoid idolatry (see comment on 1:19-20). Even Gentiles may not have heard all of Christ's message (10:17), but creation itself made them hear enough to be responsible for doing right. The Jewish *Diaspora had more knowledge than the Gentiles had; having the *law, they had every reason to believe, and word about *Christ had already begun to penetrate most Jewish centers of the ancient world.

10:19. God had promised in the law to provoke Israel to jealousy by another nation. Israel had rejected him for that which was not a god; God would reject them for that which would not be a people—to provoke them to jealousy (Deut 32:21; cf. Rom 11:11, 14).

10:20-21. Here Paul quotes Isaiah 65:1-2, which occurs in the context of God's judgment on Israel (64:8-12), of Gentiles being accepted into God's household (56:3-8; cf. 19:24-25) and of God restoring the remnant of Israel to himself (65:8-9).

11:1-10
Always a Remnant

"Remnant" does not presuppose any particular percentage; it is simply the current state of "some" Jewish people following Jesus, rather

than "all Israel" (11:26). A few other groups of Jewish people, as represented in the *Dead Sea Scrolls, also felt that they alone were serving God and the rest of Israel was in apostasy. Because the early Christians believed that Jesus was the *Messiah, they believed that rejecting him was like rejecting the *law or the prophets, and like the prophets they accused their people of apostasy from Israel's true faith.

11:1. Ancient writers often adduced examples for their arguments, sometimes using themselves. But Paul turns quickly to an example from Scripture (11:2-4).

11:2-4. The Elijah *narrative in 1 Kings 19:10, 14 and 18 indicates that at the time of Israel's deepest apostasy, a remnant had still avoided idolatry. It might be relevant that some Jewish traditions presented Elijah as zealous for God but not patriotic enough for Israel.

11:5-7. Paul now expounds on 11:2-4: if there was a remnant even in Elijah's day, there will always be a remnant (i.e., "how much more" now, a common form of argument in ancient times). That God chooses the remnant follows directly from 9:19-29 and from the other texts Paul will marshal in 11:8-10.

11:8. Here Paul blends Isaiah 29:10 ("spirit of deep sleep") with the similar message of Deut 29:4 ("to this day . . . ears to hear"). In Isaiah, God silenced the prophets (Is 29:10) because Israel refused to hear them (30:10-11); thus God would make his message plain through the Assyrian invasion (28:9-13). Israel had become blind and deaf to God's word (29:9-10), having excuses (29:11-12) and a pretense of righteousness (29:13-14); but someday they would see and hear again (29:18, 24). In Deuteronomy, Israel failed to learn from all God's acts on their behalf.

11:9-10. Early Christians often applied Psalm 69, a psalm of a righteous sufferer, to Jesus, the righteous sufferer *par excellence*. In Psalm 69:22-23, the psalmist prays for the judgment of blindness on his persecutors, implying that God was sovereign over blindness—spiritual (Rom 11:8) as well as physical. Paul may also incorporate one "bonus" term from Psalm 35:8.

11:11-14
Provoking Israel to Jealousy

Jewish people sometimes used "stumble" for apostasy or sin. Paul here begins to expound Deuteronomy 32:21, which he cited in Romans 10:19. Some Jewish people expected *Gentiles to recognize Israel's God at the time of the end (cf., e.g., Is 19:24-25; 60:3-12); Paul wants his people to recognize that it is through *Christ that this promise to Israel is being fulfilled. Turning Israel back to God is not the only purpose for the salvation of the Gentiles (cf. the missionary purpose of *Israel* in Gen 12:2-3), but it is one purpose in relation to Israel. Paul's argument in Romans places Jew and Gentile on the same level with regard to salvation (see the introduction); but now he reminds the Gentiles to remember whose faith they have adopted. Ethnocentrism of any sort, Jewish or Gentile, opposes the message of the *gospel. Ancient *rhetoricians considered it acceptable to explicitly praise oneself only if one could justify it as stirring others to emulation (as here) or as defending oneself.

11:15-24
The Jewishness of the Christian Faith

Many Gentiles despised Jewish people for what they considered separatism and strange customs (see comment at Rom 14); Gentile converts to Jesus's movement needed to avoid importing these prejudices into their new faith. Gentile Christians must remember that they are grafted into a Jewish faith, and that when they are grafted into the *Old Testament people of God, they accept not only Israel's spiritual history as their own but also Jews as in some sense their siblings, even if those who do not follow Jesus are fallen siblings. Earlier in Romans Paul had opposed Jewish arrogance against Gentiles; here he opposes Gentile arrogance against Jewish people.

11:15. In the biblical prophets, the turning of the Jewish people back to God's ways coincided with Israel's restoration and the end time (which included the *resurrection of the dead).

11:16. The mention of "dough" alludes to the firstfruits of the dough offering in Numbers 15:20-21, which consecrates the whole batch; Israel's beginnings were holy (Jer 2:3), and God had not forgotten his plans for them. Paul's second illustration (root and branches), however, is the focus of 11:17-24. (Mixed metaphors were common in antiquity.)

11:17-24. Gentiles could and did become part of the people of God in the Old Testament (e.g., Ruth, Rahab, David's Cherethite guards, etc.); but they were clearly a small minority. Now that Gentile Christians in Rome have begun to outnumber Jewish Christians, it is easier for them to forget their heritage in Israel's history.

Jewish sources often described Israel as a plant or a tree, whose roots were the patriarchs (Abraham, Isaac and Jacob). (Sometimes they even used the image of an olive tree; indeed, at some point a *synagogue in Rome was apparently named the "olive tree.") Contrary to standard Jewish teaching, Paul had argued that uncircumcised Gentiles could become part of that people of God through faith in the Jewish *Messiah (chap. 4)—like *proselytes, but without physical circumcision. Now he reminds Gentiles to respect the Jewish people, who had brought them their faith. It was easier for Jewish branches to be grafted back into the true form of their own faith than for polytheists who had worshiped idols before their conversion to understand the faith they were now accepting. Like other Jewish teachers of his day, Paul does not regard any particular person's salvation as guaranteed from the human perspective till they have persevered to the end.

Grafting of trees (adding a shoot of one tree to another tree) is reported in both Jewish and Greco-Roman literature. Sometimes shoots from a wild olive tree would be grafted onto a domestic olive tree that was bearing little fruit in an attempt to strengthen or save the life of the tree. The unproductive original branches would be pruned off, and the new graft was considered "contrary to nature" (as in 11:24—NASB).

11:25-32
The Coming Salvation of Israel

God had promised that Israel as a whole (the surviving remnant after great afflictions) would someday turn to him (Deut 4:25-31; 30:1-6); at this time God would bring about the end (e.g., Hos 14:1-7; Joel 2:12-3:2). Paul's view of the end time here presupposes this return.

11:25. Sometimes "mysteries" were previously hidden truths about the end time revealed to God's servants (e.g., Dan 2:28-30; cf. Rom 16:25-26). Some *Old Testament prophets had predicted God's witness spreading among the *Gentiles; because the final *repentance of Israel would usher in the end, God had delayed Israel's final repentance until the fullness of the Gentile remnant could be gathered in (cf. Mt 24:14; 28:19-20; 2 Pet 3:9).

11:26-27. The future salvation of Israel is repeated throughout the Old Testament prophets. Jewish teachers commonly believed that "all Israel will be saved," but at the same time could list which Israelites would *not* be saved (e.g., Mishnah *Sanhedrin* 10:1): the phrase thus means "Israel as a whole (but not necessarily including every individual) will be saved." In other words, the great majority of the surviving Jewish remnant will turn to faith in Christ. Paul proves this point from Isaiah 59:20-21: the remnant of Jacob who turn from sin will be saved by the coming of the new redeemer, when he puts his *Spirit on them (Paul paraphrases, as was common in ancient citations; he may blend the Greek version of the passage with Ps 14:7, and may add, "when I take away their sins" based on the Greek version of Is 27:9 or Ezek 36:26).

11:28-29. Paul does not regard God's promises to ethnic Israel as canceled—only deferred (cf. Deut 4:25-31); God still had a covenant with the ancestors (Deut 7:8). The grafting in of Gentiles (Rom 11:17) does not mean that they supplant the Jewish people (11:18), as if God has no further interest in the latter. The return of ethnic Israel as a whole to the covenant in the end time would join the grafted-in Gentiles and Jewish remnant that already participate in the covenant.

11:30-32. Ancient writers or speakers often summarized some themes of a section at its close. Gentiles and Israel exchanging roles of disobedience may allude back to 9:25-26 (cf. 10:21); mercy to 9:15-23. Paul's point here is that all peoples have sinned and all peoples must come to God through his mercy in Christ, a point the Roman *church needed to hear (see the introduction to Romans).

11:33-36
Praising God's Wisdom

Sometimes one would conclude a section with rousing *rhetoric; discussion of deity might especially invite exalted, almost poetic, rhetoric. Like the writers of some *Hellenistic

Jewish documents, Paul concludes this section of his letter with a doxology, or praise to God. Using the language of Isaiah 40:13 and Job 41:11 (which refer to God's sovereignty in and over creation), Paul praises God's wisdom in designing history as he has so that salvation would be available to all peoples (chaps. 9–11).

*Stoic philosophers believed that God controlled all things and that all things would ultimately be resolved back into him. In this context Paul's words in 11:36 mean instead what Jewish people normally meant by such words: God is the source and director of human history, and all things—even the evil choices of sinful humans—would in the end glorify him and the rightness of his wisdom. Philosophers distinguished various levels of causation with terms such as "from," "through" and "for"; all the levels are applicable here.

12:1-8
Serve One Another

Having laid the theological groundwork for reconciliation in the Roman *church (chaps. 1–11), Paul now turns to practical counsel. (Some other ancient letters of exhortation followed this pattern.) He emphasizes that God's will is for believers to think rightly: to recognize the equal value of all members of the body and to use all of one's gifts to build up the body.

12:1. Ancient Judaism and some philosophical schools often used "sacrifice" figuratively for praise or for a lifestyle of worship; hence it would be hard for Paul's readers to miss his point here. When he speaks of "your rational [cf. KJV 'reasonable'; more to the point than 'spiritual'—NASB, NRSV] service," his word for "service" alludes to the work of priests in the temple, and "rational" to the proper way to think (as in 12:2-3). The *Old Testament called sacrifices that God accepted "pleasing" (NIV, GNT) or "acceptable" (Ezra 6:10; Ps 20:3; Is 56:7; Jer 6:20; Mal 3:4); people also spoke of sacrifices being "holy" (e.g., Lev 6:17, 25); but "living" sacrifices strains the metaphor in order to present the sacrificial lifestyle as a continual experience.

12:2. Judaism generally believed that evil powers dominated this age but that all peoples would acknowledge God's rule in the *age to come. Here Paul says literally, "Do not be conformed to this *age*." The "renewed" mind considers matters from the perspective of the coming era. Philosophers lacked this *eschatological perspective, but did emphasize making all decisions based on reason. Paul here emphasizes the proper use of the mind: those who discern what is good, acceptable (v. 1) and perfect will know God's will, which also (in 12:3) provides self-understanding.

12:3. Philosophers emphasized proper self-understanding in the context of the rest of the cosmos; Paul emphasizes it in the context of Christ's body (12:4-5). By affirming (in 12:3) that each member has "a measure of faith" (NASB; probably not "*the* measure of faith"—KJV, NRSV) apportioned for different functions (12:6-8), Paul affirms diversity within unity. He will apply this principle to the ethnic conflict in the church (see the introduction) in chapter 14.

12:4-5. That each class in society had a special function, like members of a body, had long been argued by thinkers defending the status quo of the state (often in support of hierarchy); *Stoic philosophers had also applied the image of head and body to God and the universe. But Paul applies the image in a fresh way, in which each member of the religious community has a special function within the one body, abolishing the priesthood-laity distinction of most ancient religions.

12:6. Most of ancient Judaism regarded *prophecy as supernatural in a way different from the other gifts Paul lists here. God could use the other gifts here, but most of ancient Judaism saw them as activities one did *for* God, whereas they thought of prophecy as a divine "possession" that was very rare in their own day. That Paul regards all these gifts as divine empowerments and prophecy as one among many suggests how thoroughly he expects the God who worked miracles in the *Old Testament to continue to work regularly in the life of the church.

12:7-8. Although "serving" may have a broad meaning (cf. 15:25), its position between prophecy and teaching might suggest that it refers to an office in the church (*diakonos;* see comment on 16:1). "Showing mercy" probably refers to charity—caring for the sick and the poor, and so forth; although all Christians did this work to some extent, some had a special gift for it.

12:9-21
General Parenesis

One of the styles ancient moralists used is called *parenesis,* which strings together various moral exhortations that have little connection among them. Paul uses parenesis here but has a general theme that applies to most of his exhortations: Get along with one another. This theme fits the situation of Romans (see the introduction). Many ancient moralists would have agreed with most of the exhortations Paul offers here. Ancients sometimes framed a section with parallel ideas; Paul emphasizes good versus evil in 12:9 and 21.

12:9-10. Ancient hearers would have appreciated Paul's *rhetorical repetition in Greek here: *–oi* concludes three clauses in 12:10-11; *–ontes* or *–ountes* conclude seven clauses in 12:11-13. Ancient Mediterranean men often sought their own honor, competing with others for it. Soldiers swore never to "give preference to another" in honor above Caesar. Some philosophers recommended that "inferior" people prefer "superior" people above themselves. Paul's admonition sounds more like that of Jewish teachers, who emphasized that each of their *disciples should look out for the others' honor as much as for the disciple's own.

12:11-13. Jewish people believed in taking care of needs in their community, and the Christians of Paul's day no doubt agree (v. 13). In antiquity "hospitality" especially meant putting up travelers (without charge) in one's home while they were in town; they would normally carry letters from those trusted by their hosts, attesting that they were to be accepted as guests.

12:14. Like some other exhortations in the context, this one may well echo Jesus' teaching (Lk 6:28); it was common to repeat the sayings of famous teachers, and Jewish teachers often cited their own teachers and the *law. In a *Cynic or Stoic context, the exhortation would sound like a call to ignore suffering; but although Cynic philosophers disregarded reputation, they were adept at returning wisecracks. The counsel of Jesus and Paul has more to do with the Jewish conviction that God would judge justly and that believers could let matters rest with him (12:17-21).

12:15. Weeping with those who mourned was a proper expression of sympathy in most of ancient culture. Although philosophers and moralists often warned against weeping too much, because it "does no good," Jewish weddings and mourning ceremonies (including funeral processions, in which the public joined) presupposed the principle Paul states here.

12:16. Humility was more a Jewish virtue than a Greek one, but even Greeks valued people of status showing compassion and mercy. Whereas many writers emphasized knowing one's proper place, Christian literature goes beyond other ancient literature in suggesting that believers go out of their way to associate with the lowly.

12:17-18. Not repaying evil for evil may come from Jesus' teaching (Mt 5:39), although some other Jewish teachers had also recommended nonretaliation (as early as Prov 20:22). Doing what is respectable in the opinions of other people was a virtue not only to aspiring Greco-Roman politicians but also to Jewish people in their dealings with *Gentiles. But while Jewish people adopted stricter guidelines than the surrounding culture for the sake of witness, they never compromised their own beliefs; the point of the admonition is to protect their witness and prevent unnecessary opposition.

12:19. Stoic philosophers opposed seeking revenge; they believed that Fate was sovereign, and one's best resistance to Fate was to cooperate with it and refuse to let one's will be manipulated by circumstances. Jewish pietists likewise condemned vengeance; they trusted God to vindicate them. The practice was, however, more difficult than the principle; thus, for example, the later Gentile massacres of Jews in Palestine invited bloody reprisals. Paul cites Deuteronomy 32:35 (from the same context cited in Rom 10:19 and 15:10), but the concept appears elsewhere in the *Old Testament as well (2 Sam 22:48; Prov 20:22; Jer 51:56).

12:20. Here Paul quotes Proverbs 25:21-22; although Solomon might have meant "heap burning coals upon his head" as the enemy's emotional misery, in Paul's context of vengeance (Rom 12:19) this expression may mean that one's enemy will be punished all the more severely in the day of judgment. This is also

the sense in which the *Dead Sea Scrolls viewed nonretaliation.

12:21. Some Greek and Jewish thinkers suggested that one should turn an enemy into a friend instead of retaliating. Sometimes, however, the one who does good to the evildoer will be vindicated only in the future day (12:20).

13:1-7
Submission to Civil Authorities

Loyalty to the state was a standard literary topic among ancient writers (e.g., the *Stoic writer Hierocles, *How to Behave Toward One's Fatherland*); it appears in lists and discussions alongside proper treatment of parents, elders and friends. Philosophers and moralists commonly wrote on how government officials should act but also wrote on how citizens should behave toward the government. According to *Plato, Socrates even refused to escape execution lest he undermine the state with its good laws as well as its bad laws.

When Jewish people felt repressed for their ethnic and religious practices, submission to civil authorities was the ultimate example of nonresistance (12:17-21), an attitude that they did not always achieve. Writing this one letter to the empire's capital, Paul may be concerned for Christians' witness to their community. He is well aware that only roughly a decade before his letter some of the Jewish community had been expelled from Rome—possibly in debates over the identity of the *Messiah that Jewish Christians provoked (see comment on Acts 18:2). Paul had reason for concern; probably six to eight years after Paul wrote the letter, Nero began slaughtering Christians in Rome. Meanwhile, tensions in Judea were growing and within about a decade would erupt into a tragic war.

Jewish people had to be concerned about public opinion, especially in Rome, where their maintenance of economic ties with Palestine was viewed with suspicion. Because many people viewed Christianity as a minority sect within Judaism, Christians had even more reason to be cautious. Jews and Christians publicly stressed their good citizenship, against the popular slander that they were subversive. This emphasis does not mean, however, that they would avoid denouncing injustice (cf. 2 Thess 2; Jas 5; Jewish *apocalyptic). Stoics stressed submission to the state and other authorities, but no one understood such submission as absolute (that is, one should not submit to demands to do evil; e.g., Christians would not worship Caesar).

13:1-2. Nero was emperor at this time, but he had not yet begun persecuting Christians or repressing other groups; he was still under the benevolent influences of *Seneca and Burrus, rather than the reprobate Tigellinus. Nero was always popular in Greece, from which Paul was writing.

Although some Palestinian Jews already advocated the revolt against Rome that would take place in little more than a decade, other Palestinian Jews reportedly swore to nonresistance, believing that God had ordained all civil authorities (in the *Old Testament, cf. Is 45:1; Jer 25:9; Dan 4:32). Most Jews in Rome upheld this position and would have been embarrassed by any other. The Old Testament clearly taught God's sovereignty over earthly rulers (Prov 16:10; 21:1).

13:3-5. Here Paul offers standard ancient moral exhortation. The Roman state did many evil things; even its court decisions were based on social class. But the Romans generally advocated justice and toleration, and at this point the Christians have nothing to fear from them. Paul thus does not need to qualify the general principle he is articulating at this time. "The sword" refers to the standard method of execution in this period (beheading); in earlier times the ax had been used. Swords were carried in front of Roman officials to indicate their authority over life and death.

13:6-7. The empire as a whole levied a property tax (often about one percent) and a head tax; local provinces or kingdoms added further taxes; there were also customs duties. Taxes were used to finance roads and run the government but also to support Roman armies and temples devoted to the worship of the emperor. Particular taxes became controversial in Rome perhaps just months before Paul wrote this letter; noncitizen Jews who returned to Rome in or after A.D. 54 may have also been subject to special taxes from which Roman citizens were exempt. Officials expected and received honor by virtue of their position.

13:8-10
Fulfilling the Law

Paul reminds any Jewish hearers concerned about *Gentiles' lax observance of the *law that the best way for them to fulfill the law is to get along with each other (see the discussion of situation in the introduction to Romans).

13:8. Moralists often emphasized not being in debt (cf. Prov 22:7; Publilius Syrus 11); sometimes even whole essays were written on the subject (e.g., by *Plutarch, *One Ought Not to Borrow*). Judaism always stressed love of one's neighbor and sometimes recognized it as a commandment that summarized God's law.

13:9-10. No hearers, whether Greek, Roman or Jewish, would disagree with the commandments Paul cites here, except for some Gentiles who might disagree about coveting. Many Jewish people highlighted the Ten Commandments as particularly significant. Treating one's neighbor as oneself is a recurrent admonition of ancient ethics, although ancient moralists found many different ways to summarize ethics; Paul follows the specific summary advocated by Jesus (Mk 12:31).

13:11-14
Waking for the Dawn

13:11. Philosophers sometimes spoke of a soul inattentive to spiritual matters as being asleep. Paul's image of sleeping in the light of Christ's impending return probably harks back to Jesus' own teaching (Mt 24:43; Mk 13:36). Most Greeks expected history to continue as normal or believed that the universe moved in cycles; but most Judeans, like Paul, were anticipating its climax in the imminent future.

13:12. Many Palestinian Jews were expecting an end-time battle that would include the overthrow of the Gentiles, but Paul here intends this image much more in the sense that Jews outside Palestine would have used it. Philosophers often described their battle with the passions in athletic and military images. This imagery also influenced non-Palestinian Jewish writers; for instance, one document portrays Moses' armor or weapons as prayer and incense (Wisdom of Solomon 18:21). Some of these documents also use the image of clothing oneself spiritually, and Judaism could speak of persons' being "clothed" with God's *Spirit (the *Septuagint version of Judg 6:34; 2 Chron 24:20; *Pseudo-Philo, *Biblical Antiquities* 27:9-10; cf. also *Old Testament images listed in comment on Eph 4:20-24).

13:13-14. Jews often characterized Gentile behavior in terms of wild drinking parties and premarital sex, and in general they were not far off the mark. These activities were done at night (drunken parties often lasted well into the night), like sleeping (v. 11) and burglaries. (Nero's own nocturnal revels were widely known; *Tacitus, *Annals* 16.20.) Rome's streets were not very safe at night if one traveled alone, but parties still could last late into the night.

14:1-23
Don't Be Divided over Foods or Holy Days

The issue of "pure" and "unclean" foods (14:14) prepares for the issue of Jews and *Gentiles accepting one another (15:7-12). Paul's exhortation to unity between the Jewish and Gentile Christians in Rome (see the introduction) now reveals some of the cultural divisions being experienced there. Jewish people did not expect most Gentiles to observe their food laws or holy days but did expect Gentile converts to Judaism to do so, perhaps including Gentile Christians. (Lev 11:44-45 deals with holiness as separation and may suggest that God gave special food laws to Israel particularly to keep it separate from other nations, because most cultures had their own special dietary practices. For Jesus's followers called to reach the world, however, its principle of moral separation could be retained without cultural separation.)

Gentiles, particularly in Rome, had long ridiculed Jewish people for their peculiarities on especially these two issues (plus circumcision, addressed in 2:25-29; 4:9-12). Paul emphasizes primarily eating practices. (Although he addresses a different kind of division over foods in 1 Cor 8, he applies similar principles.)

14:1-4. Most distinct cultures in the ancient world had their own food customs; some philosophical schools also had their own food rules. But few cultures were as insistent as the Jewish people that a deity had assigned their food laws; in the two centuries before Paul many Jews had died for refusing to eat pork, a meat most Greeks thought delicious. (Others

who abstained from pork included Phoenicians, some Syrians, Egyptian priests and the philosophic sect of *Pythagoreans, who were vegetarian; Greeks looked down on some of these groups also.) Although we know that some *Hellenistically educated Jews in Egypt took the food laws symbolically, most Jews continued to keep these laws regardless of where in the Roman Empire they went. Many Gentiles ridiculed these distinctive food customs as being separatist and complained that Jews refused to dine with other peoples. Jews were not total "vegetarians" (14:2), but could resort to that when kosher meat was not available (e.g., 2 Maccabees 5:27; *Josephus, *Jewish Antiquities* 10.190; *Life* 13-14).

14:5-6. The precise time for festivals was such an important issue in Judaism that different Jewish groups broke fellowship with each other over the issue. (Not much later in history, different Christian groups followed suit.) Pagans had their own festivals, with different nations having their own ancestral customs and calendars; Romans also had market days every eight or nine days. But Gentile writers often reviled the Jewish sabbath. Romans reasoned that Jews were just lazy and wanted a day off from work. (This was not the first time in history that someone viewed Jewish worship in such terms—Ex 5:17.) God provided the sabbath before the *law (Gen 2:2-3), but outside Jewish enclaves many Gentiles (especially slaves and employees) would lack the option of observing it. Paul also alludes to the Jewish custom of giving thanks over food.

14:7-9. Like their separate food laws, their sabbath regulations forced Jews to form their own moderately self-sufficient communities in the Greco-Roman world, and Gentiles often regarded Jews as separatistic and unsociable. This situation increased the social distance between most Jews and Gentiles.

14:10-12. "Judgment seats" were common in the Greco-Roman world; officials like *Pilate or Gallio would make their judgments from such a *bema* or rostrum (Acts 18:12). God judging all people before his throne was a common image in Jewish portrayals of the end. It is natural for Paul to apply Isaiah 45:23 to the final judgment, because the chapters around it speak of God delivering Israel in the end and calling the nations to account before him so that they acknowledge that he is God.

14:13. Other ancient texts also used the "stumbling block" as a metaphor. Jews called one another "brothers," as did members of Greek religious clubs. Christians regarded one another as spiritual siblings, and Paul reinforces the conviction that Jewish and Gentile Christians must regard one another in these terms.

14:14. Jews classified foods as "clean" or "unclean," based on the Bible (Lev 11). For Paul to say that this classification is no longer literally relevant would put him in agreement with some philosophically minded Jews in the Greco-Roman world (most of whom nevertheless kept the food laws), but it would shock the vast majority of ancient Jews.

14:15-16. Precisely because foods do not matter, one should be willing to forgo eating them for the sake of what does matter: preserving the unity of the body of Christ. Paul is not telling Gentiles to keep kosher; but he is telling them not to try to talk Jewish Christians out of doing so.

14:17-19. Jewish people often spoke of the perfect future time of God's *kingdom (see 1 Cor 6:9), when the *Spirit would be made available and all people would be at peace with one another (Rom 14:17). For Paul, the coming of the *Messiah and the coming of the Spirit have also inaugurated the working of the kingdom, hence believers should be at peace with one another (14:19).

14:20-21. Gentile meat (suspected of having been offered to idols or not having the blood properly drained) and Gentile drink (some of it possibly used for libations to gods) were suspect to Jews. Jews could usually obtain Kosher food, but like a good *rhetorician, Paul calls his readers to concede his point even in the most extreme case (eg., Josephus, *Life* 14), requiring abstinence from all meat or wine (and if it applies to the extreme, "how much more"—following a standard style of argument—to all lesser cases). (Although some Jewish groups abstained from wine for periods of time—Num 6:3; cf. Jer 35:5-6—diluted wine was a normal part of meals; thus the language here is probably hyperbolic; see comment on Jn 2:9-10.)

14:22-23. Jewish teachers erected a "fence around the law" to keep people from areas of

"doubt," areas that were unclear and where they *might* be sinning. Paul's point is that one should not wound the faith of those avoiding what they think could be wrong; ideally, however, one should discern what is right.

15:1-13
Christ as a Minister of Ethnic Reconciliation

Ancient writers commonly used examples to argue their points. Opponents were more hesitant to challenge the example of a virtuous teacher. Continuing his argument from chapter 14, Paul begins with the ultimate and indisputable example for Christians: Christ.

15:1-3. Psalm 69:9 makes good sense in this context—Psalm 69 is a psalm of the righteous sufferer; thus early Christians often applied it appropriately to *Christ (the ultimate righteous sufferer; Mt 27:34; Jn 2:17).

15:4. Paul can say that Scripture (including the one cited in 15:3) "was written for our instruction" (NASB) because he believes, like his Jewish contemporaries, that it is God's Word and remains relevant. This statement does not mean that he thought it was intended only for his own generation, as some commentators have suggested on an analogy with their views of scriptural commentary in the *Dead Sea Scrolls; indeed, "for our instruction" could easily refer directly to Moses' words in Exodus 24:12. The Jewish people found comfort in the teaching of the Scriptures (2 Maccabees 15:9).

15:5. Because divisiveness was rife in ancient urban Mediterranean culture, many speakers offered exhortations to unity, as here (see our introduction to Romans). Being of "one mind" means thinking in unity (1 Chron 12:38)—in this case a unity of love, not of complete agreement (chap. 14).

15:6. Praising God "with one voice" means in unanimity; cf. Exodus 24:3 (this chapter could be fresh in Paul's mind; cf. Rom 15:4) and 2 Chronicles 5:13 (also elsewhere, e.g., *4 Maccabees 8:29).

15:7-12. Speakers could save a climactic, clinching argument for near the end of their speech; Paul here provides some of his strongest biblical argument for the unity of Jewish and *Gentile believers. That Christ accepted not only Jews but Gentiles Paul demonstrates from Scripture (Ps 18:49 = 2 Sam 22:50; Deut 32:43 [cf. Rom 12:19]; Ps 117:1; Is 11:10). Paul provides citations from different parts of the *Old Testament (Writings, Law and Prophets) and could have provided others to make his case that God seeks the praise of the Gentiles as well as that of the Jewish people (e.g., 1 Chron 16:31; Ps 22:27; 96:10; 102:22; Is 49:23; 60:3, 9-14). Deut 32:43 (cited in Rom 15:10) recalls a context Paul mined also in Romans 10:19 and 12:19. His last citation (in 15:12), Isaiah 11:10, was accepted as messianic. It was also a clear *prophecy of Gentiles turning to the *Messiah and being saved in the end time; Isaiah also has other prophecies about Gentiles being incorporated into God's people (19:23-25; 56:3-8).

15:13. Letters often included a prayer or well-wishing for someone's health, especially in the opening; Paul's letters, which focus on spiritual issues, naturally include more prayers than most ancient letters (15:5-6, 33, etc.). Jewish people customarily used wish-prayers or blessings like this one in the same way that they used direct intercession, and Paul no doubt means for God as well as his Roman audience to hear this prayer.

15:14-33
Paul as a Minister of Ethnic Reconciliation

Often a speech's epilogue would repeat points made in the proem (opening); Paul employs such repetition in this letter (cf. 15:14-33 with 1:8-15) but in a more personal tone characteristic of especially affectionate letters or speeches. The end of a speech was often the place to stress what the Greeks called *pathos,* or emotional appeals.

15:14. Greek writers often expressed their confidence in their addressees; this expression helped the readers to listen more favorably to the rest of the letter and sometimes served as a polite way to make a request. Although it was customary in letters of advice, it was less appropriate in letters of reproof (cf. Galatians). "Admonition" (KJV, NASB) was the gentlest form of correction offered by public speakers and by skilled writers in "letters of blame," and Paul here notes that they can supply this instruction to one another.

15:15. Bold speech could be respected if it was understood as for the hearers' good.

Noting that one was merely "reminding" one's hearers was a common feature of ancient moral exhortation.

15:16. Paul employs a priestly metaphor (cf. 12:1). One popular Jewish expectation of the end time was that Israel would rule over the *Gentiles, who would finally acknowledge the one true God, and the Gentiles would send tribute to Jerusalem (e.g., Is 60:11-14). Jerusalem Christians may have viewed Paul's collection for the *saints there (15:25-27) as a fulfillment of this vindication of Israel's faith.

15:17-18. People disrespected boasting unless it could be justified as for the common good. Philosophers used their lifestyle as well as their teaching to demonstrate their principles and could call attention to it as an example. Paul limits his credentials to what has been demonstrated in his life and ministry.

15:19. Illyricum was north of Macedonia, across from Italy on the eastern Adriatic coast, on the west of the Yugoslav/Serbo-Croation region. The Roman province was called Illyricum; Greeks included this region and some more territory farther south (including Dyrrhachium on the Via Egnatia in Macedonia) in what they called Illyria. Biblically literate hearers understood that "signs and wonders" occurred during the exodus (Ex 7:3; 11:9-10; Deut 4:34; 6:22; 7:19; 11:3; 26:8; 34:11; Jer 32:20-21; Wisdom of Solomon 10:15-16; Baruch 2:11); the proliferation of the *gospel is no less a divine work, often accompanied with demonstrations.

15:20. Illyricum (15:19) may have been one of these previously unevangelized areas; Spain would be another (see comment on 15:24, 28).

15:21. Here Paul quotes Isaiah 52:15, which in its context clearly refers to Gentiles ("kings"), who contrast with the suffering servant's own people, Israel, who would not recognize him (53:1-4).

15:22-23. Ancient letters often dealt with business, including planned visits. Affectionate letters often explained why the writer had not yet been able to visit (here, because evangelizing unreached peoples had kept Paul busy, 15:19-21).

15:24. Persons of honor often avoided direct requests, but Paul indirectly suggests one here. "Assist" (NIV) or "help" (NASB) implies that they would cover his expenses for the trip. This would be a great expression of hospitality, but one which the Roman *church would probably consider an honor if they could afford it. There is little evidence of any major Jewish settlement in Roman Spain before the third century A.D.; Paul's missionary work there would probably be among those who knew nothing of the Bible. Paul also would need to speak Latin there (in the Roman colonies) or use interpreters; most would not understand Greek. At the farthest western end of the Mediterranean, Spain was counted by geographers such as Strabo as at the end of the earth (with China and India on the opposite, eastern side of the world); cf. Acts 1:8.

15:25-26. "The poor" became a title for the pious of Judea in some circles (especially members of the *Qumran community)—perhaps mainly because most of them were poor. Some Jewish teachers considered the laws requiring care for the poor to be a major test of whether a Gentile convert had genuinely accepted God's *law. Sending money to Jerusalem was a common Jewish practice in the Mediterranean, especially with regard to the annual temple tax. Jewish men throughout the world expressed their solidarity with Jerusalem and the homeland through the temple tax; here the Gentile Christian offering for Jerusalem expresses solidarity between Gentile and Jewish Christianity (for the centrality of this issue in Romans, see the introduction).

Paul's letters more frequently identify churches by cities in which they are located than by provinces. The churches probably viewed themselves in these terms because inhabitants of large urban areas identified themselves more by the cities in which they lived than by the political boundaries of Roman provinces. Regional cultural ties existed, however, and this passage may indicate regional cooperation among churches.

15:27. Some believers in Jerusalem may have envisioned the gift as the firstfruits of the prophetic promise that the nations would bring tribute to Israel (Is 45:14; 60:6-10; 66:20); Paul may think more broadly of unity in Christ. In any case, Jewish readers steeped in the *Old Testament had a much better sense of corporate responsibility from members of one people to another than is common in indi-

vidualistic Western society (Deut 23:3-4; 2 Sam 21:1-9). The Roman government collected tribute from the rest of the world, but in the second century the church in Rome was known for sending funds to needy churches elsewhere in the empire, to free Christian slaves from the mines and so forth.

15:28. Ancient letters often anticipated personal visits. It was impossible for any traveler to find a direct route from Syria or the East to Spain; eastern vessels would go to Rome, from which a traveler would have to transship to Spain. A seafarer would voyage to Tarraco there; one could also travel overland by roads to southern Gaul and across the Pyrenees to Tarraco. It was a trip of more than a thousand miles; overland from Rome to Cordova was about seventeen hundred miles. "Put my seal on this fruit" (NASB) refers to the seal used in commercial documents, guaranteeing the correct contents of merchandise (hence "made sure"—NIV); Paul would inspect and oversee the offering's delivery.

15:29-31. That Paul's journey to Jerusalem could involve some danger is attested by the account in Acts 21–22; see comment on that passage. Against some, it is very unlikely that the Jerusalem church rejected the gift (15:31); they had desired help (cf. Gal 2:10), and in that culture, rejecting a gift effectively declared enmity.

15:32. For the expectation of hospitality here, see comment on 15:24.

15:33. On wish-prayers, see comment on 15:13; a standard Jewish blessing was "peace," and "peace" is relevant to a divided congregation (see introduction to Romans).

16:1-2
Letter of Recommendation for a Minister

People often wrote letters of recommendation to their peers or others who respected them, introducing or recommending someone, often the bearer of the letter, usually with reasons why the person should be helped. Jewish travelers often carried letters of recommendation attesting that they should be received by Jewish communities along the way; they were generally bearers of such letters themselves. (The only mail service was by imperial couriers for the government; Paul thus had to send the letter by a traveler.) Paul no doubt emphasizes Phoebe's spiritual qualifications for two reasons: Jewish and Greco-Roman circles did not usually have high regard for women's religious wisdom; and, as the letter's bearer, she will need to explain to them by word of mouth anything in Paul's letter that the hearers would not understand.

16:1. "Servant" (KJV, NASB) is the Greek *diakonos,* which is sometimes translated "deacon" (e.g., NRSV, NIV), perhaps the owner of a home in which *churches met. But Paul usually applies the term *diakonos* to "ministers" of God's word, like Paul and his colleagues; Paul could have this meaning in view here (although ancient Judaism barely ever allowed women to teach the *law publicly to men).

Cenchrea was the eastern port city of Corinth, to its southeast. It had naturally come to host a variety of foreign religions.

16:2. "Helper" (NASB) or "help" translates a Greek term applied especially to *patrons (with NIV, NRSV, "benefactor"). A patron of a religious association was normally a well-to-do person who allowed members of a religious group to meet in his or her home. The patron was generally a prominent and honored member of the group and could exercise significant influence over it. Although most patrons of religious associations were men, a minority were women.

16:3-16
Greetings to Friends in Rome

"All roads led to Rome," and many people in the ancient Mediterranean migrated there; this would be especially true of Jewish Christians who had returned after Claudius's death annulled his expulsion order, such as Aquila and Priscilla (16:3; cf. Acts 18:2). Many ancient letters closed with greetings to friends, often by name, but this letter makes it clear how many friends Paul had, even in a city he had not yet visited.

Many of the names are Greek or Jewish, but this is not unusual; some even suggest that as many as eighty percent of the inhabitants of imperial Rome were descendants of freed slaves from the East. One could bear a Latin name without being a Roman citizen, although the list probably includes several indigenous Romans. Jews could also bear traditional Greek names (even named for deities).

A few years after this letter, Nero began killing hundreds of Christians in Rome, yet the church remained strong; there were thus many believers in Rome, and Paul probably lists primarily house church leaders here. It is noteworthy that although Paul greets roughly twenty-eight individuals and only about eleven are women (nearly forty percent), he specifically commends the work of six (over half) of the women and six (about one-third) of the men. This disproportion may be because, in that culture, the women needed more affirmation in their ministry (see comment on 16:1-2). Some evidence suggests that men outnumbered women in Rome.

16:3. Husbands were normally mentioned first unless the wife was of higher status, which may suggest Priscilla's superior status in society (by birth) or (given Paul's concerns about overemphasizing social status) in the church. "Prisca" is a Latin name, the more formal version of the informal "Priscilla" (her name in Acts), just as Paul elsewhere uses the formal "Silvanus" whereas Luke prefers the informal "Silas."

16:4. "Laying down one's neck" (KJV) was a figure of speech for risking one's life on someone else's behalf, probably derived from the Roman method of execution by beheading.

16:5. Small *synagogues sometimes had to meet in homes before they could purchase buildings; many Greek religious associations did the same; churches did so for the first three centuries, using their income to buy slaves' freedom, feed the poor and so forth, rather than to build edifices. In Rome, many mezzanine apartments existed above ground-floor shops in multistory tenement buildings; Aquila and Priscilla may have lived above their artisan shop. Upper-story apartments were cheaper, tinier and flimsier, with room only to sleep; tall buildings periodically collapsed. Apartment churches could have met in the long hallway connecting small apartments, or on the somewhat more spacious lower floors. The Roman house churches might especially be threatened with disunity among themselves, because Rome (unlike the cities of the East) did not allow Jews to assemble on any level larger than local synagogues, and Christians were regarded as Jews. "Epenetus" was a common name among slaves and freedmen, though not limited to their ranks.

16:6. "Maria" could be a Latinized form of the Jewish "Miriam" (normally translated "Mary" in the *New Testament), or possibly a Latin *nomen,* which could indicate citizenship.

16:7. "Andronicus" is elsewhere attested as a *Hellenistic Jewish name. "Junia" is a Latin *nomen* that should indicate her Roman citizenship. Against attempts to make "Junia" a contraction of the masculine "Junianus," this contraction of Junianus is not attested, because that is a Greek form of contraction and Junianus and Junia are Latin names. Ancient Christian readers recognized that Junia was a woman. Because she and Andronicus traveled together without scandal, and singleness was unusual, they were undoubtedly a husband-wife team; husband-wife teams were known in some professions, like doctors and lower-class merchants. The majority of scholars read the Greek phrase as indicating that both were *apostles. "Kinsmen" (KJV, NASB) can mean countrymen (cf. 9:3; 16:11).

16:8-9. "Ampliatus" and "Urbanus" were common slave names in Rome; they might be freedmen.

16:10. "The household of Aristobulus" may refer to slaves (if Aristobulus remained alive) and *freedpersons of Aristobulus, Herod the Great's grandson, who spent his life in Rome. ("Aristobulus" is, however, a common Greek name, so the phrase could refer to a house church or family headed by a different Aristobulus.) Some slaves in elite households were well-educated and exercised power and influence over even free persons.

16:11. "Herodion" could be so named because he was a slave or freedperson from a Herodian family (see comment on 16:10). "Household of Narcissus" may mean the freedpersons formerly belonging to Narcissus, himself a freedman who was one of the empire's most powerful people under Claudius.

16:12. "Tryphaena" and "Tryphosa" are Greek names sometimes used by Jewish as well as Greek women. "Persis" is attested as a slave name, especially for slaves imported from Persia, but was also used by free persons.

16:13. "Rufus" was a common slave name. It is a Roman name, sometimes born by Jews; because Paul knows his mother, presumably from the East, some commentators think this is the Rufus of Mark 15:21. Greetings at the

close of letters could include affectionate terms of intimacy such as "father" or "mother" (e.g., one ancient letter addresses two older men as "fathers").

16:14. Like Greeks, Jewish people in the ancient Mediterranean often used Greek names compounded from the names of pagan gods, like Hermes or Apollo. "Patrobus" is short for the rare name "Patrobius"; some scholars have linked this name with the household of one of Nero's wealthy freedmen. "Phlegon" was also a common slave name.

16:15. "Julia" and "Nereus" appear most frequently for persons with slave backgrounds.

16:16. Kisses were a common form of affectionate greeting for family members, intimate friends or those who were objects of respect (e.g., Gen 33:4; 45:15; 1 Sam 20:41). The kiss was normally a light kiss on the mouth, readily distinguishable from lovers' passionate kisses. Nevertheless, due to abuses, in subsequent centuries the church limited the practice of the liturgical kiss of fellowship to men kissing men and women kissing women, although this was not the initial practice. Some second-century letters of Fronto suggest that a letter writer could want a reader to pass on a kiss to another person.

16:17-20
Concluding Exhortation

That the letter's concluding exhortation warns against division makes sense of the setting.

16:17. In keeping with the point of the letter (see the discussion of the situation in the introduction), those who cause schisms and divisions are Paul's main object of warning.

16:18. Moralists used "bellies" (often translated "appetites") to refer to self-indulgence. Philosophers ridiculed those who were "slaves" to their passions; on Paul's phrase here, see comment on Philippians 3:19. Philosophers and moralists also distanced themselves from populist public speakers who sought to flatter their audiences; but they emphasized that they themselves told people what they needed to hear rather than what they wanted to hear.

16:19. Paul might allude here to Adam and Eve seeking fruit from the tree of the knowledge of good and evil (Gen 2:9; 3:6); see comment on 16:20. He may also intend a contrast with Jeremiah 4:22: "wise to do evil, but ignorant of how to do good" (cf. Mt 10:16).

16:20. Genesis 3:15 promised that the serpent who deceived Adam and Eve to partake of the fruit (cf. Rom 5:12-21) would ultimately be crushed beneath the feet of Eve's seed. In many Jewish traditions the serpent represented *Satan or his instrument. Some texts seem to have understood Eve's "seed" as Israel, others as the *Messiah; but here Paul applies it more broadly to the Messiah's followers as well. His point is that they should persevere to the end, and God will bring triumph.

16:21-24
Greetings to the Church in Rome

It was not uncommon to attach supplemental greetings from others in one's location.

16:21. "Lucius" was a Greco-Roman name sometimes used by Jews; its shortened Greek form is "Lucas" (i.e., Luke; if this is the author of Acts, however, he soon traveled on ahead back to Philippi; see Acts 20:5-6). For the names "Jason" and "Sosipater" (probably the same people), see Acts 17:6, 9 and 20:4 ("Sopater" was another form of "Sosipater"); Macedonian delegates had accompanied Paul to Corinth (Rom 15:26; 1 Cor 16:3; 2 Cor 9:4).

16:22. "Tertius" was a Roman name (often used for a third boy), sometimes used by Jews. Most of the ancient world was too illiterate to write letters, certainly letters as sophisticated as this one; they depended instead on *scribes. Those who were highly literate were also wealthy enough that they could dictate letters to scribes as well, sometimes their own secretaries, who were usually literate slaves. Paul's host may have lent him his scribe, or Tertius may have been a professional scribe; in any case, Tertius seems to be a believer, because scribes did not normally add their own greetings. That Paul followed the common practice of signing dictated letters (1 Cor 16:21; Gal 6:11; Col 4:18; 2 Thess 3:17) indicates that he used scribes regularly.

16:23. If Gaius's house accommodated "the whole church," it must have been larger than most of the house churches; but Paul could simply be emphasizing Gaius's great hospitality or that his had been the initial house church (some think that Gaius could be the praenomen for Titius Justus; cf. Acts 18:7).

"City treasurers" (NASB) were sometimes public slaves or freedmen, but they were generally wealthy. In other cases public jobs were assigned to well-to-do persons as part of their civic responsibilities. If this is the same "Erastus" who is attested in a Corinthian inscription as an *aedile* in this general period (and this is likely), he must have been a wealthy benefactor of the city, part of the municipal aristocracy. Candidates for *aedile* had to promise significant donations to the city to gain election. *Synagogues and other associations could have *patrons who were not members; whether this is the Christian Erastus of Acts 19:22 is debated, but cf. 2 Timothy 4:20.

16:25-27
Closing Benediction

The conclusions of Greco-Roman letters varied considerably but often ended with a wish for the recipient's health and then "Farewell." Synagogues, however, closed prayers, readings and services with benedictions, and Paul anticipates that his letter would be publicly read in house churches' worship services. To repeat in one's conclusion themes stated early in one's speech or work, as Paul does here (cf. 1:2-5, esp. 1:5; also 1:11, 17; 2:16; 3:21; 11:25, 33, 36), was good *rhetoric.

16:25-26. Some ancient Jewish texts like Daniel and the *Dead Sea Scrolls spoke of God revealing what were once mysteries, special knowledge previously unavailable except by divine revelation. For Paul, this mystery of *Gentile ingathering was already taught in the Scriptures (Paul cites many of them in his argument in Romans, esp. in 15:9-12; cf. also, e.g., Is 19:18-25; 56:3-8; Zech 2:11) and is finally being understood.

16:27. Here Paul offers the sort of standard Jewish doxology used to close *Hellenistic Jewish religious works (except, of course, for "through Jesus Christ"). "Amen" was the standard closing at the end of prayers and a number of Jewish books.

1 Corinthians

Introduction

Authorship. All scholars accept 1 Corinthians as Pauline.

Corinth. Corinth was one of the major urban centers of the ancient Mediterranean and one of the most culturally diverse cities in the empire. A Greek city by location, the capital of Achaia (which made up most of ancient Greece), Corinth had been a Roman *colony for nearly a century, officially resettled by Romans long after its destruction, and Greek and Latin cultures coexisted. Its citizen class, however, viewed itself as Roman and was proud of its Roman identity. Its location on the isthmus of Corinth, a short land route across Greece that spared seafarers the more treacherous voyage around the south of Greece, made it a prosperous mercantile community. Although a wide disparity between rich and poor characterized the Roman empire more generally, this problem was particularly acute in Corinth. Its mercantile character contributed to the presence of foreign religions and may have accelerated the level of sexual promiscuity, although some promiscuity was characteristic of ancient Greek urban male culture in general. Corinth was known for its prosperity, and the proverbial sexual looseness of ancient Greek Corinth seems to have continued in Roman Corinth as well.

Language. Although Latin was used for official business in Corinth, most people could speak Greek, and this was especially true of settlers from elsewhere in Greece and further east, including most Jewish immigrants. (Some Greeks had continued to live onsite after the city's destruction, but it was the Roman settlers who became the founding citizens of New Corinth in 44 B.C.) Clearly the Corinthian *church, to whom Paul wrote his letters in Greek, understood him. Later in the first century, Clement of Rome also wrote to this church in Greek, which became Corinth's official language again in the early second century.

Situation. Roles were determined by social status in antiquity, and those with wealth and power preferred religious, philosophical and political ideologies that supported their base of power. Reading 1 Corinthians in light of ancient culture generally, including conflicting status ideals, cuts through much of the speculation of earlier commentaries; although theological errors were involved, a central issue

was that people were not getting along. Once we get past the cultural and language differences, the Corinthian Christians' values were very much like those of most Christians today. They had their own social interests, which seemed natural from their own perspective, but Paul summoned them to think instead as servants.

Thus higher-status members of the community seem to have preferred a more *rhetorically skilled speaker like Apollos; and, sharing the values of their peers they hoped to reach with the *gospel, they rejected manual labor as a suitable occupation for a moral teacher. Manual laborers in the church, however, appreciated a voluntarily lower-status, working teacher like Paul, even if his personal delivery in speeches left something to be desired (chaps. 1–4). Philosophical ideals held by some higher-status members may have been used to justify sexual offenses (chaps. 5–7); status issues likely factor into the minor division over head coverings (11:2-16) and possibly the approaches concerning meat and communal meals (chaps. 8–11). Philosophic views, often linked to status or at least the economic access to some kinds of education, probably also inform issues regarding the body and immortality (chap. 15) and, less likely but not impossibly, some philosophical mystical currents (chaps. 12–14). Most Greeks did not envision an end of the age in the sense in which Paul emphasizes future eschatology in his letter. In other words, the conflicting values of diverse groups in the broader society had been carried over into the church as divisive issues, and on other matters as well the values of society had obscured Paul's biblical message.

Commentaries. Helpful commentaries with a focus on background include Gordon D. Fee, *The First Epistle to the Corinthians,* NICNT (Grand Rapids: Eerdmans, 1987); David Garland, *1 Corinthians* (Grand Rapids: Baker, 2003); Craig S. Keener, *1 & 2 Corinthians* (Cambridge: Cambridge University Press, 2005); Ben Witherington III, *Conflict and Community in Corinth: A Socio-Rhetorical Commentary on 1 and 2 Corinthians* (Grand Rapids: Eerdmans, 1995); on a less technical level, C. H. Talbert, *Reading Corinthians: A Literary and Theological Commentary on 1 and 2 Corinthians* (New York: Crossroad, 1987). Also helpful are general works on social relations in antiquity, such as Ramsay MacMullen, *Roman Social Relations* (New Haven, CT: Yale University Press, 1974); for such relations in the New Testament, see Wayne E. Meeks, *The First Urban Christians: The Social World of the Apostle Paul* (New Haven, CT: Yale University Press, 1983); Abraham J. Malherbe, *Social Aspects of Early Christianity,* 2nd ed. (Philadelphia: Fortress, 1983); and other works in the LEC series cited in the bibliography in the introduction to this volume. On Corinth specifically, one may sample Pausanias, *Description of Greece* Book 2; Donald W. Engels, *Roman Corinth: An Alternative Model for the Classical City* (Chicago: University of Chicago Press, 1990); Jerome Murphy-O'Connor, *St. Paul's Corinth: Texts and Archaeology* (Collegeville, MN: Liturgical, 2002); Bruce W. Winter, *After Paul Left Corinth: The Influence of Secular Ethics and Social Change* (Grand

Rapids: Eerdmans, 2001). On the unity theme, see Margaret M. Mitchell, *Paul and the Rhetoric of Reconciliation: An Exegetical Investigation of the Language and Composition of 1 Corinthians* (Louisville: Westminster John Knox, 1991); on 1 Corinthians 7, see chapters five and six in my earlier book . . . *And Marries Another: Divorce and Remarriage in the Teaching of the New Testament* (Peabody, MA: Hendrickson, 1991); Will Deming, *Paul on Marriage and Celibacy: The Hellenistic Background of 1 Corinthians 7*, 2nd ed. (Grand Rapids: Eerdmans, 2004); for 1 Corinthians 11:2-16 and 14:34-36 see my *Paul, Women and Wives* (Peabody, MA: Hendrickson, 1992), pp. 19-100; for 1 Corinthians 8 and 10, see Wendell L. Willis, *Idol Meat in Corinth: The Pauline Argument in 1 Corinthians 8 and 10,* SBLDS 68 (Chico, CA: Scholars, 1985).

1:1-9
Opening Greetings

These verses follow a standard ancient way to open letters; see the introduction to *New Testament letters and comments on Romans 1:1 and 7.

1:1. Letters in antiquity were not usually coauthored; thus Paul may have authored the letter and Sosthenes (cf. perhaps Acts 18:17) served as *scribe, writing it down (cf. 1 Cor 16:21); or Sosthenes may have contributed to the letter's contents or (more likely) merely concurred with Paul's message. Sometimes composite authorship claims in (normally much shorter) ancient letters simply provided greetings (e.g., *Cicero, *Letters to Friends* 16.1.title).

1:2. "*Saints" means "set-apart ones," and "sanctified" means "set apart," "holy, consecrated or separated for God." This language was applied to Israel in the *Old Testament; it meant that God had set apart Israel to himself when he redeemed them, and they were therefore to live for God, not like the nations around them.

1:3. "*Grace" adapts a standard Greek greeting, and "peace" a Jewish one. By invoking Jesus alongside the Father as the source of grace and peace in a blessing or wish-prayer (wish-prayers for the hearers were common in letter openings), Paul presupposes Jesus' divinity.

1:4. Thanksgivings sometimes appear in ancient letters (e.g., 2 Maccabees 1:11). As in speeches, official letters might open with a proem praising the reader, which was designed to secure the reader's favor for the rest of the letter. Moralists who gave rebuking speeches or wrote rebuking letters also usually mixed in praise to make their advice easier to accept.

1:5. Opening sections of speeches or literary works commonly introduced some of the themes that would recur throughout the letter. "Speech" and "knowledge" were important to the Corinthians. In fact, the nearby Isthmian Games (see comment on 9:24-25) included speech contests, and knowledge was associated with philosophical wisdom or the ability to speak extemporaneously on any topic (a skill in which *rhetoricians, or public speakers, were trained). Here Paul means spiritual, not merely natural, gifts, but the Corinthians had learned to excel in these particular gifts precisely because these mattered most to them in their culture.

1:6-8. "The day of our Lord Jesus Christ" here fulfills the role assigned to "the day of *God*" in standard Jewish tradition (cf., e.g., Is 13:6, 9; Joel 2:1, 11, 31; Amos 5:18, 20; Zeph 1:7-8, 14; 2:2-3). Some elements of Judaism, especially in the *Diaspora, played down the future aspects of biblical hope; Paul wants to reverse this tendency among the Corinthian Christians.

1:9. Ancient philosophers often spoke of human "fellowship" or "communion" with other people. Paul could mean fellowship with others in Christ, or intimacy with the Lord himself, or both.

1:10-17
Christ Not Divided

Later *rhetoricians would have classified at least 1 Corinthians 1:10–4:21 (addressing unity), and perhaps the whole letter, as a letter of admonition. Paul is not defending himself against opponents (as in 2 Corinthians) but addressing the misbehavior of the Corinthians. The context shows that they are favoring specific teachers (Paul and Apollos) on the basis of their respective rhetorical or philosophical skills (1:18–4:21).

1:10. For the first three centuries of its existence, the *church met mainly in homes; those belonging to more well-to-do members of the congregation could naturally hold the most people (see comment on 11:17-34). Because the size of these homes limited the size of congregations and forced Christians to meet in different house churches, divisions could easily arise among them. A *major* basis for the Corinthian Christians' division, however, derives from differences in social status and perspectives within the congregations. One type of ancient speech (known as a *homonoia* speech) lamented divisions and called for unity; Paul's readers would immediately recognize the nature of his argument. Paul states a thesis in 1:10 and then (following the custom in ancient works) outlines the events leading up to the present situation (1:11-12).

1:11. Rivalry and enmity pervaded society, even in sports but especially in politics and public speech. Ancient urban culture, epitomized in Corinth, evaluated and compared

speakers. One normally specified the source for one's information unless it could harm the source. These informants may have been agents of Chloe, a wealthy businesswoman in Corinth or Ephesus (16:8), traveling between the two cities on business. As such, they may have been high-status slaves or *freedpersons belonging to her household. Members of a Corinthian church, they brought Paul the news; news and letters were most often carried by people traveling on other business. (Had they been her children rather than servants, they would have been named by their *father's* household, even were he deceased.)

1:12. People often gravitated toward particular teachers and defended their schools' interests. Occasionally students of competing teachers even came to blows, including in Corinth. Philosophers encouraged emotional attachment to themselves as a necessary part of developing morally and intellectually. Rabbis had their own schools, and disciples normally propagated their teacher's views. Political parties sometimes took the slogans, "I am of so-and-so." Using rhetorical repetition (here *anaphora*, which takes the form x . . . / x . . .), Paul neatly caricatures the Corinthians' divisions into four groups (though "Cephas" and "Christ" might be only hypothetical; cf. 3:5-6).

1:13. Paul here uses a common technique in argument: *reductio ad absurdum,* reducing an opponent's position to its natural but absurd conclusion. Speakers sometimes piled up rhetorical questions (here, three) to drive home their point.

1:14-15. Corinth had many famous fountains and bath houses—no shortage of potential sites for public *baptisms. In some Greek *mystery cults an initiate would reportedly call the one who had introduced him to the cult "father"; probably here Paul is simply still reducing their position to the absurd (cf. 1:13). "Crispus" (cf. Acts 18:8) and "Gaius" (a common name, but cf. Rom 16:23) are Latin names and may reflect persons of high status in the congregation.

1:16. Paul may have recalled Stephanas separately because he may have met and baptized him elsewhere (16:15). One could add an afterthought in casual or informal letters (e.g., *Cicero, *Letters to Atticus* 8.14.4) or use it as a deliberate rhetorical correction (in this case, perhaps to underline the secondary nature of the question). A "household" normally followed the religion of the head of the household; 16:15 implies that Stephanas was a believer and a person of some means.

1:17. Judaism used "baptism" as the final act of conversion for *Gentiles; early Christians followed this pattern. But Paul refuses to emphasize the act itself; his emphasis is on the message to whose reception baptism merely bears witness. Though using rhetoric to communicate, moralists commonly denied that they used skilled rhetoric to persuade their hearers, and they pointed out that they appealed only to the truth.

1:18-25
God's Wisdom in the Cross

Judaism stressed the importance of divine Wisdom, which God revealed in his Word; Wisdom was sometimes personified (1:30). Given popular Greek respect for philosophy and *rhetoric (the primary two disciplines in which advanced studies were possible for those with funds), it is probable that some educated members of the church are especially interested in "wise speech." Paul mistrusts such rhetoric (cf. 1:17, 20; 2:1, 4-5) and presumably worldly philosophy as well (cf. 1:21; 2:7-8; cf. Col 2:8). Apollos may have fit their preferred speaking style better than Paul did (1:12; see comment on Acts 18:24). Though minimizing rhetoric, Paul in this section employs rhetorical devices that his critics might recognize, including antithesis (1:18); four rhetorical questions with the triple repetition of "where is . . . ?" (1:20); and shockingly paradoxical oxymorons (1:25, also using antithesis).

1:18. Romans regarded crucifixion as a death appropriate for slaves; Jews also saw it as shameful (Deut 21:23). Those viewed as "*saviors" were normally gods, kings, wealthy benefactors or miracle workers. Roman society was built around power and status; power was concentrated in the male head of the household, in wealthy and aristocratic families, and so forth. Associating power with a crucified man—the epitome of dishonor and weakness—thus made no more sense to ancients than it does to modern people outside Christ.

1:19. Here Paul quotes Isaiah 29:14 to show

that the wisdom of those living by human tradition (including Jewish tradition, Is 29:13-14) instead of by God's revelation (Is 29:9-12) would perish; cf. similarly Jeremiah 8:9.

1:20. Commentators rightly find models for Paul's wording in texts like Isaiah 19:12; 33:18 and Job 12:17 (cf. further the principle in Prov 21:30; Is 29:14; 44:25; 47:10; Jer 8:8-9; 9:12, 23). The "debater [or reasoner] of this age" might refer to a trained rhetorician, whom philosophers sometimes despised as devoid of genuine content. But Paul challenges the philosophers ("wise men") as well.

1:21. In Greek comedy the hero pretended to be stupid, but he proved to be wise in the end; in contrast to this hero was the fool who claimed to be wise and wanted credit for the wise man's triumph but was rebuffed. *Plato said that human wisdom was worthless, and people should seek God's wisdom instead.

1:22-23. Greeks were known for their love of learning. Greeks and Jews alike might desire attesting miracles, but Paul keeps Jews and Greeks distinct here for rhetorical effect. On the foolishness of the cross to both, see comment on 1:18.

1:24-25. In antiquity, divine power was typically associated with wonderworkers (1:22); the Corinthian culture, like Roman culture in general, valued social power (1:26). Paul uses "the foolishness of God" and "the weakness of God" ironically: the least of God's wisdom is superior to the best of human wisdom. Irony was a common rhetorical device.

1:26-31
Inversion of Status

Paul again uses limited *rhetorical devices to communicate a wisdom that transcended rhetoric: repeating "not many" three times in 1:26 is *anaphora* (x . . . /x . . .); repeating "God chose" three times in 1:27-28 is *antistrophe* (. . . x/. . . x—it appears at the end of the lines in Greek). Paul introduces three elements in 1:26 and then develops them in 1:27-28.

1:26-29. Roman social class was based on birth ("nobility") rather than on wealth; but by either criterion, most of the Corinthian Christians derived from the lower ranks of society, which made up the vast majority of ancient society. Paul's guarded language here ("not many"—NIV) suggests that some, however, were of higher status, no doubt including the owners of many of the homes in which the churches met (cf. perhaps especially Rom 16:23). (Many of the recently wealthy in Corinth came from lower social ranks but achieved prestige through wealth.) This passage reflects Jeremiah 9:23, paving the way for Paul's explicit quotation of Jeremiah 9:24 in 1 Corinthians 1:31. For God inverting human status, see also Isaiah 2:11, 17.

1:30. Both Jewish and Greek literature sometimes personified wisdom. *Christ as divine Wisdom (8:6; cf. Jn 1:1-18) functions as righteousness, sanctification and redemption, changing the person completely for God. The *law was considered both wisdom (Deut 4:6) and righteousness (Deut 6:25).

1:31. Here Paul paraphrases Jeremiah 9:24: one should boast in knowing and understanding God rather than in human wisdom.

2:1-5
Saved by the Cross, Not by Rhetoric

Paul here appeals to the Corinthians' own conversion (cf. Gal 3:2). It was the powerful preaching of the weakness of the cross, not humanly powerful *rhetoric, that had saved them (1 Cor 1:18).

Even most defenders of rhetoric, or skilled speech, admitted that it was sometimes abused. But they argued that it was necessary, because having truth but being unable to persuade others of it was not helpful. Philosophers traditionally criticized rhetoric, claiming that truth, not skillful speech, should be the emphasis; but these same philosophers used forms of argument developed by rhetoricians. By this period, most had surmounted the traditional opposition between philosophy and rhetoric, allowing for the use of both. Paul here disapproves of *mere* rhetoric, but his own writing, including 1 Corinthians, displays extensive knowledge and use of rhetorical forms. Although Paul may not have matched the rhetorical prowess of Apollos or the standards of Corinthian leaders, he was a skillful writer (2 Cor 10:10) in his own right.

2:1-2. Normally a new speaker in a city would announce an event where he would offer an oration; if enough people were impressed and he drew students, he would stay in that city.

Paul, by contrast, did not tell people what they wanted to hear to make himself popular. Because Paul in the context is boasting in his weakness, he does not praise his speaking or philosophical ability (cf. Ex 4:10; Jer 1:6). But this reserve need not mean—and the skillfulness of his argumentation shows that it cannot mean—that his argumentation style was weak, even if his delivery (voice quality and gestures) were inadequate (which is likely—2 Cor 10:10; possibly Paul also spoke Greek with an accent, though cf. Acts 21:37). Even the most renowned speakers (e.g., Dio Chrysostom) often disavowed their own speaking abilities in order to lower audience expectations; then they spoke brilliantly. Rhetoricians recommended this technique.

2:3. "Fear and trembling" occur together as an expression in the *Old Testament and Jewish literature; although the expression was formulaic, it was used in a variety of different ways. In this context, this expression suggests that Paul's weakness was in his delivery, not in his awareness of contemporary rhetorical style. Apart from *Stoics, most speakers approved of stirring emotions in speeches, but trembling would normally put off audiences accustomed to skilled speakers.

2:4-5. In rhetoric, "demonstration" was a form of argument proved from certain and undisputed premises; Paul does not offer a mere syllogism (a form that was logical but might be based on inadequate premises) or dialectic (which *Plato treated as defining and classifying data) or rhetorical tricks.

One could also speak of rhetorical "power," but Paul's power is from a different source: God's power resident in the preaching of the weakness of the cross (1:18, 24). This power might imply miraculous attestation (1:22, 24; 2 Cor 12:12; 13:4; Rom 15:19).

2:6-16
Genuine Wisdom Through the Spirit

Paul hastens to explain that he does not oppose genuine wisdom; but this wisdom is beyond human understanding and can be accepted only by those who know God's heart through the *Spirit. The Corinthian believers' wrong focus shows that they are missing this fundamental wisdom (3:1-4; cf. 1:18-31).

2:6. Philosophers used the term for "mature" or "perfect" (KJV) here for those who had progressed to an advanced stage in wisdom; contrast 3:1! (Its use for full initiates to the *mystery cults is less relevant here.) The contrast in 2:6-9 is between temporal wisdom of those great in this age and God's eternal wisdom. Cf. Wisdom of Solomon 9:6: "Even one who is perfect among people will be deemed nothing without the wisdom that comes from you."

2:7. Judaism believed that God's wisdom existed before the world and that God had created the world through this wisdom.

2:8. Some scholars suggest that "rulers of the age" here refers to angelic powers in the heavens (cf. 15:24; Rom 8:38; Eph 1:21). In the context, earthly rulers (cf. Rom 13:1) are more likely, however; these are the powerful people of this age, by the Corinthians' standards (1 Cor 1:26-28). Yet the truly powerful one was "the glorious Lord"!

2:9. Here Paul quotes Isaiah 64:4, which was part of a prayer for God to intervene in history again on behalf of the remnant who hoped in him; Paul adapts the wording of the quotation slightly, as was common in ancient citations. (He may also slightly conflate this text with the *LXX of Is 65:17, which speaks of the present being forgotten in the world to come.) The point is that the things of the eternal God are inaccessible to mortals except by the means Paul articulates in verse 10.

2:10-13. Only God's *Spirit knows what is in his heart, but because believers have God's Spirit, they can know his heart too. In light of the possible allusion to Wisdom of Solomon 9 in 1 Corinthians 2:6, cf. here Wisdom of Solomon 9:17: Who has known God's plans unless God has given them wisdom and sent his Spirit from above? (For God "revealing" wisdom, cf. Sirach 1:6; "those who love him" could echo the recipients of God's wisdom in Sirach 1:10.) "Spirit" had a broad variety of meanings, including "attitude," "disposition"; hence "spirit of the world" need not refer to any particular spiritual being (unlike God's Spirit).

2:14-15. The spiritual person can evaluate all things, but the "natural" (KJV, NASB; "unspiritual," NRSV; literally, something like "soulish") person cannot evaluate the things or people of the Spirit. God's breath made

humans living "souls" (Gen 2:7), but they still needed God's Spirit to experience him. Paul's use of "natural" may be based on a particular interpretation of Genesis 2:7 current in *Hellenistic Jewish circles; see comment on 15:45-46. (This Hellenistic Jewish use may borrow the language of some Greek philosophers, who contrasted the "natural," or earthbound, part of the soul with the mind. Paul's distinction is between those ruled by their own earthly soul and those ruled by the Spirit of God. *Gnostics in the second century wrongly used 1 Cor 2:14-15 as a proof text to distinguish the human soul and spirit and to argue that they were an elite group who followed the incorruptible, immortal spirit.)

2:16. As in 2:9-10, Paul follows a text underlining the ignorance of humans apart from God with the recognition that those who receive his Spirit can understand his heart. Paul turns the rhetorical question of Isaiah 40:13 (cf. Rom 11:34) around in the light of the coming of the Spirit; he quotes "mind of the Lord" from the Greek version, but undoubtedly knows that the Hebrew has "Spirit of the Lord." Many philosophers sought to know God's mind by wisdom; for Paul, this wisdom comes only through the experience of God's Spirit.

3:1-9
Do Not Follow Servants

With their partisan celebrity cults the Corinthian Christians are acting like "natural," "fleshly" people rather than people of the *Spirit. Paul and Apollos are mere servants; God is the one the Corinthians ought to follow.

3:1-2. Ancient writers often compared the unskilled in knowledge to babes who had to start out with the basics, with milk (Philo, *Epictetus, etc.). If Paul intends the image to evoke all that it can, he portrays himself as mother or wet nurse (cf. 4:15; 1 Thess 2:7). Teachers always expected students to start with basics but also expected them to progress past basics.

3:3. "Fleshly" (not "worldly"—NIV) is slightly different from "as fleshly" (again, not "worldly"— NIV) of verse 1: it means that they were *acting* fleshly, not that they were fleshly by nature. On "flesh" and Spirit, see comment on Romans 8:1-11.

3:4. Greek culture sometimes divinized heroes into gods. Later traditions divinized philosophers, and philosophers often claimed that people could be divinized by virtue, because they considered the soul a divine part within each person. Although some Jewish writers in the Greek world adopted the language of deification, the principle of one God generally kept Jews and Christians from following this concept that far (Gen 3:5). Here Paul says: If you follow humans, then you are not only not divine; you are not even following the Spirit of God (2:14–3:3).

3:5-9. Paul uses the familiar image of sowing; at the end of verse 9 he introduces the familiar image of building, which will dominate his exposition through 3:17. Other writers like *Philo also described God as planter or builder; in the *Old Testament, most often for God planting, building or uprooting his people (cf. Ruth 4:11; Ps 28:5; 51:18; 69:35; 147:2; Jer 1:10; 18:7; 24:6; 31:4, 28; 45:4).

3:10-20
The Real Test of God's Servants

The Corinthians should follow God, not his ministers (3:1-9), because only the day of judgment would show the genuine character of ministers (3:10-15). The building on which God's servants are working is God's temple, representing God's people (3:16-17).

3:10-11. A "master builder" directed the construction; thus Paul designed strategies as well as labored.

3:12-15. A few other ancient stories highlighted the competition among substances like those Paul mentions here; further, everyone knew which substances would endure testing by fire (cf., e.g., Num 31:23). Ancient sources sometimes employed the metaphor of testing by fire; in the *Old Testament, see Proverbs 27:21; Isaiah 47:14; Zechariah 13:9. Ancient Jewish writers sometimes compared the wicked to straw that would be consumed at the judgment (in the Old Testament, cf., e.g., Is 33:11). Only the judgment would test the ultimate value of each servant's work.

3:16-17. Some ancient writers thought of spiritual temples. Some Jewish people, as attested in the *Dead Sea Scrolls (cf., e.g., 1QS 8.5-9; 9.6), portrayed God's people as a building, the temple, so the image could have been familiar to Jesus' first followers. Nearly

everyone in the ancient world believed that desecrating temples warranted judgment.

3:18-20. Paul cites Job 5:13 and Psalm 94:11. The former is a wise principle, even though Eliphaz, who first articulated it, used it in an evil way against Job (Job 4–5). Psalm 94:11 in context stresses that God alone teaches people rightly; human wisdom is at best folly. Paul thus continues his proof from Scripture of human folly (e.g., 1 Cor 1:19).

3:21-23
All Things Are the Corinthians' Anyway

This passage would make good sense to ancient readers. Even Paul and Apollos are given to them by God; why follow just Paul or Apollos, when they should follow the God who gives everything? God's people would take possession of the world to come (see comment on Rom 4:13; cf. Zech 8:12); at present they are heirs of the world and children of the God who rules it.

*Stoic and *Cynic philosophers often praised "having nothing" (see comment on 2 Cor 6:10) while emphasizing that the whole world belonged to them, so they could take whatever they needed. They often cited the proverb "Friends share all property in common" and claimed that because they were friends of the gods, who owned everything, everything was theirs.

4:1-5
Do Not Evaluate Before the Real Test

A sinful lifestyle always indicated sinful motives, but a godly lifestyle could sometimes mask selfish motives. Only God knows hearts, and Christian celebrities could be accurately evaluated only in the light of the final judgment (3:5-15). Paul adapts the language of philosophers respected by the Corinthian Christians.

4:1. "Stewards" or "managers" ("those entrusted"—NIV) were often servants, as here, or freedmen. These servants and freedmen were trusted to manage the master's estate, especially his financial affairs, and had great authority and prestige. Some philosophers saw themselves as stewards or managers of divine truths.

4:2. Because stewards were trusted to handle their masters' finances, purchasing slaves and goods and making wise investments, it was crucial that they be "trustworthy" or "faithful."

4:3-4. The *Old Testament speaks of the day of God's judgment tribunal as "the day of God." "Day" sometimes meant "court," as Paul uses it and many translations render it here. Paul uses several legal expressions in these verses. Most philosophers, especially *Cynics, expressed disdain for what anyone else thought about them.

4:5. Jesus and other Jewish teachers spoke of God bringing secret thoughts to light at his judgment (cf. Is 29:15; **1 Enoch* 38:3; 49:4). Ancient *rhetoric was concerned with "praise" for those to be honored; Paul says that the only honor that counts is what God will assign at the final judgment.

4:6-13
Apostles Last of All

In Jesus' *kingdom, where the greatest is the least and the King died for his people, no one is more important than anyone else. Indeed, true *apostles take the lowest role, not the greatest; they should not be objects of a celebrity cult.

4:6. Some commentators argue that speakers advocating harmony sometimes warned people not to "go beyond what is written" but to comply with a prior agreement; Paul may thus summon them to unity, reminding them of a contract implied in their acceptance of Christ. Some commentators have suggested that "not beyond what is written" refers to the learning of schoolchildren, who learned how to write by imitating what was written. Others think Paul refers to Scripture, perhaps texts he has cited so far in 1 Corinthians on the worthlessness of human folly. Whatever the case, Paul may warn against boasting beyond one's proper station.

4:7. Everything they have, God has given to them; they have earned none of it. Philosophers often liked to make this point to keep people from boasting.

4:8. Irony was a frequent rhetorical and literary device. Philosophers often claimed to be the only true kings, asserting that only they had character noble enough to rule rightly.

They also claimed to possess the only genuine wealth and wisdom. Paul ironically concedes the claims of his most educated readers: "You are true philosophers; I, your teacher in Christ, am foolish."

4:9. Sages often listed their sufferings that verified their commitment to living according to their teaching. Stoic philosophers sometimes claimed that they evoked the admiration of gods and mortals as they persevered through suffering; but Paul declares that the suffering *apostles became a "spectacle," objects of scorn in the theater of the world. The person in charge of games in amphitheaters would exhibit the gladiators who would battle wild beasts there; here God himself exhibits the sufferings of the apostles. "Last of all" could mean captives led in triumphal procession before execution (2 Cor 2:14), or, with likelier reference to the arena (1 Cor 15:32), that they were the final show for the day—normally reserved for the most wretched criminal condemned to die in the arena. Corinth's theater seated eighteen thousand.

4:10. Philosophers claimed to be wise, powerful and truly honorable, as opposed to the foolish masses. They meant that their conduct was wise, they were morally strong, and they were honorable in virtue. But much of society thought the opposite, especially of the homeless *Cynics: they were foolish, weak beggars. Paul's detractors think his behavior unbecoming of true wisdom; Paul uses irony to suggest that the true wisdom is on his side.

4:11. Greek moralists sometimes presented themselves as models for others to imitate; a few philosophers, especially the Cynics, wandered around homeless and dependent on charity. Paul presents his own sufferings and sacrifices for the *gospel as a model for the Corinthians to imitate (4:9-16). Everything Paul describes in 4:11 could fit the typical ancient depiction of the wandering Cynic philosopher.

4:12. Stoics tried to show themselves unaffected by criticism; the most fundamental background for blessing those who insulted one, however, is Jesus's teaching (cf. Lk 6:22). Here Paul distinguishes himself from most kinds of philosophers and from the more aristocratic ideals of the higher-status faction within the Corinthian *church. Philosophers might beg, charge tuition or be supported by a *patron; to many of them, manual labor was the least honorable option. Because wealthy landowners also considered manual labor undignified, well-to-do people in the church might be embarrassed to invite friends of their own social circle to hear the teachings of Paul, who worked as an artisan (skilled laborer). The majority of people in the congregation, however, would not be well-to-do; artisans were often proud of their labor.

4:13. Some commentators note that Paul's words translated "rubbish" and "dregs" (NRSV) could apply to criminals or others killed as offerings to gods. The terms had wider use, however, and philosophers sometimes thought of the masses as "garbage" (GNT) and "refuse" (NIV); more often, the masses may have thought of wandering Cynic philosophers in these same terms. It was a universally disgusting image for something worthless and rejected (Lam 3:45). Following Jesus, Paul goes beyond Cynics in answering slander gently (cf. Prov 15:1; 29:8); many Cynics were happy to revile their audiences, even without provocation, to prove their independence. Stoic and Cynic philosophers believed that their perseverance in suffering authenticated them as genuine philosophers, and Paul wants the philosophically informed members of his audience to recognize that on their own terms he can compete with the best of them.

4:14-21
A Father's Threat

4:14. Except in the most extreme circumstances, philosophers preferred to admonish rather than to rebuke and thereby humiliate. Moralists generally emphasized that they admonished people only because they cared for them, sometimes describing their concern in parental terms. For Paul as a parent, cf. already 3:1-2; fathers were responsible for their sons' education.

4:15. "Guardian" (NIV, NRSV; better than "tutor"—NASB—or "instructor"—KJV) refers to a slave who would accompany a child on his way to school; although respected by the child and responsible to teach him manners, this guardian was not a teacher per se. Students could affectionately call and treat special teachers as "fathers"; but slave aides were nothing like fathers.

4:16. Philosophers, *rabbis and teachers in general were considered models to imitate as well as to listen to. Most directly here, "imitate" fits the image of children and fathers (4:15).

4:17. A *disciple of a teacher could be affectionately called his "child" (4:15); Timothy as an imitator of Paul can become a model for Paul's "children" in Corinth. Paul's "ways" (NASB) or "way of life" (NIV) may allude to the Jewish use of "ways" to mean divine laws or proper behavior.

4:18-21. Paul continues in the role of "father" (4:14-17) in this passage. Fathers were sometimes portrayed as gentler than mothers, but they also used the rod for discipline, and in Roman political rhetoric, the proper patriarchal figure was stern and uncompromising. Others in antiquity also qualified some statements with "if God wills" (4:19; see comment on 16:7).

5:1-5
Discipline for Sexual Immorality

Paul now turns from issues of *church unity (chaps. 1–4) to sexual issues (chaps. 5–7). Although most incestuous relationships today have innocent victims (molestation is never the victim's fault; cf. Deut 22:26), in chapter 5 Paul addresses the sin of two consenting adults.

5:1. The marriage of full brothers and sisters was considered immoral throughout the Roman Empire except in Egypt; parent-child incest was universally abhorred throughout the Roman world (Greeks viewed Persians and Nabateans as exceptions, but this was probably slander). From the revulsion against the idea exhibited in the Greek Oedipus stories to slander leveled against emperors, it was one of those few crimes that virtually all cultures agreed was terrible. Its Roman legal punishment was banishment to an island. Relations with stepmothers were treated like relations with mothers—as incestuous. Here Paul uses the language of Leviticus 18:6-8. Relations between sons and stepmothers were often strained, but because Greek and Roman fathers often remarried much younger wives, a stepmother could be within the age range of an older son.

5:2. These people may have been boasting in their spiritual freedom. Committing a crime was considered bad in antiquity, but boasting about it in addition to committing it was considered even worse (including in Scripture: Is 3:9; Jer 6:15; 8:12). Some suggest that the Christians here boast not in the sin but in the sinner—that he was a person of status belonging to their congregation. If he was of high status, even social peers who criticized him could risk enmity, and the church could also suffer if it alienated him.

Communities of resident aliens could discipline members according to their laws, so long as the disciplines did not violate Roman law and the members remained part of these communities. Synagogues, which functioned as social centers for their communities, disciplined their members, especially those whose immorality threatened to bring *Gentile reproach on the whole Jewish community. Discipline could include corporal punishment (beatings), but the ultimate punishment was exclusion from the Jewish community—spiritual banishment. This expulsion could be deemed the spiritual equivalent of a death sentence, executed only by God; but it was reversible if the banned person repented.

5:3. Letter writers sometimes expressed their intimate concern for the readers by saying that, although they were "absent in body," they were with them "in spirit" or in mind (e.g., *Cicero, *Letters to Friends* 3.11.2; *Seneca, *Epistle to Lucilius* 67.2; Oxyrhynchus papyri 32). In some cases, the letter itself communicated the effect of the writer's presence. But this expression was meant as a statement of intimacy, not of metaphysical presence.

5:4. Some Jewish sources averred that judges in Jewish courts judged cases on the authority of the heavenly court (see comment on Mt 5:22). Jewish communities seem to have used excommunication, or official exclusion from the community (attested in both temporary and permanent forms, along with other levels of possible discipline, in the *Dead Sea Scrolls and in later *rabbinic literature), to replace the *Old Testament death penalty; Christians adopted the practice from Judaism.

5:5. Some compare the long-standing pagan custom of magical execration by devoting a person to the gods of the underworld or other avenging deities; curse tablets used for this purpose were widespread. In the Old Testament, God's servants were to place idola-

trous items under the ban, devoting them to destruction; here Paul instructs the Corinthians to deliver this man to *Satan, the agent of destruction. Paul may hope that the resultant suffering (11:30) will lead to *repentance and thus salvation. Jewish teachers often felt that suffering plus repentance would expiate sin, or that (as here) suffering could lead to repentance.

5:6-13
Removing Immorality in the Church

Immorality inside and apparently sanctioned by the church was far more likely to lead Christians astray than the immorality of nonbelievers would.

5:6. The most obvious characteristic of leaven, or yeast, is that it permeates the dough, making the whole batch of dough rise when baked. Paul uses leaven here as a symbol for sin.

5:7-8. Paul argues that the Corinthians should remain unleavened, just as bread does during the Passover season. (The Jewish people left Egypt in such haste after the first Passover that they did not have time to leaven their bread, and subsequent generations were commanded to celebrate the feast with unleavened bread in commemoration of the event.) Paul writes some time before Pentecost (16:8), fifty days after Passover, so Passover could well be fresh on his mind. Jewish people understood the Passover lamb as a sacrifice in this period (cf. *Josephus, *Jewish Antiquities* 2.312). The Jewish people were expecting a new redemption, like their first exodus from Egypt, when the *Messiah came; Paul believes that the Messiah has come, and that this Messiah was himself the new paschal lamb.

5:9-10. Jewish people typically considered Gentiles sexually "immoral" and were probably correct about most Gentile men. Both Jewish and Gentile moralists often included lists of vices (as in 5:10, 11; 6:9-10).

5:11. Jewish excommunication (5:3-5) also excluded people from communal meals, as in the Dead Sea Scrolls.

5:12. Rome allowed local Jewish communities to judge Jewish offenders of Jewish laws. This judgment and the discipline were carried out in the *synagogues, the community centers for local Jewish groups (cf. comment on 2 Cor 11:24). Paul expects the Christians of his day to follow the same model, correcting the behavior of erring fellow Christians.

5:13. The *Old Testament often commanded God's people to purge evildoers from among their ranks, normally by execution (Deut 13:5; 17:7; 19:19; 21:21; 24:7); the offenses listed include sexual sins (22:21, 24). Otherwise, the unrepentant offender could remove God's blessing from the whole community and bring about the death of others (Josh 7:5, 12-13, 25). Here the evildoer is purged from the community by being banished; banishment was a common punishment in the Roman period. In Judaism, exclusion from the community was a spiritual equivalent of execution, applied in the *New Testament period to capital crimes of the Old Testament (see comment on 1 Cor 5:2; actual capital sentences of Jewish courts could not be legally carried out without Roman permission).

6:1-11
Christians in Secular Courts

Having advocated that the *church act as a court with regard to sexual offenses (chap. 5), Paul now argues for the necessity of church courts in his society (6:1-8) and then returns to sexual offenses (6:9, 12-20). Some think that the litigants of 6:1-8 are the father and son of 5:1 (cf. "defraud" in 6:7-8; 1 Thess 4:4-6); but it is likelier simply a *digression related to the issue of courts (cf. "why not be wronged?"—6:7).

Jewish communities throughout the Mediterranean world had their own courts in their *synagogues. Bringing internal disputes of the Jewish or Christian communities before secular magistrates was a luxury these minority religions could ill afford; there was already too much slander against them in the broader society. See comment on Acts 18:12-17.

6:1. Like modern North American society, Roman society was extremely litigious. Cases began to be heard at dawn and sometimes could be argued as late as sunset. Judges were always chosen from among the well-to-do, and most legal disputes revolved around money or property. Some lawsuits were simply designed to disturb enemies.

6:2. Members of the upper class received better treatment in the law courts, sometimes generating complaints of unfairness even in

antiquity; indeed, this preference was eventually written into penalties prescribed in the laws. Further, social inferiors could rarely gain a hearing trying to sue those of higher status. But for Paul, even the lowliest believers are equipped to judge cases.

6:3. In many Jewish traditions, the righteous would judge the nations (Dan 7:22; Wisdom of Solomon 3:8; *I Enoch* 95:3; *Dead Sea Scrolls 1QpHab 5.4); this judging could also imply judging the angels who were believed to rule the nations.

6:4. In ancient society, both judges and arbiters normally were of high status. This verse could be read as a command (KJV) rather than a question (so most current translations): "appoint the lowliest," in contrast to the world (see comment on 6:2); whatever the case, the context suggests that the least of Christians *should* be more competent in justice than the wisest of pagans (cf. 2:14-15).

6:5. Family disputes such as inheritances could be settled by private arbitration, although the arbitrators were usually socially prominent landowners. A magistrate would decide whether cases should be heard by a judge or jury. Juries often judged criminal cases like adultery, murder and treason. This case may have gone before a secular jury court.

6:6. Suing literal brothers was scandalous behavior, though unfortunately quite frequent in ancient property disputes. *Stoics taught that possessions were worthless and consequently rejected legal remedies to defend them (Musonius Rufus 10, p. 76.16-17); some other philosophers also disdained submitting to courts they considered less wise than themselves. The Jewish communities outside Judea were very conscious of their minority status and did not wish to reinforce negative pagan conceptions of their morality. Consequently, they usually dealt with Jewish problems within their own community. Christians were an even smaller minority at this time and also had Jesus's teaching on the topic (Mt 5:39-40; Lk 6:29-30).

6:7-8. Many philosophers who believed that property did not matter could advocate ignoring offenses rather than going to court. Paul prefers the Jewish method of settling disputes within the community, which serves both justice and the community's witness to the outside world.

6:9-10. That the unrighteous would not "inherit God's *kingdom," that is, would not have a share in it, was standard Jewish and Christian teaching. Both Jewish and pagan "vice lists" often defined or exemplified the "unrighteous"; Paul follows this practice. "Do not be deceived" appears in ancient moral exhortation and is common in the *New Testament. Scholars have disputed the meaning of the term sometimes translated "homosexuals" (NASB), but it seems to be coined from Leviticus 20:13 and to mean those who engage in homosexual acts. These were a common feature of Greek male life in antiquity; this was one form of behavior that Jewish people regarded as virtually exclusively a *Gentile vice (e.g., *Philo, *Special Laws* 3.37-39; *Josephus, *Against Apion* 2.215; **Sibylline Oracles* 5.387).

Like the *rabbis, Paul engages in *rhetorical damnation: even though in practice he has expelled from fellowship only the most extreme offender (5:1-5), those who continue in the lifestyles he mentions here will not make it into the kingdom.

6:11. Some philosophers reasoned from indicative to imperative: those who have accepted philosophy cannot (by which philosophers often meant "must not") live by the world's folly; Jewish teachers also called Israel to live holy because God had consecrated them to himself (cf. Lev 20:26). Still, most ancient moralists primarily simply exhorted people to behave in particular ways. Paul reasons from what the Corinthians are in *Christ (by God's action) to how they should live, rather than the reverse.

6:12-20
The Body Is for God, Not for Immorality

Biblical *law forbade sex between people who were not married; the penalty for having sex with one person and then marrying another was the same as the penalty for adultery while married—death. Although this penalty was no longer strictly enforced by Paul's day (if it ever regularly had been), it underlined the seriousness of the offense; premarital sexual immorality was adultery against one's future spouse (Deut 22:13-29).

Many Greek thinkers, however, reasoned that sex without marriage ("fornication"—KJV,

NRSV) was fine as long as it did not control a person; the more vulgar *Cynics even relieved their sexual passions publicly. Much more commonly, for most Greek men under the age of thirty, heterosexual intercourse was most available with slaves or with prostitutes. Roman law permitted (and reaped tax profits from) prostitution, and it forbade fornication only if both parties were of aristocratic birth. Paul's response shows his mastery of his readers' culture and his ability to communicate biblical truth relevantly.

6:12. Philosophers used various tests for whether one should do an act, such as whether it was "lawful" or "permissible" and, more important, whether it was "profitable" (NASB) or "expedient" (KJV). Some philosophers excused relieving their sexual appetites with prostitutes or by publicly stimulating themselves, explaining that they were in complete control of their own emotions!

As is common in *diatribe (an ancient teaching form), Paul cites the opinion of an imaginary opponent similar to (or an absurd reduction of) that of his hearers, and then refutes or qualifies it: "'I can get away with anything.' Maybe so, but 'anything' is not good for you." Sometimes writers explicitly mention the interlocutor (as in 15:12; Rom 9:19); at other times, as here, they just spoke for and then responded to the interlocutor (e.g., Rom 3:1-9; *Cicero, *For Scaurus* 9.18). Philosophers frequently warned against being "enslaved" (6:12d) or dominated by pleasures, false ideas and the like.

6:13-14. Moralists often used the "belly" to represent pleasures (cf. comment on Phil 3:19). Wealthy banquets could cater to both gluttony and sexual desire. "Food for the stomach and the stomach for food" was an acceptable Greek way of arguing by analogy that the body was for sex and sex for the body. That God would do away with both reflected the typical Greek disdain for the doctrine of the *resurrection (chap. 15), because Greeks believed that one was done with one's body at death. Paul responds to this Greek position with the *Old Testament/Jewish perspective that the body is for God and he will resurrect it (cf. also 6:20). Critics of those skeptical of the resurrection (*Sadducees) or of life after death (*Epicureans) emphasized that belief in the future provided a deterrent to immorality.

6:15-16. Here Paul argues from Genesis 2:24. Jewish interpreters normally applied this text to marriage, but because in Jewish law intercourse sealed a marriage union or betrayed it, Paul's argument from Genesis 2:24 could make sense to Jewish hearers or to *Gentiles conversant with the Old Testament.

Prostitution was considered a business like any other, disreputable as the occupation was thought to be (for prostitutes, not for the men who had sex with them). It was readily available in inns and taverns, and the ranks of prostitutes were especially stocked with slave girls raised from the vast number of abandoned babies. Jews strongly opposed prostitution (although a few engaged in it), and *Philo said that it was a capital offense in God's sight; but this Jewish view was hardly the pagan position. Some pagans even considered prostitution a useful deterrent to adultery. Corinth had an ancient reputation (focused on the earlier Greek city but persisting in Paul's day) for prostitution and promiscuity, although such behavior was by no means exclusive to Corinth.

6:17. The Old Testament speaks of people being "joined" to God (Jer 50:5; Zech 2:11; cf. Num 25:3; Hos 4:17). Paul works here especially with the Old Testament doctrine that God is married to his covenant people (e.g., Is 54:5-6; Jer 3:1; Hos 2:20). Applying the analogy from Genesis 2:24, Paul cannot say that God is "one flesh" with them (the Old Testament and Judaism did not believe God had flesh), but he can say they are "one spirit," united in an intimate, covenant relationship like husband and wife. Thus Christians uniting themselves with prostitutes would defile the sanctity of their relationship with God, as in the religious prostitution reported in pre-Roman Corinth.

6:18. Moralists often exhorted people to flee from vices (also in 10:14; cf. Sirach 21:2; Wisdom of Solomon 1:5), including sexual immorality (*Testament of Reuben* 5:5) such as prostitution (Cato, *Collection of Distichs* 25); a *narrative example in this case would be Joseph (Gen 39:12). "Every sin [KJV, NRSV; not 'other' sins, against NASB, NIV] . . . is outside the body" may represent the opposing position (6:12-14), to which Paul responds, "The sexually immoral person sins against their own body."

6:19. Compare comment on 3:16-17; but here the application to the individual Christian (and hence his or her sexual sanctity) is Paul's own.

6:20. Glorifying God with the body ran against the Greek thinking of many of Paul's hearers; see comment on 6:12-14. "Bought" refers to redemption from slavery (7:23; cf. 1:30); here it is possible that Paul makes a wordplay on the price of freeing a slave prostitute.

7:1-7
Fulfilling Conjugal Rights

Different views on celibacy existed in the ancient world. Most ancient writers condemned failure to marry; Augustus's laws penalized it; and many Jewish teachers even considered it sinful, because reproduction was essential and marriage was the proper deterrent from sexual offenses and distractions. ("Replenishing the earth" was considered a biblical commandment for all Jews. Abortion and child abandonment were widely practiced in antiquity; but ancient Jews and Christians—as well as some pagan moralists—unanimously condemned both as the taking of human life. Jews and Egyptians reared all their children.)

A number of groups of philosophers and minor religious sects, however, as well as many *Essenes among the Jews, advocated celibacy or the rejection of marriage. Some philosophers rejected marriage but thought that sexual release with prostitutes was acceptable since it would not tie a person down (cf. comment on 6:12-20). Some Essenes, a Jewish sect, and members of another reported group called Therapeutae, apparently eschewed marriage; maintaining biblical morality, however, they rejected all intercourse outside marriage.

One may divide some of the ancient opinions roughly as follows: (1) Marriage and procreation are vital for all who are physically capable of it (the majority view). (2) Marriage is a distraction and should never be undertaken by the wise man except in the rare instances where one might find a spouse equally devoted to the philosophic lifestyle (the *Cynic position; cf. *Epictetus, *Diatribes* 3.22.69-76); or some could volunteer for an end-time celibate lifestyle (some Essenes). (3) Marriage is good for most people, but one must make exceptions for those too committed to other spiritual pursuits to take time for it (an early-second-century *rabbi reported in Babylonian Talmud *Yebamot* 63b). Paul's advice combines elements of the second and third approaches.

7:1. "Now concerning" sometimes offered a transition to a new point (e.g., Coptic text *P. Lond.* 1912.52). Now Paul responds to the position in their letter to him: "It is good not to touch [not 'marry,' GNT] a woman" (contrast Gen 2:18). For quoting (or paraphrasing, or caricaturing) an opposing position (7:1) and then refuting it (7:2-5), see comment on 1 Corinthians 6:12. "Touch" was a common ancient idiom for intercourse. Some members of the *church may be following an idea common among many Greek thinkers: sex was fine as long as one did not get tied down with marriage (cf. 6:12-20). Others, whom Paul addresses here, are already married (7:2-5) and abstain from relations with their spouses. Paul says that it is too late to choose celibacy once one is married (cf. v. 5).

7:2. "Let each have" reflects a Greek idiom for "Let them have sexual relations." Jewish people (and some *Gentiles) saw married sexual intimacy as the best deterrent to sexual immorality, and Paul here agrees (see also Prov 5:19-20).

7:3. Jewish marriage contracts stipulated a number of duties for the husband and a number for the wife; one major duty required of the husband was intercourse. Paul views intercourse as a mutual obligation; the meaning of "marital duty" (NIV) here is clear (cf. "conjugal rights"—NRSV).

7:4. Greek writers sometimes portrayed submitting to sexual relations or passion as bringing oneself under someone else's control (cf. 6:12d). Many Gentiles demanded only the husband's fidelity, but Paul expects it for both genders.

7:5. *Pharisees who were trying to formulate laws in this period differed on how long a man could vow to abstain from intercourse with his wife; one school said two weeks, and the other school said one week (Mishnah *Ketubbot* 5:6-7; *Sifre Deuteronomy* 213.2.1). Although Paul would not make longer abstinence grounds for divorce, as they did (7:10-13), he clearly wishes to limit even abstinence by mutual consent, leaving the specifics to the couple. For "temptation" here, see comment on 7:2, 9.

7:6. Jewish *law permitted concessions for human weakness; here Paul permits but does not require periods of abstinence, implying that it is those who wish to abstain (rather than those who do not) who are weak. Abstinence within marriage is their idea (7:1), not his.

7:7. Paul recognizes that not all are called to singleness and equipped for it.

7:8-16
Getting Married Versus Staying Married

Verses 8-9 are a *digression Paul uses to establish a contrast between single persons concerned to stay single (7:8-9) and married persons wishing to become single (7:10-16). Digressions were a standard feature of ancient writing.

7:8. Singleness has advantages; see comment on 7:32-34. But not everyone is equipped for this lifestyle; others should pursue marriage (7:9).

7:9. "Burn" (NIV, NRSV and GNT interpret correctly by adding "with passion") was used throughout ancient romances and other sources to describe the arousal of passion, often (metaphorically) through Cupid's fiery darts. Whereas Greco-Roman literature in general saw nothing wrong with passion, Paul believes that its proper place is only in marriage, and he advocates two alternatives: either self-control or marriage.

7:10-11. Many church members were likely remarried even before conversion; divorce was very common in Corinth. Here Paul addresses current choices, not their past. This divorce prohibition—virtually unique in antiquity—is "from the Lord," from a saying of Jesus (Mk 10:11-12). (The terms translated "leave" and "send away"—NASB—or "separate" and "divorce"—NIV and NRSV—were often synonyms for divorce and probably function as such in this context. In 7:10-11, however, where Paul refers to Jesus' teaching, it may be significant that a wife in Jewish Palestine could only "leave," not "divorce"; in Roman society, either partner could divorce the other by a unilateral decision or abandonment.)

7:12-13. In 7:12-16, Paul must address how Jesus' teaching relates to a specific situation; general statements of principle were regularly qualified for specific situations (cf. analogous qualifications in Mt 5:32; 19:9). What about the party divorced against his or her will? (Under Palestinian Jewish law, women could be divorced by a unilateral act of the husband; under Roman law, either party could unilaterally divorce the other.) Because most first-generation Christians were converted after marriage (which was generally arranged by parents), this text is no indication that Christians knowingly chose marriages with nonbelievers.

7:14. Both Greco-Roman and Jewish law debated the status of children of socially mixed unions (e.g., Gaius, *Institutes* 1.66-92); Jewish law also debated the status of children of religiously mixed unions (Tosefta *Demai* 3:9). Here Paul argues that children of religiously mixed unions are within the sphere of *gospel influence and cannot be used as an excuse for divorce. In Roman society, the children normally went to the father in the event of a divorce; a Christian wife involved in a divorce would lose her opportunity to influence her children for God.

7:15. Paul addresses the specific situation not addressed in Jesus' general principle that he has just cited (7:10-11): the innocent party is free to remarry (see comment on 7:12-13). "Not under bondage" or "not bound" alludes to the wording of Jewish divorce documents, which told the woman, "You are free," or, when stated more fully, "You are free to remarry any man," and further applied to divorce the precise language of freedom from slavery (e.g., Mishnah *Gittin* 9:3; *Corpus Papyrorum Judaicarum* 2:10-12, §144). Being "bound" would mean that she was still married in God's sight; not being "bound," or being "free," meant that she was free to remarry.

7:16. Although the *Old Testament stressed God's faithfulness to the families of his servants, it is also clear that godly parents could have ungodly children, and ungodly parents could have godly children (e.g., throughout 2 Chron 23–36). Paul here agrees that the conversion of the spouse is not guaranteed.

7:17-24
Be Content with Present Circumstances

Whether persons are married or single, they should accept their present lot, although this acceptance does not mean that one can never change one's lot (7:21). Paul's argument here is

so similar to *Cynic-*Stoic teaching that his educated, philosophically inclined hearers would probably concede his point respectfully.

7:17. Greek philosophers, especially Stoics, emphasized accepting one's situation (although one was welcome to change it if possible if this was more useful, 7:21-24). But whereas Stoics identified the God who directed their lives with Fate, Paul trusts God as a loving Father.

7:18-20. Greeks exercised in the nude, and both Greeks and Romans regarded circumcision as a mutilation. For two centuries some Jews, ashamed of their circumcision in the predominantly Greek culture, had opted for a minor surgical operation that could pull the remains of their foreskin forward and make them appear uncircumcised. Other Jews regarded this as an act of apostasy (1 Maccabees 1:14-15).

7:21. Slavery in the mines or gladiatorial combat constituted a virtual death sentence; work in the fields was difficult for both slaves and peasants; urban slavery, however, included a range of occupations, status and even income (cf. introduction to Philemon). With respect to the highest-status slaves, on occasion aristocratic women even married into slavery to improve their own status! Some ancient philosophers believed that slaves and masters could be moral and spiritual equals, but the philosophers also had to address the situation in which slaves lived. Even when such philosophers came to power (such as Marcus Aurelius, an emperor in the second century), they did not force their Stoic morality on society. Every attempted slave revolt had been brutally repressed, so Paul's advice is the most practical he can give. For the relevance of the slavery analogy to the present discussion, see comment on 7:15.

Some, however, were able to gain freedom, which was a better situation when possible. Slaves could save money on the side and buy their own freedom. Also, masters often rewarded slaves with freedom (or forcibly retired them from slavery when older so as to avoid the cost of supporting them; in these cases, freedom was the master's and not the slave's choice).

7:22. A *freedperson owed some continuing duties to his or her former master but was legally free. The former master remained a *patron, who would help the freedperson out financially and politically; the freedperson remained a *client, who would also look out for the former master's interests and reputation. Freedpersons were still considered part of their former master's household. Many citizens of Corinth were descended from freedpersons.

7:23-24. Slaves were expensive. They could be bought to be turned over to a temple ("freed" for service to a god) or, more often, to a new human owner.

7:25-38
Advice Especially to Virgins

Although this section addresses mainly virgins, Paul digresses here as elsewhere (7:8-9; 11:2-16), in this case to relate the virgins to groups he has just discussed (7:27-28, alluding back to 7:12-16).

7:25. The term translated "virgin" here was most often used for women, who were also normally the only ones expected to avoid premarital sex in Greco-Roman culture (outside Judaism).

7:26. Many Jewish people expected a time of great suffering just before the end of the age; in that time, marriage and procreation would be of little value (cf. **2 Baruch* 10:13-15; Mishnah *Sotah* 9:15; Mk 13:17). In other periods of great suffering, when one was liable to be bereaved of spouse and children, the same principle applied (e.g., Jer 16:2; this was not the norm—cf. Jer 29:6).

7:27-28. In the language of ancient divorce contracts, "do not seek to be released" (NASB) means "do not seek a divorce." "Released from a wife" (NASB; not simply "free from such a commitment"—NIV) can mean "divorced" or "widowed," and in the immediate passage must at least include the former (its meaning in the preceding line). Paul discourages both remarriages (v. 27) and first marriages of virgins for reasons given in the context, but he permits both (v. 28).

7:29-31. The dangerous time that was upon them would affect all normal human relations; see comment on 7:26.

7:32-35. As a matter of principle, *Cynic philosophers eschewed marriage (though not intercourse) to avoid "distraction"; one could

make an exception, however, if one found a wife who shared these convictions and who would thus not distract one from the Cynic lifestyle (the only recorded exception is Hipparchia, wife of Crates). The context indicates that Paul is making a general statement here, not a rule without exceptions; see comment on 9:5. Paul allows that some would be distracted more by being unmarried (7:2, 5, 9), but reiterates the value of singleness for those who can live by it.

7:36-38. Scholars debate whether this passage addresses the fathers of virgins (see NASB) or their fiancés (see NIV, NRSV, GNT); some evidence within the text can be read either way, with probably more scholars taking the latter view. Parents arranged their children's marriages, usually with some input from the children; the father had the greatest measure of authority in the matter (cf. Sirach 7:24-25; Mishnah *Qiddushin* 2:1). "Full age" (7:36—NASB) could mean midteens (parental arrangement of marriages allowed couples to wed at a younger age than in our culture); but the term normally means "beyond youth" and hence probably refers to a virgin older than usual. There is no evidence in this period for unconsummated "spiritual engagements," which became common in later Christianity, perhaps through the "fiancé" reading of this passage.

7:39-40
Widows and Remarriage

7:39. On "bound" and "free," see 7:15, 27; in discussions of divorce and widowhood, "free" always meant "free to remarry." (Different Greek words are used for "bound" in 7:15 and for "free" in 7:27, but these are synonyms; variation was a standard *rhetorical technique and appears throughout the *New Testament.) Those who argue that the first line of this verse excludes remarriage of all divorced persons ignore not only 7:15, 27-28, but also the language of antiquity: no one considered her former spouse "her husband" after a legitimate divorce had taken place. That a widower is to marry only "in the Lord" means that Paul is against Christians' marrying non-Christians (cf. Deut 7:3; Judg 3:6; Ezra 9:2); widows and divorcées, unlike virgins (whose parents arranged their marriages), had a great deal of say about whom they would marry.

7:40. Some people in antiquity valued a widow remaining loyal to the memory of her husband by singleness; more often, they encouraged remarriage, especially if the widow remained young enough to bear children (cf. even Roman tax legislation under Augustus). Although Paul states his "opinion" (NASB, GNT) much less strongly than he proclaims the words of Jesus (7:10-12), he does not for this reason think it lacking value. The *Spirit was normally associated with the prophets of the past, and Paul here claims that he believes he writes under inspiration as a prophet would (cf. 14:37).

8:1-13
Food Offered to Idols

Meat was offered to idols before being served in temples' dining halls (often as part of worship); much of the meat served at the marketplace had been offered to idols. One who ate in a temple would know the source of the meat; one who ate at a pagan friend's home could rarely be certain. Even regular banquets including pouring a libation to a deity, but meat was most obviously consecrated to a deity when it was sacrificed at festivals before being doled out to the people. In pagan cities with large Jewish populations, Jews normally had their own markets.

Most Jews were at pains to avoid food consecrated to idols. Palestinian Jewish teachers debated what to do in many cases of uncertainty (such as untithed food), but would never have taken a chance on food that might have been offered to an idol. They believed that Jews outside Palestine unwittingly compromised with idolatry when invited to pagans' banquets for their sons, even if they brought their own food. Following such teachings strictly (as some did) would have greatly circumscribed *Gentile believers' relationships with pagan colleagues. The matter was more troubling for Christians converted from pagan backgrounds: e.g., could they meet over lunch with business associates or fellow members of their trade guild, or attend a reception in a temple for a relative's wedding?

Although Paul is theologically opposed to food known to be offered to idols (10:1-22), he frames that argument with a social one based on loving fellow believers (8:1–9:27; 10:23-33).

The more educated and socially elite group, who unlike the poor ate meat regularly and not especially when it was doled out at pagan festivals, had well-to-do friends who would serve meat. They probably represent the liberal faction, who consider themselves "strong" and the socially lower group "weak."

8:1-3. For "now concerning," see comment on 7:1. Paul probably opens with the issue of knowledge bringing freedom because the Corinthians' letter to him had raised it (cf. 7:1); they claimed that superior "knowledge" about idols not being real enabled them to eat. Paul disagrees with their application.

8:4-5. Verses 4-6 constitute a good monotheistic statement that the "strong" are using to claim that idol food does not matter, hence they can eat it. Paul affirms the content of these verses but not the application of the content that these Corinthians make (8:7-13).

8:6. *Stoics and others used formulas similar to this one (many gods, but one true or supreme God), which Jewish apologists (defenders) for monotheism naturally exploited. But Paul's position differs from both the Stoic and the conventional Jewish position. The basic confession of Judaism was that there was one God, who was also the one Lord (Deut 6:4); Paul portrays both Father and Son as deity here. Some Jewish texts said that God created the world through personified Wisdom; here Paul assigns this same role to *Christ (cf. 1 Cor 1:30). Using different prepositions, ancient intellectuals often distinguished kinds of causation, including material ("from"), instrumental ("through"), modal ("in" or "by") and purpose ("for").

8:7. Meat was usually difficult to obtain for most Corinthians who were not well-to-do, except at the pagan festivals, when what was cooked and remained from sacrifices was doled out to the masses. Many of the socially powerless (the "weak") thus associated meat with idolatry.

8:8. Here Paul probably states the view of the "strong," some members of the Corinthian elite, with which he concurs except for his response in 8:9.

8:9. Philosophers generally believed that "all things" were theirs and that they had liberty and authority to do as they pleased. Some, like the *Cynics, paid no attention to social customs. But not everyone felt this way. For example, ancient Jewish *rabbis who felt certain that they were right nevertheless circumscribed their own rights and submitted to the majority opinion of their colleagues, for the sake of peace. Jewish teachers considered causing someone to "stumble" from the way of God (i.e., causing them to turn from and reject the faith) worse than killing that person, because it deprived the person of the life of the world to come.

8:10-13. The person who associates meat with idols might think that eating it was all right even if it meant participating in idolatry, misunderstanding the "strong" person's convictions. (Some Jewish people had scruples similar to Paul's. For example, *Pharisees said that if one saw a Pharisee accepting food from an unreligious person, that did not mean one could assume that the food had been tithed; the Pharisee might have simply committed himself in his heart to tithe on it when he got home.) Giving up "meat" (8:13) would be more difficult for the elite, who had more access to it.

9:1-14
Worthy of Support

Having called on the more well-to-do Corinthian Christians to give up their rights (chap. 8), Paul illustrates this principle by how he had given up his own rights (chap. 9), then continues the discussion of meat offered to idols (chap. 10). Ancient moral teachers commonly used examples to make moral points, and their followers observed their lives as well as their teachings to learn how to live. Jewish teachers' lives were sometimes even used as legal precedent by later *rabbis.

9:1-2. By "free" (cf. 9:19; 10:29), philosophers normally meant free from false values or free from property concerns and thus self-sufficient; they were also free from concern about others' opinions of them. The idea of freedom was often bound up with "authority" or "rights" (cf. 8:9); Paul, who calls on his readers to circumscribe their "freedom" (8:9), also sacrifices his own rights (9:4-6, 12, 18).

9:3. Paul's primary purpose here is to provide an example that will support his exhortations in chapter 8; but for this purpose also offers an "apologetic" (defense) argument. Some well-to-do members of the congregation

may have been complaining about Paul's simple artisan lifestyle, which distinguished him from most traveling teachers and would have put off their social peers (see comment on 9:6). What is a peripheral issue here later becomes central when this group's dissatisfaction is exploited by other traveling teachers (see comment on 2 Cor 12:13-18).

9:4. Here Paul states a simple right to sustenance; see comment on 9:1-2, 6.

9:5. Jewish *disciples who went away to study under a distant teacher would not bring their wives along (*Sifre Deuteronomy* 48.2.4-6; but they were rarely gone more than a month, Mishnah *Ketubbot* 5:6); this was also true of the disciples in the Gospels (though they would rarely need to be away more than a few days at a time before visiting). But just as the rare *Cynic who found a wife willing to share his lifestyle would take her with him (see comment on 7:32-35), so the *apostles eventually took their wives as colaborers. Paul presents himself and Barnabas as exceptions to the general rule that apostles were married.

Although ancient Egyptian and Hebrew (Song of Songs 4:9-12; 5:1) love songs called wives "sisters" as a term of endearment (also Tobit 8:4, 7), the term here simply means a sister in *Christ (i.e., a fellow Christian; thus some translations have "a believing wife," e.g., NASB, NRSV, KJV).

9:6. Philosophers supported themselves in one of several ways: by attaching themselves to a wealthy *patron, who used them for ostentatious dinner lectures; by charging fees for instruction; by begging (generally despised, but practiced by the Cynics); or, for some least desirable of all, by working as manual laborers. Some philosophers and many Jewish sages valued manual labor. Although artisans normally prided themselves on their own work, aristocrats and those who shared their values despised manual labor. The socially "strong" faction in the *church undoubtedly wish that their founder-teacher did not work.

9:7. The army paid its soldiers. If laborers in secular occupations are paid, why not apostles?

9:8-10. Deuteronomy 25:4 may have communicated a principle that the laborer should be fed; others recognized that such laws related to more general principles of kindness (e.g., *Josephus, *Against Apion* 2.213; *Philo, *Virtues* 140, 145). Here Paul may argue in the sense of the common Jewish *qal vahomer* argument: if for an ox, how much more for a person. Some Jewish teachers felt that God's teachings about animals were only to teach people principles (cf. **Letter of Aristeas* 144).

9:11-12. Paul refuses to use the right to material support lest anyone be offended by the *gospel. Many traveling teachers depended on others for support, and if hearers thought that Paul was such a teacher, they might challenge his motives for preaching the gospel or view him as a *client of the church's higher-status faction. Philosophers debated among themselves whether they should be concerned about public opinion. Some *Stoics and most Cynics lived as they pleased, arguing that it mattered not what anyone thought; other philosophers felt that they should give no unnecessary cause of offense, because they wanted to draw others to the wisdom of philosophy.

9:13. Priests and Levites were supported by the tithes of the people (cf., e.g., 2 Chron 31:4) but were also entitled to certain portions of the sacrificial food offered on the altar (like priests in many ancient pagan temples).

9:14. Here Paul alludes to a saying of Jesus (Mt 10:10; Lk 10:7; cf. 1 Tim 5:18).

9:15-27
Paul Sacrifices His Rights

Far from pleasing all his hearers (9:19; cf. 10:33) here, Paul's tactic of identifying with the working-class majority (9:12-15) would offend some aristocratic-minded landowners who, like most of their peers, despised manual labor. His use of populist political imagery in 9:19-23 would further alienate this part of his constituency, which is the financial backbone of the church. Unlike some teachers who were *clients of the wealthy, Paul's priorities are reaching all people with the gospel, not catering to the elite.

9:15. Self-reliance was a basic characteristic highly extolled among philosophers. *Cynics claimed that their lack of dependence on others made them free (e.g., Crates, *Epistles* 7; 8; 29); Socrates felt that refusing to charge fees kept him free (Xenophon, *Memorabilia* 1.2.6). No one could charge them with accommodating their views to maintain financial support. Both Jews and *Gentiles sometimes

spoke of death as preferable to some extreme situation (e.g., Jon 4:8; *Cicero, *Letters to Atticus* 11.9; *Letters to Friends* 9.11.1; 9.18.2).

9:16. "Woe is me" was a common *Old Testament and Greek phrase uttered by one confronted with terrible news.

9:17-18. Stoic philosophers said that Fate imposed its will whether one accepted it or not; hence one might as well accept it. The Old Testament taught that one must submit to God's call, even if (as in the case of Moses, Gideon, Isaiah and Jeremiah) one felt unprepared or inadequate for it. The "reward" (9:18) can be translated "wage"; by serving people freely Paul has better payment from God. His "gain" (often translated "win") would be especially people brought to Christ (9:19-21).

9:19-23. *Rhetoric valued adapting to one's audience, but the elite disdained those who were too flexible as fickle demagogues who tried to please the masses; they considered such demagogues "slaves." Still, some valued being "slaves" or "pleasing" others if it kept civil stability. Paul borrows the language of populist politics, undoubtedly offending defenders of the aristocratic element in Corinth. Some Jewish teachers, like (reportedly) *Hillel, similarly accommodated their hearers wherever possible, to win as many as possible to the truth (cf. also the figure in Josephus, *Jewish Antiquities* 20.41).

9:24-25. Philosophers (followed by *Diaspora Jewish sources like *Philo and *4 Maccabees) commonly used athletic illustrations to describe their striving for truth and wise living. Paul portrays the discipline and self-sacrifice necessary to live the Christian life through the analogy of races (9:24-26a) and boxing (9:26b-27). (The footrace preceded the other four athletic contests of the pentathlon in the Panhellenic Games.) The clause "but only one receives the prize" (a head wreath, which would eventually rot) emphasizes how hard one had to work to win the race. (A long period of intense discipline was mandatory for any who planned to participate in the events. For instance, participants for the Olympic games had to swear by Zeus to follow ten months of strict training beforehand.)

Corinth itself hosted major games for all Greece every two years on the isthmus; these were the best-attended Greek festivals next to the Olympic games, which were held every four years. The withered celery or pine garland was awarded at these Isthmian games (wild olive at the Olympic, parsley at the Nemean, etc.). Some others already used "crowns" (garlands) figuratively.

9:26-27. Boxing was one of the major competitions at Greek games (but not part of the pentathlon, mentioned above); boxers wore leather gloves covering most of the forearm except the fingers, and boxing was a violent sport. The pankration further mixed boxing with wrestling, forbidding only gouging and biting. Shadowboxing or "beating the air" was insufficient preparation for a real boxing competition; a boxer had to discipline his body better than that to win. In the same way, Paul had to discipline his life to sacrifice what he needed to sacrifice for the sake of the gospel, lest he himself be disqualified from the race and fall short of the wreath of *eternal life (9:25).

10:1-13
Israel's History as a Warning

Having established that those who eat idol meat ought to lay down their rights, Paul now proceeds to an argument from Scripture: the Corinthian Christians' sexual immorality and associations with idolatry were no different from those of ancient Israel and in the same way invited the judgment of God. Paul's conclusions might surprise his readers, but his style of argument would not: ancient teachers relied heavily on past examples, especially from sacred books; Judaism naturally drew its examples from the Scriptures.

10:1-2. Some later Jewish teachers also drew parallels between the Red Sea and Jewish *proselyte *baptism. Paul parallels the experience of salvation in the first exodus and salvation in Jesus to show that salvation does not render one invulnerable to falling (10:6-12). (Jewish people were awaiting a new exodus, promised by the prophets for the time of the *Messiah.) For the comparison, he employs Christian language: baptism "into Moses" recalls baptism "into Christ" (12:13).

10:3-4. Again, the Israelites in the wilderness had sacred food and drink, as the Corinthians do (10:16), but that did not save them (10:6-12). Because the rock sustained Israel in

multiple locations (Ex 17:6; Num 20:8), in some Jewish traditions the well followed the Israelites in the wilderness (*Pseudo-Philo, *Biblical Antiquities* 11:15; some *rabbis). In Paul's *midrashic application, what the rock did for Israel corresponds to what *Christ did for the Corinthians; Paul undoubtedly connects the life-giving rock with God as Israel's rock in Deuteronomy 32:13 (a context still fresh in his mind in 1 Cor 10:20, 22). Other Jewish teachers compared the rock with Wisdom (*Philo, *Allegorical Interpretation* 2.86).

10:5. Jewish teachers generally regarded early deaths as signs of God's judgment (in their view scholars of the *law, for whom God had a higher standard, could be so judged even for failing to study the law diligently enough).

10:6. The events recorded in the law were meant as a sign or warning to others (Num 26:10). The Israelites' evil desires consisted in desiring "better" food than the manna, the spiritual food God had provided (Num 11:4-6, 20, 33); they wanted meat (Num 11:18; cf. comment on 8:7).

10:7. See Exodus 32:4, 6. Just as Israel had once eaten in God's presence (Ex 24:11), so in Exodus 32:6 they ate and drank before an idol whom they called God. Later rabbis considered this the most embarrassing episode in Israel's history (eventually some even found ways to blame it on the *Gentiles traveling with the Israelites); *Josephus omits it in his account. Jewish interpreters rightly took "play" in this text to mean idolatry.

10:8. The Israelite men had unmarried sex with Midianite women, who were acting as cultic prostitutes (Num 25:1-8; 31:16), and God sent a plague in judgment (Num 25:9). Jewish traditions unanimously report that twenty-four thousand died, as does the *Old Testament text; perhaps Paul midrashically mixes this number with an allusion to the three thousand killed in an earlier judgment (Ex 32:28, the judgment for the sin in 1 Cor 10:7). But ancient writers would not have lingered or expressed concern over this sort of detail, although it has exercised modern readers (who usually suggest either a major mistake or that the other thousand died the next day).

10:9-11. Relevant to 10:3-4, Israel "tested" God by complaining about the water (Ex 17:2, 7; Deut 6:16) and food (Ps 78:18) he provided. Israel complained against God and his agent Moses (Ex 16:7-12; 17:3; Num 11:1; 14:27-29; 16:41). Jewish traditions lament Israel's complaining in the wilderness. God did not "destroy" his people during these initial tests, but after they continued to test him he pronounced judgment (Num 14:22-23), striking more directly when they complained in Numbers 21:5-6. The "destroyer" was the one who also destroyed the firstborn of Egypt (the wording in Ex 12:23; cf. Wisdom of Solomon 18:25; Heb 11:28). Philosophers also warned against grumbling, noting that one ought to accept whatever the gods and Fate would send.

10:12-13. Ancient teachers often pointed out that adversities come to everyone and that one should not be proud but submit to what comes one's way. Ancient writers often exhorted those who suffered that this experience was common to people in general. But whereas pagan writers emphasized human will, Paul emphasizes God's faithfulness.

10:14-23
Idol Meat Supports Demons

Here Paul gives a religious argument against eating meat offered to idols. As God's temple was diametrically opposed to prostitution (6:15, 19), Christ's table was diametrically opposed to the table of idols (10:14-22).

10:14. "Fleeing" vices was a fairly frequent moral exhortation in antiquity (cf. 6:18).

10:15. Ancient speeches and letters of admonition often opened with a compliment designed to secure the favor of the audience (although Paul could be ironic here); they also sometimes appealed to hearers to judge for themselves.

10:16-17. To honor pagan gods in Greek religious ceremonies, small libations of wine would be poured out of cups before people drank from them. But here "cup" and "bread" allude to the Passover meal, which was celebrated in the Lord's Supper (11:23-26). Not only at the Passover meal but at meals in general the head of the Jewish household would say a blessing (thanks) over a cup of wine. Some commentators report that the last cup at the end of the meal was called the "cup of blessing." On the "body," see comment on 12:12-26.

10:18. The priests ate some parts of the of-

ferings in the temple; other kinds of offerings (such as the Passover lamb, which Paul also considers a sacrifice—5:7) were eaten by the rest of the people. One must not share in offerings to the true God while also sharing in offerings to false ones.

10:19-20. Like Isaiah, Paul says that physical idols are nothing (cf. Is 44:12-20; 45:20-25; 46:1-11). But like most of the *Old Testament passages that mention *demons (at least in their Greek rendering—Lev 17:7; Deut 32:17, 37-39; Ps 106:28, 37) and most subsequent Jewish and Christian literature apart from most later rabbis, Paul believes that false gods seeking human worship are demons (e.g., **Jubilees* 1:11; 22:16-17; **1 Enoch* 19:1; *Sifre Deuteronomy* 318.2.1-2). Paul quotes a line from Deuteronomy 32:17.

10:21. Pagans spoke of the offering tables of their gods (e.g., the table of Serapis); most ancient Near Eastern temples had been equipped with such tables. The Old Testament uses the expression "table of the Lord" for the place of offerings (e.g., Mal 1:7, 12; in Ex 25:30, the bread eaten by priests was there; cf. 1 Cor 9:13). Table fellowship connoted intimate relations. By repeating the form, "you cannot . . . and . . . ," Paul reiterates his point in a way that *rhetorically sensitive ancient audiences appreciated.

10:22. Paul again provides a rhetorical objection against his own position, but his readers who are familiar with the Old Testament know that the Lord is a jealous God who allows the worship of no other gods (e.g., Deut 32:17, 21; see comment on 10:19-20). "Provoking" probably alludes to Deuteronomy 32:21 (cf. Baruch 4:7, also echoing Deut 32:17, 21).

10:23. Greek teachers used criteria like "usefulness" to determine whether to undertake actions. Paul raises a rhetorical objection ("Everything is allowed") and then answers it ("But not everything is helpful"), as was common in ancient moral teaching.

10:24–11:1
Instructions for the Sake of Others

10:24. Not only Jesus' early followers but also many other ancient moralists would have agreed with this exhortation.

10:25. Whatever meat was left over from sacrifices was taken to the meat market in the large agora in Corinth (not far from where Paul had once worked—Acts 18:3). Not all meat in this market had been offered to idols, but some of it had. In comparatively large cities, Jewish people were often allowed to have their own markets so they could avoid such food (some scholars speculate that a recent wave of anti-Jewish prejudice could have recently closed the one in Corinth). In other cities, they would ask about the source of the meat.

Jewish teachers considered inadvertent sins "light," though the scrupulous might not have been satisfied with Paul's "What you don't know won't hurt you" here. Because most people could not afford to buy meat very often, subsisting instead on fish and grain, Paul here addresses especially the more well-to-do in the congregation.

10:26. Here Paul quotes Psalm 24:1, which extolled the majesty and greatness of God; he was the only true and living God, and everything belonged to him, not to idols or *demons. Jewish teachers, possibly as early as Paul, used this text to prove the need to give thanks at meals.

10:27-29. Most temples had their own dining halls, and people were invited to meals "at the table of Serapis" and other pagan gods. The meat at these meals would obviously have been offered to idols. But people were also invited to banquets in wealthy homes, where they could not be certain of the meat's source. Jewish people who avoided impure foods (like pork) were virtually excluded from such banquets, but they did not look down on *Gentiles who ate pork as long as they abstained from idols. Jewish people had sometimes faced martyrdom to avoid eating impure foods, and they would expect Gentiles who claimed to believe in God at least to avoid food that had certainly been offered to idols.

10:30. Paul cites another possible objection (see comment on 10:22). Like Jewish people, Christians always offered thanks over their food before the meal (at least later, pious Palestinian Jewish homes also offered thanks after the meal).

10:31. For a believer, personal "rights" (10:23, 29) are not the highest value. Some Jewish teachers emphasized that everything should be done for the sake of God, as Paul does here; some philosophers argued that one

should invest one's life only in that which is of eternal significance. In the *Old Testament, God clearly desired his people to live wholly for him (Deut 6:4-5; Ps 63:1). Paul regards such convictions as appropriate and applies them to the credibility of the *gospel (1 Cor 10:32-33).

10:32-33. Speakers and writers often recapitulated their message at the end of a section. See comment on 9:19-23. Jews and some Christians were offended by eating idol food; Gentiles would likely see the act as tolerating their gods. For seeking the welfare of the many, cf. also 2 Maccabees 4:5.

11:1. Paul had already presented himself (chap. 9) as an example of this principle, which he articulates in 10:32-33 and exemplifies in 10:33–11:1; people often cited the lifestyles of philosophers or other sages as models.

11:2-16
Head Coverings and Sexual Modesty

Paul returns to the topic of food and a deity in 11:17-34 (cf. chaps. 8–10), but here he digresses briefly to address another issue of decorum in the Corinthian *church in which the free should surrender their rights (11:10). *Digressions were standard in ancient literature.

Earlier Athenians tended to segregate women in the home; current Corinthian culture would include more contemporary Roman influence, where wives sometimes even attended banquets with their husbands. Nevertheless, in general public activity was a predominantly male sphere and homes a predominantly female sphere; house churches intersected these boundaries, creating more ambiguous social space. Women's hair was a common object of lust in antiquity (e.g., *Apuleius, *Metamorphoses* 2.8; *Sifre Numbers* 11.2.1-3), and in much of the eastern Mediterranean married women were expected to cover their hair (for Jewish women, see *Josephus, *Jewish Antiquities* 3.270; *Philo, *Special Laws* 3.56; Mishnah *Bava Qamma* 8:6; Mishnah *Ketubbot* 7:6). To fail to cover their hair was thought to provoke male lust as a bathing suit is thought to provoke it in some cultures today. Head covering prevailed in Judea (where in conservative homes it extended even to a face veil) and elsewhere, but upper-class Roman women eager to show off their fashionable hairstyles did not practice it. Thus Paul must address a clash of culture in the Corinthian church between upper-class fashion and lower-class concern that sexual propriety is being violated.

Thus Paul provides a series of brief arguments, each of which relates directly to the culture he addresses. Some of his arguments do not work well in every culture (he himself seems eager to guard against them being misapplied—11:11-12), but it is the Corinthian women, not modern women, whom he wishes to persuade to cover their heads.

11:2. Letters were often written to "praise" or "blame" the recipients; sometimes these points characterized the entire letter in which they occurred. "Traditions" (NASB, NRSV) were accounts or regulations passed on orally; for instance, *Pharisees in Palestine transmitted their special traditions in this way.

11:3-4. Ancient writers often based arguments on wordplays. Paul uses "head" literally (for the part of the body to be covered, on top the neck) and figuratively (possibly for the authority figure in the ancient household). (Some commentators have argued that "head" means not "authority" but "source"—see 11:12—or most honored part—see 11:4-7—but these questions are vigorously debated and cannot be decided here.) On head coverings for women, see the introduction to this section. Women did not lead prayers in most *synagogues, and Jewish tradition tended to play down *Old Testament prophetesses; Paul's churches allow considerably more freedom for women's speaking. This may be partly because of early Christians' distinctive emphasis on current and pervasive prophetic inspiration; even Greeks, who often demanded women's silence, made exceptions for women speaking by inspiration, but Christians expected such inspiration regularly in their gatherings. The preference for men uncovering their heads may reflect regional culture: Greeks (the dominant custom in the eastern Mediterranean) bared their heads for worship, although Romans (the official culture in this Roman *colony) covered them. (This custom was not divided along gender lines.)

11:5-6. Paul uses the ancient debate principle of *reductio ad absurdum:* If they are so concerned to bare their heads, why not also remove

the natural covering, their hair? Paul thereby reduces their insistence to what his contemporaries would consider absurd: the greatest physical shame for a woman was to be shaved or have her hair cut like a man's. This appearance would also serve the opposite purpose of uncovered hair: it was not deemed attractive.

11:7. Paul here begins an argument from the order of creation. He cannot be denying that women are also the image of God (Gen 1:27 and 5:1-2 plainly state that both male and female were created in God's image; cf. 1 Cor 15:49; Rom 8:29; 2 Cor 3:18). But because woman was taken from man (Gen 2:21-22), he may argue that woman reflects the image via the first man (but see comment on 11:11-12). Perhaps he means that women's uncovered heads are drawing men's attention to humanity instead of to God.

11:8-9. According to Genesis 2:18 God created woman distinct from man partly so that man would no longer be alone; the phrase there translated "helper suitable" praises woman's strength rather than subordinates her. ("Helper" is used more often of God than of anyone else in the Old Testament; "suitable" means "corresponding" or "appropriate to," as an equal in contrast to the animals.) Woman was thus created because man needed her strength, not (as some have wrongly interpreted this verse) to be his servant.

11:10. Here Paul says literally, "she ought to have authority on/over her own head because of the angels"; some think Paul could mean that she should exercise wisely her right to decide whether to cover her head in a way that will honor her husband (11:8-9), given the situation with "the angels." In any case, the "angels" have been interpreted as (1) the angels who (according to ancient Jewish interpretations of Gen 6:1-3) lusted after women and so fell (see comment on 2 Pet 2:4; but they produced giants, not the likely threat here); (2) the angels present in divine worship, who would be offended by a breach of propriety or affront to the husbands (cf. *Dead Sea Scrolls 1QSa 2.3-9; 1QM 7.5-6); and (3) the angels who rule the nations but who will ultimately be subordinate to all believers, including these women (1 Cor 6:3; i.e., as a future ruler a Christian woman or man should exercise wise choices in the present, even regarding apparel).

11:11-12. Paul qualifies his preceding argument from creation (11:7-10); he wants to prove his case about head coverings, but recognizes that women and men are mutually interdependent (cf. also 7:2-5). For men coming from women, see 1 Esdras 4:15-17 (cf. 4:14, 22). Such expressions of mutuality tend to appear among the more progressive of ancient writers on the topic of gender (e.g., Musonius Rufus 12, p. 86.33-38; 14, p. 92.38–94.1).

11:13-15. Ancient writers, especially *Stoic philosophers, liked to make arguments from nature. Nature taught them, they said, that only men could grow beards; women's hair naturally seemed to grow longer than men's. Like all urban dwellers, Paul is well aware of exceptions to the rule (barbarians, statues of philosophers and heroes of the epic past, and Paul would also know of biblical Nazirites); but the "nature" argument could appeal to the general order of creation as it was experienced by his readers.

11:16. Paul reserves one final argument for those unpersuaded by his former points. One philosophical group called the Skeptics rejected all arguments except an almost universally accepted one: the argument from custom—"that's just not the way it's done."

11:17-34
Factionalized Fellowship

Despite Greek ideals of equality, even for banquets, ancient seating at public events was arranged according to rank, usually including at banquets. The churches in Corinth met especially in well-to-do *patrons' homes (see comment on Acts 18:6-7). In Greco-Roman society, patrons often seated members of their own high social class in the special *triclinium* (the best room), ideally reclining about nine diners, but more would be possible depending on the room's size and the seating arrangements. If more space were needed, others could be served in the larger *atrium* (which might comfortably seat an estimated forty persons, again depending on the size of the room and seating arrangements). Guests further from the host received (or brought) inferior food and inferior wine, and *clients often complained about where their patrons had seated them (cf. *Seneca, *Epistle to Lucilius* 4; *Juvenal, *Satire* 4.15-18, 24-25, 37-79,

146-58; Martial 3.49; 4.85; 12.28; Lk 14:8-10). (Common meals even at *Qumran included seating by rank; 1Q28a 2.21.) This societal problem spilled over into the church.

The background for the meal itself is the Jewish Passover meal, a sacred meal and celebration commemorating redemption; see comment on Matthew 26:17-30. But most Corinthian believers seem to have lost sight of this background; they treat the meal as a festal banquet such as they knew from Greek festivals or meetings of Greek religious associations.

11:17-19. Paul could praise the Corinthians on some points (see comment on 11:2) but not on this one; like division by ethnic or cultural bias (see introduction to Romans), division by social class is contrary to the *gospel. Some scholars argue that 11:18 resembles *rhetorical *dissimulatio,* that is, mock disbelief meant to shame the hearers into recognizing how terrible their behavior is.

11:20. On the "Lord's Supper," see the "Lord's table" in 10:21. Paul ironically contrasts the *Lord's* Supper (11:20) and their own (11:21).

11:21-22. Some are treated more honorably than others at the meal, and this treatment reflects the status values of the world. See the introduction to this section. Some scholars suggest that some taking their meal before others (11:21) refers to slaves and other workers who could not come as early as the more well-to-do with more leisure.

11:23. "Received" and "delivered" (KJV, NASB) were used together especially for passing on traditions (11:2; 15:3; cf., e.g., Josephus, *Jewish Antiquities* 13.297, 408). Some later *rabbis spoke of traditions received "from Sinai" or "from Moses"; although they believed they received them by means of their own predecessors, they meant that the tradition ultimately went back to Moses (e.g., Mishnah *Pe'ah* 2:6; *Eduyyot* 8:7; *Yadayim* 4:3). Paul probably means that earlier *disciples told him about the Last Supper. It took place at "night," as the Passover meal always did.

11:24-25. Covenants were usually ratified by blood (cf. "the blood of the covenant," Ex 24:8); God had promised a "new covenant" (Jer 31:31; cf. Lk 22:20). The unleavened Passover bread was normally interpreted figuratively as "the bread of affliction that our ancestors ate" in Moses' time; Jesus had applied it to himself (see comment on Mk 14:22-24). Pagans sometimes ate funerary meals "in remembrance of" a dead person, but the sense here is as in the *Old Testament, where the Passover commemorated God's redemptive acts in history (e.g., Ex 12:14; 13:3; Deut 16:2-3; **Jubilees* 49:15). As in the Passover ritual (cf. the principle in Deut 26:5), the "you" applied to all future generations; Jewish people believed that their commemoration/partial reenactment allowed them to share the experience of their ancestors. Greek banquets included a drinking party after the primary meal, also with entertainment, which could include music, lectures, readings or conversation; Paul speaks of the cup "after supper" and may also expect study of Scripture at that time.

11:26. "Until he comes" is the temporal limitation on the Lord's Supper that goes back to Jesus as well (Mk 14:25). Passover celebrations looked forward to the future redemption of Israel (Tosefta *Berakhot* 1:10-11) as well as backward to how God had redeemed them in the exodus of Moses' day. Jewish people expected an *eschatological banquet when God would reward his people (cf. Is 25:6, 8; **2 Baruch* 29:4).

11:27-29. Associations normally had rules to prevent and discipline abuses such as drunken quarrels, but here God is the avenger. "Eating in an unworthy manner" here refers to the status-conscious eating that is dividing the church (11:21-22). By rejecting or looking down on other members of Christ's body, the church (10:17), they also reject the saving gift of his body represented by the bread (11:24).

11:30-34. Jewish teachers stressed that in this world God punished the righteous for their few sins, but in the world to come he would punish the wicked for their many sins; thus Jewish teachers believed that suffering could free one from later punishment. Paul agrees at least that suffering *can* be the Lord's discipline; the idea here might be that when the church does not embrace all its members, gifts of healings are inhibited (12:9). Paul distinguishes between meetings of the house congregations and, in 11:34, personal use of the home, where believers might have more freedom to follow their cultures' traditions.

12:1-3
Qualifying the Gifts

Because Christian gifts like *prophecy are given by God's *Spirit (in both the *Old Testament and the *New Testament), cultural background is less important here than in some parts of 1 Corinthians (e.g., on head coverings or holy kisses). But it can help the modern reader appreciate how the first readers might have viewed the functioning of some of the gifts in their culture.

For "now concerning," see comment on 7:1. Paul indicates that prophesying is not necessarily a sign of godliness; pagans prophesied too, and at Greek oracular shrines possessed persons prophesied ecstatically, inspired by gods other than the Christian God. Although some reported that interest in oracles had declined in this period, oracles and other forms of divination remained a strong influence on pagan culture. Paul can thus point to some of his hearers' former behavior in paganism as a warning that ecstatic activity *by itself* cannot constitute proof that they are obeying God. (Verse 3 probably hypothetically contrasts two extreme examples of evil and true utterances.)

12:4-11
Diverse Gifts

12:4-6. Paul's (here proto-trinitarian) triple repetition of the same thought in three ways ("there are varieties of . . . but the same . . . ") reinforces his point in a way that rhetorically sensitive ancient audiences would have appreciated (in *rhetoric, *anaphora* began successive clauses the same way). Paul emphasizes that all the gifts are different but all are useful; hence a Christian with one gift is not more or less important than another Christian with a different gift.

12:7-11. In ancient rhetoric, writers sometimes framed an important point by repeating a thought before and after it; here, 12:7 and 11 frame the list in 12:8-10, emphasizing that it is the Spirit that enables these ministries. Ancient audiences valued repetition, and often (as here) offered random lists. Given the use of "word," "wisdom" and "knowledge" (12:8) earlier in 1 Corinthians, here these terms surely refer to God's providing speaking ability and teaching (see comment on 1:5). (Some modern readers have taken these terms to refer to supernaturally revealed knowledge. Although supernaturally revealed knowledge is often illustrated by prophets in the *Old Testament and may be considered a form of the gift of prophecy, it is not likely Paul's point in mentioning "knowledge" here; cf. 8:1; 13:8-9, 12.)

Some magicians sought to perform healings and other extraordinary acts (12:9-10) and more often people sought cures at shrines of Asclepius (including at Epidauros near Corinth) or sometimes Serapis (with two shrines in Corinth). Outside the early *churches, however, there are no ancient parallels to these events as a regular occurrence within a local congregation. The gift of "discerning spirits" was particularly useful for judging prophecy (cf. 14:29; 1 Jn 4:1). Although ecstatic babbling occurs in some pagan cultures today, the ancient Mediterranean has little evidence of this phenomenon and no useful parallel to "tongues" (inspired worship in a language one does not know—14:2) or inspired "interpretation" of tongues (the term can mean either translation or communication of the general sense).

12:12-26
All Members of the Body Are Necessary

12:12. Paul adapts an image commonly used for the Roman state or for the universe and applies it to the church (as in Rom 12:3-5). When the plebeians (the lower class in earlier Rome) had proposed revolt, the aristocrat Menenius Agrippa convinced them that although they were less noticeable members (like the stomach), they were necessary; the upper and lower classes had different roles but equal importance (e.g., Dionysius of Halicarnassus, *Antiquities of Rome* 6.86.1-5; *Livy, *History of Rome* 2.32.9-12). This argument was mere aristocratic sophistry to keep the masses down; but after him other writers, especially *Stoic philosophers, borrowed the image. Many continued to apply it to the state (cf., e.g., *Cicero, *On the Republic* 3.25.37; *Orationes philippicae* 8.5.15). Stoics even said that the universe was like a body, and God's *logos,* or reason, was the mind or head that directed it (cf., e.g., *Seneca, *Epistle to Lucilius* 95.52; *Epictetus, *Diatribes* 1.12.26). Paul here refers to

the unity of the body not to keep one group down but to tell all the Christians in Corinth to respect and appreciate one another. Just as a solitary eye or foot is useless, so is any member of the church apart from other Christians. Identifying the body with *Christ in 12:12 fits ancient figures of speech such as metonymy or synecdoche; it emphasizes the close connection (but does not deify the church).

12:13. Although the drinking here probably alludes to the rock of Christ in 10:4, ancient hearers might also think of drinking from Wisdom (Sirach 24:21; cf. Jn 4:14).

12:14-21. In a way pleasing for rhetorically sensitive ancient hearers, Paul reinforces his point through repetition (12:14, 18-20). In 12:15-16 and 21 he uses the graphic rhetorical device *prosopopoiia*, in which inanimate objects (here, parts of the body) speak. In some other ancient analogies, "eyes" fill a prominent role.

12:22-24. Men did not usually cover their prominent parts, such as their heads, but their private parts and perhaps (as in Menenius's fable above) their stomachs. One could argue that these covered parts receive special treatment.

12:25-26. Ancient moralists emphasized that true friends would share the other's sorrows and joys.

12:27-31
Different Gifts Again

12:27-28. Ancient speakers liked lists (cf. 12:8-10), which drove home a point by repeated examples. "First . . . second . . . third" was normally a designation of rank; most of the gifts after the first three could be listed randomly (although perhaps placing tongues last because of the abuse of them in Corinth; cf. 1 Cor 14).

12:29-30. For lists, see comment on 12:27-28. Ancient hearers outside the church would consider it extraordinary that any person in a given congregation has some of these gifts, such as *prophecy or miracles, which were considered rare. The term translated "*apostles" probably means "commissioned messengers," backed by the full authority of the sender so long as they represented his message properly; although some philosophers considered themselves messengers of the gods and Jewish people often viewed the *Old Testament prophets in this light, early Christians respected this position as a present role in the church. See comment on Eph 4:11.

12:31. Ancient writers sometimes digressed (as in chap. 13) and sometimes framed special material by returning to a point (12:31; 14:1). The greatest gifts (also 14:1) are defined by the need of the rest of the body (chap. 13). Most Jewish people believed that only a very small number of the very pious could do miracles; the idea that any believer could seek God for whatever gifts are most useful for his people was extraordinary. Early Christians democratized the supernatural—they believed God could work actively in each believer's daily life.

13:1-3
Nothing Without Love

Some regard this chapter as poetic; it does not have the meter of Greek poetry, but does fit a form of exalted prose (grand or sublime *rhetoric). This chapter resembles praises of various virtues elsewhere in Greco-Roman literature; one of three kinds of epideictic (praise) rhetoric was an encomium praising a person or subject, with some virtue being a common topic (cf. similarly Heb 11:3-31). That Paul chooses this particular virtue above all others is not dependent on his culture—many ancients valued love, but it is specifically in early Christian literature that it appears regularly as the supreme virtue (given Jesus' teaching, Mk 12:30-31; Jn 13:34-35). As a brief *digression between 12:31 and 14:1 (digressions were common in ancient literature), this chapter explains the way to evaluate which gifts are "greater."

13:1. The varied but threefold repetition of, "If I . . . but do not have love" is rhetorical *anaphora,* reinforcing the point; the similar endings of the claims are also rhetorical reinforcement. In some Jewish traditions, angels preferred to speak Hebrew, but most Jewish people would have agreed that angels understood human languages, especially since angels were appointed over various nations. Paul could believe that there are angelic languages in addition to human ones, in which case he would be saying, "Though I be so fluent in tongues that I could speak every conceivable language . . . " (Job's daughters at the end of the *Testament of Job* spoke ecstatically in angelic tongues as they were inspired to think heavenly

things; but it is not clear whether this text is pre-Pauline or was added by a tongues-speaking Christian in the second century.) But this could also simply be *hyperbole.

Although cymbals were used in some pagan worship (as well as in Jewish worship), the point of Paul's comparison is undoubtedly simply that, though loud, by themselves they communicate nothing (like some rhetoricians in his day). Corinth was famous for its expensive gold- or silver-colored "bronze"; bronze vases (the Greek does not specify "gongs," as in most translations) were often used for amplifiers in the outdoor theaters of this period, though the term could apply to any bronze object that could produce loud noise.

13:2-3. "Moving mountains" seems to have been a figure of speech for doing the impossible (cf. comment on Mk 11:23; cf. Zech 4:7). Jesus spoke of moving mountains, giving up possessions and even one's life (Mk 11:23; 8:34-38; 10:21-31); without love, however, these are nothing. The earliest manuscripts read, "that I may boast," but the other reading, "to be burned" could allude to some Jewish traditions of martyrs (cf. 2 Maccabees 7:5; *4 Maccabees 6:26-27; 7:12; 10:14).

13:4-13
What Love Is

13:4-7. A rhetorically sensitive ancient audience would appreciate the repetition and fleshing out with examples. In Greek, many of the words (*all* of them in 13:4) end with vowels (most often *ei* or *ai*); in 13:6, "unrighteousness" and "truth" each begin and end with *a*. Most forceful is the fourfold anaphoric repetition of "all" (first in the Greek) and then a verb ending in *ei* in 13:7. The point of Paul's rhetorically polished description of love is its contrast to what he has earlier said about the attitudes of the Corinthians. See comment on 13:1-3.

13:8-13. Writers sometimes framed sections with a special point, here that love lasts forever (13:8, which is transitional, and 13:13). Greek thinkers valued especially what was eternal. As in verses 1-3, Paul demonstrates here that love is a greater virtue than the gifts; in this case it is because love is eternal, whereas the gifts are temporary. In 13:8, Paul's rhetorically sensitive hearers would appreciate the threefold anaphoric repetition of "if there are" (NRSV: "as for") and similar closings.

In contrast to most Greeks, Jewish people envisioned a decisive, future climax to history. Some *Old Testament prophets predicted the outpouring of the *Spirit in the final time, accompanied by ability to speak under the Spirit's inspiration (Joel 2:28); but other prophecies noted that all of God's people in the world to come would know God, hence there would be no reason for exhortation (Jer 31:33-34). Paul believes that the time of the Spirit's gifts, including limited human knowledge, is the current time, between Jesus' first and second comings (cf. 13:10, 12).

Around age thirteen (at least in later Jewish tradition) or around sixteen (more often for Romans), boys would enter manhood; at that time a Roman boy would replace his childhood toga with an all-white adult toga. Mirrors (13:12) were often made of bronze, and given the worldwide renown of Corinthian bronze (e.g., Pausanias 2.3.3), would perhaps strike the Corinthians as a locally prominent product (also 2 Cor 3:18). But even the best mirrors reflected images imperfectly (some philosophers thus used mirrors as an analogy to describe mortals' searching for the deity). Other prophets saw God enigmatically, but Moses saw him face to face (Num 12:6-8; cf. Ex 33:11; Deut 34:10); the future revelation will be complete.

14:1-20
Intelligible Versus Unintelligible Speech

Because Christian gifts like *prophecy are given by God's *Spirit, cultural background is less important here than on some parts of 1 Corinthians (e.g., on women's head coverings in 11:2-16). But it can help the modern reader appreciate how the first readers might have viewed the functioning of some of the gifts in their culture.

Although Paul is clearly not against speaking in tongues (14:5, 18), he emphasizes that the value of gifts must be judged by their utility in any given setting; intelligible speech profits others in public worship, whereas unintelligible speech, no matter how inspired, is profitable only privately or if interpreted. Many believed that divine inspiration displaced rational thought (see e.g., Lucan, *Civil*

War 5.97-193; throughout *Philo, *Drunkenness*), but Paul allows for inspiration to work with reason in prophecy and not necessarily to displace it in tongues. The term for "tongues" normally means simply "languages" (as in 13:1), but it is clear here (14:2, 14) that the person inspired to pray in these other languages does not know the languages; as in Acts, this gift presupposes a supernatural enabling.

14:1-3. In the *Old Testament, prophecy also served the functions Paul lists here: "edification" or building up (and tearing down, e.g., Jer 1:10, where God's word overthrows and restores nations); "exhortation" (KJV, NASB; cf. "encouragement"—NIV, NRSV, GNT), which can include reproof; and nearly all Old Testament prophets, no matter how focused on judgment, included a message of "consolation" (NASB, NRSV) or "comfort" (NIV, KJV, GNT) and hope.

14:4-5. Paul's wish that all could prophesy (cf. Num 11:29) is probably realistic, at least potentially; God had promised to enable all his people to prophesy once the time of the end (inaugurated by Jesus, according to the *New Testament) had come (Joel 2:28). If tongues were interpreted, they could also serve as a form of inspired speech useful to the *church.

14:6-7. Intelligibility is the key to edifying others (14:6-12). Paul mentions here the two primary musical instruments of antiquity: the "pipe" (KJV; most translations render this "flute"), a wind instrument that sounded like an oboe and often had two pipes from the mouthpiece and was common in religious and emotional music; the "harp," a stringed instrument, was considered more harmonious and often accompanied singing. Although such instruments as in 14:7-8 did not have language, they could communicate meaning; for example, flute melodies could give instructions to flocks, and trumpets regularly signaled armies.

14:8-9. "Trumpets" or "bugles" were used to call armies to battle, to march and so forth; an uncertain trumpeting would confuse the soldiers (14:8).

14:10-12. Greeks traditionally looked down on non-Greeks as "barbarians" or "foreigners," calling them "barbarians" because they spoke "strange" (i.e., non-Greek) languages, but even those who did not believe in the superiority of Greeks divided the world into "Greeks and barbarians" (e.g., Rom 1:14), often on the basis of ethnicity but sometimes on the basis of language. (Sometimes even slips in speaking Greek or different accents were called "barbaric.") Paul simply observes that those who cannot communicate intelligibly may each view the other as an alien (14:11).

14:13-14. The Jewish philosopher Philo described divine inspiration as God possessing his prophets and completely overwhelming their rational faculties during the period of inspiration (e.g., *Who Is the Heir?* 264-65), a view often held by *Gentiles (e.g., Euripides, *Bacchae* 298-99; Virgil, *Aeneid* 6.77-102). By contrast, Paul believes that prophetic inspiration relates to the rational faculties (as does interpretation); even with regard to glossolalia or inspired tongues, which are the prayers of a different, nonrational component of human nature, Paul does not indicate that the mind is forced to be inactive. Paul values both kinds of worship and both components of human nature. (In modern terms, these components of human nature are perhaps similar to the affective and cognitive components.)

14:15. "Charismatic" worship—that is, worship inspired by the *Spirit—was also practiced by the schools of the prophets in the Old Testament (1 Sam 10:5; cf. 2 Kings 3:15); transferred to worship in what became the temple (1 Chron 25:1-5), it generated many of the psalms in the book of Psalms (cf. 2 Chron 29:30). Although worship in tongues had not been practiced in the Old Testament, inspired worship in a more general sense had been.

14:16-17. Roman officials followed standard prayers exactly; Jewish services allowed more freedom. Paul here anticipates spontaneity in prayer and does not even object to public prayer in tongues ("by one's spirit"), provided that it is interpreted. "Amen" was the standard Jewish response to an agreeable benediction.

14:18-19. In *synagogues, those who prayed could not always do publicly as they did in private; Paul likewise distinguishes between private and public practice of tongues (ten thousand is the largest number in Greek and commonly used as *hyperbole for large numbers). Even so, he clearly does not forbid it in public (14:39), as long as there is an interpreter (14:28).

14:20. See comments on 3:1-2 and 14:21.

14:21-25
Effects on Visitors of Intelligible and Unintelligible Speech

14:21. Here Paul quotes Isaiah 28:11, which in context refers to a sign of judgment; because his people could hear nothing else, God would speak to them through judgment by the Assyrians (cf. Is 33:19; Deut 28:49). The preceding context of this quotation is Israel acting like infants (Is 28:9-10), relevant in view of 14:20. (Many Jewish teachers used "*law" loosely to refer to anything in the *Old Testament; later it was even applied to earlier Jewish traditions.)

14:22. On one view, Paul here refers to tongues as a sign of judgment that causes nonbelievers to stumble (cf. 14:21); on another, Paul quotes the Corinthians in 14:22 and refutes them in 14:23-25 (cf. 6:12-14).

14:23-25. *Prophecy was a known phenomenon in the ancient world, whereas the gift of tongues was not (or at least, any parallels to it were extremely rare); ancients respected prophecy, but if they did not know beforehand to expect speaking in tongues, they would not know what was happening (cf. Acts 2:13). Perhaps Paul would not object to a whole group simultaneously worshiping charismatically under other circumstances (e.g., Acts 2:4-21; cf. 1 Sam 10:5; 19:20); but not in the Corinthian house churches where unbelievers could be alienated. Outsiders bowing and acknowledging God probably recalls Isaiah 45:14.

14:26-33
Regulations to Keep Order

That Paul had spent over a year and a half with them (Acts 18:11, 18) and had apparently not told them these rules before suggests that these rules are directed toward the specific situation in Corinth. The *rules* necessary to keep worship edifying to everyone might vary from one culture and setting to another, but the *principle* of keeping it edifying to everyone is much more universal. Some ancients acted in ecstatic frenzy when they claimed to be inspired; Paul believes that inspiration can be channeled in disciplined ways.

14:26. Although prayer in the synagogues may have been more spontaneous in Paul's day than later, he advocates more individual participation here than would have been natural in other worship settings of his day. We should keep in mind, however, that the house churches in Corinth probably each comprised at the most only fifty members. Psalms were used regularly in Jewish worship (here Paul may mean either biblical psalms or newly composed ones; some postbiblical ones appear at *Qumran), as was teaching; but the revelations, tongues and interpretations are distinctly Christian features of worship.

14:27. Order was very important in lecture settings and public assemblies in antiquity, as is clear from the frequent practice of seating according to rank. In *Essene assemblies, one had to have permission to speak, and one spoke in order according to rank (*Dead Sea Scrolls 1QS 6.10-13; *Josephus, *Jewish War* 2.132). Paul is not so strict here, but he wishes to balance spontaneity with order; not everything that was inherently good was necessarily good for the gathered assembly. In the *Old Testament, charismatic worship was not incompatible with order (1 Chron 25:1-5; cf. also Philo's description of an Egyptian Jewish sect of worshipers called the Therapeutae).

14:28. "Speak to himself and to God" probably means "so that only he and God can hear it." It is also possible, however, that this expression implies that tongues could be used not only as prayer but also as a vehicle of God's *Spirit speaking to an individual's spirit (cf. *prophecy coming thus in 2 Sam 23:2-3; Jer 27:2; Hos 1:2; cf. Ps 46:10; 91:14), although perhaps this speaking is mainly in the form of inspired prayer.

14:29. Most Old Testament prophets were apparently trained in groups of prophets, with more experienced prophets like Samuel presiding over them (1 Sam 19:20; cf. 2 Kings 2:3-7, 15; 6:1-7). The young churches of Paul's day had few prophets as experienced or trusted as Samuel, so the experience and testing has to be "peer reviewed," carried out in the public service by all those prophetically endowed. Testing, examining and interpreting prophecies was not necessarily viewed as incompatible with their general inspiration (cf. *Plato on inspired poets, and Jewish sages answering Scripture with Scripture).

14:30. Ancient teachers practiced various customs with regard to sitting and standing; at least in later times, *rabbis would sit and

*disciples stand to teach; those who read Scripture would stand. Among the Essenes, each would speak in turn; often the person speaking to an assembly would stand, while others would be seated. In general, standing to speak was customary in assemblies (e.g., Homer, *Iliad* 1.68-69).

14:31. On "all prophesying," see comment on 14:4-5; Paul here adds "teaching" to possible functions of prophecy (i.e., hearers could learn from it).

14:32. In most contemporary Jewish teaching, prophecy involved complete possession by the Spirit; one dare not seek to control one's utterance. For Paul, however, inspiration can be regulated, and regulating the timing and manner of one's utterance is not the same as quenching it altogether. On regulating one's spirit, cf. Proverbs 16:32; 25:28.

14:33. For an appeal to the conduct of the churches, see comment on 11:16.

14:34-35
Interruptions at Lectures

Because the topic changes so abruptly and some manuscripts relocate 14:34-35, many scholars see these verses as an interpolation by a later *scribe. They can also be read, however (with many other scholars), as a *digression; these were common in ancient literature. While addressing the topic of church order, Paul briefly digresses from his contrast of *prophecy and tongues and regulations concerning them to address the interruptions of some women occurring during the teaching period of the church service. Unless Paul changes the subject from women's universal silence (v. 34) to asking questions (v. 35a) and back to universal silence again (v. 35b), his general statement about women's silence in church addresses only the specific issue of their challenges in verse 34a. Paul has already noted that, under normal conditions, women may pray and prophesy in church (11:5). The issue here could be their inadequate acquaintance with Scripture rather than a transcultural statement about gender.

14:34. Although more progressive views existed, many traditionally held that women should not speak in public in mixed-gender company (*Plutarch, *Advice to the Bride* 32; *Morals* 142D; Heliodorus, *Aethiopica* 1.21; Valerius Maximus, *Memorable Deeds and Sayings* 3.8.6); some would have deemed even the house-churches such a setting. (Even very traditional Greek men sometimes made exceptions for specifically *inspired* speech; cf. 11:5.) Biblical *law includes no specific text that enjoins silence or submission on women, although Paul could refer back to his creation argument in 11:8-9, to the effects of the curse in Genesis 3:16, or to the example of the matriarchs (1 Pet 3:5). But he can also use "law" generally (1 Cor 14:21), so he could refer to the generally subordinate position of women in *Old Testament times to show that it is not wrong for them to be submissive in some cultural settings. (Josephus also claims that the "law" supports wives' submission, without citing a specific passage; *Against Apion* 2.200-201.) Some also suggest that Paul cites the Corinthians' view in 14:34-35 and refutes it in 14:36 (cf. comment on 14:22); but 14:36 seems too weak to supply a refutation for 14:34-35.

14:35. Informed listeners customarily asked questions during lectures (Aulus Gellius, *Noctes atticae* 1.26.2; 12.5.4; Tosefta *Sanhedrin* 7:10), but it was considered rude for the ignorant to do so (cf. Plutarch, *Lectures* 4, *Moralia* 39CD; 11, *Moralia* 43BC; 18, *Moralia* 48AB). Although by modern standards literacy was generally low in antiquity (less so in the cities), women were far less often trained in the Scriptures and public reasoning than men were. In general, they achieved a given level of education only perhaps ten percent as often as men of the same social class. Disciples of rabbis were always men (though cf. Lk 10:38-42, which is exceptional). Although Jewish women could hear Torah teaching in the synagogue, girls were generally not taught to recite it as boys were (for the boys, cf., e.g., Mishnah *Avot* 5:21).

Paul does not expect these uneducated women to refrain from learning (indeed, that most of their culture had kept them from learning was the *problem*). Instead he provides the most progressive model of his day: their husbands are to respect their intellectual capabilities and give them private instruction. (Plutarch, one of the minority "progressive" voices of the era, advises a husband to concern himself with his wife's learning—but unlike Paul attributes the need for this to the wife's

irrational passion; *Advice to the Bride* 48; *Moralia* 145BE. Roman marriage taxation policy and, more importantly, the shortage of marriageable Greek women assured that the strong majority of adult women, at least in cities such as Corinth, were married.) He wants them to stop interrupting the teaching period of the church service, however, because at least until they know more, they are distracting everyone and disrupting church order.

14:36-40
Final Exhortations on Gifts

14:36-38. Some prophets in the *Old Testament stood out as stronger spokespersons for God than their peers—Elijah, Elisha, Samuel and so forth. Most prophets in the early church were not comparable in authority to New Testament prophets like Agabus and *apostles like Paul; if some prophets at Corinth appeal to their prophetic capabilities to advance their views, Paul can do so even more to *refute* their views—he claims to speak for God.

14:39-40. Here Paul summarizes the rest of the chapter; concluding summaries for sections were fairly common, though they were not always used.

15:1-11
Jesus Was Raised

Many, probably most, Judeans affirmed an end-time *resurrection of the righteous (2 Maccabees 7:9, 14, 23, 29; 14:46; **Psalms of Solomon* 3:12; **1 Enoch* 22:13), as taught in Scripture (Dan 12:2). By contrast, this conception was difficult for Greeks to envision. Many *Gentile intellectuals affirmed the soul's immortality without a future for the body (e.g., *Plato, *Phaedo* 64CE, 67C; *Seneca, *Dialogues* 11.9.3; 12.11.7); some (such as *Epicureans; Lucretius 3.417-977) denied any afterlife at all.

Like other skilled speakers and writers of his day, Paul starts by looking for common ground with his audience. Some of the Corinthians dispute the future resurrection of believers. They cannot, however, dispute the past resurrection of Jesus, because this is an established fact and the very foundation of their faith. Yet Paul points out that this fact is simply the first installment of the future resurrection of believers, hence cannot be separated from it (15:12-14, 23).

15:1-2. Paul follows the standard argument technique of beginning with an agreed-on premise; the Corinthians must agree with the very *gospel by which they were converted (see also 2:1-5; Gal 3:2-5).

15:3. "Handed on to you . . . what I had received" (NRSV) is the language of what scholars call "traditioning": Jewish teachers would pass on their teachings to their students, who would in turn pass them on to their own students. The students could take notes, but they delighted especially in oral memorization and became quite skilled at it; memorization was a central feature of ancient education. In the first generation, the tradition would be very accurate; some even believe that this tradition in 15:3-5 or 15:3-7 may be a verbatim citation. That Jesus died for our sins "according to the Scriptures" may refer especially to Isaiah 53:4-6, 8, 11-12 as well as the biblical pattern of the righteous suffering before exaltation.

15:4. The mention of the burial presupposes an empty tomb after the resurrection, because by definition "resurrection" meant a new body that did not leave a corpse behind; Paul's Palestinian Jewish sources could have meant the expression no other way. Unlike the Gospels, Paul does not mention the empty tomb, because the witnesses provide stronger proof of what happened to Jesus (15:5-8). "The Scriptures" probably refers to an assortment of texts, such as Psalm 16 and Isaiah 53:12. If the "third day" is also in view in "according to the Scriptures," perhaps it alludes to Hosea 6:2, Jonah 1:17 or other texts, although Paul may include the phrase simply to say, according to Jewish custom, that Jesus was raised before he could "see corruption" (Ps 16:10).

15:5. Although arguments from probability counted best in ancient law courts, eyewitness accounts were also highly valued. The ancient epiphanies (revelations) of gods or spirits were normally said to have been attested by eyewitnesses, but except for dreams and deliverances, these reports rarely stem from the era that records them. (The mystery initiation at Eleusis may have climaxed with some sort of ecstatic encounter with the deity, but this event again differs significantly from the sort of concrete, unsolicited, mass revelation Paul describes here.) Multiple revelations like this one, and mass revelations as in 15:6, especially in a sect,

that risked persecution to claim them are virtually unparalleled. Because by definition resurrection meant a new body, and Christians would not have been persecuted for claiming that they saw a mere spirit (most ancient people believed in ghosts), they are making a claim no one else made. "Appeared" was used in antiquity both for visions and for actual appearances (often of God or angels); but by all Jewish definitions of resurrection, especially in a Palestinian tradition such as Paul cites here, Paul must mean a literal appearance.

"Cephas" is *Aramaic for "Peter"; for the "Twelve" and its special significance for Israel, see comment on Acts 1:13 and the introduction to Acts 1:15-26. Groups often retained titles based on the original number of members even when the number changed (e.g., the "thirty" in Athens and the "hundred" in Rome), so some would call this group the "Twelve" even after Judas's death.

15:6. Paul's purpose in appealing to witnesses still alive may be to invite his readers to check his facts if they doubt his words. We may safely rule out the suggestion that the resurrection appearances were mass hallucinations, because such a mass hallucination of a demonstrably physical person is virtually unparalleled in history. (Were this evidence being cited for a war, about which we often take the word of a single ancient author, or any other event in history, few today would think to deny it.)

15:7. "The *apostles" clearly includes a larger group than the "Twelve" (15:5); see comment on 12:29-30.

15:8. "One untimely born" (NASB, NRSV) or "one abnormally born" (NIV) usually meant a dead fetus, by either abortion or miscarriage. Paul may be calling himself a freak compared to the other apostles (15:9); he is probably deprecating himself in some manner. This expression could refer to his being born at the wrong time (here, *postmaturely* rather than prematurely), after Jesus' initial resurrection appearances were complete; other commentators have suggested that Paul was chosen from the womb, but his persecution of the *church had been annulling that purpose, making him like an aborted person till his conversion.

15:9-11. Greeks did not mind boasting, provided that it was not too conspicuous; Jewish piety emphasized the need to thank God for one's goodness or status. Judaism and most ancient religion believed in retribution for sin; Paul believes that God exalted him despite his sin simply because of God's loving heart.

15:12-19
Resurrection of Christ and of Believers

15:12-17. Paul again reduces the opposing position to the absurd (a common *rhetorical technique): if there is no *resurrection, then Jesus did not rise (against their own beliefs and the evidence in 15:1-11) and other logical consequences that the Corinthians reject would also follow. Speakers would sometimes "dwell on a point," as Paul does here, using rhetorical repetition to underline his point with seven "if . . . then" statements in 15:12-19. With the exception of the *Sadducees and some Jews greatly influenced by Greek conceptions, most Judeans believed in the future resurrection of the body (Dan 12:2). Jesus's resurrection was not intelligible or fully meaningful apart from that teaching. As here, Jewish teachers also often used the particular to prove the general principle that it presupposed.

15:18-19. These verses suggest that Paul rejects the Greek idea of an immortality of the soul without a bodily resurrection; if there is no resurrection, the *Epicurean denial of an afterlife also follows (15:32). (Despite a view of judgment, the common Greek view of most people's afterlife as shades below the earth was dreary and unhappy to begin with, providing little of the incentive Paul found in the resurrection. Some other Greeks in this period believed in a heavenly destiny for the soul, and yet others would have agreed with the Epicureans that there was no afterlife.) Paul could believe in the resurrection *and* in an intermediate existence for the soul, as many *Pharisees did. But if God had not provided future hope for the whole person, Jewish people like Paul, who acknowledged the bodily nature of human existence, would have doubted that he had provided any future hope at all (cf. *2 *Baruch* 21:12-13).

15:20-28
God's Plan for History

15:20. The firstfruits were the beginning of the Palestinian harvest (Ex 23:16, 19; 34:22, 26; Lev 23:10, 17), guaranteeing the imminent ingathering of the remainder of the harvest.

15:21-22. See especially comment on Romans 5:12-21; 1 Cor 15:44-48. Paul may here play on or respond to a *Diaspora Jewish tradition (attested in Philo), possibly adopted by some of the Corinthian Christians, that the ideal, spiritual man formed in Genesis 1:26-27 differed from the natural man Adam formed in Genesis 2:7.

15:23-24. Some find here belief in an intermediate messianic era between the present age and the *age to come, a view held (in various forms) by many Jewish writers of his day; see comment on Revelation 20. But the intermediate kingdom here may refer to the present era (1 Cor 15:25-27). On "firstfruits," see comment on 1 Corinthians 15:20.

15:25. Paul begins expounding Psalm 110:1, which he will link with a more explicit passage in 15:27; Jewish teachers often connected texts based on key terms or concepts common to both ("feet" and probably the idea of reigning).

15:26. Many philosophers refused to grieve or to view death as an enemy (cf. *Epictetus, *Diatribes* 1.27.7). Jewish writers generally portrayed death as an enemy, sometimes as an angel sent by God, but never pleasant. Paul sees death as the final enemy to be subdued; the *resurrection of believers would thus be the final event preceding Christ's *kingdom.

15:27-28. Paul quotes the Greek version of Psalm 8:6 (for the connection with his argument, see comment on 15:25). The context of the verse identifies the ruler as the "son of man" who is "a little lower than God" (Ps 8:4-5, though the Greek version differs); thus the Son will reign over all else as God's viceroy but remain subordinate in role to the Father (cf. Ps 110:1; Is 9:6-7; Dan 7:14). This psalm probably alludes to God granting authority to the first human (Gen 1:26-28); Paul undoubtedly is thinking of restoration in the new Adam, which he addresses in this context (1 Cor 15:22, 45-49). Were Paul a *Stoic, God's being "all in all" (which is rhetorically emphatic) could mean that all things would be absorbed back into the primeval fire, being part of his being; but when Jewish writers like Paul used such language, they meant merely that God is creator and ruler of all (Sirach 43:27).

15:29-34
Suffering in Hope of Resurrection

The early Christian witnesses of the *resurrection were so convinced of the truth of their own claims to have seen Jesus alive from the dead that they were not afraid to seal their witness with martyrdom.

15:29. Paul appeals to a practice, which the Corinthians affirmed, as inconsistent without belief in resurrection (cf. 2 Maccabees 12:43-45). Here "baptized for the dead" may mean that a Christian friend was baptized for symbolic effect on behalf of a new convert who had died before being able to be baptized. (Although there is no evidence of vicarious *baptism in ancient Judaism, posthumous symbols could be employed. For instance, if someone was to be executed, Jewish teachers said that his death could *atone for his sins; if he died before he could be executed, however, the people placed a stone on the coffin, symbolically enacting his stoning so that his execution would still count with God; cf. Mishnah *Eduyyot* 5:6.) Or this expression may refer to washings of the dead before burial, a standard Jewish custom; religious groups in the ancient Mediterranean supervised the burials of their own members. It could also be a roundabout way of saying "baptized so as to be able to participate in *eternal life with Christians who have already died," hence baptized in the light of their own mortality as well. Or people may be baptized for the sake of their own future resurrection, in view of the sentence of death already in their mortal bodies (cf. Rom 8:10). To whatever practice Paul alludes, it is not clear whether he agrees with the Corinthian practice; even if he does not, however, he can use it to make his point.

15:30. For the language of continual opposition, cf. Psalm 44:22 and 119:109 (cf. danger every hour in **4 Ezra* 7:89).

15:31. In this context, "die daily" (KJV, NASB) is *hyperbole for Paul's proleptic experience of martyrdom in his repeated sufferings for the gospel.

15:32. Romans were often entertained by

watching criminals, prisoners of war or slaves mauled by wild beasts in the arena (*Josephus, *Jewish Antiquities* 14.210; *Apuleius, *Metamorphoses* 10.29), much as many Westerners today enjoy the violence of the entertainment media (although ancient Christians refused to attend such events except when they themselves were forced to be the victims). Roman gladiatorial shows were also held in the theater at Ephesus during many festivals (as well as in Corinth). It is unlikely, however, that Paul was *literally* cast to beasts in that arena. The victims were not supposed to survive the maulings, and as a Roman citizen Paul would have been exempt from this punishment. Philosophers employed the image of battling such beasts (usually irrational people), and Paul here probably describes his opposition in similarly graphic terms (cf. similarly Ps 22:6, 12-13, 16, 20-21; 74:19). "In human terms" in verse 32 may mean "figuratively" (contrary to most translations; cf. 9:8; Rom 6:19; Gal 3:15).

But if Paul had no future hope, instead of facing affliction, he may as well have simply indulged his passions, a sentiment often attributed (with some distortion) to *Epicurean philosophers but lived out by many Greek and Roman men at wild parties. The same perspective was attributed to others who denied an afterlife (Wisdom of Solomon 2:1-20; **1 Enoch* 102:6-8). He quotes Isaiah 22:13 (with its context about judgment on the wicked); cf. Sirach 14:16; Luke 12:19. (The *Old Testament often uses the language of eating and drinking in a neutral way—Eccles 2:24; 5:18-19; cf. 3:12—but without God it is never enough for life—Is 22:12-14; Eccles 11:7-12:14; cf. 7:2, 14.)

15:33-34. Here Paul cites a popular proverb, first attributed to the comic playwright Menander but in common circulation by Paul's day. It was the common advice of Greco-Roman moralists and Jewish wisdom teachers to avoid morally inferior company (e.g., Sirach 13:1; in the Old Testament, Ps 119:63; Prov 13:20; 14:7; 28:7). Paul perhaps refers here to those who do not believe in the future resurrection and hence do not have the basis for morals that those who believe in a final judgment of God do; other Jewish teachers who believed in the resurrection associated disbelief in that doctrine with immorality.

15:35-49
The Nature of the Resurrection Body

Ancient Judaism taught the *resurrection of the body, not just the immortality of the soul; Paul agrees but defines the nature of the new body differently from many of his contemporaries.

15:35-38. Ancient writers often raised *rhetorical objections from imaginary opponents; Jewish teachers presented questions like the one Paul raises here as the standard objections nonbelievers raised against the doctrine of the resurrection. (For imaginary interlocutors, see comment on 6:12.) For instance, what happened if someone died at sea, or the body was completely destroyed by fire? Later *rabbis decided that the body would be resurrected from a particular bone in the neck which they held to be indestructible. Paul more reasonably argues that, regardless of what physical material remains, at least the pattern of the old body will always remain as the seed for the new body. His argument from analogy, a standard argument, is effective, and later rabbis also used the "seed" analogy. "Fool!" (15:36) was a standard rhetorical insult, Jewish as well as Greek, for someone who raised an ignorant or immoral objection.

15:39-41. Paul's argument here appeals not to modern astronomy but to ancient cosmology. Even in the present, not all bodies were made of flesh; some were made of glory. Heavenly bodies, which *Gentiles often viewed as divine and Jewish people often identified with angels, were thought to be made of fire. Many Gentiles believed that immortal souls ascended into the heavens like stars; many Jewish people compared the resurrection body to angels (**2 Baruch* 51:10) or stars (Dan 12:2-3; cf. *1 Enoch* 43). Paul describes the different kinds of glory that various earthly and heavenly bodies have to explain how the resurrected body will come in glory, yet each person will remain distinct from other people. Thus there is continuity between the old and new bodies as well as discontinuity. *Midrashically, cf. also *eschatological "glory" for God's people in Isaiah 60:1-2, 19; 61:3; 62:2.

15:42-43. Paul's rhythm in 15:42-44 would stir rhetorically sensitive ancient hearers: he combines antithesis (contrasts) with fourfold

anaphora (x . . . x . . . ; here: "it is sown . . . it is raised). Some Jewish teachers believed that the body would be raised in exactly the form in which it had died, even if maimed, and only then be healed; this belief was meant to prove the continuity between the old and new body (*2 Baruch* 49:2–50:4; *Genesis Rabbah* 95:1; 100:2). But Paul clearly sees the resurrection body in different terms. Present "dishonor" and "weakness" in 15:43 challenge the status-conscious Corinthian believers (cf. 2 Cor 12:5, 9; 13:4).

15:44-45. Both Paul's "natural" and "spiritual" bodies might shock ancient hearers. A "natural" or "physical" body is literally a "soulish" body, in contrast to a "spiritual" body. Paul does not teach a future body made out of "spirit" (although the *Stoics taught that spirit was a material substance), any more than a present body made out of "soul." Rather, the present body is adapted for current natural existence, and the future body for the life even now ruled by God's *Spirit. In verse 45 Paul cites Genesis 2:7, where God made Adam a soul, a natural man; but many Diaspora Jews thought that Genesis 1:26-27 referred to a different, ideal man, the pure form and model for humanity, and Paul may play on this tradition here. The two kinds of body belong to the contrast between humanity's legacy in Adam and believers' destiny in Christ.

15:46-48. Some ancient thinkers viewed the body as earthly but the soul as heavenly. The Diaspora Jewish philosopher *Philo contrasted the incorruptible "heavenly man" of Genesis 1 with the later "living soul"/"earthly man" of Genesis 2; the former represented the ideal spiritual state of the mind seeking heavenly things, the latter the carnal person devoted to temporal things (*Allegorical Interpretation* 1.31-32; 2.4-5). Paul reapplies the language of this view, which the Corinthians had probably adopted, to the resurrection body, switching the order (natural then spiritual). In Jewish thought, both the full experience of the Spirit and the resurrection were eschatological expectations.

Jewish teachers often explained that Adam's sin brought sin and death into the world for everyone (**4 Ezra* 4:30; 7:118; *2 Baruch* 23:4; 48:42-43), and his descendants reenacted his sin in their own sins (*4 Ezra* 3:21, 26; 7:119; *2 Baruch* 54:15, 19; see comment on Rom 5:12-21).

15:49. Jewish teachers often taught that Adam had incomparable glory and power before his sin, and that this glory and power would be restored in the world to come. God created humanity in his image (Gen 1:26-27; cf. 1 Cor 11:7). For Philo, it is the first, heavenly man, not the soulish physical man, that bears God's image (*Allegorical Interpretation* 2.4; cf. 2 Cor 4:4; Col 1:15); for Paul, God's image is restored in *Christ (Rom 8:29; 2 Cor 3:18; Col 3:10).

15:50-58
The Resurrection Hope

To inherit the *kingdom, people must share the image of the heavenly person (15:45-49).

15:50. "Flesh and blood" was a common figure of speech for mortals.

15:51. Some Jewish people considered end-time "mysteries" (Dan 2:28-30, 47; *Dead Sea Scrolls 1QS 3.23). "Sleep" was a common euphemism for death.

15:52. *Old Testament prophets often employed the image of the trumpet, which was used to assemble people for convocation or war; here, as in a daily Jewish prayer of the period, it refers to the final gathering of God's people at the end (cf. similarly Is 27:13). Paul undoubtedly takes the image from Jesus (Mt 24:31).

15:53-54. Paul continues using rhetorical antithesis (e.g., perishable, imperishable). Here Paul quotes Isaiah 25:8, which refers to God's triumph over death at the time of the end, at Israel's final restoration; the context fits *resurrection in Isaiah 26:19. For "put on," see comment on 2 Cor 5:4.

15:55. Jewish interpreters often linked different texts together on the basis of a common key word; "death" occurs in Isaiah 25:8 and also in Hosea 13:14, which Paul may therefore apply to the resurrection as well. Although the latter passage is in the context of judgment, it may imply the same thing as Isaiah 25:8 (unless read as a question); cf. restoration imagery in Hosea 14:4-7. "Victory" also occurs in one Greek version of Isaiah (though not the *Septuagint); Jewish expositors normally selected whatever translation best suited their needs, which here allows Paul to make a good

*midrashic wordplay with Hosea 13:14: Paul changes the Greek version's "punishment" (*dike*) to "victory" (*nike*).

15:56. Jewish teachers typically expounded points of a text once they had cited it. Paul explains the meaning of "sting" and "victory" ("power") in Hosea 13:14 here (cf. comment on 15:55).

15:57-58. In 15:42-56, Paul has accumulated stirring rhetorical devices that reach their emotional peak in 15:57. As in 14:39-40, Paul concludes with a sort of summary; here it is a closing exhortation. Just as Judaism often linked failure to believe in the future world with immoral living, and faith in future judgment with perseverance, Paul encourages believers to hold to the truth of the resurrection and so to right living.

16:1-4
Paul's Collection

Many ancient letters involved business, a topic to which Paul turns in his closing comments. Most ancient associations had membership dues, but gifts among believers were voluntary.

16:1-2. That one should give "as the Lord has blessed" (lit., "as one may prosper") indicates that Paul is applying the teaching on serving the poor in Deuteronomy 15:14 (cf. also 16:10, 17). Setting aside resources on the week's "first day" may signify giving to God first (cf. Ex 23:16; Lev 27:26), though most wage-earners were paid daily or by the job. On possible meetings on the "first day" of the week, see comment on Acts 20:7.

16:3-4. When Jewish people from around the world were ready to send the required annual temple tax to Jerusalem, they would choose respected and trustworthy members of their own communities as representatives to take the money to Jerusalem (for guarding against accusations, see comment on 2 Cor 8:17-23). Jewish travelers often bore letters indicating their authorization, which would allow them to receive hospitality wherever they went; Christians seem to have continued this practice.

16:5-9
Paul's Travel Plans

16:5. The easiest way to travel to Corinth from Ephesus was to cross over by boat from Troas in Asia Minor to Philippi in Macedonia, then to take the westward road and turn south into Greece (as in Paul's second missionary journey in Acts; see Acts 16:7-9). Paul later delayed this planned visit partly to avoid having to confront them forcefully (2 Cor 1:15-23).

16:6. The seas were closed for travel in the winter; if Paul were in Corinth once the seas closed, he would stay there until they opened in the spring (cf. later Acts 20:2-3). Paul is writing in the spring (16:8), many months before the next winter. Warm letters between friends often discussed plans to spend time together (e.g., *Cicero, *Letters to Friends* 1.9.1; 7.15.1; 8.15.2). Hospitality was important in antiquity, and the Corinthians would feel honored to be able to provide hospitality to a prominent teacher (especially the founder of their *church). "Send me on my way" (NASB, NRSV) means that the church will provide for Paul's travel.

16:7-8. Others also offered the necessary caveat, "If God wills" (e.g., Homer, *Iliad* 8.142; *Epictetus, *Diatribes* 1.1.17). On Pentecost, see comment on Acts 2:1; perhaps Paul plans to observe the festival.

16:9. An "open door" (or "wide door"—NASB, NRSV) was sometimes used figuratively for freedom of movement or choice; here Paul refers to his ministry.

16:10-18
Recommendations and Exhortations

16:10-11. Persons of high status often wrote letters of recommendation, using their status to advocate the needs of those for whom they wrote. See comment on 2 Corinthians 3:1. One should receive a person's agent the way one would receive the person himself (Mishnah *Berakhot* 5:5); sending one "in peace" means that the host has received him well.

16:12. Even when others viewed them as rivals (3:4), leaders were sometimes friends (e.g., *Cicero, *Brutus* 1.2-3).

16:13. Some of Paul's exhortation here would be suitable in a military setting. "Act like men" (NASB) usually meant "be courageous" (NRSV); the expression did not necessarily connote masculinity, although it was used for courage because most people in antiquity associated courage with masculinity.

16:14. Skilled speakers often summarized toward the end of a work. Although ancient writers often stressed virtues, the supreme place of love (chap. 13), emphasized repeatedly throughout early Christian literature, is unusual in antiquity and especially characterized Christianity.

16:15-18. Here Paul makes another recommendation (cf. 16:10-12). "Firstfruits" (literally, in 16:15) was the beginning of a larger harvest; Achaia was the province that made up much of Greece, and of which Corinth was the chief city. (As a free city, Athens was technically excluded from the province in this period; cf. Acts 17:34.) Because mail in antiquity had to be carried by travelers, and these people are returning to Corinth from Paul, we may safely assume that they brought the letter we know as 1 Corinthians back to Corinth.

16:19-24
Closing Greetings

16:19. The Corinthians knew Aquila and Priscilla and that they had moved to Ephesus (Acts 18:2-3, 18, 24-27). Churches met in homes, as many pagan religious associations did; this was a matter of convenience, economy and eventually of safety.

16:20. Letters often closed with greetings (e.g., *Cicero, *Letters to Atticus* 5.9), because travelers visited relatively infrequently and greetings had to be included whenever a letter was being sent out. Family members and close friends used light kisses, usually on the lips, as signs of affection (e.g., 1 Sam 20:41); see comment on Romans 16:16.

16:21. Most letters were written down by amanuenses, or *scribes, and usually signed by the author. Writing something in one's own hand could communicate affection. A signature authorized the letter, as it does today.

16:22. Ancient people, including Jewish people, used curse invocations (here the *Aramaic *anathema*) as the opposite of blessings. "Marana tha" (GNT) is an Aramaic prayer, "Come, our Lord." That the Corinthians would understand it means that it is part of common tradition carried over from the early Palestinian-Syrian church, which already recognized Jesus as "Lord" and as the one who would come (cf. Rev 22:20). (Thus Christians described his coming in the way that Jewish tradition expected God's coming for judgment.)

16:23-24. Greek letters often included the greeting *chairein,* "greetings"; Paul consistently transforms this to *charis,* "*grace." This is a blessing, an implicit prayer for them.

2 Corinthians

Introduction

Authorship and Unity. Although virtually all scholars agree that Paul wrote 2 Corinthians, scholars differ over whether it is one letter or a composite of several. Some of the proposed partitions in the book have more in their favor than others; the most obvious break in tone is between chapters 1–9 and chapters 10–13, the latter chapters shifting to an outright heated defense. But although ancient letter collections often removed openings and closings of letters, such collections generally retained the distinction between one letter and the next (e.g., *Cicero, *Seneca). Dividing 2 Corinthians into two letters is a possible way to read the evidence, but the burden of proof should remain on those who wish to divide it rather than on those who argue for its unity. As in speeches, Paul may save the most controversial material for the final section (cf. also, e.g., Oxyrhynchus papyri 1837); one could also save an emotional climax for the end (Demosthenes, *Epistles* 2). The eloquent could vary their tone within a single work (e.g., Pliny, *Epistles* 2.5.7-8). Most elements from earlier in the letter appear at least sometimes later, and vice versa. (I discuss this question much more fully in my Cambridge commentary. See below under "Commentaries.")

Situation. Scholars vigorously debate the precise setting of some books in the *New Testament, including 2 Corinthians. Reconstructing the exact problem depends somewhat on the issue of the book's unity. Virtually everyone agrees that Paul addresses tensions caused by opponents, at least in chapters 10–13, but views on the nature of the opponents vary. Paul's reference to their descent from Abraham in 11:22 at least makes clear that they are Jewish, but this need not make the division a particularly Jewish issue. That is, their being Jewish does not require us to identify them with Paul's opponents in Galatia; Paul himself was Jewish. Part of the division here is apparently over views of ministry: Paul came as a servant and labored among them, whereas his accusers have a high view of themselves more appropriate to upper-class ideals of leadership in antiquity than Paul's was. They also claim to be more *rhetorically skilled than Paul (11:5-6).

Purpose. Paul wishes to reestablish his converts' trust in him and their role of

intimate friendship. He thus writes a letter of self-commendation, a particular form of letter of recommendation especially necessary if one were defending oneself against charges. Chapters 10–13 are an ironic self-defense to the Corinthian Christians. The letter includes elements of various ancient letter styles: reproof, comfort and especially friendship. Another concern is also at issue: for the sake of the poor in Jerusalem, Paul needs the Corinthians Christians' money (chaps. 8–9). Unlike the opposing missionaries who have sought to replace him, Paul has never asked the Corinthians for money for *himself*. This practice has disturbed higher-status members of the congregation; their peers would expect the community to pay its teachers, who should not be self-supporting artisans (the well-to-do typically despised ordinary artisans).

Commentaries. Helpful commentaries with a focus on background include Frederick W. Danker, *II Corinthians* (Minneapolis: Augsburg, 1989); Craig S. Keener, *1 & 2 Corinthians* (Cambridge: Cambridge University Press, 2005); Ben Witherington III, *Conflict and Community in Corinth: A Socio-Rhetorical Commentary on 1 and 2 Corinthians* (Grand Rapids: Eerdmans; Carlisle: Paternoster, 1995); in heavier detail, see Victor Paul Furnish, *II Corinthians,* AB 32 (Garden City, NY: Doubleday, 1984); and especially Margaret E. Thrall, *A Critical and Exegetical Commentary on the Second Epistle to the Corinthians*, 2 vols. (Edinburgh: Clark, 1994–2000). Of more technical and specialized works, see, e.g., John T. Fitzgerald, *Cracks in an Earthen Vessel,* SBLDS 99 (Atlanta: Scholars, 1988); Peter Marshall, *Enmity in Corinth: Social Conventions in Paul's Relations with the Corinthians* (Tübingen, Germany: J. C. B. Mohr, 1987).

1:1-7
Opening Greetings

1:1-2. Paul opens following standard letter-writing conventions; see the introduction to *New Testament letters and comment on Romans 1:1-7. Corinth was the chief city of Achaia, and about forty settlements (such as Cenchrea) existed on Corinth's own outskirts.

1:3. It was customary in the ancient world to include a prayer or offering of thanks to a deity in letters of substantial length (as most of Paul's extant letters are). One of the most common forms of Jewish prayer was a benediction or praise that began, "Blessed [praised] be God, who . . . "; this was a way of glorifying God for his works. A regular *synagogue prayer addressed God as the "merciful Father" (so GNT here), which is what "Father of mercies" (cf. "Father of compassion"—NIV) means.

1:4. God would bring his final comfort to his people with the *Messiah's coming (e.g., Is 40:1; 49:13), but he also comforted them in their hardships during the present (e.g., Ps 94:19). The principle that suffering teaches one how to treat others is rooted in the *Old Testament (Ex 23:9). Paul's comfort in this verse is especially that he found Titus well and with good news about the Corinthians (2 Cor 7:4, 6-7, 13; cf. 2:2-3).

1:5. Some Jewish people spoke of the "pangs of the Messiah" as a period of tribulation for God's people before the end, and some commentators have naturally read "we have a share in Christ's many sufferings" (GNT) in these terms (Paul seems to have meant this also in Rom 8:22-23). Other commentators emphasize corporate personality; Jewish people also believed that they corporately shared the experience of those who had gone before them. They were chosen in Abraham, redeemed with their ancestors in the exodus from Egypt and so on. Paul believed that Jesus' followers became sharers in his cross in an even more intimate way by his *Spirit who lived in them.

1:6-7. In Greco-Roman tradition, the way a sage endured the sufferings sent by God helped others by setting an example of virtuous conduct. Through prayer, the Corinthians are also involved in Christ's mission being carried on by Paul and Christ's other witnesses (1:11). Such an expression of solidarity may have parallels, but they are rare—and in practice the Corinthians may not have been as supportive of his mission as Paul was wishing (chaps. 10–13). One conventional type of letter in later handbooks was the "letter of consolation"; Paul may hope to communicate comfort in this letter (2:7), after having written the sorrowful one (2:4; 7:7-13).

1:8-11
Paul's Sufferings

Speeches and substantive letters often included a brief *narrative section (1:8–2:13), usually following the introduction, that explained the circumstances necessitating the speech or letter.

1:8. "Asia" is the Roman province by that name, in what is now western Turkey. Its most prominent city was Ephesus, Paul's missionary headquarters during this period in his life (1 Cor 16:8). Some scholars have argued that Paul was imprisoned in Ephesus during this period, but it is more likely that he simply refers to chronic opposition later climaxing in the riot of Acts 19:23-41.

1:9-10. "We had the sentence of death within ourselves" (NASB) is presumably figurative (see comment on 1 Cor 15:32); psalms depicted deliverance from death graphically (e.g., Ps 30:3). Jewish daily prayers celebrated God's power by noting that he was "mighty to raise the dead." Paul can view his escapes from death as a proleptic experience of the power of *resurrection as well as of martyrdom; proleptic thinking was natural for early Christian readers of the *Old Testament who saw God's previous redemptive acts as a history of salvation that climaxed in Jesus.

1:11. The ancient world emphasized gratitude for benefaction. Many ancient pagans tried to barter with the gods through sacrifices and offerings; Paul instead trusts God.

1:12-22
Paul Had a Reason for Not Coming

Various *genres in antiquity prefaced their argument or teaching by narrating the events that had led to the present situation. Hospitality was important in antiquity, and it was an honor to host a prominent guest. For Paul not to have come could have seemed like both a

breach of his word—and thus of his honor and integrity—and an insult to their hospitality. Correspondents sometimes affectionately protested failure to come or write more often (e.g., *Cicero, *Letters to Atticus* 1.9; *Letters to Friends* 2.10.1), but the Corinthians seem more genuinely offended. *Rhetoricians (trained public speakers) recommended that one defending himself defuse the audience's negative attitudes before addressing the more serious charges (chaps. 10–13).

1:12-14. Some ancient letters focused on praise or blame; many moralists both chided and encouraged their pupils. It was also normal to open a speech or letter with compliments, which helped the hearers to be more open to the point of the speech or letter. Ancient writers sometimes praised themselves discreetly (thus essays like *Plutarch's *Praising Oneself Inoffensively*), which was acceptable in a situation such as self-defense (like here). Paul's boast (1:12a—NIV), however, is in his *hearers.* By this period moralists customarily defended their motives whether they had been attacked or not, because so many charlatans existed; but if chapters 10–13 are part of 2 Corinthians (see the introduction), Paul is already defending himself against real opposition here.

1:15. Well-to-do benefactors were greatly extolled for bestowing gifts on persons of less means, but unlike worldly benefactors (or the opponents of chaps. 10–13), Paul asks for no status in return (1:24).

1:16. From Troas in Asia (1:8), one could sail to Macedonia, and come overland down to Corinth, as Paul had done before (Acts 16:11-12) and planned to do again (1 Cor 16:5), and finally did later (Acts 20:1-3).

1:17. Ancient sources frequently praise people who kept their word despite hardship; these sources also frequently condemn fickleness, especially in leaders. When someone had to change already noted plans, they had to (and sometimes did) supply good reasons and show that they were not fickle. Paul's flexibility may have drawn criticism earlier (cf. 1 Cor 9:19-23), but now he had been unable to fulfill his stated intention. As he says in 1:23, his decision not to stop at Corinth was to "spare" them; instead he sent Titus ahead with a harsh letter (1:23–2:11; 7:7-12). When Titus did not return to the appointed meeting place in Troas, Paul feared for him (given the dangers of traveling in antiquity) and went on into Macedonia (2:12-13). There Paul met up with Titus again, who gave him good news about them (7:5-16).

1:18-20. *Digressions were standard in ancient writing, and Paul here digresses (1:18-22) to assure them that he indeed had a good reason for not coming. Far from being unreliable (as some apparently insinuated), he remained a representative of the God who always kept his word, and he proclaimed a faithful *gospel. "Amen" functioned as a positive affirmation at the end of a prayer, and *Christ became the amen and yes to all the biblical promises of a truly faithful God.

1:21. In the *Old Testament "anointing," pouring olive oil over someone's head, attested that God had set that person apart for ministry (royal, priestly, etc.); Paul adopts that image here. Business documents used the term translated "stand firm" (NIV) or "establish" (NASB, NRSV) or "confirm" for confirming a sale; if such a nuance is present here (it is not in most other uses of the term by Paul), it could connect with "down payment" ("deposit"—NIV) in verse 22. In any case, both 1:21 and 1:22 signify that God attests to Paul's integrity.

1:22. Documents and jars of merchandise could be sealed with the owner's identity marker, or to certify that no one had tampered with their contents. The stamp of the owner or the person witnessing a document would be pressed into the hot wax, which then dried over the string tied around the rolled-up document. (Perhaps one might also figuratively "seal" a pledge; Xenophon, *Anabasis* 2.2.9.) Paul means that God attested the contents of the ministry of himself and his colleagues (cf. 3:2-3). Judaism generally associated the *Spirit with the end of the age (e.g., Ezek 39:28-29; Joel 2:28); Paul says that believers had the Spirit in the present as a "down payment" ("pledge"—NASB; "deposit"—NIV; "first installment"—NRSV), the first taste of the life of the world to come.

1:23–2:13
Paul Delayed Coming in Order to Spare Them

One could explain that one's reason for not writing or visiting was consideration for the

other person (e.g., Fronto, *Ad M. Caesarem* 3.13.3). Paul's reason for changing his mind about coming and for only sending Titus with a letter was to spare them his harshness (1 Cor 4:21; though he will still come harshly if they force him to do so; 2 Cor 13:2, 10).

1:23-24. If his hearers refused to accept Paul's "Yes, yes" (1:17; cf. Mt 5:37), Paul would invoke the most dependable witness. Social superiors often acted arrogantly toward their inferiors and expected praise or even groveling. Unlike the world's authority models (and those of his opponents in chaps. 10–13), Paul counts his converts as coworkers.

2:1-3. Affectionate letters sometimes spoke of sharing the reader's emotions, including sorrow (e.g., *Cicero, *Letters to Friends* 13.1.1). Any ambiguity, at least in the beginning, may be diplomatic, especially about the chief conflict addressed later in chapters 10–13; because of honor concerns, conciliatory communications sometimes avoided the primary point that had caused conflict (cf., e.g., Pliny, *Epistles* 1.5.11).

2:4. Even orators often showed affection with tears during speeches, and letters of friendship often emphasized deep love (e.g., Cicero, *Letters to Friends* 2.4.2). Paul's letter suggested severe discipline of the offender (2:5-10). Scholars dispute whether this offender is the same as the one in 1 Corinthians 5:1-5, as most church fathers believed; but whether or not it is, Paul had written a letter after 1 Corinthians to tell the Corinthians to discipline him (this one sent with Titus). This letter has probably been lost. (Some scholars think this harsh letter between 1 and 2 Corinthians is 2 Cor 10–13, which they believe was originally a separate letter. This passage mentions nothing about a particular offender, however, and it is therefore more likely that the intervening letter was simply lost. One might not blame the Corinthians for misplacing this one.)

2:5-7. On the analogy of similar wording in the *Dead Sea Scrolls and some Greek texts, many commentators argue that "the majority" refers to the community of believers as a whole. Pharisaic Judaism also stressed receiving back repentant offenders. Groups like the one reflected in the Dead Sea Scrolls, however, required a time of punishment to elapse before the repentant could be fully restored to the community, and Roman and Greek law assumed the carrying out of a sentence. The Corinthian Christians may thus wonder what to do with the man now that he has repented.

2:8. "Confirm" (KJV; "reaffirm"—NASB, NIV, NRSV) was often used in legal settings with reference to confirming the verdict; here the Corinthians are to confirm their love instead.

2:9-11. One of Judaism's most basic convictions about *Satan was that he was a deceiver and could come in various disguises.

2:12. From Titus, Paul received good news about their compliance and the man's *repentance (2:12-13; 7:5-16). Troas is Alexandria Troas, a significant and sizeable Roman *colony, the port in Asia from which one sailed across to Macedonia, and thence walked or sailed to Corinth. The "opened door" means freedom to minister (see comment on 1 Cor 16:9); at some point Paul stayed in Troas long enough to leave some possessions there (2 Tim 4:13).

2:13. Both travel and communication were difficult to coordinate in antiquity, so that people sometimes ended up waiting for each other in different locations (e.g., Cicero, *Letters to Atticus* 3.8). Paul and Titus would be able to check for each other at any of the *churches along the way, just as Jewish people knew how to find fellow Jews through the local Jewish communities when they traveled.

2:14-17
Witnesses to Christ's Triumph

*Digressions were common in ancient letter writing and elsewhere. For example, at one point Homer digresses for seventy-five lines, just repeating a verb to summon his audience back to the previous point. Paul has also used this pattern to frame some sections in 1 Corinthians (6:1-8; chap. 9; chap. 13). Paul begins a digression here defending the sincerity of his ministry—a common topic of Greco-Roman moralists—that lasts through 7:4. The Corinthians should receive Paul as an ambassador of Christ's new covenant, a revelation fuller than the one given to Moses.

The view that 2:14–7:4 is not a digression but a separate letter accidentally inserted into the middle of another Pauline letter has little to commend it, because the first copies were on scrolls (codices were later), which preclude

accidental insertions of this sort. This section makes more sense as a natural digression than as a separate letter.

2:14-16. Roman conquerors would lead their shamed captives in a "triumphal procession"; in this period, only the emperor was allowed to lead triumphs. *Christ had triumphed and now led believers in him as his captives (the image is similar to that of being Christ's servants); cf. Psalm 68:18, used in Ephesians 4:8. The Roman senate normally decreed public thanksgivings before the triumphal processions, so they were great celebrations for the victors and great humiliations for the defeated. Most of the captives were executed after the triumph. But Paul glories in the image of Christians as peoples taken captive by Christ (cf. 1 Cor 4:9, etc.), and this prisoner of war himself, who identifies with Christ's death in the following chapters, offers the thanksgiving!

When sacrifices were offered in the *Old Testament and elsewhere in the ancient world, incense was burned to offset the stench of burning flesh (cf. Ps 141:2), and the same would have been true at Roman triumphal celebrations. (Sirach 24:15 described Wisdom as having a pleasant "aroma"; Paul and his fellow witnesses for Jesus Christ fulfill here the role which that book ascribed to Wisdom, but it is unlikely that he intends an allusion to that book here; the image was a natural one.) The Old Testament has precedent for acknowledging one's own inadequacy (Ex 3:11) but God's adequacy (Ex 3:14; cf. 2 Cor 3:5).

2:17. Professional speakers had long been accused of changing truth into error for gain (like a merchant providing impure products to save money). Philosophers had come under the same charge in some circles, because most made their living by their teaching or, in the case of the *Cynics, by public begging. The public often perceived wandering teachers and holy men as charlatans, no doubt because many of them were (in Scripture, cf. Jer 6:13-14; 8:10-11; Micah 3:5, 11). (Critics sometimes declined to name their opponents, thus refusing to grant them even explicit notice, but Paul may have his opponents in mind; cf. 2 Cor 11:4-5, 22.) Thus many philosophers and moralists felt the need to repudiate the charge, as Paul does here.

3:1-6
Adequacy from God

3:1. Self-commendation was considered inappropriate unless justifiable, but acceptable when necessary to defend oneself or to make a point (see comment on 5:12). Jewish travelers often carried letters of recommendation indicating that Jewish householders could trust them and give them lodging on their journey. In Greco-Roman society, higher-class *patrons would write letters recommending their subordinates; such recommendations naturally carried more weight than the person's own claims. Anyone who was trusted could write letters on someone else's behalf (Acts 15:25-27; 18:27; 1 Cor 16:3), and by such letters a sender could also authorize a messenger (Acts 9:2). Many philosophers disdained others' recommendations, both because they despised human opinion and because character was directly evident without letters (e.g., *Epictetus, *Diatribes* 1.9.27, 33-34; 2.3.1-2).

3:2-3. Others also understood the concept of matters written on human hearts, but Paul evokes Scripture here. The first *law was written by God's fingers on tablets of stone (Ex 31:18; Deut 5:22), but the prophets had promised a new giving of the law (Is 2:3) to be written on the heart (Jer 31:31-34), as it had always been meant to be (Deut 30:6, 11-14). Ezekiel had prophesied that God would remove his people's hard heart, a heart of stone, and write his word on soft hearts of flesh, by the *Spirit (Ezek 11:19-20; 36:26-27). *Old Testament prophets appealed to their divine calls, and some Greek philosophers, eager to distinguish themselves from charlatans (2:17), also claimed divine rather than merely human ordination.

3:4-5. Jews outside Palestine sometimes spoke of God as "the Sufficient One" (v. 5 KJV; cf. 2:16).

3:6. Greco-Roman legal scholars distinguished between the letter and the intent of the law. Perhaps more relevant here, Jewish teachers sometimes gave detailed attention even to the very letters in the law; the letter here was thus the written law by itself, which "killed" simply by pronouncing its death sentence on the morally guilty. The Spirit, however, wrote the law's morality in the

hearts of God's people, by God's own gracious gift (Ezek 36:26-27).

3:7-18
The Glory of Two Covenants

Paul naturally infers that the glory of the new covenant would be greater than that of the old (3:6), and therefore articulates here the ways in which it was greater. Writers and speakers could "dwell on a point" that was important at length, as Paul does here; Paul also employs antithesis, rhetorically contrasting the earlier glory with the greater one. Ancient speakers could contrast good and bad, but as here could also contrast good and better (the comparison with what was good honoring what was better all the more).

Anyone in the Roman Empire who knew much about Judaism knew that Moses had been an important Jewish leader. But the glory revealed in *Christ is much greater—though more subtle—than that revealed to Moses; thus *apostles like Paul are in some sense in a position superior to that of Moses. Here Paul responds to Corinthian criticisms (perhaps fostered by the arrogant opponents in 11:13); Paul is even greater than Moses—but only because he preaches a message greater than that of Moses. If his opponents were appealing to Moses for their authority (cf. 11:22), Paul effectively short-circuits their claims here.

3:7. When Moses returned from beholding God's glory, his skin was shining so much that the people were afraid of him (Ex 34:29-30, 35). Jewish tradition had expanded on this *narrative extensively, so Paul's readers have probably heard other expositions of this passage before, although they could understand his exposition simply from the *Septuagint of Exodus. But Moses could see only part of God's glory, since seeing God's glory brought death (Ex 33:10)—in contrast to the *Spirit that brings life (2 Cor 3:6).

3:8. The prophets had compared the new covenant favorably with the old (Jer 31:31-34) and spoken of the Spirit and the internalized *law to come as the ideal (Ezek 36:26-27). Thus no one could deny that the Spirit of God in one's heart was better than a law scroll before one's eyes.

3:9-11. Paul reasons according to the Jewish principle *qal vahomer*, "how much more": if the giving of the law on stone tablets was revealed in great glory, how much more the greater giving of the law of the Spirit?

3:12. Paul continues explaining his confidence throughout this section of the letter (4:1, 16). Moralists and other speakers commonly used his word for "boldness" (NASB, NRSV) here to explain that they spoke forthrightly; they thus contended that they were not flatterers like the demagogues who sought popular support but did not care about the masses.

3:13. Moses' glory had to be covered (Ex 34:30, 33-35)—unlike Paul's forthright speech (v. 12)—and would always fade away—unlike the glory of Paul's message, revealed through the Spirit who came to reside in believers. Jewish men in Paul's day did not cover their heads unless they were ashamed or mourning.

3:14. The law of Moses was read aloud regularly in *synagogues. Only in the new covenant in Christ could the glory be revealed openly, when it would come internally by the Spirit. The future coming of the Spirit (in contrast to the present dearth of the Spirit in the world) was a common Jewish belief.

3:15-16. Paul says that the full glory present in the law still cannot be heard (human nature being unchanged since Moses' day), until one turns to Christ (3:14, 16) and has the law written on one's heart (Jer 31:31-34). In the same way, Moses, who had an intimate relationship with God, did not need a veil (Ex 34:34).

3:17. Following a standard Jewish method of interpretation, Paul shows the correspondence between figures in the first giving of the law and those under the new covenant: "The Lord" in the text about Moses (Ex 33:9, 11, 19; 34:5-6, 34) corresponds to "the Spirit" today.

3:18. Greeks told many stories of people who became "metamorphosed" or "transformed," but many Greek philosophers spoke of being transformed toward divinity by contemplating divine things. The *Dead Sea Scrolls spoke of the righteous reflecting divine splendor. But although Paul could be relating to his hearers in such culturally relevant images (minus Greek divinization), the basis of his image is simply how Moses reflected God's glory, as is clear in this context. Those under the new covenant behold God's glory even more plainly than Moses could (Ex 33:20);

thus, like Moses, they are transformed to reflect God's glory by the Spirit. In Platonic philosophy, the mind could envision the deity as pure reason, stripped of all passion; the glory revealed to Moses, by contrast, was full of love and faithfulness, revealing the biblical God's heart (Ex 34:6-7). On the "mirror" (NASB, NRSV), see comment on 1 Corinthians 13:12; for divine Wisdom being God's image and a mirror that reflects God's glory, see Wisdom of Solomon 7:26. On Christ as God's image, see comment on 4:4.

4:1-6
True Messengers of God's Glory

4:1-2. Merchants sometimes "adulterated" (cf. NASB here) substances by mixing in something cheaper to cheat their customers (contrast real treasure in 4:7); philosophers often accused professional speakers of doing the same, because they were more concerned about speaking ability than about correct content. Greco-Roman teachers often distanced themselves from such charges.

4:3-4. Paul continues his exposition from 3:1-18: the good news remains veiled (3:13) to some; *Christ is the complete revelation of God's glory (cf. 3:18). *Diaspora Jews sometimes argued that God stamped his image on people by his *logos,* his "word," or Wisdom (cf., e.g., *Philo, *Creation* 25, 31; *Allegorical Interpretation* 3.96; *Confusion of Tongues* 146-47; *Special Laws* 1.81; 3.207). Christ fills the place assigned to preexistent, divine Wisdom in Jewish tradition; for Paul the divine image and glory obscured in Adam are restored in Christ. Other Jewish teachers did not explicitly speak of *Satan as the "god of this age" (NIV), but most of them recognized that the nations (everyone but themselves) were ruled by spiritual powers under Satan's command.

4:5. To be the slave of a high official in the Greco-Roman world often meant to hold more honor and to control more wealth than the majority of free people. When Paul calls himself a "slave of Christ" (e.g., Rom 1:1), this is a title of honor, similar to the *Old Testament's calling the prophets "servants of God." But here Paul may use the image of the hired servant: Jesus has lent him to them to serve them on Jesus' behalf. Moral teachers like Paul would always have to be ready to refute the charge leveled against some philosophers that they proclaimed themselves, a charge that Paul seems to refute here.

4:6. Contrast was a frequent *rhetorical device; Paul contrasts unbelievers in 4:4 with believers in 4:6. God spoke light into being at the first creation (Gen 1:3); he similarly could make the light of his glory shine in the hearts of those who saw greater glory than Moses had—the glory in Christ (thus he uses here wording from Is 9:1-2). In various Jewish traditions the light in Genesis 1:3 represented the light of God's *law, of the righteous or of God himself; cf. comment on John 1:4.

4:7-15
Fading Flesh but Enduring Glory

The message of Jesus' witnesses is greater than Moses' message because Moses' glory could fade and the *law could be ignored, whereas the glory of God lives through Jesus' witnesses even in death.

4:7. Many Greek writers felt that philosophers' contentment in suffering displayed special power. But whereas philosophers were often hailed as strong and unswayed by testing, Paul reminds his readers that his power is from God alone.

"Earthen" or "clay" jars, as opposed to bronze ones, were readily discarded; because clay was always available, such containers were cheap and disposable if they were broken or incurred ceremonial impurity—an odd container for a rich treasure. (Paul's audience would be very familiar with these; evidence suggests that Corinth abounded in frail pottery lamps.) Some Greek writers similarly described the body as the soul's container; for Paul, however, the contrast is not between body and soul but between humanity and God. Some others portrayed people as weak vessels (e.g., Ps 31:12; *Dead Sea Scrolls 1QS 11.22; in images of judgment, Is 30:14; Jer 19:11), and wisdom or similar virtues as treasures (e.g., Prov 2:4; Sirach 20:30; Wisdom of Solomon 7:14; Philo, *That the Worse Attacks the Better* 59; Xenophon, *Memorabilia* 4.2.9).

4:8-9. As an example to others, *Stoic philosophers often listed their various sufferings to show their commitment to a life of contentment and perseverance. Thus they remained content in illness, in hardship, in

death and so on. Jewish people often appealed to prophets and martyrs of the past as examples of endurance. In 4:8-12, Paul develops *rhetorical antithesis (cf. *Testament of Joseph* 1:4-7).

4:10-12. On Paul's proleptic experience of Christ's death and *resurrection, see comment on 1:9-10; here the glory is Christ himself living in Paul and other believers through the *Spirit, as the context makes clear. Paul describes his participation in Christ's sufferings quite graphically.

4:13. Paul here offers one way to translate Psalm 116:10, the way followed by the most common recension of the *Septuagint (the dominant Greek translation of the *Old Testament) in Paul's day. In the psalm's context, a righteous sufferer praises God's deliverance. Jewish teachers accepted arguments based even on short phrases; Paul establishes a principle explaining why he boldly proclaims Christ despite the opposition he receives.

4:14. Judaism believed in a *resurrection at the end time, when everyone raised would be presented to God for the judgment (cf. 5:10). While acknowledging Christ's resurrection in the past, some of the Corinthian Christians had been more skeptical about future resurrection and judgment, especially of the body; the idea was foreign to Greek thought (see comment on 1 Cor 15).

4:15. People in the Greco-Roman world honored benefactors; more people receiving the good news would yield more thanks to God. The Old Testament had prophesied that the *Gentiles would also give thanks to God in the end time, and Paul is zealous to see this *prophecy fulfilled in his day (1:11).

4:16–5:10
The Present and Future Life

4:16. Following *Plato's lead, some Greek thinkers (and a number of Greco-Jewish writers) distinguished between physical decomposition and the survival of the soul. Stoic sages emphasized that inner choices, not outer circumstances, were what mattered. Adapting the Corinthians' own Greek language where it is relevant, Paul the master missionary seeks to convince them with their own language that the glory of proleptic *resurrection is present even in proleptic dying (see comment on 4:7-12).

4:17-18. Some others also understood that the future reward would be greater than present sufferings (e.g., Wisdom of Solomon 3:5; **1 Enoch* 103:9–104:2; **4 Ezra* 7:14-16). Plato and many philosophers after him rightly contrasted the temporal and the eternal. By Paul's day many Platonists thought that bodily things were heavy and weighed down the soul (cf. even Wisdom of Solomon 9:15), but that the soul was light; once freed by the body's death, it would soar up to the pure heavens from which it had originated. Paul here inverts the image but perhaps partly for a play on words that a few Jewish readers skilled in Hebrew exposition might catch: "glory" and "weight, heaviness," represent the same Hebrew word.

Plato also believed that the world of ideas was the real, unchanging world, whereas the temporal, changing world of sense knowledge was only a world of shadows. Paul does not deny the reality of the visible world but does agree that it is subject to decay, whereas the unseen world is eternal. In making this statement, however, Paul is still contrasting his ministry with that of Moses: he does not teach an outward *law written on stones, but the law written in his inner person by the *Spirit (chaps. 3–4).

Although Paul finds some common ground with his Greek readers on the righteous soul's endurance (4:16-18), he is quick to bring them back to the future hope that is the basis for it (see 5:1-10). Like the Greek sages, Paul is ready to face death; unlike them, he has a hope of future bodily life. *Pharisees accepted both the immortality of the soul and the future *resurrection of the body, and many Jewish writers described the experience of heaven after death as a proleptic experience to be completed in paradise after the resurrection. Paul apparently likewise accepted both the soul's continuance after death and bodily resurrection (cf., e.g., Phil 1:21-23 with Phil 3:20-21).

5:1. Greek writers described the body as a vessel, a house, a tent and often as a tomb; Paul says that a better body awaits (he can use the present tense because of the secure down payment; see 5:5). A *Hellenistic Jewish work depicts the body as a tent (Wisdom of Solomon 9:15).

5:2-4. "Groaning" may allude to Exodus 2:23 (the same word in the *LXX); or it may

relate to birth pangs (Rom 8:22-23), in the light of some Jewish teachings that the resurrection would be preceded by a period of suffering described as birth pangs. At any rate, groaning was behavior characteristically ascribed to those in agony.

Paul's longing here is not for death (as in Greek views of the body as a tomb, which made even suicide acceptable if life became too difficult) but for the resurrection, when he will receive a new body. Some described the body as clothing (*Epictetus, *Diatribes* 1.25.21), death as disrobing (e.g., Philo, *Allegorical Interpretation* 2.56) and/or the resurrection body as clothing (cf. *1 Enoch* 62:15). Although Greeks regularly exercised in the nude and Romans had adopted nude bathing from the Greeks (probably including at the many baths in Corinth), all Jews except those who had surrendered to Greek custom abhorred nakedness in public. (Others also disliked nakedness in some social situations.) For Paul, the image of "nakedness" is thus an unpleasant one.

5:5. The term translated "pledge" (NASB) or "deposit guaranteeing" (NIV) was used in business documents for "down payment," a first installment. Because the *Old Testament (e.g., Is 44:3; Ezek 39:29) and much of early Judaism associated the outpouring of the *Spirit with the future age, the present experience of the Spirit is the Corinthians' initial experience of the resurrection life to come, "guaranteeing" (cf. NRSV) its fulfillment (1:22).

5:6-9. Jewish accounts of the righteous dead in heaven portrayed them as experiencing a measure of the future glory now, while awaiting the resurrection. Although this state was inferior to the resurrection (5:4), it meant an end to the present toils—and Paul's continual experience of gradual martyrdom (4:8-10). Some sages who listed their sufferings (cf. 4:8-12) also emphasized their willingness to surrender life (cf. *Seneca, *Epistle to Lucilius* 120.12-15). Some expected greater vision of God at death (e.g., Maximus of Tyre, *Orations* 10.3).

5:10. Corinth had a magnificent "judgment seat," the raised platform where governors would pronounce judgments and decrees; the Corinthians know that Paul had appeared before it (Acts 18:12). Paul's allusion here, however, is especially to the standard Old Testament and Jewish image of the day of judgment, in which God's throne became the ultimate judgment seat (Christ here filling the divine role; cf. Rom 14:10). Paul's emphasis on judgment for deeds in the body reiterates his opposition to any remaining elements of common Greek ideas disparaging the body, which Paul had refuted in 1 Corinthians 6:12-14.

5:11-19
Paul's Ministry of Reconciliation

5:11. The "fear of the Lord" was a common motivation for righteousness in Jewish texts, often associated with a recognition that God would judge (5:10).

5:12. In ancient culture, self-commendation was generally offensive (see also 3:1; cf. Prov 25:27; 27:2); one needed a good reason to employ it, like defending oneself (here; 3:1), for his audience's good (10:8), responding to charges (10:10), challenging others' arrogance (11:12), necessity (12:1) or compulsion (12:11). Bringing pride to a group of people who should identify with the speaker would also count. Paul here employs the inward-outward contrast of 4:16-18 against his boastful opponents and borrows some terms from 1 Samuel 16:7 LXX (as well as continuing the "uncovered face" theme from 3:12, 18).

5:13. Both philosophers (Diogenes Laertius 6.3.82) and prophets (2 Kings 9:11; Jer 29:26; Hos 9:7) were sometimes thought "insane" (GNT here; the standard meaning of "beside oneself"—KJV, NASB, NRSV). Greek sages often acknowledged this erroneous perception of themselves, although they believed that they themselves were the only truly sane ones (cf. also Wisdom of Solomon 5:4); similarly, ecstatics often described their experiences in these terms. The Greek term contrasted with being "sober" or "of sound mind," as here. Paul's contrast between his behavior toward the Corinthians and his behavior toward God probably derives from Moses' behavior in Exodus 34:33-34 (see comment on 2 Cor 3:7-18); he would have revealed more of his ecstatic side to them had he thought it helpful (see comment on 12:1-7; cf. 1 Cor 14:18-19).

5:14-17. The new person on the inside, participating in Christ's *resurrection, means more than the decaying outer person ob-

servable to human eyes (see comment on 4:16-18). The new identity included an entirely new framework for thinking, including about Jesus. Judaism applied the language of "new creation" in various ways. For example, for divine Wisdom spiritually "making all things new" in the present, cf. Wisdom of Solomon 7:27. In later rabbinic texts one who made a *proselyte was considered as if he or she had created the proselyte; the New Year was also given some significance as a new beginning, because sins were shortly thereafter absolved on the Day of Atonement. But in early texts like **Jubilees* and the *Dead Sea Scrolls, "new creation" language applies especially to the world to come (cf. **1 Enoch* 72:1; *Jubilees* 1:29; 4:26; **2 Baruch* 44:12). This was the most obvious application of new creation language, since it referred to the life of the world to come in the *Old Testament (Is 65:16-18; 66:22). For Paul, that the *Messiah Jesus has come means that believers have already begun to participate in the resurrection life of the coming world (see comment on 4:10-12; 5:5).

5:18-19. By "us" as "ministers of reconciliation" Paul refers to himself and his associates—not to the Corinthians in their present state (5:20). Paul styles his words here in a relevant way to a Greek audience: Greek speakers often spoke on the subject of "concord," thereby urging reconciliation and unity. The term translated "reconciliation" applied especially to relations between people; but here, as in the Old Testament, reconciliation between people and God presumably presupposes *repentance and *atonement by blood sacrifice (here by Christ's death).

5:20–6:10
A Plea from Christ's Suffering Ambassadors

Ancient *rhetoric sometimes used shocking words to grip people's attention. Having established that he and his colleagues are Christ's representatives, Paul entreats the Corinthian Christians to be reconciled to God again by being reconciled again to himself (7:2; cf. Mt 10:40). Treatment of a herald reflected one's attitude toward the sender, and in ancient Mediterranean life (and especially in Roman party politics, well known in Corinth), one should be friends of one's friends and enemies to their enemies. If the Corinthians welcomed Paul's opponents, they were rejecting him; if they rejected Paul, they rejected the one who sent him.

5:20. An "ambassador" was a representative of one state to another, usually applied in this period to the emperor's legates in the East. This image fits "*apostles" as appointed messengers (see comment on 1 Cor 12:29-30), just as the *Old Testament prophets had been (Ex 7:1). (The prophets frequently delivered messages in the form of a covenant lawsuit or in words to kings used by messengers of suzerain [supreme] kings to vassal [client] rulers.) In the context of a plea for reconciliation, Paul as an ambassador urges the Corinthians to make peace with God the ultimate King; emperors normally took action against unrepentant client states that had offended them, and no one took such warnings lightly.

5:21. Paul might blend the idea of unblemished sacrifices with that of the scapegoat that embodied the sin of God's people (Lev 1:3; 16:21-22). Here Paul could mean that *Christ became sin's representative when he bore its judgment on the cross, and Paul and his associates become righteousness's representatives when they proclaim his message. This verse carries on the representative idea set forth in 5:20.

6:1-2. Paul quotes Isaiah 49:8, which is in the context of the messianic redemption, reconciliation and peace for God's people (52:7), a time that Paul says has arrived in Christ (5:17). His argument would also be quite relevant to his readers: Greek sages sometimes discussed appropriate moments for speaking, especially for bold speech. They often also spoke boldly about and stressed urgency for reconciliation (concord, harmony; see comment on 5:18-19).

6:3. "Giving no offense" (KJV) was important for those in public office or for those whose behavior would influence public perceptions of their group; this topic was widely discussed by ancient political theorists, public speakers and minority religions. (The "ministry" is the ministry of reconciliation—5:18.)

6:4-5. Philosophers often listed their hardships, sometimes in triads, as Paul does here; these catalogs of hardships verified their commitment to contentment and thus the sincerity of their message. (Orators also sought to es-

tablish a person's *character* as a central part of arguing for guilt, innocence or reliability.) Some of Paul's words are essentially synonyms; as in ancient *rhetorical style, they are repeated for effect. The list in 6:4-10 is the sort an orator would have composed (cf. *Cicero, *In Catalinam* 2.10.25; *For Scaurus* 16.37; *For Caelius* 22.55; *Orationes philippicae* 3.11.28; 8.5.16): prefaced by the Greek *en,* nine sufferings (6:4-5) and eight virtues (6:6-7); prefaced by *dia,* three antitheses regarding weakness (6:7-8) followed by seven more structured by "as . . . yet" (6:8-10). One can also read this as three sets of nine elements (cf. nine in 1 Cor 12:8-10; Gal 5:22-23; two sets in 2 Cor 11:23-25, 26).

6:6-7. Philosophers also often described themselves by catalogs of virtues, which made their lives models for those of their readers. Because charlatans were abundant, true teachers had to stress their pure motives and that they acted on knowledge of what was real. Paul's defense here would impress a Greek audience who thought that Paul was out of touch with their culture's proper speaking conventions (see 1 Cor 2). By "weapons" Paul may refer to the shield, which was carried on the left, and the spear or sword, which was carried on the right.

6:8-9. Paul again relates to issues that other speakers on moral issues faced in Greco-Roman society. Paradox, contrasting apparently irreconcilable opposites, was a standard literary and rhetorical technique. Sages often liked to jar audiences with oxymorons (cf., e.g., Musonius Rufus 9, p. 74.10-12 Lutz). Some philosophers (particularly *Cynics) used paradox and the similar technique of irony for turning the comments of their accusers (insane, foolish, shameful) against them, proclaiming themselves truly wise and rich (see comment on 1 Cor 4:8). Radical sages proclaimed that the opinions of foolish men (nonphilosophers) did not bother them; *Stoics often reflected on their lack of worldly honor.

But many philosophers avoided unnecessary criticism when possible, lest their message be dishonored; moralists often even sought to learn some truth from false accusations leveled against them. Both Greek and Jewish traditions stressed being honorable and irreproachable, and most people cared about public opinion. "Well-known" here presumably means known to the one who counts—God. On "dying" and "living," see 4:10-12 and the language of Psalm 118:17-18 (familiar to many Jews from the Hallel, Psalms 113–118, sung at Jewish festivals; cf. Ps 116:10 in 2 Cor 4:13 and possibly Ps 119:32 in 2 Cor 6:11).

6:10. Although better off than most peasants, artisans (Paul had earned his living as a leatherworker—Acts 18:3) toiled, remained poor and had little social status; this was especially true of those who moved around, as Paul did. *Cynic philosophers gave up all possessions to pursue their lifestyle but considered themselves spiritually rich. Cynic and Stoic philosophers claimed that, although they owned little or nothing, all the world belonged to them, because they were friends of the gods who owned it; as a servant of the true God, Paul has all the more reason to apply the phrase "possessing all things" to himself.

6:11–7:4
Receive Christ's Ambassadors

Orators often climaxed arguments with an intense emotional appeal, as here (letters, which were less formal than speeches, could also give free play to emotion). By refusing to be reconciled to Paul, the Corinthians are in effect refusing to be reconciled fully to God, whose agent Paul is (cf. Mt 10:40). In 6:14–7:1, Paul calls the Corinthians to give up their intimate ties with the world; in the context of 6:11-13 and 7:2-4, his point is that they should instead resume their intimate ties with him and other true representatives of God. Thus Paul here offers a calculated insult to his spiritual opposition in Corinth.

6:11-13. It is they and not Paul who are hindering proper reconciliation. A "mouth speaking freely" and a "heart bared wide open" fit Paul's emphasis on "open speech," an important motif in ancient speaking (see comment on 3:12). Paul's words here are deeply affectionate, again beseeching them to return his love. Recording deep feelings and reasoning on an emotional level were not out of place but were a normal part of ancient public speaking and writing. Public speakers purposely appealed to their hearers' emotions (cf. Gal 4:20). Letters often expressed deep affection (e.g., *Cicero, *Letters to Friends* 1.9.1;

2.1.1; 2.1.2; 2.2.1; 2.3.2; 12.12.1); sometimes they also affectionately protested that the other should show more love. Affection, writers sometimes urged, ought to be reciprocated (e.g., Cicero, *Letters to Friends* 6.15.1; 7.14.2; 12.30.3; 15.21.3).Of course, these speakers and writers were supposed to feel these emotions genuinely, not merely pretend to have them.

6:14. In 6:14–7:1 Paul makes a *digression, a common literary device; he frames it like some of his other digressions and uses antithesis in a striking emotional climax to the preceding section. Perhaps he summons the believers to choose between him (as Christ's agent) and the rival teachers; ancient Mediterranean values required one to befriend one's friends and oppose their enemies.

"Unequal yoking"(cf. KJV) here might evoke Leviticus 19:19 (cf. Deut 22:10); the principle would reinforce the *law's prohibition of marriage with nonbelievers (cf. Deut 7:3; Ezra 9:12; Neh 13:25) but need not be limited to marriage. The *Dead Sea Scrolls contrast the people of light and the people of darkness (e.g., 1QM 1.1, 11).

The lack of concord between the wise and the foolish was a Greek proverb; more prominently, the division between wise and foolish, righteous and wicked, and Israel and the *Gentiles was central to *Old Testament and Jewish thought. Others offered similar contrasts (Sirach 13:16-19, using one of the same verbs as here). Very religious and less religious Jews could work together, but the more religious Jews imposed some limitations. Rhetorical questions were a common part of rhetorical style, and Paul has several successive ones in verses 14-16.

6:15. "Belial" or "Beliar" (NRSV) was another Jewish name for *Satan (e.g., **Jubilees* 1:20; Dead Sea Scrolls CD 4.13-16; 1QM 1.1, 5, 13; 13.2, 4, 11); some passages demanded a choice between God and Beliar (*Testament of Naphtali* 2:6; 3:1).

6:16-17. Jewish law forbade doing business with *Gentiles on pagan festival days or in any other way that would bring associations with idolatry. Jewish people did not try to interfere with pagan temples, but when an emperor planned to set up an idol in Jerusalem's temple less than two decades before Paul wrote 2 Corinthians, the Jewish people were ready to revolt rather than to allow it.

Portraying the Corinthian Christians as God's temple (1 Cor 3:16; 6:19) who have no fellowship with idols (1 Cor 10:20-21), Paul can cite relevant Old Testament texts (listing together various texts, as early Jewish sources sometimes did): verse 16 cites Leviticus 26:11-12 (apparently correcting the usual Greek translation where necessary), probably echoed in Ezekiel 37:26-28 (esp. v. 27). Verse 17 adapts Isaiah 52:11, addressing the time of the new exodus of the messianic salvation (52:7-15); cf. Leviticus 11:31, 44-45 and 22:4-6. "I will welcome you" uses a *Septuagint rendering of God's promise to gather his people in a number of texts, perhaps especially Ezekiel 20:34, 41.

6:18. God's people were his sons and daughters (e.g., Deut 32:19; Jer 3:19), who would be restored to their special relationship with him in the time of the end (Is 43:6). Paul blends the language of several texts (probably including 2 Sam 7:14, in the immediate context of building a temple), as Jewish writers sometimes did; here he may also blend his own prophetic insight (cf. 1 Cor 14:37-38).

7:1. The promises of 6:16-18 were confirmed in *Christ (1:20), applicable to those consecrated to God. Jews often spoke of pure and undefiled hearts; undefiled flesh usually referred to ceremonial purity (hand washing or ritual immersion). Purity in body and spirit here (see comment on 5:10 and on 1 Cor 6:20) invites abstention from sin.

7:2-3. *Rhetorically, the Greek of 7:2 uses *anaphora* (three times beginning with "no one") and *homoioptoton* (three verbs ending the same way); 7:3 is full of pathos (emotional appeal). Speakers often followed shocking or offensive statements with more welcome words; writers often indicated the end of a digression by returning to the point. Paul uses language of great affection; see comment on 6:11-13. A writer could clarify that he stressed a point not for other reasons but to show love (*Cicero, *Letters to Friends* 2.4.2). The greatest expression of friendship in Greco-Roman literature was willingness to die with someone (which also makes sense outside Greek culture; see 2 Sam 15:21; Jn 13:37; 15:13).

7:4. Moralists felt that true friends should speak frankly (cf. KJV, ASV: "boldness of speech"). Greco-Roman speakers often em-

phasized their confidence in their hearers for the purpose of establishing intimacy and to secure willing compliance.

7:5-16
Reconciliation Between Paul and the Corinthians

7:5-6. Paul resumes here the *narrative introduction that he suspended in 2:13; even in speeches, where the *narratio* was normally at the front, it could also appear later when needed. *Old Testament texts often emphasized God's comfort for his people (e.g., Is 40:1; 51:3; 52:9), including, as here, God comforting the "humble" (NRSV, "downcast"; see the *Septuagint of Is 49:13; 54:11); Paul here continues his opening theme (1:3-6). Paul crossed over from Troas to Macedonia to find Titus, whom he had sent to the Corinthians with a harsh letter (2:12-13). He was comforted not only by Titus's safety but by their response.

7:7. Rhetorically sensitive hearers would appreciate the repetition of three qualities of the Corinthians in quick repetition.
